5.12.2 release notes

The following release notes include information for Amazon EMR release 5.12.2. Changes are relative to 5.12.1.

Initial release date: August 29, 2018

Changes, enhancements, and resolved issues

- This release addresses a potential security vulnerability.

5.12.2 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
aws-sagemaker-spark-sdk	1.0.1	Amazon SageMaker Spark SDK
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.9.0	Distributed copy application optimized for Amazon S3.
emrfs	2.21.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.4.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.

Component	Version	Description
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.8.3-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.8.3-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.8.3-amzn-0	HDFS command-line client and library
hadoop-hdfs-namenode	2.8.3-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.8.3-amzn-0	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.8.3-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.8.3-amzn-0	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.8.3-amzn-0	YARN service for managing containers on an individual node.

Component	Version	Description
hadoop-yarn-resour cemanager	2.8.3-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.8.3-amzn-0	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.4.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.4.0	Service for serving one or more HBase regions.
hbase-client	1.4.0	HBase command-line client.
hbase-rest-server	1.4.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.4.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.2-amzn-1	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.2-amzn-1	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.2-amzn-1	HTTP endpoint providing a REST interface to HCatalog.

Component	Version	Description
hive-client	2.3.2-amzn-1	Hive command line client.
hive-hbase	2.3.2-amzn-1	Hive-hbase client.
hive-metastore-server	2.3.2-amzn-1	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.2-amzn-1	Service for accepting Hive queries as web requests.
hue-server	4.1.0	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mxnet	1.0.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.1.85	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.13.0-HBase-1.4	The phoenix libraries for server and client

Component	Version	Description
phoenix-query-server	4.13.0-HBase-1.4	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.188	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.188	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.1	Spark command-line clients.
spark-history-server	2.2.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.1	In-memory execution engine for YARN.
spark-yarn-slave	2.2.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.

Component	Version	Description
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.12.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see [Configure applications](#).

emr-5.12.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.

Classifications	Description
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.

Classifications	Description
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.

Classifications	Description
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-env	Change values in the Pig environment.

Classifications	Description
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.

Classifications	Description
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-redshift	Change values in Presto's redshift.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.

Classifications	Description
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.12.1

5.12.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, MXNet, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.12.1	emr-5.12.0	emr-5.11.4	emr-5.11.3

5.12.1 release notes

The following release notes include information for Amazon EMR release 5.12.1. Changes are relative to 5.12.0.

Initial release date: March 29, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address potential vulnerabilities.

5.12.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2

has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
aws-sagemaker-spark-sdk	1.0.1	Amazon SageMaker Spark SDK
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.9.0	Distributed copy application optimized for Amazon S3.
emrfs	2.21.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.4.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.

Component	Version	Description
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.8.3-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.8.3-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.8.3-amzn-0	HDFS command-line client and library
hadoop-hdfs-namenode	2.8.3-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.8.3-amzn-0	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.8.3-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.8.3-amzn-0	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.8.3-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.8.3-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.

Component	Version	Description
hadoop-yarn-timeline-server	2.8.3-amzn-0	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.4.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.4.0	Service for serving one or more HBase regions.
hbase-client	1.4.0	HBase command-line client.
hbase-rest-server	1.4.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.4.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.2-amzn-1	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.2-amzn-1	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.2-amzn-1	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.2-amzn-1	Hive command line client.
hive-hbase	2.3.2-amzn-1	Hive-hbase client.

Component	Version	Description
hive-metastore-server	2.3.2-amzn-1	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.2-amzn-1	Service for accepting Hive queries as web requests.
hue-server	4.1.0	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mxnet	1.0.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.1.85	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.13.0-HBase-1.4	The phoenix libraries for server and client

Component	Version	Description
phoenix-query-server	4.13.0-HBase-1.4	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.188	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.188	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.1	Spark command-line clients.
spark-history-server	2.2.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.1	In-memory execution engine for YARN.
spark-yarn-slave	2.2.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.

Component	Version	Description
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.12.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.12.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.

Classifications	Description
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.

Classifications	Description
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.

Classifications	Description
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-env	Change values in the Pig environment.

Classifications	Description
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.

Classifications	Description
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-redshift	Change values in Presto's redshift.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.

Classifications	Description
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.12.0

5.12.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, MXNet, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.12.0	emr-5.11.4	emr-5.11.3	emr-5.11.2
AWS SDK for Java	1.11.267	1.11.238	1.11.238	1.11.238
Python	2.7, 3.4	2.7, 3.4	2.7, 3.4	2.7, 3.4
Scala	2.11.8	2.11.8	2.11.8	2.11.8
AmazonCloudWatchAgent	-	-	-	-

	emr-5.12.0	emr-5.11.4	emr-5.11.3	emr-5.11.2
Delta	-	-	-	-
Flink	1.4.0	1.3.2	1.3.2	1.3.2
Ganglia	3.7.2	3.7.2	3.7.2	3.7.2
HBase	1.4.0	1.3.1	1.3.1	1.3.1
HCatalog	2.3.2	2.3.2	2.3.2	2.3.2
Hadoop	2.8.3	2.7.3	2.7.3	2.7.3
Hive	2.3.2	2.3.2	2.3.2	2.3.2
Hudi	-	-	-	-
Hue	4.1.0	4.0.1	4.0.1	4.0.1
Iceberg	-	-	-	-
JupyterEnterpriseGateway	-	-	-	-
JupyterHub	-	-	-	-
Livy	0.4.0	0.4.0	0.4.0	0.4.0
MXNet	1.0.0	0.12.0	0.12.0	0.12.0
Mahout	0.13.0	0.13.0	0.13.0	0.13.0
Oozie	4.3.0	4.3.0	4.3.0	4.3.0
Phoenix	4.13.0	4.11.0	4.11.0	4.11.0
Pig	0.17.0	0.17.0	0.17.0	0.17.0
Presto	0.188	0.187	0.187	0.187
Spark	2.2.1	2.2.1	2.2.1	2.2.1

	emr-5.12.0	emr-5.11.4	emr-5.11.3	emr-5.11.2
Sqoop	1.4.6	1.4.6	1.4.6	1.4.6
TensorFlow	-	-	-	-
Tez	0.8.4	0.8.4	0.8.4	0.8.4
Trino (PrestoSQL)	-	-	-	-
Zeppelin	0.7.3	0.7.3	0.7.3	0.7.3
ZooKeeper	3.4.10	3.4.10	3.4.10	3.4.10

5.12.0 release notes

The following release notes include information for the Amazon EMR release 5.12.0. Changes are relative to 5.11.1.

Upgrades

- AWS SDK for Java 1.11.238 ⇒ 1.11.267. For more information, see the AWS SDK for Java Change Log on GitHub.
- Hadoop 2.7.3 ⇒ 2.8.3. For more information, see Apache Hadoop Releases.
- Flink 1.3.2 ⇒ 1.4.0. For more information, see the Apache Flink 1.4.0 Release Announcement.
- HBase 1.3.1 ⇒ 1.4.0. For more information, see the HBase Release Announcement.
- Hue 4.0.1 ⇒ 4.1.0. For more information, see the Release Notes.
- MxNet 0.12.0 ⇒ 1.0.0. For more information, see the MXNet Change Log on GitHub.
- Presto 0.187 ⇒ 0.188. For more information, see the Release Notes.

Changes, enhancements, and resolved issues

- **Hadoop**
  - The `yarn.resourcemanager.decommissioning.timeout` property has changed to `yarn.resourcemanager.nodemanager-graceful-decommission-timeout-secs`.

  You can use this property to customize cluster scale-down. For more information, see Cluster Scale-Down in the *Amazon EMR Management Guide*.

  - The Hadoop CLI added the `-d` option to the `cp` (copy) command, which specifies direct copy. You can use this to avoid creating an intermediary `.COPYING` file, which makes copying data between Amazon S3 faster. For more information, see HADOOP-12384.

- **Pig**
  - Added the `pig-env` configuration classification, which simplifies the configuration of Pig environment properties. For more information, see Configure applications.
- **Presto**
  - Added the `presto-connector-redshift` configuration classification, which you can use to configure values in the Presto `redshift.properties` configuration file. For more information, see Redshift Connector in Presto documentation, and Configure applications.
  - Presto support for EMRFS has been added and is the default configuration. Earlier Amazon EMR releases used PrestoS3FileSystem, which was the only option. For more information, see EMRFS and PrestoS3FileSystem configuration.

    Note

    If you query underlying data in Amazon S3 with Amazon EMR version 5.12.0, Presto errors can occur. This is because Presto fails to pick up configuration classification values from `emrfs-site.xml`. As a workaround, create an `emrfs` subdirectory under `usr/lib/presto/plugin/hive-hadoop2/` and create a symlink in `usr/lib/presto/plugin/hive-hadoop2/emrfs` to the existing `/usr/share/aws/emr/emrfs/conf/emrfs-site.xml` file. Then restart the presto-server process (`sudo presto-server stop` followed by `sudo presto-server start`).

- **Spark**
  - Backported SPARK-22036: BigDecimal multiplication sometimes returns null.

Known issues

- MXNet does not include OpenCV libraries.
- SparkR is not available for clusters created using a custom AMI because R is not installed by default on cluster nodes.

5.12.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
aws-sagemaker-spark-sdk	1.0.1	Amazon SageMaker Spark SDK
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.9.0	Distributed copy application optimized for Amazon S3.
emrfs	2.21.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.4.0	Apache Flink command line client scripts and applications.

Component	Version	Description
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.8.3-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.8.3-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.8.3-amzn-0	HDFS command-line client and library
hadoop-hdfs-namenode	2.8.3-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.8.3-amzn-0	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.8.3-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.8.3-amzn-0	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.8.3-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.8.3-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.8.3-amzn-0	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.4.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.4.0	Service for serving one or more HBase regions.
hbase-client	1.4.0	HBase command-line client.
hbase-rest-server	1.4.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.4.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.2-amzn-1	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.2-amzn-1	Service providing HCatalog, a table and storage management layer for distributed applications.

Component	Version	Description
hcatalog-webhcat-server	2.3.2-amzn-1	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.2-amzn-1	Hive command line client.
hive-hbase	2.3.2-amzn-1	Hive-hbase client.
hive-metastore-server	2.3.2-amzn-1	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.2-amzn-1	Service for accepting Hive queries as web requests.
hue-server	4.1.0	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mxnet	1.0.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.1.85	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.

Component	Version	Description
phoenix-library	4.13.0-HBase-1.4	The phoenix libraries for server and client
phoenix-query-server	4.13.0-HBase-1.4	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.188	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.188	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.1	Spark command-line clients.
spark-history-server	2.2.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.1	In-memory execution engine for YARN.
spark-yarn-slave	2.2.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.

Component	Version	Description
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.12.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.12.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.

Classifications	Description
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.

Classifications	Description
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.

Classifications	Description
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.

Classifications	Description
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-env	Change values in the Pig environment.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.

Classifications	Description
presto-connector-postgresql	Change values in Presto's postgresql.properties file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-redshift	Change values in Presto's redshift.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.

Classifications	Description
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.11.4

5.11.4 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, MXNet, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.11.4	emr-5.11.3	emr-5.11.2	emr-5.11.1

ZooKeeper	3.4.10	3.4.10	3.4.10	3.4.10

5.11.4 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.11.4 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
aws-sagemaker-spark-sdk	1.0	Amazon SageMaker Spark SDK
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.8.0	Distributed copy application optimized for Amazon S3.
emrfs	2.20.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.2	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.

Component	Version	Description
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-6	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-6	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-6	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-6	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-6	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-6	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-6	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-6	YARN service for managing containers on an individual node.

Component	Version	Description
hadoop-yarn-resour cemanager	2.7.3-amzn-6	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-6	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.2-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.2-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.2-amzn-0	HTTP endpoint providing a REST interface to HCatalog.

Component	Version	Description
hive-client	2.3.2-amzn-0	Hive command line client.
hive-hbase	2.3.2-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.2-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.2-amzn-0	Service for accepting Hive queries as web requests.
hue-server	4.0.1	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mxnet	0.12.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.0.176	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client

Component	Version	Description
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.187	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.187	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.1	Spark command-line clients.
spark-history-server	2.2.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.1	In-memory execution engine for YARN.
spark-yarn-slave	2.2.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.

Component	Version	Description
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.11.4 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.11.4 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.

Classifications	Description
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.

Classifications	Description
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.

Classifications	Description
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.

Classifications	Description
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.

Classifications	Description
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.11.3

5.11.3 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, MXNet, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.11.3	emr-5.11.2	emr-5.11.1	emr-5.11.0
AWS SDK for Java	1.11.238	1.11.238	1.11.238	1.11.238
Python	2.7, 3.4	2.7, 3.4	2.7, 3.4	2.7, 3.4
Scala	2.11.8	2.11.8	2.11.8	2.11.8
AmazonCloudWatchAgent	-	-	-	-
Delta	-	-	-	-
Flink	1.3.2	1.3.2	1.3.2	1.3.2
Ganglia	3.7.2	3.7.2	3.7.2	3.7.2

5.11.3 release notes

The following release notes include information for Amazon EMR release 5.11.3. Changes are relative to 5.11.2.

Initial release date: July 18, 2019

Changes, enhancements, and resolved issues

- Updated the default Amazon Linux AMI for Amazon EMR to include important Linux kernel security updates, including the TCP SACK Denial of Service Issue (AWS-2019-005).

5.11.3 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
aws-sagemaker-spark-sdk	1.0	Amazon SageMaker Spark SDK
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.8.0	Distributed copy application optimized for Amazon S3.
emrfs	2.20.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.2	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.

Component	Version	Description
hadoop-client	2.7.3-amzn-6	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-6	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-6	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-6	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-6	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-6	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-6	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-6	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-6	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-6	Service for retrieving current and historical information for YARN applications.

Component	Version	Description
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.2-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.2-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.2-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.2-amzn-0	Hive command line client.
hive-hbase	2.3.2-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.2-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.

Component	Version	Description
hive-server2	2.3.2-amzn-0	Service for accepting Hive queries as web requests.
hue-server	4.0.1	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mxnet	0.12.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.0.176	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API

Component	Version	Description
presto-coordinator	0.187	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.187	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.1	Spark command-line clients.
spark-history-server	2.2.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.1	In-memory execution engine for YARN.
spark-yarn-slave	2.2.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.

Component	Version	Description
zookeeper-server	3.4.10	Centralized service for maintaining configuration information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.11.3 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.11.3 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler.xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.

Classifications	Description
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.

Classifications	Description
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.

Classifications	Description
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.

Classifications	Description
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.11.2

5.11.2 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, MXNet, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.11.2	emr-5.11.1	emr-5.11.0	emr-5.10.1

5.11.2 release notes

The following release notes include information for Amazon EMR release 5.11.2. Changes are relative to 5.11.1.

Initial release date: August 29, 2018

Changes, enhancements, and resolved issues

- This release addresses a potential security vulnerability.

5.11.2 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
aws-sagemaker-spark-sdk	1.0	Amazon SageMaker Spark SDK

Component	Version	Description
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.8.0	Distributed copy application optimized for Amazon S3.
emrfs	2.20.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.2	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-6	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.3-amzn-6	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-6	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-6	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-6	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-6	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-6	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-6	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-6	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-6	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.2-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.2-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.2-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.2-amzn-0	Hive command line client.
hive-hbase	2.3.2-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.2-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.2-amzn-0	Service for accepting Hive queries as web requests.

Component	Version	Description
hue-server	4.0.1	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mxnet	0.12.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.0.176	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.187	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.187	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.1	Spark command-line clients.
spark-history-server	2.2.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.1	In-memory execution engine for YARN.
spark-yarn-slave	2.2.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.

Component	Version	Description
zookeeper-client	3.4.10	ZooKeeper command line client.

5.11.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.11.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration

Classifications	Description
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.

Classifications	Description
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2- site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.

Classifications	Description
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.

Classifications	Description
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file

Classifications	Description
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.11.1

5.11.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, MXNet, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- [Application versions in Amazon EMR 7.x releases]
- [Application versions in Amazon EMR 6.x releases]
- [Application versions in Amazon EMR 5.x releases]
- [Application versions in Amazon EMR 4.x releases]

Application version information

	emr-5.11.1	emr-5.11.0	emr-5.10.1	emr-5.10.0

5.11.1 release notes

The following release notes include information for the Amazon EMR 5.11.1 release. Changes are relative to the Amazon EMR 5.8.0 release.

Initial release date: January 22, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address vulnerabilities associated with speculative execution (CVE-2017-5715, CVE-2017-5753, and CVE-2017-5754). For more information, see https://aws.amazon.com/security/security-bulletins/AWS-2018-013/.

5.11.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
aws-sagemaker-spark-sdk	1.0	Amazon SageMaker Spark SDK
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.

Component	Version	Description
emr-s3-dist-cp	2.8.0	Distributed copy application optimized for Amazon S3.
emrfs	2.20.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.2	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-6	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-6	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-6	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-6	HDFS service for tracking file names and block locations.

Component	Version	Description
hadoop-httpfs-server	2.7.3-amzn-6	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-6	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-6	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-6	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-6	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-6	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.

Component	Version	Description
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.2-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.2-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.2-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.2-amzn-0	Hive command line client.
hive-hbase	2.3.2-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.2-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.2-amzn-0	Service for accepting Hive queries as web requests.
hue-server	4.0.1	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.

Component	Version	Description
mxnet	0.12.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.0.176	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.187	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.187	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.1	Spark command-line clients.

Component	Version	Description
spark-history-server	2.2.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.1	In-memory execution engine for YARN.
spark-yarn-slave	2.2.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.11.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.11.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.

Classifications	Description
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.

Classifications	Description
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.

Classifications	Description
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.

Classifications	Description
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.

Classifications	Description
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.11.0

5.11.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, MXNet, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases

- [Application versions in Amazon EMR 4.x releases]

Application version information

	emr-5.11.0	emr-5.10.1	emr-5.10.0	emr-5.9.1
AWS SDK for Java	1.11.238	1.11.221	1.11.221	1.11.183
Python	2.7, 3.4	2.7, 3.4	2.7, 3.4	Not tracked
Scala	2.11.8	2.11.8	2.11.8	2.11.8
AmazonCloudWatchAgent	-	-	-	-
Delta	-	-	-	-
Flink	1.3.2	1.3.2	1.3.2	1.3.2
Ganglia	3.7.2	3.7.2	3.7.2	3.7.2

ZooKeeper	3.4.10	3.4.10	3.4.10	3.4.10

5.11.0 release notes

The following release notes include information for the Amazon EMR release 5.11.0. Changes are relative to 5.10.0.

Upgrades

- Hive 2.3.2
- Spark 2.2.1

- SDK for Java 1.11.238

New features

- Spark
  - Added `spark.decommissioning.timeout.threshold` setting, which improves Spark decommissioning behavior when using Spot Instances. For more information, see Configuring node decommissioning behavior.
  - Added the `aws-sagemaker-spark-sdk` component to Spark, which installs Amazon SageMaker Spark and associated dependencies for Spark integration with Amazon SageMaker. You can use Amazon SageMaker Spark to construct Spark machine learning (ML) pipelines using Amazon SageMaker stages. For more information, see the SageMaker Spark Readme on GitHub and Using Apache Spark with Amazon SageMaker in the *Amazon SageMaker Developer Guide*.

Known issues

- MXNet does not include OpenCV libraries.
- Hive 2.3.2 sets `hive.compute.query.using.stats=true` by default. This causes queries to get data from existing statistics rather than directly from data, which could be confusing. For example, if you have a table with `hive.compute.query.using.stats=true` and upload new files to the table `LOCATION`, running a `SELECT COUNT(*)` query on the table returns the count from the statistics, rather than picking up the added rows.

  As a workaround, use the `ANALYZE TABLE` command to gather new statistics, or set `hive.compute.query.using.stats=false`. For more information, see Statistics in Hive in the Apache Hive documentation.

5.11.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
aws-sagemaker-spark-sdk	1.0	Amazon SageMaker Spark SDK
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.8.0	Distributed copy application optimized for Amazon S3.
emrfs	2.20.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.2	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.

Component	Version	Description
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-6	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-6	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-6	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-6	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-6	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-6	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-6	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-6	YARN service for managing containers on an individual node.

Component	Version	Description
hadoop-yarn-resour cemanager	2.7.3-amzn-6	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-6	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.2-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.2-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.2-amzn-0	HTTP endpoint providing a REST interface to HCatalog.

Component	Version	Description
hive-client	2.3.2-amzn-0	Hive command line client.
hive-hbase	2.3.2-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.2-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.2-amzn-0	Service for accepting Hive queries as web requests.
hue-server	4.0.1	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mxnet	0.12.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.0.176	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client

Component	Version	Description
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.187	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.187	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.1	Spark command-line clients.
spark-history-server	2.2.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.1	In-memory execution engine for YARN.
spark-yarn-slave	2.2.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.

Component	Version	Description
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.11.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.11.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.

Classifications	Description
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.

Classifications	Description
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.

Classifications	Description
hadoop-kms-env	Change values in the Hadoop KMS environment.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properties file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.properties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.

Classifications	Description
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.

Classifications	Description
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.10.1

5.10.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, MXNet, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.10.1	emr-5.10.0	emr-5.9.1	emr-5.9.0

5.10.1 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.10.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.7.0	Distributed copy application optimized for Amazon S3.
emrfs	2.20.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.2	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-5	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.3-amzn-5	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-5	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-5	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-5	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-5	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-5	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-5	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-5	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-5	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.1-amzn-0	Hive command line client.
hive-hbase	2.3.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.1-amzn-0	Service for accepting Hive queries as web requests.

Component	Version	Description
hue-server	4.0.1	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mxnet	0.12.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.0.176	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.187	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.187	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.0	Spark command-line clients.
spark-history-server	2.2.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.0	In-memory execution engine for YARN.
spark-yarn-slave	2.2.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.

Component	Version	Description
zookeeper-client	3.4.10	ZooKeeper command line client.

5.10.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.10.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.

zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.10.0

5.10.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, MXNet, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.10.0	emr-5.9.1	emr-5.9.0	emr-5.8.3
AWS SDK for Java	1.11.221	1.11.183	1.11.183	1.11.160
Python	2.7, 3.4	Not tracked	Not tracked	Not tracked
Scala	2.11.8	2.11.8	2.11.8	2.11.8
AmazonCloudWatchAgent	-	-	-	-
Delta	-	-	-	-
Flink	1.3.2	1.3.2	1.3.2	1.3.1
Ganglia	3.7.2	3.7.2	3.7.2	3.7.2
HBase	1.3.1	1.3.1	1.3.1	1.3.1
HCatalog	2.3.1	2.3.0	2.3.0	2.3.0
Hadoop	2.7.3	2.7.3	2.7.3	2.7.3
Hive	2.3.1	2.3.0	2.3.0	2.3.0
Hudi	-	-	-	-
Hue	4.0.1	4.0.1	4.0.1	3.12.0
Iceberg	-	-	-	-

	emr-5.10.0	emr-5.9.1	emr-5.9.0	emr-5.8.3
JupyterEnterpriseGateway	-	-	-	-
JupyterHub	-	-	-	-
Livy	0.4.0	0.4.0	0.4.0	-
MXNet	0.12.0	-	-	-
Mahout	0.13.0	0.13.0	0.13.0	0.13.0
Oozie	4.3.0	4.3.0	4.3.0	4.3.0
Phoenix	4.11.0	4.11.0	4.11.0	4.11.0
Pig	0.17.0	0.17.0	0.17.0	0.16.0
Presto	0.187	0.184	0.184	0.170
Spark	2.2.0	2.2.0	2.2.0	2.2.0
Sqoop	1.4.6	1.4.6	1.4.6	1.4.6
TensorFlow	-	-	-	-
Tez	0.8.4	0.8.4	0.8.4	0.8.4
Trino (PrestoSQL)	-	-	-	-
Zeppelin	0.7.3	0.7.2	0.7.2	0.7.2
ZooKeeper	3.4.10	3.4.10	3.4.10	3.4.10

5.10.0 release notes

The following release notes include information for the Amazon EMR version 5.10.0 release. Changes are relative to the Amazon EMR 5.9.0 release.

Upgrades

- AWS SDK for Java 1.11.221
- Hive 2.3.1
- Presto 0.187

New features

- Added support for Kerberos authentication. For more information, see Use Kerberos Authentication in the *Amazon EMR Management Guide*
- Added support for IAM roles for EMRFS. For more information, see Configure IAM Roles for EMRFS Requests to Amazon S3 in the *Amazon EMR Management Guide*
- Added support for GPU-based P2 and P3 instance types. For more information, see Amazon EC2 P2 Instances and Amazon EC2 P3 Instances. NVIDIA driver 384.81 and CUDA driver 9.0.176 are installed on these instance types by default.
- Added support for Apache MXNet.

Changes, enhancements, and resolved issues

- Presto
  - Added support for using the AWS Glue Data Catalog as the default Hive metastore. For more information, see Using Presto with the AWS Glue Data Catalog.
  - Added support for geospatial functions.
  - Added spill to disk support for joins.
  - Added support for the Redshift connector.
- Spark
  - Backported SPARK-20640, which makes the rpc timeout and the retries for shuffle registration values configurable using `spark.shuffle.registration.timeout` and `spark.shuffle.registration.maxAttempts` properties.
  - Backported SPARK-21549, which corrects an error that occurs when writing custom OutputFormat to non-HDFS locations.
- Backported Hadoop-13270

- The Numpy, Scipy, and Matplotlib libraries have been removed from the base Amazon EMR AMI. If these libraries are required for your application, they are available in the application repository, so you can use a bootstrap action to install them on all nodes using `yum install`.
- The Amazon EMR base AMI no longer has application RPM packages included, so the RPM packages are no longer present on cluster nodes. Custom AMIs and the Amazon EMR base AMI now reference the RPM package repository in Amazon S3.
- Because of the introduction of per-second billing in Amazon EC2, the default **Scale down behavior** is now **Terminate at task completion** rather than **Terminate at instance hour**. For more information, see Configure Cluster Scale-Down.

Known issues

- MXNet does not include OpenCV libraries.
- Hive 2.3.1 sets `hive.compute.query.using.stats=true` by default. This causes queries to get data from existing statistics rather than directly from data, which could be confusing. For example, if you have a table with `hive.compute.query.using.stats=true` and upload new files to the table `LOCATION`, running a `SELECT COUNT(*)` query on the table returns the count from the statistics, rather than picking up the added rows.

  As a workaround, use the `ANALYZE TABLE` command to gather new statistics, or set `hive.compute.query.using.stats=false`. For more information, see Statistics in Hive in the Apache Hive documentation.

5.10.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.5.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.7.0	Distributed copy application optimized for Amazon S3.
emrfs	2.20.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.2	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-5	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.3-amzn-5	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-5	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-5	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-5	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-5	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-5	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-5	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-5	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-5	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.1-amzn-0	Hive command line client.
hive-hbase	2.3.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.1-amzn-0	Service for accepting Hive queries as web requests.

Component	Version	Description
hue-server	4.0.1	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mxnet	0.12.0	A flexible, scalable, and efficient library for deep learning.
mysql-server	5.5.54+	MySQL database server.
nvidia-cuda	9.0.176	Nvidia drivers and Cuda toolkit
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.187	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.187	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.0	Spark command-line clients.
spark-history-server	2.2.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.0	In-memory execution engine for YARN.
spark-yarn-slave	2.2.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.3	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.

Component	Version	Description
zookeeper-client	3.4.10	ZooKeeper command line client.

5.10.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.10.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration

Classifications	Description
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.

Classifications	Description
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2- site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.

Classifications	Description
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.

Classifications	Description
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file

Classifications	Description
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.9.1

5.9.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases

- Application versions in Amazon EMR 6.x releases

5.9.1 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.9.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.4.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.7.0	Distributed copy application optimized for Amazon S3.

Component	Version	Description
emrfs	2.19.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.2	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-4	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-4	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-4	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-4	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-4	HTTP endpoint for HDFS operations.

Component	Version	Description
hadoop-kms-server	2.7.3-amzn-4	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-4	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-4	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-4	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-4	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.

Component	Version	Description
hcatalog-client	2.3.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.0-amzn-0	Hive command line client.
hive-hbase	2.3.0-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	4.0.1	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.

Component	Version	Description
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.184	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.184	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.0	Spark command-line clients.
spark-history-server	2.2.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.0	In-memory execution engine for YARN.
spark-yarn-slave	2.2.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.

Component	Version	Description
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.9.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.9.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.

Classifications	Description
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.

Classifications	Description
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.

Classifications	Description
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.

Classifications	Description
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.

Classifications	Description
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.

Classifications	Description
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.9.0

5.9.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Livy, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.9.0	emr-5.8.3	emr-5.8.2	emr-5.8.1
AWS SDK for Java	1.11.183	1.11.160	1.11.160	1.11.160
Python	Not tracked	Not tracked	Not tracked	Not tracked
Scala	2.11.8	2.11.8	2.11.8	2.11.8
AmazonCloudWatchAgent	-	-	-	-
Delta	-	-	-	-

	emr-5.9.0	emr-5.8.3	emr-5.8.2	emr-5.8.1
Flink	1.3.2	1.3.1	1.3.1	1.3.1
Ganglia	3.7.2	3.7.2	3.7.2	3.7.2
HBase	1.3.1	1.3.1	1.3.1	1.3.1
HCatalog	2.3.0	2.3.0	2.3.0	2.3.0
Hadoop	2.7.3	2.7.3	2.7.3	2.7.3
Hive	2.3.0	2.3.0	2.3.0	2.3.0
Hudi	-	-	-	-
Hue	4.0.1	3.12.0	3.12.0	3.12.0
Iceberg	-	-	-	-
JupyterEnterpriseGateway	-	-	-	-
JupyterHub	-	-	-	-
Livy	0.4.0	-	-	-
MXNet	-	-	-	-
Mahout	0.13.0	0.13.0	0.13.0	0.13.0
Oozie	4.3.0	4.3.0	4.3.0	4.3.0
Phoenix	4.11.0	4.11.0	4.11.0	4.11.0
Pig	0.17.0	0.16.0	0.16.0	0.16.0
Presto	0.184	0.170	0.170	0.170
Spark	2.2.0	2.2.0	2.2.0	2.2.0
Sqoop	1.4.6	1.4.6	1.4.6	1.4.6

	emr-5.9.0	emr-5.8.3	emr-5.8.2	emr-5.8.1
TensorFlow	-	-	-	-
Tez	0.8.4	0.8.4	0.8.4	0.8.4
Trino (PrestoSQL)	-	-	-	-
Zeppelin	0.7.2	0.7.2	0.7.2	0.7.2
ZooKeeper	3.4.10	3.4.10	3.4.10	3.4.10

5.9.0 release notes

The following release notes include information for the Amazon EMR version 5.9.0 release. Changes are relative to the Amazon EMR 5.8.0 release.

Release date: October 5, 2017

Latest feature update: October 12, 2017

Upgrades

- AWS SDK for Java version 1.11.183
- Flink 1.3.2
- Hue 4.0.1
- Pig 0.17.0
- Presto 0.184

New features

- Added Livy support (version 0.4.0-incubating). For more information, see Apache Livy.
- Added support for Hue Notebook for Spark.
- Added support for i3-series Amazon EC2 instances (October 12, 2017).

Changes, enhancements, and resolved issues

- Spark
  - Added a new set of features that help ensure Spark handles node termination because of a manual resize or an automatic scaling policy request more gracefully. For more information, see Configuring node decommissioning behavior.
  - SSL is used instead of 3DES for in-transit encryption for the block transfer service, which enhances performance when using Amazon EC2 instance types with AES-NI.
  - Backported SPARK-21494.
- Zeppelin
  - Backported ZEPPELIN-2377.
- HBase
  - Added patch HBASE-18533, which allows additional values for HBase BucketCache configuration using the `hbase-site` configuration classification.
- Hue
  - Added AWS Glue Data Catalog support for the Hive query editor in Hue.
  - By default, superusers in Hue can access all files that Amazon EMR IAM roles are allowed to access. Newly created users do not automatically have permissions to access the Amazon S3 filebrowser and must have the `filebrowser.s3_access` permissions enabled for their group.
- Resolved an issue that caused underlying JSON data created using AWS Glue Data Catalog to be inaccessible.

Known issues

- Cluster launch fails when all applications are installed and the default Amazon EBS root volume size is not changed. As a workaround, use the `aws emr create-cluster` command from the AWS CLI and specify a larger `--ebs-root-volume-size` parameter.
- Hive 2.3.0 sets `hive.compute.query.using.stats=true` by default. This causes queries to get data from existing statistics rather than directly from data, which could be confusing. For example, if you have a table with `hive.compute.query.using.stats=true` and upload new files to the table `LOCATION`, running a `SELECT COUNT(*)` query on the table returns the count from the statistics, rather than picking up the added rows.

As a workaround, use the `ANALYZE TABLE` command to gather new statistics, or set `hive.compute.query.using.stats=false`. For more information, see Statistics in Hive in the Apache Hive documentation.

5.9.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.4.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.7.0	Distributed copy application optimized for Amazon S3.
emrfs	2.19.0	Amazon S3 connector for Hadoop ecosystem applicati ons.

Component	Version	Description
flink-client	1.3.2	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-4	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-4	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-4	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-4	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-4	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-4	Cryptographic key management server based on Hadoop's KeyProvider API.

Component	Version	Description
hadoop-mapred	2.7.3-amzn-4	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-4	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-4	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-4	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.

Component	Version	Description
hcatalog-server	2.3.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.0-amzn-0	Hive command line client.
hive-hbase	2.3.0-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	4.0.1	Web application for analyzing data using Hadoop ecosystem applications
livy-server	0.4.0-incubating	REST interface for interacting with Apache Spark
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.

Component	Version	Description
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.184	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.184	Service for executing pieces of a query.
pig-client	0.17.0	Pig command-line client.
spark-client	2.2.0	Spark command-line clients.
spark-history-server	2.2.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.0	In-memory execution engine for YARN.
spark-yarn-slave	2.2.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.

Component	Version	Description
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.9.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.9.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.

Classifications	Description
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.

Classifications	Description
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.

Classifications	Description
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
livy-conf	Change values in Livy's livy.conf file.
livy-env	Change values in the Livy environment.
livy-log4j	Change Livy log4j.properties settings.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.

Classifications	Description
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.properties file.

Classifications	Description
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.

Classifications	Description
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.8.3

5.8.3 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

5.8.3 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.8.3 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.4.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.6.0	Distributed copy application optimized for Amazon S3.
emrfs	2.18.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.1	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-3	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.3-amzn-3	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-3	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-3	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-3	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-3	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.0-amzn-0	Hive command line client.
hive-hbase	2.3.0-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.0-amzn-0	Service for accepting Hive queries as web requests.

Component	Version	Description
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-1	Pig command-line client.
spark-client	2.2.0	Spark command-line clients.
spark-history-server	2.2.0	Web UI for viewing logged events for the lifetime of a completed Spark application.

Component	Version	Description
spark-on-yarn	2.2.0	In-memory execution engine for YARN.
spark-yarn-slave	2.2.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.8.3 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.8.3 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.

Classifications	Description
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.

Classifications	Description
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.

Classifications	Description
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.

Classifications	Description
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.properties file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.

Classifications	Description
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.8.2

5.8.2 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

5.8.2 release notes

The following release notes include information for Amazon EMR release 5.8.2. Changes are relative to 5.8.1.

Initial release date: March 29, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address potential vulnerabilities.

5.8.2 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
emr-ddb	4.4.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.6.0	Distributed copy application optimized for Amazon S3.
emrfs	2.18.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.1	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.

Component	Version	Description
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-3	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-3	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-3	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-3	YARN service for managing containers on an individual node.
hadoop-yarn-resourcemanager	2.7.3-amzn-3	YARN service for allocating and managing cluster resources and distributed applications.

Component	Version	Description
hadoop-yarn-timeline-server	2.7.3-amzn-3	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.0-amzn-0	Hive command line client.
hive-hbase	2.3.0-amzn-0	Hive-hbase client.

Component	Version	Description
hive-metastore-server	2.3.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-1	Pig command-line client.
spark-client	2.2.0	Spark command-line clients.
spark-history-server	2.2.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.0	In-memory execution engine for YARN.
spark-yarn-slave	2.2.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.

Component	Version	Description
zookeeper-client	3.4.10	ZooKeeper command line client.

5.8.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.8.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration

Classifications	Description
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.

Classifications	Description
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.

Classifications	Description
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.

Classifications	Description
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.

Classifications	Description
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.8.1

5.8.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.8.1	emr-5.8.0	emr-5.7.1	emr-5.7.0

5.8.1 release notes

The following release notes include information for the Amazon EMR 5.8.1 release. Changes are relative to the Amazon EMR 5.8.0 release.

Initial release date: January 22, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address vulnerabilities associated with speculative execution (CVE-2017-5715, CVE-2017-5753, and CVE-2017-5754). For more information, see https://aws.amazon.com/security/security-bulletins/AWS-2018-013/.

5.8.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.4.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.6.0	Distributed copy application optimized for Amazon S3.
emrfs	2.18.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.1	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati

Component	Version	Description
		ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-3	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-3	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-3	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.7.3-amzn-3	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-3	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-3	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.

Component	Version	Description
hcatalog-webhcat-server	2.3.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.0-amzn-0	Hive command line client.
hive-hbase	2.3.0-amzn-0	Hive-hbase client.
hive-metastore-server	2.3.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API

Component	Version	Description
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-1	Pig command-line client.
spark-client	2.2.0	Spark command-line clients.
spark-history-server	2.2.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.0	In-memory execution engine for YARN.
spark-yarn-slave	2.2.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.2	Web-based notebook that enables interactive data analytics.

Component	Version	Description
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.8.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.8.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.

Classifications	Description
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.

Classifications	Description
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.

Classifications	Description
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.

Classifications	Description
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.8.0

5.8.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.8.0	emr-5.7.1	emr-5.7.0	emr-5.6.1

ZooKeeper	3.4.10	3.4.10	3.4.10	3.4.10

5.8.0 release notes

The following release notes include information for the Amazon EMR version 5.8.0 release. Changes are relative to the Amazon EMR 5.7.0 release.

Initial release date: August 10, 2017

Latest feature update: September 25, 2017

Upgrades

- AWS SDK 1.11.160
- Flink 1.3.1
- Hive 2.3.0. For more information, see Release Notes on the Apache Hive site.
- Spark 2.2.0. For more information, see Release Notes on the Apache Spark site.

New features

- Added support for viewing application history (September 25, 2017). For more information, see Viewing Application History in the *Amazon EMR Management Guide*.

Changes, enhancements, and resolved issues

- **Integration with AWS Glue Data Catalog**
  - Added ability for Hive and Spark SQL to use AWS Glue Data Catalog as the Hive metadata store. For more information, see Using the AWS Glue Data Catalog as the metastore for Hive and Use the AWS Glue Data Catalog as the metastore for Spark SQL.
- Added **Application history** to cluster details, which allows you to view historical data for YARN applications and additional details for Spark applications. For more information, see View Application History in the *Amazon EMR Management Guide*.
- **Oozie**
  - Backported OOZIE-2748.
- **Hue**
  - Backported HUE-5859
- **HBase**

- Added patch to expose the HBase master server start time through Java Management Extensions (JMX) using `getMasterInitializedTime`.
- Added patch that improves cluster start time.

Known issues

- Cluster launch fails when all applications are installed and the default Amazon EBS root volume size is not changed. As a workaround, use the `aws emr create-cluster` command from the AWS CLI and specify a larger `--ebs-root-volume-size` parameter.
- Hive 2.3.0 sets `hive.compute.query.using.stats=true` by default. This causes queries to get data from existing statistics rather than directly from data, which could be confusing. For example, if you have a table with `hive.compute.query.using.stats=true` and upload new files to the table `LOCATION`, running a `SELECT COUNT(*)` query on the table returns the count from the statistics, rather than picking up the added rows.

  As a workaround, use the `ANALYZE TABLE` command to gather new statistics, or set `hive.compute.query.using.stats=false`. For more information, see Statistics in Hive in the Apache Hive documentation.
- **Spark**—When using Spark, there is a file handler leak issue with the apppusher daemon, which can appear for a long-running Spark job after several hours or days. To fix the issue, connect to the primary node and type `sudo /etc/init.d/apppusher stop`. This stops that apppusher daemon, which Amazon EMR will restart automatically.
- **Application history**
  - Historical data for dead Spark executors is not available.
  - Application history is not available for clusters that use a security configuration to enable in-flight encryption.

5.8.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
emr-ddb	4.4.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.4.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.4.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.6.0	Distributed copy application optimized for Amazon S3.
emrfs	2.18.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.1	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.

Component	Version	Description
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-3	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-3	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-3	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-3	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-3	YARN service for allocatin g and managing cluster resources and distributed applications.

Component	Version	Description
hadoop-yarn-timeline-server	2.7.3-amzn-3	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.3.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.3.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.3.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.3.0-amzn-0	Hive command line client.
hive-hbase	2.3.0-amzn-0	Hive-hbase client.

Component	Version	Description
hive-metastore-server	2.3.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.3.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-1	Pig command-line client.
spark-client	2.2.0	Spark command-line clients.
spark-history-server	2.2.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.2.0	In-memory execution engine for YARN.
spark-yarn-slave	2.2.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.

Component	Version	Description
zookeeper-client	3.4.10	ZooKeeper command line client.

5.8.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see [Configure applications](#).

emr-5.8.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration

Classifications	Description
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.

Classifications	Description
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.

Classifications	Description
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.

Classifications	Description
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.

Classifications	Description
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.7.1

5.7.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.7.1	emr-5.7.0	emr-5.6.1	emr-5.6.0

ZooKeeper	3.4.10	3.4.10	3.4.10	3.4.10

5.7.1 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.7.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.5.0	Distributed copy application optimized for Amazon S3.
emrfs	2.18.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati

Component	Version	Description
		ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.

Component	Version	Description
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API

Component	Version	Description
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.1	Spark command-line clients.
spark-history-server	2.1.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.1	In-memory execution engine for YARN.
spark-yarn-slave	2.1.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.2	Web-based notebook that enables interactive data analytics.

Component	Version	Description
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.7.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.7.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.

Classifications	Description
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.

Classifications	Description
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.

Classifications	Description
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.

Classifications	Description
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.7.0

5.7.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

5.7.0 release notes

The following release notes include information for the Amazon EMR 5.7.0 release. Changes are relative to the Amazon EMR 5.6.0 release.

Release date: July 13, 2017

Upgrades

- Flink 1.3.0
- Phoenix 4.11.0
- Zeppelin 0.7.2

New features

- Added the ability to specify a customAmazon Linux AMI when you create a cluster. For more information, see Using a Custom AMI.

Changes, enhancements, and resolved issues

- **HBase**
  - Added capability to configure HBase read-replica clusters. See Using a Read-Replica Cluster.
  - Multiple bug fixes and enhancements
- **Presto** - added ability to configure `node.properties`.
- **YARN** - added ability to configure `container-log4j.properties`
- **Sqoop** - backported SQOOP-2880, which introduces an argument that allows you to set the Sqoop temporary directory.

5.7.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.5.0	Distributed copy application optimized for Amazon S3.
emrfs	2.18.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.3.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.

Component	Version	Description
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.

Component	Version	Description
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.

Component	Version	Description
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.11.0-HBase-1.3	The phoenix libraries for server and client
phoenix-query-server	4.11.0-HBase-1.3	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.1	Spark command-line clients.
spark-history-server	2.1.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.1	In-memory execution engine for YARN.
spark-yarn-slave	2.1.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.

Component	Version	Description
zookeeper-client	3.4.10	ZooKeeper command line client.

5.7.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see [Configure applications](#).

emr-5.7.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration

Classifications	Description
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.properties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hbase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.properties file.

Classifications	Description
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.

Classifications	Description
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.

Classifications	Description
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.

Classifications	Description
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.6.1

5.6.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

5.6.1 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

Important

In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.6.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.5.0	Distributed copy application optimized for Amazon S3.
emrfs	2.17.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.2.1	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati

Component	Version	Description
		ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.

Component	Version	Description
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.9.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.9.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API

Component	Version	Description
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.1	Spark command-line clients.
spark-history-server	2.1.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.1	In-memory execution engine for YARN.
spark-yarn-slave	2.1.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.1	Web-based notebook that enables interactive data analytics.

Component	Version	Description
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.6.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.6.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.

Classifications	Description
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.

Classifications	Description
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.

Classifications	Description
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.

Classifications	Description
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.6.0

5.6.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

5.6.0 release notes

The following release notes include information for the Amazon EMR 5.6.0 release. Changes are relative to the Amazon EMR 5.5.0 release.

Release date: June 5, 2017

Upgrades

- Flink 1.2.1
- HBase 1.3.1
- Mahout 0.13.0. This is the first version of Mahout to support Spark 2.x in Amazon EMR version 5.0 and later.
- Spark 2.1.1

Changes, enhancements, and resolved issues

- **Presto**
  - Added the ability to enable SSL/TLS secured communication between Presto nodes by enabling in-transit encryption using a security configuration. For more information, see In-transit Data Encryption.
  - Backported Presto 7661, which adds the `VERBOSE` option to the `EXPLAIN ANALYZE` statement to report more detailed, low-level statistics about a query plan.

5.6.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.5.0	Distributed copy application optimized for Amazon S3.
emrfs	2.17.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.2.1	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.3.1	Service for serving one or more HBase regions.
hbase-client	1.3.1	HBase command-line client.
hbase-rest-server	1.3.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.

Component	Version	Description
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.13.0	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.9.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.9.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.1	Spark command-line clients.
spark-history-server	2.1.1	Web UI for viewing logged events for the lifetime of a completed Spark application.

Component	Version	Description
spark-on-yarn	2.1.1	In-memory execution engine for YARN.
spark-yarn-slave	2.1.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.6.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.6.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb ase.properties file.

Classifications	Description
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.

Classifications	Description
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.

Classifications	Description
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-env	Change values in Presto's presto-env.sh file.
presto-node	Change values in Presto's node.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.

Classifications	Description
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.properties file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.

Classifications	Description
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.5.4

5.5.4 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

5.5.4 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.5.4 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0.

For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.5.0	Distributed copy application optimized for Amazon S3.
emrfs	2.16.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.2.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.

Component	Version	Description
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.

Component	Version	Description
hbase-hmaster	1.3.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.0	Service for serving one or more HBase regions.
hbase-client	1.3.0	HBase command-line client.
hbase-rest-server	1.3.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.

Component	Version	Description
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.9.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.9.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.

Component	Version	Description
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.0	In-memory execution engine for YARN.
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.5.4 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.5.4 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.

Classifications	Description
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.

Classifications	Description
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.

Classifications	Description
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.

Classifications	Description
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.

Classifications	Description
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.5.3

5.5.3 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

5.5.3 release notes

The following release notes include information for Amazon EMR release 5.5.3. Changes are relative to 5.5.2.

Initial release date: August 29, 2018

Changes, enhancements, and resolved issues

- This release addresses a potential security vulnerability.

5.5.3 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the

most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.5.0	Distributed copy application optimized for Amazon S3.
emrfs	2.16.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.2.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.

Component	Version	Description
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.

Component	Version	Description
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.0	Service for serving one or more HBase regions.
hbase-client	1.3.0	HBase command-line client.
hbase-rest-server	1.3.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.

Component	Version	Description
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.9.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.9.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API

Component	Version	Description
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.0	In-memory execution engine for YARN.
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.1	Web-based notebook that enables interactive data analytics.

Component	Version	Description
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.5.3 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.5.3 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.

Classifications	Description
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.

Classifications	Description
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.

Classifications	Description
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.properties file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file

Classifications	Description
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.5.2

5.5.2 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases

- [Application versions in Amazon EMR 6.x releases]
- [Application versions in Amazon EMR 5.x releases]
- [Application versions in Amazon EMR 4.x releases]

5.5.2 release notes

The following release notes include information for Amazon EMR release 5.5.2. Changes are relative to 5.5.1.

Initial release date: March 29, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address potential vulnerabilities.

5.5.2 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.5.0	Distributed copy application optimized for Amazon S3.
emrfs	2.16.0	Amazon S3 connector for Hadoop ecosystem applicati ons.

Component	Version	Description
flink-client	1.2.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.

Component	Version	Description
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.0	Service for serving one or more HBase regions.
hbase-client	1.3.0	HBase command-line client.
hbase-rest-server	1.3.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.

Component	Version	Description
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.9.0-HBase-1.2	The phoenix libraries for server and client

Component	Version	Description
phoenix-query-server	4.9.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.0	In-memory execution engine for YARN.
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.

Component	Version	Description
zeppelin-server	0.7.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.5.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.5.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.

Classifications	Description
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.

Classifications	Description
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.

Classifications	Description
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.

Classifications	Description
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.

Classifications	Description
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.5.1

5.5.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.5.1	emr-5.5.0	emr-5.4.1	emr-5.4.0

5.5.1 release notes

The following release notes include information for the Amazon EMR 5.5.1 release. Changes are relative to the Amazon EMR 5.5.0 release.

Initial release date: January 22, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address vulnerabilities associated with speculative execution (CVE-2017-5715, CVE-2017-5753, and CVE-2017-5754). For more information, see https://aws.amazon.com/security/security-bulletins/AWS-2018-013/.

5.5.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.

Component	Version	Description
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.5.0	Distributed copy application optimized for Amazon S3.
emrfs	2.16.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.2.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library

Component	Version	Description
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.0	Service for serving one or more HBase regions.
hbase-client	1.3.0	HBase command-line client.

Component	Version	Description
hbase-rest-server	1.3.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.

Component	Version	Description
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.9.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.9.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.0	In-memory execution engine for YARN.
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.

Component	Version	Description
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.5.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.5.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.

Classifications	Description
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.

Classifications	Description
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file

Classifications	Description
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.

Classifications	Description
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.

Classifications	Description
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.5.0

5.5.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

ZooKeeper	3.4.10	3.4.9	3.4.9	3.4.9

5.5.0 release notes

The following release notes include information for the Amazon EMR 5.5.0 release. Changes are relative to the Amazon EMR 5.4.0 release.

Release date: April 26, 2017

Upgrades

- Hue 3.12
- Presto 0.170
- Zeppelin 0.7.1
- ZooKeeper 3.4.10

Changes, enhancements, and resolved issues

- **Spark**
  - Backported Spark Patch (SPARK-20115) Fix DAGScheduler to recompute all the lost shuffle blocks when external shuffle service is unavailable to version 2.1.0 of Spark, which is included in this release.
- **Flink**
  - Flink is now built with Scala 2.11. If you use the Scala API and libraries, we recommend that you use Scala 2.11 in your projects.
  - Addressed an issue where `HADOOP_CONF_DIR` and `YARN_CONF_DIR` defaults were not properly set, so `start-scala-shell.sh` failed to work. Also added the ability to set these values using `env.hadoop.conf.dir` and `env.yarn.conf.dir` in `/etc/flink/conf/flink-conf.yaml` or the `flink-conf` configuration classification.

  - Introduced a new EMR-specific command, `flink-scala-shell` as a wrapper for `start-scala-shell.sh`. We recommend using this command instead of `start-scala-shell`. The new command simplifies execution. For example, `flink-scala-shell -n 2` starts a Flink Scala shell with a task parallelism of 2.
  - Introduced a new EMR-specific command, `flink-yarn-session` as a wrapper for `yarn-session.sh`. We recommend using this command instead of `yarn-session`. The new command simplifies execution. For example, `flink-yarn-session -d -n 2` starts a long-running Flink session in a detached state with two task managers.
  - Addressed [(FLINK-6125) Commons httpclient is not shaded anymore in Flink 1.2](#).
- **Presto**
  - Added support for LDAP authentication. Using LDAP with Presto on Amazon EMR requires that you enable HTTPS access for the Presto coordinator (`http-server.https.enabled=true` in `config.properties`). For configuration details, see [LDAP Authentication](#) in Presto documentation.
  - Added support for `SHOW GRANTS`.
- **Amazon EMR Base Linux AMI**
  - Amazon EMR releases are now based on Amazon Linux 2017.03. For more information, see [Amazon Linux AMI 2017.03 Release Notes](#).
  - Removed Python 2.6 from the Amazon EMR base Linux image. Python 2.7 and 3.4 are installed by default. You can install Python 2.6 manually if necessary.

5.5.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.5.0	Distributed copy application optimized for Amazon S3.
emrfs	2.16.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.2.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.3.0	Service for serving one or more HBase regions.
hbase-client	1.3.0	HBase command-line client.
hbase-rest-server	1.3.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.

Component	Version	Description
hue-server	3.12.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.9.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.9.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.170	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.170	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.

Component	Version	Description
spark-on-yarn	2.1.0	In-memory execution engine for YARN.
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.10	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.10	ZooKeeper command line client.

5.5.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.5.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.

Classifications	Description
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.

Classifications	Description
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environment.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properties file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.properties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.

Classifications	Description
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.

Classifications	Description
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.

Classifications	Description
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.4.1

5.4.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.4.1	emr-5.4.0	emr-5.3.2	emr-5.3.1

ZooKeeper	3.4.9	3.4.9	3.4.9	3.4.9

5.4.1 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.4.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.15.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.2.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.3.0	Service for serving one or more HBase regions.
hbase-client	1.3.0	HBase command-line client.
hbase-rest-server	1.3.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.

Component	Version	Description
hue-server	3.11.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.9.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.9.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.166	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.166	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.

Component	Version	Description
spark-on-yarn	2.1.0	In-memory execution engine for YARN.
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.0	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

5.4.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.4.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.

Classifications	Description
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.

Classifications	Description
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environment.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properties file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.properties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.

Classifications	Description
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.

Classifications	Description
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.

Classifications	Description
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.4.0

5.4.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

5.4.0 release notes

The following release notes include information for the Amazon EMR 5.4.0 release. Changes are relative to the Amazon EMR 5.3.0 release.

Release date: March 08, 2017

Upgrades

- Upgraded to Flink 1.2.0
- Upgraded to HBase 1.3.0
- Upgraded to Phoenix 4.9.0

> **Note**
>
> If you upgrade from an earlier version of Amazon EMR to Amazon EMR version 5.4.0 or later and use secondary indexing, upgrade local indexes as described in the [Apache Phoenix documentation](). Amazon EMR removes the required configurations from the `hbase-site` classification, but indexes need to be repopulated. Online and offline upgrade of indexes are supported. Online upgrades are the default, which means indexes are repopulated while initializing from Phoenix clients of version 4.8.0 or greater. To specify offline upgrades, set the `phoenix.client.localIndexUpgrade` configuration to false in the `phoenix-site` classification, and then SSH to the primary node to run `psql [zookeeper] -1`.

- Upgraded to Presto 0.166

- Upgraded to Zeppelin 0.7.0

Changes and enhancements

- Added support for r4 instances. See Amazon EC2 Instance Types.

5.4.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.3.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.

Component	Version	Description
emrfs	2.15.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.2.0	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.

Component	Version	Description
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.3.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.3.0	Service for serving one or more HBase regions.
hbase-client	1.3.0	HBase command-line client.
hbase-rest-server	1.3.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.3.0	Service providing a Thrift endpoint to HBase.

Component	Version	Description
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-hbase	2.1.1-amzn-0	Hive-hbase client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server2	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.11.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.

Component	Version	Description
phoenix-library	4.9.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.9.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.166	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.166	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.0	In-memory execution engine for YARN.
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.

Component	Version	Description
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.7.0	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

5.4.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.4.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.

Classifications	Description
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.

Classifications	Description
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.

Classifications	Description
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.

Classifications	Description
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.

Classifications	Description
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.3.2

5.3.2 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

5.3.2 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.3.2 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.

Component	Version	Description
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.14.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.1.4	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.

Component	Version	Description
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.3	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.3	Service for serving one or more HBase regions.
hbase-client	1.2.3	HBase command-line client.
hbase-rest-server	1.2.3	Service providing a RESTful HTTP endpoint for HBase.

Component	Version	Description
hbase-thrift-server	1.2.3	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.11.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.

Component	Version	Description
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.0	In-memory execution engine for YARN.
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.

Component	Version	Description
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.6.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

5.3.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.3.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.

Classifications	Description
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.

Classifications	Description
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.

Classifications	Description
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.

Classifications	Description
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.

Classifications	Description
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.3.1

5.3.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

5.3.1 release notes

The following release notes include information for the Amazon EMR 5.3.1 release. Changes are relative to the Amazon EMR 5.3.0 release.

Release date: February 7, 2017

Minor changes to backport Zeppelin patches and update the default AMI for Amazon EMR.

5.3.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.

Component	Version	Description
emrfs	2.14.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.1.4	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.

Component	Version	Description
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.3	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.3	Service for serving one or more HBase regions.
hbase-client	1.2.3	HBase command-line client.
hbase-rest-server	1.2.3	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.3	Service providing a Thrift endpoint to HBase.

Component	Version	Description
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.11.0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.

Component	Version	Description
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.0	In-memory execution engine for YARN.
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.

Component	Version	Description
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.6.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

5.3.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.3.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.

Classifications	Description
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.

Classifications	Description
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.

Classifications	Description
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.

Classifications	Description
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.

Classifications	Description
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.3.0

5.3.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.3.0	**emr-5.2.3**	**emr-5.2.2**	**emr-5.2.1**

5.3.0 release notes

The following release notes include information for the Amazon EMR 5.3.0 release. Changes are relative to the Amazon EMR 5.2.1 release.

Release date: January 26, 2017

Upgrades

- Upgraded to Hive 2.1.1
- Upgraded to Hue 3.11.0
- Upgraded to Spark 2.1.0
- Upgraded to Oozie 4.3.0
- Upgraded to Flink 1.1.4

Changes and enhancements

- Added a patch to Hue that allows you to use the `interpreters_shown_on_wheel` setting to configure what interpreters to show first on the Notebook selection wheel, regardless of their ordering in the `hue.ini` file.
- Added the `hive-parquet-logging` configuration classification, which you can use to configure values in the Hive `parquet-logging.properties` file.

5.3.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.14.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.1.4	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.3	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.2.3	Service for serving one or more HBase regions.
hbase-client	1.2.3	HBase command-line client.
hbase-rest-server	1.2.3	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.3	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.1-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.1-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.1-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.1-amzn-0	Hive command line client.
hive-metastore-server	2.1.1-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.1-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.11.0	Web application for analyzing data using Hadoop ecosystem applications

Component	Version	Description
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.52	MySQL database server.
oozie-client	4.3.0	Oozie command-line client.
oozie-server	4.3.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.1.0	Spark command-line clients.
spark-history-server	2.1.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.1.0	In-memory execution engine for YARN.

Component	Version	Description
spark-yarn-slave	2.1.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.6.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

5.3.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.3.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.

Classifications	Description
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.

Classifications	Description
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-parquet-logging	Change values in Hive's parquet-logging.pr operties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file

Classifications	Description
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.

Classifications	Description
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.

Classifications	Description
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.2.3

5.2.3 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

ZooKeeper	3.4.9	3.4.9	3.4.9	3.4.8

5.2.3 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.2.3 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.13.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.1.3	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.3	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.2.3	Service for serving one or more HBase regions.
hbase-client	1.2.3	HBase command-line client.
hbase-rest-server	1.2.3	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.3	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications

Component	Version	Description
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.52	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.2	Spark command-line clients.
spark-history-server	2.0.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.2	In-memory execution engine for YARN.

Component	Version	Description
spark-yarn-slave	2.0.2	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

5.2.3 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.2.3 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.

Classifications	Description
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.

Classifications	Description
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file

Classifications	Description
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.

Classifications	Description
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.

Classifications	Description
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.2.2

5.2.2 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

5.2.2 release notes

The following release notes include information for the Amazon EMR 5.2.2 release. Changes are relative to the Amazon EMR 5.2.1 release.

Release date: May 2, 2017

Known issues resolved from previous releases

- Backported SPARK-194459, which addresses an issue where reading from an ORC table with char/varchar columns can fail.

5.2.2 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.

Component	Version	Description
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.13.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.1.3	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.

Component	Version	Description
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.3	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.3	Service for serving one or more HBase regions.
hbase-client	1.2.3	HBase command-line client.
hbase-rest-server	1.2.3	Service providing a RESTful HTTP endpoint for HBase.

Component	Version	Description
hbase-thrift-server	1.2.3	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.52	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.

Component	Version	Description
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.2	Spark command-line clients.
spark-history-server	2.0.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.2	In-memory execution engine for YARN.
spark-yarn-slave	2.0.2	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.

Component	Version	Description
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

5.2.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.2.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.

Classifications	Description
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.

Classifications	Description
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.

Classifications	Description
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.

Classifications	Description
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.

Classifications	Description
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.2.1

5.2.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.2.1	**emr-5.2.0**	**emr-5.1.1**	**emr-5.1.0**
AWS SDK for Java	1.10.75	1.10.75	1.10.75	1.10.75
Python	Not tracked	Not tracked	Not tracked	Not tracked
Scala	2.11.8	2.11.8	2.11.8	2.11.8
AmazonCloudWatchAgent	-	-	-	-
Delta	-	-	-	-
Flink	1.1.3	1.1.3	1.1.3	1.1.3
Ganglia	3.7.2	3.7.2	3.7.2	3.7.2
HBase	1.2.3	1.2.3	1.2.3	1.2.3

ZooKeeper	3.4.9	3.4.8	3.4.8	3.4.8

5.2.1 release notes

The following release notes include information for the Amazon EMR 5.2.1 release. Changes are relative to the Amazon EMR 5.2.0 release.

Release date: December 29, 2016

Upgrades

- Upgraded to Presto 0.157.1. For more information, see Presto Release Notes in the Presto documentation.
- Upgraded to Zookeeper 3.4.9. For more information, see ZooKeeper Release Notes in the Apache ZooKeeper documentation.

Changes and enhancements

- Added support for the Amazon EC2 m4.16xlarge instance type in Amazon EMR version 4.8.3 and later, excluding 5.0.0, 5.0.3, and 5.2.0.
- Amazon EMR releases are now based on Amazon Linux 2016.09. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.09-release-notes/.
- The location of Flink and YARN configuration paths are now set by default in `/etc/default/flink` that you do not need to set the environment variables `FLINK_CONF_DIR` and `HADOOP_CONF_DIR` when running the `flink` or `yarn-session.sh` driver scripts to launch Flink jobs.
- Added support for FlinkKinesisConsumer class.

Known issues resolved from previous releases

- Fixed an issue in Hadoop where the ReplicationMonitor thread could get stuck for a long time because of a race between replication and deletion of the same file in a large cluster.
- Fixed an issue where ControlledJob#toString failed with a null pointer exception (NPE) when job status was not successfully updated.

5.2.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system

processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.13.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.1.3	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.

Component	Version	Description
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.

Component	Version	Description
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.3	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.3	Service for serving one or more HBase regions.
hbase-client	1.2.3	HBase command-line client.
hbase-rest-server	1.2.3	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.3	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.

Component	Version	Description
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.52	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.2	Spark command-line clients.
spark-history-server	2.0.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.2	In-memory execution engine for YARN.
spark-yarn-slave	2.0.2	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.

Component	Version	Description
zookeeper-client	3.4.9	ZooKeeper command line client.

5.2.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see [Configure applications](#).

emr-5.2.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration

Classifications	Description
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.

Classifications	Description
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.

Classifications	Description
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.

Classifications	Description
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.

Classifications	Description
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.2.0

5.2.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.2.0	emr-5.1.1	emr-5.1.0	emr-5.0.3

Zeppelin	0.6.2	0.6.2	0.6.2	0.6.1
ZooKeeper	3.4.8	3.4.8	3.4.8	3.4.8

5.2.0 release notes

The following release notes include information for the Amazon EMR 5.2.0 release. Changes are relative to the Amazon EMR 5.1.0 release.

Release date: November 21, 2016

Changes and enhancements

- Added Amazon S3 storage mode for HBase.
- Enables you to specify an Amazon S3 location for the HBase rootdir. For more information, see HBase on Amazon S3.

Upgrades

- Upgraded to Spark 2.0.2

Known issues resolved from previous releases

- Fixed an issue with /mnt being constrained to 2 TB on EBS-only instance types.
- Fixed an issue with instance-controller and logpusher logs being output to their corresponding .out files instead of to their normal log4j-configured .log files, which rotate hourly. The .out files do not rotate, so this would eventually fill up the /emr partition. This issue only affects hardware virtual machine (HVM) instance types.

5.2.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.1.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.

Component	Version	Description
emrfs	2.12.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.1.3	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-0	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-0	HTTP endpoint for HDFS operations.

Component	Version	Description
hadoop-kms-server	2.7.3-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-0	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-0	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.3	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.3	Service for serving one or more HBase regions.
hbase-client	1.2.3	HBase command-line client.
hbase-rest-server	1.2.3	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.3	Service providing a Thrift endpoint to HBase.

Component	Version	Description
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.52	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.

Component	Version	Description
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.152.3	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.152.3	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.2	Spark command-line clients.
spark-history-server	2.0.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.2	In-memory execution engine for YARN.
spark-yarn-slave	2.0.2	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.

Component	Version	Description
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

5.2.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.2.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.

Classifications	Description
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase	Amazon EMR-curated settings for Apache HBase.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.

Classifications	Description
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.

Classifications	Description
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.

Classifications	Description
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.

Classifications	Description
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.1.1

5.1.1 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

5.1.1 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

5.1.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.1.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.

Component	Version	Description
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.11.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.1.3	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-0	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-0	HDFS service for tracking file names and block locations.

Component	Version	Description
hadoop-httpfs-server	2.7.3-amzn-0	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-0	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-0	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.3	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.3	Service for serving one or more HBase regions.
hbase-client	1.2.3	HBase command-line client.
hbase-rest-server	1.2.3	Service providing a RESTful HTTP endpoint for HBase.

Component	Version	Description
hbase-thrift-server	1.2.3	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.52	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.

Component	Version	Description
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.152.3	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.152.3	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.1	Spark command-line clients.
spark-history-server	2.0.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.1	In-memory execution engine for YARN.
spark-yarn-slave	2.0.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.

Component	Version	Description
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

5.1.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.1.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.

Classifications	Description
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.

Classifications	Description
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.

Classifications	Description
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properties file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.properties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.

Classifications	Description
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.properties file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file

Classifications	Description
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.1.0

5.1.0 application versions

The following applications are supported in this release: Flink, Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases

- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

5.1.0 release notes

The following release notes include information for the Amazon EMR 5.1.0 release. Changes are relative to the Amazon EMR 5.0.3 release.

Release date: November 03, 2016

Changes and enhancements

- Added support for Flink 1.1.3.
- Presto has been added as an option in the notebook section of Hue.

Upgrades

- Upgraded to HBase 1.2.3
- Upgraded to Zeppelin 0.6.2

Known issues resolved from previous releases

- Fixed an issue with Tez queries on Amazon S3 with ORC files did not perform as well as earlier Amazon EMR 4.x versions.

5.1.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.1.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.

Component	Version	Description
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.11.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
flink-client	1.1.3	Apache Flink command line client scripts and applications.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-0	HDFS command-line client and library

Component	Version	Description
hadoop-hdfs-namenode	2.7.3-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-0	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-0	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-0	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.3	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.3	Service for serving one or more HBase regions.
hbase-client	1.2.3	HBase command-line client.

Component	Version	Description
hbase-rest-server	1.2.3	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.3	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.52	MySQL database server.

Component	Version	Description
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.152.3	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.152.3	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.1	Spark command-line clients.
spark-history-server	2.0.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.1	In-memory execution engine for YARN.
spark-yarn-slave	2.0.1	Apache Spark libraries needed by YARN slaves.

Component	Version	Description
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.2	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

5.1.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.1.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.

Classifications	Description
emrfs-site	Change EMRFS settings.
flink-conf	Change flink-conf.yaml settings.
flink-log4j	Change Flink log4j.properties settings.
flink-log4j-yarn-session	Change Flink log4j-yarn-session.properties settings.
flink-log4j-cli	Change Flink log4j-cli.properties settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.

Classifications	Description
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.

Classifications	Description
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.

Classifications	Description
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.

Classifications	Description
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.0.3

5.0.3 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-5.0.3	emr-5.0.2	emr-5.0.1	emr-5.0.0

5.0.3 release notes

The following release notes include information for the Amazon EMR 5.0.3 release. Changes are relative to the Amazon EMR 5.0.0 release.

Release date: October 24, 2016

Upgrades

- Upgraded to Hadoop 2.7.3
- Upgraded to Presto 0.152.3, which includes support for the Presto web interface. You can access the Presto web interface on the Presto coordinator using port 8889. For more information about the Presto web interface, see Web Interface in the Presto documentation.
- Upgraded to Spark 2.0.1
- Amazon EMR releases are now based on Amazon Linux 2016.09. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.09-release-notes/.

5.0.3 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.1.0	Amazon DynamoDB connector for Hadoop ecosystem applications.

Component	Version	Description
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.10.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-0	HDFS command-line client and library

Component	Version	Description
hadoop-hdfs-namenode	2.7.3-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-0	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-0	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-0	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.

Component	Version	Description
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.52	MySQL database server.

Component	Version	Description
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.152.3	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.152.3	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.1	Spark command-line clients.
spark-history-server	2.0.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.1	In-memory execution engine for YARN.
spark-yarn-slave	2.0.1	Apache Spark libraries needed by YARN slaves.

Component	Version	Description
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

5.0.3 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.0.3 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.

Classifications	Description
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.

Classifications	Description
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.

Classifications	Description
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.

Classifications	Description
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.0.2

5.0.2 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases

- [Application versions in Amazon EMR 5.x releases]
- [Application versions in Amazon EMR 4.x releases]

hadoop-hdfs-library	2.7.2-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-3	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-3	YARN service for managing containers on an individual node.
hadoop-yarn-resourcemanager	2.7.2-amzn-3	YARN service for allocating and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-3	Service for retrieving current and historical information for YARN applications.

Component	Version	Description
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.

Component	Version	Description
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.46	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.150	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.150	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.0	Spark command-line clients.

Component	Version	Description
spark-history-server	2.0.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.0	In-memory execution engine for YARN.
spark-yarn-slave	2.0.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.1-SNAPSHOT	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

5.0.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.0.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.

Classifications	Description
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.

Classifications	Description
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.

Classifications	Description
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.

Classifications	Description
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.0.1

5.0.1 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

5.0.1 release notes

5.0.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.9.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati

Component	Version	Description
		ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-3	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-3	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-3	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.7.2-amzn-3	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-3	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-3	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.

Component	Version	Description
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.46	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API

Component	Version	Description
presto-coordinator	0.150	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.150	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.0	Spark command-line clients.
spark-history-server	2.0.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.0	In-memory execution engine for YARN.
spark-yarn-slave	2.0.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.1-SNAPSHOT	Web-based notebook that enables interactive data analytics.

Component	Version	Description
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

5.0.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.0.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration

Classifications	Description
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.

Classifications	Description
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.

hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.

Classifications	Description
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.

Classifications	Description
presto-connector-postgresql	Change values in Presto's postgresql.properties file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.

Classifications	Description
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 5.0.0

5.0.0 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie, Phoenix, Pig, Presto, Spark, Sqoop, Tez, Zeppelin, and ZooKeeper.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

ZooKeeper	3.4.8	3.4.8	3.4.8	3.4.8

5.0.0 release notes

Release date: July 27, 2016

Upgrades

- Upgraded to Hive 2.1
- Upgraded to Presto 0.150
- Upgraded to Spark 2.0
- Upgraded to Hue 3.10.0
- Upgraded to Pig 0.16.0
- Upgraded to Tez 0.8.4
- Upgraded to Zeppelin 0.6.1

Changes and enhancements

- Amazon EMR supports the latest open-source versions of Hive (version 2.1) and Pig (version 0.16.0). If you have used Hive or Pig on Amazon EMR in the past, this may affect some use cases. For more information, see Hive and Pig.
- The default execution engine for Hive and Pig is now Tez. To change this, you would edit the appropriate values in the `hive-site` and `pig-properties` configuration classifications, respectively.

- An enhanced step debugging feature was added, which allows you to see the root cause of step failures if the service can determine the cause. For more information, see Enhanced Step Debugging in the Amazon EMR Management Guide.
- Applications that previously ended with "-Sandbox" no longer have that suffix. This may break your automation, for example, if you are using scripts to launch clusters with these applications. The following table shows application names in Amazon EMR 4.7.2 versus Amazon EMR 5.0.0.

Application name changes

Amazon EMR 4.7.2	Amazon EMR 5.0.0
Oozie-Sandbox	Oozie
Presto-Sandbox	Presto
Sqoop-Sandbox	Sqoop
Zeppelin-Sandbox	Zeppelin
ZooKeeper-Sandbox	ZooKeeper

- Spark is now compiled for Scala 2.11.
- Java 8 is now the default JVM. All applications run using the Java 8 runtime. There are no changes to any applicationâ€™s byte code target. Most applications continue to target Java 7.
- Zeppelin now includes authentication features. For more information, see Zeppelin.
- Added support for security configurations, which allow you to create and apply encryption options more easily. For more information, see Data Encryption.

5.0.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2

has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.9.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-3	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.2-amzn-3	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-3	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-3	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-3	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-3	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	2.1.0-amzn-0	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	2.1.0-amzn-0	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	2.1.0-amzn-0	HTTP endpoint providing a REST interface to HCatalog.
hive-client	2.1.0-amzn-0	Hive command line client.
hive-metastore-server	2.1.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	2.1.0-amzn-0	Service for accepting Hive queries as web requests.
hue-server	3.10.0-amzn-0	Web application for analyzing data using Hadoop ecosystem applications

Component	Version	Description
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.46	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.150	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.150	Service for executing pieces of a query.
pig-client	0.16.0-amzn-0	Pig command-line client.
spark-client	2.0.0	Spark command-line clients.
spark-history-server	2.0.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	2.0.0	In-memory execution engine for YARN.

Component	Version	Description
spark-yarn-slave	2.0.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.1-SNAPSHOT	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

5.0.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-5.0.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.

Classifications	Description
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j2	Change values in HCatalog WebHCat's log4j2.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-beeline-log4j2	Change values in Hive's beeline-log4j2.pro perties file.
hive-env	Change values in the Hive environment.
hive-exec-log4j2	Change values in Hive's hive-exec-log4j2.p roperties file.
hive-llap-daemon-log4j2	Change values in Hive's llap-daemon-log4j2 .properties file.
hive-log4j2	Change values in Hive's hive-log4j2.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.

Classifications	Description
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.

Classifications	Description
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-hive-site	Change values in Spark's hive-site.xml file
spark-log4j	Change values in Spark's log4j.properties file.

Classifications	Description
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR 4.x release versions

This section contains application versions, release notes, component versions, and configuration classifications available in each Amazon EMR 4.x release version.

When you launch a cluster, you can choose from multiple releases of Amazon EMR. This allows you to test and use application versions that fit your compatibility requirements. You specify the release number with the *release label*. Release labels are in the form `emr-x.x.x`. For example, `emr-7.2.0`.

New Amazon EMR releases are made available in different Regions over a period of several days, beginning with the first Region on the initial release date. The latest release version may not be available in your Region during this period.

For a comprehensive table of application versions in every Amazon EMR 4.x release, see Application versions in Amazon EMR 4.x releases.

Topics

Application versions in Amazon EMR 4.x releases

For a comprehensive table that lists the application versions available in each Amazon EMR 4.x release, open Application versions in Amazon EMR 4.x releases in your browser.

Differences in Amazon EMR 4.x release versions

Documentation for Amazon EMR features in the *Amazon EMR Management Guide* specify the Amazon EMR release version that a feature became available, as well as applicable differences between Amazon EMR features dating back to 4.0.0.

Beginning with Amazon EMR release version 5.0.0, some applications got a significant version upgrade that changed installation or operational details, and others were promoted from sandbox applications to native applications. Each topic in this section provides notable application-specific differences when using Amazon EMR 4.x release versions.

Topics

Sandbox applications

When using Amazon EMR 4.x release versions, some applications are considered *sandbox* applications. Sandbox applications are early versions of the application that we made available at the time of the initial Amazon EMR release because of demand. You can use the console, AWS CLI, or API to have Amazon EMR install sandbox applications in the same way as native applications, but sandbox applications have limited support and documentation. Sandbox applications became native, fully supported applications in Amazon EMR release version 5.0.0 and later. The following are sandbox applications in Amazon EMR 4.x release versions:

- Oozie
- Presto
- Sqoop
- Zeppelin
- ZooKeeper

When you install sandbox applications, the application names are denoted with the suffix `-sandbox`. For example, to install the sandbox version of *Presto*, use `Presto-sandbox`. Installation may take longer than it does for a fully supported application. The version numbers listed for each application in this section correspond to the community version of the application.

Oozie (sandbox versions)

Oozie is available as a sandbox application beginning with Amazon EMR release version 4.1.0.

Oozie examples are not installed by default using the sandbox versions. To install the examples, SSH to the master node and run `install-oozie-examples`.

Oozie-Sandbox version information

Amazon EMR Release label	Oozie-Sandbox Version	Components installed with Oozie-Sandbox
emr-4.9.6	4.2.0	emrfs, emr-ddb, emr-goodies, emr-kinesis, emr-s3-dist-cp, hadoop-client, hadoop-mapred, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, oozie-client, oozie-server
emr-4.9.5	4.2.0	emrfs, emr-ddb, emr-goodies, emr-kinesis, emr-s3-dist-cp, hadoop-client, hadoop-mapred, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resour

Amazon EMR Release label	Oozie-Sandbox Version	Components installed with Oozie-Sandbox
		cemanager, oozie-client, oozie-server
emr-4.9.4	4.2.0	emrfs, emr-ddb, emr-goodies, emr-kinesis, emr-s3-dist-cp, hadoop-client, hadoop-mapred, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, oozie-client, oozie-server

Considerations for using Hive on Amazon EMR 4.x

This section covers differences to consider when using Hive version 1.0.0 on Amazon EMR 4.x release versions, as compared to Hive 2.x on Amazon EMR 5.x release versions.

ACID transactions not supported

Hive on Amazon EMR 4.x release versions does not support ACID transactions with Hive data stored in Amazon S3 when using 4.x release versions. If you try to create a transactional table in Amazon S3, an exception occurs.

Reading and writing to tables in Amazon S3

Hive on Amazon EMR 4.x release versions can write directly to Amazon S3 without using temporary files. This improves performance, but a consequence is that you cannot read and write to the same table in Amazon S3 within the same Hive statement. A workaround is to create and use a temporary table in HDFS.

The following example shows how to use multiple Hive statements to update a table in Amazon S3. The statements create a temporary table in HDFS named `tmp` based on a table in Amazon S3 named `my_s3_table`. The table in Amazon S3 is then updated with the contents of the temporary table.

```
CREATE TEMPORARY TABLE tmp LIKE my_s3_table;
```

```
INSERT OVERWRITE TABLE tmp SELECT ....;
INSERT OVERWRITE TABLE my_s3_table SELECT * FROM tmp;
```

Log4j vs. Log4j 2

Hive on Amazon EMR 4.x release versions uses Log4j. Beginning with version 5.0.0, Log4j 2 is the default. These versions may require different logging configurations. See Apache Log4j 2 for details.

MapReduce is the default execution engine

Hive on Amazon EMR 4.x release versions uses MapReduce as the default execution engine. Beginning with Amazon EMR version 5.0.0, Tez is the default, which provides improved performance for most workflows.

Hive authorization

Hive on Amazon EMR 4.x release versions supports Hive authorization for HDFS but not for EMRFS and Amazon S3. Amazon EMR clusters run with authorization disabled by default.

Hive file merge behavior with Amazon S3

Hive on Amazon EMR 4.x release versions merges small files at the end of a map-only job if `hive.merge.mapfiles` is `true`. A merge is triggered only if the average output size of the job is less than the `hive.merge.smallfiles.avgsize` setting. Amazon EMR Hive has exactly the same behavior if the final output path is in HDFS. If the output path is in Amazon S3, however, the `hive.merge.smallfiles.avgsize` parameter is ignored. In that situation, the merge task is always triggered if `hive.merge.mapfiles` is set to `true`.

Considerations for using Pig on Amazon EMR 4.x

Pig version 0.14.0 is installed on clusters created using Amazon EMR 4.x release versions. Pig was upgraded to version 0.16.0 in Amazon EMR 5.0.0. Significant differences are covered below.

Different default execution engine

Pig version 0.14.0 on Amazon EMR 4.x release versions uses MapReduce as the default execution engine. Pig 0.16.0 and later use Apache Tez. You can explicitly set `exectype=mapreduce` in the `pig-properties` configuration classification to use MapReduce.

Dropped Pig user-defined functions (UDFs)

Custom UDFs that were available in Pig on Amazon EMR 4.x release versions were dropped beginning with Pig 0.16.0. Most of the UDFs have equivalent functions you can use instead. The following table lists dropped UDFs and equivalent functions. For more information, see Built-in functions on the Apache Pig site.

Dropped UDF	Equivalent function
FORMAT_DT(dtformat, date)	GetHour(date), GetMinute(date), GetMonth(date), GetSecond(date), GetWeek(date), GetYear(date), GetDay(date)
EXTRACT(string, pattern)	REGEX_EXTRACT_ALL(string, pattern)
REPLACE(string, pattern, replacement)	REPLACE(string, pattern, replacement)
DATE_TIME()	ToDate()
DURATION(dt, dt2)	WeeksBetween(dt, dt2), YearsBetween(dt, dt2), SecondsBetween(dt, dt2), MonthsBetween(dt, dt2), MinutesBetween(dt, dt2), HoursBetween(dt, dt2)
EXTRACT_DT(format, date)	GetHour(date), GetMinute(date), GetMonth(date), GetSecond(date), GetWeek(date), GetYear(date), GetDay(date)
OFFSET_DT(date, duration)	AddDuration(date, duration), SubtractDuration(date, duration)
PERIOD(dt, dt2)	WeeksBetween(dt, dt2), YearsBetween(dt, dt2), SecondsBetween(dt, dt2), MonthsBetween(dt, dt2), MinutesBetween(dt, dt2), HoursBetween(dt, dt2)
CAPITALIZE(string)	UCFIRST(string)
CONCAT_WITH()	CONCAT()

Dropped UDF	Equivalent function
INDEX_OF()	INDEXOF()
LAST_INDEX_OF()	LAST_INDEXOF()
SPLIT_ON_REGEX()	STRSPLT()
UNCAPITALIZE()	LCFIRST()

The following UDFs were dropped with no equivalent: FORMAT(), LOCAL_DATE(), LOCAL_TIME(), CENTER(), LEFT_PAD(), REPEAT(), REPLACE_ONCE(), RIGHT_PAD(), STRIP(), STRIP_END(), STRIP_START(), SWAP_CASE().

Discontinued Grunt commands

Some Grunt commands were discontinued beginning with Pig 0.16.0. The following table lists Grunt commands in Pig 0.14.0 and the equivalent commands in the current version, where applicable.

Pig 0.14.0 and equivalent current Grunt commands

Pig 0.14.0 Grunt command	Pig Grunt command in 0.16.0 and later
cat <non-hdfs-path>)	fs -cat <non-hdfs-path>;
cd <non-hdfs-path>;	No equivalent
ls <non-hdfs-path>;	fs -ls <non-hdfs-path>;
move <non-hdfs-path> <non-hdfs-path>;	fs -mv <non-hdfs-path> <non-hdfs-path>;
copy <non-hdfs-path> <non-hdfs-path>;	fs -cp <non-hdfs-path> <non-hdfs-path>;
copyToLocal <non-hdfs-path> <local-path>;	fs -copyToLocal <non-hdfs-path> <local-path>;
copyFromLocal <local-path> <non-hdfs-path>;	fs -copyFromLocal <local-path> <non-hdfs-path>;
mkdir <non-hdfs-path>;	fs -mkdir <non-hdfs-path>;

Pig 0.14.0 Grunt command	Pig Grunt command in 0.16.0 and later
rm <non-hdfs-path>;	fs -rm -r -skipTrash <non-hdfs-path>;
rmf <non-hdfs-path>;	fs -rm -r -skipTrash <non-hdfs-path>;

Capability removed for non-HDFS home directories

Pig 0.14.0 on Amazon EMR 4.x release versions has two mechanisms to allow users other than the `hadoop` user, who don't have home directories, to run Pig scripts. The first mechanism is an automatic fallback that sets the initial working directory to the root directory if the home directory doesn't exist. The second is a `pig.initial.fs.name` property that allows you to change the initial working directory.

These mechanisms are not available beginning with Amazon EMR version 5.0.0, and users must have a home directory on HDFS. This doesn't apply to the `hadoop` user because a home directory is provisioned at launch. Scripts run using Hadoop jar steps default to the Hadoop user unless another user is explicitly specified using `command-runner.jar`.

Amazon EMR release 4.9.6

4.9.6 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.9.6 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

4.9.6 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.

Component	Version	Description
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.17.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.

Component	Version	Description
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.

Component	Version	Description
hcatalog-client	1.0.0-amzn-9	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-9	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-9	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-9	Hive command line client.
hive-metastore-server	1.0.0-amzn-9	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-9	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.

Component	Version	Description
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.3	Spark command-line clients.
spark-history-server	1.6.3	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.3	In-memory execution engine for YARN.
spark-yarn-slave	1.6.3	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.

Component	Version	Description
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

4.9.6 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.9.6 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.

Classifications	Description
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.

Classifications	Description
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.

Classifications	Description
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.

Classifications	Description
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.

Classifications	Description
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.9.5

4.9.5 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.9.5 release notes

The following release notes include information for Amazon EMR release 4.9.5. Changes are relative to 4.9.4.

Initial release date: August 29, 2018

Changes, enhancements, and resolved issues

- HBase

- This release addresses a potential security vulnerability.

4.9.5 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.17.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati

Component	Version	Description
		ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-9	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-9	Service providing HCatalog, a table and storage management layer for distributed applications.

Component	Version	Description
hcatalog-webhcat-server	1.0.0-amzn-9	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-9	Hive command line client.
hive-metastore-server	1.0.0-amzn-9	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-9	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API

Component	Version	Description
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-workers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.3	Spark command-line clients.
spark-history-server	1.6.3	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.3	In-memory execution engine for YARN.
spark-yarn-slave	1.6.3	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.

Component	Version	Description
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

4.9.5 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.9.5 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration

Classifications	Description
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.

Classifications	Description
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environment.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properties file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.properties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.

Classifications	Description
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.

Classifications	Description
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.9.4

4.9.4 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.9.4 release notes

The following release notes include information for Amazon EMR release 4.9.4. Changes are relative to 4.9.3.

Initial release date: March 29, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address potential vulnerabilities.

4.9.4 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.17.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.

Component	Version	Description
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.

Component	Version	Description
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-9	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-9	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-9	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-9	Hive command line client.
hive-metastore-server	1.0.0-amzn-9	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.

Component	Version	Description
hive-server	1.0.0-amzn-9	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.3	Spark command-line clients.

Component	Version	Description
spark-history-server	1.6.3	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.3	In-memory execution engine for YARN.
spark-yarn-slave	1.6.3	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

4.9.4 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.9.4 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.

Classifications	Description
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.

Classifications	Description
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properties file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.properties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.

Classifications	Description
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.

Classifications	Description
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.9.3

4.9.3 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases

- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.9.3 release notes

The following release notes include information for the Amazon EMR 4.9.3 release. Changes are relative to the Amazon EMR 4.9.2 release.

Initial release date: January 22, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address vulnerabilities associated with speculative execution (CVE-2017-5715, CVE-2017-5753, and CVE-2017-5754). For more information, see https://aws.amazon.com/security/security-bulletins/AWS-2018-013/.

4.9.3 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.

Component	Version	Description
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.17.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library

Component	Version	Description
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.

Component	Version	Description
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-9	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-9	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-9	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-9	Hive command line client.
hive-metastore-server	1.0.0-amzn-9	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-9	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.

Component	Version	Description
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.3	Spark command-line clients.
spark-history-server	1.6.3	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.3	In-memory execution engine for YARN.
spark-yarn-slave	1.6.3	Apache Spark libraries needed by YARN slaves.

Component	Version	Description
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

4.9.3 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.9.3 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.

Classifications	Description
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.

Classifications	Description
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.

Classifications	Description
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.

Classifications	Description
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.9.2

4.9.2 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.9.2 release notes

The following release notes include information for the Amazon EMR 4.9.2 release. Changes are relative to the Amazon EMR 4.9.1 release.

Release date: July 13, 2017

Minor changes, bug fixes, and enhancements were made in this release.

4.9.2 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.3.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.

Component	Version	Description
emrfs	2.17.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.

Component	Version	Description
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-9	The 'hcat' command line client for manipulating hcatalog-server.

Component	Version	Description
hcatalog-server	1.0.0-amzn-9	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-9	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-9	Hive command line client.
hive-metastore-server	1.0.0-amzn-9	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-9	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client

Component	Version	Description
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.3	Spark command-line clients.
spark-history-server	1.6.3	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.3	In-memory execution engine for YARN.
spark-yarn-slave	1.6.3	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.

Component	Version	Description
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

4.9.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.9.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.

Classifications	Description
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.

Classifications	Description
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.

Classifications	Description
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.

Classifications	Description
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.

Classifications	Description
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.9.1

4.9.1 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.9.1 release notes

The following release notes include information for the Amazon EMR 4.9.1 release. Changes are relative to the Amazon EMR 4.8.4 release.

Release date: April 10, 2017

Known issues resolved from previous releases

- Backports of HIVE-9976 and HIVE-10106
- Fixed an issue in YARN where a large number of nodes (greater than 2,000) and containers (greater than 5,000) would cause an out-of-memory error, for example: `"Exception in thread main java.lang.OutOfMemoryError"`.

Changes and enhancements

- Amazon EMR releases are now based on Amazon Linux 2017.03. For more information, see https://aws.amazon.com/amazon-linux-ami/2017.03-release-notes/.
- Removed Python 2.6 from the Amazon EMR base Linux image. You can install Python 2.6 manually if necessary.

4.9.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.3.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.

Component	Version	Description
emrfs	2.15.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.

Component	Version	Description
hadoop-mapred	2.7.3-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-9	The 'hcat' command line client for manipulating hcatalog-server.

Component	Version	Description
hcatalog-server	1.0.0-amzn-9	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-9	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-9	Hive command line client.
hive-metastore-server	1.0.0-amzn-9	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-9	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client

Component	Version	Description
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.3	Spark command-line clients.
spark-history-server	1.6.3	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.3	In-memory execution engine for YARN.
spark-yarn-slave	1.6.3	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.

Component	Version	Description
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

4.9.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.9.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.

Classifications	Description
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.

Classifications	Description
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.

Classifications	Description
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.

Classifications	Description
presto-connector-postgresql	Change values in Presto's postgresql.properties file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.

Classifications	Description
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.8.5

4.8.5 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.8.5 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

4.8.5 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.14.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.

Component	Version	Description
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.

Component	Version	Description
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-8	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-8	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-8	HTTP endpoint providing a REST interface to HCatalog.

Component	Version	Description
hive-client	1.0.0-amzn-8	Hive command line client.
hive-metastore-server	1.0.0-amzn-8	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-8	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.3	Spark command-line clients.
spark-history-server	1.6.3	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.3	In-memory execution engine for YARN.
spark-yarn-slave	1.6.3	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.

Component	Version	Description
zookeeper-client	3.4.9	ZooKeeper command line client.

4.8.5 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.8.5 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.

Classifications	Description
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.properties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file

Classifications	Description
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.

Classifications	Description
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.

Classifications	Description
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.8.4

4.8.4 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.8.4 release notes

The following release notes include information for the Amazon EMR 4.8.4 release. Changes are relative to the Amazon EMR 4.8.3 release.

Release date: February 7, 2017

Minor changes, bug fixes, and enhancements were made in this release.

4.8.4 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form `*CommunityVersion*-amzn-*EmrVersion*`. The `*EmrVersion*` starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.14.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.

Component	Version	Description
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.

Component	Version	Description
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-8	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-8	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-8	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-8	Hive command line client.
hive-metastore-server	1.0.0-amzn-8	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-8	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.

Component	Version	Description
mysql-server	5.5.54+	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.3	Spark command-line clients.
spark-history-server	1.6.3	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.3	In-memory execution engine for YARN.
spark-yarn-slave	1.6.3	Apache Spark libraries needed by YARN slaves.

Component	Version	Description
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.25+	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

4.8.4 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.8.4 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.

Classifications	Description
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.

Classifications	Description
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.

Classifications	Description
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.

Classifications	Description
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.8.3

4.8.3 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

4.8.3 release notes

The following release notes include information for the Amazon EMR 4.8.3 release. Changes are relative to the Amazon EMR 4.8.2 release.

Release date: December 29, 2016

Upgrades

- Upgraded to Presto 0.157.1. For more information, see Presto Release Notes in the Presto documentation.
- Upgraded to Spark 1.6.3. For more information, see Spark Release Notes in the Apache Spark documentation.
- Upgraded to ZooKeeper 3.4.9. For more information, see ZooKeeper Release Notes in the Apache ZooKeeper documentation.

Changes and enhancements

- Added support for the Amazon EC2 m4.16xlarge instance type in Amazon EMR version 4.8.3 and later, excluding 5.0.0, 5.0.3, and 5.2.0.
- Amazon EMR releases are now based on Amazon Linux 2016.09. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.09-release-notes/.

Known issues resolved from previous releases

- Fixed an issue in Hadoop where the ReplicationMonitor thread could get stuck for a long time because of a race between replication and deletion of the same file in a large cluster.
- Fixed an issue where ControlledJob#toString failed with a null pointer exception (NPE) when job status was not successfully updated.

4.8.3 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
emr-ddb	4.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.2.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.13.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.

Component	Version	Description
hadoop-client	2.7.3-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.3-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-1	Service for retrieving current and historical information for YARN applications.

Component	Version	Description
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-8	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-8	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-8	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-8	Hive command line client.
hive-metastore-server	1.0.0-amzn-8	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.

Component	Version	Description
hive-server	1.0.0-amzn-8	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.52	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.157.1	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.157.1	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.3	Spark command-line clients.

Component	Version	Description
spark-history-server	1.6.3	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.3	In-memory execution engine for YARN.
spark-yarn-slave	1.6.3	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.9	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.9	ZooKeeper command line client.

4.8.3 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.8.3 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.

Classifications	Description
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.

Classifications	Description
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.

Classifications	Description
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.properties file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.

Classifications	Description
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.8.2

4.8.2 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases

- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.8.2 release notes

The following release notes include information for the Amazon EMR 4.8.2 release. Changes are relative to the Amazon EMR 4.8.0 release.

Release date: October 24, 2016

Upgrades

- Upgraded to Hadoop 2.7.3
- Upgraded to Presto 0.152.3, which includes support for the Presto web interface. You can access the Presto web interface on the Presto coordinator using port 8889. For more information about the Presto web interface, see Web Interface in the Presto documentation.
- Amazon EMR releases are now based on Amazon Linux 2016.09. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.09-release-notes/.

4.8.2 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	4.1.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.10.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.3-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.3-amzn-0	HDFS node-level service for storing blocks.

Component	Version	Description
hadoop-hdfs-library	2.7.3-amzn-0	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.3-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.3-amzn-0	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.3-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.3-amzn-0	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.3-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.3-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.3-amzn-0	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.

Component	Version	Description
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-7	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-7	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-7	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-7	Hive command line client.
hive-metastore-server	1.0.0-amzn-7	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-7	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.

Component	Version	Description
mysql-server	5.5.52	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.152.3	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.152.3	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.2	Spark command-line clients.
spark-history-server	1.6.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.2	In-memory execution engine for YARN.
spark-yarn-slave	1.6.2	Apache Spark libraries needed by YARN slaves.

Component	Version	Description
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

4.8.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.8.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.

Classifications	Description
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.

Classifications	Description
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.

Classifications	Description
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.propert ies file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.

Classifications	Description
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.8.1

4.8.1 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

4.8.1 release notes

4.8.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.9.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati

Component	Version	Description
		ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-4	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-4	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-4	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-4	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-4	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-4	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-4	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.7.2-amzn-4	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-4	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-4	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-7	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-7	Service providing HCatalog, a table and storage management layer for distributed applications.

Component	Version	Description
hcatalog-webhcat-server	1.0.0-amzn-7	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-7	Hive command line client.
hive-metastore-server	1.0.0-amzn-7	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-7	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.51	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API

Component	Version	Description
presto-coordinator	0.151	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.151	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.2	Spark command-line clients.
spark-history-server	1.6.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.2	In-memory execution engine for YARN.
spark-yarn-slave	1.6.2	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.

Component	Version	Description
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

4.8.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.8.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration

Classifications	Description
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.

Classifications	Description
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.

Classifications	Description
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.
presto-connector-postgresql	Change values in Presto's postgresql.properties file.

Classifications	Description
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.8.0

4.8.0 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-4.8.0	emr-4.7.4	emr-4.7.3	emr-4.7.2

4.8.0 release notes

The following release notes include information for the Amazon EMR 4.8.0 release. Changes are relative to the Amazon EMR 4.7.2 release.

Release date: September 7, 2016

Upgrades

- Upgraded to HBase 1.2.2
- Upgraded to Presto-Sandbox 0.151
- Upgraded to Tez 0.8.4
- Upgraded to Zeppelin-Sandbox 0.6.1

Changes and enhancements

- Fixed an issue in YARN where the ApplicationMaster would attempt to clean up containers that no longer exist because their instances have been terminated.
- Corrected the hive-server2 URL for Hive2 actions in the Oozie examples.

- Added support for additional Presto catalogs.
- Backported patches: HIVE-8948, HIVE-12679, HIVE-13405, PHOENIX-3116, HADOOP-12689
- Added support for security configurations, which allow you to create and apply encryption options more easily. For more information, see Data Encryption.

4.8.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.

Component	Version	Description
emrfs	2.9.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-4	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-4	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-4	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-4	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-4	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-4	Cryptographic key management server based on Hadoop's KeyProvider API.

Component	Version	Description
hadoop-mapred	2.7.2-amzn-4	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-4	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-4	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-4	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.2	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.2	Service for serving one or more HBase regions.
hbase-client	1.2.2	HBase command-line client.
hbase-rest-server	1.2.2	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.2	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-7	The 'hcat' command line client for manipulating hcatalog-server.

Component	Version	Description
hcatalog-server	1.0.0-amzn-7	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-7	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-7	Hive command line client.
hive-metastore-server	1.0.0-amzn-7	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-7	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.51	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client

Component	Version	Description
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.151	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.151	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.2	Spark command-line clients.
spark-history-server	1.6.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.2	In-memory execution engine for YARN.
spark-yarn-slave	1.6.2	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.4	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.

Component	Version	Description
zeppelin-server	0.6.1	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

4.8.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see [Configure applications](#).

emr-4.8.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.

Classifications	Description
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.

Classifications	Description
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hiveserver2-site	Change values in Hive Server2's hiveserver2-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.

Classifications	Description
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-blackhole	Change values in Presto's blackhole.properties file.
presto-connector-cassandra	Change values in Presto's cassandra.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
presto-connector-jmx	Change values in Presto's jmx.properties file.
presto-connector-kafka	Change values in Presto's kafka.properties file.
presto-connector-localfile	Change values in Presto's localfile.properties file.
presto-connector-mongodb	Change values in Presto's mongodb.properties file.
presto-connector-mysql	Change values in Presto's mysql.properties file.

Classifications	Description
presto-connector-postgresql	Change values in Presto's postgresql.properties file.
presto-connector-raptor	Change values in Presto's raptor.properties file.
presto-connector-redis	Change values in Presto's redis.properties file.
presto-connector-tpch	Change values in Presto's tpch.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.

Classifications	Description
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.7.4

4.7.4 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.7.4 release notes

This is a patch release to add AWS Signature Version 4 authentication for requests to Amazon S3. All applications and components are the same as the previous Amazon EMR release.

> **Important**
>
> In this release version, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. For more information, see Whats New.

4.7.4 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.8.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.

Component	Version	Description
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-3	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-3	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-3	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-3	YARN service for managing containers on an individual node.

Component	Version	Description
hadoop-yarn-resour cemanager	2.7.2-amzn-3	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-3	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.1	Service for serving one or more HBase regions.
hbase-client	1.2.1	HBase command-line client.
hbase-rest-server	1.2.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-6	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-6	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-6	HTTP endpoint providing a REST interface to HCatalog.

Component	Version	Description
hive-client	1.0.0-amzn-6	Hive command line client.
hive-metastore-server	1.0.0-amzn-6	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-6	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.46	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.148	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.148	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.2	Spark command-line clients.
spark-history-server	1.6.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.2	In-memory execution engine for YARN.
spark-yarn-slave	1.6.2	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.3	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.5.6-incubating	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.

Component	Version	Description
zookeeper-client	3.4.8	ZooKeeper command line client.

4.7.4 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.7.4 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.

Classifications	Description
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.properties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.

Classifications	Description
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.

Classifications	Description
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.7.3

4.7.3 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.7.3 release notes

4.7.3 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.8.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-3	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-3	HDFS node-level service for storing blocks.

Component	Version	Description
hadoop-hdfs-library	2.7.2-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-3	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-3	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-3	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-3	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.1	Service for serving one or more HBase regions.

Component	Version	Description
hbase-client	1.2.1	HBase command-line client.
hbase-rest-server	1.2.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-6	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-6	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-6	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-6	Hive command line client.
hive-metastore-server	1.0.0-amzn-6	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-6	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.2	Library for machine learning.

Component	Version	Description
mysql-server	5.5.46	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.148	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.148	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.2	Spark command-line clients.
spark-history-server	1.6.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.2	In-memory execution engine for YARN.
spark-yarn-slave	1.6.2	Apache Spark libraries needed by YARN slaves.

Component	Version	Description
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.3	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.5.6-incubating	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

4.7.3 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.7.3 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.

Classifications	Description
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.

Classifications	Description
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.

Classifications	Description
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.7.2

4.7.2 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases

- [Application versions in Amazon EMR 4.x releases]

4.7.2 release notes

The following release notes include information for Amazon EMR 4.7.2.

Release date: July 15, 2016

Features

- Upgraded to Mahout 0.12.2
- Upgraded to Presto 0.148
- Upgraded to Spark 1.6.2
- You can now create an AWSCredentialsProvider for use with EMRFS using a URI as a parameter. For more information, see Create an AWSCredentialsProvider for EMRFS.
- EMRFS now allows users to configure a custom DynamoDB endpoint for their Consistent View metadata using the `fs.s3.consistent.dynamodb.endpoint` property in `emrfs-site.xml`.
- Added a script in `/usr/bin` called `spark-example`, which wraps `/usr/lib/spark/spark/bin/run-example` so you can run examples directly. For instance, to run the SparkPi example that comes with the Spark distribution, you can run `spark-example SparkPi 100` from the command line or using `command-runner.jar` as a step in the API.

Known issues resolved from previous releases

- Fixed an issue where Oozie had the `spark-assembly.jar` was not in the correct location when Spark was also installed, which resulted in failure to launch Spark applications with Oozie.
- Fixed an issue with Spark Log4j-based logging in YARN containers.

4.7.2 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2

has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.2.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.1.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.8.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-3	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.

Component	Version	Description
hadoop-hdfs-datanode	2.7.2-amzn-3	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-3	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-3	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-3	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-3	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-3	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-3	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-3	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-3	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.

Component	Version	Description
hbase-region-server	1.2.1	Service for serving one or more HBase regions.
hbase-client	1.2.1	HBase command-line client.
hbase-rest-server	1.2.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-6	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-6	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-6	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-6	Hive command line client.
hive-metastore-server	1.0.0-amzn-6	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-6	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications

Component	Version	Description
mahout-client	0.12.2	Library for machine learning.
mysql-server	5.5.46	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.148	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.148	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.2	Spark command-line clients.
spark-history-server	1.6.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.2	In-memory execution engine for YARN.

Component	Version	Description
spark-yarn-slave	1.6.2	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.3	The tez YARN application and libraries.
webserver	2.4.23	Apache HTTP server.
zeppelin-server	0.5.6-incubating	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

4.7.2 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.7.2 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.

Classifications	Description
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hadoop-ssl-server	Change hadoop ssl server configuration
hadoop-ssl-client	Change hadoop ssl client configuration
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.

Classifications	Description
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.properties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environment.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properties file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.

Classifications	Description
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.

Classifications	Description
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.7.1

4.7.1 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases

- Application versions in Amazon EMR 4.x releases

4.7.1 release notes

The following release notes include information for Amazon EMR 4.7.1.

Release date: June 10, 2016

Known issues resolved from previous releases

- Fixed an issue that extended the startup time of clusters launched in a VPC with private subnets. The bug only impacted clusters launched with the Amazon EMR 4.7.0 release.
- Fixed an issue that improperly handled listing of files in Amazon EMR for clusters launched with the Amazon EMR 4.7.0 release.

4.7.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.1.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.

Component	Version	Description
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.7.1	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-2	HTTP endpoint for HDFS operations.

Component	Version	Description
hadoop-kms-server	2.7.2-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.1	Service for serving one or more HBase regions.
hbase-client	1.2.1	HBase command-line client.
hbase-rest-server	1.2.1	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.1	Service providing a Thrift endpoint to HBase.

Component	Version	Description
hcatalog-client	1.0.0-amzn-5	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-5	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-5	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-5	Hive command line client.
hive-metastore-server	1.0.0-amzn-5	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-5	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.0	Library for machine learning.
mysql-server	5.5.46	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.

Component	Version	Description
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.147	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.147	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.1	Spark command-line clients.
spark-history-server	1.6.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.1	In-memory execution engine for YARN.
spark-yarn-slave	1.6.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
tez-on-yarn	0.8.3	The tez YARN application and libraries.

Component	Version	Description
webserver	2.4.18	Apache HTTP server.
zeppelin-server	0.5.6-incubating	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

4.7.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.7.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.

Classifications	Description
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.

Classifications	Description
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.

Classifications	Description
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
tez-site	Change values in Tez's tez-site.xml file.

Classifications	Description
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.7.0

4.7.0 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Phoenix, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Tez, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.7.0 release notes

Important

Amazon EMR 4.7.0 is deprecated. Use Amazon EMR 4.7.1 or later instead.

Release date: June 2, 2016

Features

- Added Apache Phoenix 4.7.0
- Added Apache Tez 0.8.3
- Upgraded to HBase 1.2.1
- Upgraded to Mahout 0.12.0
- Upgraded to Presto 0.147
- Upgraded the AWS SDK for Java to 1.10.75
- The final flag was removed from the `mapreduce.cluster.local.dir` property in `mapred-site.xml` to allow users to run Pig in local mode.
- Amazon Redshift JDBC Drivers Available on Cluster

  Amazon Redshift JDBC drivers are now included at `/usr/share/aws/redshift/jdbc`. `/usr/share/aws/redshift/jdbc/RedshiftJDBC41.jar` is the JDBC 4.1-compatible Amazon Redshift driver and `/usr/share/aws/redshift/jdbc/RedshiftJDBC4.jar` is the JDBC 4.0-compatible Amazon Redshift driver. For more information, see Configure a JDBC Connection in the *Amazon Redshift Management Guide*.
- Java 8

  Except for Presto, OpenJDK 1.7 is the default JDK used for all applications. However, both OpenJDK 1.7 and 1.8 are installed. For information about how to set `JAVA_HOME` for applications, see Configuring Applications to Use Java 8.

Known issues resolved from previous releases

- Fixed a kernel issue that significantly affected performance on Throughput Optimized HDD (st1) EBS volumes for Amazon EMR in emr-4.6.0.
- Fixed an issue where a cluster would fail if any HDFS encryption zone were specified without choosing Hadoop as an application.
- Changed the default HDFS write policy from `RoundRobin` to `AvailableSpaceVolumeChoosingPolicy`. Some volumes were not properly utilized with the RoundRobin configuration, which resulted in failed core nodes and an unreliable HDFS.
- Fixed an issue with the EMRFS CLI, which would cause an exception when creating the default DynamoDB metadata table for consistent views.

- Fixed a deadlock issue in EMRFS that potentially occurred during multipart rename and copy operations.
- Fixed an issue with EMRFS that caused the CopyPart size default to be 5 MB. The default is now properly set at 128 MB.
- Fixed an issue with the Zeppelin upstart configuration that potentially prevented you from stopping the service.
- Fixed an issue with Spark and Zeppelin, which prevented you from using the `s3a://` URI scheme because `/usr/lib/hadoop/hadoop-aws.jar` was not properly loaded in their respective classpath.
- Backported HUE-2484.
- Backported a commit from Hue 3.9.0 (no JIRA exists) to fix an issue with the HBase browser sample.
- Backported HIVE-9073.

4.7.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.1.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.

Component	Version	Description
emr-kinesis	3.2.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.4.0	Distributed copy application optimized for Amazon S3.
emrfs	2.7.1	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-2	HDFS service for tracking file names and block locations.

Component	Version	Description
hadoop-httpfs-server	2.7.2-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-2	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hadoop-yarn-timeline-server	2.7.2-amzn-2	Service for retrieving current and historical information for YARN applications.
hbase-hmaster	1.2.1	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.1	Service for serving one or more HBase regions.
hbase-client	1.2.1	HBase command-line client.
hbase-rest-server	1.2.1	Service providing a RESTful HTTP endpoint for HBase.

Component	Version	Description
hbase-thrift-server	1.2.1	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-5	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-5	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-5	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-5	Hive command line client.
hive-metastore-server	1.0.0-amzn-5	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-5	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-7	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.12.0	Library for machine learning.
mysql-server	5.5.46	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.

Component	Version	Description
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
phoenix-library	4.7.0-HBase-1.2	The phoenix libraries for server and client
phoenix-query-server	4.7.0-HBase-1.2	A light weight server providing JDBC access as well as Protocol Buffers and JSON format access to the Avatica API
presto-coordinator	0.147	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.147	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.1	Spark command-line clients.
spark-history-server	1.6.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.1	In-memory execution engine for YARN.
spark-yarn-slave	1.6.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.

Component	Version	Description
tez-on-yarn	0.8.3	The tez YARN application and libraries.
webserver	2.4.18	Apache HTTP server.
zeppelin-server	0.5.6-incubating	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

4.7.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.7.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.

Classifications	Description
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.

Classifications	Description
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
phoenix-hbase-metrics	Change values in Phoenix's hadoop-metrics2-hbase.properties file.

Classifications	Description
phoenix-hbase-site	Change values in Phoenix's hbase-site.xml file.
phoenix-log4j	Change values in Phoenix's log4j.properties file.
phoenix-metrics	Change values in Phoenix's hadoop-metrics2-phoenix.properties file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.

Classifications	Description
tez-site	Change values in Tez's tez-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.6.1

4.6.1 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.6.1 release notes

4.6.1 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form `CommunityVersion-amzn-EmrVersion`. The `EmrVersion` starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.1.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.3.0	Distributed copy application optimized for Amazon S3.
emrfs	2.6.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati

Component	Version	Description
		ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-1	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.7.2-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hbase-hmaster	1.2.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.0	Service for serving one or more HBase regions.
hbase-client	1.2.0	HBase command-line client.
hbase-rest-server	1.2.0	Service providing a RESTful HTTP endpoint for HBase.
hbase-thrift-server	1.2.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-4	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-4	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-4	HTTP endpoint providing a REST interface to HCatalog.

Component	Version	Description
hive-client	1.0.0-amzn-4	Hive command line client.
hive-metastore-server	1.0.0-amzn-4	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-4	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-6	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.11.1	Library for machine learning.
mysql-server	5.5	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
presto-coordinator	0.143	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.143	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.1	Spark command-line clients.

Component	Version	Description
spark-history-server	1.6.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.1	In-memory execution engine for YARN.
spark-yarn-slave	1.6.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
webserver	2.4	Apache HTTP server.
zeppelin-server	0.5.6-incubating	Web-based notebook that enables interactive data analytics.
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

4.6.1 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.6.1 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.
hbase-metrics	Change values in HBase's hadoop-metrics2-hb aase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.

Classifications	Description
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.

Classifications	Description
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.

Classifications	Description
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.6.0

4.6.0 application versions

The following applications are supported in this release: Ganglia, HBase, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, Zeppelin-Sandbox, and ZooKeeper-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

ZooKeeper	-	-	-	-
ZooKeeper-Sandbox	3.4.8	-	-	-

4.6.0 release notes

The following release notes include information for the Amazon EMR 4.6.0 release.

- Added HBase 1.2.0
- Added Zookeeper-Sandbox 3.4.8
- Upgraded to Presto-Sandbox 0.143
- Amazon EMR releases are now based on Amazon Linux 2016.03.0. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.03-release-notes/.
- Issue Affecting Throughput Optimized HDD (st1) EBS Volume Types

  An issue in the Linux kernel versions 4.2 and above significantly affects performance on Throughput Optimized HDD (st1) EBS volumes for EMR. This release (emr-4.6.0) uses kernel version 4.4.5 and hence is impacted. Therefore, we recommend not using emr-4.6.0 if you want to use st1 EBS volumes. You can use emr-4.5.0 or prior Amazon EMR releases with st1 without impact. In addition, we provide the fix with future releases.
- Python Defaults

  Python 3.4 is now installed by default, but Python 2.7 remains the system default. You may configure Python 3.4 as the system default using either a bootstrap action; you can use the configuration API to set PYSPARK_PYTHON export to `/usr/bin/python3.4` in the `spark-env` classification to affect the Python version used by PySpark.
- Java 8

  Except for Presto, OpenJDK 1.7 is the default JDK used for all applications. However, both OpenJDK 1.7 and 1.8 are installed. For information about how to set `JAVA_HOME` for applications, see Configuring Applications to Use Java 8.

Known issues resolved from previous releases

- Fixed an issue where application provisioning would sometimes randomly fail due to a generated password.
- Previously, `mysqld` was installed on all nodes. Now, it is only installed on the master instance and only if the chosen application includes `mysql-server` as a component. Currently, the following applications include the `mysql-server` component: HCatalog, Hive, Hue, Presto-Sandbox, and Sqoop-Sandbox.

- Changed `yarn.scheduler.maximum-allocation-vcores` to 80 from the default of 32, which fixes an issue introduced in emr-4.4.0 that mainly occurs with Spark while using the `maximizeResourceAllocation` option in a cluster whose core instance type is one of a few large instance types that have the YARN vcores set higher than 32; namely c4.8xlarge, cc2.8xlarge, hs1.8xlarge, i2.8xlarge, m2.4xlarge, r3.8xlarge, d2.8xlarge, or m4.10xlarge were affected by this issue.
- s3-dist-cp now uses EMRFS for all Amazon S3 nominations and no longer stages to a temporary HDFS directory.
- Fixed an issue with exception handling for client-side encryption multipart uploads.
- Added an option to allow users to change the Amazon S3 storage class. By default this setting is `STANDARD`. The `emrfs-site` configuration classification setting is `fs.s3.storageClass` and the possible values are `STANDARD`, `STANDARD_IA`, and `REDUCED_REDUNDANCY`. For more information about storage classes, see Storage Classes in the *Amazon Simple Storage Service User Guide*.

4.6.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.

Component	Version	Description
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.1.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.3.0	Distributed copy application optimized for Amazon S3.
emrfs	2.6.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-1	HDFS command-line client and library

Component	Version	Description
hadoop-hdfs-namenode	2.7.2-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.2-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hbase-hmaster	1.2.0	Service for an HBase cluster responsible for coordination of Regions and execution of administrative commands.
hbase-region-server	1.2.0	Service for serving one or more HBase regions.
hbase-client	1.2.0	HBase command-line client.
hbase-rest-server	1.2.0	Service providing a RESTful HTTP endpoint for HBase.

Component	Version	Description
hbase-thrift-server	1.2.0	Service providing a Thrift endpoint to HBase.
hcatalog-client	1.0.0-amzn-4	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-4	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-4	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-4	Hive command line client.
hive-metastore-server	1.0.0-amzn-4	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-4	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-6	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.11.1	Library for machine learning.
mysql-server	5.5	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.

Component	Version	Description
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
presto-coordinator	0.143	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.143	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.1	Spark command-line clients.
spark-history-server	1.6.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.1	In-memory execution engine for YARN.
spark-yarn-slave	1.6.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
webserver	2.4	Apache HTTP server.
zeppelin-server	0.5.6-incubating	Web-based notebook that enables interactive data analytics.

Component	Version	Description
zookeeper-server	3.4.8	Centralized service for maintaining configura tion information, naming, providing distributed synchronization, and providing group services.
zookeeper-client	3.4.8	ZooKeeper command line client.

4.6.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.6.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hbase-env	Change values in HBase's environment.
hbase-log4j	Change values in HBase's hbase-log4j.proper ties file.

Classifications	Description
hbase-metrics	Change values in HBase's hadoop-metrics2-hbaase.properties file.
hbase-policy	Change values in HBase's hbase-policy.xml file.
hbase-site	Change values in HBase's hbase-site.xml file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.properties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file

Classifications	Description
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.

Classifications	Description
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.
zookeeper-config	Change values in ZooKeeper's zoo.cfg file.
zookeeper-log4j	Change values in ZooKeeper's log4j.properties file.

Amazon EMR release 4.5.0

4.5.0 application versions

The following applications are supported in this release: Ganglia, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, and Zeppelin-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.5.0 release notes

The following release notes include information for the Amazon EMR 4.5.0 release.

Release date: April 4, 2016

Features

- Upgraded to Spark 1.6.1
- Upgraded to Hadoop 2.7.2
- Upgraded to Presto 0.140
- Added AWS KMS support for Amazon S3 server-side encryption.

Known issues resolved from previous releases

- Fixed an issue where MySQL and Apache servers would not start after a node was rebooted.
- Fixed an issue where IMPORT did not work correctly with non-partitioned tables stored in Amazon S3
- Fixed an issue with Presto where it requires the staging directory to be `/mnt/tmp` rather than `/tmp` when writing to Hive tables.

4.5.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system

processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.1.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.2.0	Distributed copy application optimized for Amazon S3.
emrfs	2.5.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.

Component	Version	Description
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.2-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.2-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.2-amzn-0	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.2-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.2-amzn-0	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.2-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.2-amzn-0	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.2-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resourcemanager	2.7.2-amzn-0	YARN service for allocating and managing cluster resources and distributed applications.

Component	Version	Description
hcatalog-client	1.0.0-amzn-4	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-4	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-4	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-4	Hive command line client.
hive-metastore-server	1.0.0-amzn-4	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-4	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-5	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.11.1	Library for machine learning.
mysql-server	5.5	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.

Component	Version	Description
presto-coordinator	0.140	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.140	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.1	Spark command-line clients.
spark-history-server	1.6.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.1	In-memory execution engine for YARN.
spark-yarn-slave	1.6.1	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
webserver	2.4	Apache HTTP server.
zeppelin-server	0.5.6-incubating	Web-based notebook that enables interactive data analytics.

4.5.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.5.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.

Classifications	Description
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.

Classifications	Description
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-site.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.

Amazon EMR release 4.4.0

4.4.0 application versions

The following applications are supported in this release: Ganglia, HCatalog, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Pig, Presto-Sandbox, Spark, Sqoop-Sandbox, and Zeppelin-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

4.4.0 release notes

The following release notes include information for the Amazon EMR 4.4.0 release.

Release date: March 14, 2016

Features

- Added HCatalog 1.0.0
- Added Sqoop-Sandbox 1.4.6
- Upgraded to Presto 0.136
- Upgraded to Zeppelin 0.5.6
- Upgraded to Mahout 0.11.1
- Enabled `dynamicResourceAllocation` by default.
- Added a table of all configuration classifications for the release. For more information, see the Configuration Classifications table in Configuring Applications.

Known issues resolved from previous releases

- Fixed an issue where the `maximizeResourceAllocation` setting would not reserve enough memory for YARN ApplicationMaster daemons.
- Fixed an issue encountered with a custom DNS. If any entries in `resolve.conf` precede the custom entries provided, then the custom entries are not resolvable. This behavior was affected by clusters in a VPC where the default VPC name server is inserted as the top entry in `resolve.conf`.

- Fixed an issue where the default Python moved to version 2.7 and boto was not installed for that version.
- Fixed an issue where YARN containers and Spark applications would generate a unique Ganglia round robin database (rrd) file, which resulted in the first disk attached to the instance filling up. Because of this fix, YARN container level metrics have been disabled and Spark application level metrics have been disabled.
- Fixed an issue in log pusher where it would delete all empty log folders. The effect was that the Hive CLI was not able to log because log pusher was removing the empty `user` folder under `/var/log/hive`.
- Fixed an issue affecting Hive imports, which affected partitioning and resulted in an error during import.
- Fixed an issue where EMRFS and s3-dist-cp did not properly handle bucket names that contain periods.
- Changed a behavior in EMRFS so that in versioning-enabled buckets the `_$folder$` marker file is not continuously created, which may contribute to improved performance for versioning-enabled buckets.
- Changed the behavior in EMRFS such that it does not use instruction files except for cases where client-side encryption is enabled. If you want to delete instruction files while using client-side encryption, you can set the emrfs-site.xml property, `fs.s3.cse.cryptoStorageMode.deleteInstructionFiles.enabled`, to true.
- Changed YARN log aggregation to retain logs at the aggregation destination for two days. The default destination is your cluster HDFS storage. If you want to change this duration, change the value of `yarn.log-aggregation.retain-seconds` using the `yarn-site` configuration classification when you create your cluster. As always, you can save your application logs to Amazon S3 using the `log-uri` parameter when you create your cluster.

Patches Applied

- HIVE-9655
- HIVE-9183
- HADOOP-12810

4.4.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.1.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.2.0	Distributed copy application optimized for Amazon S3.
emrfs	2.4.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.

Component	Version	Description
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.7.1-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.1-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.1-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.1-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.1-amzn-1	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.1-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.1-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.1-amzn-1	YARN service for managing containers on an individual node.

Component	Version	Description
hadoop-yarn-resour cemanager	2.7.1-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hcatalog-client	1.0.0-amzn-3	The 'hcat' command line client for manipulating hcatalog-server.
hcatalog-server	1.0.0-amzn-3	Service providing HCatalog, a table and storage management layer for distributed applications.
hcatalog-webhcat-server	1.0.0-amzn-3	HTTP endpoint providing a REST interface to HCatalog.
hive-client	1.0.0-amzn-3	Hive command line client.
hive-metastore-server	1.0.0-amzn-3	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-3	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-5	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.11.1	Library for machine learning.
mysql-server	5.5	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.

Component	Version	Description
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
presto-coordinator	0.136	Service for accepting queries and managing query execution among presto-workers.
presto-worker	0.136	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.0	Spark command-line clients.
spark-history-server	1.6.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.6.0	In-memory execution engine for YARN.
spark-yarn-slave	1.6.0	Apache Spark libraries needed by YARN slaves.
sqoop-client	1.4.6	Apache Sqoop command-line client.
webserver	2.4	Apache HTTP server.
zeppelin-server	0.5.6-incubating	Web-based notebook that enables interactive data analytics.

4.4.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.4.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hcatalog-env	Change values in HCatalog's environment.
hcatalog-server-jndi	Change values in HCatalog's jndi.properties.
hcatalog-server-proto-hive-site	Change values in HCatalog's proto-hive-site.xml.
hcatalog-webhcat-env	Change values in HCatalog WebHCat's environment.
hcatalog-webhcat-log4j	Change values in HCatalog WebHCat's log4j.properties.

Classifications	Description
hcatalog-webhcat-site	Change values in HCatalog WebHCat's webhcat-site.xml file.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.

Classifications	Description
oozie-site	Change values in Oozie's oozie-site.xml file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
sqoop-env	Change values in Sqoop's environment.
sqoop-oraoop-site	Change values in Sqoop OraOop's oraoop-si te.xml file.
sqoop-site	Change values in Sqoop's sqoop-site.xml file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.

Amazon EMR release 4.3.0

4.3.0 application versions

The following applications are supported in this release: Ganglia, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Pig, Presto-Sandbox, Spark, and Zeppelin-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

4.3.0 release notes

The following release notes include information for the Amazon EMR 4.3.0 release.

Release date: January 19, 2016

Features

- Upgraded to Hadoop 2.7.1
- Upgraded to Spark 1.6.0
- Upgraded Ganglia to 3.7.2
- Upgraded Presto to 0.130
- Amazon EMR made some changes to `spark.dynamicAllocation.enabled` when it is set to true; it is false by default. When set to true, this affects the defaults set by the `maximizeResourceAllocation` setting:
  - If `spark.dynamicAllocation.enabled` is set to true, `spark.executor.instances` is not set by `maximizeResourceAllocation`.
  - The `spark.driver.memory` setting is now configured based on the instance types in the cluster in a similar way to how `spark.executors.memory` is set. However, because the Spark

driver application may run on either the master or one of the core instances (for example, in YARN client and cluster modes, respectively), the `spark.driver.memory` setting is set based on the instance type of the smaller instance type between these two instance groups.

- The `spark.default.parallelism` setting is now set at twice the number of CPU cores available for YARN containers. In previous releases, this was half that value.
- The calculations for the memory overhead reserved for Spark YARN processes were adjusted to be more accurate, resulting in a small increase in the total amount of memory available to Spark (that is, `spark.executor.memory`).

Known issues resolved from previous releases

- YARN log aggregation is now enabled by default.
- Fixed an issue where logs would not be pushed to Amazon S3 logs bucket for the cluster when YARN log aggregation was enabled.
- YARN container sizes now have a new minimum of 32 across all node types.
- Fixed an issue with Ganglia that caused excessive disk I/O on the primary node in large clusters.
- Fixed an issue that prevented applications logs from being pushed to Amazon S3 when a cluster is shutting down.
- Fixed an issue in EMRFS CLI that caused certain commands to fail.
- Fixed an issue with Zeppelin that prevented dependencies from being loaded in the underlying SparkContext.
- Fixed an issue that resulted from issuing a resize attempting to add instances.
- Fixed an issue in Hive where CREATE TABLE AS SELECT makes excessive list calls to Amazon S3.
- Fixed an issue where large clusters would not provision properly when Hue, Oozie, and Ganglia are installed.
- Fixed an issue in s3-dist-cp where it would return a zero exit code even if it failed with an error.

4.3.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named myapp-component with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as 2.2-amzn-2.

Component	Version	Description
emr-ddb	3.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.1.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.1.0	Distributed copy application optimized for Amazon S3.
emrfs	2.3.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
ganglia-monitor	3.7.2	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.7.2	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.7.1	Web application for viewing metrics collected by the Ganglia metadata collector.

Component	Version	Description
hadoop-client	2.7.1-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.7.1-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.7.1-amzn-0	HDFS command-line client and library
hadoop-hdfs-namenode	2.7.1-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.7.1-amzn-0	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.7.1-amzn-0	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.7.1-amzn-0	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.7.1-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.7.1-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.
hive-client	1.0.0-amzn-2	Hive command line client.

Component	Version	Description
hive-metastore-server	1.0.0-amzn-2	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-2	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-5	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.11.0	Library for machine learning.
mysql-server	5.5	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
presto-coordinator	0.130	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.130	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.6.0	Spark command-line clients.
spark-history-server	1.6.0	Web UI for viewing logged events for the lifetime of a completed Spark application.

Component	Version	Description
spark-on-yarn	1.6.0	In-memory execution engine for YARN.
spark-yarn-slave	1.6.0	Apache Spark libraries needed by YARN slaves.
webserver	2.4	Apache HTTP server.
zeppelin-server	0.5.5-incubating-amzn-1	Web-based notebook that enables interactive data analytics.

4.3.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.3.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.

Classifications	Description
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.

Classifications	Description
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.

Amazon EMR release 4.2.0

4.2.0 application versions

The following applications are supported in this release: Ganglia, Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Pig, Presto-Sandbox, Spark, and Zeppelin-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

4.2.0 release notes

The following release notes include information for the Amazon EMR 4.2.0 release.

Release date: November 18, 2015

Features

- Added Ganglia support
- Upgraded to Spark 1.5.2
- Upgraded to Presto 0.125
- Upgraded Oozie to 4.2.0
- Upgraded Zeppelin to 0.5.5
- Upgraded the AWS SDK for Java to 1.10.27

Known issues resolved from previous releases

- Fixed an issue with the EMRFS CLI where it did not use the default metadata table name.
- Fixed an issue encountered when using ORC-backed tables in Amazon S3.
- Fixed an issue encountered with a Python version mismatch in the Spark configuration.
- Fixed an issue when a YARN node status fails to report because of DNS issues for clusters in a VPC.
- Fixed an issue encountered when YARN decommissioned nodes, resulting in hung applications or the inability to schedule new applications.

- Fixed an issue encountered when clusters terminated with status TIMED_OUT_STARTING.
- Fixed an issue encountered when including the EMRFS Scala dependency in other builds. The Scala dependency has been removed.

4.2.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *CommunityVersion*-amzn-*EmrVersion*. The *EmrVersion* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.1.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.0.0	Distributed copy application optimized for Amazon S3.
emrfs	2.2.0	Amazon S3 connector for Hadoop ecosystem applicati ons.

Component	Version	Description
ganglia-monitor	3.6.0	Embedded Ganglia agent for Hadoop ecosystem applicati ons along with the Ganglia monitoring agent.
ganglia-metadata-collector	3.6.0	Ganglia metadata collector for aggregating metrics from Ganglia monitoring agents.
ganglia-web	3.5.10	Web application for viewing metrics collected by the Ganglia metadata collector.
hadoop-client	2.6.0-amzn-2	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.6.0-amzn-2	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.6.0-amzn-2	HDFS command-line client and library
hadoop-hdfs-namenode	2.6.0-amzn-2	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.6.0-amzn-2	HTTP endpoint for HDFS operations.
hadoop-kms-server	2.6.0-amzn-2	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.6.0-amzn-2	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.6.0-amzn-2	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.6.0-amzn-2	YARN service for allocatin g and managing cluster resources and distributed applications.
hive-client	1.0.0-amzn-1	Hive command line client.
hive-metastore-server	1.0.0-amzn-1	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-1	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-5	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.11.0	Library for machine learning.
mysql-server	5.5	MySQL database server.
oozie-client	4.2.0	Oozie command-line client.
oozie-server	4.2.0	Service for accepting Oozie workflow requests.
presto-coordinator	0.125	Service for accepting queries and managing query execution among presto-wo rkers.

Component	Version	Description
presto-worker	0.125	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.5.2	Spark command-line clients.
spark-history-server	1.5.2	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.5.2	In-memory execution engine for YARN.
spark-yarn-slave	1.5.2	Apache Spark libraries needed by YARN slaves.
webserver	2.4	Apache HTTP server.
zeppelin-server	0.5.5-incubating-amzn-0	Web-based notebook that enables interactive data analytics.

4.2.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.2.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.

Classifications	Description
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properti es file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.

Classifications	Description
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.proper ties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
presto-connector-hive	Change values in Presto's hive.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
spark-metrics	Change values in Spark's metrics.properties file.
yarn-env	Change values in the YARN environment.

Classifications	Description
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.

Amazon EMR release 4.1.0

4.1.0 application versions

The following applications are supported in this release: Hadoop, Hive, Hue, Mahout, Oozie-Sandbox, Pig, Presto-Sandbox, Spark, and Zeppelin-Sandbox.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

4.1.0 release notes

4.1.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2

has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.1.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.0.0	Distributed copy application optimized for Amazon S3.
emrfs	2.1.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
hadoop-client	2.6.0-amzn-1	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.6.0-amzn-1	HDFS node-level service for storing blocks.
hadoop-hdfs-library	2.6.0-amzn-1	HDFS command-line client and library
hadoop-hdfs-namenode	2.6.0-amzn-1	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.6.0-amzn-1	HTTP endpoint for HDFS operations.

Component	Version	Description
hadoop-kms-server	2.6.0-amzn-1	Cryptographic key management server based on Hadoop's KeyProvider API.
hadoop-mapred	2.6.0-amzn-1	MapReduce execution engine libraries for running a MapReduce application.
hadoop-yarn-nodemanager	2.6.0-amzn-1	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.6.0-amzn-1	YARN service for allocatin g and managing cluster resources and distributed applications.
hive-client	1.0.0-amzn-1	Hive command line client.
hive-metastore-server	1.0.0-amzn-1	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-1	Service for accepting Hive queries as web requests.
hue-server	3.7.1-amzn-4	Web application for analyzing data using Hadoop ecosystem applications
mahout-client	0.11.0	Library for machine learning.
mysql-server	5.5	MySQL database server.
oozie-client	4.0.1	Oozie command-line client.

Component	Version	Description
oozie-server	4.0.1	Service for accepting Oozie workflow requests.
presto-coordinator	0.119	Service for accepting queries and managing query execution among presto-wo rkers.
presto-worker	0.119	Service for executing pieces of a query.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.5.0	Spark command-line clients.
spark-history-server	1.5.0	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.5.0	In-memory execution engine for YARN.
spark-yarn-slave	1.5.0	Apache Spark libraries needed by YARN slaves.
zeppelin-server	0.6.0-incubating-SNAPSHOT	Web-based notebook that enables interactive data analytics.

4.1.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see Configure applications.

emr-4.1.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hdfs-encryption-zones	Configure HDFS encryption zones.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
hue-ini	Change values in Hue's ini file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
hadoop-kms-acls	Change values in Hadoop's kms-acls.xml file.
hadoop-kms-env	Change values in the Hadoop KMS environme nt.

Classifications	Description
hadoop-kms-log4j	Change values in Hadoop's kms-log4j.properties file.
hadoop-kms-site	Change values in Hadoop's kms-site.xml file.
mapred-env	Change values in the MapReduce application's environment.
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
oozie-env	Change values in Oozie's environment.
oozie-log4j	Change values in Oozie's oozie-log4j.properties file.
oozie-site	Change values in Oozie's oozie-site.xml file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
presto-log	Change values in Presto's log.properties file.
presto-config	Change values in Presto's config.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
yarn-env	Change values in the YARN environment.

Classifications	Description
yarn-site	Change values in YARN's yarn-site.xml file.
zeppelin-env	Change values in the Zeppelin environment.

Amazon EMR release 4.0.0

4.0.0 application versions

The following applications are supported in this release: Hadoop, Hive, Mahout, Pig, and Spark.

The table below lists the application versions available in this release of Amazon EMR and the application versions in the preceding three Amazon EMR releases (when applicable).

For a comprehensive history of application versions for each release of Amazon EMR, see the following topics:

- Application versions in Amazon EMR 7.x releases
- Application versions in Amazon EMR 6.x releases
- Application versions in Amazon EMR 5.x releases
- Application versions in Amazon EMR 4.x releases

Application version information

	emr-4.3.0	emr-4.2.0	emr-4.1.0	emr-4.0.0

4.0.0 release notes

4.0.0 component versions

The components that Amazon EMR installs with this release are listed below. Some are installed as part of big-data application packages. Others are unique to Amazon EMR and installed for system processes and features. These typically start with `emr` or `aws`. Big-data application packages in the most recent Amazon EMR release are usually the latest version found in the community. We make community releases available in Amazon EMR as quickly as possible.

Some components in Amazon EMR differ from community versions. These components have a version label in the form *`CommunityVersion`*`-amzn-`*`EmrVersion`*. The *`EmrVersion`* starts at 0. For example, if open source community component named `myapp-component` with version 2.2 has been modified three times for inclusion in different Amazon EMR releases, its release version is listed as `2.2-amzn-2`.

Component	Version	Description
emr-ddb	3.0.0	Amazon DynamoDB connector for Hadoop ecosystem applications.
emr-goodies	2.0.0	Extra convenience libraries for the Hadoop ecosystem.
emr-kinesis	3.0.0	Amazon Kinesis connector for Hadoop ecosystem applicati ons.
emr-s3-dist-cp	2.0.0	Distributed copy application optimized for Amazon S3.
emrfs	2.0.0	Amazon S3 connector for Hadoop ecosystem applicati ons.
hadoop-client	2.6.0-amzn-0	Hadoop command-line clients such as 'hdfs', 'hadoop', or 'yarn'.
hadoop-hdfs-datanode	2.6.0-amzn-0	HDFS node-level service for storing blocks.
hadoop-hdfs-namenode	2.6.0-amzn-0	HDFS service for tracking file names and block locations.
hadoop-httpfs-server	2.6.0-amzn-0	HTTP endpoint for HDFS operations.
hadoop-mapred	2.6.0-amzn-0	MapReduce execution engine libraries for running a MapReduce application.

Component	Version	Description
hadoop-yarn-nodemanager	2.6.0-amzn-0	YARN service for managing containers on an individual node.
hadoop-yarn-resour cemanager	2.6.0-amzn-0	YARN service for allocatin g and managing cluster resources and distributed applications.
hive-client	1.0.0-amzn-0	Hive command line client.
hive-metastore-server	1.0.0-amzn-0	Service for accessing the Hive metastore, a semantic repository storing metadata for SQL on Hadoop operation s.
hive-server	1.0.0-amzn-0	Service for accepting Hive queries as web requests.
mahout-client	0.10.0	Library for machine learning.
mysql-server	5.5	MySQL database server.
pig-client	0.14.0-amzn-0	Pig command-line client.
spark-client	1.4.1	Spark command-line clients.
spark-history-server	1.4.1	Web UI for viewing logged events for the lifetime of a completed Spark application.
spark-on-yarn	1.4.1	In-memory execution engine for YARN.
spark-yarn-slave	1.4.1	Apache Spark libraries needed by YARN slaves.

4.0.0 configuration classifications

Configuration classifications allow you to customize applications. These often correspond to a configuration XML file for the application, such as `hive-site.xml`. For more information, see [Configure applications](#).

emr-4.0.0 classifications

Classifications	Description
capacity-scheduler	Change values in Hadoop's capacity-scheduler .xml file.
core-site	Change values in Hadoop's core-site.xml file.
emrfs-site	Change EMRFS settings.
hadoop-env	Change values in the Hadoop environment for all Hadoop components.
hadoop-log4j	Change values in Hadoop's log4j.properties file.
hdfs-site	Change values in HDFS's hdfs-site.xml.
hive-env	Change values in the Hive environment.
hive-exec-log4j	Change values in Hive's hive-exec-log4j.pr operties file.
hive-log4j	Change values in Hive's hive-log4j.properties file.
hive-site	Change values in Hive's hive-site.xml file
httpfs-env	Change values in the HTTPFS environment.
httpfs-site	Change values in Hadoop's httpfs-site.xml file.
mapred-env	Change values in the MapReduce application's environment.

Classifications	Description
mapred-site	Change values in the MapReduce application's mapred-site.xml file.
pig-properties	Change values in Pig's pig.properties file.
pig-log4j	Change values in Pig's log4j.properties file.
spark	Amazon EMR-curated settings for Apache Spark.
spark-defaults	Change values in Spark's spark-defaults.conf file.
spark-env	Change values in the Spark environment.
spark-log4j	Change values in Spark's log4j.properties file.
yarn-env	Change values in the YARN environment.
yarn-site	Change values in YARN's yarn-site.xml file.

Amazon EMR 2.x and 3.x AMI versions

Note

AWS is updating the TLS configuration for all AWS API endpoints to a minimum version of TLS 1.2. Amazon EMR releases 3.10 and lower only support TLS 1.0/1.1 connections. After December 4, 2023, you won't be able to create clusters with Amazon EMR 3.10 and lower. If you use Amazon EMR 3.10 or lower, we recommend that you immediately test and migrate your workloads to the latest Amazon EMR release. For more information, see the AWS Security Blog.

Amazon EMR 2.x and 3.x releases, called *AMI versions*, are made available for pre-existing solutions that require them for compatibility reasons. We do not recommend creating new clusters or new solutions with these release versions. They lack features of newer releases and include outdated application packages.

We recommend that you build solutions using the most recent Amazon EMR release version.

The scope of differences between the 2.x and 3.x series release versions and recent Amazon EMR release versions is significant. Those differences range from how you create and configure a cluster to the ports and directory structure of applications on the cluster.

This section attempts to cover the most significant differences for Amazon EMR, as well as specific application configuration and management differences. It is not comprehensive. If you create and use clusters in the 2.x or 3.x series, you may encounter differences not covered in this section.

Topics

Creating a cluster with earlier AMI versions of Amazon EMR

Amazon EMR 2.x and 3.x releases are referenced by *AMI version*. With Amazon EMR release 4.0.0 and later, releases are referenced by release version, using a *release label* such as `emr-5.11.0`. This change is most apparent when you create a cluster using the AWS CLI or programmatically.

When you use the AWS CLI to create a cluster using an AMI release version, use the `--ami-version` option, for example, `--ami-version 3.11.0`. Many options, features, and applications introduced in Amazon EMR 4.0.0 and later are not available when you specify an `--ami-version`. For more information, see create-cluster in the *AWS CLI Command Reference*.

The following example AWS CLI command launches a cluster using an AMI version.

Note

Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Test cluster" --ami-version 3.11.0 \
--applications Name=Hue Name=Hive Name=Pig \
--use-default-roles --ec2-attributes KeyName=myKey \
--instance-groups InstanceGroupType=MASTER,InstanceCount=1,\
InstanceType=m3.xlarge InstanceGroupType=CORE,InstanceCount=2,\
InstanceType=m3.xlarge --bootstrap-actions Path=s3://elasticmapreduce/bootstrap-
actions/configure-hadoop,\
Name="Configuring infinite JVM reuse",Args=["-m","mapred.job.reuse.jvm.num.tasks=-1"]
```

Programmatically, all Amazon EMR release versions use the `RunJobFlowRequest` action in the EMR API to create clusters. The following example Java code creates a cluster using AMI release version 3.11.0.

```
RunJobFlowRequest request = new RunJobFlowRequest()
   .withName("AmiVersion Cluster")
   .withAmiVersion("3.11.0")
   .withInstances(new JobFlowInstancesConfig()
    .withEc2KeyName("myKeyPair")
    .withInstanceCount(1)
    .withKeepJobFlowAliveWhenNoSteps(true)
    .withMasterInstanceType("m3.xlarge")
    .withSlaveInstanceType("m3.xlarge");
```

The following `RunJobFlowRequest` call uses a release label instead:

```
RunJobFlowRequest request = new RunJobFlowRequest()
   .withName("ReleaseLabel Cluster")
   .withReleaseLabel("emr-7.2.0")
   .withInstances(new JobFlowInstancesConfig()
    .withEc2KeyName("myKeyPair")
    .withInstanceCount(1)
    .withKeepJobFlowAliveWhenNoSteps(true)
    .withMasterInstanceType("m3.xlarge")
    .withSlaveInstanceType("m3.xlarge");
```

Configuring cluster size

When your cluster runs, Hadoop determines the number of mapper and reducer tasks needed to process the data. Larger clusters should have more tasks for better resource use and shorter processing time. Typically, an EMR cluster remains the same size during the entire cluster; you set the number of tasks when you create the cluster. When you resize a running cluster, you can vary the processing during the cluster execution. Therefore, instead of using a fixed number of tasks, you can vary the number of tasks during the life of the cluster. There are two configuration options to help set the ideal number of tasks:

- `mapred.map.tasksperslot`
- `mapred.reduce.tasksperslot`

You can set both options in the `mapred-conf.xml` file. When you submit a job to the cluster, the job client checks the current total number of map and reduce slots available clusterwide. The job client then uses the following equations to set the number of tasks:

- `mapred.map.tasks` = `mapred.map.tasksperslot` * map slots in cluster
- `mapred.reduce.tasks` = `mapred.reduce.tasksperslot` * reduce slots in cluster

The job client only reads the `tasksperslot` parameter if the number of tasks is not configured. You can override the number of tasks at any time, either for all clusters via a bootstrap action or individually per job by adding a step to change the configuration.

Amazon EMR withstands task node failures and continues cluster execution even if a task node becomes unavailable. Amazon EMR automatically provisions additional task nodes to replace those that fail.

You can have a different number of task nodes for each cluster step. You can also add a step to a running cluster to modify the number of task nodes. Because all steps are guaranteed to run sequentially by default, you can specify the number of running task nodes for any step.

Installing applications with earlier AMI versions of Amazon EMR

When using an AMI version, applications are installed in any number of ways, including using the `NewSupportedProducts` parameter for the [RunJobFlow](#) action, using bootstrap actions, and using the [Step](#) action.

Customizing cluster and application configuration with earlier AMI versions of Amazon EMR

Amazon EMR release version 4.0.0 introduced a simplified method of configuring applications using configuration classifications. For more information, see Configure applications. When using an AMI version, you configure applications using bootstrap actions along with arguments that you pass. For example, the `configure-hadoop` and `configure-daemons` bootstrap actions set Hadoop and YARN–specific environment properties like `--namenode-heap-size`. In more recent versions, these are configured using the `hadoop-env` and `yarn-env` configuration classifications. For bootstrap actions that perform common configurations, see the emr-bootstrap-actions repository on Github.

The following tables map bootstrap actions to configuration classifications in more recent Amazon EMR release versions.

Hadoop

Affected application file name	AMI version bootstrap action	Configuration classification
`core-site.xml`	`configure-hadoop -c`	`core-site`
`log4j.properties`	`configure-hadoop -l`	`hadoop-log4j`
`hdfs-site.xml`	`configure-hadoop -s`	`hdfs-site`
n/a	n/a	`hdfs-encryption-zones`
`mapred-site.xml`	`configure-hadoop -m`	`mapred-site`
`yarn-site.xml`	`configure-hadoop -y`	`yarn-site`
`httpfs-site.xml`	`configure-hadoop -t`	`httpfs-site`
`capacity-scheduler.xml`	`configure-hadoop -z`	`capacity-scheduler`
`yarn-env.sh`	`configure-daemons --resourcemanager-opts`	`yarn-env`

Hive

Affected application file name	AMI version bootstrap action	Configuration classification
hive-env.sh	n/a	hive-env
hive-site.xml	hive-script --install -hive-site ${MY_HIVE _SITE_FILE}	hive-site
hive-exec-log4j.pr operties	n/a	hive-exec-log4j
hive-log4j.propert ies	n/a	hive-log4j

EMRFS

Affected application file name	AMI version bootstrap action	Configuration classification
emrfs-site.xml	configure-hadoop -e	emrfs-site
n/a	s3get -s s3://cust om-provider.jar -d / usr/share/aws/emr/ auxlib/	emrfs-site (with new setting fs.s3.cse .encryptionMateria lsProvider.uri)

For a list of all classifications, see Configure applications.

Application environment variables

When using an AMI version, a hadoop-user-env.sh script is used along with the configure-daemons bootstrap action to configure the Hadoop environment. The script includes the following actions:

```
#!/bin/bash
export HADOOP_USER_CLASSPATH_FIRST=true;
```

```
echo "HADOOP_CLASSPATH=/path/to/my.jar" >> /home/hadoop/conf/hadoop-user-env.sh
```

In Amazon EMR release 4.x, you do the same using the hadoop-env configuration classification, as shown in the following example:

```
[
      {
         "Classification":"hadoop-env",
         "Properties":{

         },
         "Configurations":[
            {
               "Classification":"export",
               "Properties":{
                  "HADOOP_USER_CLASSPATH_FIRST":"true",
                  "HADOOP_CLASSPATH":"/path/to/my.jar"
               }
            }
         ]
      }
   ]
```

As another example, using configure-daemons and passing --namenode-heap-size=2048 and --namenode-opts=-XX:GCTimeRatio=19 is equivalent to the following configuration classifications.

```
[
      {
         "Classification":"hadoop-env",
         "Properties":{

         },
         "Configurations":[
            {
               "Classification":"export",
               "Properties":{
                  "HADOOP_DATANODE_HEAPSIZE":  "2048",
            "HADOOP_NAMENODE_OPTS":  "-XX:GCTimeRatio=19"
               }
            }
         ]
```

```
        }
    ]
```

Other application environment variables are no longer defined in `/home/hadoop/.bashrc`. Instead, they are primarily set in `/etc/default` files per component or application, such as `/etc/default/hadoop`. Wrapper scripts in `/usr/bin/` installed by application RPMs may also set additional environment variables before involving the actual bin script.

Service ports

When using an AMI version, some services use custom ports.

Changes in port settings

Setting	AMI version 3.x	Open-source default
fs.default.name	hdfs://emrDeterminedIP:9000	default (hdfs://*emrDeterminedIP* :8020)
dfs.datanode.address	0.0.0.0:9200	default (0.0.0.0:50010)
dfs.datanode.http.address	0.0.0.0:9102	default (0.0.0.0:50075)
dfs.datanode.https.address	0.0.0.0:9402	default (0.0.0.0:50475)
dfs.datanode.ipc.address	0.0.0.0:9201	default (0.0.0.0:50020)
dfs.http.address	0.0.0.0:9101	default (0.0.0.0:50070)
dfs.https.address	0.0.0.0:9202	default (0.0.0.0:50470)
dfs.secondary.http.address	0.0.0.0:9104	default (0.0.0.0:50090)
yarn.nodemanager.address	0.0.0.0:9103	default (${yarn.nodemanager.hostname}:0)
yarn.nodemanager.localizer.address	0.0.0.0:9033	default (${yarn.nodemanager.hostname}:8040)
yarn.nodemanager.webapp.address	0.0.0.0:9035	default (${yarn.nodemanager.hostname}:8042)

Setting	AMI version 3.x	Open-source default
yarn.resourcemanager.address	*emrDeterminedIP* :9022	default (${yarn.resourcemanager.hostname}:8032)
yarn.resourcemanager.admin.address	*emrDeterminedIP* :9025	default (${yarn.resourcemanager.hostname}:8033)
yarn.resourcemanager.resource-tracker.address	*emrDeterminedIP* :9023	default (${yarn.resourcemanager.hostname}:8031)
yarn.resourcemanager.scheduler.address	*emrDeterminedIP* :9024	default (${yarn.resourcemanager.hostname}:8030)
yarn.resourcemanager.webapp.address	0.0.0.0:9026	default (${yarn.resourcemanager.hostname}:8088)
yarn.web-proxy.address	*emrDeterminedIP* :9046	default (no-value)
yarn.resourcemanager.hostname	0.0.0.0 (default)	*emrDeterminedIP*

Note

The *emrDeterminedIP* is an IP address that is generated by Amazon EMR.

Users

When using an AMI version, the user `hadoop` runs all processes and owns all files. In Amazon EMR release version 4.0.0 and later, users exist at the application and component level.

Installation sequence, installed artifacts, and log file locations

When using an AMI version, application artifacts and their configuration directories are installed in the `/home/hadoop/application` directory. For example, if you installed Hive, the directory would be `/home/hadoop/hive`. In Amazon EMR release 4.0.0 and later, application artifacts are installed in the `/usr/lib/application` directory. When using an AMI version, log files are found in various places. The table below lists locations.

Changes in log locations on Amazon S3

Daemon or application	Directory location
instance-state	node/*instance-id* /instance-state/
hadoop-hdfs-namenode	daemons/*instance-id* /hadoop-hadoop-namenode.log
hadoop-hdfs-datanode	daemons/*instance-id* /hadoop-hadoop-datanode.log
hadoop-yarn (ResourceManager)	daemons/*instance-id* /yarn-hadoop-resourcemanager
hadoop-yarn (Proxy Server)	daemons/*instance-id* /yarn-hadoop-proxyserver
mapred-historyserver	daemons/*instance-id* /
httpfs	daemons/*instance-id* /httpfs.log
hive-server	node/*instance-id* /hive-server/hive-server.log
hive-metastore	node/*instance-id* /apps/hive.log
Hive CLI	node/*instance-id* /apps/hive.log
YARN applications user logs and container logs	task-attempts/
Mahout	N/A
Pig	N/A
spark-historyserver	N/A
mapreduce job history files	jobs/

Command runner

When using an AMI version, many scripts or programs, like /home/hadoop/contrib/streaming/hadoop-streaming.jar, are not placed on the shell login path environment, so you need to specify the full path when you use a jar file such as command-runner.jar or script-runner.jar to execute the scripts. The command-runner.jar is located on the AMI so there is no need to know a full URI as was the case with script-runner.jar.

Replication factor

The replication factor lets you configure when to start a Hadoop JVM. You can start a new Hadoop JVM for every task, which provides better task isolation, or you can share JVMs between tasks, providing lower framework overhead. If you are processing many small files, it makes sense to reuse the JVM many times to amortize the cost of start-up. However, if each task takes a long time or processes a large amount of data, then you might choose to not reuse the JVM to ensure that all memory is freed for subsequent tasks. When using an AMI version, you can customize the replication factor using the configure-hadoop bootstrap action to set the mapred.job.reuse.jvm.num.tasks property.

The following example demonstrates setting the JVM reuse factor for infinite JVM reuse.

Note

Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Test cluster" --ami-version 3.11.0 \
--applications Name=Hue Name=Hive Name=Pig \
--use-default-roles --ec2-attributes KeyName=myKey \
--instance-groups InstanceGroupType=MASTER,InstanceCount=1,InstanceType=m3.xlarge \
InstanceGroupType=CORE,InstanceCount=2,InstanceType=m3.xlarge \
--bootstrap-actions Path=s3://elasticmapreduce/bootstrap-actions/configure-hadoop,\
Name="Configuring infinite JVM reuse",Args=["-m","mapred.job.reuse.jvm.num.tasks=-1"]
```

Hive application specifics for earlier AMI versions of Amazon EMR

Log files

Using Amazon EMR AMI versions 2.x and 3.x, Hive logs are saved to `/mnt/var/log/apps/`. In order to support concurrent versions of Hive, the version of Hive that you run determines the log file name, as shown in the following table.

Hive version	Log file name
0.13.1	`hive.log` **Note** Beginning with this version, Amazon EMR uses an unversioned file name, `hive.log`. Minor versions share the same log location as the major version.
0.11.0	`hive_0110.log` **Note** Minor versions of Hive 0.11.0, such as 0.11.0.1, share the same log file location as Hive 0.11.0.
0.8.1	`hive_081.log` **Note** Minor versions of Hive 0.8.1, such as Hive 0.8.1.1, share the same log file location as Hive 0.8.1.
0.7.1	`hive_07_1.log`

Hive version	Log file name
	Note Minor versions of Hive 0.7.1, such as Hive 0.7.1.3 and Hive 0.7.1.4, share the same log file location as Hive 0.7.1.
0.7	`hive_07.log`
0.5	`hive_05.log`
0.4	`hive.log`

Split input functionality

To implement split input functionality using Hive versions earlier than 0.13.1 (Amazon EMR AMI versions earlier 3.11.0), use the following:

```
hive> set hive.input.format=org.apache.hadoop.hive.ql.io.HiveCombineSplitsInputFormat;
hive> set mapred.min.split.size=100000000;
```

This functionality was deprecated with Hive 0.13.1. To get the same split input format functionality in Amazon EMR AMI Version 3.11.0, use the following:

```
set hive.hadoop.supports.splittable.combineinputformat=true;
```

Thrift service ports

Thrift is an RPC framework that defines a compact binary serialization format used to persist data structures for later analysis. Normally, Hive configures the server to operate on the following ports.

Hive version	Port number
Hive 0.13.1	10000

Hive version	Port number
Hive 0.11.0	10004
Hive 0.8.1	10003
Hive 0.7.1	10002
Hive 0.7	10001
Hive 0.5	10000

For more information about thrift services, see http://wiki.apache.org/thrift/.

Use Hive to recover partitions

Amazon EMR includes a statement in the Hive query language that recovers the partitions of a table from table data located in Amazon S3. The following example shows this.

```
CREATE EXTERNAL TABLE (json string) raw_impression
PARTITIONED BY (dt string)
LOCATION 's3://elastic-mapreduce/samples/hive-ads/tables/impressions';
ALTER TABLE logs RECOVER PARTITIONS;
```

The partition directories and data must be at the location specified in the table definition and must be named according to the Hive convention: for example, `dt=2009-01-01`.

> **Note**
>
> After Hive 0.13.1 this capability is supported natively using `msck repair` *`table`* and therefore `recover partitions` is not supported. For more information, see https://cwiki.apache.org/confluence/display/Hive/LanguageManual+DDL.

Pass a Hive variable to a script

To pass a variable into a Hive step using the AWS CLI, type the following command, replace *mykey* with the name of your EC2 key pair, and replace *mybucket* with your bucket name. In this example, SAMPLE is a variable value preceded by the -d switch. This variable is defined in the Hive script as: ${SAMPLE}.

> **Note**
>
> Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Test cluster" --ami-version 3.9 \
--applications Name=Hue Name=Hive Name=Pig \
--use-default-roles --ec2-attributes KeyName=myKey \
--instance-type m3.xlarge --instance-count 3 \
--steps Type=Hive,Name="Hive Program",ActionOnFailure=CONTINUE,\
Args=[-f,s3://elasticmapreduce/samples/hive-ads/libs/response-time-stats.q,-d,\
INPUT=s3://elasticmapreduce/samples/hive-ads/tables,-d,OUTPUT=s3://mybucket/hive-ads/
output/,\
-d,SAMPLE=s3://elasticmapreduce/samples/hive-ads/]
```

Specify an external metastore location

The following procedure shows you how to override the default configuration values for the Hive metastore location and start a cluster using the reconfigured metastore location.

To create a metastore located outside of the EMR cluster

1. Create a MySQL or Aurora database using Amazon RDS.

   For information about how to create an Amazon RDS database, see Getting started with Amazon RDS.

2. Modify your security groups to allow JDBC connections between your database and the **ElasticMapReduce-Master** security group.

   For information about how to modify your security groups for access, see Amazon RDS security groups in the *Amazon RDS User Guide*.

3. Set the JDBC configuration values in `hive-site.xml`:

   a. Create a `hive-site.xml` configuration file containing the following:

```
<configuration>
  <property>
    <name>javax.jdo.option.ConnectionURL</name>
    <value>jdbc:mariadb://hostname:3306/hive?createDatabaseIfNotExist=true</
value>
    <description>JDBC connect string for a JDBC metastore</description>
  </property>
  <property>
    <name>javax.jdo.option.ConnectionUserName</name>
    <value>hive</value>
    <description>Username to use against metastore database</description>
  </property>
  <property>
    <name>javax.jdo.option.ConnectionPassword</name>
    <value>password</value>
    <description>Password to use against metastore database</description>
  </property>
</configuration>
```

   `hostname` is the DNS address of the Amazon RDS instance running the database. *`username`* and *`password`* are the credentials for your database. For more information about connecting to MySQL and Aurora database instances, see [Connecting to a DB instance running the MySQL database engine] and [Connecting to an Aurora DB cluster] in the *Amazon RDS User Guide*.

   The JDBC drivers are installed by Amazon EMR.

   > **Note**
   >
   > The value property should not contain any spaces or carriage returns. It should appear all on one line.

   b. Save your `hive-site.xml` file to a location on Amazon S3, such as `s3://`*`mybucket/`*`hive-site.xml`.

4. Create a cluster, specifying the Amazon S3 location of the customized `hive-site.xml` file.

   The following example command demonstrates an AWS CLI command that does this.

Note

Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Test cluster" --ami-version 3.10 \
--applications Name=Hue Name=Hive Name=Pig \
--use-default-roles --ec2-attributes KeyName=myKey \
--instance-type m3.xlarge --instance-count 3 \
--bootstrap-actions Name="Install Hive Site Configuration",\
Path="s3://region.elasticmapreduce/libs/hive/hive-script",\
Args=["--base-path","s3://elasticmapreduce/libs/hive","--install-hive-site",\
"--hive-site=s3://mybucket/hive-site.xml","--hive-versions","latest"]
```

Connect to Hive using JDBC

To connect to Hive via JDBC requires you to download the JDBC driver and install a SQL client. The following example demonstrates using SQL Workbench/J to connect to Hive using JDBC.

To download JDBC drivers

1. Download and extract the drivers appropriate to the versions of Hive that you want to access. The Hive version differs depending on the AMI that you choose when you create an Amazon EMR cluster.

   - Hive 0.13.1 JDBC drivers: https://amazon-odbc-jdbc-drivers.s3.amazonaws.com/public/AmazonHiveJDBC_1.0.4.1004.zip
   - Hive 0.11.0 JDBC drivers: https://mvnrepository.com/artifact/org.apache.hive/hive-jdbc/0.11.0
   - Hive 0.8.1 JDBC drivers: https://mvnrepository.com/artifact/org.apache.hive/hive-jdbc/0.8.1

2. Install SQL Workbench/J. For more information, see Installing and starting SQL Workbench/J in the SQL Workbench/J Manual User's Manual.

3. Create an SSH tunnel to the cluster master node. The port for connection is different depending on the version of Hive. Example commands are provided in the tables below for Linux `ssh` users and PuTTY commands for Windows users

Linux SSH commands

Hive version	Command
0.13.1	`ssh -o ServerAliveInterval=10 -i` *`path-to-key-file`* `-N -L 10000:localhost:10000 hadoop@` *`master-public-dns-name`*
0.11.0	`ssh -o ServerAliveInterval=10 -i` *`path-to-key-file`* `-N -L 10004:localhost:10004 hadoop@` *`master-public-dns-name`*
0.8.1	`ssh -o ServerAliveInterval=10 -i` *`path-to-key-file`* `-N -L 10003:localhost:10003 hadoop@` *`master-public-dns-name`*
0.7.1	`ssh -o ServerAliveInterval=10 -i` *`path-to-key-file`* `-N -L 10002:localhost:10002 hadoop@` *`master-public-dns-name`*
0.7	`ssh -o ServerAliveInterval=10 -i` *`path-to-key-file`* `-N -L 10001:localhost:10001 hadoop@` *`master-public-dns-name`*
0.5	`ssh -o ServerAliveInterval=10 -i` *`path-to-key-file`* `-N -L 10000:localhost:10000 hadoop@` *`master-public-dns-name`*

Windows PuTTY tunnel settings

Hive version	Tunnel settings
0.13.1	**Source port**: 10000 **Destination**: *`master-public-dns-name`* :10000
0.11.0	**Source port**: 10004 **Destination**: *`master-public-dns-name`* :10004
0.8.1	**Source port**: 10003 **Destination**: *`master-public-dns-name`* :10003

4. Add the JDBC driver to SQL Workbench.

   a. In the **Select Connection Profile** dialog box, choose **Manage Drivers**.

   b. Choose the **Create a new entry** (blank page) icon.

   c. In the **Name** field, type **`Hive JDBC`**.

d. For **Library**, click the **Select the JAR file(s)** icon.

e. Select JAR files as shown in the following table.

Hive driver version	JAR files to add

0.13.1	`hive_metastore.jar`
	`hive_service.jar`
	`HiveJDBC3.jar`
	`libfb303-0.9.0.jar`
	`libthrift-0.9.0.jar`
	`log4j-1.2.14.jar`
	`ql.jar`
	`slf4j-api-1.5.8.jar`
	`slf4j-log4j12-1.5.8.jar`
	`TCLIServiceClient.jar`

0.11.0	`hadoop-core-1.0.3.jar`
	`hive-exec-0.11.0.jar`
	`hive-jdbc-0.11.0.jar`
	`hive-metastore-0.11.0.jar`
	`hive-service-0.11.0.jar`
	`libfb303-0.9.0.jar`
	`commons-logging-1.0.4.jar`
	`slf4j-api-1.6.1.jar`

0.8.1	`hadoop-core-0.20.205.jar`
	`hive-exec-0.8.1.jar`
	`hive-jdbc-0.8.1.jar`
	`hive-metastore-0.8.1.jar`
	`hive-service-0.8.1.jar`
	`libfb303-0.7.0.jar`
	`libthrift-0.7.0.jar`
	`log4j-1.2.15.jar`
	`slf4j-api-1.6.1.jar`
	`slf4j-log4j12-1.6.1.jar`

0.7.1	`hadoop-0.20-core.jar`

Hive driver version	JAR files to add

	`hive-exec-0.7.1.jar`
	`hive-jdbc-0.7.1.jar`
	`hive-metastore-0.7.1.jar`
	`hive-service-0.7.1.jar`
	`libfb303.jar`
	`commons-logging-1.0.4.jar`
	`slf4j-api-1.6.1.jar`
	`slf4j-log4j12-1.6.1.jar`

0.7	`hadoop-0.20-core.jar`
	`hive-exec-0.7.0.jar`
	`hive-jdbc-0.7.0.jar`
	`hive-metastore-0.7.0.jar`
	`hive-service-0.7.0.jar`
	`libfb303.jar`
	`commons-logging-1.0.4.jar`
	`slf4j-api-1.5.6.jar`
	`slf4j-log4j12-1.5.6.jar`

0.5	`hadoop-0.20-core.jar`
	`hive-exec-0.5.0.jar`
	`hive-jdbc-0.5.0.jar`
	`hive-metastore-0.5.0.jar`
	`hive-service-0.5.0.jar`
	`libfb303.jar`
	`log4j-1.2.15.jar`
	`commons-logging-1.0.4.jar`

f. In the **Please select one driver** dialog box, select a driver according to the following table and click **OK**.

Hive version	Driver classname
0.13.1	`com.amazon.hive.jdbc3.HS2Driver`
0.11.0	`org.apache.hadoop.hive.jdbc.HiveDriver.jar`
0.8.1	`org.apache.hadoop.hive.jdbc.HiveDriver.jar`
0.7.1	`org.apache.hadoop.hive.jdbc.HiveDriver.jar`
0.7	`org.apache.hadoop.hive.jdbc.HiveDriver.jar`
0.5	`org.apache.hadoop.hive.jdbc.HiveDriver.jar`

5. When you return to the **Select Connection Profile** dialog box, verify that the **Driver** field is set to **Hive JDBC** and provide the JDBC connection string in the **URL** field according to the following table.

Hive version	JDBC connection string
0.13.1	`jdbc:hive2://localhost:10000/default`
0.11.0	`jdbc:hive://localhost:10004/default`
0.8.1	`jdbc:hive://localhost:10003/default`

If your cluster uses AMI version 3.3.1 or later, in the **Select Connection Profile** dialog box, type **hadoop** in the **Username** field.

HBase application specifics for earlier AMI versions of Amazon EMR

Supported HBase versions

HBase version	AMI version	AWS CLI configura tion parameters	HBase version details

0.94.18	3.1.0 and later	`--ami-version 3.1`
		`--ami-version 3.2`
		`--ami-version 3.3`
		`--applications Name=HBase`
			• Bug fixes and enhancements.

0.94.7	3.0-3.0.4	`--ami-version 3.0` `--applications Name=HBase`	
0.92	2.2 and later	`--ami-version 2.2 or later` `--applications Name=HBase`	

HBase cluster prerequisites

A cluster created using Amazon EMR AMI versions 2.x and 3.x should meet the following requirements for HBase.

- The AWS CLI (optional)—To interact with HBase using the command line, download and install the latest version of the AWS CLI. For more information, see Installing the AWS Command Line Interface in the *AWS Command Line Interface User Guide*.

- At least two instances (optional)—The cluster's master node runs the HBase master server and Zookeeper, and task nodes run the HBase region servers. For best performance, HBase clusters should run on at least two EC2 instances, but you can run HBase on a single node for evaluation purposes.
- Long-running cluster—HBase only runs on long-running clusters. By default, the CLI and Amazon EMR console create long-running clusters.
- An Amazon EC2 key pair set (recommended)—To use the Secure Shell (SSH) network protocol to connect with the master node and run HBase shell commands, you must use an Amazon EC2 key pair when you create the cluster.
- The correct AMI and Hadoop versions—HBase clusters are currently supported only on Hadoop 20.205 or later.
- Ganglia (optional)—To monitor HBase performance metrics, install Ganglia when you create the cluster.
- An Amazon S3 bucket for logs (optional)—The logs for HBase are available on the master node. If you'd like these logs copied to Amazon S3, specify an S3 bucket to receive log files when you create the cluster.

Creating a cluster with HBase

The following table lists options that are available when using the console to create a cluster with HBase using an Amazon EMR AMI release version.

Field	Action
Restore from backup	Specify whether to pre-load the HBase cluster with data stored in Amazon S3.
Backup location	Specify the URI where the backup from which to restore resides in Amazon S3.
Backup version	Optionally, specify the version name of the backup at **Backup Location** to use. If you leave this field blank, Amazon EMR uses the latest backup at **Backup Location** to populate the new HBase cluster.

Field	Action
Schedule Regular Backups	Specify whether to schedule automatic incremental backups. The first backup is a full backup to create a baseline for future incremental backups.
Consistent backup	Specify whether the backups should be consistent. A consistent backup is one that pauses write operations during the initial backup stage, synchroni zation across nodes. Any write operations thus paused are placed in a queue and resume when synchronization completes.
Backup frequency	The number of days/hours/minutes between scheduled backups.
Backup location	The Amazon S3 URI where backups are stored. The backup location for each HBase cluster should be different to ensure that differential backups stay correct.
Backup start time	Specify when the first backup should occur. You can set this to now, which causes the first backup to start as soon as the cluster is running, or enter a date and time in ISO format. For example, 2012-06-15T20:00Z would set the start time to June 15, 2012 at 8PM UTC.

The following example AWS CLI command launches a cluster with HBase and other applications:

Note

Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Test cluster" --ami-version 3.3 \
               --applications Name=Hue Name=Hive Name=Pig Name=HBase \
               --use-default-roles --ec2-attributes KeyName=myKey \
               --instance-type c1.xlarge --instance-count 3 --termination-protected
```

After the connection between the Hive and HBase clusters has been made (as shown in the previous procedure), you can access the data stored on the HBase cluster by creating an external table in Hive.

The following example, when run from the Hive prompt, creates an external table that references data stored in an HBase table called `inputTable`. You can then reference `inputTable` in Hive statements to query and modify data stored in the HBase cluster.

> **Note**
>
> The following example uses **protobuf-java-2.4.0a.jar** in AMI 2.3.3, but you should modify the example to match your version. To check which version of the Protocol Buffers JAR you have, run the command at the Hive command prompt: `! ls /home/hadoop/lib;`.

```
add jar lib/emr-metrics-1.0.jar ;
               add jar lib/protobuf-java-2.4.0a.jar ;

               set hbase.zookeeper.quorum=ec2-107-21-163-157.compute-1.amazonaws.com ;

               create external table inputTable (key string, value string)
                    stored by 'org.apache.hadoop.hive.hbase.HBaseStorageHandler'
                     with serdeproperties ("hbase.columns.mapping" = ":key,f1:col1")
                     tblproperties ("hbase.table.name" = "t1");

               select count(*) from inputTable ;
```

Customizing HBase configuration

Although the default settings should work for most applications, you have the flexibility to modify your HBase configuration settings. To do this, run one of two bootstrap action scripts:

- **configure-hbase-daemons**—Configures properties of the master, regionserver, and zookeeper daemons. These properties include heap size and options to pass to the Java Virtual Machine (JVM) when the HBase daemon starts. You set these properties as arguments in the bootstrap action. This bootstrap action modifies the /home/hadoop/conf/hbase-user-env.sh configuration file on the HBase cluster.
- **configure-hbase**—Configures HBase site-specific settings such as the port the HBase master should bind to and the maximum number of times the client CLI client should retry an action.

You can set these one-by-one, as arguments in the bootstrap action, or you can specify the location of an XML configuration file in Amazon S3. This bootstrap action modifies the /home/hadoop/conf/hbase-site.xml configuration file on the HBase cluster.

> **Note**
>
> These scripts, like other bootstrap actions, can only be run when the cluster is created; you cannot use them to change the configuration of an HBase cluster that is currently running.

When you run the **configure-hbase** or **configure-hbase-daemons** bootstrap actions, the values you specify override the default values. Any values that you don't explicitly set receive the default values.

Configuring HBase with these bootstrap actions is analogous to using bootstrap actions in Amazon EMR to configure Hadoop settings and Hadoop daemon properties. The difference is that HBase does not have per-process memory options. Instead, memory options are set using the `--*daemon*-opts` argument, where `*daemon*` is replaced by the name of the daemon to configure.

Configure HBase daemons

Amazon EMR provides a bootstrap action, `s3://*region*.elasticmapreduce/bootstrap-actions/configure-hbase-daemons`, that you can use to change the configuration of HBase daemons, where *region* is the region into which you're launching your HBase cluster.

To configure HBase daemons using the AWS CLI, add the `configure-hbase-daemons` bootstrap action when you launch the cluster to configure one or more HBase daemons. You can set the following properties.

Property	Description
`hbase-master-opts`	Options that control how the JVM runs the master daemon. If set, these override the default HBASE_MASTER_OPTS variables.
`regionserver-opts`	Options that control how the JVM runs the region server daemon. If set, these override the default HBASE_REGIONSERVER_OPTS variables.

Property	Description
`zookeeper-opts`	Options that control how the JVM runs the zookeeper daemon. If set, these override the default HBASE_ZOOKEEPER_OPTS variables.

For more information about these options, see hbase-env.sh in the HBase documentation.

A bootstrap action to configure values for `zookeeper-opts` and `hbase-master-opts` is shown in the following example.

Note

Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Test cluster" --ami-version 3.3 \
--applications Name=Hue Name=Hive Name=Pig Name=HBase \
--use-default-roles --ec2-attributes KeyName=myKey \
--instance-type c1.xlarge --instance-count 3 --termination-protected \
--bootstrap-actions Path=s3://elasticmapreduce/bootstrap-actions/configure-hbase-daemons,\
Args=["--hbase-zookeeper-opts=-Xmx1024m -XX:GCTimeRatio=19","--hbase-master-opts=-Xmx2048m","--hbase-regionserver-opts=-Xmx4096m"]
```

Configure HBase site settings

Amazon EMR provides a bootstrap action, `s3://elasticmapreduce/bootstrap-actions/configure-hbase`, that you can use to change the configuration of HBase. You can set configuration values one-by-one, as arguments in the bootstrap action, or you can specify the location of an XML configuration file in Amazon S3. Setting configuration values one-by-one is useful if you only need to set a few configuration settings. Setting them using an XML file is useful if you have many changes to make, or if you want to save your configuration settings for reuse.

Note

You can prefix the Amazon S3 bucket name with a region prefix, such as `s3://region.elasticmapreduce/bootstrap-actions/configure-hbase`, where *region* is the region into which you're launching your HBase cluster.

This bootstrap action modifies the `/home/hadoop/conf/hbase-site.xml` configuration file on the HBase cluster. The bootstrap action can only be run when the HBase cluster is launched.

For more information about the HBase site settings that you can configure, see Default configuration in the HBase documentation.

Set the `configure-hbase` bootstrap action when you launch the HBase cluster and specify the values in `hbase-site.xml` to change.

To specify individual HBase site settings using the AWS CLI

- To change the `hbase.hregion.max.filesize` setting, type the following command and replace *myKey* with the name of your Amazon EC2 key pair.

  Note

  Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Test cluster" --ami-version 3.3 \
--applications Name=Hue Name=Hive Name=Pig Name=HBase \
--use-default-roles --ec2-attributes KeyName=myKey \
--instance-type c1.xlarge --instance-count 3 --termination-protected \
--bootstrap-actions Path=s3://elasticmapreduce/bootstrap-actions/configure-
hbase,Args=["-s","hbase.hregion.max.filesize=52428800"]
```

To specify HBase site settings with an XML file using the AWS CLI

1. Create a custom version of `hbase-site.xml`. Your custom file must be valid XML. To reduce the chance of introducing errors, start with the default copy of `hbase-site.xml`, located on

the Amazon EMR HBase master node at `/home/hadoop/conf/hbase-site.xml`, and edit a copy of that file instead of creating a file from scratch. You can give your new file a new name, or leave it as `hbase-site.xml`.

2. Upload your custom `hbase-site.xml` file to an Amazon S3 bucket. It should have permissions set so the AWS account that launches the cluster can access the file. If the AWS account launching the cluster also owns the Amazon S3 bucket, it has access.
3. Set the **configure-hbase** bootstrap action when you launch the HBase cluster, and include the location of your custom `hbase-site.xml` file. The following example sets the HBase site configuration values to those specified in the file `s3://mybucket/my-hbase-site.xml`. Type the following command, replace *myKey* with the name of your EC2 key pair, and replace *mybucket* with the name of your Amazon S3 bucket.

> **Note**
>
> Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Test cluster" --ami-version 3.3 \
        --applications Name=Hue Name=Hive Name=Pig Name=HBase \
        --use-default-roles --ec2-attributes KeyName=myKey \
        --instance-type c1.xlarge --instance-count 3 --termination-protected \
        --bootstrap-actions Path=s3://elasticmapreduce/bootstrap-actions/configure-
hbase,Args=["--site-config-file","s3://mybucket/config.xml"]
```

If you specify more than one option to customize HBase operation, you must prepend each key-value pair with a `-s` option switch, as shown in the following example:

```
       --bootstrap-actions s3://elasticmapreduce/bootstrap-actions/configure-
hbase,Args=["-s","zookeeper.session.timeout=60000"]
```

With the proxy set and the SSH connection open, you can view the HBase UI by opening a browser window with http://*master-public-dns-name*:60010/master-status, where *master-public-dns-name* is the public DNS address of the master node in the HBase cluster.

You can view the current HBase logs by using SSH to connect to the master node, and navigating to the `mnt/var/log/hbase` directory. These logs are not available after the cluster is terminated unless you enable logging to Amazon S3 when the cluster is launched.

Back up and restore HBase

Amazon EMR provides the ability to back up your HBase data to Amazon S3, either manually or on an automated schedule. You can perform both full and incremental backups. After you have a backed-up version of HBase data, you can restore that version to an HBase cluster. You can restore to an HBase cluster that is currently running, or launch a new cluster pre-populated with backed-up data.

During the backup process, HBase continues to execute write commands. Although this ensures that your cluster remains available throughout the backup, there is the risk of inconsistency between the data being backed up and any write operations being executed in parallel. To understand the inconsistencies that might arise, you have to consider that HBase distributes write operations across the nodes in its cluster. If a write operation happens after a particular node is polled, that data is not included in the backup archive. You may even find that earlier writes to the HBase cluster (sent to a node that has already been polled) might not be in the backup archive, whereas later writes (sent to a node before it was polled) are included.

If a consistent backup is required, you must pause writes to HBase during the initial portion of the backup process, synchronization across nodes. You can do this by specifying the `--consistent` parameter when requesting a backup. With this parameter, writes during this period are queued and executed as soon as the synchronization completes. You can also schedule recurring backups, which resolves any inconsistencies over time, as data that is missed on one backup pass is backed up on the following pass.

When you back up HBase data, you should specify a different backup directory for each cluster. An easy way to do this is to use the cluster identifier as part of the path specified for the backup directory. For example, `s3://mybucket/backups/j-3AEXXXXXX16F2`. This ensures that any future incremental backups reference the correct HBase cluster.

When you are ready to delete old backup files that are no longer needed, we recommend that you first do a full backup of your HBase data. This ensures that all data is preserved and provides a baseline for future incremental backups. After the full backup is done, you can navigate to the backup location and manually delete the old backup files.

The HBase backup process uses S3DistCp for the copy operation, which has certain limitations regarding temporary file storage space.

Back up and restore HBase using the console

The console provides the ability to launch a new cluster and populate it with data from a previous HBase backup. It also gives you the ability to schedule periodic incremental backups of HBase data. Additional backup and restore functionality, such as the ability to restore data to an already running cluster, do manual backups, and schedule automated full backups, is available using the CLI.

To populate a new cluster with archived HBase data using the console

1. Navigate to the new Amazon EMR console and select **Switch to the old console** from the side navigation. For more information on what to expect when you switch to the old console, see Using the old console.
2. Choose **Create cluster**.
3. In the **Software Configuration** section, for **Additional Applications**, choose **HBase** and **Configure and add**.
4. On the **Add Application** dialog box, check **Restore From Backup**.
5. For **Backup Location**, specify the location of the backup yto load into the new HBase cluster. This should be an Amazon S3 URL of the form `s3://myawsbucket/backups/`.
6. For **Backup Version**, you have the option to specify the name of a backup version to load by setting a value. If you do not set a value for **Backup Version**, Amazon EMR loads the latest backup in the specified location.
7. Choose **Add** and proceed to create the cluster with other options as desired.

To schedule automated backups of HBase data using the console

1. In the **Software Configuration** section, for **Additional Applications**, choose **HBase** and **Configure and add**.
2. Choose **Schedule Regular Backups**.
3. Specify whether the backups should be consistent. A consistent backup is one that pauses write operations during the initial backup stage, synchronization across nodes. Any write operations thus paused are placed in a queue and resume when the synchronization completes.
4. Set how often backups should occur by entering a number for **Backup Frequency** and choosing **Days**, **Hours**, or **Minutes**. The first automated backup that runs is a full backup; after that, Amazon EMR saves incremental backups based on the schedule that you specify.

5. Specify the location in Amazon S3 where the backups should be stored. Each HBase cluster should be backed up to a separate location in Amazon S3 to ensure that incremental backups are calculated correctly.
6. Specify when the first backup should occur by setting a value for **Backup Start Time**. You can set this to `now`, which causes the first backup to start as soon as the cluster is running, or enter a date and time in ISO format. For example, 2013-09-26T20:00Z, sets the start time to September 26, 2013 at 8PM UTC.
7. Choose **Add**.
8. Proceed with creating the cluster with other options as desired.

Monitor HBase with CloudWatch

Amazon EMR reports three metrics to CloudWatch that you can use to monitor your HBase backups. These metrics are pushed to CloudWatch at five-minute intervals, and are provided without charge.

Metric	Description
`HBaseBackupFailed`	Whether the last backup failed. This is set to 0 by default and updated to 1 if the previous backup attempt failed. This metric is only reported for HBase clusters. Use case: Monitor HBase backups Units: *Count*
`HBaseMostRecentBackupDuration`	The amount of time it took the previous backup to complete. This metric is set regardless of whether the last completed backup succeeded or failed. While the backup is ongoing, this metric returns the number of minutes after the backup started. This metric is only reported for HBase clusters. Use case: Monitor HBase Backups Units: *Minutes*

Metric	Description
HBaseTimeSinceLast SuccessfulBackup	The number of elapsed minutes after the last successful HBase backup started on your cluster. This metric is only reported for HBase clusters. Use case: Monitor HBase backups Units: *Minutes*

Configure Ganglia for HBase

You configure Ganglia for HBase using the **configure-hbase-for-ganglia** bootstrap action. This bootstrap action configures HBase to publish metrics to Ganglia.

You must configure HBase and Ganglia when you launch the cluster; Ganglia reporting cannot be added to a running cluster.

Ganglia also stores log files on the server at `/mnt/var/log/ganglia/rrds`. If you configured your cluster to persist log files to an Amazon S3 bucket, the Ganglia log files are persisted there as well.

To launch a cluster with Ganglia for HBase, use the **configure-hbase-for-ganglia** bootstrap action as shown in the following example.

> **Note**
>
> Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Test cluster" --ami-version 3.3 \
--applications Name=Hue Name=Hive Name=Pig Name=HBase Name=Ganglia \
--use-default-roles --ec2-attributes KeyName=myKey \
--instance-type c1.xlarge --instance-count 3 --termination-protected \
--bootstrap-actions Path=s3://elasticmapreduce/bootstrap-actions/configure-hbase-for-
ganglia
```

After the cluster is launched with Ganglia configured, you can access the Ganglia graphs and reports using the graphical interface running on the master node.

Pig application specifics for earlier AMI versions of Amazon EMR

Supported Pig versions

The Pig version you can add to your cluster depends on the version of the Amazon EMR AMI and the version of Hadoop you are using. The table below shows which AMI versions and versions of Hadoop are compatible with the different versions of Pig. We recommend using the latest available version of Pig to take advantage of performance enhancements and new functionality.

When you use the API to install Pig, the default version is used unless you specify `--pig-versions` as an argument to the step that loads Pig onto the cluster during the call to RunJobFlow.

Pig version	AMI version	Configuration parameters	Pig version details

0.12.0
 	
Release notes
 	
Documentation
	3.1.0 and later	`--ami-version 3.1`
		
		`--ami-version 3.2`
		
		`--ami-version 3.3`
			Adds support for the following:
			
			• Streaming UDFs without JVM implementations
			• ASSERT and IN operators
			• CASE expression
			• AvroStorage as a Pig built-in function.
			• ParquetLoader and ParquetStorer as built-in functions
			• BigInteger and BigDecimal types

Pig version	AMI version	Configuration parameters	Pig version details

0.11.1.1
 	
Release notes
 	
Documentation
	2.2 and later	`--pig-versions 0.11.1.1`
		
		`--ami-version 2.2`
			Improves performance of LOAD command with PigStorage if input resides in Amazon S3.

0.11.1
 	
Release notes
 	
Documentation
	2.2 and later	`--pig-versions 0.11.1`
		
		`--ami-version 2.2`
			Adds support for JDK 7, Hadoop 2, Groovy user-defined functions, SchemaTuple optimization, new operators, and more. For more information, see Pig 0.11.1 change log.

0.9.2.2
 	
Release notes
 	
Documentation
	2.2 and later	`--pig-versions 0.9.2.2`
		
		`--ami-version 2.2`
			Adds support for Hadoop 1.0.3.

0.9.2.1
 	
Release notes
 	
Documentation
	2.2 and later	`--pig-versions 0.9.2.1`
		
		`--ami-version 2.2`
			Adds support for MapR.

Pig version	AMI version	Configuration parameters	Pig version details
0.9.2 Release notes Documentation	2.2 and later	`--pig-versions 0.9.2` `--ami-version 2.2`	Includes several performance improvements and bug fixes. For complete information about the changes for Pig 0.9.2, go to the Pig 0.9.2 change log.
0.9.1 Release notes Documentation	2.0	`--pig-versions 0.9.1` `--ami-version 2.0`	
0.6 Release notes	1.0	`--pig-versions 0.6` `--ami-version 1.0`	
0.3 Release notes	1.0	`--pig-versions 0.3` `--ami-version 1.0`	

Pig version details

Amazon EMR supports certain Pig releases that might have additional Amazon EMR patches applied. You can configure which version of Pig to run on Amazon EMR clusters. For more information about how to do this, see Apache Pig. The following sections describe different Pig versions and the patches applied to the versions loaded on Amazon EMR.

Pig patches

This section describes the custom patches applied to Pig versions available with Amazon EMR.

Pig 0.11.1.1 patches

The Amazon EMR version of Pig 0.11.1.1 is a maintenance release that improves performance of LOAD command with PigStorage if the input resides in Amazon S3.

Pig 0.11.1 patches

The Amazon EMR version of Pig 0.11.1 contains all the updates provided by the Apache Software Foundation and the cumulative Amazon EMR patches from Pig version 0.9.2.2. However, there are no new Amazon EMR-specific patches in Pig 0.11.1.

Pig 0.9.2 patches

Apache Pig 0.9.2 is a maintenance release of Pig. The Amazon EMR team has applied the following patches to the Amazon EMR version of Pig 0.9.2.

Patch	Description
PIG-1429	Add the Boolean data type to Pig as a first class data type. For more information, go to https://issues.apache.org/jira/browse/PIG-1429. **Status:** Committed **Fixed in Apache Pig Version:** 0.10
PIG-1824	Support import modules in Jython UDF. For more information, go to https://issues.apache.org/jira/browse/PIG-1824. **Status:** Committed **Fixed in Apache Pig Version:** 0.10
PIG-2010	Bundle registered JARs on the distributed cache. For more information, go to https://issues.apache.org/jira/browse/PIG-2010. **Status:** Committed

Patch	Description
	Fixed in Apache Pig Version: 0.11
PIG-2456	Add a ~/.pigbootup file where the user can specify default Pig statements. For more information, go to https://issues.apache.org/jira/browse/PIG-2456. **Status:** Committed **Fixed in Apache Pig Version:** 0.11
PIG-2623	Support using Amazon S3 paths to register UDFs. For more information, go to https://issues.apache.org/jira/browse/PIG-2623. **Status:** Committed **Fixed in Apache Pig Version:** 0.10, 0.11

Pig 0.9.1 patches

The Amazon EMR team has applied the following patches to the Amazon EMR version of Pig 0.9.1.

Patch	Description
Support JAR files and Pig scripts in dfs	Add support for running scripts and registering JAR files stored in HDFS, Amazon S3, or other distributed file systems. For more information, go to https://issues.apache.org/jira/browse/PIG-1505. **Status:** Committed **Fixed in Apache Pig Version:** 0.8.0
Support multiple file systems in Pig	Add support for Pig scripts to read data from one file system and write it to another. For more information, go to https://issues.apache.org/jira/browse/PIG-1564. **Status:** Not Committed

Patch	Description
	Fixed in Apache Pig Version: n/a
Add Piggybank datetime and string UDFs	Add datetime and string UDFs to support custom Pig scripts. For more information, go to https://issues.apache.org/jira/browse/PIG-1565. **Status:** Not Committed **Fixed in Apache Pig Version:** n/a

Interactive and batch Pig clusters

Amazon EMR enables you to run Pig scripts in two modes:

- Interactive
- Batch

When you launch a long-running cluster using the console or the AWS CLI, you can connect using **ssh** into the master node as the Hadoop user and use the Grunt shell to develop and run your Pig scripts interactively. Using Pig interactively enables you to revise the Pig script more easily than batch mode. After you successfully revise the Pig script in interactive mode, you can upload the script to Amazon S3 and use batch mode to run the script in production. You can also submit Pig commands interactively on a running cluster to analyze and transform data as needed.

In batch mode, you upload your Pig script to Amazon S3, and then submit the work to the cluster as a step. Pig steps can be submitted to a long-running cluster or a transient cluster.

Spark application specifics with earlier AMI versions of Amazon EMR

Use Spark interactively or in batch mode

Amazon EMR enables you to run Spark applications in two modes:

- Interactive
- Batch

When you launch a long-running cluster using the console or the AWS CLI, you can connect using SSH into the master node as the Hadoop user and use the Spark shell to develop and run your Spark applications interactively. Using Spark interactively enables you to prototype or test Spark applications more easily than in a batch environment. After you successfully revise the Spark application in interactive mode, you can put that application JAR or Python program in the file system local to the master node of the cluster on Amazon S3. You can then submit the application as a batch workflow.

In batch mode, upload your Spark script to Amazon S3 or the local master node file system, and then submit the work to the cluster as a step. Spark steps can be submitted to a long-running cluster or a transient cluster.

Creating a cluster with Spark installed

To launch a cluster with Spark installed using the console

1. Navigate to the new Amazon EMR console and select **Switch to the old console** from the side navigation. For more information on what to expect when you switch to the old console, see Using the old console.
2. Choose **Create cluster**.
3. For **Software Configuration**, choose the AMI release version that you require.
4. For **Applications to be installed**, choose **Spark** from the list, then choose **Configure and add**.
5. Add arguments to change the Spark configuration as desired. For more information, see Configure Spark. Choose **Add**.
6. Select other options as necessary and then choose **Create cluster**.

The following example shows how to create a cluster with Spark using Java:

```
AmazonElasticMapReduceClient emr = new AmazonElasticMapReduceClient(credentials);
SupportedProductConfig sparkConfig = new SupportedProductConfig()
   .withName("Spark");

RunJobFlowRequest request = new RunJobFlowRequest()
   .withName("Spark Cluster")
   .withAmiVersion("3.11.0")
   .withNewSupportedProducts(sparkConfig)
   .withInstances(new JobFlowInstancesConfig()
    .withEc2KeyName("myKeyName")
```

```
     .withInstanceCount(1)
     .withKeepJobFlowAliveWhenNoSteps(true)
     .withMasterInstanceType("m3.xlarge")
     .withSlaveInstanceType("m3.xlarge")
    );
RunJobFlowResult result = emr.runJobFlow(request);
```

Configure Spark

You configure Spark when you create a cluster by running the bootstrap action located at awslabs/emr-bootstrap-actions/spark repository on Github. For arguments that the bootstrap action accepts, see the READMEin that repository. The bootstrap action configures properties in the `$SPARK_CONF_DIR/spark-defaults.conf` file. For more information about settings, see the Spark Configuration topic in Spark documentation. You can replace "latest" in the following URL with the version number of Spark that you are installing, for example, `2.2.0` http://spark.apache.org/docs/latest/configuration.html.

You can also configure Spark dynamically at the time of each application submission. A setting to automatically maximize the resource allocation for an executor is available using the `spark` configuration file. For more information, see Overriding Spark default configuration settings.

Changing Spark default settings

The following example shows how to create a cluster with `spark.executor.memory` set to 2G using the AWS CLI.

> **Note**
>
> Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Spark cluster" --ami-version 3.11.0 \
--applications Name=Spark, Args=[-d,spark.executor.memory=2G] --ec2-attributes
 KeyName=myKey \
--instance-type m3.xlarge --instance-count 3 --use-default-roles
```

Submit work to Spark

To submit work to a cluster, use a step to run the `spark-submit` script on your EMR cluster. Add the step using the `addJobFlowSteps` method in [AmazonElasticMapReduceClient]():

```
AWSCredentials credentials = new BasicAWSCredentials(accessKey, secretKey);
AmazonElasticMapReduceClient emr = new AmazonElasticMapReduceClient(credentials);
StepFactory stepFactory = new StepFactory();
AddJobFlowStepsRequest req = new AddJobFlowStepsRequest();
req.withJobFlowId("j-1K48XXXXXXHCB");

List<StepConfig> stepConfigs = new ArrayList<StepConfig>();

StepConfig sparkStep = new StepConfig()
 .withName("Spark Step")
 .withActionOnFailure("CONTINUE")
 .withHadoopJarStep(stepFactory.newScriptRunnerStep("/home/hadoop/spark/bin/spark-
submit","--class","org.apache.spark.examples.SparkPi","/home/hadoop/spark/lib/spark-
examples-1.3.1-hadoop2.4.0.jar","10"));

stepConfigs.add(sparkStep);
req.withSteps(stepConfigs);
AddJobFlowStepsResult result = emr.addJobFlowSteps(req);
```

Overriding Spark default configuration settings

You may want to override Spark default configuration values on a per-application basis. You can do this when you submit applications using a step, which essentially passes options to `spark-submit`. For example, you may wish to change the memory allocated to an executor process by changing `spark.executor.memory`. You can supply the `--executor-memory` switch with an argument like the following:

```
/home/hadoop/spark/bin/spark-submit --executor-memory 1g --class
 org.apache.spark.examples.SparkPi /home/hadoop/spark/lib/spark-examples*.jar 10
```

Similarly, you can tune `--executor-cores` and `--driver-memory`. In a step, you would provide the following arguments to the step:

```
--executor-memory 1g --class org.apache.spark.examples.SparkPi /home/hadoop/spark/lib/
spark-examples*.jar 10
```

You can also tune settings that may not have a built-in switch using the `--conf` option. For more information about other settings that are tunable, see the [Dynamically loading Spark properties](#) topic in the Apache Spark documentation.

S3DistCp utility differences with earlier AMI versions of Amazon EMR

S3DistCp versions supported in Amazon EMR

The following S3DistCp versions are supported in Amazon EMR AMI releases. S3DistCp versions after 1.0.7 are found on directly on the clusters. Use the JAR in `/home/hadoop/lib` for the latest features.

Version	Description	Release date
1.0.8	Adds the `--appendToLastFile` , `--requirePreviousManifest` , and `--storageClass` options.	3 January 2014
1.0.7	Adds the `--s3ServerSideEncryption` option.	2 May 2013
1.0.6	Adds the `--s3Endpoint` option.	6 August 2012
1.0.5	Improves the ability to specify which version of S3DistCp to run.	27 June 2012
1.0.4	Improves the `--deleteOnSuccess` option.	19 June 2012
1.0.3	Adds support for the `--numberFiles` and `--startingIndex` options.	12 June 2012
1.0.2	Improves file naming when using groups.	6 June 2012
1.0.1	Initial release of S3DistCp.	19 January 2012

Add an S3DistCp copy step to a cluster

To add an S3DistCp copy step to a running cluster, type the following command, replace *j-3GYXXXXXX9IOK* with your cluster ID, and replace *mybucket* with your Amazon S3 bucket name.

Note

Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr add-steps --cluster-id j-3GYXXXXXX9IOK \
--steps Type=CUSTOM_JAR,Name="S3DistCp step",Jar=/home/hadoop/lib/emr-s3distcp-1.0.jar,
\
Args=["--s3Endpoint,s3-eu-west-1.amazonaws.com",\
"--src,s3://mybucket/logs/j-3GYXXXXXX9IOJ/node/",\
"--dest,hdfs:///output",\
"--srcPattern,.*[a-zA-Z,]+"]
```

Example Load Amazon CloudFront logs into HDFS

This example loads Amazon CloudFront logs into HDFS by adding a step to a running cluster. In the process, it changes the compression format from Gzip (the CloudFront default) to LZO. This is useful because data compressed using LZO can be split into multiple maps as it is decompressed, so you don't have to wait until the compression is complete, as you do with Gzip. This provides better performance when you analyze the data using Amazon EMR. This example also improves performance by using the regular expression specified in the `--groupBy` option to combine all of the logs for a given hour into a single file. Amazon EMR clusters are more efficient when processing a few, large, LZO-compressed files than when processing many, small, Gzip-compressed files. To split LZO files, you must index them and use the hadoop-lzo third-party library.

To load Amazon CloudFront logs into HDFS, type the following command, replace *j-3GYXXXXXX9IOK* with your cluster ID, and replace *mybucket* with your Amazon S3 bucket name.

Note

Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr add-steps --cluster-id j-3GYXXXXXX9IOK \
--steps Type=CUSTOM_JAR,Name="S3DistCp step",Jar=/home/hadoop/lib/emr-s3distcp-1.0.jar,
\
```

```
Args=["--src,s3://mybucket/cf","--dest,hdfs:///local",\
"--groupBy,.*XABCD12345678.([0-9]+-[0-9]+-[0-9]+-[0-9]+).*",\
"--targetSize,128",
"--outputCodec,lzo","--deleteOnSuccess"]
```

Consider the case in which the preceding example is run over the following CloudFront log files.

```
s3://amzn-s3-demo-bucket1/cf/XABCD12345678.2012-02-23-01.HLUS3JKx.gz
s3://amzn-s3-demo-bucket1/cf/XABCD12345678.2012-02-23-01.I9CNAZrg.gz
s3://amzn-s3-demo-bucket1/cf/XABCD12345678.2012-02-23-02.YRRwERSA.gz
s3://amzn-s3-demo-bucket1/cf/XABCD12345678.2012-02-23-02.dshVLXFE.gz
s3://amzn-s3-demo-bucket1/cf/XABCD12345678.2012-02-23-02.LpLfuShd.gz
```

S3DistCp copies, concatenates, and compresses the files into the following two files, where the file name is determined by the match made by the regular expression.

```
hdfs:///local/2012-02-23-01.lzo
hdfs:///local/2012-02-23-02.lzo
```

What's new?

This page describes the changes and functionality available in the latest releases of Amazon EMR 7.x, 6.x, and 5.x.

These release notes are also available on the Amazon EMR 7.2.0, Amazon EMR 6.15.0, and Amazon EMR 5.36.2 pages, along with the application versions, component versions, and available configuration classifications for each release.

- For release notes from prior releases, see the Amazon EMR archive of release notes.
- To get updates when a new Amazon EMR release is available, subscribe to the RSS feed for Amazon EMR release notes.

> **Note**
>
> Later releases of Amazon EMR use AWS Signature Version 4 (SigV4) to authenticate requests to Amazon S3. We recommend that you use an Amazon EMR release that supports SigV4 so that you can access new S3 buckets and avoid interruption to your workloads. For more information and a list of Amazon EMR releases that support SigV4, see Amazon EMR and AWS Signature Version 4.

Amazon EMR 7.2.0 (latest release of 7.x series)

New Amazon EMR releases are made available in different Regions over a period of several days, beginning with the first Region on the initial release date. The latest release version may not be available in your Region during this period.

The following release notes include information for Amazon EMR release 7.2.0. Changes are relative to 7.2.0.

New features

- **Application upgrades** – Amazon EMR 7.2.0 application upgrades include Iceberg 1.5.0-amzn-0 and Delta 3.1.0.
- Amazon EMR adds support so that you can use other applications such as HBase, Flink, and Hive with the Amazon S3 Express One Zone storage class.

- This release adds the capability to read restored objects, so you can read Glacier objects from an S3 location with the S3A protocol. This capability works with Spark, Flink, and Hive.
- Node labels with managed scaling - Use node labels with your instances based on market type or node type to improve automatic scaling from Amazon EMR. For more information, see Using managed scaling in Amazon EMR.

Known issues

- Python 3.11 isn't supported with EMR Studio.

Changes, enhancements, and resolved issues

- This release fixes a deadlock issue that can occur during internal step cleanup operations. This operation manages the life cycle of steps as they complete on the EMR cluster. This issue affects critical Amazon EMR operations, such as step operation and scaling.
- This release resolves an issue where custom clusters with custom AMIs that have certain pre-existing log files can cause the Amazon EMR log management daemon to fail.
- Amazon EMR 7.2.0 upgrades the Amazon EMR daemon responsible for cluster management and monitoring activities from AWS SDK v1 to v2.

- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

Amazon EMR 6.15.0 (latest release of 6.x series)

New Amazon EMR releases are made available in different Regions over a period of several days, beginning with the first Region on the initial release date. The latest release version may not be available in your Region during this period.

The following release notes include information for Amazon EMR release 6.15.0. Changes are relative to 6.14.0. For information on the release timeline, see the 6.15.0 change log.

New features

- **Application upgrades** – Amazon EMR 6.15.0 application upgrades include Apache Hadoop 3.3.6, Apache Hudi 0.14.0-amzn-0, Iceberg 1.4.0-amzn-0, and Trino 426.
- **Faster launches for EMR clusters that run on EC2** – It's now up to 35% faster to launch an Amazon EMR on EC2 cluster. With this improvement, most customers can launch their clusters in 5 minutes or less.
- **CodeWhisperer for EMR Studio** – You can now use Amazon CodeWhisperer with Amazon EMR Studio to get real-time recommendations as you write code in JupyterLab. CodeWhisperer can complete your comments, finish single lines of code, make line-by-line recommendations, and generate fully-formed functions.
- **Faster job restart times with Flink** – With Amazon EMR 6.15.0 and higher, several new mechanisms are available for Apache Flink to improve the job restart time during task recovery or scaling operations. This optimizes the speed of recovery and restart of execution graphs to improve job stability.
- **Table-level and fine-grained access control for open-table formats** – With Amazon EMR 6.15.0 and higher, when you run Spark jobs on Amazon EMR on EC2 clusters that access data in the AWS Glue Data Catalog, you can use AWS Lake Formation to apply table, row, column, and cell level permissions on Hudi, Iceberg, or Delta Lake based tables.
- **Hadoop upgrade** – Amazon EMR 6.15.0 includes an upgrade of Apache Hadoop to version 3.3.6. Hadoop 3.3.6 was the latest version at the time of the Amazon EMR 6.15 deployment, released by Apache in June 2023. Prior releases of Amazon EMR (6.9.0 to 6.14.x) used Hadoop 3.3.3.

  The upgrade includes hundreds of improvements and fixes, and features that include reconfigurable datanode parameters, `DFSAdmin` option to initiate bulk reconfiguration operations on all live datanodes, and a vectored API that allows seek-heavy readers to specify multiple ranges to read. Hadoop 3.3.6 also adds support for HDFS APIs and semantics for its write-ahead log (WAL), so that HBase can run on other storage system implementations. For more information, see the changelogs for versions 3.3.4, 3.3.5, and 3.3.6 in the *Apache Hadoop documentation*.

- **Support for AWS SDK for Java, version 2** - Amazon EMR 6.15.0 applications can use AWS SDK for Java versions 1.12.569 or 2.20.160 if the application supports v2. The AWS SDK for Java 2.x is a major rewrite of the version 1.x code base. It's built on top of Java 8+ and adds several frequently requested features. These include support for non-blocking I/O, and the ability to plug in a different HTTP implementation at runtime. For more information, including a **Migration Guide from SDK for Java v1 to v2**, see the AWS SDK for Java, version 2 guide.

Changes, enhancements, and resolved issues

- To improve your high-availability EMR clusters, this release enables connectivity to Amazon EMR daemons on local host that use IPv6 endpoints.
- This release enables TLS 1.2 for communication with ZooKeeper provisioned on all the primary nodes of your high-availability cluster.
- This release improves the management of ZooKeeper transaction log files that are maintained on primary nodes to minimize scenarios where the log files grow out of bounds and interrupt cluster operations.
- This release makes intra-node communication more resilient for high-availability EMR clusters. This improvement reduces the chance of bootstrap action failures or cluster start failures.
- Tez in Amazon EMR 6.15.0 introduces configurations that you can specify to asynchronously open the input splits in a Tez grouped split. This results in faster performance of read queries when there are a large number of input splits in a single Tez grouped split. For more information, see Tez asynchronous split opening.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

Amazon EMR 5.36.2 (latest release of 5.x series)

New Amazon EMR releases are made available in different Regions over a period of several days, beginning with the first Region on the initial release date. The latest release version may not be available in your Region during this period.

The following release notes include information for Amazon EMR release 5.36.2. Changes are relative to 5.36.1. For information on the release timeline, see the change log.

Changes, enhancements, and resolved issues

- This releases improves cluster scale-down logic so that Amazon EMR doesn't scale-down core nodes below the HDFS replication factor setting for the cluster. This improvement fulfills data redundancy requirements, and reduces the chance that a scaling operation might stall.
- This release adds a new retry mechanism to the cluster scaling workflow for that run Presto or Trino. This improvement reduces the risk that cluster resize runs indefinitely due to a single failed resize operation. It also improves cluster utilization, because your cluster scales up and down faster.
- Fixes an issue where cluster scale-down operations might stall while Amazon EMR gracefully decommissions a core node and it turns unhealthy before it is fully decommissioned.
- Improves the stability of a node in a high-availability cluster with multiple primary nodes when Amazon EMR restarts a single node.
- Optimizes log management with Amazon EMR running on Amazon EC2. As a result, you might see a slight reduction in storage costs for your cluster logs.
- Improves the management of ZooKeeper transaction log files that are maintained on primary nodes to minimize scenarios where the log files grow out of bounds and interrupt cluster operations.
- Fixes a rare bug which can cause a high-availability cluster with multiple primary nodes to fail due to not being able to communicate with the Yarn ResourceManager.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

Amazon EMR and AWS Signature Version 4

Amazon EMR releases use AWS Signature Version 4 (SigV4) to authenticate requests to Amazon S3. Buckets created in Amazon S3 after June 24, 2020 don't support requests signed by Signature Version 2 (SigV2). Buckets created on or before June 24, 2020 will continue to support SigV2.

We recommend that you migrate to an Amazon EMR release that supports SigV4 so that you can access new S3 buckets and avoid interruption to your workloads.

If you use applications that are included with Amazon EMR such as Apache Spark, Apache Hive, and Presto, you don't need to change your application code to use SigV4 . If you use custom applications that are not included with Amazon EMR, you might need to update your code to use SigV4. For more information, see Moving from Signature Version 2 to Signature Version 4 in the Amazon S3 User Guide.

The following Amazon EMR releases support SigV4: emr-4.7.4, emr-4.8.5, emr-4.9.6, emr-4.10.1, emr-5.1.1, emr-5.2.3, emr-5.3.2, emr-5.4.1, emr-5.5.4, emr-5.6.1, emr-5.7.1, emr-5.8.3, emr-5.9.1, emr-5.10.1, emr-5.11.4, emr-5.12.3, emr-5.13.1, emr-5.14.2, emr-5.15.1, emr-5.16.1, emr-5.17.2, emr-5.18.1, emr-5.19.1, emr-5.20.1, emr-5.21.2, and emr-5.22.0 and higher. All 6.x and 7.x releases support SigV4.

Approach to mitigate CVE-2021-44228

Note

For Amazon EMR release 6.9.0 and later, all components installed by Amazon EMR that use Log4j libraries use Log4j version 2.17.1 or later.

Amazon EMR running on EC2

The issue discussed in CVE-2021-44228 is relevant to Apache Log4j core versions between 2.0.0 and 2.14.1 when processing inputs from untrusted sources. Amazon EMR clusters launched with Amazon EMR 5.x releases up to 5.34.0 and EMR 6.x releases up to Amazon EMR 6.5.0 include open-source frameworks such as Apache Hive, Flink, HUDI, Presto, and Trino, which use these versions of Apache Log4j. However, many customers use the open-source frameworks installed on their Amazon EMR clusters to process and log inputs from untrusted sources.

We recommend that you apply the "Amazon EMR Bootstrap Action Solution for Log4j CVE-2021-44228" as described in the following section. This solution also addresses CVE-2021-45046.

> **Note**
>
> The bootstrap action scripts for Amazon EMR were updated on September 7, 2022 to include incremental bug fixes and improvements for Oozie. If you use Oozie, you should apply the updated Amazon EMR bootstrap action solution described in the following section.

Amazon EMR on EKS

If you use Amazon EMR on EKS with default configuration, you are not impacted by the issue described in CVE-2021-44228, and you do not have to apply the solution described in the Amazon EMR bootstrap action solution for Log4j CVE-2021-44228 & CVE-2021-45046section. For Amazon EMR on EKS, the Amazon EMR runtime for Spark uses Apache Log4j version 1.2.17. When using Amazon EMR on EKS you should not change the default setting for `log4j.appender` component to `log`.

Amazon EMR bootstrap action solution for Log4j CVE-2021-44228 & CVE-2021-45046

This solution provides an Amazon EMR bootstrap action that must be applied on your Amazon EMR clusters. For each Amazon EMR release, you will find a link to a bootstrap action script below. To apply this bootstrap action, you should complete the following steps:

1. Copy the script that corresponds to your Amazon EMR release to a local S3 bucket in your AWS account. Please make sure that you are using a bootstrap script that is specific to your Amazon EMR release.
2. Set up a bootstrap action for your EMR clusters to run the script copied to your S3 bucket as per instructions described in EMR documentation. If you have other bootstrap actions configured for your EMR clusters, please ensure that this script is set up as the first bootstrap action script to execute.
3. Terminate existing EMR clusters, and launch new clusters with the bootstrap action script. AWS recommends that you test the bootstrap scripts in your test environment and validate your applications before applying it to your production environment. If you are not using the latest revision for an EMR minor release (for example, 6.3.0), you must use the latest revision (for example, 6.3.1), and then apply the solution discussed above.

CVE-2021-44228 & CVE-2021-45046 - Bootstrap Scripts for Amazon EMR Releases

Amazon EMR release number	Script location	Script release date
6.5.0	`s3://elasticmapreduce/bootstrap-actions/log4j/patch-log4j-emr-6.5.0-v2.sh`	March 24, 2022

5.13.0	5.13.1
5.12.0, 5.12.1, 5.12.2	5.12.3
5.11.0, 5.11.1, 5.11.2, 5.11.3	5.11.4
5.9.0	5.9.1
5.8.0, 5.8.1, 5.8.2	5.8.3
5.7.0	5.7.1

Frequently asked questions

- **Are EMR releases older than EMR 5 impacted by CVE-2021-44228**?

  No. EMR releases prior to EMR release 5 use Log4j versions older than 2.0.
- **Does this solution address CVE-2021-45046?**

  Yes, this solution also addresses **CVE-2021-45046.**
- **Does the solution handle custom applications that I install on my EMR clusters?**

  The bootstrap script only updates JAR files that are installed by EMR. If you install and run custom applications and JAR files on your EMR clusters through bootstrap actions, as steps submitted to your clusters, by using custom Amazon Linux AMI, or through any other mechanism, please work with your application vendor to determine if your custom applications are impacted by CVE-2021- 44228, and determine an appropriate solution.
- **How should I handle customized docker images with EMR on EKS?**

  If you add custom applications to Amazon EMR on EKS using customized docker images or submit jobs to Amazon EMR on EKSwith custom application files, please work with the application vendor to determine if your custom applications are impacted by CVE-2021-44228, and determine an appropriate solution.
- **How does the bootstrap script work to mitigate the issue described in CVE-2021-44228 and CVE-2021-45046?**

The bootstrap script updates EMR startup instructions by adding a new set of instructions. These new instructions delete the JndiLookup class files used through Log4j by all open source frameworks installed by EMR. This follows the recommendation published by Apache for addressing the Log4j issues.

- **Is there an update to EMR that uses Log4j versions 2.17.1 or higher?**

  EMR 5 releases up to release 5.34 and EMR 6 releases up to release 6.5 use older versions of open source frameworks that are incompatible with the latest versions of Log4j. If you continue to use these releases, we recommend that you apply the bootstrap action to mitigate the issues discussed in the CVEs. After EMR 5 release 5.34 and EMR 6 release 6.5, applications that use Log4j 1.x and Log4j 2.x will be upgraded to use Log4j 1.2.17 (or higher) and Log4j 2.17.1 (or higher) respectively, and will not require using the bootstrap actions provided above to mitigate the CVE issues.

- **Are EMR releases impacted by CVE-2021-45105?**

  The applications installed by Amazon EMR with EMR's default configurations are not impacted by CVE-2021-45105. Among applications installed by Amazon EMR, only Apache Hive uses Apache Log4j with context lookups, and it does not use non-default pattern layout in a manner that allows inappropriate input data to be processed.

- **Is Amazon EMR impacted by any of the following CVE disclosures?**

  The following table contains a list of CVEs that are related to Log4j and notes whether each CVE impacts Amazon EMR. The information in this table only applies when applications are installed by Amazon EMR using the default configurations.

CVE	Impacts EMR	Notes
CVE-2022-23302	No	Amazon EMR does not set up Log4j JMSSink
CVE-2022-23305	No	Amazon EMR does not set up Log4j JDBCAppender
CVE-2022-23307	No	Amazon EMR does not set up Log4j Chainsaw

CVE	Impacts EMR	Notes
CVE-2020-9493	No	Amazon EMR does not set up Log4j Chainsaw
CVE-2021-44832	No	Amazon EMR does not set up Log4j JDBCAppender with a JNDI connection string
CVE-2021-4104	No	Amazon EMR does not use Log4j JMSAppender
CVE-2020-9488	No	The applications that are installed by Amazon EMR do not use Log4j SMTPAppender
CVE-2019-17571	No	Amazon EMR blocks public access to clusters and does not launch SocketServer
CVE-2019-17531	No	We recommend that you upgrade to the latest Amazon EMR release version. Amazon EMR 5.33.0 and later use jackson-databind 2.6.7.4 or later, and EMR 6.1.0 and later use jackson-databind 2.10.0 or later. These versions of jackson-databind are not impacted by the CVE.

Amazon EMR archive of release notes

Release notes for all Amazon EMR releases are available below. For comprehensive release information for each release, see Amazon EMR 6.x release versions, Amazon EMR 5.x release versions and Amazon EMR 4.x release versions.

To get updates when a new Amazon EMR release is available, subscribe to the RSS feed for Amazon EMR release notes.

Release 6.14.0

The following release notes include information for Amazon EMR release 6.14.0. Changes are relative to 6.13.0. For information on the release timeline, see the 6.14.0 change log.

New features

- Amazon EMR 6.14.0 supports Apache Spark 3.4.1, Apache Spark RAPIDS 23.06.0-amzn-2, Flink 1.17.1, Iceberg 1.3.1, and Trino 422.
- Amazon EMR managed scaling is now available in the `ap-southeast-3` Asia Pacific (Jakarta) Region for clusters that you create with Amazon EMR 6.14.0 and higher.

Changes, enhancements, and resolved issues

- The 6.14.0 release optimizes log management with Amazon EMR running on Amazon EC2. As a result, you might see a slight reduction in storage costs for your cluster logs.
- The 6.14.0 release improves the scaling workflow to account for different core instances that have a substantial variation in size for their Amazon EBS volumes. This improvement applies to core nodes only; scale-down operations for task nodes aren't affected.
- The 6.14.0 release improves the way that Amazon EMR interacts with open-source applications such as Apache Hadoop YARN ResourceManager and HDFS NameNode. This improvement reduces the risk of operational delays with cluster scaling, and mitigates startup failures that occur due to connectivity issues with the open-source applications.
- The 6.14.0 release optimizes application installation at cluster launch. This improves the cluster startup times for certain combinations of Amazon EMR applications.
- The 6.14.0 release fixes an issue where cluster scale-down operations might stall when a cluster that's running in a VPC with a custom domain encounters a core or task node restart.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

Release 6.13.0

The following release notes include information for Amazon EMR release 6.13.0. Changes are relative to 6.12.0. For information on the release timeline, see the 6.13.0 change log.

New features

- Amazon EMR 6.13.0 supports Apache Spark 3.4.1, Apache Spark RAPIDS 23.06.0-amzn-1, CUDA Toolkit 11.8.0, and JupyterHub 1.5.0.

Changes, enhancements, and resolved issues

- The 6.13.0 release improves the Amazon EMR log management daemon to ensure that all logs are uploaded at a regular cadence to Amazon S3 when a cluster termination command is issued. This facilitates faster cluster terminations.
- The 6.13.0 release enhances Amazon EMR log management capabilities to ensure consistent and timely upload of all log files to Amazon S3. This especially benefits long-running EMR clusters.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

Release 6.12.0

The following release notes include information for Amazon EMR release 6.12.0. Changes are relative to 6.11.0. For information on the release timeline, see the 6.12.0 change log.

New features

- Amazon EMR 6.12.0 supports Apache Spark 3.4.0, Apache Spark RAPIDS 23.06.0-amzn-0, CUDA 11.8.0, Apache Hudi 0.13.1-amzn-0, Apache Iceberg 1.3.0-amzn-0, Trino 414, and PrestoDB 0.281.
- Amazon EMR releases 6.12.0 and higher support LDAP integration with Apache Livy, Apache Hive through HiveServer2 (HS2), Trino, Presto, and Hue. You can also install Apache Spark and Apache Hadoop on an EMR cluster that uses 6.12.0 or higher and configure them to use LDAP. For more information, see Use Active Directory or LDAP servers for authentication with Amazon EMR.

Changes, enhancements, and resolved issues

- Amazon EMR releases 6.12.0 and higher provide Java 11 runtime support for Flink. For more information, see Configure Flink to run with Java 11.
- The 6.12.0 release adds a new retry mechanism to the cluster scaling workflow for EMR clusters that run Presto or Trino. This improvement reduces the risk that cluster resizing will indefinitely stall due to a single failed resize operation. It also improves cluster utilization, because your cluster scales up and down faster.
- The 6.12.0 release fixes an issue where cluster scale-down operations might stall when a core node that is undergoing graceful decommissioning turns unhealthy for any reason before it fully decommissions.
- The 6.12.0 release improves cluster scale-down logic so that your cluster doesn't attempt a scale-down of core nodes below the HDFS replication factor setting for the cluster. This aligns with your data redundancy requirements, and reduces the chance that a scaling operation might stall.
- The 6.12.0 release enhances the performance and efficiency of the health monitoring service for Amazon EMR by increasing the speed at which it logs state changes for instances. This improvement reduces the chance of degraded performance for cluster nodes that are running multiple custom client tools or third-party applications.
- The 6.12.0 release improves the performance of the on-cluster log management daemon for Amazon EMR. As a result, there is less chance for degraded performance with EMR clusters that run steps with high concurrency.
- With Amazon EMR release 6.12.0, the log management daemon has been upgraded to identify all logs that are in active use with open file handles on the local instance storage, and the associated processes. This upgrade ensures that Amazon EMR properly deletes the files and reclaims storage space after the logs are archived to Amazon S3.

- The 6.12.0 release includes a log-management daemon enhancement that deletes empty, unused steps directories in the local cluster file system. An excessively large number of empty directories can degrade the performance of Amazon EMR daemons and result in disk over-utilization.
- The 6.12.0 release enables log rotation for YARN Timeline Server logs. This minimizes disk over-utilization scenarios, especially for long-running clusters.
- The default root volume size has increased to 15 GB in Amazon EMR 6.10.0 and higher. Earlier releases have default root volume size of 10 GB.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

Release 6.11.1

The following release notes include information for Amazon EMR release 6.11.1. Changes are relative to 6.11.0. For information on the release timeline, see the 6.11.1 change log.

Changes, enhancements, and resolved issues

- Due to lock contention, a node can enter into a deadlock if it's added or removed at the same time that it attempts to decommission. As a result, the Hadoop Resource Manager (YARN) becomes unresponsive, and affects all the incoming and currently-running containers.
- This release includes a change that allows high-availability clusters to recover from failed state after restart.
- This release includes security fixes for Hue and HBase.
- This release fixes an issue where clusters that are running workloads on Spark with Amazon EMR might silently receive incorrect results with `contains`, `startsWith`, `endsWith`, and `like`. This issue occurs when you use the expressions on partitioned fields that have metadata in the Amazon EMR Hive3 Metastore Server (HMS).
- This release fixes an issue with throttling on the Glue side when there are no user-defined functions (UDF).
- This release fixes an issue that deletes container logs by the node log aggregation service before log pusher can push them to S3 in case of YARN decommissioning.
- This release fixes an issue with FairShare Scheduler metrics when Node Label is enabled for Hadoop.
- This release fixes an issue that impacted Spark performance when you set a default `true` value for the `spark.yarn.heterogeneousExecutors.enabled` config in `spark-defaults.conf`.
- This release fixes an issue with Reduce Task failing to read shuffle data. The issue caused Hive query failures with a corrupted memory error.
- This release adds a new retry mechanism to the cluster scaling workflow for EMR clusters that run Presto or Trino. This improvement reduces the risk that cluster resizing will indefinitely stall due to a single failed resize operation. It also improves cluster utilization, because your cluster scales up and down faster.
- This release improves cluster scale-down logic so that your cluster doesn't attempt a scale-down of core nodes below the HDFS replication factor setting for the cluster. This aligns with your data redundancy requirements, and reduces the chance that a scaling operation might stall.
- The log management daemon has been upgraded to identify all logs that are in active use with open file handles on the local instance storage, and the associated processes. This upgrade ensures that Amazon EMR properly deletes the files and reclaims storage space after the logs are archived to Amazon S3.

- This release includes a log-management daemon enhancement that deletes empty, unused steps directories in the local cluster file system. An excessively large number of empty directories can degrade the performance of Amazon EMR daemons and result in disk over-utilization.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

Release 6.11.0

The following release notes include information for Amazon EMR release 6.11.0. Changes are relative to 6.10.0. For information on the release timeline, see the change log.

New features

- Amazon EMR 6.11.0 supports Apache Spark 3.3.2-amzn-0, Apache Spark RAPIDS 23.02.0-amzn-0, CUDA 11.8.0, Apache Hudi 0.13.0-amzn-0, Apache Iceberg 1.2.0-amzn-0, Trino 410-amzn-0, and PrestoDB 0.279-amzn-0.

Changes, enhancements, and resolved issues

- With Amazon EMR 6.11.0, the DynamoDB connector has been upgraded to version 5.0.0. Version 5.0.0 uses AWS SDK for Java 2.x. Previous releases used AWS SDK for Java 1.x. As a result of this upgrade, we strongly advise you to test your code before you use the DynamoDB connector with Amazon EMR 6.11.
- When the DynamoDB connector for Amazon EMR 6.11.0 calls the DynamoDB service, it uses the Region value that you provide for the `dynamodb.endpoint` property. We recommend that you also configure `dynamodb.region` when you use `dynamodb.endpoint`, and that both properties target the same AWS Region. If you use `dynamodb.endpoint` and you don't configure `dynamodb.region`, the DynamoDB connector for Amazon EMR 6.11.0 will return an invalid Region exception and attempt to reconcile your AWS Region information from the Amazon EC2 instance metadata service (IMDS). If the connector can't retrieve the Region from IMDS, it defaults to US East (N. Virginia) (`us-east-1`). The following error is an example of the invalid Region exception that you might get if you don't properly configure the `dynamodb.region` property: `error software.amazon.awssdk.services.dynamodb.model.DynamoDbException: Credential should be scoped to a valid region.` For more information on the classes that are affected by the AWS SDK for Java upgrade to 2.x, see the [Upgrade AWS SDK for Java from 1.x to 2.x (#175)](#) commit in the GitHub repo for the Amazon EMR - DynamoDB connector.
- This release fixes an issue where column data becomes `NULL` when you use Delta Lake to store Delta table data in Amazon S3 after column rename operation. For more information about this experimental feature in Delta Lake, see [Column rename operation](#) in the Delta Lake User Guide.
- The 6.11.0 release fixes an issue that might occur when you create an edge node by replicating one of the primary nodes from a cluster with multiple primary nodes. The replicated edge node could cause delays with scale-down operations, or result in high memory-utilization on the primary nodes. For more information on how to create an edge node to communicate with your EMR cluster, see [Edge Node Creator](#) in the `aws-samples` repo on GitHub.

- The 6.11.0 release improves the automation process that Amazon EMR uses to re-mount Amazon EBS volumes to an instance after a reboot.
- The 6.11.0 release fixes an issue that resulted in intermittent gaps in the Hadoop metrics that Amazon EMR publishes to Amazon CloudWatch.
- The 6.11.0 release fixes an issue with EMR clusters where an update to the YARN configuration file that contains the exclusion list of nodes for the cluster is interrupted due to disk over-utilization. The incomplete update hinders future cluster scale-down operations. This release ensures that your cluster remains healthy, and that scaling operations work as expected.
- The default root volume size has increased to 15 GB in Amazon EMR 6.10.0 and higher. Earlier releases have default root volume size of 10 GB.
- Hadoop 3.3.3 introduced a change in YARN (YARN-9608) that keeps nodes where containers ran in a decommissioning state until the application completes. This change ensures that local data such as shuffle data doesn't get lost, and you don' need to re-run the job. This approach might also lead to underutilization of resources on clusters with or without managed scaling enabled.

  With Amazon EMR releases 6.11.0 and higher as well as 6.8.1, 6.9.1, and 6.10.1, the value of `yarn.resourcemanager.decommissioning-nodes-watcher.wait-for-applications` is set to `false` in `yarn-site.xml` to resolve this issue.

  While the fix addresses the issues that were introduced by YARN-9608, it might cause Hive jobs to fail due to shuffle data loss on clusters that have managed scaling enabled. We've mitigated that risk in this release by also setting `yarn.resourcemanager.decommissioning-nodes-watcher.wait-for-shuffle-data` for Hive workloads. This config is only available with Amazon EMR releases 6.11.0 and higher.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

Note

This release no longer gets automatic AMI updates since it has been succeeded by 1 more more patch releases. The patch release is denoted by the number after the second decimal point (`6.8.`*1*). To see if you're using the latest patch release, check the available releases in the *Release Guide*, or check the **Amazon EMR release** dropdown when you create a cluster in the console, or use the `ListReleaseLabels` API or `list-release-`

labels CLI action. To get updates about new releases, subscribe to the RSS feed on the What's new? page.

Release 6.10.0

The following release notes include information for Amazon EMR release 6.10.0. Changes are relative to 6.9.0. For information on the release timeline, see the change log.

New features

- Amazon EMR 6.10.0 supports Apache Spark 3.3.1, Apache Spark RAPIDS 22.12.0, CUDA 11.8.0, Apache Hudi 0.12.2-amzn-0, Apache Iceberg 1.1.0-amzn-0, Trino 403, and PrestoDB 0.278.1.
- Amazon EMR 6.10.0 includes a native Trino-Hudi connector that provides read access to data in Hudi tables. You can activate the connector with `trino-cli --catalog hudi`, and configure the connector for your requirements with `trino-connector-hudi`. The native integration with Amazon EMR means that you no longer need to use `trino-connector-hive` to query Hudi tables. For a list of supported configurations with the new connector, see the Hudi connector page of the Trino documentation.
- Amazon EMR releases 6.10.0 and higher support Apache Zeppelin integration with Apache Flink. See Working with Flink jobs from Zeppelin in Amazon EMR for more information.

Known Issues

- Hadoop 3.3.3 introduced a change in YARN (YARN-9608) that keeps nodes where containers ran in a decommissioning state until the application completes. This change ensures that local data such as shuffle data doesn't get lost, and you don' need to re-run the job. This approach might also lead to underutilization of resources on clusters with or without managed scaling enabled.

  To work around this issue in Amazon EMR 6.10.0, you can set the value of `yarn.resourcemanager.decommissioning-nodes-watcher.wait-for-applications` to `false` in `yarn-site.xml`. In Amazon EMR releases 6.11.0 and higher as well as 6.8.1, 6.9.1, and 6.10.1, the config is set to `false` by default to resolve this issue.

Changes, enhancements, and resolved issues

- Amazon EMR 6.10.0 removes the dependency on `minimal-json.jar` for the Amazon Redshift integration for Apache Spark, and automatically adds the required Spark-Redshift related jars to the executor class path for Spark: `spark-redshift.jar`, `spark-avro.jar`, and `RedshiftJDBC.jar`.
- The 6.10.0 release improves the on-cluster log management daemon to monitor additional log folders in your EMR cluster. This improvement minimizes disk over-utilization scenarios.
- The 6.10.0 release automatically restarts the on-cluster log management daemon when it stops. This improvement reduces the risk for nodes to appear unhealthy due to disk over-utilization.
- Amazon EMR 6.10.0 supports regional endpoints for EMRFS user mapping.

- The default root volume size has increased to 15 GB in Amazon EMR 6.10.0 and higher. Earlier releases have default root volume size of 10 GB.
- The 6.10.0 release fixes an issue that caused Spark jobs to stall when all remaining Spark executors are on a decommissioning host with the YARN resource manager.
- With Amazon EMR 6.6.0 through 6.9.x, INSERT queries with dynamic partition and an ORDER BY or SORT BY clause will always have two reducers. This issue is caused by OSS change HIVE-20703, which puts dynamic sort partition optimization under cost-based decision. If your workload doesn't require sorting of dynamic partitions, we recommend that you set the `hive.optimize.sort.dynamic.partition.threshold` property to `-1` to disable the new feature and get the correctly calculated number of reducers. This issue is fixed in OSS Hive as part of HIVE-22269 and is fixed in Amazon EMR 6.10.0.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

> **Note**
>
> This release no longer gets automatic AMI updates since it has been succeeded by 1 more more patch releases. The patch release is denoted by the number after the second decimal point (`6.8.1`). To see if you're using the latest patch release, check the available releases in the *Release Guide*, or check the **Amazon EMR release** dropdown when you create a cluster in the console, or use the `ListReleaseLabels` API or `list-release-labels` CLI action. To get updates about new releases, subscribe to the RSS feed on the What's new? page.

Release 6.9.0

The following release notes include information for Amazon EMR release 6.9.0. Changes are relative to Amazon EMR release 6.8.0. For information on the release timeline, see the change log.

New Features

- Amazon EMR release 6.9.0 supports Apache Spark RAPIDS 22.08.0, Apache Hudi 0.12.1, Apache Iceberg 0.14.1, Trino 398, and Tez 0.10.2.
- Amazon EMR release 6.9.0 includes a new open-source application, Delta Lake 2.1.0.
- The Amazon Redshift integration for Apache Spark is included in Amazon EMR releases 6.9.0 and later. Previously an open-source tool, the native integration is a Spark connector that you can use to build Apache Spark applications that read from and write to data in Amazon Redshift and Amazon Redshift Serverless. For more information, see Using Amazon Redshift integration for Apache Spark with Amazon EMR .
- Amazon EMR release 6.9.0 adds support for archiving logs to Amazon S3 during cluster scale-down. Previously, you could only archive log files to Amazon S3 during cluster termination. The new capability ensures that log files generated on the cluster persist on Amazon S3 even after the node is terminated. For more information, see Configure cluster logging and debugging.
- To support long running queries, Trino now includes a fault-tolerant execution mechanism. Fault-tolerant execution mitigates query failures by retrying failed queries or their component tasks. For more information, see Fault-tolerant execution in Trino.
- You can use Apache Flink on Amazon EMR for unified `BATCH` and `STREAM` processing of Apache Hive Tables or metadata of any Flink tablesource such as Iceberg, Kinesis or Kafka. You can specify the AWS Glue Data Catalog as the metastore for Flink using the AWS Management Console, AWS CLI, or Amazon EMR API. For more information, see Configuring Flink in Amazon EMR.
- You can now specify AWS Identity and Access Management (IAM) runtime roles and AWS Lake Formation-based access control for Apache Spark, Apache Hive, and Presto queries on Amazon EMR on EC2 clusters with Amazon SageMaker Studio. For more information, see Configure runtime roles for Amazon EMR steps.

Known Issues

- For Amazon EMR release 6.9.0, Trino does not work on clusters enabled for Apache Ranger. If you need to use Trino with Ranger, contact AWS Support.
- If you use the the Amazon Redshift integration for Apache Spark and have a time, timetz, timestamp, or timestamptz with microsecond precision in Parquet format, the connector rounds the time values to the nearest millisecond value. As a workaround, use the text unload format `unload_s3_format` parameter.

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&‘()*+,-`. For more information, see [UTF-8 encoding table and Unicode characters](#).

  As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.
- Connections to Amazon EMR clusters from Amazon SageMaker Studio may intermittently fail with a **403 Forbidden** response code. This error happens when setup of the IAM role on the cluster takes longer than 60 seconds. As a workaround, you can install an Amazon EMR patch to enable retries and increase the timeout to a minimum of 300 seconds. Use the following steps to apply the bootstrap action when you launch your cluster.

  1. Download the bootstrap script and RPM files from the following Amazon S3 URIs.

     ```
     s3://emr-data-access-control-us-east-1/customer-bootstrap-actions/gcsc/replace-rpms.sh
     s3://emr-data-access-control-us-east-1/customer-bootstrap-actions/gcsc/emr-secret-agent-1.18.0-SNAPSHOT20221121212949.noarch.rpm
     ```
  2. Upload the files from the previous step to an Amazon S3 bucket that you own. The bucket must be in the same AWS Region where you plan to launch the cluster.
  3. Include the following bootstrap action when you launch your EMR cluster. Replace *`bootstrap_URI`* and *`RPM_URI`* with the corresponding URIs from Amazon S3.

     ```
     --bootstrap-actions "Path=bootstrap_URI,Args=[RPM_URI]"
     ```
- With Amazon EMR releases 5.36.0 and 6.6.0 through 6.9.0, `SecretAgent` and `RecordServer` service components may experience log data loss due to an incorrect file name pattern

configuration in Log4j2 properties. The incorrect configuration causes the components to generate only one log file per day. When the rotation strategy occurs, it overwrites the existing file instead of generating a new log file as expected. As a workaround, use a bootstrap action to generate log files each hour and append an auto-increment integer in the file name to handle the rotation.

For Amazon EMR 6.6.0 through 6.9.0 releases, use the following bootstrap action when you launch a cluster.

```
--bootstrap-actions "Path=s3://emr-data-access-control-us-east-1/customer-bootstrap-
actions/log-rotation-emr-6x/replace-puppet.sh,Args=[]"
```

For Amazon EMR 5.36.0, use the following bootstrap action when you launch a cluster.

```
--bootstrap-actions "Path=s3://emr-data-access-control-us-east-1/customer-bootstrap-
actions/log-rotation-emr-5x/replace-puppet.sh,Args=[]"
```

- Apache Flink provides Native S3 FileSystem and Hadoop FileSystem Connectors, which let applications create a FileSink and write the data into Amazon S3. This FileSink fails with one of the following two exceptions.

```
java.lang.UnsupportedOperationException: Recoverable writers on Hadoop are only
 supported for HDFS
```

```
Caused by: java.lang.NoSuchMethodError:
 org.apache.hadoop.io.retry.RetryPolicies.retryOtherThanRemoteAndSaslException(Lorg/
apache/hadoop/io/retry/RetryPolicy;Ljava/util/Map;)Lorg/apache/hadoop/io/retry/
RetryPolicy;
                                        at
 org.apache.hadoop.yarn.client.RMProxy.createRetryPolicy(RMProxy.java:302) ~[hadoop-
yarn-common-3.3.3-amzn-0.jar:?]
```

As a workaround, you can install an Amazon EMR patch, which fixes the above issue in Flink. To apply the bootstrap action when you launch your cluster, complete the following steps.

1. Download the flink-rpm to your Amazon S3 bucket. Your RPM path is `s3://DOC-EXAMPLE-BUCKET/rpms/flink/`.
2. Download the bootstrap script and RPM files from Amazon S3 using the following URI. Replace *regionName* with the AWS Region where you plan to launch the cluster.

```
s3://emr-data-access-control-regionName/customer-bootstrap-actions/gcsc/replace-
rpms.sh
```

3. Hadoop 3.3.3 introduced a change in YARN (YARN-9608) that keeps nodes where containers ran in a decommissioning state until the application completes. This change ensures that local data such as shuffle data doesn't get lost, and you don' need to re-run the job. In Amazon EMR 6.8.0 and 6.9.0, this approach might also lead to underutilization of resources on clusters with or without managed scaling enabled.

   With Amazon EMR 6.10.0, there's a workaround for this issue to set the value of `yarn.resourcemanager.decommissioning-nodes-watcher.wait-for-applications` to `false` in `yarn-site.xml`. In Amazon EMR releases 6.11.0 and higher as well as 6.8.1, 6.9.1, and 6.10.1, the config is set to `false` by default to resolve this issue.

Changes, Enhancements, and Resolved Issues

- For Amazon EMR release 6.9.0 and later, all components installed by Amazon EMR that use Log4j libraries use Log4j version 2.17.1 or later.
- When you use the DynamoDB connector with Spark on Amazon EMR versions 6.6.0, 6.7.0, and 6.8.0, all reads from your table return an empty result, even though the input split references non-empty data. Amazon EMR release 6.9.0 fixes this issue.
- Amazon EMR 6.9.0 adds limited support for Lake Formation-based access control with Apache Hudi when reading data using Spark SQL. The support is for SELECT queries using Spark SQL and is limited to column-level access control. For more information, see Hudi and Lake Formation.
- When you use Amazon EMR 6.9.0 to create a Hadoop cluster with Node Labels enabled, the YARN metrics API returns aggregated information across all partitions, instead of the default partition. For more information, see YARN-11414.
- With Amazon EMR release 6.9.0, we've updated Trino to version 398, which uses Java 17. The previous supported version of Trino for Amazon EMR 6.8.0 was Trino 388 running on Java 11. For more information about this change, see Trino updates to Java 17 on the Trino blog.
- This releases fixes a timing sequence mismatch issue between Apache BigTop and the Amazon EMR on EC2 cluster startup sequence. This timing sequence mismatch occurs when a system attempts to perform two or more operations at the same time instead of doing them in the proper sequence. As a result, certain cluster configurations experienced instance startup timeouts and slower cluster startup times.

- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

> **Note**
>
> This release no longer gets automatic AMI updates since it has been succeeded by 1 more more patch releases. The patch release is denoted by the number after the second decimal point (`6.8.1`). To see if you're using the latest patch release, check the available releases in the *Release Guide*, or check the **Amazon EMR release** dropdown when you create a cluster in the console, or use the `ListReleaseLabels` API or `list-release-labels` CLI action. To get updates about new releases, subscribe to the RSS feed on the What's new? page.

Release 6.8.0

The following release notes include information for Amazon EMR release 6.8.0. Changes are relative to 6.7.0.

New Features

- Amazon EMR steps feature now supports Apache Livy endpoint and JDBC/ODBC clients. For more information, see Configure runtime roles for Amazon EMR steps.

- Amazon EMR release 6.8.0 comes with Apache HBase release 2.4.12. With this HBase release, you can both archive and delete your HBase tables. The Amazon S3 archive process renames all table files to the archive directory. This can be a costly and lengthy process. Now, you can skip the archive process and quickly drop and delete large tables. For more information, see Using the HBase shell.

Known Issues

- Hadoop 3.3.3 introduced a change in YARN (YARN-9608) that keeps nodes where containers ran in a decommissioning state until the application completes. This change ensures that local data such as shuffle data doesn't get lost, and you don' need to re-run the job. In Amazon EMR 6.8.0 and 6.9.0, this approach might also lead to underutilization of resources on clusters with or without managed scaling enabled.

  With Amazon EMR 6.10.0, there's a workaround for this issue to set the value of `yarn.resourcemanager.decommissioning-nodes-watcher.wait-for-applications` to `false` in `yarn-site.xml`. In Amazon EMR releases 6.11.0 and higher as well as 6.8.1, 6.9.1, and 6.10.1, the config is set to `false` by default to resolve this issue.

Changes, Enhancements, and Resolved Issues

- When Amazon EMR release 6.5.0, 6.6.0, or 6.7.0 read Apache Phoenix tables through the Apache Spark shell, Amazon EMR produced a `NoSuchMethodError`. Amazon EMR release 6.8.0 fixes this issue.
- Amazon EMR release 6.8.0 comes with Apache Hudi 0.11.1; however, Amazon EMR 6.8.0 clusters are also compatible with the open-source `hudi-spark3.3-bundle_2.12` from Hudi 0.12.0.
- Amazon EMR release 6.8.0 comes with Apache Spark 3.3.0. This Spark release uses Apache Log4j 2 and the `log4j2.properties` file to configure Log4j in Spark processes. If you use Spark in the cluster or create EMR clusters with custom configuration parameters, and you want to upgrade to Amazon EMR release 6.8.0, you must migrate to the new `spark-log4j2` configuration classification and key format for Apache Log4j 2. For more information, see Migrating from Apache Log4j 1.x to Log4j 2.x.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

> **Note**
>
> This release no longer gets automatic AMI updates since it has been succeeded by 1 more more patch releases. The patch release is denoted by the number after the second decimal point (`6.8.1`). To see if you're using the latest patch release, check the available releases in the *Release Guide*, or check the **Amazon EMR release** dropdown when you create a cluster in the console, or use the `ListReleaseLabels` API or `list-release-labels` CLI action. To get updates about new releases, subscribe to the RSS feed on the What's new? page.

Known Issues

- When you use the DynamoDB connector with Spark on Amazon EMR versions 6.6.0, 6.7.0, and 6.8.0, all reads from your table return an empty result, even though the input split references non-empty data. This is because Spark 3.2.0 sets `spark.hadoopRDD.ignoreEmptySplits` to `true` by default. As a workaround, explicitly set `spark.hadoopRDD.ignoreEmptySplits` to `false`. Amazon EMR release 6.9.0 fixes this issue.

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&‘()*+,-`. For more information, see [UTF-8 encoding table and Unicode characters](https://www.utf8-chartable.de/).

  As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

- With Amazon EMR releases 5.36.0 and 6.6.0 through 6.9.0, `SecretAgent` and `RecordServer` service components may experience log data loss due to an incorrect file name pattern configuration in Log4j2 properties. The incorrect configuration causes the components to generate only one log file per day. When the rotation strategy occurs, it overwrites the existing file instead of generating a new log file as expected. As a workaround, use a bootstrap action to generate log files each hour and append an auto-increment integer in the file name to handle the rotation.

  For Amazon EMR 6.6.0 through 6.9.0 releases, use the following bootstrap action when you launch a cluster.

  ```
  --bootstrap-actions "Path=s3://emr-data-access-control-us-east-1/customer-bootstrap-actions/log-rotation-emr-6x/replace-puppet.sh,Args=[]"
  ```

  For Amazon EMR 5.36.0, use the following bootstrap action when you launch a cluster.

  ```
  --bootstrap-actions "Path=s3://emr-data-access-control-us-east-1/customer-bootstrap-actions/log-rotation-emr-5x/replace-puppet.sh,Args=[]"
  ```

For more information on the release timeline, see the [change log](#).

Release 6.7.0

The following release notes include information for Amazon EMR release 6.7.0. Changes are relative to 6.6.0.

Initial release date: July 15, 2022

New Features

- Amazon EMR now supports Apache Spark 3.2.1, Apache Hive 3.1.3, HUDI 0.11, PrestoDB 0.272, and Trino 0.378.
- Supports IAM Role and Lake Formation-based access controls with EMR steps (Spark, Hive) for Amazon EMR on EC2 clusters.
- Supports Apache Spark data definition statements on Apache Ranger enabled clusters. This now includes support for Trino applications reading and writing Apache Hive metadata on Apache Ranger enabled clusters. For more information, see Enable federated governance using Trino and Apache Ranger on Amazon EMR.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

Known Issues

- When Amazon EMR release 6.5.0, 6.6.0, or 6.7.0 read Apache Phoenix tables through the Apache Spark shell, a `NoSuchMethodError` occurs because Amazon EMR uses an incorrect `Hbase.compat.version`. Amazon EMR release 6.8.0 fixes this issue.
- When you use the DynamoDB connector with Spark on Amazon EMR versions 6.6.0, 6.7.0, and 6.8.0, all reads from your table return an empty result, even though the input split references non-empty data. This is because Spark 3.2.0 sets `spark.hadoopRDD.ignoreEmptySplits` to

true by default. As a workaround, explicitly set spark.hadoopRDD.ignoreEmptySplits to false. Amazon EMR release 6.9.0 fixes this issue.

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, s3://bucket/table/p=a is a prefix of s3://bucket/table/p=a b.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in s3://bucket/table/p=a b falls into this category. Note that there are 14 other non-control characters: !"#$%&‘()*+,-. For more information, see [UTF-8 encoding table and Unicode characters](https://www.utf8-chartable.de/).

  As a workaround to this issue, set the spark.sql.sources.fastS3PartitionDiscovery.enabled configuration to false in the spark-defaults classification.

- With Amazon EMR releases 5.36.0 and 6.6.0 through 6.9.0, SecretAgent and RecordServer service components may experience log data loss due to an incorrect file name pattern configuration in Log4j2 properties. The incorrect configuration causes the components to generate only one log file per day. When the rotation strategy occurs, it overwrites the existing file instead of generating a new log file as expected. As a workaround, use a bootstrap action to generate log files each hour and append an auto-increment integer in the file name to handle the rotation.

  For Amazon EMR 6.6.0 through 6.9.0 releases, use the following bootstrap action when you launch a cluster.

```
--bootstrap-actions "Path=s3://emr-data-access-control-us-east-1/customer-bootstrap-
actions/log-rotation-emr-6x/replace-puppet.sh,Args=[]"
```

  For Amazon EMR 5.36.0, use the following bootstrap action when you launch a cluster.

```
--bootstrap-actions "Path=s3://emr-data-access-control-us-east-1/customer-bootstrap-
actions/log-rotation-emr-5x/replace-puppet.sh,Args=[]"
```

- The GetClusterSessionCredentials API isn't supported with clusters that run on Amazon EMR 6.7 or lower.

Release 6.6.0

The following release notes include information for Amazon EMR release 6.6.0. Changes are relative to 6.5.0.

Initial release date: May 9, 2022

Updated documentation date: June 15, 2022

New Features

- Amazon EMR 6.6 now supports Apache Spark 3.2, Apache Spark RAPIDS 22.02, CUDA 11, Apache Hudi 0.10.1, Apache Iceberg 0.13, Trino 0.367 and PrestoDB 0.267.
- When you launch a cluster with *the latest patch release* of Amazon EMR 5.36 or higher, 6.6 or higher, or 7.0 or higher, Amazon EMR uses the latest Amazon Linux 2023 or Amazon Linux 2 release for the default Amazon EMR AMI. For more information, see Using the default Amazon Linux AMI for Amazon EMR.

- With Amazon EMR 6.6 and later, applications that use Log4j 1.x and Log4j 2.x are upgraded to use Log4j 1.2.17 (or higher) and Log4j 2.17.1 (or higher) respectively, and do not require using the bootstrap actions provided to mitigate the CVE issues.
- **[Managed scaling] Spark shuffle data managed scaling optimization** - For Amazon EMR versions 5.34.0 and later, and EMR versions 6.4.0 and later, managed scaling is now Spark shuffle data aware (data that Spark redistributes across partitions to perform specific operations). For more information on shuffle operations, see Using EMR managed scaling in Amazon EMR in the *Amazon EMR Management Guide* and Spark Programming Guide.

- Starting with Amazon EMR 5.32.0 and 6.5.0, dynamic executor sizing for Apache Spark is enabled by default. To turn this feature on or off, you can use the `spark.yarn.heterogeneousExecutors.enabled` configuration parameter.

Changes, Enhancements, and Resolved Issues

- Amazon EMR reduces cluster startup time by up to 80 seconds on average for clusters that use the EMR default AMI option and only install common applications, such as Apache Hadoop, Apache Spark and Apache Hive.

Known Issues

- When Amazon EMR release 6.5.0, 6.6.0, or 6.7.0 read Apache Phoenix tables through the Apache Spark shell, a `NoSuchMethodError` occurs because Amazon EMR uses an incorrect `Hbase.compat.version`. Amazon EMR release 6.8.0 fixes this issue.
- When you use the DynamoDB connector with Spark on Amazon EMR versions 6.6.0, 6.7.0, and 6.8.0, all reads from your table return an empty result, even though the input split references non-empty data. This is because Spark 3.2.0 sets `spark.hadoopRDD.ignoreEmptySplits` to `true` by default. As a workaround, explicitly set `spark.hadoopRDD.ignoreEmptySplits` to `false`. Amazon EMR release 6.9.0 fixes this issue.
- On Trino long-running clusters, Amazon EMR 6.6.0 enables Garbage Collection logging parameters in the Trino jvm.config to get better insights from the Garbage Collection logs. This change appends many Garbage Collection logs to the launcher.log (/var/log/trino/launcher.log) file. If you are running Trino clusters in Amazon EMR 6.6.0, you may encounter nodes running out of disk space after the cluster has been running for a couple of days due to the appended logs.

  The workaround for this issue is to run the script below as a Bootstrap Action to disable the Garbage Collection logging parameters in jvm.config while creating or cloning the cluster for Amazon EMR 6.6.0.

```
#!/bin/bash
  set -ex
  PRESTO_PUPPET_DIR='/var/aws/emr/bigtop-deploy/puppet/modules/trino'
  sudo bash -c "sed -i '/-Xlog/d' ${PRESTO_PUPPET_DIR}/templates/jvm.config"
```

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:

- Two or more partitions are scanned from the same table.
- At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
- The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&'()*+,-`. For more information, see [UTF-8 encoding table and Unicode characters](#).

As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

- With Amazon EMR releases 5.36.0 and 6.6.0 through 6.9.0, `SecretAgent` and `RecordServer` service components may experience log data loss due to an incorrect file name pattern configuration in Log4j2 properties. The incorrect configuration causes the components to generate only one log file per day. When the rotation strategy occurs, it overwrites the existing file instead of generating a new log file as expected. As a workaround, use a bootstrap action to generate log files each hour and append an auto-increment integer in the file name to handle the rotation.

  For Amazon EMR 6.6.0 through 6.9.0 releases, use the following bootstrap action when you launch a cluster.

```
--bootstrap-actions "Path=s3://emr-data-access-control-us-east-1/customer-bootstrap-actions/log-rotation-emr-6x/replace-puppet.sh,Args=[]"
```

  For Amazon EMR 5.36.0, use the following bootstrap action when you launch a cluster.

```
--bootstrap-actions "Path=s3://emr-data-access-control-us-east-1/customer-bootstrap-actions/log-rotation-emr-5x/replace-puppet.sh,Args=[]"
```

Release 5.35.0

This is the Amazon EMR release 5.35.0 release note.

The following release notes include information for Amazon EMR release 5.35.0. Changes are relative to 5.34.0.

Initial release date: March 30, 2022

New Features

- Amazon EMR release 5.35 applications that use Log4j 1.x and Log4j 2.x are upgraded to use Log4j 1.2.17 (or higher) and Log4j 2.17.1 (or higher) respectively, and do not require using bootstrap actions to mitigate the CVE issues in previous releases. See Approach to mitigate CVE-2021-44228.

Changes, Enhancements, and Resolved Issues

Flink changes

Change type	Description
Upgrades	• Update flink version to 1.14.2. • log4j upgraded to 2.17.1.

Hadoop changes

Change type	Description
Hadoop open source backports since EMR 5.34.0	• YARN-10438: Handle null containerId in ClientRMService#getContainerReport() • YARN-7266: Timeline Server event handler threads locked • YARN-10438: ATS 1.5 fails to start if RollingLevelDb files are corrupt or missing • HADOOP-13500: Synchronizing iteration of Configuration properties object • YARN-10651: CapacityScheduler crashed with NPE in AbstractYarnScheduler.updat eNodeResource()

Change type	Description
	• HDFS-12221: Replace xerces in XmlEditsV isitor • HDFS-16410: Insecure Xml parsing in OfflineEditsXmlLoader
Hadoop changes and fixes	• Tomcat used in KMS and HttpFS is upgraded to 8.5.75 • In FileSystemOptimizedCommitterV2, the success marker was written in the commitJob output path defined while creating the committer. Since commitJob and task level output paths can differ, the path has been corrected to use the one defined in manifest files. For Hive jobs, this results in the success marker being written correctly in when performing operations such as dynamic partition or UNION ALL.

Hive changes

Change type	Description
Hive upgraded to open source release 2.3.9, including these JIRA fixes	• HIVE-17155: findConfFile() in HiveConf.java has some issues with the conf path • HIVE-24797: Disable validate default values when parsing Avro schemas • HIVE-21563: Improve Table#getEmptyTabl e performance by disable registerAllFunctio nsOnce • HIVE-18147: Tests can fail with java.net. BindException: Address already in use • HIVE-24608: Switch back to get_table in HMS client for Hive 2.3.x

Change type	Description
	• HIVE-21200: Vectorization - date column throwing java.lang.UnsupportedOperationException for parquet • HIVE-19228: Remove commons-httpclient 3.x usage
Hive open source backports since EMR 5.34.0	• HIVE-19990: Query with interval literal in join condition fails • HIVE-25824: Upgrade branch-2.3 to log4j 2.17.0 • TEZ-4062: Speculative attempt scheduling should be aborted when Task has completed • TEZ-4108: NullPointerException during speculative execution race condition • TEZ-3918: Setting tez.task.log.level does not work
Hive upgrades and fixes	• Upgrade Log4j version to 2.17.1 • Upgrade ORC version to 1.4.3 • FixED deadlock due to penalty thread in ShuffleScheduler
New features	• Added feature to print Hive Query in AM logs. This is disabled by default. Flag/Conf : `tez.am.emr.print.hive.query.in.log` . Status (default): FALSE.

Oozie changes

Change type	Description
Oozie open source backports since EMR 5.34.0	• OOZIE-3652: Oozie launcher should retry directory listing when NoSuchFileException occurs

Pig changes

Change type	Description
Upgrades	• log4j upgraded to 1.2.17.

Known issues

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&'()*+,-`. For more information, see [UTF-8 encoding table and Unicode characters](#).

  As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

Release 5.34.0

The following release notes include information for Amazon EMR release 5.34.0. Changes are relative to 5.33.1.

Initial release date: January 20, 2022

Updated release date: March 21, 2022

New Features

- **[Managed scaling] Spark shuffle data managed scaling optimization** - For Amazon EMR versions 5.34.0 and later, and EMR versions 6.4.0 and later, managed scaling is now Spark shuffle data aware (data that Spark redistributes across partitions to perform specific operations). For more information on shuffle operations, see Using EMR managed scaling in Amazon EMR in the *Amazon EMR Management Guide* and Spark Programming Guide.

- [Hudi] Improvements to simplify Hudi configuration. Disabled optimistic concurrency control by default.

Changes, Enhancements, and Resolved Issues

- This is a release to fix issues with Amazon EMR Scaling when it fails to scale up/scale down a cluster successfully or causes application failures.
- Previously, manual restart of the resource manager on a multi-master cluster caused Amazon EMR on-cluster daemons, like Zookeeper, to reload all previously decommissioned or lost nodes in the Zookeeper znode file. This caused default limits to be exceeded in certain situations. Amazon EMR now removes the decommissioned or lost node records older than one hour from the Zookeeper file and the internal limits have been increased.
- Fixed an issue where scaling requests failed for a large, highly utilized cluster when Amazon EMR on-cluster daemons were running health checking activities, such as gathering YARN node state and HDFS node state. This was happening because on-cluster daemons were not able to communicate the health status data of a node to internal Amazon EMR components.
- Improved EMR on-cluster daemons to correctly track the node states when IP addresses are reused to improve reliability during scaling operations.
- SPARK-29683. Fixed an issue where job failures occurred during cluster scale-down as Spark was assuming all available nodes were deny-listed.
- YARN-9011. Fixed an issue where job failures occurred due to a race condition in YARN decommissioning when cluster tried to scale up or down.
- Fixed issue with step or job failures during cluster scaling by ensuring that the node states are always consistent between the Amazon EMR on-cluster daemons and YARN/HDFS.
- Fixed an issue where cluster operations such as scale down and step submission failed for Amazon EMR clusters enabled with Kerberos authentication. This was because the Amazon EMR on-cluster daemon did not renew the Kerberos ticket, which is required to securely communicate with HDFS/YARN running on the primary node.
- Zeppelin upgraded to version 0.10.0.
- Livy Fix - upgraded to 0.7.1

- Spark performance improvement - heterogeneous executors are disabled when certain Spark configuration values are overridden in EMR 5.34.0.
- WebHDFS and HttpFS server are disabled by default. You can re-enable WebHDFS using the Hadoop configuration, `dfs.webhdfs.enabled`. HttpFS server can be started by using `sudo systemctl start hadoop-httpfs`.

Known Issues

- The Amazon EMR Notebooks feature used with Livy user impersonation does not work because HttpFS is disabled by default. In this case, the EMR notebook cannot connect to the cluster that has Livy impersonation enabled. The workaround is to start HttpFS server before connecting the EMR notebook to the cluster using `sudo systemctl start hadoop-httpfs`.
- Hue queries do not work in Amazon EMR 6.4.0 because Apache Hadoop HttpFS server is disabled by default. To use Hue on Amazon EMR 6.4.0, either manually start HttpFS server on the Amazon EMR primary node using `sudo systemctl start hadoop-httpfs`, or use an Amazon EMR step.
- The Amazon EMR Notebooks feature used with Livy user impersonation does not work because HttpFS is disabled by default. In this case, the EMR notebook cannot connect to the cluster that has Livy impersonation enabled. The workaround is to start HttpFS server before connecting the EMR notebook to the cluster using `sudo systemctl start hadoop-httpfs`.
- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that’s less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&‘()*+,-`. For more information, see UTF-8 encoding table and Unicode characters.

As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

Release 6.5.0

The following release notes include information for Amazon EMR release 6.5.0. Changes are relative to 6.4.0.

Initial release date: January 20, 2022

Updated release date: March 21, 2022

New Features

- **[Managed scaling] Spark shuffle data managed scaling optimization** - For Amazon EMR versions 5.34.0 and later, and EMR versions 6.4.0 and later, managed scaling is now Spark shuffle data aware (data that Spark redistributes across partitions to perform specific operations). For more information on shuffle operations, see Using EMR managed scaling in Amazon EMR in the *Amazon EMR Management Guide* and Spark Programming Guide.
- Starting with Amazon EMR 5.32.0 and 6.5.0, dynamic executor sizing for Apache Spark is enabled by default. To turn this feature on or off, you can use the `spark.yarn.heterogeneousExecutors.enabled` configuration parameter.
- Support for Apache Iceberg open table format for huge analytic datasets.
- Support for ranger-trino-plugin 2.0.1-amzn-1
- Support for toree 0.5.0

Changes, Enhancements, and Resolved Issues

- Amazon EMR 6.5 release version now supports Apache Iceberg 0.12.0, and provides runtime improvements with Amazon EMR Runtime for Apache Spark, Amazon EMR Runtime for Presto, and Amazon EMR Runtime for Apache Hive.
- Apache Iceberg is an open table format for large data sets in Amazon S3 and provides fast query performance over large tables, atomic commits, concurrent writes, and SQL-compatible table evolution. With EMR 6.5, you can use Apache Spark 3.1.2 with the Iceberg table format.

- Apache Hudi 0.9 adds Spark SQL DDL and DML support. This allows you to create, upsert Hudi tables using just SQL statements. Apache Hudi 0.9 also includes query side and writer side performance improvements.
- Amazon EMR Runtime for Apache Hive improves Apache Hive performance on Amazon S3 by removing rename operations during staging operations, and improves performance for metastore check (MSCK) commands used for repairing tables.

Known Issues

- When Amazon EMR release 6.5.0, 6.6.0, or 6.7.0 read Apache Phoenix tables through the Apache Spark shell, a `NoSuchMethodError` occurs because Amazon EMR uses an incorrect `Hbase.compat.version`. Amazon EMR release 6.8.0 fixes this issue.
- Hbase bundle clusters in high availability (HA) fail to provision with the default volume size and instance type. The workaround for this issue is to increase the root volume size.
- To use Spark actions with Apache Oozie, you must add the following configuration to your Oozie `workflow.xml` file. Otherwise, several critical libraries such as Hadoop and EMRFS will be missing from the classpath of the Spark executors that Oozie launches.

```
<spark-opts>--conf spark.yarn.populateHadoopClasspath=true</spark-opts>
```

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&‘()*+,-`. For more information, see [UTF-8 encoding table and Unicode characters](#).

  As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

Release 6.4.0

The following release notes include information for Amazon EMR release 6.4.0. Changes are relative to 6.3.0.

Initial release date: Sept 20, 2021

Updated release date: March 21, 2022

Supported applications

- AWS SDK for Java version 1.12.31
- CloudWatch Sink version 2.2.0
- DynamoDB Connector version 4.16.0
- EMRFS version 2.47.0
- Amazon EMR Goodies version 3.2.0
- Amazon EMR Kinesis Connector version 3.5.0
- Amazon EMR Record Server version 2.1.0
- Amazon EMR Scripts version 2.5.0
- Flink version 1.13.1
- Ganglia version 3.7.2
- AWS Glue Hive Metastore Client version 3.3.0
- Hadoop version 3.2.1-amzn-4
- HBase version 2.4.4-amzn-0
- HBase-operator-tools 1.1.0
- HCatalog version 3.1.2-amzn-5
- Hive version 3.1.2-amzn-5
- Hudi version 0.8.0-amzn-0
- Hue version 4.9.0
- Java JDK version Corretto-8.302.08.1 (build 1.8.0_302-b08)
- JupyterHub version 1.4.1
- Livy version 0.7.1-incubating
- MXNet version 1.8.0
- Oozie version 5.2.1

- Phoenix version 5.1.2
- Pig version 0.17.0
- Presto version 0.254.1-amzn-0
- Trino version 359
- Apache Ranger KMS (multi-master transparent encryption) version 2.0.0
- ranger-plugins 2.0.1-amzn-0
- ranger-s3-plugin 1.2.0
- SageMaker Spark SDK version 1.4.1
- Scala version 2.12.10 (OpenJDK 64-Bit Server VM, Java 1.8.0_282)
- Spark version 3.1.2-amzn-0
- spark-rapids 0.4.1
- Sqoop version 1.4.7
- TensorFlow version 2.4.1
- tez version 0.9.2
- Zeppelin version 0.9.0
- Zookeeper version 3.5.7
- Connectors and drivers: DynamoDB Connector 4.16.0

New features

- **[Managed scaling] Spark shuffle data managed scaling optimization** - For Amazon EMR versions 5.34.0 and later, and EMR versions 6.4.0 and later, managed scaling is now Spark shuffle data aware (data that Spark redistributes across partitions to perform specific operations). For more information on shuffle operations, see Using EMR managed scaling in Amazon EMR in the *Amazon EMR Management Guide* and Spark Programming Guide.
- On Apache Ranger-enabled Amazon EMR clusters, you can use Apache Spark SQL to insert data into or update the Apache Hive metastore tables using `INSERT INTO`, `INSERT OVERWRITE`, and `ALTER TABLE`. When using ALTER TABLE with Spark SQL, a partition location must be the child directory of a table location. Amazon EMR does not currently support inserting data into a partition where the partition location is different from the table location.
- PrestoSQL has been renamed to Trino.
- Hive: Execution of simple SELECT queries with LIMIT clause are accelerated by stopping the query execution as soon as the number of records mentioned in LIMIT clause is fetched. Simple

SELECT queries are queries that do not have GROUP BY / ORDER by clause or queries that do not have a reducer stage. For example, `SELECT * from <TABLE> WHERE <Condition> LIMIT <Number>`.

Hudi Concurrency Control

- Hudi now supports Optimistic Concurrency Control (OCC), which can be leveraged with write operations like UPSERT and INSERT to allow changes from multiple writers to the same Hudi table. This is file-level OCC, so any two commits (or writers) can write to the same table, if their changes do not conflict. For more information, see the Hudi concurrency control.
- Amazon EMR clusters have Zookeeper installed, which can be leveraged as the lock provider for OCC. To make it easier to use this feature, Amazon EMR clusters have the following properties pre-configured:

```
hoodie.write.lock.provider=org.apache.hudi.client.transaction.lock.ZookeeperBasedLockProvider
hoodie.write.lock.zookeeper.url=<EMR Zookeeper URL>
hoodie.write.lock.zookeeper.port=<EMR Zookeeper Port>
hoodie.write.lock.zookeeper.base_path=/hudi
```

  To enable OCC, you need to configure the following properties either with their Hudi job options or at the cluster-level using the Amazon EMR configurations API:

```
hoodie.write.concurrency.mode=optimistic_concurrency_control
hoodie.cleaner.policy.failed.writes=LAZY (Performs cleaning of failed writes lazily
 instead of inline with every write)
hoodie.write.lock.zookeeper.lock_key=<Key to uniquely identify the Hudi table> (Table
 Name is a good option)
```

Hudi Monitoring: Amazon CloudWatch integration to report Hudi Metrics

- Amazon EMR supports publishing Hudi Metrics to Amazon CloudWatch. It is enabled by setting the following required configurations:

```
hoodie.metrics.on=true
hoodie.metrics.reporter.type=CLOUDWATCH
```

- The following are optional Hudi configurations that you can change:

Setting	Description	Value
hoodie.metrics.cloudwatch.report.period.seconds	Frequency (in seconds) at which to report metrics to Amazon CloudWatch	Default value is 60s, which is fine for the default one minute resolution offered by Amazon CloudWatch
hoodie.metrics.cloudwatch.metric.prefix	Prefix to be added to each metric name	Default value is empty (no prefix)
hoodie.metrics.cloudwatch.namespace	Amazon CloudWatch namespace under which metrics are published	Default value is Hudi
hoodie.metrics.cloudwatch.maxDatumsPerRequest	Maximum number of datums to be included in one request to Amazon CloudWatch	Default value is 20, which is same as Amazon CloudWatch default

Amazon EMR Hudi configurations support and improvements

- Customers can now leverage EMR Configurations API and Reconfiguration feature to configure Hudi configurations at cluster level. A new file based configuration support has been introduced via /etc/hudi/conf/hudi-defaults.conf along the lines of other applications like Spark, Hive etc. EMR configures few defaults to improve user experience:

  — `hoodie.datasource.hive_sync.jdbcurl` is configured to the cluster Hive server URL and no longer needs to be specified. This is particularly useful when running a job in Spark cluster mode, where you previously had to specify the Amazon EMR master IP.

  — HBase specific configurations, which are useful for using HBase index with Hudi.

  — Zookeeper lock provider specific configuration, as discussed under concurrency control, which makes it easier to use Optimistic Concurrency Control (OCC).
- Additional changes have been introduced to reduce the number of configurations that you need to pass, and to infer automatically where possible:

  — The `partitionBy` keyword can be used to specify the partition column.

— When enabling Hive Sync, it is no longer mandatory to pass HIVE_TABLE_OPT_KEY, HIVE_PARTITION_FIELDS_OPT_KEY, HIVE_PARTITION_EXTRACTOR_CLASS_OPT_KEY. Those values can be inferred from the Hudi table name and partition field.

— KEYGENERATOR_CLASS_OPT_KEY is not mandatory to pass, and can be inferred from simpler cases of SimpleKeyGenerator and ComplexKeyGenerator.

Hudi Caveats

- Hudi does not support vectorized execution in Hive for Merge on Read (MoR) and Bootstrap tables. For example, `count(*)` fails with Hudi realtime table when `hive.vectorized.execution.enabled` is set to true. As a workaround, you can disable vectorized reading by setting `hive.vectorized.execution.enabled` to `false`.
- Multi-writer support is not compatible with the Hudi bootstrap feature.
- Flink Streamer and Flink SQL are experimental features in this release. These features are not recommended for use in production deployments.

Changes, enhancements, and resolved issues

This is a release to fix issues with Amazon EMR Scaling when it fails to scale up/scale down a cluster successfully or causes application failures.

- Previously, manual restart of the resource manager on a multi-master cluster caused Amazon EMR on-cluster daemons, like Zookeeper, to reload all previously decommissioned or lost nodes in the Zookeeper znode file. This caused default limits to be exceeded in certain situations. Amazon EMR now removes the decommissioned or lost node records older than one hour from the Zookeeper file and the internal limits have been increased.
- Fixed an issue where scaling requests failed for a large, highly utilized cluster when Amazon EMR on-cluster daemons were running health checking activities, such as gathering YARN node state and HDFS node state. This was happening because on-cluster daemons were not able to communicate the health status data of a node to internal Amazon EMR components.
- Improved EMR on-cluster daemons to correctly track the node states when IP addresses are reused to improve reliability during scaling operations.
- SPARK-29683. Fixed an issue where job failures occurred during cluster scale-down as Spark was assuming all available nodes were deny-listed.

- [YARN-9011](). Fixed an issue where job failures occurred due to a race condition in YARN decommissioning when cluster tried to scale up or down.
- Fixed issue with step or job failures during cluster scaling by ensuring that the node states are always consistent between the Amazon EMR on-cluster daemons and YARN/HDFS.
- Fixed an issue where cluster operations such as scale down and step submission failed for Amazon EMR clusters enabled with Kerberos authentication. This was because the Amazon EMR on-cluster daemon did not renew the Kerberos ticket, which is required to securely communicate with HDFS/YARN running on the primary node.
- **Configuring a cluster to fix Apache YARN Timeline Server version 1 and 1.5 performance issues**

  Apache YARN Timeline Server version 1 and 1.5 can cause performance issues with very active, large EMR clusters, particularly with `yarn.resourcemanager.system-metrics-publisher.enabled=true`, which is the default setting in Amazon EMR. An open source YARN Timeline Server v2 solves the performance issue related to YARN Timeline Server scalability.

  Other workarounds for this issue include:

  - Configuring yarn.resourcemanager.system-metrics-publisher.enabled=false in yarn-site.xml.
  - Enabling the fix for this issue when creating a cluster, as described below.

  The following Amazon EMR releases contain a fix for this YARN Timeline Server performance issue.

  EMR 5.30.2, 5.31.1, 5.32.1, 5.33.1, 5.34.x, 6.0.1, 6.1.1, 6.2.1, 6.3.1, 6.4.x

  To enable the fix on any of the above specified Amazon EMR releases, set these properties to `true` in a configurations JSON file that is passed in using the [`aws emr create-cluster` command parameter](): `--configurations file://./configurations.json`. Or enable the fix using the [reconfiguration console UI]().

  Example of the configurations.json file contents:

```
[
{
"Classification": "yarn-site",
"Properties": {
"yarn.resourcemanager.system-metrics-publisher.timeline-server-v1.enable-batch":
 "true",
"yarn.resourcemanager.system-metrics-publisher.enabled": "true"
```

```
},
"Configurations": []
}
]
```

- WebHDFS and HttpFS server are disabled by default. You can re-enable WebHDFS using the Hadoop configuration, `dfs.webhdfs.enabled`. HttpFS server can be started by using `sudo systemctl start hadoop-httpfs`.
- HTTPS is now enabled by default for Amazon Linux repositories. If you are using an Amazon S3 VPCE policy to restrict access to specific buckets, you must add the new Amazon Linux bucket ARN `arn:aws:s3:::amazonlinux-2-repos-$region/*` to your policy (replace `$region` with the region where the endpoint is). For more information, see this topic in the AWS discussion forums. [Announcement: Amazon Linux 2 now supports the ability to use HTTPS while connecting to package repositories](#).
- Hive: Write query performance is improved by enabling the use of a scratch directory on HDFS for the last job. The temporary data for final job is written to HDFS instead of Amazon S3 and performance is improved because the data is moved from HDFS to the final table location (Amazon S3) instead of between Amazon S3 devices.
- Hive: Query compilation time improvement up to 2.5x with Glue metastore Partition Pruning.
- By default, when built-in UDFs are passed by Hive to the Hive Metastore Server, only a subset of those built-in UDFs are passed to the Glue Metastore since Glue supports only limited expression operators. If you set `hive.glue.partition.pruning.client=true`, then all partition pruning happens on the client side. If the you set `hive.glue.partition.pruning.server=true`, then all partition pruning happens on the server side.

Known issues

- Hue queries do not work in Amazon EMR 6.4.0 because Apache Hadoop HttpFS server is disabled by default. To use Hue on Amazon EMR 6.4.0, either manually start HttpFS server on the Amazon EMR primary node using `sudo systemctl start hadoop-httpfs`, or [use an Amazon EMR step](#).
- The Amazon EMR Notebooks feature used with Livy user impersonation does not work because HttpFS is disabled by default. In this case, the EMR notebook cannot connect to the cluster that has Livy impersonation enabled. The workaround is to start HttpFS server before connecting the EMR notebook to the cluster using `sudo systemctl start hadoop-httpfs`.

- In Amazon EMR version 6.4.0, Phoenix does not support the Phoenix connectors component.
- To use Spark actions with Apache Oozie, you must add the following configuration to your Oozie `workflow.xml` file. Otherwise, several critical libraries such as Hadoop and EMRFS will be missing from the classpath of the Spark executors that Oozie launches.

```
<spark-opts>--conf spark.yarn.populateHadoopClasspath=true</spark-opts>
```

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&‘()*+,-`. For more information, see [UTF-8 encoding table and Unicode characters](https://www.utf8-chartable.de/).

  As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

Release 5.32.0

The following release notes include information for Amazon EMR release 5.32.0. Changes are relative to 5.31.0.

Initial release date: Jan 8, 2021

Upgrades

- Upgraded Amazon Glue connector to version 1.14.0
- Upgraded Amazon SageMaker Spark SDK to version 1.4.1
- Upgraded AWS SDK for Java to version 1.11.890
- Upgraded EMR DynamoDB Connector version 4.16.0

- Upgraded EMRFS to version 2.45.0
- Upgraded EMR Log Analytics Metrics to version 1.18.0
- Upgraded EMR MetricsAndEventsApiGateway Client to version 1.5.0
- Upgraded EMR Record Server to version 1.8.0
- Upgraded EMR S3 Dist CP to version 2.17.0
- Upgraded EMR Secret Agent to version 1.7.0
- Upgraded Flink to version 1.11.2
- Upgraded Hadoop to version 2.10.1-amzn-0
- Upgraded Hive to version 2.3.7-amzn-3
- Upgraded Hue to version 4.8.0
- Upgraded Mxnet to version 1.7.0
- Upgraded OpenCV to version 4.4.0
- Upgraded Presto to version 0.240.1-amzn-0
- Upgraded Spark to version 2.4.7-amzn-0
- Upgraded TensorFlow to version 2.3.1

Changes, enhancements, and resolved issues

- This is a release to fix issues with Amazon EMR Scaling when it fails to scale up/scale down a cluster successfully or causes application failures.
- Fixed an issue where scaling requests failed for a large, highly utilized cluster when Amazon EMR on-cluster daemons were running health checking activities, such as gathering YARN node state and HDFS node state. This was happening because on-cluster daemons were not able to communicate the health status data of a node to internal Amazon EMR components.
- Improved EMR on-cluster daemons to correctly track the node states when IP addresses are reused to improve reliability during scaling operations.
- SPARK-29683. Fixed an issue where job failures occurred during cluster scale-down as Spark was assuming all available nodes were deny-listed.
- YARN-9011. Fixed an issue where job failures occurred due to a race condition in YARN decommissioning when cluster tried to scale up or down.
- Fixed issue with step or job failures during cluster scaling by ensuring that the node states are always consistent between the Amazon EMR on-cluster daemons and YARN/HDFS.

- Fixed an issue where cluster operations such as scale down and step submission failed for Amazon EMR clusters enabled with Kerberos authentication. This was because the Amazon EMR on-cluster daemon did not renew the Kerberos ticket, which is required to securely communicate with HDFS/YARN running on the primary node.
- Newer Amazon EMR releases fix the issue with a lower "Max open files" limit on older AL2 in Amazon EMR. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later now include a permanent fix with a higher "Max open files" setting.
- Upgraded component versions.
- For a list of component versions, see About Amazon EMR Releases in this guide.

New features

- Starting with Amazon EMR 5.32.0 and 6.5.0, dynamic executor sizing for Apache Spark is enabled by default. To turn this feature on or off, you can use the `spark.yarn.heterogeneousExecutors.enabled` configuration parameter.
- Instance Metadata Service (IMDS) V2 support status: Amazon EMR 5.23.1, 5.27.1 and 5.32 or later components use IMDSv2 for all IMDS calls. For IMDS calls in your application code, you can use both IMDSv1 and IMDSv2, or configure the IMDS to use only IMDSv2 for added security. For other 5.x EMR releases, disabling IMDSv1 causes cluster startup failure.
- Beginning with Amazon EMR 5.32.0, you can launch a cluster that natively integrates with Apache Ranger. Apache Ranger is an open-source framework to enable, monitor, and manage comprehensive data security across the Hadoop platform. For more information, see Apache Ranger. With native integration, you can bring your own Apache Ranger to enforce fine-grained data access control on Amazon EMR. See Integrate Amazon EMR with Apache Ranger in the *Amazon EMR Release Guide*.
- Amazon EMR Release 5.32.0 supports Amazon EMR on EKS. For more details on getting started with EMR on EKS, see What is Amazon EMR on EKS.
- Amazon EMR Release 5.32.0 supports Amazon EMR Studio (Preview). For more details on getting started with EMR Studio, see Amazon EMR Studio (Preview).
- Scoped managed policies: To align with AWS best practices, Amazon EMR has introduced v2 EMR-scoped default managed policies as replacements for policies that will be deprecated. See Amazon EMR Managed Policies.

Known issues

- For Amazon EMR 6.3.0 and 6.2.0 private subnet clusters, you cannot access the Ganglia web UI. You will get an "access denied (403)" error. Other web UIs, such as Spark, Hue, JupyterHub, Zeppelin, Livy, and Tez are working normally. Ganglia web UI access on public subnet clusters are also working normally. To resolve this issue, restart httpd service on the primary node with `sudo systemctl restart httpd`. This issue is fixed in Amazon EMR 6.4.0.
- **Lower "Max open files" limit on older AL2 [fixed in newer releases].** Amazon EMR releases: emr-5.30.x, emr-5.31.0, emr-5.32.0, emr-6.0.0, emr-6.1.0, and emr-6.2.0 are based on older versions ofAmazon Linux 2 (AL2), which have a lower ulimit setting for "Max open files" when Amazon EMR clusters are created with the default AMI. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later include a permanent fix with a higher "Max open files" setting. Releases with the lower open file limit causes a "Too many open files" error when submitting Spark job. In the impacted releases, the Amazon EMR default AMI has a default ulimit setting of 4096 for "Max open files," which is lower than the 65536 file limit in the latestAmazon Linux 2 AMI. The lower ulimit setting for "Max open files" causes Spark job failure when the Spark driver and executor try to open more than 4096 files. To fix the issue, Amazon EMR has a bootstrap action (BA) script that adjusts the ulimit setting at cluster creation.

  If you are using an older Amazon EMR version that doesn't have the permanent fix for this issue, the following workaround lets you to explicitly set the instance-controller ulimit to a maximum of 65536 files.

  Explicitly set a ulimit from the command line

  1. Edit `/etc/systemd/system/instance-controller.service` to add the following parameters to Service section.

     `LimitNOFILE=65536`

     `LimitNPROC=65536`
  2. Restart InstanceController

     `$ sudo systemctl daemon-reload`

     `$ sudo systemctl restart instance-controller`

  Set a ulimit using bootstrap action (BA)

You can also use a bootstrap action (BA) script to configure the instance-controller ulimit to 65536 files at cluster creation.

```
#!/bin/bash
for user in hadoop spark hive; do
sudo tee /etc/security/limits.d/$user.conf << EOF
$user - nofile 65536
$user - nproc 65536
EOF
done
for proc in instancecontroller logpusher; do
sudo mkdir -p /etc/systemd/system/$proc.service.d/
sudo tee /etc/systemd/system/$proc.service.d/override.conf << EOF
[Service]
LimitNOFILE=65536
LimitNPROC=65536
EOF
pid=$(pgrep -f aws157.$proc.Main)
sudo prlimit --pid $pid --nofile=65535:65535 --nproc=65535:65535
done
sudo systemctl daemon-reload
```

- **Important**

  EMR clusters that run Amazon Linux or Amazon Linux 2 Amazon Machine Images (AMIs) use default Amazon Linux behavior, and do not automatically download and install important and critical kernel updates that require a reboot. This is the same behavior as other Amazon EC2 instances that run the default Amazon Linux AMI. If new Amazon Linux software updates that require a reboot (such as kernel, NVIDIA, and CUDA updates) become available after an Amazon EMR release becomes available, EMR cluster instances that run the default AMI do not automatically download and install those updates. To get kernel updates, you can customize your Amazon EMR AMI to use the latest Amazon Linux AMI.

- Console support to create a security configuration that specifies the AWS Ranger integration option is currently not supported in the GovCloud Region. Security configuration can be done using the CLI. See Create the EMR Security Configuration in the *Amazon EMR Management Guide*.
- When AtRestEncryption or HDFS encryption is enabled on a cluster that uses Amazon EMR 5.31.0 or 5.32.0, Hive queries result in the following runtime exception.

```
TaskAttempt 3 failed, info=[Error: Error while running task ( failure ) :
 attempt_1604112648850_0001_1_01_000000_3:java.lang.RuntimeException:
 java.lang.RuntimeException: Hive Runtime Error while closing
 operators: java.io.IOException: java.util.ServiceConfigurationError:
 org.apache.hadoop.security.token.TokenIdentifier: Provider
 org.apache.hadoop.hbase.security.token.AuthenticationTokenIdentifier not found
```

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&‘()*+,-`. For more information, see [UTF-8 encoding table and Unicode characters](#).

  As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

Release 6.2.0

The following release notes include information for Amazon EMR release 6.2.0. Changes are relative to 6.1.0.

Initial release date: Dec 09, 2020

Last updated date: Oct 04, 2021

Supported applications

- AWS SDK for Java version 1.11.828
- emr-record-server version 1.7.0
- Flink version 1.11.2

- Ganglia version 3.7.2
- Hadoop version 3.2.1-amzn-1
- HBase version 2.2.6-amzn-0
- HBase-operator-tools 1.0.0
- HCatalog version 3.1.2-amzn-0
- Hive version 3.1.2-amzn-3
- Hudi version 0.6.0-amzn-1
- Hue version 4.8.0
- JupyterHub version 1.1.0
- Livy version 0.7.0
- MXNet version 1.7.0
- Oozie version 5.2.0
- Phoenix version 5.0.0
- Pig version 0.17.0
- Presto version 0.238.3-amzn-1
- PrestoSQL version 343
- Spark version 3.0.1-amzn-0
- spark-rapids 0.2.0
- TensorFlow version 2.3.1
- Zeppelin version 0.9.0-preview1
- Zookeeper version 3.4.14
- Connectors and drivers: DynamoDB Connector 4.16.0

New features

- HBase: Removed rename in commit phase and added persistent HFile tracking. See Persistent HFile Tracking in the *Amazon EMR Release Guide*.
- HBase: Backported Create a config that forces to cache blocks on compaction.
- PrestoDB: Improvements to Dynamic Partition Pruning. Rule-based Join Reorder works on non-partitioned data.

- Scoped managed policies: To align with AWS best practices, Amazon EMR has introduced v2 EMR-scoped default managed policies as replacements for policies that will be deprecated. See Amazon EMR Managed Policies.
- Instance Metadata Service (IMDS) V2 support status: For Amazon EMR 6.2 or later, Amazon EMR components use IMDSv2 for all IMDS calls. For IMDS calls in your application code, you can use both IMDSv1 and IMDSv2, or configure the IMDS to use only IMDSv2 for added security. If you disable IMDSv1 in earlier Amazon EMR 6.x releases, it causes cluster startup failure.

Changes, enhancements, and resolved issues

- This is a release to fix issues with Amazon EMR Scaling when it fails to scale up/scale down a cluster successfully or causes application failures.
- Fixed an issue where scaling requests failed for a large, highly utilized cluster when Amazon EMR on-cluster daemons were running health checking activities, such as gathering YARN node state and HDFS node state. This was happening because on-cluster daemons were not able to communicate the health status data of a node to internal Amazon EMR components.
- Improved EMR on-cluster daemons to correctly track the node states when IP addresses are reused to improve reliability during scaling operations.
- SPARK-29683. Fixed an issue where job failures occurred during cluster scale-down as Spark was assuming all available nodes were deny-listed.
- YARN-9011. Fixed an issue where job failures occurred due to a race condition in YARN decommissioning when cluster tried to scale up or down.
- Fixed issue with step or job failures during cluster scaling by ensuring that the node states are always consistent between the Amazon EMR on-cluster daemons and YARN/HDFS.
- Fixed an issue where cluster operations such as scale down and step submission failed for Amazon EMR clusters enabled with Kerberos authentication. This was because the Amazon EMR on-cluster daemon did not renew the Kerberos ticket, which is required to securely communicate with HDFS/YARN running on the primary node.
- Newer Amazon EMR releases fix the issue with a lower "Max open files" limit on older AL2 in Amazon EMR. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later now include a permanent fix with a higher "Max open files" setting.
- Spark: Performance improvements in Spark runtime.

Known issues

- Amazon EMR 6.2 has incorrect permissions set on the /etc/cron.d/libinstance-controller-java file in EMR 6.2.0. Permissions on the file are 645 (-rw-r--r-x), when they should be 644 (-rw-r--r--). As a result, Amazon EMR version 6.2 does not log instance-state logs, and the /emr/instance-logs directory is empty. This issue is fixed in Amazon EMR 6.3.0 and later.

  To work around this issue, run the following script as a bootstrap action at cluster launch.

  ```
  #!/bin/bash
  sudo chmod 644 /etc/cron.d/libinstance-controller-java
  ```

- For Amazon EMR 6.2.0 and 6.3.0 private subnet clusters, you cannot access the Ganglia web UI. You will get an "access denied (403)" error. Other web UIs, such as Spark, Hue, JupyterHub, Zeppelin, Livy, and Tez are working normally. Ganglia web UI access on public subnet clusters are also working normally. To resolve this issue, restart httpd service on the primary node with `sudo systemctl restart httpd`. This issue is fixed in Amazon EMR 6.4.0.
- There is an issue in Amazon EMR 6.2.0 where httpd continuously fails, causing Ganglia to be unavailable. You get a "cannot connect to the server" error. To fix a cluster that is already running with this issue, SSH to the cluster primary node and add the line `Listen 80` to the file `httpd.conf` located at `/etc/httpd/conf/httpd.conf`. This issue is fixed in Amazon EMR 6.3.0.
- HTTPD fails on EMR 6.2.0 clusters when you use a security configuration. This makes the Ganglia web application user interface unavailable. To access the Ganglia web application user interface, add `Listen 80` to the `/etc/httpd/conf/httpd.conf` file on the primary node of your cluster. For information about connecting to your cluster, see Connect to the Primary Node Using SSH.

  EMR Notebooks also fail to establish a connection with EMR 6.2.0 clusters when you use a security configuration. The notebook will fail to list kernels and submit Spark jobs. We recommend that you use EMR Notebooks with another version of Amazon EMR instead.
- **Lower "Max open files" limit on older AL2 [fixed in newer releases].** Amazon EMR releases: emr-5.30.x, emr-5.31.0, emr-5.32.0, emr-6.0.0, emr-6.1.0, and emr-6.2.0 are based on older versions ofAmazon Linux 2 (AL2), which have a lower ulimit setting for "Max open files" when Amazon EMR clusters are created with the default AMI. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later include a permanent fix with a higher "Max open files" setting. Releases with the lower open file limit causes a "Too many open files"

error when submitting Spark job. In the impacted releases, the Amazon EMR default AMI has a default ulimit setting of 4096 for "Max open files," which is lower than the 65536 file limit in the latestAmazon Linux 2 AMI. The lower ulimit setting for "Max open files" causes Spark job failure when the Spark driver and executor try to open more than 4096 files. To fix the issue, Amazon EMR has a bootstrap action (BA) script that adjusts the ulimit setting at cluster creation.

If you are using an older Amazon EMR version that doesn't have the permanent fix for this issue, the following workaround lets you to explicitly set the instance-controller ulimit to a maximum of 65536 files.

Explicitly set a ulimit from the command line

1. Edit `/etc/systemd/system/instance-controller.service` to add the following parameters to Service section.

   `LimitNOFILE=65536`

   `LimitNPROC=65536`
2. Restart InstanceController

   `$ sudo systemctl daemon-reload`

   `$ sudo systemctl restart instance-controller`

Set a ulimit using bootstrap action (BA)

You can also use a bootstrap action (BA) script to configure the instance-controller ulimit to 65536 files at cluster creation.

```
#!/bin/bash
for user in hadoop spark hive; do
sudo tee /etc/security/limits.d/$user.conf << EOF
$user - nofile 65536
$user - nproc 65536
EOF
done
for proc in instancecontroller logpusher; do
sudo mkdir -p /etc/systemd/system/$proc.service.d/
sudo tee /etc/systemd/system/$proc.service.d/override.conf << EOF
[Service]
LimitNOFILE=65536
```

```
LimitNPROC=65536
EOF
pid=$(pgrep -f aws157.$proc.Main)
sudo prlimit --pid $pid --nofile=65535:65535 --nproc=65535:65535
done
sudo systemctl daemon-reload
```

- **Important**

  Amazon EMR 6.1.0 and 6.2.0 include a performance issue that can critically affect all Hudi insert, upsert, and delete operations. If you plan to use Hudi with Amazon EMR 6.1.0 or 6.2.0, you should contact AWS support to obtain a patched Hudi RPM.

- **Important**

  EMR clusters that run Amazon Linux or Amazon Linux 2 Amazon Machine Images (AMIs) use default Amazon Linux behavior, and do not automatically download and install important and critical kernel updates that require a reboot. This is the same behavior as other Amazon EC2 instances that run the default Amazon Linux AMI. If new Amazon Linux software updates that require a reboot (such as kernel, NVIDIA, and CUDA updates) become available after an Amazon EMR release becomes available, EMR cluster instances that run the default AMI do not automatically download and install those updates. To get kernel updates, you can customize your Amazon EMR AMI to use the latest Amazon Linux AMI.

- Amazon EMR 6.2.0 Maven artifacts are not published. They will be published with a future release of Amazon EMR.
- Persistent HFile tracking using the HBase storefile system table does not support the HBase region replication feature. For more information about HBase region replication, see Timeline-consistent High Available Reads.
- Amazon EMR 6.x and EMR 5.x Hive bucketing version differences

  EMR 5.x uses OOS Apache Hive 2, while in EMR 6.x uses OOS Apache Hive 3. The open source Hive2 uses Bucketing version 1, while open source Hive3 uses Bucketing version 2. This bucketing version difference between Hive 2 (EMR 5.x) and Hive 3 (EMR 6.x) means Hive bucketing hashing functions differently. See the example below.

  The following table is an example created in EMR 6.x and EMR 5.x, respectively.

```
-- Using following LOCATION in EMR 6.x
CREATE TABLE test_bucketing (id INT, desc STRING)
PARTITIONED BY (day STRING)
CLUSTERED BY(id) INTO 128 BUCKETS
LOCATION 's3://your-own-s3-bucket/emr-6-bucketing/';

-- Using following LOCATION in EMR 5.x
LOCATION 's3://your-own-s3-bucket/emr-5-bucketing/';
```

Inserting the same data in both EMR 6.x and EMR 5.x.

```
INSERT INTO test_bucketing PARTITION (day='01') VALUES(66, 'some_data');
INSERT INTO test_bucketing PARTITION (day='01') VALUES(200, 'some_data');
```

Checking the S3 location, shows the bucketing file name is different, because the hashing function is different between EMR 6.x (Hive 3) and EMR 5.x (Hive 2).

```
[hadoop@ip-10-0-0-122 ~]$ aws s3 ls s3://your-own-s3-bucket/emr-6-bucketing/day=01/
2020-10-21 20:35:16         13 000025_0
2020-10-21 20:35:22         14 000121_0
[hadoop@ip-10-0-0-122 ~]$ aws s3 ls s3://your-own-s3-bucket/emr-5-bucketing/day=01/
2020-10-21 20:32:07         13 000066_0
2020-10-21 20:32:51         14 000072_0
```

You can also see the version difference by running the following command in Hive CLI in EMR 6.x. Note that it returns bucketing version 2.

```
hive> DESCRIBE FORMATTED test_bucketing;
...
Table Parameters:
    bucketing_version       2
...
```

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem

impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

Workaround:

- SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
- Run the following command to renew Kerberos ticket for hadoop user.

```
kinit -kt <keytab_file> <principal>
```

Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, s3://bucket/table/p=a is a prefix of s3://bucket/table/p=a b.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in s3://bucket/table/p=a b falls into this category. Note that there are 14 other non-control characters: !"#$%&‘()*+,-. For more information, see UTF-8 encoding table and Unicode characters.

  As a workaround to this issue, set the spark.sql.sources.fastS3PartitionDiscovery.enabled configuration to false in the spark-defaults classification.

Release 5.31.0

The following release notes include information for Amazon EMR release 5.31.0. Changes are relative to 5.30.1.

Initial release date: Oct 9, 2020

Last updated date: Oct 15, 2020

Upgrades

- Upgraded Amazon Glue connector to version 1.13.0
- Upgraded Amazon SageMaker Spark SDK to version 1.4.0
- Upgraded Amazon Kinesis connector to version 3.5.9
- Upgraded AWS SDK for Java to version 1.11.852
- Upgraded Bigtop-tomcat to version 8.5.56
- Upgraded EMR FS to version 2.43.0
- Upgraded EMR MetricsAndEventsApiGateway Client to version 1.4.0
- Upgraded EMR S3 Dist CP to version 2.15.0
- Upgraded EMR S3 Select to version 1.6.0
- Upgraded Flink to version 1.11.0
- Upgraded Hadoop to version 2.10.0
- Upgraded Hive to version 2.3.7
- Upgraded Hudi to version 0.6.0
- Upgraded Hue to version 4.7.1
- Upgraded JupyterHub to version 1.1.0
- Upgraded Mxnet to version 1.6.0
- Upgraded OpenCV to version 4.3.0
- Upgraded Presto to version 0.238.3
- Upgraded TensorFlow to version 2.1.0

Changes, enhancements, and resolved issues

- This is a release to fix issues with Amazon EMR Scaling when it fails to scale up/scale down a cluster successfully or causes application failures.

- Fixed an issue where scaling requests failed for a large, highly utilized cluster when Amazon EMR on-cluster daemons were running health checking activities, such as gathering YARN node state and HDFS node state. This was happening because on-cluster daemons were not able to communicate the health status data of a node to internal Amazon EMR components.
- Improved EMR on-cluster daemons to correctly track the node states when IP addresses are reused to improve reliability during scaling operations.
- SPARK-29683. Fixed an issue where job failures occurred during cluster scale-down as Spark was assuming all available nodes were deny-listed.
- YARN-9011. Fixed an issue where job failures occurred due to a race condition in YARN decommissioning when cluster tried to scale up or down.
- Fixed issue with step or job failures during cluster scaling by ensuring that the node states are always consistent between the Amazon EMR on-cluster daemons and YARN/HDFS.
- Fixed an issue where cluster operations such as scale down and step submission failed for Amazon EMR clusters enabled with Kerberos authentication. This was because the Amazon EMR on-cluster daemon did not renew the Kerberos ticket, which is required to securely communicate with HDFS/YARN running on the primary node.
- Newer Amazon EMR releases fix the issue with a lower "Max open files" limit on older AL2 in Amazon EMR. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later now include a permanent fix with a higher "Max open files" setting.
- Hive column statistics are supported for Amazon EMR versions 5.31.0 and later.
- Upgraded component versions.
- EMRFS S3EC V2 Support in Amazon EMR 5.31.0. In S3 Java SDK releases 1.11.837 and later, encryption client Version 2 (S3EC V2) has been introduced with various security enhancements. For more information, see the following:
  - S3 blog post: Updates to the Amazon S3 encryption client.
  - AWS SDK for Java Developer Guide: Migrate encryption and decryption clients to V2.
  - EMR Management Guide: Amazon S3 client-side encryption.

  Encryption Client V1 is still available in the SDK for backward compatibility.

New features

- **Lower "Max open files" limit on older AL2 [fixed in newer releases].** Amazon EMR releases: emr-5.30.x, emr-5.31.0, emr-5.32.0, emr-6.0.0, emr-6.1.0, and emr-6.2.0 are based on older versions ofAmazon Linux 2 (AL2), which have a lower ulimit setting for "Max open files" when Amazon EMR clusters are created with the default AMI. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later include a permanent fix with a higher "Max open files" setting. Releases with the lower open file limit causes a "Too many open files" error when submitting Spark job. In the impacted releases, the Amazon EMR default AMI has a default ulimit setting of 4096 for "Max open files," which is lower than the 65536 file limit in the latestAmazon Linux 2 AMI. The lower ulimit setting for "Max open files" causes Spark job failure when the Spark driver and executor try to open more than 4096 files. To fix the issue, Amazon EMR has a bootstrap action (BA) script that adjusts the ulimit setting at cluster creation.

If you are using an older Amazon EMR version that doesn't have the permanent fix for this issue, the following workaround lets you to explicitly set the instance-controller ulimit to a maximum of 65536 files.

Explicitly set a ulimit from the command line

1. Edit `/etc/systemd/system/instance-controller.service` to add the following parameters to Service section.

   `LimitNOFILE=65536`

   `LimitNPROC=65536`
2. Restart InstanceController

   `$ sudo systemctl daemon-reload`

   `$ sudo systemctl restart instance-controller`

Set a ulimit using bootstrap action (BA)

You can also use a bootstrap action (BA) script to configure the instance-controller ulimit to 65536 files at cluster creation.

```
#!/bin/bash
for user in hadoop spark hive; do
sudo tee /etc/security/limits.d/$user.conf << EOF
$user - nofile 65536
$user - nproc 65536
EOF
done
```

```
for proc in instancecontroller logpusher; do
sudo mkdir -p /etc/systemd/system/$proc.service.d/
sudo tee /etc/systemd/system/$proc.service.d/override.conf << EOF
[Service]
LimitNOFILE=65536
LimitNPROC=65536
EOF
pid=$(pgrep -f aws157.$proc.Main)
sudo prlimit --pid $pid --nofile=65535:65535 --nproc=65535:65535
done
sudo systemctl daemon-reload
```

- With Amazon EMR 5.31.0, you can launch a cluster that integrates with Lake Formation. This integration provides fine-grained, column-level data filtering to databases and tables in the AWS Glue Data Catalog. It also enables federated single sign-on to EMR Notebooks or Apache Zeppelin from an enterprise identity system. For more information, see Integrating Amazon EMR with AWS Lake Formation in the *Amazon EMR Management Guide*.

  Amazon EMR with Lake Formation is currently available in 16 AWS Regions: US East (Ohio and N. Virginia), US West (N. California and Oregon), Asia Pacific (Mumbai, Seoul, Singapore, Sydney, and Tokyo), Canada (Central), Europe (Frankfurt, Ireland, London, Paris, and Stockholm), South America (São Paulo).

Known issues

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
  - Run the following command to renew Kerberos ticket for hadoop user.

  ```
  kinit -kt <keytab_file> <principal>
  ```

Typically, the keytab file is located at `/etc/hadoop.keytab` and the principal is in the form of `hadoop/<hostname>@<REALM>`.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

- When AtRestEncryption or HDFS encryption is enabled on a cluster that uses Amazon EMR 5.31.0 or 5.32.0, Hive queries result in the following runtime exception.

```
TaskAttempt 3 failed, info=[Error: Error while running task ( failure ) :
 attempt_1604112648850_0001_1_01_000000_3:java.lang.RuntimeException:
 java.lang.RuntimeException: Hive Runtime Error while closing
 operators: java.io.IOException: java.util.ServiceConfigurationError:
 org.apache.hadoop.security.token.TokenIdentifier: Provider
 org.apache.hadoop.hbase.security.token.AuthenticationTokenIdentifier not found
```

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&'()*+,-`. For more information, see [UTF-8 encoding table and Unicode characters](https://www.utf8-chartable.de/).

  As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

Release 6.1.0

The following release notes include information for Amazon EMR release 6.1.0. Changes are relative to 6.0.0.

Initial release date: Sept 04, 2020

Last updated date: Oct 15, 2020

Supported applications

- AWS SDK for Java version 1.11.828
- Flink version 1.11.0
- Ganglia version 3.7.2
- Hadoop version 3.2.1-amzn-1
- HBase version 2.2.5
- HBase-operator-tools 1.0.0
- HCatalog version 3.1.2-amzn-0
- Hive version 3.1.2-amzn-1
- Hudi version 0.5.2-incubating
- Hue version 4.7.1
- JupyterHub version 1.1.0
- Livy version 0.7.0
- MXNet version 1.6.0
- Oozie version 5.2.0
- Phoenix version 5.0.0
- Presto version 0.232
- PrestoSQL version 338
- Spark version 3.0.0-amzn-0
- TensorFlow version 2.1.0
- Zeppelin version 0.9.0-preview1
- Zookeeper version 3.4.14

- Connectors and drivers: DynamoDB Connector 4.14.0

New features

- ARM instance types are supported starting with Amazon EMR version 5.30.0 and Amazon EMR version 6.1.0.
- M6g general purpose instance types are supported starting with Amazon EMR versions 6.1.0 and 5.30.0. For more information, see Supported Instance Types in the *Amazon EMR Management Guide*.
- The EC2 placement group feature is supported starting with Amazon EMR version 5.23.0 as an option for multiple primary node clusters. Currently, only primary node types are supported by the placement group feature, and the `SPREAD` strategy is applied to those primary nodes. The `SPREAD` strategy places a small group of instances across separate underlying hardware to guard against the loss of multiple primary nodes in the event of a hardware failure. For more information, see EMR Integration with EC2 Placement Group in the *Amazon EMR Management Guide*.
- Managed Scaling – With Amazon EMR version 6.1.0, you can enable Amazon EMR managed scaling to automatically increase or decrease the number of instances or units in your cluster based on workload. Amazon EMR continuously evaluates cluster metrics to make scaling decisions that optimize your clusters for cost and speed. Managed Scaling is also available on Amazon EMR version 5.30.0 and later, except 6.0.0. For more information, see Scaling Cluster Resources in the *Amazon EMR Management Guide*.
- PrestoSQL version 338 is supported with EMR 6.1.0. For more information, see Presto.
  - PrestoSQL is supported on EMR 6.1.0 and later versions only, not on EMR 6.0.0 or EMR 5.x.
  - The application name, `Presto` continues to be used to install PrestoDB on clusters. To install PrestoSQL on clusters, use the application name `PrestoSQL`.
  - You can install either PrestoDB or PrestoSQL, but you cannot install both on a single cluster. If both PrestoDB and PrestoSQL are specified when attempting to create a cluster, a validation error occurs and the cluster creation request fails.
  - PrestoSQL is supported on both single-master and muti-master clusters. On multi-master clusters, an external Hive metastore is required to run PrestoSQL or PrestoDB. See Supported applications in an EMR cluster with multiple primary nodes.
- ECR auto authentication support on Apache Hadoop and Apache Spark with Docker: Spark users can use Docker images from Docker Hub and Amazon Elastic Container Registry (Amazon ECR) to define environment and library dependencies.

Configure Docker and Run Spark Applications with Docker Using Amazon EMR 6.x.

- EMR supports Apache Hive ACID transactions: Amazon EMR 6.1.0 adds support for Hive ACID transactions so it complies with the ACID properties of a database. With this feature, you can run `INSERT, UPDATE, DELETE,` and `MERGE` operations in Hive managed tables with data in Amazon Simple Storage Service (Amazon S3). This is a key feature for use cases like streaming ingestion, data restatement, bulk updates using MERGE, and slowly changing dimensions. For more information, including configuration examples and use cases, see Amazon EMR supports Apache Hive ACID transactions.

Changes, enhancements, and resolved issues

- This is a release to fix issues with Amazon EMR Scaling when it fails to scale up/scale down a cluster successfully or causes application failures.
- Fixed an issue where scaling requests failed for a large, highly utilized cluster when Amazon EMR on-cluster daemons were running health checking activities, such as gathering YARN node state and HDFS node state. This was happening because on-cluster daemons were not able to communicate the health status data of a node to internal Amazon EMR components.
- Improved EMR on-cluster daemons to correctly track the node states when IP addresses are reused to improve reliability during scaling operations.
- SPARK-29683. Fixed an issue where job failures occurred during cluster scale-down as Spark was assuming all available nodes were deny-listed.
- YARN-9011. Fixed an issue where job failures occurred due to a race condition in YARN decommissioning when cluster tried to scale up or down.
- Fixed issue with step or job failures during cluster scaling by ensuring that the node states are always consistent between the Amazon EMR on-cluster daemons and YARN/HDFS.
- Fixed an issue where cluster operations such as scale down and step submission failed for Amazon EMR clusters enabled with Kerberos authentication. This was because the Amazon EMR on-cluster daemon did not renew the Kerberos ticket, which is required to securely communicate with HDFS/YARN running on the primary node.
- Newer Amazon EMR releases fix the issue with a lower "Max open files" limit on older AL2 in Amazon EMR. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later now include a permanent fix with a higher "Max open files" setting.

- Apache Flink is not supported on EMR 6.0.0, but it is supported on EMR 6.1.0 with Flink 1.11.0. This is the first version of Flink to officially support Hadoop 3. See Apache Flink 1.11.0 Release Announcement.
- Ganglia has been removed from default EMR 6.1.0 package bundles.

Known issues

- **Lower "Max open files" limit on older AL2 [fixed in newer releases].** Amazon EMR releases: emr-5.30.x, emr-5.31.0, emr-5.32.0, emr-6.0.0, emr-6.1.0, and emr-6.2.0 are based on older versions ofAmazon Linux 2 (AL2), which have a lower ulimit setting for "Max open files" when Amazon EMR clusters are created with the default AMI. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later include a permanent fix with a higher "Max open files" setting. Releases with the lower open file limit causes a "Too many open files" error when submitting Spark job. In the impacted releases, the Amazon EMR default AMI has a default ulimit setting of 4096 for "Max open files," which is lower than the 65536 file limit in the latestAmazon Linux 2 AMI. The lower ulimit setting for "Max open files" causes Spark job failure when the Spark driver and executor try to open more than 4096 files. To fix the issue, Amazon EMR has a bootstrap action (BA) script that adjusts the ulimit setting at cluster creation.

  If you are using an older Amazon EMR version that doesn't have the permanent fix for this issue, the following workaround lets you to explicitly set the instance-controller ulimit to a maximum of 65536 files.

  Explicitly set a ulimit from the command line

  1. Edit `/etc/systemd/system/instance-controller.service` to add the following parameters to Service section.

     ```
     LimitNOFILE=65536
     ```

     ```
     LimitNPROC=65536
     ```
  2. Restart InstanceController

     ```
     $ sudo systemctl daemon-reload
     ```

     ```
     $ sudo systemctl restart instance-controller
     ```

  Set a ulimit using bootstrap action (BA)

You can also use a bootstrap action (BA) script to configure the instance-controller ulimit to 65536 files at cluster creation.

```
#!/bin/bash
for user in hadoop spark hive; do
sudo tee /etc/security/limits.d/$user.conf << EOF
$user - nofile 65536
$user - nproc 65536
EOF
done
for proc in instancecontroller logpusher; do
sudo mkdir -p /etc/systemd/system/$proc.service.d/
sudo tee /etc/systemd/system/$proc.service.d/override.conf << EOF
[Service]
LimitNOFILE=65536
LimitNPROC=65536
EOF
pid=$(pgrep -f aws157.$proc.Main)
sudo prlimit --pid $pid --nofile=65535:65535 --nproc=65535:65535
done
sudo systemctl daemon-reload
```

- **Important**

  Amazon EMR 6.1.0 and 6.2.0 include a performance issue that can critically affect all Hudi insert, upsert, and delete operations. If you plan to use Hudi with Amazon EMR 6.1.0 or 6.2.0, you should contact AWS support to obtain a patched Hudi RPM.

- If you set custom garbage collection configuration with `spark.driver.extraJavaOptions` and `spark.executor.extraJavaOptions`, this will result in driver/executor launch failure with EMR 6.1 due to conflicting garbage collection configuration. With EMR Release 6.1.0, you should specify custom Spark garbage collection configuration for drivers and executors with the properties `spark.driver.defaultJavaOptions` and `spark.executor.defaultJavaOptions` instead. Read more in Apache Spark Runtime Environment and Configuring Spark Garbage Collection on Amazon EMR 6.1.0.
- Using Pig with Oozie (and within Hue, since Hue uses Oozie actions to run Pig scripts), generates an error that a native-lzo library cannot be loaded. This error message is informational and does not block Pig from running.

- Hudi Concurrency Support: Currently Hudi doesn't support concurrent writes to a single Hudi table. In addition, Hudi rolls back any changes being done by in-progress writers before allowing a new writer to start. Concurrent writes can interfere with this mechanism and introduce race conditions, which can lead to data corruption. You should ensure that as part of your data processing workflow, there is only a single Hudi writer operating against a Hudi table at any time. Hudi does support multiple concurrent readers operating against the same Hudi table.
- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
  - Run the following command to renew Kerberos ticket for hadoop user.

    ```
    kinit -kt <keytab_file> <principal>
    ```

    Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

  Note

  This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

- There is an issue in Amazon EMR 6.1.0 that affects clusters running Presto. After an extended period of time (days), the cluster may throw errors such as, "su: failed to execute /bin/bash: Resource temporarily unavailable" or "shell request failed on channel 0". This issue is caused by an internal Amazon EMR process (InstanceController) that is spawning too many Light Weight Processes (LWP), which eventually causes the Hadoop user to exceed their nproc limit. This prevents the user from opening additional processes. The solution for this issue is to upgrade to EMR 6.2.0.

Release 6.0.0

The following release notes include information for Amazon EMR release 6.0.0.

Initial release date: March 10, 2020

Supported applications

- AWS SDK for Java version 1.11.711
- Ganglia version 3.7.2
- Hadoop version 3.2.1
- HBase version 2.2.3
- HCatalog version 3.1.2
- Hive version 3.1.2
- Hudi version 0.5.0-incubating
- Hue version 4.4.0
- JupyterHub version 1.0.0
- Livy version 0.6.0
- MXNet version 1.5.1
- Oozie version 5.1.0
- Phoenix version 5.0.0
- Presto version 0.230
- Spark version 2.4.4
- TensorFlow version 1.14.0
- Zeppelin version 0.9.0-SNAPSHOT
- Zookeeper version 3.4.14
- Connectors and drivers: DynamoDB Connector 4.14.0

> **Note**
>
> Flink, Sqoop, Pig, and Mahout are not available in Amazon EMR version 6.0.0.

New features

- YARN Docker Runtime Support - YARN applications, such as Spark jobs, can now run in the context of a Docker container. This allows you to easily define dependencies in a Docker image without the need to install custom libraries on your Amazon EMR cluster. For more information, see Configure Docker Integration and Run Spark applications with Docker using Amazon EMR 6.0.0.
- Hive LLAP Support - Hive now supports the LLAP execution mode for improved query performance. For more information, see Using Hive LLAP.

Changes, enhancements, and resolved issues

- This is a release to fix issues with Amazon EMR Scaling when it fails to scale up/scale down a cluster successfully or causes application failures.
- Fixed an issue where scaling requests failed for a large, highly utilized cluster when Amazon EMR on-cluster daemons were running health checking activities, such as gathering YARN node state and HDFS node state. This was happening because on-cluster daemons were not able to communicate the health status data of a node to internal Amazon EMR components.
- Improved EMR on-cluster daemons to correctly track the node states when IP addresses are reused to improve reliability during scaling operations.
- SPARK-29683. Fixed an issue where job failures occurred during cluster scale-down as Spark was assuming all available nodes were deny-listed.
- YARN-9011. Fixed an issue where job failures occurred due to a race condition in YARN decommissioning when cluster tried to scale up or down.
- Fixed issue with step or job failures during cluster scaling by ensuring that the node states are always consistent between the Amazon EMR on-cluster daemons and YARN/HDFS.
- Fixed an issue where cluster operations such as scale down and step submission failed for Amazon EMR clusters enabled with Kerberos authentication. This was because the Amazon EMR on-cluster daemon did not renew the Kerberos ticket, which is required to securely communicate with HDFS/YARN running on the primary node.
- Newer Amazon EMR releases fix the issue with a lower "Max open files" limit on older AL2 in Amazon EMR. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later now include a permanent fix with a higher "Max open files" setting.
- Amazon Linux
  - Amazon Linux 2 is the operating system for the EMR 6.x release series.

  - `systemd` is used for service management instead of `upstart` used inAmazon Linux 1.
- Java Development Kit (JDK)
  - Corretto JDK 8 is the default JDK for the EMR 6.x release series.
- Scala
  - Scala 2.12 is used with Apache Spark and Apache Livy.
- Python 3
  - Python 3 is now the default version of Python in EMR.
- YARN node labels
  - Beginning with Amazon EMR 6.x release series, the YARN node labels feature is disabled by default. The application master processes can run on both core and task nodes by default. You can enable the YARN node labels feature by configuring following properties: `yarn.node-labels.enabled` and `yarn.node-labels.am.default-node-label-expression`. For more information, see Understanding Primary, Core, and Task Nodes.

Known issues

- **Lower "Max open files" limit on older AL2 [fixed in newer releases].** Amazon EMR releases: emr-5.30.x, emr-5.31.0, emr-5.32.0, emr-6.0.0, emr-6.1.0, and emr-6.2.0 are based on older versions ofAmazon Linux 2 (AL2), which have a lower ulimit setting for "Max open files" when Amazon EMR clusters are created with the default AMI. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later include a permanent fix with a higher "Max open files" setting. Releases with the lower open file limit causes a "Too many open files" error when submitting Spark job. In the impacted releases, the Amazon EMR default AMI has a default ulimit setting of 4096 for "Max open files," which is lower than the 65536 file limit in the latestAmazon Linux 2 AMI. The lower ulimit setting for "Max open files" causes Spark job failure when the Spark driver and executor try to open more than 4096 files. To fix the issue, Amazon EMR has a bootstrap action (BA) script that adjusts the ulimit setting at cluster creation.

  If you are using an older Amazon EMR version that doesn't have the permanent fix for this issue, the following workaround lets you to explicitly set the instance-controller ulimit to a maximum of 65536 files.

  Explicitly set a ulimit from the command line

  1. Edit `/etc/systemd/system/instance-controller.service` to add the following parameters to Service section.

```
LimitNOFILE=65536

LimitNPROC=65536
```

2. Restart InstanceController

```
$ sudo systemctl daemon-reload

$ sudo systemctl restart instance-controller
```

Set a ulimit using bootstrap action (BA)

You can also use a bootstrap action (BA) script to configure the instance-controller ulimit to 65536 files at cluster creation.

```
#!/bin/bash
for user in hadoop spark hive; do
sudo tee /etc/security/limits.d/$user.conf << EOF
$user - nofile 65536
$user - nproc 65536
EOF
done
for proc in instancecontroller logpusher; do
sudo mkdir -p /etc/systemd/system/$proc.service.d/
sudo tee /etc/systemd/system/$proc.service.d/override.conf << EOF
[Service]
LimitNOFILE=65536
LimitNPROC=65536
EOF
pid=$(pgrep -f aws157.$proc.Main)
sudo prlimit --pid $pid --nofile=65535:65535 --nproc=65535:65535
done
sudo systemctl daemon-reload
```

- Spark interactive shell, including PySpark, SparkR, and spark-shell, does not support using Docker with additional libraries.
- To use Python 3 with Amazon EMR version 6.0.0, you must add PATH to `yarn.nodemanager.env-whitelist`.
- The Live Long and Process (LLAP) functionality is not supported when you use the AWS Glue Data Catalog as the metastore for Hive.

- When using Amazon EMR 6.0.0 with Spark and Docker integration, you need to configure the instances in your cluster with the same instance type and the same amount of EBS volumes to avoid failure when submitting a Spark job with Docker runtime.
- In Amazon EMR 6.0.0, HBase on Amazon S3 storage mode is impacted by the HBASE-24286. issue. HBase master cannot initialize when the cluster is created using existing S3 data.
- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
  - Run the following command to renew Kerberos ticket for hadoop user.

    ```
    kinit -kt <keytab_file> <principal>
    ```

    Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

  Note

  This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.30.1

The following release notes include information for Amazon EMR release 5.30.1. Changes are relative to 5.30.0.

Initial release date: June 30, 2020

Last updated date: August 24, 2020

Changes, enhancements, and resolved issues

- Newer Amazon EMR releases fix the issue with a lower "Max open files" limit on older AL2 in Amazon EMR. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later now include a permanent fix with a higher "Max open files" setting.
- Fixed issue where instance controller process spawned infinite number of processes.
- Fixed issue where Hue was unable to run an Hive query, showing a "database is locked" message and preventing the execution of queries.
- Fixed a Spark issue to enable more tasks to run concurrently on the EMR cluster.
- Fixed a Jupyter notebook issue causing a "too many files open error" in the Jupyter server.
- Fixed an issue with cluster start times.

New features

- Tez UI and YARN timeline server persistent application interfaces are available with Amazon EMR versions 6.x, and EMR version 5.30.1 and later. One-click link access to persistent application history lets you quickly access job history without setting up a web proxy through an SSH connection. Logs for active and terminated clusters are available for 30 days after the application ends. For more information, see View Persistent Application User Interfaces in the *Amazon EMR Management Guide*.
- EMR Notebook execution APIs are available to execute EMR notebooks via a script or command line. The ability to start, stop, list, and describe EMR notebook executions without the AWS console enables you programmatically control an EMR notebook. Using a parameterized notebook cell, you can pass different parameter values to a notebook without having to create a copy of the notebook for each new set of paramter values. See EMR API Actions. For sample code, see Sample commands to execute EMR Notebooks programmatically.

Known issues

- **Lower "Max open files" limit on older AL2 [fixed in newer releases].** Amazon EMR releases: emr-5.30.x, emr-5.31.0, emr-5.32.0, emr-6.0.0, emr-6.1.0, and emr-6.2.0 are based on older versions ofAmazon Linux 2 (AL2), which have a lower ulimit setting for "Max open files" when Amazon EMR clusters are created with the default AMI. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later include a permanent fix with a higher "Max open files" setting. Releases with the lower open file limit causes a "Too many open files" error when submitting Spark job. In the impacted releases, the Amazon EMR default AMI has a default ulimit setting of 4096 for "Max open files," which is lower than the 65536 file limit in the latestAmazon Linux 2 AMI. The lower ulimit setting for "Max open files" causes Spark job failure when the Spark driver and executor try to open more than 4096 files. To fix the issue, Amazon EMR has a bootstrap action (BA) script that adjusts the ulimit setting at cluster creation.

If you are using an older Amazon EMR version that doesn't have the permanent fix for this issue, the following workaround lets you to explicitly set the instance-controller ulimit to a maximum of 65536 files.

Explicitly set a ulimit from the command line

1. Edit `/etc/systemd/system/instance-controller.service` to add the following parameters to Service section.

   `LimitNOFILE=65536`

   `LimitNPROC=65536`

2. Restart InstanceController

   `$ sudo systemctl daemon-reload`

   `$ sudo systemctl restart instance-controller`

Set a ulimit using bootstrap action (BA)

You can also use a bootstrap action (BA) script to configure the instance-controller ulimit to 65536 files at cluster creation.

```
#!/bin/bash
for user in hadoop spark hive; do
sudo tee /etc/security/limits.d/$user.conf << EOF
$user - nofile 65536
$user - nproc 65536
EOF
done
for proc in instancecontroller logpusher; do
sudo mkdir -p /etc/systemd/system/$proc.service.d/
sudo tee /etc/systemd/system/$proc.service.d/override.conf << EOF
[Service]
LimitNOFILE=65536
LimitNPROC=65536
```

```
EOF
pid=$(pgrep -f aws157.$proc.Main)
sudo prlimit --pid $pid --nofile=65535:65535 --nproc=65535:65535
done
sudo systemctl daemon-reload
```

- **EMR Notebooks**

  The feature that allows you to install kernels and additional Python libraries on the cluster primary node is disabled by default on EMR version 5.30.1. For more information about this feature, see Installing Kernels and Python Libraries on a Cluster Primary Node.

  To enable the feature, do the following:

  1. Make sure that the permissions policy attached to the service role for EMR Notebooks allows the following action:

     `elasticmapreduce:ListSteps`

     For more information, see Service Role for EMR Notebooks.
  2. Use the AWS CLI to run a step on the cluster that sets up EMR Notebooks as shown in the following example. Replace *us-east-1* with the Region in which your cluster resides. For more information, see Adding Steps to a Cluster Using the AWS CLI.

     ```
     aws emr add-steps  --cluster-id MyClusterID --steps
      Type=CUSTOM_JAR,Name=EMRNotebooksSetup,ActionOnFailure=CONTINUE,Jar=s3://us-
     east-1.elasticmapreduce/libs/script-runner/script-runner.jar,Args=["s3://
     awssupportdatasvcs.com/bootstrap-actions/EMRNotebooksSetup/emr-notebooks-setup.sh"]
     ```

- **Managed scaling**

  Managed scaling operations on 5.30.0 and 5.30.1 clusters without Presto installed may cause application failures or cause a uniform instance group or instance fleet to stay in the ARRESTED state, particularly when a scale down operation is followed quickly by a scale up operation.

  As a workaround, choose Presto as an application to install when you create a cluster with Amazon EMR releases 5.30.0 and 5.30.1, even if your job does not require Presto.
- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

Workaround:

- SSH as `hadoop` user to the lead primary node of the EMR cluster with multiple primary nodes.
- Run the following command to renew Kerberos ticket for `hadoop` user.

```
kinit -kt <keytab_file> <principal>
```

  Typically, the keytab file is located at `/etc/hadoop.keytab` and the principal is in the form of `hadoop/<hostname>@<REALM>`.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&‘()*+,-`. For more information, see UTF-8 encoding table and Unicode characters.

  As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

Release 5.30.0

The following release notes include information for Amazon EMR release 5.30.0. Changes are relative to 5.29.0.

Initial release date: May 13, 2020

Last updated date: June 25, 2020

Upgrades

- Upgraded AWS SDK for Java to version 1.11.759
- Upgraded Amazon SageMaker Spark SDK to version 1.3.0
- Upgraded EMR Record Server to version 1.6.0
- Upgraded Flink to version 1.10.0
- Upgraded Ganglia to version 3.7.2
- Upgraded HBase to version 1.4.13
- Upgraded Hudi to version 0.5.2-incubating
- Upgraded Hue to version 4.6.0
- Upgraded JupyterHub to version 1.1.0
- Upgraded Livy to version 0.7.0-incubating
- Upgraded Oozie to version 5.2.0
- Upgraded Presto to version 0.232
- Upgraded Spark to version 2.4.5
- Upgraded Connectors and drivers: Amazon Glue Connector 1.12.0; Amazon Kinesis Connector 3.5.0; EMR DynamoDB Connector 4.14.0

New features

- **EMR Notebooks** – When used with EMR clusters created using 5.30.0, EMR notebook kernels run on cluster. This improves notebook performance and allows you to install and customize kernels. You can also install Python libraries on the cluster primary node. For more information, see Installing and Using Kernels and Libraries in the *EMR Management Guide*.
- **Managed Scaling** – With Amazon EMR version 5.30.0 and later, you can enable EMR managed scaling to automatically increase or decrease the number of instances or units in your cluster

based on workload. Amazon EMR continuously evaluates cluster metrics to make scaling decisions that optimize your clusters for cost and speed. For more information, see Scaling Cluster Resources in the *Amazon EMR Management Guide*.

- **Encrypt log files stored in Amazon S3** – With Amazon EMR version 5.30.0 and later, you can encrypt log files stored in Amazon S3 with an AWS KMS customer managed key. For more information, see Encrypt log files stored in Amazon S3 in the *Amazon EMR Management Guide*.
- **Amazon Linux 2 support** – In EMR version 5.30.0 and later, EMR usesAmazon Linux 2 OS. New custom AMIs (Amazon Machine Image) must be based on theAmazon Linux 2 AMI. For more information, see Using a Custom AMI.
- **Presto Graceful Auto Scale** – EMR clusters using 5.30.0 can be set with an auto scaling timeout period that gives Presto tasks time to finish running before their node is decommissioned. For more information, see Using Presto automatic scaling with Graceful Decommission.
- **Fleet Instance creation with new allocation strategy option** – A new allocation strategy option is available in EMR version 5.12.1 and later. It offers faster cluster provisioning, more accurate spot allocation, and less spot instance interruption. Updates to non-default EMR service roles are required. See Configure Instance Fleets.
- **sudo systemctl stop and sudo systemctl start commands** – In EMR version 5.30.0 and later, which useAmazon Linux 2 OS, EMR uses `sudo systemctl stop` and `sudo systemctl start` commands to restart services. For more information, see How do I restart a service in Amazon EMR?.

Changes, enhancements, and resolved issues

- EMR version 5.30.0 doesn't install Ganglia by default. You can explicitly select Ganglia to install when you create a cluster.
- Spark performance optimizations.
- Presto performance optimizations.
- Python 3 is the default for Amazon EMR version 5.30.0 and later.
- The default managed security group for service access in private subnets has been updated with new rules. If you use a custom security group for service access, you must include the same rules as the default managed security group. For more information, see Amazon EMR-Managed Security Group for Service Access (Private Subnets). If you use a custom service role for Amazon EMR, you must grant permission to `ec2:describeSecurityGroups` so that EMR can validate if the security groups are correctly created. If you use the `EMR_DefaultRole`, this permission is already included in the default managed policy.

Known issues

- **Lower "Max open files" limit on older AL2 [fixed in newer releases].** Amazon EMR releases: emr-5.30.x, emr-5.31.0, emr-5.32.0, emr-6.0.0, emr-6.1.0, and emr-6.2.0 are based on older versions ofAmazon Linux 2 (AL2), which have a lower ulimit setting for "Max open files" when Amazon EMR clusters are created with the default AMI. Amazon EMR releases 5.30.1, 5.30.2, 5.31.1, 5.32.1, 6.0.1, 6.1.1, 6.2.1, 5.33.0, 6.3.0 and later include a permanent fix with a higher "Max open files" setting. Releases with the lower open file limit causes a "Too many open files" error when submitting Spark job. In the impacted releases, the Amazon EMR default AMI has a default ulimit setting of 4096 for "Max open files," which is lower than the 65536 file limit in the latestAmazon Linux 2 AMI. The lower ulimit setting for "Max open files" causes Spark job failure when the Spark driver and executor try to open more than 4096 files. To fix the issue, Amazon EMR has a bootstrap action (BA) script that adjusts the ulimit setting at cluster creation.

  If you are using an older Amazon EMR version that doesn't have the permanent fix for this issue, the following workaround lets you to explicitly set the instance-controller ulimit to a maximum of 65536 files.

  Explicitly set a ulimit from the command line

  1. Edit `/etc/systemd/system/instance-controller.service` to add the following parameters to Service section.

     `LimitNOFILE=65536`

     `LimitNPROC=65536`
  2. Restart InstanceController

     `$ sudo systemctl daemon-reload`

     `$ sudo systemctl restart instance-controller`

  Set a ulimit using bootstrap action (BA)

  You can also use a bootstrap action (BA) script to configure the instance-controller ulimit to 65536 files at cluster creation.

```
#!/bin/bash
for user in hadoop spark hive; do
```

```
sudo tee /etc/security/limits.d/$user.conf << EOF
$user - nofile 65536
$user - nproc 65536
EOF
done
for proc in instancecontroller logpusher; do
sudo mkdir -p /etc/systemd/system/$proc.service.d/
sudo tee /etc/systemd/system/$proc.service.d/override.conf << EOF
[Service]
LimitNOFILE=65536
LimitNPROC=65536
EOF
pid=$(pgrep -f aws157.$proc.Main)
sudo prlimit --pid $pid --nofile=65535:65535 --nproc=65535:65535
done
sudo systemctl daemon-reload
```

- **Managed scaling**

  Managed scaling operations on 5.30.0 and 5.30.1 clusters without Presto installed may cause application failures or cause a uniform instance group or instance fleet to stay in the ARRESTED state, particularly when a scale down operation is followed quickly by a scale up operation.

  As a workaround, choose Presto as an application to install when you create a cluster with Amazon EMR releases 5.30.0 and 5.30.1, even if your job does not require Presto.

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
  - Run the following command to renew Kerberos ticket for hadoop user.

  ```
  kinit -kt <keytab_file> <principal>
  ```

Typically, the keytab file is located at `/etc/hadoop.keytab` and the principal is in the form of `hadoop/<hostname>@<REALM>`.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

- The default database engine for Hue 4.6.0 is SQLite, which causes issues when you try to use Hue with an external database. To fix this, set `engine` in your `hue-ini` configuration classification to `mysql`. This issue has been fixed in Amazon EMR version 5.30.1.
- When you use Spark with Hive partition location formatting to read data in Amazon S3, and you run Spark on Amazon EMR releases 5.30.0 to 5.36.0, and 6.2.0 to 6.9.0, you might encounter an issue that prevents your cluster from reading data correctly. This can happen if your partitions have all of the following characteristics:
  - Two or more partitions are scanned from the same table.
  - At least one partition directory path is a prefix of at least one other partition directory path, for example, `s3://bucket/table/p=a` is a prefix of `s3://bucket/table/p=a b`.
  - The first character that follows the prefix in the other partition directory has a UTF-8 value that's less than than the / character (U+002F). For example, the space character (U+0020) that occurs between a and b in `s3://bucket/table/p=a b` falls into this category. Note that there are 14 other non-control characters: `!"#$%&‘()*+,-`. For more information, see [UTF-8 encoding table and Unicode characters](#).

  As a workaround to this issue, set the `spark.sql.sources.fastS3PartitionDiscovery.enabled` configuration to `false` in the `spark-defaults` classification.

Release 5.29.0

The following release notes include information for Amazon EMR release 5.29.0. Changes are relative to 5.28.1.

Initial release date: Jan 17, 2020

Upgrades

- Upgraded AWS SDK for Java to version 1.11.682
- Upgraded Hive to version 2.3.6
- Upgraded Flink to version 1.9.1
- Upgraded EmrFS to version 2.38.0
- Upgraded EMR DynamoDB Connector to version 4.13.0

Changes, enhancements, and resolved issues

- Spark
  - Spark performance optimizations.
- EMRFS
  - Management Guide updates to emrfs-site.xml default settings for consistent view.

Known issues

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as `hadoop` user to the lead primary node of the EMR cluster with multiple primary nodes.
  - Run the following command to renew Kerberos ticket for `hadoop` user.

    ```
    kinit -kt <keytab_file> <principal>
    ```

    Typically, the keytab file is located at `/etc/hadoop.keytab` and the principal is in the form of `hadoop/<hostname>@<REALM>`.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.28.1

The following release notes include information for Amazon EMR release 5.28.1. Changes are relative to 5.28.0.

Initial release date: Jan 10, 2020

Changes, enhancements, and resolved issues

- Spark
  - Fixed Spark compatibility issues.
- CloudWatch Metrics
  - Fixed Amazon CloudWatch Metrics publishing on an EMR cluster with multiple primary nodes.
- Disabled log message
  - Disabled false log message, "...using old version (<4.5.8) of Apache http client."

Known issues

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as `hadoop` user to the lead primary node of the EMR cluster with multiple primary nodes.

- Run the following command to renew Kerberos ticket for hadoop user.

```
kinit -kt <keytab_file> <principal>
```

Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

Note

This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.28.0

The following release notes include information for Amazon EMR release 5.28.0. Changes are relative to 5.27.0.

Initial release date: Nov 12, 2019

Upgrades

- Upgraded Flink to version 1.9.0
- Upgraded Hive to version 2.3.6
- Upgraded MXNet to version 1.5.1
- Upgraded Phoenix to version 4.14.3
- Upgraded Presto to version 0.227
- Upgraded Zeppelin to version 0.8.2

New features

- Apache Hudi is now available for Amazon EMR to install when you create a cluster. For more information, see Hudi.
- (Nov 25, 2019) You can now choose to run multiple steps in parallel to improve cluster utilization and save cost. You can also cancel both pending and running steps. For more information, see Work with Steps Using the AWS CLI and Console.

- (Dec 3, 2019) You can now create and run EMR clusters on AWS Outposts. AWS Outposts enables native AWS services, infrastructure, and operating models in on-premises facilities. In AWS Outposts environments, you can use the same AWS APIs, tools, and infrastructure that you use in the AWS cloud. For more information, see EMR clusters on AWS Outposts.
- (Mar 11, 2020) Beginning with Amazon EMR version 5.28.0, you can create and run Amazon EMR clusters on an AWS Local Zones subnet as a logical extension of an AWS Region that supports Local Zones. A Local Zone enables Amazon EMR features and a subset of AWS services, like compute and storage services, to be located closer to users, providing very low latency access to applications running locally. For a list of available Local Zones, see AWS Local Zones. For information about accessing available AWS Local Zones, see Regions, Availability Zones, and Local Zones.

  Local Zones do not currently support Amazon EMR Notebooks and do not support connections directly to Amazon EMR using interface VPC endpoint (AWS PrivateLink).

Changes, enhancements, and resolved issues

- Expanded Application Support for High Availability Clusters
  - For more information, see Supported applications in an EMR cluster with Multiple Primary Nodes in the *Amazon EMR Management Guide*.
- Spark
  - Performance optimizations
- Hive
  - Performance optimizations
- Presto
  - Performance optimizations

Known issues

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem

impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

Workaround:

- SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
- Run the following command to renew Kerberos ticket for hadoop user.

```
kinit -kt <keytab_file> <principal>
```

  Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.27.0

The following release notes include information for Amazon EMR release 5.27.0. Changes are relative to 5.26.0.

Initial release date: Sep 23, 2019

Upgrades

- AWS SDK for Java 1.11.615
- Flink 1.8.1
- JupyterHub 1.0.0
- Spark 2.4.4
- Tensorflow 1.14.0
- Connectors and drivers:
  - DynamoDB Connector 4.12.0

New features

- (Oct 24, 2019) The following New features in EMR notebooks are available with all Amazon EMR releases.
  - You can now associate Git repositories with EMR notebooks to store your notebooks in a version controlled environment. You can share code with peers and reuse existing Jupyter notebooks through remote Git repositories. For more information, see Associate Git Repositories with Amazon EMR Notebooks in the *Amazon EMR Management Guide*.
  - The nbdime utility is now available in EMR notebooks to simplify comparing and merging notebooks.
  - EMR notebooks now support JupyterLab. JupyterLab is a web-based interactive development environment fully compatible with Jupyter notebooks. You can now choose to open your notebook in either JupyterLab or Jupyter notebook editor.
- (Oct 30, 2019) With Amazon EMR versions 5.25.0 and later, you can connect to Spark history server UI from the cluster **Summary** page or the **Application history** tab in the console. Instead of setting up a web proxy through an SSH connection, you can quickly access the Spark history server UI to view application metrics and access relevant log files for active and terminated clusters. For more information, see Off-cluster access to persistent application user interfaces in the *Amazon EMR Management Guide*.

Changes, enhancements, and resolved issues

- Amazon EMR cluster with multiple primary nodes
  - You can install and run Flink on an Amazon EMR cluster with multiple primary nodes. For more information, see Supported applications and features.
  - You can configure HDFS transparent encryption on an Amazon EMR cluster with multiple primary nodes. For more information, see HDFS Transparent Encryption on EMR clusters with Multiple Primary Nodes.
  - You can now modify the configuration of applications running on an Amazon EMR cluster with multiple primary nodes. For more information, see Supplying a Configuration for an Instance Group in a Running Cluster.
- Amazon EMR-DynamoDB Connector
  - Amazon EMR-DynamoDB Connector now supports the following DynamoDB data types: boolean, list, map, item, null. For more information, see Set Up a Hive Table to Run Hive Commands.

Known issues

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as `hadoop` user to the lead primary node of the EMR cluster with multiple primary nodes.
  - Run the following command to renew Kerberos ticket for `hadoop` user.

    ```
    kinit -kt <keytab_file> <principal>
    ```

    Typically, the keytab file is located at `/etc/hadoop.keytab` and the principal is in the form of `hadoop/<hostname>@<REALM>`.

> **Note**
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.26.0

The following release notes include information for Amazon EMR release 5.26.0. Changes are relative to 5.25.0.

Initial release date: Aug 8, 2019

Last updated date: Aug 19, 2019

Upgrades

- AWS SDK for Java 1.11.595

- HBase 1.4.10
- Phoenix 4.14.2
- Connectors and drivers:
  - DynamoDB Connector 4.11.0
  - MariaDB Connector 2.4.2
  - Amazon Redshift JDBC Driver 1.2.32.1056

New features

- (Beta) With Amazon EMR 5.26.0, you can launch a cluster that integrates with Lake Formation. This integration provides fine-grained, column-level access to databases and tables in the AWS Glue Data Catalog. It also enables federated single sign-on to EMR Notebooks or Apache Zeppelin from an enterprise identity system. For more information, see Integrating Amazon EMR with AWS Lake Formation (Beta).
- (Aug 19, 2019) Amazon EMR block public access is now available with all Amazon EMR releases that support security groups. Block public access is an account-wide setting applied to each AWS Region. Block public access prevents a cluster from launching when any security group associated with the cluster has a rule that allows inbound traffic from IPv4 0.0.0.0/0 or IPv6 ::/0 (public access) on a port, unless a port is specified as an exception. Port 22 is an exception by default. For more information, see Using Amazon EMR Block Public Access in the *Amazon EMR Management Guide*.

Changes, enhancements, and resolved issues

- EMR Notebooks
  - With EMR 5.26.0 and later, EMR Notebooks supports notebook-scoped Python libraries in addition to the default Python libraries. You can install notebook-scoped libraries from within the notebook editor without having to re-create a cluster or re-attach a notebook to a cluster. Notebook-scoped libraries are created in a Python virtual environment, so they apply only to the current notebook session. This allows you to isolate notebook dependencies. For more information, see Using Notebook Scoped Libraries in the *Amazon EMR Management Guide*.
- EMRFS
  - You can enable an ETag verification feature (Beta) by setting `fs.s3.consistent.metadata.etag.verification.enabled` to `true`. With this feature, EMRFS uses Amazon S3 ETags to verify that objects being read are the latest available

version. This feature is helpful for read-after-update use cases in which files on Amazon S3 are overwritten while retaining the same name. This ETag verification capability currently does not work with S3 Select. For more information, see Configure Consistent View.

- Spark
  - The following optimizations are now enabled by default: dynamic partition pruning, DISTINCT before INTERSECT, improvements in SQL plan statistics inference for JOIN followed by DISTINCT queries, flattening scalar subqueries, optimized join reorder, and bloom filter join. For more information, see Optimizing Spark Performance.
  - Improved whole stage code generation for Sort Merge Join.
  - Improved query fragment and subquery reuse.
  - Improvements to pre-allocate executors on Spark start up.
  - Bloom filter joins are no longer applied when the smaller side of the join includes a broadcast hint.
- Tez
  - Resolved an issue with Tez. Tez UI now works on an Amazon EMR cluster with multiple primary nodes.

Known issues

- The improved whole stage code generation capabilities for Sort Merge Join can increase memory pressure when enabled. This optimization improves performance, but may result in job retries or failures if the `spark.yarn.executor.memoryOverheadFactor` is not tuned to provide enough memory. To disable this feature, set `spark.sql.sortMergeJoinExec.extendedCodegen.enabled` to false.
- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.

- Run the following command to renew Kerberos ticket for hadoop user.

```
kinit -kt <keytab_file> <principal>
```

Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

Note

This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.25.0

The following release notes include information for Amazon EMR release 5.25.0. Changes are relative to 5.24.1.

Initial release date: July 17, 2019

Last updated date: Oct 30, 2019

Amazon EMR 5.25.0

Upgrades

- AWS SDK for Java 1.11.566
- Hive 2.3.5
- Presto 0.220
- Spark 2.4.3
- TensorFlow 1.13.1
- Tez 0.9.2
- Zookeeper 3.4.14

New features

- (Oct 30, 2019) Beginning with Amazon EMR version 5.25.0, you can connect to Spark history server UI from the cluster **Summary** page or the **Application history** tab in the console. Instead of setting up a web proxy through an SSH connection, you can quickly access the Spark history server UI to view application metrics and access relevant log files for active and terminated clusters. For more information, see Off-cluster access to persistent application user interfaces in the *Amazon EMR Management Guide*.

Changes, enhancements, and resolved issues

- Spark
  - Improved the performance of some joins by using Bloom filters to pre-filter inputs. The optimization is disabled by default and can be enabled by setting the Spark configuration parameter `spark.sql.bloomFilterJoin.enabled` to `true`.
  - Improved the performance of grouping by string type columns.
  - Improved the default Spark executor memory and cores configuration of R4 instance types for clusters without HBase installed.
  - Resolved a previous issue with the dynamic partition pruning feature where the pruned table has to be on the left side of the join.
  - Improved DISTINCT before INTERSECT optimization to apply to additional cases involving aliases.
  - Improved SQL plan statistics inference for JOIN followed by DISTINCT queries. This improvement is disabled by default and can be enabled by setting the Spark configuration parameter `spark.sql.statsImprovements.enabled` to `true`. This optimization is required by the Distinct before Intersect feature and will be enabled automatically when `spark.sql.optimizer.distinctBeforeIntersect.enabled` is set to `true`.
  - Optimized join order based on table size and filters. This optimization is disabled by default and can be enabled by setting the Spark configuration parameter `spark.sql.optimizer.sizeBasedJoinReorder.enabled` to `true`.

  For more information, see Optimizing Spark Performance.
- EMRFS
  - The EMRFS setting, `fs.s3.buckets.create.enabled`, is now disabled by default. With testing, we found that disabling this setting improves performance and prevents unintentional

creation of S3 buckets. If your application relies on this functionality, you can enable it by setting the property `fs.s3.buckets.create.enabled` to `true` in the `emrfs-site` configuration classification. For information, see Supplying a Configuration when Creating a Cluster.

- Local Disk Encryption and S3 Encryption Improvements in Security Configurations (August 5, 2019)
  - Separated Amazon S3 encryption settings from local disk encryption settings in security configuration setup.
  - Added an option to enable EBS encryption with release 5.24.0 and later. Selecting this option encrypts the root device volume in addition to storage volumes. Previous versions required using a custom AMI to encrypt the root device volume.
  - For more information, see Encryption Options in the *Amazon EMR Management Guide*.

Known issues

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as `hadoop` user to the lead primary node of the EMR cluster with multiple primary nodes.
  - Run the following command to renew Kerberos ticket for `hadoop` user.

    ```
    kinit -kt <keytab_file> <principal>
    ```

    Typically, the keytab file is located at `/etc/hadoop.keytab` and the principal is in the form of `hadoop/<hostname>@<REALM>`.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.24.1

The following release notes include information for Amazon EMR release 5.24.1. Changes are relative to 5.24.0.

Initial release date: June 26, 2019

Changes, enhancements, and resolved issues

- Updated the default Amazon Linux AMI for Amazon EMR to include important Linux kernel security updates, including the TCP SACK Denial of Service Issue (AWS-2019-005).

Known issues

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
  - Run the following command to renew Kerberos ticket for hadoop user.

    ```
    kinit -kt <keytab_file> <principal>
    ```

Typically, the keytab file is located at `/etc/hadoop.keytab` and the principal is in the form of `hadoop/<hostname>@<REALM>`.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.24.0

The following release notes include information for Amazon EMR release 5.24.0. Changes are relative to 5.23.0.

Initial release date: June 11, 2019

Last updated date: August 5, 2019

Upgrades

- Flink 1.8.0
- Hue 4.4.0
- JupyterHub 0.9.6
- Livy 0.6.0
- MxNet 1.4.0
- Presto 0.219
- Spark 2.4.2
- AWS SDK for Java 1.11.546
- Connectors and drivers:
  - DynamoDB Connector 4.9.0
  - MariaDB Connector 2.4.1
  - Amazon Redshift JDBC Driver 1.2.27.1051

Changes, enhancements, and resolved issues

- Spark
  - Added optimization to dynamically prune partitions. The optimization is disabled by default. To enable it, set the Spark configuration parameter `spark.sql.dynamicPartitionPruning.enabled` to `true`.
  - Improved performance of `INTERSECT` queries. This optimization is disabled by default. To enable it, set the Spark configuration parameter `spark.sql.optimizer.distinctBeforeIntersect.enabled` to `true`.
  - Added optimization to flatten scalar subqueries with aggregates that use the same relation. The optimization is disabled by default. To enable it, set the Spark configuration parameter `spark.sql.optimizer.flattenScalarSubqueriesWithAggregates.enabled` to `true`.
  - Improved whole stage code generation.

  For more information, see Optimizing Spark Performance.
- Local Disk Encryption and S3 Encryption Improvements in Security Configurations (August 5, 2019)
  - Separated Amazon S3 encryption settings from local disk encryption settings in security configuration setup.
  - Added an option to enable EBS encryption. Selecting this option encrypts the root device volume in addition to storage volumes. Previous versions required using a custom AMI to encrypt the root device volume.
  - For more information, see Encryption Options in the *Amazon EMR Management Guide*.

Known issues

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

Workaround:

- SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
- Run the following command to renew Kerberos ticket for hadoop user.

```
kinit -kt <keytab_file> <principal>
```

  Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.23.0

The following release notes include information for Amazon EMR release 5.23.0. Changes are relative to 5.22.0.

Initial release date: April 01, 2019

Last updated date: April 30, 2019

Upgrades

- AWS SDK for Java 1.11.519

New features

- (April 30, 2019) With Amazon EMR 5.23.0 and later, you can launch a cluster with three primary nodes to support high availability of applications like YARN Resource Manager, HDFS NameNode, Spark, Hive, and Ganglia. The primary node is no longer a potential single point of failure with this feature. If one of the primary nodes fails, Amazon EMR automatically fails over to a standby primary node and replaces the failed primary node with a new one with the same configuration and bootstrap actions. For more information, see Plan and Configure Primary Nodes.

Known issues

- Tez UI (Fixed in Amazon EMR release 5.26.0)

  Tez UI does not work on an EMR cluster with multiple primary nodes.
- Hue (Fixed in Amazon EMR release 5.24.0)
  - Hue running on Amazon EMR does not support Solr. Beginning with Amazon EMR release 5.20.0, a misconfiguration issue causes Solr to be enabled and a harmless error message to appear similar to the following:

    ```
    Solr server could not be contacted properly:
    HTTPConnectionPool('host=ip-xx-xx-xx-xx.ec2.internal',
    port=1978): Max retries exceeded with url: /solr/admin/info/
    system?user.name=hue&doAs=administrator&wt=json (Caused by
    NewConnectionError(': Failed to establish a new connection: [Errno 111]
    Connection refused',))
    ```

    To prevent the Solr error message from appearing:

    1. Connect to the primary node command line using SSH.
    2. Use a text editor to open the `hue.ini` file. For example:

       ```
       sudo vim /etc/hue/conf/hue.ini
       ```
    3. Search for the term `appblacklist` and modify the line to the following:

       ```
       appblacklist = search
       ```
    4. Save your changes and restart Hue as shown in the following example:

       ```
       sudo stop hue; sudo start hue
       ```
- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

Workaround:

- SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
- Run the following command to renew Kerberos ticket for hadoop user.

```
kinit -kt <keytab_file> <principal>
```

Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.22.0

The following release notes include information for Amazon EMR release 5.22.0. Changes are relative to 5.21.0.

> **Important**
>
> Beginning with Amazon EMR release 5.22.0, Amazon EMR uses AWS Signature Version 4 exclusively to authenticate requests to Amazon S3. Earlier Amazon EMR releases use AWS Signature Version 2 in some cases, unless the release notes indicate that Signature Version 4 is used exclusively. For more information, see Authenticating Requests (AWS Signature Version 4) and Authenticating Requests (AWS Signature Version 2) in the *Amazon Simple Storage Service Developer Guide*.

Initial release date: March 20, 2019

Upgrades

- Flink 1.7.1
- HBase 1.4.9

- Oozie 5.1.0
- Phoenix 4.14.1
- Zeppelin 0.8.1
- Connectors and drivers:
  - DynamoDB Connector 4.8.0
  - MariaDB Connector 2.2.6
  - Amazon Redshift JDBC Driver 1.2.20.1043

New features

- Modified the default EBS configuration for EC2 instance types with EBS-only storage. When you create a cluster using Amazon EMR release 5.22.0 and later, the default amount of EBS storage increases based on the size of the instance. In addition, we split increased storage across multiple volumes, giving increased IOPS performance. If you want to use a different EBS instance storage configuration, you can specify it when you create an EMR cluster or add nodes to an existing cluster. For more information about the amount of storage and number of volumes allocated by default for each instance type, see Default EBS Storage for Instances in the *Amazon EMR Management Guide*.

Changes, enhancements, and resolved issues

- Spark
  - Introduced a new configuration property for Spark on YARN, `spark.yarn.executor.memoryOverheadFactor`. The value of this property is a scale factor that sets the value of memory overhead to a percentage of executor memory, with a minimum of 384 MB. If memory overhead is set explicitly using `spark.yarn.executor.memoryOverhead`, this property has no effect. The default value is `0.1875`, representing 18.75%. This default for Amazon EMR leaves more space in YARN containers for executor memory overhead than the 10% default set internally by Spark. The Amazon EMR default of 18.75% empirically showed fewer memory-related failures in TPC-DS benchmarks.
  - Backported SPARK-26316 to improve performance.
- In Amazon EMR version 5.19.0, 5.20.0, and 5.21.0, YARN node labels are stored in an HDFS directory. In some situations, this leads to core node startup delays and then causes cluster time-

out and launch failure. Beginning with Amazon EMR 5.22.0, this issue is resolved. YARN node labels are stored on the local disk of each cluster node, avoiding dependencies on HDFS.

Known issues

- Hue (Fixed in Amazon EMR release 5.24.0)
  - Hue running on Amazon EMR does not support Solr. Beginning with Amazon EMR release 5.20.0, a misconfiguration issue causes Solr to be enabled and a harmless error message to appear similar to the following:

    ```
    Solr server could not be contacted properly: 
    HTTPConnectionPool('host=ip-xx-xx-xx-xx.ec2.internal', 
    port=1978): Max retries exceeded with url: /solr/admin/info/
    system?user.name=hue&doAs=administrator&wt=json (Caused by 
    NewConnectionError(': Failed to establish a new connection: [Errno 111] 
    Connection refused',))
    ```

    To prevent the Solr error message from appearing:

    1. Connect to the primary node command line using SSH.
    2. Use a text editor to open the `hue.ini` file. For example:

       ```
       sudo vim /etc/hue/conf/hue.ini
       ```

    3. Search for the term `appblacklist` and modify the line to the following:

       ```
       appblacklist = search
       ```

    4. Save your changes and restart Hue as shown in the following example:

       ```
       sudo stop hue; sudo start hue
       ```

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

Workaround:

- SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
- Run the following command to renew Kerberos ticket for hadoop user.

```
kinit -kt <keytab_file> <principal>
```

  Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.21.1

The following release notes include information for Amazon EMR release 5.21.1. Changes are relative to 5.21.0.

Initial release date: July 18, 2019

Changes, enhancements, and resolved issues

- Updated the default Amazon Linux AMI for Amazon EMR to include important Linux kernel security updates, including the TCP SACK Denial of Service Issue (AWS-2019-005).

Known issues

- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem

impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

Workaround:

- SSH as hadoop user to the lead primary node of the EMR cluster with multiple primary nodes.
- Run the following command to renew Kerberos ticket for hadoop user.

```
kinit -kt <keytab_file> <principal>
```

  Typically, the keytab file is located at /etc/hadoop.keytab and the principal is in the form of hadoop/<hostname>@<REALM>.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.21.0

The following release notes include information for Amazon EMR release 5.21.0. Changes are relative to 5.20.0.

Initial release date: February 18, 2019

Last updated date: April 3, 2019

Upgrades

- Flink 1.7.0
- Presto 0.215
- AWS SDK for Java 1.11.479

New features

- (April 3, 2019) With Amazon EMR version 5.21.0 and later, you can override cluster configurations and specify additional configuration classifications for each instance group in a running cluster. You do this by using the Amazon EMR console, the AWS Command Line Interface (AWS CLI), or the AWS SDK. For more information, see Supplying a Configuration for an Instance Group in a Running Cluster.

Changes, enhancements, and resolved issues

- Zeppelin
  - Backported ZEPPELIN-3878.

Known issues

- Hue (Fixed in Amazon EMR release 5.24.0)
  - Hue running on Amazon EMR does not support Solr. Beginning with Amazon EMR release 5.20.0, a misconfiguration issue causes Solr to be enabled and a harmless error message to appear similar to the following:

    ```
    Solr server could not be contacted properly:
    HTTPConnectionPool('host=ip-xx-xx-xx-xx.ec2.internal',
    port=1978): Max retries exceeded with url: /solr/admin/info/
    system?user.name=hue&doAs=administrator&wt=json (Caused by
    NewConnectionError(': Failed to establish a new connection: [Errno 111]
    Connection refused',))
    ```

    To prevent the Solr error message from appearing:

    1. Connect to the primary node command line using SSH.
    2. Use a text editor to open the hue.ini file. For example:

       ```
       sudo vim /etc/hue/conf/hue.ini
       ```

    3. Search for the term appblacklist and modify the line to the following:

       ```
       appblacklist = search
       ```

    4. Save your changes and restart Hue as shown in the following example:

       ```
       sudo stop hue; sudo start hue
       ```

- Tez

  - This issue was fixed in Amazon EMR 5.22.0.

    When you connect to the Tez UI at http://*MasterDNS*:8080/tez-ui through an SSH connection to the cluster primary node, the error "Adapter operation failed - Timeline server (ATS) is out of reach. Either it is down, or CORS is not enabled" appears, or tasks unexpectedly show N/A.

    This is caused by the Tez UI making requests to the YARN Timeline Server using `localhost` rather than the host name of the primary node. As a workaround, a script is available to run as a bootstrap action or step. The script updates the host name in the Tez `configs.env` file. For more information and the location of the script, see the [Bootstrap Instructions].

- In Amazon EMR version 5.19.0, 5.20.0, and 5.21.0, YARN node labels are stored in an HDFS directory. In some situations, this leads to core node startup delays and then causes cluster time-out and launch failure. Beginning with Amazon EMR 5.22.0, this issue is resolved. YARN node labels are stored on the local disk of each cluster node, avoiding dependencies on HDFS.
- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

  Workaround:

  - SSH as `hadoop` user to the lead primary node of the EMR cluster with multiple primary nodes.
  - Run the following command to renew Kerberos ticket for `hadoop` user.

    ```
    kinit -kt <keytab_file> <principal>
    ```

    Typically, the keytab file is located at `/etc/hadoop.keytab` and the principal is in the form of `hadoop/<hostname>@<REALM>`.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.20.0

The following release notes include information for Amazon EMR release 5.20.0. Changes are relative to 5.19.0.

Initial release date: December 18, 2018

Last updated date: January 22, 2019

Upgrades

- Flink 1.6.2
- HBase 1.4.8
- Hive 2.3.4
- Hue 4.3.0
- MXNet 1.3.1
- Presto 0.214
- Spark 2.4.0
- TensorFlow 1.12.0
- Tez 0.9.1
- AWS SDK for Java 1.11.461

New features

- (January 22, 2019) Kerberos in Amazon EMR has been improved to support authenticating principals from an external KDC. This centralizes principal management because multiple clusters can share a single, external KDC. In addition, the external KDC can have a cross-realm trust with an Active Directory domain. This allows all clusters to authenticate principals from

Active Directory. For more information, see Use Kerberos Authentication in the *Amazon EMR Management Guide*.

Changes, enhancements, and resolved issues

- Default Amazon Linux AMI for Amazon EMR
  - Python3 package was upgraded from python 3.4 to 3.6.
- The EMRFS S3-optimized committer
  - The EMRFS S3-optimized committer is now enabled by default, which improves write performance. For more information, see Use the EMRFS S3-optimized committer.
- Hive
  - Backported HIVE-16686.
- Glue with Spark and Hive
  - In EMR 5.20.0 or later, parallel partition pruning is enabled automatically for Spark and Hive when AWS Glue Data Catalog is used as the metastore. This change significantly reduces query planning time by executing multiple requests in parallel to retrieve partitions. The total number of segments that can be executed concurrently range between 1 and 10. The default value is 5, which is a recommended setting. You can change it by specifying the property `aws.glue.partition.num.segments` in `hive-site` configuration classification. If throttling occurs, you can turn off the feature by changing the value to 1. For more information, see AWS Glue Segment Structure.

Known issues

- Hue (Fixed in Amazon EMR release 5.24.0)
  - Hue running on Amazon EMR does not support Solr. Beginning with Amazon EMR release 5.20.0, a misconfiguration issue causes Solr to be enabled and a harmless error message to appear similar to the following:

    ```
    Solr server could not be contacted properly:
    HTTPConnectionPool('host=ip-xx-xx-xx-xx.ec2.internal',
    port=1978): Max retries exceeded with url: /solr/admin/info/
    system?user.name=hue&doAs=administrator&wt=json (Caused by
    NewConnectionError(': Failed to establish a new connection: [Errno 111]
    Connection refused',))
    ```

To prevent the Solr error message from appearing:

1. Connect to the primary node command line using SSH.
2. Use a text editor to open the `hue.ini` file. For example:

   `sudo vim /etc/hue/conf/hue.ini`
3. Search for the term `appblacklist` and modify the line to the following:

```
appblacklist = search
```

4. Save your changes and restart Hue as shown in the following example:

```
sudo stop hue; sudo start hue
```

- Tez
  - This issue was fixed in Amazon EMR 5.22.0.

    When you connect to the Tez UI at http://*MasterDNS*:8080/tez-ui through an SSH connection to the cluster primary node, the error "Adapter operation failed - Timeline server (ATS) is out of reach. Either it is down, or CORS is not enabled" appears, or tasks unexpectedly show N/A.

    This is caused by the Tez UI making requests to the YARN Timeline Server using `localhost` rather than the host name of the primary node. As a workaround, a script is available to run as a bootstrap action or step. The script updates the host name in the Tez `configs.env` file. For more information and the location of the script, see the Bootstrap Instructions.
- In Amazon EMR version 5.19.0, 5.20.0, and 5.21.0, YARN node labels are stored in an HDFS directory. In some situations, this leads to core node startup delays and then causes cluster time-out and launch failure. Beginning with Amazon EMR 5.22.0, this issue is resolved. YARN node labels are stored on the local disk of each cluster node, avoiding dependencies on HDFS.
- Known issue in clusters with multiple primary nodes and Kerberos authentication

  If you run clusters with multiple primary nodes and Kerberos authentication in Amazon EMR releases 5.20.0 and later, you may encounter problems with cluster operations such as scale down or step submission, after the cluster has been running for some time. The time period depends on the Kerberos ticket validity period that you defined. The scale-down problem impacts both automatic scale-down and explicit scale down requests that you submitted. Additional cluster operations can also be impacted.

Workaround:

- SSH as `hadoop` user to the lead primary node of the EMR cluster with multiple primary nodes.
- Run the following command to renew Kerberos ticket for `hadoop` user.

```
kinit -kt <keytab_file> <principal>
```

Typically, the keytab file is located at `/etc/hadoop.keytab` and the principal is in the form of `hadoop/<hostname>@<REALM>`.

> **Note**
>
> This workaround will be effective for the time period the Kerberos ticket is valid. This duration is 10 hours by default, but can configured by your Kerberos settings. You must re-run the above command once the Kerberos ticket expires.

Release 5.19.0

The following release notes include information for Amazon EMR release 5.19.0. Changes are relative to 5.18.0.

Initial release date: November 7, 2018

Last updated date: November 19, 2018

Upgrades

- Hadoop 2.8.5
- Flink 1.6.1
- JupyterHub 0.9.4
- MXNet 1.3.0
- Presto 0.212
- TensorFlow 1.11.0
- Zookeeper 3.4.13
- AWS SDK for Java 1.11.433

New features

- (Nov. 19, 2018) EMR Notebooks is a managed environment based on Jupyter Notebook. It supports Spark magic kernels for PySpark, Spark SQL, Spark R, and Scala. EMR Notebooks can be used with clusters created using Amazon EMR release 5.18.0 and later. For more information, see Using EMR Notebooks in the *Amazon EMR Management Guide*.
- The EMRFS S3-optimized committer is available when writing Parquet files using Spark and EMRFS. This committer improves write performance. For more information, see Use the EMRFS S3-optimized committer.

Changes, enhancements, and resolved issues

- YARN
  - Modified the logic that limits the application master process to running on core nodes. This functionality now uses the YARN node labels feature and properties in the `yarn-site` and `capacity-scheduler` configuration classifications. For information, see https://docs.aws.amazon.com/emr/latest/ManagementGuide/emr-plan-instances-guidelines.html#emr-plan-spot-YARN.
- Default Amazon Linux AMI for Amazon EMR
  - `ruby18`, `php56`, and `gcc48` are no longer installed by default. These can be installed if desired using `yum`.
  - The aws-sdk ruby gem is no longer installed by default. It can be installed using `gem install aws-sdk`, if desired. Specific components can also be installed. For example, `gem install aws-sdk-s3`.

Known issues

- **EMR Notebooks**—In some circumstances, with multiple notebook editors open, the notebook editor may appear unable to connect to the cluster. If this happens, clear browser cookies and then reopen notebook editors.
- **CloudWatch ContainerPending Metric and Automatic Scaling**—(Fixed in 5.20.0)Amazon EMR may emit a negative value for `ContainerPending`. If `ContainerPending` is used in an automatic scaling rule, automatic scaling does not behave as expected. Avoid using `ContainerPending` with automatic scaling.

- In Amazon EMR version 5.19.0, 5.20.0, and 5.21.0, YARN node labels are stored in an HDFS directory. In some situations, this leads to core node startup delays and then causes cluster time-out and launch failure. Beginning with Amazon EMR 5.22.0, this issue is resolved. YARN node labels are stored on the local disk of each cluster node, avoiding dependencies on HDFS.

Release 5.18.0

The following release notes include information for Amazon EMR release 5.18.0. Changes are relative to 5.17.0.

Initial release date: October 24, 2018

Upgrades

- Flink 1.6.0
- HBase 1.4.7
- Presto 0.210
- Spark 2.3.2
- Zeppelin 0.8.0

New features

- Beginning with Amazon EMR 5.18.0, you can use the Amazon EMR artifact repository to build your job code against the exact versions of libraries and dependencies that are available with specific Amazon EMR releases. For more information, see Checking dependencies using the Amazon EMR artifact repository.

Changes, enhancements, and resolved issues

- Hive
  - Added support for S3 Select. For more information, see Using S3 Select with Hive to improve performance.
- Presto
  - Added support for S3 Select Pushdown. For more information, see Using S3 Select Pushdown with Presto to improve performance.
- Spark

  - The default log4j configuration for Spark has been changed to roll container logs hourly for Spark streaming jobs. This helps prevent the deletion of logs for long-running Spark streaming jobs.

Release 5.17.1

The following release notes include information for Amazon EMR release 5.17.1. Changes are relative to 5.17.0.

Initial release date: July 18, 2019

Changes, enhancements, and resolved issues

- Updated the default Amazon Linux AMI for Amazon EMR to include important Linux kernel security updates, including the TCP SACK Denial of Service Issue (AWS-2019-005).

Release 5.17.0

The following release notes include information for Amazon EMR release 5.17.0. Changes are relative to 5.16.0.

Initial release date: August 30, 2018

Upgrades

- Flink 1.5.2
- HBase 1.4.6
- Presto 0.206

New features

- Added support for Tensorflow. For more information, see TensorFlow.

Changes, enhancements, and resolved issues

- JupyterHub
  - Added support for notebook persistence in Amazon S3. For more information, see Configuring persistence for notebooks in Amazon S3.

- Spark
  - Added support for S3 Select. For more information, see Use S3 Select with Spark to improve query performance.
- Resolved the issues with the Cloudwatch metrics and the automatic scaling feature in Amazon EMR version 5.14.0, 5.15.0, or 5.16.0.

Known issues

- When you create a kerberized cluster with Livy installed, Livy fails with an error that simple authentication is not enabled. Rebooting the Livy server resolves the issue. As a workaround, add a step during cluster creation that runs `sudo restart livy-server` on the primary node.
- If you use a custom Amazon Linux AMI based on an Amazon Linux AMI with a creation date of 2018-08-11, the Oozie server fails to start. If you use Oozie, create a custom AMI based on an Amazon Linux AMI ID with a different creation date. You can use the following AWS CLI command to return a list of Image IDs for all HVM Amazon Linux AMIs with a 2018.03 version, along with the release date, so that you can choose an appropriate Amazon Linux AMI as your base. Replace MyRegion with your Region identifier, such as us-west-2.

```
aws ec2 --region MyRegion describe-images --owner amazon --query 'Images[?
Name!=`null`]|[?starts_with(Name, `amzn-ami-hvm-2018.03`) == `true`].
[CreationDate,ImageId,Name]' --output text | sort -rk1
```

Release 5.16.0

The following release notes include information for Amazon EMR release 5.16.0. Changes are relative to 5.15.0.

Initial release date: July 19, 2018

Upgrades

- Hadoop 2.8.4
- Flink 1.5.0
- Livy 0.5.0
- MXNet 1.2.0
- Phoenix 4.14.0

- Presto 0.203
- Spark 2.3.1
- AWS SDK for Java 1.11.336
- CUDA 9.2
- Redshift JDBC Driver 1.2.15.1025

Changes, enhancements, and resolved issues

- HBase
  - Backported HBASE-20723
- Presto
  - Configuration changes to support LDAP authentication. For more information, see Using LDAP authentication for Presto on Amazon EMR.
- Spark
  - Apache Spark version 2.3.1, available beginning with Amazon EMR release 5.16.0, addresses CVE-2018-8024 and CVE-2018-1334. We recommend that you migrate earlier versions of Spark to Spark version 2.3.1 or later.

Known issues

- This release version does not support the c1.medium or m1.small instance types. Clusters using either of these instance types fail to start. As a workaround, specify a different instance type or use a different release version.
- When you create a kerberized cluster with Livy installed, Livy fails with an error that simple authentication is not enabled. Rebooting the Livy server resolves the issue. As a workaround, add a step during cluster creation that runs `sudo restart livy-server` on the primary node.
- After the primary node reboots or the instance controller restarts, the CloudWatch metrics will not be collected and the automatic scaling feature will not be available in Amazon EMR version 5.14.0, 5.15.0, or 5.16.0. This issue is fixed in Amazon EMR 5.17.0.

Release 5.15.0

The following release notes include information for Amazon EMR release 5.15.0. Changes are relative to 5.14.0.

Initial release date: June 21, 2018

Upgrades

- Upgraded HBase to 1.4.4
- Upgraded Hive to 2.3.3
- Upgraded Hue to 4.2.0
- Upgraded Oozie to 5.0.0
- Upgraded Zookeeper to 3.4.12
- Upgraded AWS SDK to 1.11.333

Changes, enhancements, and resolved issues

- Hive
  - Backported HIVE-18069
- Hue
  - Updated Hue to correctly authenticate with Livy when Kerberos is enabled. Livy is now supported when using Kerberos with Amazon EMR.
- JupyterHub
  - Updated JupyterHub so that Amazon EMR installs LDAP client libraries by default.
  - Fixed an error in the script that generates self-signed certificates.

Known issues

- This release version does not support the c1.medium or m1.small instance types. Clusters using either of these instance types fail to start. As a workaround, specify a different instance type or use a different release version.
- After the primary node reboots or the instance controller restarts, the CloudWatch metrics will not be collected and the automatic scaling feature will not be available in Amazon EMR version 5.14.0, 5.15.0, or 5.16.0. This issue is fixed in Amazon EMR 5.17.0.

Release 5.14.1

The following release notes include information for Amazon EMR release 5.14.1. Changes are relative to 5.14.0.

Initial release date: October 17, 2018

Updated the default AMI for Amazon EMR to address potential security vulnerabilities.

Release 5.14.0

The following release notes include information for Amazon EMR release 5.14.0. Changes are relative to 5.13.0.

Initial release date: June 4, 2018

Upgrades

- Upgraded Apache Flink to 1.4.2
- Upgraded Apache MXnet to 1.1.0
- Upgraded Apache Sqoop to 1.4.7

New features

- Added JupyterHub support. For more information, see JupyterHub.

Changes, enhancements, and resolved issues

- EMRFS
  - The userAgent string in requests to Amazon S3 has been updated to contain the user and group information of the invoking principal. This can be used with AWS CloudTrail logs for more comprehensive request tracking.
- HBase
  - Included HBASE-20447, which addresses an issue that could cause cache issues, especially with split Regions.
- MXnet
  - Added OpenCV libraries.
- Spark
  - When Spark writes Parquet files to an Amazon S3 location using EMRFS, the FileOutputCommitter algorithm has been updated to use version 2 instead of version 1. This reduces the number of renames, which improves application performance. This change does not affect:

  - Applications other than Spark.
  - Applications that write to other file systems, such as HDFS (which still use version 1 of FileOutputCommitter).
  - Applications that use other output formats, such as text or csv, that already use EMRFS direct write.

Known issues

- JupyterHub
  - Using configuration classifications to set up JupyterHub and individual Jupyter notebooks when you create a cluster is not supported. Edit the jupyterhub_config.py file and jupyter_notebook_config.py files for each user manually. For more information, see Configuring JupyterHub.
  - JupyterHub fails to start on clusters within a private subnet, failing with the message `Error: ENOENT: no such file or directory, open '/etc/jupyter/conf/server.crt'` . This is caused by an error in the script that generates self-signed certificates. Use the following workaround to generate self-signed certificates. All commands are executed while connected to the primary node.
    1. Copy the certificate generation script from the container to the primary node:

       ```
       sudo docker cp jupyterhub:/tmp/gen_self_signed_cert.sh ./
       ```

    2. Use a text editor to change line 23 to change public hostname to local hostname as shown below:

       ```
       local hostname=$(curl -s $EC2_METADATA_SERVICE_URI/local-hostname)
       ```

    3. Run the script to generate self-signed certificates:

       ```
       sudo bash ./gen_self_signed_cert.sh
       ```

    4. Move the certificate files that the script generates to the `/etc/jupyter/conf/` directory:

       ```
       sudo mv /tmp/server.crt /tmp/server.key /etc/jupyter/conf/
       ```

    You can `tail` the `jupyter.log` file to verify that JupyterHub restarted and is returning a 200 response code. For example:

```
tail -f /var/log/jupyter/jupyter.log
```

This should return a response similar to the following:

```
# [I 2018-06-14 18:56:51.356 JupyterHub app:1581] JupyterHub is now running at
 https://:9443/
# 19:01:51.359 - info: [ConfigProxy] 200 GET /api/routes
```

- After the primary node reboots or the instance controller restarts, the CloudWatch metrics will not be collected and the automatic scaling feature will not be available in Amazon EMR version 5.14.0, 5.15.0, or 5.16.0. This issue is fixed in Amazon EMR 5.17.0.

Release 5.13.0

The following release notes include information for the Amazon EMR release 5.13.0. Changes are relative to 5.12.0.

Upgrades

- Upgraded Spark to 2.3.0
- Upgraded HBase to 1.4.2
- Upgraded Presto to 0.194
- Upgraded AWS SDK for Java to 1.11.297

Changes, enhancements, and resolved issues

- Hive
  - Backported HIVE-15436. Enhanced Hive APIs to return only views.

Known issues

- MXNet does not currently have OpenCV libraries.

Release 5.12.2

The following release notes include information for Amazon EMR release 5.12.2. Changes are relative to 5.12.1.

Initial release date: August 29, 2018

Changes, enhancements, and resolved issues

- This release addresses a potential security vulnerability.

Release 5.12.1

The following release notes include information for Amazon EMR release 5.12.1. Changes are relative to 5.12.0.

Initial release date: March 29, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address potential vulnerabilities.

Release 5.12.0

The following release notes include information for the Amazon EMR release 5.12.0. Changes are relative to 5.11.1.

Upgrades

- AWS SDK for Java 1.11.238 ⇒ 1.11.267. For more information, see the AWS SDK for Java Change Log on GitHub.
- Hadoop 2.7.3 ⇒ 2.8.3. For more information, see Apache Hadoop Releases.
- Flink 1.3.2 ⇒ 1.4.0. For more information, see the Apache Flink 1.4.0 Release Announcement.
- HBase 1.3.1 ⇒ 1.4.0. For more information, see the HBase Release Announcement.
- Hue 4.0.1 ⇒ 4.1.0. For more information, see the Release Notes.
- MxNet 0.12.0 ⇒ 1.0.0. For more information, see the MXNet Change Log on GitHub.

- Presto 0.187 ⇒ 0.188. For more information, see the Release Notes.

Changes, enhancements, and resolved issues

- **Hadoop**
  - The `yarn.resourcemanager.decommissioning.timeout` property has changed to `yarn.resourcemanager.nodemanager-graceful-decommission-timeout-secs`. You can use this property to customize cluster scale-down. For more information, see Cluster Scale-Down in the *Amazon EMR Management Guide*.
  - The Hadoop CLI added the `-d` option to the `cp` (copy) command, which specifies direct copy. You can use this to avoid creating an intermediary `.COPYING` file, which makes copying data between Amazon S3 faster. For more information, see HADOOP-12384.
- **Pig**
  - Added the `pig-env` configuration classification, which simplifies the configuration of Pig environment properties. For more information, see Configure applications.
- **Presto**
  - Added the `presto-connector-redshift` configuration classification, which you can use to configure values in the Presto `redshift.properties` configuration file. For more information, see Redshift Connector in Presto documentation, and Configure applications.
  - Presto support for EMRFS has been added and is the default configuration. Earlier Amazon EMR releases used PrestoS3FileSystem, which was the only option. For more information, see EMRFS and PrestoS3FileSystem configuration.

    > **Note**
    >
    > If you query underlying data in Amazon S3 with Amazon EMR version 5.12.0, Presto errors can occur. This is because Presto fails to pick up configuration classification values from `emrfs-site.xml`. As a workaround, create an `emrfs` subdirectory under `usr/lib/presto/plugin/hive-hadoop2/` and create a symlink in `usr/lib/presto/plugin/hive-hadoop2/emrfs` to the existing `/usr/share/aws/emr/emrfs/conf/emrfs-site.xml` file. Then restart the presto-server process (`sudo presto-server stop` followed by `sudo presto-server start`).
- **Spark**
  - Backported SPARK-22036: BigDecimal multiplication sometimes returns null.

Known issues

- MXNet does not include OpenCV libraries.
- SparkR is not available for clusters created using a custom AMI because R is not installed by default on cluster nodes.

Release 5.11.3

The following release notes include information for Amazon EMR release 5.11.3. Changes are relative to 5.11.2.

Initial release date: July 18, 2019

Changes, enhancements, and resolved issues

- Updated the default Amazon Linux AMI for Amazon EMR to include important Linux kernel security updates, including the TCP SACK Denial of Service Issue (AWS-2019-005).

Release 5.11.2

The following release notes include information for Amazon EMR release 5.11.2. Changes are relative to 5.11.1.

Initial release date: August 29, 2018

Changes, enhancements, and resolved issues

- This release addresses a potential security vulnerability.

Release 5.11.1

The following release notes include information for the Amazon EMR version 5.11.1 release. Changes are relative to the Amazon EMR 5.11.0 release.

Initial release date: January 22, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address vulnerabilities associated with speculative execution (CVE-2017-5715, CVE-2017-5753, and

CVE-2017-5754). For more information, see https://aws.amazon.com/security/security-bulletins/AWS-2018-013/.

Known issues

- MXNet does not include OpenCV libraries.
- Hive 2.3.2 sets `hive.compute.query.using.stats=true` by default. This causes queries to get data from existing statistics rather than directly from data, which could be confusing. For example, if you have a table with `hive.compute.query.using.stats=true` and upload new files to the table `LOCATION`, running a `SELECT COUNT(*)` query on the table returns the count from the statistics, rather than picking up the added rows.

  As a workaround, use the `ANALYZE TABLE` command to gather new statistics, or set `hive.compute.query.using.stats=false`. For more information, see Statistics in Hive in the Apache Hive documentation.

Release 5.11.0

The following release notes include information for the Amazon EMR version 5.11.0 release. Changes are relative to the Amazon EMR 5.10.0 release.

Upgrades

The following applications and components have been upgraded in this release to include the following versions.

- Hive 2.3.2
- Spark 2.2.1
- SDK for Java 1.11.238

New features

- **Spark**
  - Added `spark.decommissioning.timeout.threshold` setting, which improves Spark decommissioning behavior when using Spot instances. For more information, see Configuring node decommissioning behavior.

- Added the aws-sagemaker-spark-sdk component to Spark, which installs Amazon SageMaker Spark and associated dependencies for Spark integration with Amazon SageMaker. You can use Amazon SageMaker Spark to construct Spark machine learning (ML) pipelines using Amazon SageMaker stages. For more information, see the SageMaker Spark readme on GitHub and Using Apache Spark with Amazon SageMaker in the *Amazon SageMaker Developer Guide*.

Known issues

- MXNet does not include OpenCV libraries.
- Hive 2.3.2 sets hive.compute.query.using.stats=true by default. This causes queries to get data from existing statistics rather than directly from data, which could be confusing. For example, if you have a table with hive.compute.query.using.stats=true and upload new files to the table LOCATION, running a SELECT COUNT(*) query on the table returns the count from the statistics, rather than picking up the added rows.

  As a workaround, use the ANALYZE TABLE command to gather new statistics, or set hive.compute.query.using.stats=false. For more information, see Statistics in Hive in the Apache Hive documentation.

Release 5.10.0

The following release notes include information for the Amazon EMR version 5.10.0 release. Changes are relative to the Amazon EMR 5.9.0 release.

Upgrades

The following applications and components have been upgraded in this release to include the following versions.

- AWS SDK for Java 1.11.221
- Hive 2.3.1
- Presto 0.187

New features

- Added support for Kerberos authentication. For more information, see Use Kerberos authentication in the *Amazon EMR Management Guide*
- Added support for IAM roles for EMRFS requests to Amazon S3. For more information, see Configure IAM roles for EMRFS requests to Amazon S3 in the *Amazon EMR Management Guide*.
- Added support for GPU-based P2 and P3 instance types. For more information, see Amazon EC2 P2 instances and Amazon EC2 P3 instances. NVIDIA driver 384.81 and CUDA driver 9.0.176 are installed on these instance types by default.
- Added support for Apache MXNet.

Changes, enhancements, and resolved issues

- Presto
  - Added support for using the AWS Glue Data Catalog as the default Hive metastore. For more information, see Using Presto with the AWS Glue Data Catalog.
  - Added support for geospatial functions.
  - Added spill to disk support for joins.
  - Added support for the Redshift connector.
- Spark
  - Backported SPARK-20640, which makes the rpc timeout and the retries for shuffle registration values configurable using `spark.shuffle.registration.timeout` and `spark.shuffle.registration.maxAttempts` properties.
  - Backported SPARK-21549, which corrects an error that occurs when writing custom OutputFormat to non-HDFS locations.
- Backported Hadoop-13270
- The Numpy, Scipy, and Matplotlib libraries have been removed from the base Amazon EMR AMI. If these libraries are required for your application, they are available in the application repository, so you can use a bootstrap action to install them on all nodes using `yum install`.
- The Amazon EMR base AMI no longer has application RPM packages included, so the RPM packages are no longer present on cluster nodes. Custom AMIs and the Amazon EMR base AMI now reference the RPM package repository in Amazon S3.

- Because of the introduction of per-second billing in Amazon EC2, the default **Scale down behavior** is now **Terminate at task completion** rather than **Terminate at instance hour**. For more information, see Configure cluster scale-down.

Known issues

- MXNet does not include OpenCV libraries.
- Hive 2.3.1 sets `hive.compute.query.using.stats=true` by default. This causes queries to get data from existing statistics rather than directly from data, which could be confusing. For example, if you have a table with `hive.compute.query.using.stats=true` and upload new files to the table `LOCATION`, running a `SELECT COUNT(*)` query on the table returns the count from the statistics, rather than picking up the added rows.

  As a workaround, use the `ANALYZE TABLE` command to gather new statistics, or set `hive.compute.query.using.stats=false`. For more information, see Statistics in Hive in the Apache Hive documentation.

Release 5.9.0

The following release notes include information for the Amazon EMR version 5.9.0 release. Changes are relative to the Amazon EMR 5.8.0 release.

Release date: October 5, 2017

Latest feature update: October 12, 2017

Upgrades

The following applications and components have been upgraded in this release to include the following versions.

- AWS SDK for Java version 1.11.183
- Flink 1.3.2
- Hue 4.0.1
- Pig 0.17.0
- Presto 0.184

New features

- Added Livy support (version 0.4.0-incubating). For more information, see Apache Livy.
- Added support for Hue Notebook for Spark.
- Added support for i3-series Amazon EC2 instances (October 12, 2017).

Changes, enhancements, and resolved issues

- Spark
  - Added a new set of features that help ensure Spark handles node termination because of a manual resize or an automatic scaling policy request more gracefully. For more information, see Configuring node decommissioning behavior.
  - SSL is used instead of 3DES for in-transit encryption for the block transfer service, which enhances performance when using Amazon EC2 instance types with AES-NI.
  - Backported SPARK-21494.
- Zeppelin
  - Backported ZEPPELIN-2377.
- HBase
  - Added patch HBASE-18533, which allows additional values for HBase BucketCache configuration using the `hbase-site` configuration classification.
- Hue
  - Added AWS Glue Data Catalog support for the Hive query editor in Hue.
  - By default, superusers in Hue can access all files that Amazon EMR IAM roles are allowed to access. Newly created users do not automatically have permissions to access the Amazon S3 filebrowser and must have the `filebrowser.s3_access` permissions enabled for their group.
- Resolved an issue that caused underlying JSON data created using AWS Glue Data Catalog to be inaccessible.

Known issues

- Cluster launch fails when all applications are installed and the default Amazon EBS root volume size is not changed. As a workaround, use the `aws emr create-cluster` command from the AWS CLI and specify a larger `--ebs-root-volume-size` parameter.

- Hive 2.3.0 sets `hive.compute.query.using.stats=true` by default. This causes queries to get data from existing statistics rather than directly from data, which could be confusing. For example, if you have a table with `hive.compute.query.using.stats=true` and upload new files to the table `LOCATION`, running a `SELECT COUNT(*)` query on the table returns the count from the statistics, rather than picking up the added rows.

  As a workaround, use the `ANALYZE TABLE` command to gather new statistics, or set `hive.compute.query.using.stats=false`. For more information, see Statistics in Hive in the Apache Hive documentation.

Release 5.8.2

The following release notes include information for Amazon EMR release 5.8.2. Changes are relative to 5.8.1.

Initial release date: March 29, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address potential vulnerabilities.

Release 5.8.1

The following release notes include information for the Amazon EMR version 5.8.1 release. Changes are relative to the Amazon EMR 5.8.0 release.

Initial release date: January 22, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address vulnerabilities associated with speculative execution (CVE-2017-5715, CVE-2017-5753, and CVE-2017-5754). For more information, see https://aws.amazon.com/security/security-bulletins/AWS-2018-013/.

Release 5.8.0

The following release notes include information for the Amazon EMR version 5.8.0 release. Changes are relative to the Amazon EMR 5.7.0 release.

Initial release date: August 10, 2017

Latest feature update: September 25, 2017

Upgrades

The following applications and components have been upgraded in this release to include the following versions:

- AWS SDK 1.11.160
- Flink 1.3.1
- Hive 2.3.0. For more information, see Release notes on the Apache Hive site.
- Spark 2.2.0. For more information, see Release notes on the Apache Spark site.

New features

- Added support for viewing application history (September 25, 2017). For more information, see Viewing application history in the *Amazon EMR Management Guide*.

Changes, enhancements, and resolved issues

- **Integration with AWS Glue Data Catalog**
  - Added ability for Hive and Spark SQL to use AWS Glue Data Catalog as the Hive metadata store. For more information, see Using the AWS Glue Data Catalog as the metastore for Hive and Use the AWS Glue Data Catalog as the metastore for Spark SQL.
- Added **Application history** to cluster details, which allows you to view historical data for YARN applications and additional details for Spark applications. For more information, see View application history in the *Amazon EMR Management Guide*.
- **Oozie**
  - Backported OOZIE-2748.
- **Hue**

  - Backported HUE-5859
- **HBase**
  - Added patch to expose the HBase master server start time through Java Management Extensions (JMX) using `getMasterInitializedTime`.
  - Added patch that improves cluster start time.

Known issues

- Cluster launch fails when all applications are installed and the default Amazon EBS root volume size is not changed. As a workaround, use the `aws emr create-cluster` command from the AWS CLI and specify a larger `--ebs-root-volume-size` parameter.
- Hive 2.3.0 sets `hive.compute.query.using.stats=true` by default. This causes queries to get data from existing statistics rather than directly from data, which could be confusing. For example, if you have a table with `hive.compute.query.using.stats=true` and upload new files to the table `LOCATION`, running a `SELECT COUNT(*)` query on the table returns the count from the statistics, rather than picking up the added rows.

  As a workaround, use the `ANALYZE TABLE` command to gather new statistics, or set `hive.compute.query.using.stats=false`. For more information, see Statistics in Hive in the Apache Hive documentation.
- **Spark**—When using Spark, there is a file handler leak issue with the apppusher daemon, which can appear for a long-running Spark job after several hours or days. To fix the issue, connect to the master node and type `sudo /etc/init.d/apppusher stop`. This stops that apppusher daemon, which Amazon EMR will restart automatically.
- **Application history**
  - Historical data for dead Spark executors is not available.
  - Application history is not available for clusters that use a security configuration to enable in-flight encryption.

Release 5.7.0

The following release notes include information for the Amazon EMR 5.7.0 release. Changes are relative to the Amazon EMR 5.6.0 release.

Release date: July 13, 2017

Upgrades

- Flink 1.3.0
- Phoenix 4.11.0
- Zeppelin 0.7.2

New features

- Added the ability to specify a custom Amazon Linux AMI when you create a cluster. For more information, see Using a custom AMI.

Changes, enhancements, and resolved issues

- **HBase**
  - Added capability to configure HBase read-replica clusters. See Using a read-replica cluster.
  - Multiple bug fixes and enhancements
- **Presto** - added ability to configure `node.properties`.
- **YARN** - added ability to configure `container-log4j.properties`
- **Sqoop** - backported SQOOP-2880, which introduces an argument that allows you to set the Sqoop temporary directory.

Release 5.6.0

The following release notes include information for the Amazon EMR 5.6.0 release. Changes are relative to the Amazon EMR 5.5.0 release.

Release date: June 5, 2017

Upgrades

- Flink 1.2.1
- HBase 1.3.1
- Mahout 0.13.0. This is the first version of Mahout to support Spark 2.x in Amazon EMR version 5.0 and later.
- Spark 2.1.1

Changes, enhancements, and resolved issues

- **Presto**
  - Added the ability to enable SSL/TLS secured communication between Presto nodes by enabling in-transit encryption using a security configuration. For more information, see In-transit data encryption.
  - Backported Presto 7661, which adds the VERBOSE option to the EXPLAIN ANALYZE statement to report more detailed, low level statistics about a query plan.

Release 5.5.3

The following release notes include information for Amazon EMR release 5.5.3. Changes are relative to 5.5.2.

Initial release date: August 29, 2018

Changes, enhancements, and resolved issues

- This release addresses a potential security vulnerability.

Release 5.5.2

The following release notes include information for Amazon EMR release 5.5.2. Changes are relative to 5.5.1.

Initial release date: March 29, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address potential vulnerabilities.

Release 5.5.1

The following release notes include information for the Amazon EMR 5.5.1 release. Changes are relative to the Amazon EMR 5.5.0 release.

Initial release date: January 22, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address vulnerabilities associated with speculative execution (CVE-2017-5715, CVE-2017-5753, and CVE-2017-5754). For more information, see https://aws.amazon.com/security/security-bulletins/AWS-2018-013/.

Release 5.5.0

The following release notes include information for the Amazon EMR 5.5.0 release. Changes are relative to the Amazon EMR 5.4.0 release.

Release date: April 26, 2017

Upgrades

- Hue 3.12
- Presto 0.170
- Zeppelin 0.7.1
- ZooKeeper 3.4.10

Changes, enhancements, and resolved issues

- **Spark**
  - Backported Spark Patch (SPARK-20115) fix DAGScheduler to recompute all the lost shuffle blocks when external shuffle service is unavailable to version 2.1.0 of Spark, which is included in this release.
- **Flink**
  - Flink is now built with Scala 2.11. If you use the Scala API and libraries, we recommend that you use Scala 2.11 in your projects.
  - Addressed an issue where `HADOOP_CONF_DIR` and `YARN_CONF_DIR` defaults were not properly set, so `start-scala-shell.sh` failed to work. Also added the ability to set these values using `env.hadoop.conf.dir` and `env.yarn.conf.dir` in `/etc/flink/conf/flink-conf.yaml` or the `flink-conf` configuration classification.
  - Introduced a new EMR-specific command, `flink-scala-shell` as a wrapper for `start-scala-shell.sh`. We recommend using this command instead of `start-scala-shell`. The

new command simplifies execution. For example, `flink-scala-shell -n 2` starts a Flink Scala shell with a task parallelism of 2.

- Introduced a new EMR-specific command, `flink-yarn-session` as a wrapper for `yarn-session.sh`. We recommend using this command instead of `yarn-session`. The new command simplifies execution. For example, `flink-yarn-session -d -n 2` starts a long-running Flink session in a detached state with two task managers.
- Addressed (FLINK-6125) commons httpclient is not shaded anymore in Flink 1.2.

- **Presto**
  - Added support for LDAP authentication. Using LDAP with Presto on Amazon EMR requires that you enable HTTPS access for the Presto coordinator (`http-server.https.enabled=true` in `config.properties`). For configuration details, see LDAP authentication in Presto documentation.
  - Added support for `SHOW GRANTS`.
- **Amazon EMR Base Linux AMI**
  - Amazon EMR releases are now based on Amazon Linux 2017.03. For more information, see Amazon Linux AMI 2017.03 release notes.
  - Removed Python 2.6 from the Amazon EMR base Linux image. Python 2.7 and 3.4 are installed by default. You can install Python 2.6 manually if necessary.

Release 5.4.0

The following release notes include information for the Amazon EMR 5.4.0 release. Changes are relative to the Amazon EMR 5.3.0 release.

Release date: March 08, 2017

Upgrades

The following upgrades are available in this release:

- Upgraded to Flink 1.2.0
- Upgraded to Hbase 1.3.0
- Upgraded to Phoenix 4.9.0

Note

If you upgrade from an earlier version of Amazon EMR to Amazon EMR version 5.4.0 or later and use secondary indexing, upgrade local indexes as described in the Apache Phoenix documentation. Amazon EMR removes the required configurations from the `hbase-site` classification, but indexes need to be repopulated. Online and offline upgrade of indexes are supported. Online upgrades are the default, which means indexes are repopulated while initializing from Phoenix clients of version 4.8.0 or greater. To specify offline upgrades, set the `phoenix.client.localIndexUpgrade` configuration to false in the `phoenix-site` classification, and then SSH to the master node to run `psql [zookeeper] -1`.

- Upgraded to Presto 0.166
- Upgraded to Zeppelin 0.7.0

Changes and enhancements

The following are changes made to Amazon EMR releases for release label emr-5.4.0:

- Added support for r4 instances. See Amazon EC2 instance types.

Release 5.3.1

The following release notes include information for the Amazon EMR 5.3.1 release. Changes are relative to the Amazon EMR 5.3.0 release.

Release date: February 7, 2017

Minor changes to backport Zeppelin patches and update the default AMI for Amazon EMR.

Release 5.3.0

The following release notes include information for the Amazon EMR 5.3.0 release. Changes are relative to the Amazon EMR 5.2.1 release.

Release date: January 26, 2017

Upgrades

The following upgrades are available in this release:

- Upgraded to Hive 2.1.1
- Upgraded to Hue 3.11.0
- Upgraded to Spark 2.1.0
- Upgraded to Oozie 4.3.0
- Upgraded to Flink 1.1.4

Changes and enhancements

The following are changes made to Amazon EMR releases for release label emr-5.3.0:

- Added a patch to Hue that allows you to use the `interpreters_shown_on_wheel` setting to configure what interpreters to show first on the Notebook selection wheel, regardless of their ordering in the `hue.ini` file.
- Added the `hive-parquet-logging` configuration classification, which you can use to configure values in Hive's `parquet-logging.properties` file.

Release 5.2.2

The following release notes include information for the Amazon EMR 5.2.2 release. Changes are relative to the Amazon EMR 5.2.1 release.

Release date: May 2, 2017

Known issues resolved from the previous releases

- Backported SPARK-194459, which addresses an issue where reading from an ORC table with char/varchar columns can fail.

Release 5.2.1

The following release notes include information for the Amazon EMR 5.2.1 release. Changes are relative to the Amazon EMR 5.2.0 release.

Release date: December 29, 2016

Upgrades

The following upgrades are available in this release:

- Upgraded to Presto 0.157.1. For more information, see Presto release notes in the Presto documentation.
- Upgraded to Zookeeper 3.4.9. For more information, see ZooKeeper release notes in the Apache ZooKeeper documentation.

Changes and enhancements

The following are changes made to Amazon EMR releases for release label emr-5.2.1:

- Added support for the Amazon EC2 m4.16xlarge instance type in Amazon EMR version 4.8.3 and later, excluding 5.0.0, 5.0.3, and 5.2.0.
- Amazon EMR releases are now based on Amazon Linux 2016.09. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.09-release-notes/.
- The location of Flink and YARN configuration paths are now set by default in `/etc/default/flink` that you don't need to set the environment variables `FLINK_CONF_DIR` and `HADOOP_CONF_DIR` when running the `flink` or `yarn-session.sh` driver scripts to launch Flink jobs.
- Added support for FlinkKinesisConsumer class.

Known issues resolved from the previous releases

- Fixed an issue in Hadoop where the ReplicationMonitor thread could get stuck for a long time because of a race between replication and deletion of the same file in a large cluster.
- Fixed an issue where ControlledJob#toString failed with a null pointer exception (NPE) when job status was not successfully updated.

Release 5.2.0

The following release notes include information for the Amazon EMR 5.2.0 release. Changes are relative to the Amazon EMR 5.1.0 release.

Release date: November 21, 2016

Changes and enhancements

The following changes and enhancements are available in this release:

- Added Amazon S3 storage mode for HBase.
- Enables you to specify an Amazon S3 location for the HBase rootdir. For more information, see HBase on Amazon S3.

Upgrades

The following upgrades are available in this release:

- Upgraded to Spark 2.0.2

Known issues resolved from the previous releases

- Fixed an issue with /mnt being constrained to 2 TB on EBS-only instance types.
- Fixed an issue with instance-controller and logpusher logs being output to their corresponding .out files instead of to their normal log4j-configured .log files, which rotate hourly. The .out files don't rotate, so this would eventually fill up the /emr partition. This issue only affects hardware virtual machine (HVM) instance types.

Release 5.1.0

The following release notes include information for the Amazon EMR 5.1.0 release. Changes are relative to the Amazon EMR 5.0.0 release.

Release date: November 03, 2016

Changes and enhancements

The following changes and enhancements are available in this release:

- Added support for Flink 1.1.3.
- Presto has been added as an option in the notebook section of Hue.

Upgrades

The following upgrades are available in this release:

- Upgraded to HBase 1.2.3
- Upgraded to Zeppelin 0.6.2

Known issues resolved from the previous releases

- Fixed an issue with Tez queries on Amazon S3 with ORC files did not perform as well as earlier Amazon EMR 4.x versions.

Release 5.0.3

The following release notes include information for the Amazon EMR 5.0.3 release. Changes are relative to the Amazon EMR 5.0.0 release.

Release date: October 24, 2016

Upgrades

The following upgrades are available in this release:

- Upgraded to Hadoop 2.7.3
- Upgraded to Presto 0.152.3, which includes support for the Presto web interface. You can access the Presto web interface on the Presto coordinator using port 8889. For more information about the Presto web interface, see Web interface in the Presto documentation.
- Upgraded to Spark 2.0.1
- Amazon EMR releases are now based on Amazon Linux 2016.09. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.09-release-notes/.

Release 5.0.0

Release date: July 27, 2016

Upgrades

The following upgrades are available in this release:

- Upgraded to Hive 2.1
- Upgraded to Presto 0.150
- Upgraded to Spark 2.0
- Upgraded to Hue 3.10.0
- Upgraded to Pig 0.16.0
- Upgraded to Tez 0.8.4
- Upgraded to Zeppelin 0.6.1

Changes and enhancements

The following are changes made to Amazon EMR releases for release label emr-5.0.0 or greater:

- Amazon EMR supports the latest open-source versions of Hive (version 2.1) and Pig (version 0.16.0). If you have used Hive or Pig on Amazon EMR in the past, this may affect some use cases. For more information, see Hive and Pig.
- The default execution engine for Hive and Pig is now Tez. To change this, you would edit the appropriate values in the `hive-site` and `pig-properties` configuration classifications, respectively.
- An enhanced step debugging feature was added, which allows you to see the root cause of step failures if the service can determine the cause. For more information, see Enhanced step debugging in the Amazon EMR Management Guide.
- Applications that previously ended with "-Sandbox" no longer have that suffix. This may break your automation, for example, if you are using scripts to launch clusters with these applications. The following table shows application names in Amazon EMR 4.7.2 versus Amazon EMR 5.0.0.

  Application name changes

Amazon EMR 4.7.2	Amazon EMR 5.0.0
Oozie-Sandbox	Oozie
Presto-Sandbox	Presto
Sqoop-Sandbox	Sqoop
Zeppelin-Sandbox	Zeppelin

Amazon EMR 4.7.2	Amazon EMR 5.0.0
ZooKeeper-Sandbox	ZooKeeper

- Spark is now compiled for Scala 2.11.
- Java 8 is now the default JVM. All applications run using the Java 8 runtime. There are no changes to any application's byte code target. Most applications continue to target Java 7.
- Zeppelin now includes authentication features. For more information, see Zeppelin.
- Added support for security configurations, which allow you to create and apply encryption options more easily. For more information, see Data encryption.

Release 4.9.5

The following release notes include information for Amazon EMR release 4.9.5. Changes are relative to 4.9.4.

Initial release date: August 29, 2018

Changes, enhancements, and resolved issues

- HBase
  - This release addresses a potential security vulnerability.

Release 4.9.4

The following release notes include information for Amazon EMR release 4.9.4. Changes are relative to 4.9.3.

Initial release date: March 29, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address potential vulnerabilities.

Release 4.9.3

The following release notes include information for the Amazon EMR 4.9.3 release. Changes are relative to the Amazon EMR 4.9.2 release.

Initial release date: January 22, 2018

Changes, enhancements, and resolved issues

- Updated the Amazon Linux kernel of the defaultAmazon Linux AMI for Amazon EMR to address vulnerabilities associated with speculative execution (CVE-2017-5715, CVE-2017-5753, and CVE-2017-5754). For more information, see https://aws.amazon.com/security/security-bulletins/AWS-2018-013/.

Release 4.9.2

The following release notes include information for the Amazon EMR 4.9.2 release. Changes are relative to the Amazon EMR 4.9.1 release.

Release date: July 13, 2017

Minor changes, bug fixes, and enhancements were made in this release.

Release 4.9.1

The following release notes include information for the Amazon EMR 4.9.1 release. Changes are relative to the Amazon EMR 4.8.4 release.

Release date: April 10, 2017

Known issues resolved from the previous releases

- Backports of HIVE-9976 and HIVE-10106
- Fixed an issue in YARN where a large number of nodes (greater than 2,000) and containers (greater than 5,000) would cause an out of memory error, for example: `"Exception in thread 'main' java.lang.OutOfMemoryError"`.

Changes and enhancements

The following are changes made to Amazon EMR releases for release label emr-4.9.1:

- Amazon EMR releases are now based on Amazon Linux 2017.03. For more information, see https://aws.amazon.com/amazon-linux-ami/2017.03-release-notes/.
- Removed Python 2.6 from the Amazon EMR base Linux image. You can install Python 2.6 manually if necessary.

Release 4.8.4

The following release notes include information for the Amazon EMR 4.8.4 release. Changes are relative to the Amazon EMR 4.8.3 release.

Release date: Feb 7, 2017

Minor changes, bug fixes, and enhancements were made in this release.

Release 4.8.3

The following release notes include information for the Amazon EMR 4.8.3 release. Changes are relative to the Amazon EMR 4.8.2 release.

Release date: December 29, 2016

Upgrades

The following upgrades are available in this release:

- Upgraded to Presto 0.157.1. For more information, see Presto release notes in the Presto documentation.
- Upgraded to Spark 1.6.3. For more information, see Spark release notes in the Apache Spark documentation.
- Upgraded to ZooKeeper 3.4.9. For more information, see ZooKeeper release notes in the Apache ZooKeeper documentation.

Changes and enhancements

The following are changes made to Amazon EMR releases for release label emr-4.8.3:

- Added support for the Amazon EC2 m4.16xlarge instance type in Amazon EMR version 4.8.3 and later, excluding 5.0.0, 5.0.3, and 5.2.0.

- Amazon EMR releases are now based on Amazon Linux 2016.09. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.09-release-notes/.

Known issues resolved from the previous releases

- Fixed an issue in Hadoop where the ReplicationMonitor thread could get stuck for a long time because of a race between replication and deletion of the same file in a large cluster.
- Fixed an issue where ControlledJob#toString failed with a null pointer exception (NPE) when job status was not successfully updated.

Release 4.8.2

The following release notes include information for the Amazon EMR 4.8.2 release. Changes are relative to the Amazon EMR 4.8.0 release.

Release date: October 24, 2016

Upgrades

The following upgrades are available in this release:

- Upgraded to Hadoop 2.7.3
- Upgraded to Presto 0.152.3, which includes support for the Presto web interface. You can access the Presto web interface on the Presto coordinator using port 8889. For more information about the Presto web interface, see Web interface in the Presto documentation.
- Amazon EMR releases are now based on Amazon Linux 2016.09. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.09-release-notes/.

Release 4.8.0

Release date: September 7, 2016

Upgrades

The following upgrades are available in this release:

- Upgraded to HBase 1.2.2

- Upgraded to Presto-Sandbox 0.151
- Upgraded to Tez 0.8.4
- Upgraded to Zeppelin-Sandbox 0.6.1

Changes and enhancements

The following are changes made to Amazon EMR releases for release label emr-4.8.0:

- Fixed an issue in YARN where the ApplicationMaster would attempt to clean up containers that no longer exist because their instances have been terminated.
- Corrected the hive-server2 URL for Hive2 actions in the Oozie examples.
- Added support for additional Presto catalogs.
- Backported patches: HIVE-8948, HIVE-12679, HIVE-13405, PHOENIX-3116, HADOOP-12689
- Added support for security configurations, which allow you to create and apply encryption options more easily. For more information, see Data encryption.

Release 4.7.2

The following release notes include information for Amazon EMR 4.7.2.

Release date: July 15, 2016

Features

The following features are available in this release:

- Upgraded to Mahout 0.12.2
- Upgraded to Presto 0.148
- Upgraded to Spark 1.6.2
- You can now create an AWSCredentialsProvider for use with EMRFS using a URI as a parameter. For more information, see Create an AWSCredentialsProvider for EMRFS.
- EMRFS now allows users to configure a custom DynamoDB endpoint for their Consistent View metadata using the `fs.s3.consistent.dynamodb.endpoint` property in `emrfs-site.xml`.
- Added a script in `/usr/bin` called `spark-example`, which wraps `/usr/lib/spark/spark/bin/run-example` so you can run examples directly. For instance, to run the SparkPi example

that comes with the Spark distribution, you can run `spark-example SparkPi 100` from the command line or using `command-runner.jar` as a step in the API.

Known issues resolved from previous releases

- Fixed an issue where Oozie had the `spark-assembly.jar` was not in the correct location when Spark was also installed, which resulted in failure to launch Spark applications with Oozie.
- Fixed an issue with Spark Log4j-based logging in YARN containers.

Release 4.7.1

Release date: June 10, 2016

Known issues resolved from previous releases

- Fixed an issue that extended the startup time of clusters launched in a VPC with private subnets. The bug only impacted clusters launched with the Amazon EMR 4.7.0 release.
- Fixed an issue that improperly handled listing of files in Amazon EMR for clusters launched with the Amazon EMR 4.7.0 release.

Release 4.7.0

> **Important**
>
> Amazon EMR 4.7.0 is deprecated. Use Amazon EMR 4.7.1 or later instead.

Release date: June 2, 2016

Features

The following features are available in this release:

- Added Apache Phoenix 4.7.0
- Added Apache Tez 0.8.3
- Upgraded to HBase 1.2.1
- Upgraded to Mahout 0.12.0

- Upgraded to Presto 0.147
- Upgraded the AWS SDK for Java to 1.10.75
- The final flag was removed from the `mapreduce.cluster.local.dir` property in `mapred-site.xml` to allow users to run Pig in local mode.

Amazon Redshift JDBC drivers available on cluster

Amazon Redshift JDBC drivers are now included at `/usr/share/aws/redshift/jdbc`. `/usr/share/aws/redshift/jdbc/RedshiftJDBC41.jar` is the JDBC 4.1-compatible Amazon Redshift driver and `/usr/share/aws/redshift/jdbc/RedshiftJDBC4.jar` is the JDBC 4.0-compatible Amazon Redshift driver. For more information, see Configure a JDBC connection in the *Amazon Redshift Management Guide*.

Java 8

Except for Presto, OpenJDK 1.7 is the default JDK used for all applications. However, both OpenJDK 1.7 and 1.8 are installed. For information about how to set `JAVA_HOME` for applications, see Configuring applications to use Java 8.

Known issues resolved from previous releases

- Fixed a kernel issue that significantly affected performance on Throughput Optimized HDD (st1) EBS volumes for Amazon EMR in emr-4.6.0.
- Fixed an issue where a cluster would fail if any HDFS encryption zone were specified without choosing Hadoop as an application.
- Changed the default HDFS write policy from `RoundRobin` to `AvailableSpaceVolumeChoosingPolicy`. Some volumes were not properly utilized with the RoundRobin configuration, which resulted in failed core nodes and an unreliable HDFS.
- Fixed an issue with the EMRFS CLI, which would cause an exception when creating the default DynamoDB metadata table for consistent views.
- Fixed a deadlock issue in EMRFS that potentially occurred during multipart rename and copy operations.
- Fixed an issue with EMRFS that caused the CopyPart size default to be 5 MB. The default is now properly set at 128 MB.
- Fixed an issue with the Zeppelin upstart configuration that potentially prevented you from stopping the service.

- Fixed an issue with Spark and Zeppelin, which prevented you from using the `s3a://` URI scheme because `/usr/lib/hadoop/hadoop-aws.jar` was not properly loaded in their respective classpath.
- Backported HUE-2484.
- Backported a commit from Hue 3.9.0 (no JIRA exists) to fix an issue with the HBase browser sample.
- Backported HIVE-9073.

Release 4.6.0

Release date: April 21, 2016

Features

The following features are available in this release:

- Added HBase 1.2.0
- Added Zookeeper-Sandbox 3.4.8
- Upgraded to Presto-Sandbox 0.143
- Amazon EMR releases are now based on Amazon Linux 2016.03.0. For more information, see https://aws.amazon.com/amazon-linux-ami/2016.03-release-notes/.

Issue affecting Throughput Optimized HDD (st1) EBS volume types

An issue in the Linux kernel versions 4.2 and above significantly affects performance on Throughput Optimized HDD (st1) EBS volumes for EMR. This release (emr-4.6.0) uses kernel version 4.4.5 and hence is impacted. Therefore, we recommend not using emr-4.6.0 if you want to use st1 EBS volumes. You can use emr-4.5.0 or prior Amazon EMR releases with st1 without impact. In addition, we provide the fix with future releases.

Python defaults

Python 3.4 is now installed by default, but Python 2.7 remains the system default. You may configure Python 3.4 as the system default using either a bootstrap action; you can use the configuration API to set PYSPARK_PYTHON export to `/usr/bin/python3.4` in the `spark-env` classification to affect the Python version used by PySpark.

Java 8

Except for Presto, OpenJDK 1.7 is the default JDK used for all applications. However, both OpenJDK 1.7 and 1.8 are installed. For information about how to set JAVA_HOME for applications, see Configuring applications to use Java 8.

Known issues resolved from previous releases

- Fixed an issue where application provisioning would sometimes randomly fail due to a generated password.
- Previously, `mysqld` was installed on all nodes. Now, it is only installed on the master instance and only if the chosen application includes `mysql-server` as a component. Currently, the following applications include the `mysql-server` component: HCatalog, Hive, Hue, Presto-Sandbox, and Sqoop-Sandbox.
- Changed `yarn.scheduler.maximum-allocation-vcores` to 80 from the default of 32, which fixes an issue introduced in emr-4.4.0 that mainly occurs with Spark while using the `maximizeResourceAllocation` option in a cluster whose core instance type is one of a few large instance types that have the YARN vcores set higher than 32; namely c4.8xlarge, cc2.8xlarge, hs1.8xlarge, i2.8xlarge, m2.4xlarge, r3.8xlarge, d2.8xlarge, or m4.10xlarge were affected by this issue.
- s3-dist-cp now uses EMRFS for all Amazon S3 nominations and no longer stages to a temporary HDFS directory.
- Fixed an issue with exception handling for client-side encryption multipart uploads.
- Added an option to allow users to change the Amazon S3 storage class. By default this setting is `STANDARD`. The `emrfs-site` configuration classification setting is `fs.s3.storageClass` and the possible values are `STANDARD`, `STANDARD_IA`, and `REDUCED_REDUNDANCY`. For more information about storage classes, see Storage classes in the Amazon Simple Storage Service User Guide.

Release 4.5.0

Release date: April 4, 2016

Features

The following features are available in this release:

- Upgraded to Spark 1.6.1
- Upgraded to Hadoop 2.7.2
- Upgraded to Presto 0.140
- Added AWS KMS support for Amazon S3 server-side encryption.

Known issues resolved from previous releases

- Fixed an issue where MySQL and Apache servers would not start after a node was rebooted.
- Fixed an issue where IMPORT did not work correctly with non-partitioned tables stored in Amazon S3
- Fixed an issue with Presto where it requires the staging directory to be `/mnt/tmp` rather than `/tmp` when writing to Hive tables.

Release 4.4.0

Release date: March 14, 2016

Features

The following features are available in this release:

- Added HCatalog 1.0.0
- Added Sqoop-Sandbox 1.4.6
- Upgraded to Presto 0.136
- Upgraded to Zeppelin 0.5.6
- Upgraded to Mahout 0.11.1
- Enabled `dynamicResourceAllocation` by default.
- Added a table of all configuration classifications for the release. For more information, see the Configuration Classifications table in Configuring applications.

Known issues resolved from previous releases

- Fixed an issue where the `maximizeResourceAllocation` setting would not reserve enough memory for YARN ApplicationMaster daemons.

- Fixed an issue encountered with a custom DNS. If any entries in `resolve.conf` precede the custom entries provided, then the custom entries are not resolvable. This behavior was affected by clusters in a VPC where the default VPC name server is inserted as the top entry in `resolve.conf`.
- Fixed an issue where the default Python moved to version 2.7 and boto was not installed for that version.
- Fixed an issue where YARN containers and Spark applications would generate a unique Ganglia round robin database (rrd) file, which resulted in the first disk attached to the instance filling up. Because of this fix, YARN container level metrics have been disabled and Spark application level metrics have been disabled.
- Fixed an issue in log pusher where it would delete all empty log folders. The effect was that the Hive CLI was not able to log because log pusher was removing the empty `user` folder under `/var/log/hive`.
- Fixed an issue affecting Hive imports, which affected partitioning and resulted in an error during import.
- Fixed an issue where EMRFS and s3-dist-cp did not properly handle bucket names that contain periods.
- Changed a behavior in EMRFS so that in versioning-enabled buckets the `_$folder$` marker file is not continuously created, which may contribute to improved performance for versioning-enabled buckets.
- Changed the behavior in EMRFS such that it does not use instruction files except for cases where client-side encryption is enabled. If you want to delete instruction files while using client-side encryption, you can set the emrfs-site.xml property, `fs.s3.cse.cryptoStorageMode.deleteInstructionFiles.enabled`, to true.
- Changed YARN log aggregation to retain logs at the aggregation destination for two days. The default destination is your cluster's HDFS storage. If you want to change this duration, change the value of `yarn.log-aggregation.retain-seconds` using the `yarn-site` configuration classification when you create your cluster. As always, you can save your application logs to Amazon S3 using the `log-uri` parameter when you create your cluster.

Patches applied

The following patches from open source projects were included in this release:

- HIVE-9655

- HIVE-9183
- HADOOP-12810

Release 4.3.0

Release date: January 19, 2016

Features

The following features are available in this release:

- Upgraded to Hadoop 2.7.1
- Upgraded to Spark 1.6.0
- Upgraded Ganglia to 3.7.2
- Upgraded Presto to 0.130

Amazon EMR made some changes to `spark.dynamicAllocation.enabled` when it is set to true; it is false by default. When set to true, this affects the defaults set by the `maximizeResourceAllocation` setting:

- If `spark.dynamicAllocation.enabled` is set to true, `spark.executor.instances` is not set by `maximizeResourceAllocation`.
- The `spark.driver.memory` setting is now configured based on the instance types in the cluster in a similar way to how `spark.executors.memory` is set. However, because the Spark driver application may run on either the master or one of the core instances (for example, in YARN client and cluster modes, respectively), the `spark.driver.memory` setting is set based on the instance type of the smaller instance type between these two instance groups.
- The `spark.default.parallelism` setting is now set at twice the number of CPU cores available for YARN containers. In previous releases, this was half that value.
- The calculations for the memory overhead reserved for Spark YARN processes was adjusted to be more accurate, resulting in a small increase in the total amount of memory available to Spark (that is, `spark.executor.memory`).

Known issues resolved from the previous releases

- YARN log aggregation is now enabled by default.

- Fixed an issue where logs would not be pushed to a cluster's Amazon S3 logs bucket when YARN log aggregation was enabled.
- YARN container sizes now have a new minimum of 32 across all node types.
- Fixed an issue with Ganglia that caused excessive disk I/O on the master node in large clusters.
- Fixed an issue that prevented applications logs from being pushed to Amazon S3 when a cluster is shutting down.
- Fixed an issue in EMRFS CLI that caused certain commands to fail.
- Fixed an issue with Zeppelin that prevented dependencies from being loaded in the underlying SparkContext.
- Fixed an issue that resulted from issuing a resize attempting to add instances.
- Fixed an issue in Hive where CREATE TABLE AS SELECT makes excessive list calls to Amazon S3.
- Fixed an issue where large clusters would not provision properly when Hue, Oozie, and Ganglia are installed.
- Fixed an issue in s3-dist-cp where it would return a zero exit code even if it failed with an error.

Patches applied

The following patches from open source projects were included in this release:

- OOZIE-2402
- HIVE-12502
- HIVE-10631
- HIVE-12213
- HIVE-10559
- HIVE-12715
- HIVE-10685

Release 4.2.0

Release date: November 18, 2015

Features

The following features are available in this release:

- Added Ganglia support
- Upgraded to Spark 1.5.2
- Upgraded to Presto 0.125
- Upgraded Oozie to 4.2.0
- Upgraded Zeppelin to 0.5.5
- Upgraded the AWS SDK for Java to 1.10.27

Known issues resolved from the previous releases

- Fixed an issue with the EMRFS CLI where it did not use the default metadata table name.
- Fixed an issue encountered when using ORC-backed tables in Amazon S3.
- Fixed an issue encountered with a Python version mismatch in the Spark configuration.
- Fixed an issue when a YARN node status fails to report because of DNS issues for clusters in a VPC.
- Fixed an issue encountered when YARN decommissioned nodes, resulting in hanged applications or the inability to schedule new applications.
- Fixed an issue encountered when clusters terminated with status TIMED_OUT_STARTING.
- Fixed an issue encountered when including the EMRFS Scala dependency in other builds. The Scala dependency has been removed.

Configure applications

To override the default configurations for an application, you can supply a configuration object. You can either use a shorthand syntax to provide the configuration, or you can reference the configuration object in a JSON file. Configuration objects consist of a classification, properties, and optional nested configurations. Properties correspond to the application settings you want to change. You can specify multiple classifications for multiple applications in a single JSON object.

> **Warning**
>
> Amazon EMR Describe and List API operations emit custom and configurable settings, which are used as a part of Amazon EMR job flows, in plaintext. To provide sensitive information, such as passwords, in these settings, see Store sensitive configuration data in AWS Secrets Manager.

The configuration classifications that are available vary by Amazon EMR release version. For a list of configuration classifications that are supported in a particular release version, refer to the page for that release version under About Amazon EMR Releases.

The following is example JSON file for a list of configurations.

```
[
  {
    "Classification": "core-site",
    "Properties": {
      "hadoop.security.groups.cache.secs": "250"
    }
  },
  {
    "Classification": "mapred-site",
    "Properties": {
      "mapred.tasktracker.map.tasks.maximum": "2",
      "mapreduce.map.sort.spill.percent": "0.90",
      "mapreduce.tasktracker.reduce.tasks.maximum": "5"
    }
  }
]
```

A configuration classification often maps to an application-specific configuration file. For example, the `hive-site` classification maps to settings in the `hive-site.xml` configuration file for Hive. An exception to this is the no longer supported bootstrap action `configure-daemons`, which is used to set environment parameters such as `--namenode-heap-size`. Options like this are subsumed into the `hadoop-env` and `yarn-env` classifications with their own nested export classifications. If any classification ends in `env`, use the export sub-classification.

Another exception is `s3get`, which is used to place a customer `EncryptionMaterialsProvider` object on each node in a cluster for use in client-side encryption. An option was added to the `emrfs-site` classification for this purpose.

The following is an example of the `hadoop-env` classification.

```
[
  {
    "Classification": "hadoop-env",
    "Properties": {

    },
    "Configurations": [
      {
        "Classification": "export",
        "Properties": {
          "HADOOP_DATANODE_HEAPSIZE": "2048",
          "HADOOP_NAMENODE_OPTS": "-XX:GCTimeRatio=19"
        },
        "Configurations": [

        ]
      }
    ]
  }
]
```

The following is an example of the yarn-env classification.

```
[
  {
    "Classification": "yarn-env",
    "Properties": {
```

```
    },
    "Configurations": [
      {
        "Classification": "export",
        "Properties": {
          "YARN_RESOURCEMANAGER_OPTS": "-Xdebug -Xrunjdwp:transport=dt_socket"
        },
        "Configurations": [

        ]
      }
    ]
  }
]
```

The following settings do not belong to a configuration file but are used by Amazon EMR to potentially configure multiple settings on your behalf.

Settings curated by Amazon EMR

Application	Release label classification	Valid properties	When to use
Spark	`spark`	`maximizeResourceAllocation`	Configure executors to utilize the maximum resources of each node.

Topics

- Configure applications when you create a cluster
- Reconfigure an instance group in a running cluster
- Store sensitive configuration data in AWS Secrets Manager
- Configure applications to use a specific Java Virtual Machine

Configure applications when you create a cluster

When you create a cluster, you can override the default configurations for applications using the Amazon EMR console, the AWS Command Line Interface (AWS CLI), or the AWS SDK.

To override the default configuration for an application, you specify custom values in a configuration classification. A configuration classification corresponds to a configuration XML file for an application, such as `hive-site.xml`.

Configuration classifications vary by Amazon EMR release version. For a list of configuration classifications that are available in a specific release version, see the release detail page. For example, [Amazon EMR release 6.4.0.](#)

Supply a configuration in the console when you create a cluster

To supply a configuration, navigate to the **Create cluster** page and expand **Software settings**. You can then enter the configuration directly by using either JSON or a shorthand syntax demonstrated in shadow text in the console. Otherwise, you can provide an Amazon S3 URI for a file with a JSON `Configurations` object.

To supply a configuration for an instance group, choose a cluster in your list of clusters, then choose the **Configurations** tab. In the **Instance group configurations** table, choose the instance group to edit, then choose **Reconfigure**.

Supply a configuration using the AWS CLI when you create a cluster

You can provide a configuration to **create-cluster** by supplying a path to a JSON file stored locally or in Amazon S3. The following example assumes that you are using default roles for Amazon EMR and that the roles have been created. If you need to create the roles, run `aws emr create-default-roles` first.

If your configuration is in your local directory, you can use the following example command.

```
aws emr create-cluster --use-default-roles --release-label emr-7.2.0 --applications
 Name=Hive \
--instance-type m5.xlarge --instance-count 3 --configurations file://./
configurations.json
```

If your configuration is in an Amazon S3 path, you'll need to set up the following workaround before passing the Amazon S3 path to the `create-cluster` command.

```
#!/bin/sh
# Assume the ConfigurationS3Path is not public, and its present in the same AWS account
 as the EMR cluster
ConfigurationS3Path="s3://my-bucket/config.json"
# Get a presigned HTTP URL for the s3Path
```

```
ConfigurationURL=`aws s3 presign $ConfigurationS3Path --expires-in 300`
# Fetch the presigned URL, and minify the JSON so that it spans only a single line
Configurations=`curl $ConfigurationURL | jq -c .`
aws emr create-cluster --use-default-roles --release-label emr-5.34.0 --instance-type
 m5.xlarge --instance-count 2 --applications Name=Hadoop Name=Spark --configurations
 $Configurations
```

Supply a configuration using the Java SDK when you create a cluster

The following program excerpt shows how to supply a configuration using the AWS SDK for Java.

```
Application hive = new Application().withName("Hive");

Map<String,String> hiveProperties = new HashMap<String,String>();
 hiveProperties.put("hive.join.emit.interval","1000");
 hiveProperties.put("hive.merge.mapfiles","true");

Configuration myHiveConfig = new Configuration()
 .withClassification("hive-site")
 .withProperties(hiveProperties);

RunJobFlowRequest request = new RunJobFlowRequest()
 .withName("Create cluster with ReleaseLabel")
 .withReleaseLabel("emr-5.20.0")
 .withApplications(hive)
 .withConfigurations(myHiveConfig)
 .withServiceRole("EMR_DefaultRole")
 .withJobFlowRole("EMR_EC2_DefaultRole")
 .withInstances(new JobFlowInstancesConfig()
  .withEc2KeyName("myEc2Key")
  .withInstanceCount(3)
  .withKeepJobFlowAliveWhenNoSteps(true)
  .withMasterInstanceType("m4.large")
  .withSlaveInstanceType("m4.large")
 );
```

Reconfigure an instance group in a running cluster

With Amazon EMR version 5.21.0 and later, you can reconfigure cluster applications and specify additional configuration classifications for each instance group in a running cluster. To do so, you can use the Amazon EMR console, the AWS Command Line Interface (AWS CLI), or the AWS SDK.

When you update an application configuration for an instance group in the new Amazon EMR console, the console attempts to merge the new configuration with the existing configuration to create a new, active configuration. In the unusual case where Amazon EMR can't merge the configuration, the console alerts you.

After you submit a reconfiguration request for an instance group, Amazon EMR assigns a version number to the new configuration specification. You can track the version number of a configuration, or the state of an instance group, by viewing the CloudWatch events. For more information, see Monitor CloudWatch Events.

> **Note**
>
> You can only override, and not delete, cluster configurations that were specified during cluster creation. If there are differences between the existing configuration and the file that you supply, Amazon EMR resets manually modified configurations, such as configurations that you have modified while connected to your cluster using SSH, to the cluster defaults for the specified instance group.

Considerations when you reconfigure an instance group

Reconfiguration actions

When you submit a reconfiguration request using the Amazon EMR console, the AWS Command Line Interface (AWS CLI), or the AWS SDK, Amazon EMR checks the existing on-cluster configuration file. If there are differences between the existing configuration and the file that you supply, Amazon EMR initiates reconfiguration actions, restarts some applications, and resets any manually modified configurations, such as configurations that you have modified while connected to your cluster using SSH, to the cluster defaults for the specified instance group.

> **Note**
>
> Amazon EMR performs some default actions during every instance group reconfiguration. These default actions might conflict with cluster customizations that you have made, and result in reconfiguration failures. For information about how to troubleshoot reconfiguration failures, see Troubleshoot instance group reconfiguration.

Amazon EMR also initiates reconfiguration actions for the configuration classifications that you specify in your request. For a complete list of these actions, see the Configuration Classifications section for the version of Amazon EMR that you use. For example, 6.2.0 Configuration Classifications.

> **Note**
>
> The Amazon EMR Release Guide only lists reconfiguration actions starting with Amazon EMR versions 5.32.0 and 6.2.0.

Service disruption

Amazon EMR follows a rolling process to reconfigure instances in the Task and Core instance groups. Only 10 percent of the instances in an instance group are modified and restarted at a time. This process takes longer to finish but reduces the chance of potential application failure in a running cluster.

To run YARN jobs during a YARN restart, you can either create an Amazon EMR cluster with multiple master nodes or set `yarn.resourcemanager.recovery.enabled` to `true` in your `yarn-site` configuration classification. For more information about using multiple master nodes, see High availability YARN ResourceManager.

Application validation

Amazon EMR checks that each application on the cluster is running after the reconfiguration restart process. If any application is unavailable, the overall reconfiguration operation fails. If a reconfiguration operation fails, Amazon EMR reverses the configuration parameters to the previous working version.

> **Note**
>
> To avoid reconfiguration failure, we recommend that you only install applications on your cluster that you plan to use. We also recommend that you make sure all cluster applications are healthy and running before you submit a reconfiguration request.

Types of reconfiguration

You can reconfigure an instance group in one of two ways:

- **Overwrite**. Default reconfiguration method and the only one available in Amazon EMR releases earlier than 5.35.0 and 6.6.0. This reconfiguration method indiscriminately overwrites any on-cluster files with the newly submitted configuration set. The method erases any changes to configuration files made outside the reconfiguration API.
- **Merge**. Reconfiguration method supported for Amazon EMR releases 5.35.0 and 6.6.0 and later, except from the Amazon EMR console, where no version supports it. This reconfiguration method merges the newly submitted configurations with configurations that already exist on the cluster. This option only adds or modifies the new configurations that you submit. It preserves existing configurations.

> **Note**
>
> Amazon EMR continues to overwrite some essential Hadoop configurations that it needs to ensure that the service is running correctly.

Limitations

When you reconfigure an instance group in a running cluster, consider the following limitations:

- Non-YARN applications can fail during restart or cause cluster issues, especially if the applications aren't configured properly. Clusters approaching maximum memory and CPU usage may run into issues after the restart process. This is especially true for the master instance group.
- You can't submit a reconfiguration request when an instance group is being resized. If a reconfiguration is initiated while an instance group is resizing, reconfiguration cannot start until the instance group has completed resizing, and vice versa.
- After reconfiguring an instance group, Amazon EMR restarts the applications to allow the new configurations to take effect. Job failure or other unexpected application behavior might occur if the applications are in use during reconfiguration.
- If a reconfiguration for an instance group fails, Amazon EMR reverses the configuration parameters to the previous working version. If the reversion process fails too, you must submit a new `ModifyInstanceGroup` request to recover the instance group from the `SUSPENDED` state.
- Reconfiguration requests for Phoenix configuration classifications are only supported in Amazon EMR version 5.23.0 and later, and are not supported in Amazon EMR version 5.21.0 or 5.22.0.
- Reconfiguration requests for HBase configuration classifications are only supported in Amazon EMR version 5.30.0 and later, and are not supported in Amazon EMR versions 5.23.0 through 5.29.0.

- Amazon EMR supports application reconfiguration requests on an Amazon EMR cluster with multiple primary nodes only in Amazon EMR versions 5.27.0 and later.
- Reconfiguring `hdfs-encryption-zones` classification or any of the Hadoop KMS configuration classifications is not supported on an Amazon EMR cluster with multiple primary nodes.
- Amazon EMR currently doesn't support certain reconfiguration requests for the capacity scheduler that require restarting the YARN ResourceManager. For example, you cannot completely remove a queue.

Reconfigure an instance group in the console

Note

The Amazon EMR console does not support **Merge** type reconfigurations.

1. Open the Amazon EMR console at https://console.aws.amazon.com/emr
2. In the cluster list under **Name**, choose the active cluster that you want to reconfigure.
3. Open the cluster details page for the cluster, and go to the **Configurations** tab.
4. In the **Filter** drop-down list, select the instance group that you want to reconfigure.
5. In the **Reconfigure** drop-down menu, choose either **Edit in table** or **Edit in JSON file**.
   - **Edit in table** - In the configuration classification table, edit the property and value for existing configurations, or choose **Add configuration** to supply additional configuration classifications.
   - **Edit in JSON file** - Enter the configuration directly in JSON, or use shorthand syntax (demonstrated in shadow text). Otherwise, provide an Amazon S3 URI for a file with a JSON `Configurations` object.

   Note

   The **Source** column in the configuration classification table indicates whether the configuration is supplied when you create a cluster, or when you specify additional configurations for this instance group. You can edit the configurations for an instance group from both sources. You cannot delete initial cluster configurations, but you can override them for an instance group.

You can also add or edit nested configuration classifications directly in the table. For example, to supply an additional `export` sub-classification of `hadoop-env`, add a `hadoop.export` configuration classification in the table. Then, provide a specific property and value for this classification.

6. (Optional) Select **Apply this configuration to all active instance groups**.
7. Save the changes.

Reconfigure an instance group using the CLI

Use the **modify-instance-groups** command to specify a new configuration for an instance group in a running cluster.

> **Note**
>
> In the following examples, replace *<j-2AL4XXXXXX5T9>* with your cluster ID, and replace *<ig-1xxxxxxx9>* with your instance group ID.

Example – Replace a configuration for an instance group

The following example references a configuration JSON file called `instanceGroups.json` to edit the property of the YARN NodeManager disk health checker for an instance group.

1. Prepare your configuration classification, and save it as `instanceGroups.json` in the same directory where you will run the command.

```
[
   {
      "InstanceGroupId":"<ig-1xxxxxxx9>",
      "Configurations":[
         {
            "Classification":"yarn-site",
            "Properties":{
               "yarn.nodemanager.disk-health-checker.enable":"true",
               "yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-
percentage":"100.0"
            },
```

```
            "Configurations":[]
         }
      ]
   }
]
```

2. Run the following command.

```
aws emr modify-instance-groups --cluster-id <j-2AL4XXXXXX5T9> \
--instance-groups file://instanceGroups.json
```

Example – Add a configuration to an instance group

If you want to add a configuration to an instance group, you must include all previously specified configurations for that instance group in your new `ModifyInstanceGroup` request. Otherwise, the previously specified configurations are removed.

The following example adds a property for the YARN NodeManager virtual memory checker. The configuration also includes previously specified values for the YARN NodeManager disk health checker so that the values won't be overwritten.

1. Prepare the following contents in `instanceGroups.json` and save it in the same directory where you will run the command.

```
[
   {
      "InstanceGroupId":"<ig-1xxxxxxx9>",
      "Configurations":[
         {
            "Classification":"yarn-site",
            "Properties":{
               "yarn.nodemanager.disk-health-checker.enable":"true",
               "yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-
percentage":"100.0",
               "yarn.nodemanager.vmem-check-enabled":"true",
               "yarn.nodemanager.vmem-pmem-ratio":"3.0"
            },
            "Configurations":[]
         }
```

```
        ]
    }
]
```

2. Run the following command.

```
aws emr modify-instance-groups --cluster-id <j-2AL4XXXXXX5T9> \
--instance-groups file://instanceGroups.json
```

Example – Add a configuration to an instance group with Merge type reconfiguration

When you want to use the default **Overwrite** reconfiguration method to add a configuration, you must include all previously specified configurations for that instance group in your new `ModifyInstanceGroup` request. Otherwise, the **Overwrite** removes the configurations that you previously specified. You don't need to do this with **Merge** reconfiguration. Instead, you must ensure that your request only includes the new configurations are included.

The following example adds a property for the YARN NodeManager virtual memory checker. Because this is a **Merge** type reconfiguration, it does not overwrite previously specified values for the YARN NodeManager disk health checker.

1. Prepare the following contents in `instanceGroups.json` and save it in the same directory where you will run the command.

```
[
   {"InstanceGroupId":"<ig-1xxxxxxx9>",
    "ReconfigurationType" :"MERGE",
      "Configurations":[
         {"Classification":"yarn-site",
            "Properties":{
               "yarn.nodemanager.vmem-check-enabled":"true",
               "yarn.nodemanager.vmem-pmem-ratio":"3.0"
            },
            "Configurations":[]
         }
      ]
   }
]
```

2. Run the following command.

```
aws emr modify-instance-groups --cluster-id <j-2AL4XXXXXX5T9> \
--instance-groups file://instanceGroups.json
```

Example – Delete a configuration for an instance group

To delete a configuration for an instance group, submit a new reconfiguration request that excludes the previous configuration.

> **Note**
>
> You can only override the initial *cluster* configuration. You cannot delete it.

For example, to delete the configuration for the YARN NodeManager disk health checker from the previous example, submit a new `instanceGroups.json` with the following contents.

```
[
   {
      "InstanceGroupId":"<ig-1xxxxxxx9>",
      "Configurations":[
         {
            "Classification":"yarn-site",
            "Properties":{
               "yarn.nodemanager.vmem-check-enabled":"true",
               "yarn.nodemanager.vmem-pmem-ratio":"3.0"
            },
            "Configurations":[]
         }
      ]
   }
]
```

Note

To delete all of the configurations in your last reconfiguration request, submit a reconfiguration request with an empty array of configurations. For example,

```
[
   {
      "InstanceGroupId":"<ig-1xxxxxxx9>",
      "Configurations":[]
   }
]
```

Example – Reconfigure and resize an instance group in one request

The following example JSON demonstrates how to reconfigure and resize an instance group in the same request.

```
[
   {
      "InstanceGroupId":"<ig-1xxxxxxx9>",
      "InstanceCount":5,
      "EC2InstanceIdsToTerminate":["i-123"],
      "ForceShutdown":true,
      "ShrinkPolicy":{
         "DecommissionTimeout":10,
         "InstanceResizePolicy":{
            "InstancesToTerminate":["i-123"],
            "InstancesToProtect":["i-345"],
            "InstanceTerminationTimeout":20
         }
      },
      "Configurations":[
         {
            "Classification":"yarn-site",
            "Configurations":[],
            "Properties":{
               "yarn.nodemanager.disk-health-checker.enable":"true",
               "yarn.nodemanager.disk-health-checker.max-disk-utilization-per-disk-
percentage":"100.0"
            }
```

```
        }
      ]
    }
]
```

Reconfigure an instance group using the Java SDK

Note

In the following examples, replace *<j-2AL4XXXXXX5T9>* with your cluster ID, and replace *<ig-1xxxxxxx9>* with your instance group ID.

The following code snippet provides a new configuration for an instance group using the AWS SDK for Java.

```
AWSCredentials credentials = new BasicAWSCredentials("access-key", "secret-key");
AmazonElasticMapReduce emr = new AmazonElasticMapReduceClient(credentials);

Map<String,String> hiveProperties = new HashMap<String,String>();
hiveProperties.put("hive.join.emit.interval","1000");
hiveProperties.put("hive.merge.mapfiles","true");

Configuration configuration = new Configuration()
    .withClassification("hive-site")
    .withProperties(hiveProperties);

InstanceGroupModifyConfig igConfig = new InstanceGroupModifyConfig()
    .withInstanceGroupId("<ig-1xxxxxxx9>")
    .withReconfigurationType("MERGE");
    .withConfigurations(configuration);

ModifyInstanceGroupsRequest migRequest = new ModifyInstanceGroupsRequest()
    .withClusterId("<j-2AL4XXXXXX5T9>")
    .withInstanceGroups(igConfig);

emr.modifyInstanceGroups(migRequest);
```

The following code snippet deletes a previously specified configuration for an instance group by supplying an empty array of configurations.

```
List<Configuration> configurations = new ArrayList<Configuration>();

InstanceGroupModifyConfig igConfig = new InstanceGroupModifyConfig()
    .withInstanceGroupId("<ig-1xxxxxxx9>")
    .withConfigurations(configurations);

ModifyInstanceGroupsRequest migRequest = new ModifyInstanceGroupsRequest()
    .withClusterId("<j-2AL4XXXXXX5T9>")
    .withInstanceGroups(igConfig);

emr.modifyInstanceGroups(migRequest);
```

Troubleshoot instance group reconfiguration

If the reconfiguration process for an instance group fails, Amazon EMR reverts the reconfiguration and logs a failure message using an Amazon CloudWatch event. The event provides a brief summary of the reconfiguration failure. It lists the instances for which reconfiguration has failed and corresponding failure messages. The following is an example failure message.

```
The reconfiguration operation for instance group ig-1xxxxxxx9 in Amazon EMR
 cluster j-2AL4XXXXXX5T9 (ExampleClusterName)
failed at 2021-01-01 00:00 UTC and took 2 minutes to fail. Failed configuration version
 is example12345.
Failure message: Instance i-xxxxxxx1, i-xxxxxxx2, i-xxxxxxx3 failed with message "This
 is an example failure message".
```

To gather more data about a reconfiguration failure, you can check the node provisioning logs. Doing so is particularly useful when you receive a message like the following.

```
i-xxxxxxx1 failed with message “Unable to complete transaction and some changes were
 applied.”
```

On the node

To access node provisioning logs by connecting to a node

1. Use SSH to connect to the node on which reconfiguration has failed. For instructions, see Connect to your Linux instance in the *Amazon EC2 User Guide for Linux Instances*.
2. Navigate to the following directory, which contains the node provisioning log files.

```
/mnt/var/log/provision-node/
```

3. Open the `reports` subdirectory and search for the node provisioning report for your reconfiguration. The `reports` directory organizes logs by reconfiguration version number, universally unique identifier (UUID), Amazon EC2 instance IP address, and timestamp. Each report is a compressed YAML file that contains detailed information about the reconfiguration process.

   The following is an example report file name and path.

```
/reports/2/ca598xxx-cxxx-4xxx-bxxx-6dbxxxxxxxxx/ip-10-73-xxx-
xxx.ec2.internal/202104061715.yaml.gz
```

4. You can examine a report using a file viewer like `zless`, as in the following example.

```
zless 202104061715.yaml.gz
```

Amazon S3

To access node provisioning logs using Amazon S3

1. Sign in to the AWS Management Console and open the Amazon S3 console at https://console.aws.amazon.com/s3/.
2. Open the Amazon S3 bucket that you specified when you configured the cluster to archive log files.
3. Navigate to the following folder, which contains the node provisioning log files:

```
DOC-EXAMPLE-BUCKET/elasticmapreduce/<cluster id>/node/<instance id>/provision-
node/
```

4. Open the `reports` folder and search for the node provisioning report for your reconfiguration. The `reports` folder organizes logs by reconfiguration version number, universally unique identifier (UUID), Amazon EC2 instance IP address, and timestamp. Each report is a compressed YAML file that contains detailed information about the reconfiguration process.

   The following is an example report file name and path.

   ```
   /reports/2/ca598xxx-cxxx-4xxx-bxxx-6dbxxxxxxxxx/ip-10-73-xxx-
   xxx.ec2.internal/202104061715.yaml.gz
   ```

5. To view a log file, you can download it from Amazon S3 to your local machine as a text file. For instructions, see Downloading an object.

Each log file contains a detailed provisioning report for the associated reconfiguration. To find error message information, you can search for the `err` log level of a report. Report format depends on the version of Amazon EMR on your cluster.

The following example shows error information for Amazon EMR release versions earlier than 5.32.0 and 6.2.0.

```
- !ruby/object:Puppet::Util::Log
      level: !ruby/sym err
      tags:
        - err
      message: "Example detailed error message."
      source: Puppet
      time: 2021-01-01 00:00:00.000000 +00:00
```

Amazon EMR release versions 5.32.0 and 6.2.0 and later use the following format instead.

```
- level: err
  message: 'Example detailed error message.'
  source: Puppet
  tags:
  - err
  time: '2021-01-01 00:00:00.000000 +00:00'
  file:
  line:
```

Store sensitive configuration data in AWS Secrets Manager

The Amazon EMR describe and list API operations that emit custom configuration data (such as `DescribeCluster` and `ListInstanceGroups`) do so in plaintext. Amazon EMR integrates with AWS Secrets Manager so that you can store your data in Secrets Manager and use the secret ARN in your configurations. This way, you don't pass sensitive configuration data to Amazon EMR in plaintext and expose it to external APIs. If you indicate that a key-value pair contains an ARN for a secret stored in Secrets Manager, Amazon EMR retrieves this secret when it sends configuration data to the cluster. Amazon EMR doesn't send the annotation when it uses external APIs to display the configuration.

Create a secret

To create a secret, follow the steps in Create an AWS Secrets Manager secret in the *AWS Secrets Manager User Guide*. In **Step 3**, you must choose the **Plaintext** field to enter your sensitive value.

Note that while Secrets Manager allows a secret to contain up to 65536 bytes, Amazon EMR limits the combined length of the property key (excluding the annotation) and the retrieved secret value to 1024 characters.

Grant Amazon EMR access to retrieve the secret

Amazon EMR uses an IAM service role to provision and manage clusters for you. The service role for Amazon EMR defines the allowable actions for Amazon EMR when it provisions resources and performs service-level tasks that aren't performed in the context of an Amazon EC2 instance running within a cluster. For more information about service roles, see Service role for Amazon EMR (EMR role) and Customize IAM roles.

To allow Amazon EMR to retrieve the secret value from Secrets Manager, add the following policy statement to your Amazon EMR role when you launch your cluster.

```
{
   "Sid":"AllowSecretsRetrieval",
   "Effect":"Allow",
   "Action":"secretsmanager:GetSecretValue",
   "Resource":[
      "arn:aws:secretsmanager:<region>:<aws-account-id>:secret:<secret-name>"
   ]
}
```

If you create the secret with a customer-managed AWS KMS key, you must also add `kms:Decrypt` permission to the Amazon EMR role for the key that you use. For more information, see [Authentication and access control for AWS Secrets Manager](#) in the *AWS Secrets Manager User Guide*.

Use the secret in a configuration classification

You can add the `EMR.secret@` annotation to any configuration property to indicate that its key-value pair contains an ARN for a secret stored in Secrets Manager.

The following example shows how to provide a secret ARN in a configuration classification:

```
{
   "Classification":"core-site",
   "Properties":{
      "presto.s3.access-key":"<sensitive-access-key>",
      "EMR.secret@presto.s3.secret-key":"arn:aws:secretsmanager:<region>:<aws-account-id>:secret:<secret-name>"
   }
}
```

When you create your cluster and submit your annotated configuration, Amazon EMR validates the configuration properties. If your configuration is valid, Amazon EMR strips the annotation from the configuration and retrieves the secret from Secrets Manager to create the actual configuration before applying it to the cluster:

```
{
   "Classification":"core-site",
   "Properties":{
      "presto.s3.access-key":"<sensitive-access-key>",
      "presto.s3.secret-key":"<my-secret-key-retrieved-from-Secrets-Manager>"
   }
}
```

When you call an action like `DescribeCluster`, Amazon EMR returns the current application configuration on the cluster. If an application configuration property is marked as containing a secret ARN, then the application configuration returned by the `DescribeCluster` call contains the ARN and not the secret value. This ensures that the secret value is only visible on the cluster:

```
{
   "Classification":"core-site",
   "Properties":{
```

```
      "presto.s3.access-key":"<sensitive-access-key>",
      "presto.s3.secret-key":"arn:aws:secretsmanager:<region>:<aws-account-
id>:secret:<secret-name>"
    }
}
```

Update the secret value

Amazon EMR retrieves the secret value from an annotated configuration whenever the attached instance group is starting, reconfiguring, or resizing. You can use Secrets Manager to modify the value of a secret used in the configuration of a running cluster. When you do, you can submit a reconfiguration request to each instance group that you want to receive the updated value. For more information on how to reconfigure an instance group, and things to consider when you do it, see Reconfigure an instance group in a running cluster.

Configure applications to use a specific Java Virtual Machine

Amazon EMR releases have different default Java Virtual Machine (JVM) versions. This page explains the JVM support for different releases and applications.

Considerations

For information about the supported Java versions for applications, see the application pages in the Amazon EMR Release Guide.

- Amazon EMR only supports running one runtime version in a cluster, and doesn't support running different nodes or applications on different runtime versions on the same cluster.
- For Amazon EMR 7.x, the default Java Virtual Machine (JVM) is Java 17 for applications that support Java 17, with the exception of Apache Livy. For more information about the supported JDK versions for applications, see the corresponding release page in the Amazon EMR Release Guide.
- Starting with Amazon EMR 7.1.0, Flink supports and is set to Java 17 by default. To use a different version Java runtime, override the settings in `flink-conf`. For more information about configuring Flink to use Java 8 or Java 11, see Configure Flink to run with Java 11.
- For Amazon EMR 5.x and 6.x, the default Java Virtual Machine (JVM) is Java 8.
  - For Amazon EMR releases 6.12.0 and higher, some applications also support Java 11 and 17.
  - For Amazon EMR releases 6.9.0 and higher, Trino supports Java 17 as default. For more information about Java 17 with Trino, see Trino updates to Java 17 on the Trino blog.

Keep in mind the following application-specific considerations when you choose your runtime version:

Application-specific Java configuration notes

Application	Java configuration notes
Spark	To run Spark with a non-default Java version, you must configure both Spark and Hadoop. For examples, see [Override the JVM](#). • Configure `JAVA_HOME` in `spark-env` to update the Java runtime of primary instance processes. For example, spark-sub mit, spark-shell, and Spark History Server. • Modify the Hadoop configuration to update the Java runtime of the Spark executors and the YARN `ApplicationMaster`
Spark RAPIDS	You can run RAPIDS with the configured Java version for Spark.
Iceberg	You can run Iceberg with the configured Java version of the application that is using it.
Delta	You can run Delta with the configured Java version of the application that is using it.
Hudi	You can run Hudi with the configured Java version of the application that is using it.
Hadoop	To update the JVM for Hadoop, modify `hadoop-env` . For examples, see [Override the JVM](#).
Hive	To set the Java version to 11 or 17 for Hive, configure the Hadoop JVM setting to the Java version that you want to use.

Application	Java configuration notes
HBase	To update the JVM for HBase, modify hbase-env . By default, Amazon EMR sets the HBase JVM based on the JVM configuration for Hadoop unless you override the settings in hbase-env . For examples, see Override the JVM.
Flink	To update the JVM for Flink, modify flink-conf . By default, Amazon EMR sets the Flink JVM based on the JVM configuration for Hadoop unless you override the settings in flink-conf . For more information, see Configure Flink to run with Java 11.
Oozie	To configure Oozie to run on Java 11 or 17, configure Oozie Server, the Oozie LauncherAM Launcher AM, and change your client-side executable and job configurations. You can also configure EmbeddedOozieServer to run on Java 17. For more information, see Configure Java version for Oozie.
Pig	Pig only supports Java 8. You can't use Java 11 or 17 with Hadoop and run Pig on the same cluster.

Override the JVM

To override the JVM setting for an Amazon EMR release - for example, to use Java 17 with a cluster that uses Amazon EMR release 6.12.0 - supply the `JAVA_HOME` setting to its environment classification, which is *`application`*`-env` for all applications except Flink. For Flink, the environment classification is `flink-conf`. For steps to configure the Java runtime with Flink, see Configure Flink to run with Java 11.

Topics

- [Override the JVM setting with Apache Spark]
- [Override the JVM setting with Apache HBase]
- [Override the JVM setting with Apache Hadoop and Hive]

Override the JVM setting with Apache Spark

When you use Spark with Amazon EMR releases 6.12 and higher, if you write a driver for submission in cluster mode, the driver uses Java 8, but you can set the environment so that the executors use Java 11 or 17. And when you use Spark with Amazon EMR releases lower than 5.x, and you write a driver for submission in cluster mode, the driver uses Java 7. However, you can set the environment to ensure that the executors use Java 8.

To override the JVM for Spark, we recommend that you set both the Hadoop and Spark classifications.

```
{
"Classification": "hadoop-env",
        "Configurations": [
            {
"Classification": "export",
                "Configurations": [],
                "Properties": {
"JAVA_HOME": "/usr/lib/jvm/java-1.8.0"
                }
            }
        ],
        "Properties": {}
    },
    {
"Classification": "spark-env",
        "Configurations": [
            {
"Classification": "export",
                "Configurations": [],
                "Properties": {
"JAVA_HOME": "/usr/lib/jvm/java-1.8.0"
                }
            }
        ],
        "Properties": {}
```

```
    }
```

Override the JVM setting with Apache HBase

To configure HBase to use Java 11, you can set the following configuration when you launch the cluster.

```
[
  {
    "Classification": "hbase-env",
    "Configurations": [
      {
        "Classification": "export",
        "Configurations": [],
        "Properties": {
          "JAVA_HOME": "/usr/lib/jvm/jre-11"
        }
      }
    ],
    "Properties": {}
  }
]
```

Override the JVM setting with Apache Hadoop and Hive

The following example shows how to set the JVM to version 17 for Hadoop and Hive.

```
[
    {
        "Classification": "hadoop-env",
            "Configurations": [
                {
                    "Classification": "export",
                    "Configurations": [],
                    "Properties": {
                        "JAVA_HOME": "/usr/lib/jvm/jre-17"
                    }
                }
        ],
        "Properties": {}
    }
```

```
]
```

Service ports

The following are YARN and HDFS service ports. These settings reflect Hadoop defaults. Other application services are hosted at default ports unless otherwise documented. For more information, see the application's project documentation.

Port settings for YARN and HDFS

Setting	Hostname/Port
`fs.default.name`	default (`hdfs://`*`emrDeterminedIP`*`:8020`)
`dfs.datanode.address`	default (`0.0.0.0:50010`)
`dfs.datanode.http.address`	default (`0.0.0.0:50075`)
`dfs.datanode.https.address`	default (`0.0.0.0:50475`)
`dfs.datanode.ipc.address`	default (`0.0.0.0:50020`)
`dfs.http.address`	default (`0.0.0.0:50070`)
`dfs.https.address`	default (`0.0.0.0:50470`)
`dfs.secondary.http.address`	default (`0.0.0.0:50090`)
`yarn.nodemanager.address`	default (`${yarn.nodemanager.hostname}:0`)
`yarn.nodemanager.localizer.address`	default (`${yarn.nodemanager.hostname}:8040`)
`yarn.nodemanager.webapp.address`	default (`${yarn.nodemanager.hostname}:8042`)
`yarn.resourcemanager.address`	default (`${yarn.resourcemanager.hostname}:8032`)

Setting	Hostname/Port
yarn.resourcemanager.admin.address	default (${yarn.resourcemanager.hostname}:8033)
yarn.resourcemanager.resource-tracker.address	default (${yarn.resourcemanager.hostname}:8031)
yarn.resourcemanager.scheduler.address	default (${yarn.resourcemanager.hostname}:8030)
yarn.resourcemanager.webapp.address	default (${yarn.resourcemanager.hostname}:8088)
yarn.web-proxy.address	default (no-value)
yarn.resourcemanager.hostname	*emrDeterminedIP*

Note

The term *emrDeterminedIP* is an IP address that is generated by the Amazon EMR control plane. In the newer version, this convention has been removed, except for the yarn.resourcemanager.hostname and fs.default.name settings.

Application users

Applications run processes as their own user. For example, Hive JVMs run as user hive, MapReduce JVMs run as mapred, and so on. This is demonstrated in the following process status example.

```
USER       PID %CPU %MEM    VSZ   RSS TTY      STAT START   TIME COMMAND
hive      6452  0.2  0.7 853684 218520 ?       Sl   16:32   0:13 /usr/lib/jvm/
java-openjdk/bin/java -Xmx256m -Dhive.log.dir=/var/log/hive -Dhive.log.file=hive-
metastore.log -Dhive.log.threshold=INFO -Dhadoop.log.dir=/usr/lib/hadoop
hive      6557  0.2  0.6 849508 202396 ?       Sl   16:32   0:09 /usr/lib/jvm/java-
openjdk/bin/java -Xmx256m -Dhive.log.dir=/var/log/hive -Dhive.log.file=hive-server2.log
 -Dhive.log.threshold=INFO -Dhadoop.log.dir=/usr/lib/hadoop/l
```

```
hbase     6716  0.1  1.0 1755516 336600 ?      Sl   Jun21   2:20 /usr/lib/jvm/java-
openjdk/bin/java -Dproc_master -XX:OnOutOfMemoryError=kill -9 %p -Xmx1024m -ea -XX:
+UseConcMarkSweepGC -XX:+CMSIncrementalMode -Dhbase.log.dir=/var/
hbase     6871  0.0  0.7 1672196 237648 ?      Sl   Jun21   0:46 /usr/lib/jvm/java-
openjdk/bin/java -Dproc_thrift -XX:OnOutOfMemoryError=kill -9 %p -Xmx1024m -ea -XX:
+UseConcMarkSweepGC -XX:+CMSIncrementalMode -Dhbase.log.dir=/var/
hdfs      7491  0.4  1.0 1719476 309820 ?      Sl   16:32   0:22 /usr/lib/jvm/java-
openjdk/bin/java -Dproc_namenode -Xmx1000m -Dhadoop.log.dir=/var/log/hadoop-hdfs -
Dhadoop.log.file=hadoop-hdfs-namenode-ip-10-71-203-213.log -Dhadoo
yarn      8524  0.1  0.6 1626164 211300 ?      Sl   16:33   0:05 /usr/lib/jvm/java-
openjdk/bin/java -Dproc_proxyserver -Xmx1000m -Dhadoop.log.dir=/var/log/hadoop-yarn -

```

Checking dependencies using the Amazon EMR artifact repository

You can use the Amazon EMR artifact repository to build Apache Hive and Apache Hadoop job code against the exact versions of libraries and dependencies that are available with specific Amazon EMR release versions, beginning with Amazon EMR release version 5.18.0. Building against Amazon EMR artifacts in the repository helps avoid runtime class path issues by ensuring that the versions of the libraries that the job is built against are exactly the same versions provided at runtime on the cluster. Currently, Amazon EMR artifacts are only available for Maven builds.

To access the artifact repository, add the repository URL to your Maven settings file or to a specific project's `pom.xml` configuration file. You can then specify the dependencies in your project configuration. For dependency versions, use the version listed under *Component Versions* for the desired release on Amazon EMR 5.x release versions. For example, component versions for the most recent Amazon EMR release are available at the section called "5.36.2 component versions". If an artifact for your project is not listed under *Component Versions*, specify the version that is listed for Hive and Hadoop in that release. For example, for Hadoop components in Amazon EMR release version 5.18.0, the version is `2.8.4-amzn-1`.

The artifact repository URL has the following syntax:

```
https://s3-endpoint/region-ID-emr-artifacts/emr-release-label/repos/maven/
```

- *`s3-endpoint`* is the Amazon Simple Storage Service (Amazon S3) endpoint of the region for the repository and *`region-ID`* is the corresponding region. For example, `s3.us-west-1.amazonaws.com` and `us-west-1`. For more information, see Amazon S3 endpoints in the *Amazon Web Services General Reference*. There is no difference in artifacts between regions, so you can specify the most convenient region for your development environment.
- *`emr-release-label`* is the release label for the Amazon EMR cluster that will run your code. Release labels are in the form `emr-x.x.x`, such as, `emr-5.36.2`. An EMR release series may include multiple releases. For example, if you're using EMR release version 5.24.1, use the first EMR release label within the 5.24 series, `emr-5.24.0`, in the artifact repository URL:

```
https://s3-endpoint/region-ID-emr-artifacts/emr-5.24.0/repos/maven/
```

Example Configuration for Maven pom.xml

The pom.xml example below configures a Maven project to build against the emr-5.18.0 Apache Hadoop and Apache Hive artifacts, using the artifact repository in us-west-1. Snapshot versions are not available in the artifact repository, so snapshots are disabled in the pom.xml. Ellipses (`...`) in the example below indicate omission of other configuration parameters. Do not copy these into your Maven project.

```
<project>
 ...
 <repositories>
  ...
  <repository>
   <id>emr-5.18.0-artifacts</id>
   <name>EMR 5.18.0 Releases Repository</name>
   <releases>
    <enabled>true</enabled>
   </releases>
   <snapshots>
    <enabled>false</enabled>
   </snapshots>
   <url>https://s3.us-west-1.amazonaws.com/us-west-1-emr-artifacts/emr-5.18.0/repos/
maven/</url>
  </repository>
  ...
 </repositories>
 ...
 <dependencies>
  ...
  <dependency>
   <groupId>org.apache.hive</groupId>
   <artifactId>hive-exec</artifactId>
   <version>2.3.3-amzn-2</version>
  </dependency>
  <dependency>
   <groupId>org.apache.hadoop</groupId>
   <artifactId>hadoop-common</artifactId>
   <version>2.8.4-amzn-1</version>
  </dependency>
  ...
 </dependencies>
```

```
</project>
```

EMR File System (EMRFS)

The EMR File System (EMRFS) is an implementation of HDFS that all Amazon EMR clusters use for reading and writing regular files from Amazon EMR directly to Amazon S3. EMRFS provides the convenience of storing persistent data in Amazon S3 for use with Hadoop while also providing features like data encryption.

Data encryption allows you to encrypt objects that EMRFS writes to Amazon S3, and enables EMRFS to work with encrypted objects in Amazon S3. If you're using Amazon EMR release version 4.8.0 or later, you can use security configurations to set up encryption for EMRFS objects in Amazon S3, along with other encryption settings. For more information, see Encryption options. If you use an earlier release version of Amazon EMR, you can manually configure encryption settings. For more information, see Specifying Amazon S3 encryption using EMRFS properties.

Amazon S3 offers strong read-after write consistency for all GET, PUT, and LIST operations across all AWS Regions. This means that what you write using EMRFS is what you'll read from Amazon S3, with no impact on performance. For more information, see Amazon S3 data consistency model.

When using Amazon EMR release version 5.10.0 or later, you can use different IAM roles for EMRFS requests to Amazon S3 based on cluster users, groups, or the location of EMRFS data in Amazon S3. For more information, see Configure IAM roles for EMRFS requests to Amazon S3.

Warning

Before turning on speculative execution for Amazon EMR clusters running Apache Spark jobs, please review the following information.

EMRFS includes the EMRFS S3-optimized committer, an OutputCommitter implementation that is optimized for writing files to Amazon S3 when using EMRFS. If you turn on the Apache Spark speculative execution feature with applications that write data to Amazon S3 and do not use the EMRFS S3-optimized committer, you may encounter data correctness issues described in SPARK-10063. This can occur if you are using Amazon EMR versions earlier than Amazon EMR release 5.19, or if you are writing files to Amazon S3 with formats such as ORC and CSV. These formats aren't supported by the EMRFS S3-optimized committer. For a complete list of requirements for using the EMRFS S3-optimized committer, see Requirements for the EMRFS S3-optimized committer.

EMRFS direct write is typically used when the EMRFS S3-optimized committer is not supported, such as when writing the following:

- An output format other than Parquet, such as ORC or text.
- Hadoop files using the Spark RDD API.
- Parquet using Hive SerDe. See Hive metastore Parquet table conversion.

EMRFS direct write is not used in the following scenarios:

- When the EMRFS S3-optimized committer is enabled. See Requirements for the EMRFS S3-optimized committer.
- When writing dynamic partitions with partitionOverwriteMode set to dynamic.
- When writing to custom partition locations, such as locations that do not conform to the Hive default partition location convention.
- When using file systems other than EMRFS, such as writing to HDFS or using the S3A file system.

To determine whether your application uses direct write in Amazon EMR 5.14.0 or later, enable Spark INFO logging. If a log line containing the text "Direct Write: ENABLED" is present in either Spark driver logs or Spark executor container logs, then your Spark application wrote using direct write.
By default, speculative execution is turned OFF on Amazon EMRclusters. We highly recommend that you do not turn speculative execution on if both of these conditons are true:

- You are writing data to Amazon S3.
- Data is written in a format other than Apache Parquet or in Apache Parquet format not using the EMRFS S3-optimized committer.

If you turn on Spark speculative execution and write data to Amazon S3 using EMRFS direct write, you may experience intermittent data loss. When you write data to HDFS, or write data in Parquet using the EMRFS S3-optimized committer, Amazon EMR does not use direct write and this issue does not occur.
If you need to write data in formats that use EMRFS direct write from Spark to Amazon S3 and use speculative execution, we recommend writing to HDFS and then transferring output files to Amazon S3 using S3DistCP.

Topics

Consistent view

> **Warning**
>
> On June 1, 2023, EMRFS consistent view will reach end of standard support for future Amazon EMR releases. EMRFS consistent view will continue to work for existing releases.

With the release of Amazon S3 strong read-after-write consistency on December 1, 2020, you no longer need to use EMRFS consistent view (EMRFS CV) with your Amazon EMR clusters. EMRFS CV is an optional feature that allows Amazon EMR clusters to check for list and read-after-write consistency for Amazon S3 objects. When you create a cluster and EMRFS CV is turned on, Amazon EMR creates an Amazon DynamoDB database to store object metadata that it uses to track list and read-after-write consistency for S3 objects. You can now turn off EMRFS CV and delete the DynamoDB database that it uses so that you don't accrue additional costs. The following procedures explain how to check for the CV feature, turn it off, and delete the DynamoDB database that the feature uses.

To check if you're using the EMRFS CV feature

1. Navigate to the **Configuration** tab. If your cluster has the following configuration, it uses EMRFS CV.

   ```
   Classification=emrfs-site,Property=fs.s3.consistent,Value=true
   ```

2. Alternatively, use the AWS CLI to describe your cluster with the `describe-cluster` API. If the output contains `fs.s3.consistent: true`, your cluster uses EMRFS CV.

To turn off EMRFS CV on your Amazon EMR clusters

To turn off the EMRFS CV feature, use one of the following three options. You should test these options in your testing environment before applying them to your production environments.

1. **To stop your existing cluster and start a new cluster without EMRFS CV options.**

    a. Before you stop your cluster, ensure that you back up your data and notify your users.

    b. To stop your cluster, follow the instructions in Terminate a cluster.

    c. If you use the Amazon EMR console to create new cluster, navigate to **Advanced Options**. In the **Edit software settings** section, deselect the option to turn on EMRFS CV. If the check box for **EMRFS consistent view** is available, keep it unchecked.

    d. If you use AWS CLI to create a new cluster with the `create-cluster` API, don't use the `--emrfs` option, which turns on EMRFS CV.

    e. If you use an SDK or AWS CloudFormation to create a new cluster, don't use any of the configurations listed in Configure consistent view.

2. **To clone a cluster and remove EMRFS CV**

    a. In the Amazon EMR console, choose the cluster that uses EMRFS CV.

    b. At the top of the **Cluster Details** page, choose **Clone**.

    c. Choose **Previous** and navigate to **Step 1: Software and Steps**.

    d. In **Edit software settings**, remove EMRFS CV. In **Edit configuration**, delete the following configurations in the `emrfs-site` classification. If you're loading JSON from a S3 bucket, you must modify your S3 object.

```
[
 {"classification":
  "emrfs-site",
  "properties": {
   "fs.s3.consistent.retryPeriodSeconds":"10",
   "fs.s3.consistent":"true",
   "fs.s3.consistent.retryCount":"5",
   "fs.s3.consistent.metadata.tableName":"EmrFSMetadata"
  }
 }
]
```

3. **To remove EMRFS CV from a cluster that uses instance groups**

   a. Use the following command to check if a single EMR cluster uses the DynamoDB table that is associated with EMRFS CV, or if multiple clusters share the table. The table name is specified in `fs.s3.consistent.metadata.tableName`, as described in [Configure consistent view](). The default table name used by EMRFS CV is `EmrFSMetadata`.

```
aws emr describe-cluster --cluster-id j-XXXXX | grep
 fs.s3.consistent.metadata.tableName
```

   b. If your cluster doesn't share your DynamoDB database with another cluster, use the following command to reconfigure the cluster and deactivate EMRFS CV. For more information, see [Reconfigure an instance group in a running cluster]().

```
aws emr modify-instance-groups --cli-input-json file://disable-emrfs-1.json
```

   This command opens the file you want to modify. Modify the file with the following configurations.

```
{
 "ClusterId": "j-xxxx",
 "InstanceGroups": [
  {
   "InstanceGroupId": "ig-xxxx",
   "Configurations": [
    {
     "Classification": "emrfs-site",
     "Properties": {
      "fs.s3.consistent": "false"
     },
     "Configurations": []
    }
   ]
  }
 ]
}
```

   c. If your cluster shares the DynamoDB table with another cluster, turn off EMRFS CV on all clusters at a time when no clusters modify any objects in the shared S3 location.

To delete Amazon DynamoDB resources associated with EMRFS CV

After you remove EMRFS CV from your Amazon EMR clusters, delete the DynamoDB resources associated with EMRFS CV. Until you do so, you continue to incur DynamoDB charges associated with EMRFS CV.

1. Check the CloudWatch metrics for your DynamoDB table and confirm that the table isn't used by any clusters.
2. Delete the DynamoDB table.

```
aws dynamodb delete-table --table-name <your-table-name>
```

To delete Amazon SQS resources associated with EMRFS CV

1. If you configured your cluster to push inconsistency notifications to Amazon SQS, you can delete all SQS queues.
2. Find the Amazon SQS queue name specified in `fs.s3.consistent.notification.SQS.queueName`, as described in [Configure consistent view](). The default queue name format is `EMRFS-Inconsistency-`*`<j-cluster ID>`*.

```
aws sqs list-queues | grep 'EMRFS-Inconsistency'
aws sqs delete-queue -queue-url <your-queue-url>
```

To stop using the EMRFS CLI

- The [EMRFS CLI]() manages the metadata that EMRFS CV generates. As standard support for EMRFS CV reaches its end in future releases of Amazon EMR, support for the EMRFS CLI will also reach its end.

Topics

- Configure consistent view
- EMRFS CLI Command Reference

Enable consistent view

You can enable Amazon S3 server-side encryption or consistent view for EMRFS using the AWS Management Console, AWS CLI, or the `emrfs-site` configuration classification.

To configure consistent view using the console

1. Navigate to the new Amazon EMR console and select **Switch to the old console** from the side navigation. For more information on what to expect when you switch to the old console, see Using the old console.
2. Choose **Create cluster**, **Go to advanced options**.
3. Choose settings for **Step 1: Software and Steps** and **Step 2: Hardware**.
4. For **Step 3: General Cluster Settings**, under **Additional Options**, choose **EMRFS consistent view**.
5. For **EMRFS Metadata store**, type the name of your metadata store. The default value is **`EmrFSMetadata`**. If the EmrFSMetadata table does not exist, it is created for you in DynamoDB.

   > **Note**
   >
   > Amazon EMR does not automatically remove the EMRFS metadata from DynamoDB when the cluster is terminated.

6. For **Number of retries**, type an integer value. If an inconsistency is detected, EMRFS tries to call Amazon S3 this number of times. The default value is **5**.
7. For **Retry period (in seconds)**, type an integer value. This is the amount of time that EMRFS waits between retry attempts. The default value is **`10`**.

   > **Note**
   >
   > Subsequent retries use an exponential backoff.

To launch a cluster with consistent view enabled using the AWS CLI

We recommend that you install the current version of AWS CLI. To download the latest release, see https://aws.amazon.com/cli/.

- **Note**

  Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --instance-type m5.xlarge --instance-count 3 --emrfs
 Consistent=true \
--release-label emr-7.2.0 --ec2-attributes KeyName=myKey
```

To check if consistent view is enabled using the AWS Management Console

- To check whether consistent view is enabled in the console, navigate to the **Cluster List** and select your cluster name to view **Cluster Details**. The "EMRFS consistent view" field has a value of `Enabled` or `Disabled`.

To check if consistent view is enabled by examining the `emrfs-site.xml` file

- You can check if consistency is enabled by inspecting the `emrfs-site.xml` configuration file on the master node of the cluster. If the Boolean value for `fs.s3.consistent` is set to `true` then consistent view is enabled for file system operations involving Amazon S3.

Understanding how EMRFS consistent view tracks objects in Amazon S3

EMRFS creates a consistent view of objects in Amazon S3 by adding information about those objects to the EMRFS metadata. EMRFS adds these listings to its metadata when:

- An object written by EMRFS during the course of an Amazon EMR job.
- An object is synced with or imported to EMRFS metadata by using the EMRFS CLI.

Objects read by EMRFS are not automatically added to the metadata. When EMRFS deletes an object, a listing still remains in the metadata with a deleted state until that listing is purged using the EMRFS CLI. To learn more about the CLI, see EMRFS CLI Command Reference. For more information about purging listings in the EMRFS metadata, see EMRFS consistent view metadata.

For every Amazon S3 operation, EMRFS checks the metadata for information about the set of objects in consistent view. If EMRFS finds that Amazon S3 is inconsistent during one of these operations, it retries the operation according to parameters defined in `emrfs-site` configuration properties. After EMRFS exhausts the retries, it either throws a `ConsistencyException` or logs the exception and continue the workflow. For more information about retry logic, see Retry logic. You can find `ConsistencyExceptions` in your logs, for example:

- listStatus: No Amazon S3 object for metadata item `/S3_bucket/dir/object`
- getFileStatus: Key `dir/file` is present in metadata but not Amazon S3

If you delete an object directly from Amazon S3 that EMRFS consistent view tracks, EMRFS treats that object as inconsistent because it is still listed in the metadata as present in Amazon S3. If your metadata becomes out of sync with the objects EMRFS tracks in Amazon S3, you can use the **sync** sub-command of the EMRFS CLI to reset metadata so that it reflects Amazon S3. To discover discrepancies between metadata and Amazon S3, use the **diff**. Finally, EMRFS only has a consistent view of the objects referenced in the metadata; there can be other objects in the same Amazon S3 path that are not being tracked. When EMRFS lists the objects in an Amazon S3 path, it returns the superset of the objects being tracked in the metadata and those in that Amazon S3 path.

Retry logic

EMRFS tries to verify list consistency for objects tracked in its metadata for a specific number of retries. The default is 5. In the case where the number of retries is exceeded the originating job returns a failure unless `fs.s3.consistent.throwExceptionOnInconsistency` is set to `false`, where it will only log the objects tracked as inconsistent. EMRFS uses an exponential backoff retry policy by default but you can also set it to a fixed policy. Users may also want to retry for a certain period of time before proceeding with the rest of their job without throwing an exception. They can achieve this by setting `fs.s3.consistent.throwExceptionOnInconsistency` to `false`, `fs.s3.consistent.retryPolicyType` to `fixed`, and `fs.s3.consistent.retryPeriodSeconds` for the desired value. The following example creates a cluster with consistency enabled, which logs inconsistencies and sets a fixed retry interval of 10 seconds:

Example Setting retry period to a fixed amount

```
aws emr create-cluster --release-label emr-7.2.0 \
--instance-type m5.xlarge --instance-count 1 \
--emrfs Consistent=true,Args=[fs.s3.consistent.throwExceptionOnInconsistency=false,
 fs.s3.consistent.retryPolicyType=fixed,fs.s3.consistent.retryPeriodSeconds=10] --ec2-
attributes KeyName=myKey
```

> **Note**
>
> Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

For more information, see Consistent view.

EMRFS configurations for IMDS get region calls

EMRFS relies on the IMDS (instance metadata service) to get instance region and Amazon S3, DynamoDB, or AWS KMS endpoints. However, IMDS has a limit on how many requests it can handle, and requests that exceed that limit will fail. This IMDS limit can cause EMRFS failures to initialize and cause the query or command to fail. You can use the following randomized exponential backoff retry mechanism and a fallback region configuration properties in emrfs-site.xml to address the scenario where all retries fail.

```
<property>
    <name>fs.s3.region.retryCount</name>
    <value>3</value>
    <description>
    Maximum retries that would be attempted to get AWS region.
    </description>
</property>
<property>
    <name>fs.s3.region.retryPeriodSeconds</name>
    <value>3</value>
    <description>
    Base sleep time in second for each get-region retry.
```

```
    </description>
</property>
<property>
    <name>fs.s3.region.fallback</name>
    <value>us-east-1</value>
    <description>
    Fallback to this region after maximum retries for getting AWS region have been
 reached.
    </description>
</property>
```

EMRFS consistent view metadata

EMRFS consistent view tracks consistency using a DynamoDB table to track objects in Amazon S3 that have been synced with or created by EMRFS. The metadata is used to track all operations (read, write, update, and copy), and no actual content is stored in it. This metadata is used to validate whether the objects or metadata received from Amazon S3 matches what is expected. This confirmation gives EMRFS the ability to check list consistency and read-after-write consistency for new objects EMRFS writes to Amazon S3 or objects synced with EMRFS. Multiple clusters can share the same metadata.

How to add entries to metadata

You can use the `sync` or `import` subcommands to add entries to metadata. `sync` reflects the state of the Amazon S3 objects in a path, while `import` is used strictly to add new entries to the metadata. For more information, see EMRFS CLI Command Reference.

How to check differences between metadata and objects in Amazon S3

To check for differences between the metadata and Amazon S3, use the `diff` subcommand of the EMRFS CLI. For more information, see EMRFS CLI Command Reference.

How to know if metadata operations are being throttled

EMRFS sets default throughput capacity limits on the metadata for its read and write operations at 500 and 100 units, respectively. Large numbers of objects or buckets may cause operations to exceed this capacity, at which point DynamoDB will throttle operations. For example, an application may cause EMRFS to throw a `ProvisionedThroughputExceededException` if you perform an operation that exceeds these capacity limits. Upon throttling, the EMRFS CLI tool attempts to retry writing to the DynamoDB table using exponential backoff until the operation finishes or when it reaches the maximum retry value for writing objects from Amazon EMR to Amazon S3.

You can configure your own throughput capacity limits. However, DynamoDB has strict partition limits of 3000 read capacity units (RCUs) and 1000 write capacity units (WCUs) per second for read and write operations. To avoid `sync` failures caused by throttling, we recommend you limit throughput for read operations to fewer than 3000 RCUs and write operations to fewer than 1000 WCUs. For instructions on setting custom throughput capacity limits, see Configure consistent view.

You can also view Amazon CloudWatch metrics for your EMRFS metadata in the DynamoDB console where you can see the number of throttled read and write requests. If you do have a non-zero value for throttled requests, your application may potentially benefit from increasing allocated throughput capacity for read or write operations. You may also realize a performance benefit if you see that your operations are approaching the maximum allocated throughput capacity in reads or writes for an extended period of time.

Throughput characteristics for notable EMRFS operations

The default for read and write operations is 400 and 100 throughput capacity units, respectively. The following performance characteristics give you an idea of what throughput is required for certain operations. These tests were performed using a single-node `m3.large` cluster. All operations were single threaded. Performance differs greatly based on particular application characteristics and it may take experimentation to optimize file system operations.

Operation	Average read-per-second	Average write-per-second
create (object)	26.79	6.70
delete (object)	10.79	10.79
delete (directory containing 1000 objects)	21.79	338.40
getFileStatus (object)	34.70	0
getFileStatus (directory)	19.96	0

Operation	Average read-per-second	Average write-per-second
listStatus (directory containing 1 object)	43.31	0
listStatus (directory containing 10 objects)	44.34	0
listStatus (directory containing 100 objects)	84.44	0
listStatus (directory containing 1,000 objects)	308.81	0
listStatus (directory containing 10,000 objects)	416.05	0
listStatus (directory containing 100,000 objects)	823.56	0
listStatus (directory containing 1M objects)	882.36	0
mkdir (continuous for 120 seconds)	24.18	4.03
mkdir	12.59	0
rename (object)	19.53	4.88
rename (directory containing 1000 objects)	23.22	339.34

To submit a step that purges old data from your metadata store

Users may wish to remove particular entries in the DynamoDB-based metadata. This can help reduce storage costs associated with the table. Users have the ability to manually or programmatically purge particular entries by using the EMRFS CLI `delete` subcommand. However, if you delete entries from the metadata, EMRFS no longer makes any checks for consistency.

Programmatically purging after the completion of a job can be done by submitting a final step to your cluster, which executes a command on the EMRFS CLI. For instance, type the following command to submit a step to your cluster to delete all entries older than two days.

```
aws emr add-steps --cluster-id j-2AL4XXXXXX5T9 --steps Name="emrfsCLI",Jar="command-runner.jar",Args=["emrfs","delete","--time","2","--time-unit","days"]
{
    "StepIds": [
        "s-B12345678902"
    ]
}
```

Use the StepId value returned to check the logs for the result of the operation.

Configure consistency notifications for CloudWatch and Amazon SQS

You can enable CloudWatch metrics and Amazon SQS messages in EMRFS for Amazon S3 eventual consistency issues.

CloudWatch

When CloudWatch metrics are enabled, a metric named **Inconsistency** is pushed each time a `FileSystem` API call fails due to Amazon S3 eventual consistency.

To view CloudWatch metrics for Amazon S3 eventual consistency issues

To view the **Inconsistency** metric in the CloudWatch console, select the EMRFS metrics and then select a **JobFlowId/Metric Name** pair. For example: `j-162XXXXXXM2CU ListStatus`, `j-162XXXXXXM2CU GetFileStatus`, and so on.

1. Open the CloudWatch console at https://console.aws.amazon.com/cloudwatch/.
2. In the **Dashboard**, in the **Metrics** section, choose **EMRFS**.
3. In the **Job Flow Metrics** pane, select one or more **JobFlowId/Metric Name** pairs. A graphical representation of the metrics appears in the window below.

Amazon SQS

When Amazon SQS notifications are enabled, an Amazon SQS queue with the name `EMRFS-Inconsistency-<jobFlowId>` is created when EMRFS is initialized. Amazon SQS messages are pushed into the queue when a `FileSystem` API call fails due to Amazon S3 eventual consistency. The message contains information such as JobFlowId, API, a list of inconsistent paths, a stack trace, and so on. Messages can be read using the Amazon SQS console or using the EMRFS `read-sqs` command.

To manage Amazon SQS messages for Amazon S3 eventual consistency issues

Amazon SQS messages for Amazon S3 eventual consistency issues can be read using the EMRFS CLI. To read messages from an EMRFS Amazon SQS queue, type the `read-sqs` command and specify an output location on the master node's local file system for the resulting output file.

You can also delete an EMRFS Amazon SQS queue using the `delete-sqs` command.

1. To read messages from an Amazon SQS queue, type the following command. Replace *`queuename`* with the name of the Amazon SQS queue that you configured and replace *`/path/filename`* with the path to the output file:

   ```
   emrfs read-sqs --queue-name queuename --output-file /path/filename
   ```

   For example, to read and output Amazon SQS messages from the default queue, type:

   ```
   emrfs read-sqs --queue-name EMRFS-Inconsistency-j-162XXXXXXM2CU --output-file /
   path/filename
   ```

   Note

   You can also use the `-q` and `-o` shortcuts instead of `--queue-name` and `--output-file` respectively.

2. To delete an Amazon SQS queue, type the following command:

   ```
   emrfs delete-sqs --queue-name queuename
   ```

   For example, to delete the default queue, type:

   ```
   emrfs delete-sqs --queue-name EMRFS-Inconsistency-j-162XXXXXXM2CU
   ```

> **Note**
>
> You can also use the `-q` shortcut instead of `--queue-name`.

Configure consistent view

You can configure additional settings for consistent view by providing them using configuration properties for `emrfs-site` properties. For example, you can choose a different default DynamoDB throughput by supplying the following arguments to the CLI `--emrfs` option, using the emrfs-site configuration classification (Amazon EMR release version 4.x and later only), or a bootstrap action to configure the emrfs-site.xml file on the master node:

Example Changing default metadata read and write values at cluster launch

```
aws emr create-cluster --release-label emr-7.2.0 --instance-type m5.xlarge \
--emrfs Consistent=true,Args=[fs.s3.consistent.metadata.read.capacity=600,\
fs.s3.consistent.metadata.write.capacity=300] --ec2-attributes KeyName=myKey
```

Alternatively, use the following configuration file and save it locally or in Amazon S3:

```
[
    {
      "Classification": "emrfs-site",
      "Properties": {
        "fs.s3.consistent.metadata.read.capacity": "600",
        "fs.s3.consistent.metadata.write.capacity": "300"
      }
    }
 ]
```

Use the configuration you created with the following syntax:

```
aws emr create-cluster --release-label emr-7.2.0 --applications Name=Hive \
--instance-type m5.xlarge --instance-count 2 --configurations file://./myConfig.json
```

Note

Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

The following options can be set using configurations or AWS CLI `--emrfs` arguments. For information about those arguments, see the AWS CLI Command Reference.

`emrfs-site.xml` Properties for consistent view

Property	Default value	Description
`fs.s3.consistent`	**`false`**	When set to **`true`**, this property configures EMRFS to use DynamoDB to provide consistency.
`fs.s3.consistent.retryPolicyType`	**`exponential`**	This property identifies the policy to use when retrying for consistency issues. Options include: exponential, fixed, or none.
`fs.s3.consistent.retryPeriodSeconds`	**`1`**	This property sets the length of time to wait between consistency retry attempts.
`fs.s3.consistent.retryCount`	**`10`**	This property sets the maximum number of retries when inconsistency is detected.
`fs.s3.consistent.throwExceptionOnInconsistency`	**`true`**	This property determines whether to throw or log a consistency exception. When set to **`true`**, a `ConsistencyException` is thrown.

Property	Default value	Description
fs.s3.consistent.metadata.autoCreate	**true**	When set to **true**, this property enables automatic creation of metadata tables.
fs.s3.consistent.metadata.etag.verification.enabled	**true**	With Amazon EMR 5.29.0, this property is enabled by default. When enabled, EMRFS uses S3 ETags to verify that objects being read are the latest available version. This feature is helpful for read-after-update use cases in which files on S3 are being overwritten while retaining the same name. This ETag verification capability currently does not work with S3 Select.
fs.s3.consistent.metadata.tableName	**EmrFSMetadata**	This property specifies the name of the metadata table in DynamoDB.
fs.s3.consistent.metadata.read.capacity	**500**	This property specifies the DynamoDB read capacity to provision when the metadata table is created.
fs.s3.consistent.metadata.write.capacity	**100**	This property specifies the DynamoDB write capacity to provision when the metadata table is created.

Property	Default value	Description
fs.s3.consistent.fastList	**true**	When set to **true**, this property uses multiple threads to list a directory (when necessary). Consistency must be enabled in order to use this property.
fs.s3.consistent.fastList.prefetchMetadata	**false**	When set to **true**, this property enables metadata prefetching for directories containing more than 20,000 items.
fs.s3.consistent.notification.CloudWatch	**false**	When set to **true**, CloudWatch metrics are enabled for FileSystem API calls that fail due to Amazon S3 eventual consistency issues.
fs.s3.consistent.notification.SQS	**false**	When set to **true**, eventual consistency notifications are pushed to an Amazon SQS queue.
fs.s3.consistent.notification.SQS.queueName	**EMRFS-Inconsistency-<jobFlowId>**	Changing this property allows you to specify your own SQS queue name for messages regarding Amazon S3 eventual consistency issues.

Property	Default value	Description
`fs.s3.consistent.notification.SQS.customMsg`	**none**	This property allows you to specify custom information included in SQS messages regarding Amazon S3 eventual consistency issues. If a value is not specified for this property, the corresponding field in the message is empty.
`fs.s3.consistent.dynamodb.endpoint`	**none**	This property allows you to specify a custom DynamoDB endpoint for your consistent view metadata.
`fs.s3.useRequesterPaysHeader`	**`false`**	When set to **`true`**, this property allows Amazon S3 requests to buckets with the request payer option enabled.

EMRFS CLI Command Reference

The EMRFS CLI is installed by default on all cluster master nodes created using Amazon EMR release version 3.2.1 or later. You can use the EMRFS CLI to manage the metadata for consistent view.

> **Note**
>
> The **emrfs** command is only supported with VT100 terminal emulation. However, it may work with other terminal emulator modes.

emrfs top-level command

The **emrfs** top-level command supports the following structure.

```
emrfs [describe-metadata | set-metadata-capacity | delete-metadata | create-metadata |
 \
list-metadata-stores | diff | delete | sync | import ] [options] [arguments]
```

Specify [options], with or without [arguments] as described in the following table. For [options] specific to sub-commands (`describe-metadata`, `set-metadata-capacity`, etc.), see each sub-command below.

[Options] for emrfs

Option	Description	Required
`-a` *AWS_ACCESS_KEY_ID* | `--access-key` *AWS_ACCESS_KEY_ID*	The AWS access key you use to write objects to Amazon S3 and to create or access a metadata store in DynamoDB. By default, *AWS_ACCESS_KEY_ID* is set to the access key used to create the cluster.	No
`-s` *AWS_SECRET_ACCESS_KEY* | `--secret-key` *AWS_SECRET_ACCESS_KEY*	The AWS secret key associated with the access key you use to write objects to Amazon S3 and to create or access a metadata store in DynamoDB. By default, *AWS_SECRET_ACCESS_KEY* is set to the secret key associated with the access key used to create the cluster.	No
`-v` | `--verbose`	Makes output verbose.	No
`-h` | `--help`	Displays the help message for the `emrfs` command with a usage statement.	No

emrfs describe-metadata sub-command

[Options] for emrfs describe-metadata

Option	Description	Required

Option	Description	Required
-m *METADATA_NAME* | --metadata-name *METADATA_NAME*	*METADATA_NAME* is the name of the DynamoDB metadata table. If the *METADATA_NAME* argument is not supplied, the default value is `EmrFSMetadata`.	No

Example emrfs describe-metadata example

The following example describes the default metadata table.

```
$ emrfs describe-metadata
EmrFSMetadata
  read-capacity: 400
  write-capacity: 100
  status: ACTIVE
  approximate-item-count (6 hour delay): 12
```

emrfs set-metadata-capacity sub-command

[Options] for emrfs set-metadata-capacity

Option	Description	Required
-m *METADATA_NAME* | --metadata-name *METADATA_NAME*	*METADATA_NAME* is the name of the DynamoDB metadata table. If the *METADATA_NAME* argument is not supplied, the default value is `EmrFSMetadata`.	No
-r *READ_CAPACITY* | --read-capacity *READ_CAPACITY*	The requested read throughput capacity for the metadata table. If the *READ_CAPACITY* argument is not supplied, the default value is `400`.	No
-w *WRITE_CAPACITY* | --write-capacity *WRITE_CAPACITY*	The requested write throughput capacity for the metadata table. If the *WRITE_CAPACITY* argument is not supplied, the default value is `100`.	No

Example emrfs set-metadata-capacity example

The following example sets the read throughput capacity to 600 and the write capacity to 150 for a metadata table named EmrMetadataAlt.

```
$ emrfs set-metadata-capacity --metadata-name EmrMetadataAlt  --read-capacity 600 --
write-capacity 150
  read-capacity: 400
  write-capacity: 100
  status: UPDATING
  approximate-item-count (6 hour delay): 0
```

emrfs delete-metadata sub-command

[Options] for emrfs delete-metadata

Option	Description	Required
-m *METADATA_NAME* | --metadata-name *METADATA_NAME*	*METADATA_NAME* is the name of the DynamoDB metadata table. If the *METADATA_NAME* argument is not supplied, the default value is EmrFSMetadata .	No

Example emrfs delete-metadata example

The following example deletes the default metadata table.

```
$ emrfs delete-metadata
```

emrfs create-metadata sub-command

[Options] for emrfs create-metadata

Option	Description	Required
-m *METADATA_NAME* | --metadata-name *METADATA_NAME*	*METADATA_NAME* is the name of the DynamoDB metadata table. If the *METADATA_NAME* argument is not supplied, the default value is EmrFSMetadata .	No

Option	Description	Required
`-r READ_CAPACITY` | `--read-capacity READ_CAPACITY`	The requested read throughput capacity for the metadata table. If the *READ_CAPACITY* argument is not supplied, the default value is `400`.	No
`-w WRITE_CAPACITY` | `--write-capacity WRITE_CAPACITY`	The requested write throughput capacity for the metadata table. If the *WRITE_CAPACITY* argument is not supplied, the default value is `100`.	No

Example emrfs create-metadata example

The following example creates a metadata table named `EmrFSMetadataAlt`.

```
$ emrfs create-metadata -m EmrFSMetadataAlt
Creating metadata: EmrFSMetadataAlt
EmrFSMetadataAlt
  read-capacity: 400
  write-capacity: 100
  status: ACTIVE
  approximate-item-count (6 hour delay): 0
```

emrfs list-metadata-stores sub-command

The **emrfs list-metadata-stores** sub-command has no [options].

Example List-metadata-stores example

The following example lists your metadata tables.

```
$ emrfs list-metadata-stores
  EmrFSMetadata
```

emrfs diff sub-command

[Options] for emrfs diff

Option	Description	Required

Option	Description	Required
-m *METADATA_NAME* | --metadata-name *METADATA_NAME*	*METADATA_NAME* is the name of the DynamoDB metadata table. If the *METADATA_NAME* argument is not supplied, the default value is EmrFSMetadata .	No
s3://s3Path	The path to the Amazon S3 bucket to compare with the metadata table. Buckets sync recursively.	Yes

Example emrfs diff example

The following example compares the default metadata table to an Amazon S3 bucket.

```
$ emrfs diff s3://elasticmapreduce/samples/cloudfront
BOTH | MANIFEST ONLY | S3 ONLY
DIR elasticmapreduce/samples/cloudfront
DIR elasticmapreduce/samples/cloudfront/code/
DIR elasticmapreduce/samples/cloudfront/input/
DIR elasticmapreduce/samples/cloudfront/logprocessor.jar
DIR elasticmapreduce/samples/cloudfront/input/XABCD12345678.2009-05-05-14.WxYz1234
DIR elasticmapreduce/samples/cloudfront/input/XABCD12345678.2009-05-05-15.WxYz1234
DIR elasticmapreduce/samples/cloudfront/input/XABCD12345678.2009-05-05-16.WxYz1234
DIR elasticmapreduce/samples/cloudfront/input/XABCD12345678.2009-05-05-17.WxYz1234
DIR elasticmapreduce/samples/cloudfront/input/XABCD12345678.2009-05-05-18.WxYz1234
DIR elasticmapreduce/samples/cloudfront/input/XABCD12345678.2009-05-05-19.WxYz1234
DIR elasticmapreduce/samples/cloudfront/input/XABCD12345678.2009-05-05-20.WxYz1234
DIR elasticmapreduce/samples/cloudfront/code/cloudfront-loganalyzer.tgz
```

emrfs delete sub-command

[Options] for emrfs delete

Option	Description	Required
-m *METADATA_NAME* | --metadata-name *METADATA_NAME*	*METADATA_NAME* is the name of the DynamoDB metadata table. If the *METADATA_NAME*	No

Option	Description	Required
	argument is not supplied, the default value is `EmrFSMetadata` .	
s3://s3Path	The path to the Amazon S3 bucket you are tracking for consistent view. Buckets sync recursively.	Yes
`-t` *TIME* | `--time` *TIME*	The expiration time (interpreted using the time unit argument). All metadata entries older than the *TIME* argument are deleted for the specified bucket.	
`-u` *UNIT* | `--time-unit` *UNIT*	The measure used to interpret the time argument (nanoseconds, microseconds, milliseconds, seconds, minutes, hours, or days). If no argument is specified, the default value is `days`.	
`--read-consumption` *READ_CONSUMPTION*	The requested amount of available read throughput used for the **delete** operation. If the *READ_CONSUMPTION* argument is not specified, the default value is `400`.	No
`--write-consumption` *WRITE_CONSUMPTION*	The requested amount of available write throughput used for the **delete** operation. If the *WRITE_CONSUMPTION* argument is not specified, the default value is `100`.	No

Example emrfs delete example

The following example removes all objects in an Amazon S3 bucket from the tracking metadata for consistent view.

```
$ emrfs delete s3://elasticmapreduce/samples/cloudfront
entries deleted: 11
```

emrfs import sub-command

[Options] for emrfs import

Option	Description	Required
-m *METADATA_NAME* | --metadata-name *METADATA_NAME*	*METADATA_NAME* is the name of the DynamoDB metadata table. If the *METADATA_NAME* argument is not supplied, the default value is EmrFSMetadata .	No
s3://s3Path	The path to the Amazon S3 bucket you are tracking for consistent view. Buckets sync recursive ly.	Yes
--read-consumption *READ_CONSUMPTION*	The requested amount of available read throughpu t used for the **delete** operation. If the *READ_CONS UMPTION* argument is not specified, the default value is 400.	No
--write-consumption *WRITE_CONSUMPTION*	The requested amount of available write throughput used for the **delete** operation. If the *WRITE_CONSUMPTION* argument is not specified , the default value is 100.	No

Example emrfs import example

The following example imports all objects in an Amazon S3 bucket with the tracking metadata for consistent view. All unknown keys are ignored.

```
$ emrfs import s3://elasticmapreduce/samples/cloudfront
```

emrfs sync sub-command

[Options] for emrfs sync

Option	Description	Required
-m *METADATA_NAME* | --metadata-name *METADATA_NAME*	*METADATA_NAME* is the name of the DynamoDB metadata table. If the *METADATA_NAME* argument is not supplied, the default value is EmrFSMetadata .	No
s3://s3Path	The path to the Amazon S3 bucket you are tracking for consistent view. Buckets sync recursively.	Yes
--read-consumption *READ_CONSUMPTION*	The requested amount of available read throughput used for the **delete** operation. If the *READ_CONSUMPTION* argument is not specified, the default value is 400.	No
--write-consumption *WRITE_CONSUMPTION*	The requested amount of available write throughput used for the **delete** operation. If the *WRITE_CONSUMPTION* argument is not specified, the default value is 100.	No

Example emrfs sync command example

The following example imports all objects in an Amazon S3 bucket with the tracking metadata for consistent view. All unknown keys are deleted.

```
$ emrfs sync s3://elasticmapreduce/samples/cloudfront
Synching samples/cloudfront                                       0 added | 0 updated |
 0 removed | 0 unchanged
Synching samples/cloudfront/code/                                 1 added | 0 updated |
 0 removed | 0 unchanged
Synching samples/cloudfront/                                      2 added | 0 updated |
 0 removed | 0 unchanged
```

```
Synching samples/cloudfront/input/                                9 added | 0 updated |
 0 removed | 0 unchanged
Done synching s3://elasticmapreduce/samples/cloudfront            9 added | 0 updated |
 1 removed | 0 unchanged
creating 3 folder key(s)
folders written: 3
```

emrfs read-sqs sub-command

[Options] for emrfs read-sqs

Option	Description	Required
-q *QUEUE_NAME* | --queue-name *QUEUE_NAME*	*QUEUE_NAME* is the name of the Amazon SQS queue configured in `emrfs-site.xml`. The default value is **`EMRFS-Inconsistency-<jobFlowId>`**.	Yes
-o *OUTPUT_FILE* | --output-file *OUTPUT_FILE*	*OUTPUT_FILE* is the path to the output file on the master node's local file system. Messages read from the queue are written to this file.	Yes

emrfs delete-sqs sub-command

[Options] for emrfs delete-sqs

Option	Description	Required
-q *QUEUE_NAME* | --queue-name *QUEUE_NAME*	*QUEUE_NAME* is the name of the Amazon SQS queue configured in `emrfs-site.xml`. The default value is **`EMRFS-Inconsistency-<jobFlowId>`**.	Yes

Submitting EMRFS CLI commands as steps

The following example shows how to use the `emrfs` utility on the master node by leveraging the AWS CLI or API and the `command-runner.jar` to run the `emrfs` command as a step. The example uses the AWS SDK for Python (Boto3) to add a step to a cluster which adds objects in an Amazon S3 bucket to the default EMRFS metadata table.

```
import boto3
from botocore.exceptions import ClientError

def add_emrfs_step(command, bucket_url, cluster_id, emr_client):
    """
    Add an EMRFS command as a job flow step to an existing cluster.

    :param command: The EMRFS command to run.
    :param bucket_url: The URL of a bucket that contains tracking metadata.
    :param cluster_id: The ID of the cluster to update.
    :param emr_client: The Boto3 Amazon EMR client object.
    :return: The ID of the added job flow step. Status can be tracked by calling
             the emr_client.describe_step() function.
    """
    job_flow_step = {
        "Name": "Example EMRFS Command Step",
        "ActionOnFailure": "CONTINUE",
        "HadoopJarStep": {
            "Jar": "command-runner.jar",
            "Args": ["/usr/bin/emrfs", command, bucket_url],
        },
    }

    try:
        response = emr_client.add_job_flow_steps(
            JobFlowId=cluster_id, Steps=[job_flow_step]
        )
        step_id = response["StepIds"][0]
        print(f"Added step {step_id} to cluster {cluster_id}.")
    except ClientError:
        print(f"Couldn't add a step to cluster {cluster_id}.")
        raise
    else:
        return step_id

def usage_demo():
    emr_client = boto3.client("emr")
    # Assumes the first waiting cluster has EMRFS enabled and has created metadata
```

```
    # with the default name of 'EmrFSMetadata'.
    cluster = emr_client.list_clusters(ClusterStates=["WAITING"])["Clusters"][0]
    add_emrfs_step(
        "sync", "s3://elasticmapreduce/samples/cloudfront", cluster["Id"], emr_client
    )

if __name__ == "__main__":
    usage_demo()
```

You can use the `step_id` value returned to check the logs for the result of the operation.

Authorizing access to EMRFS data in Amazon S3

By default, the EMR role for EC2 determines the permissions for accessing EMRFS data in Amazon S3. The IAM policies that are attached to this role apply regardless of the user or group making the request through EMRFS. The default is `EMR_EC2_DefaultRole`. For more information, see Service role for cluster EC2 instances (EC2 instance profile).

Beginning with Amazon EMR release version 5.10.0, you can use a security configuration to specify IAM roles for EMRFS. This allows you to customize permissions for EMRFS requests to Amazon S3 for clusters that have multiple users. You can specify different IAM roles for different users and groups, and for different Amazon S3 bucket locations based on the prefix in Amazon S3. When EMRFS makes a request to Amazon S3 that matches users, groups, or the locations that you specify, the cluster uses the corresponding role that you specify instead of the EMR role for EC2. For more information, see Configure IAM roles for EMRFS requests to Amazon S3.

Alternatively, if your Amazon EMR solution has demands beyond what IAM roles for EMRFS provides, you can define a custom credentials provider class, which allows you to customize access to EMRFS data in Amazon S3.

Creating a custom credentials provider for EMRFS data in Amazon S3

To create a custom credentials provider, you implement the AWSCredentialsProvider and the Hadoop Configurable classes.

For a detailed explanation of this approach, see Securely analyze data from another AWS account with EMRFS in the AWS Big Data blog. The blog post includes a tutorial that walks you through the process end-to-end, from creating IAM roles to launching the cluster. It also provides a Java code example that implements the custom credential provider class.

The basic steps are as follows:

To specify a custom credentials provider

1. Create a custom credentials provider class compiled as a JAR file.
2. Run a script as a bootstrap action to copy the custom credentials provider JAR file to the `/usr/share/aws/emr/emrfs/auxlib` location on the cluster's master node. For more information about bootstrap actions, see [(Optional) Create bootstrap actions to install additional software](#).
3. Customize the `emrfs-site` classification to specify the class that you implement in the JAR file. For more information about specifying configuration objects to customize applications, see [Configuring applications](#) in the *Amazon EMR Release Guide*.

   The following example demonstrates a `create-cluster` command that launches a Hive cluster with common configuration parameters, and also includes:

   - A bootstrap action that runs the script, *`copy_jar_file.sh`*, which is saved to *`mybucket`* in Amazon S3.
   - An `emrfs-site` classification that specifies a custom credentials provider defined in the JAR file as *`MyCustomCredentialsProvider`*

> **Note**
>
> Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --applications Name=Hive \
--bootstrap-actions '[{"Path":"s3://mybucket/copy_jar_file.sh","Name":"Custom
 action"}]' \
--ec2-attributes '{"KeyName":"MyKeyPair","InstanceProfile":"EMR_EC2_DefaultRole",\
"SubnetId":"subnet-xxxxxxxx","EmrManagedSlaveSecurityGroup":"sg-xxxxxxxx",\
"EmrManagedMasterSecurityGroup":"sg-xxxxxxxx"}' \
--service-role EMR_DefaultRole_V2 --enable-debugging --release-label emr-7.2.0 \
--log-uri 's3n://my-emr-log-bucket/' --name 'test-awscredentialsprovider-emrfs' \
--instance-type=m5.xlarge --instance-count 3  \
--configurations '[{"Classification":"emrfs-site",\
```

```
"Properties":
{"fs.s3.customAWSCredentialsProvider":"MyAWSCredentialsProviderWithUri"},\
"Configurations":[]}]'
```

Managing the default AWS Security Token Service endpoint

EMRFS uses the AWS Security Token Service (STS) to retrieve temporary security credentials in order to access your AWS resources. Earlier Amazon EMR release versions send all AWS STS requests to a single global endpoint at `https://sts.amazonaws.com`. Amazon EMR release versions 5.31.0 and 6.1.0 and later make requests to Regional AWS STS endpoints instead. This reduces latency and improves session token validity. For more information about AWS STS endpoints, see [Managing AWS STS in an AWS Region](#) in the *AWS Identity and Access Management User Guide*.

When you use Amazon EMR release versions 5.31.0 and 6.1.0 and later, you can override the default AWS STS endpoint. To do so, you must change the `fs.s3.sts.endpoint` property in your `emrfs-site` configuration.

The following AWS CLI example sets the default AWS STS endpoint used by EMRFS to the global endpoint.

```
aws emr create-cluster --release-label <emr-5.33.0> --instance-type m5.xlarge \
--emrfs Args=[fs.s3.sts.endpoint=https://sts.amazonaws.com]
```

Note

Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

Alternatively, you can create a JSON configuration file using the following example, and specify it using the `--configurations` argument of `emr create-cluster`. For more information about using `--configurations`, see the [*AWS CLI Command Reference.*](#)

```
[
  {
    "classification": "emrfs-site",
    "properties": {
      "fs.s3.sts.endpoint": "https://sts.amazonaws.com"
```

```
    }
  }
]
```

Specifying Amazon S3 encryption using EMRFS properties

Important

Beginning with Amazon EMR release version 4.8.0, you can use security configurations to apply encryption settings more easily and with more options. We recommend using security configurations. For information, see Configure data encryption. The console instructions described in this section are available for release versions earlier than 4.8.0. If you use the AWS CLI to configure Amazon S3 encryption both in the cluster configuration and in a security configuration in subsequent versions, the security configuration overrides the cluster configuration.

When you create a cluster, you can specify server-side encryption (SSE) or client-side encryption (CSE) for EMRFS data in Amazon S3 using the console or using `emrfs-site` classification properties through the AWS CLI or EMR SDK. Amazon S3 SSE and CSE are mutually exclusive; you can choose either but not both.

For AWS CLI instructions, see the appropriate section for your encryption type below.

To specify EMRFS encryption options using the AWS Management Console

1. Navigate to the new Amazon EMR console and select **Switch to the old console** from the side navigation. For more information on what to expect when you switch to the old console, see Using the old console.
2. Choose **Create cluster**, **Go to advanced options**.
3. Choose a **Release** of 4.7.2 or earlier.
4. Choose other options for **Software and Steps** as appropriate for your application, and then choose **Next**.
5. Choose settings in the **Hardware** and **General Cluster Settings** panes as appropriate for your application.
6. On the **Security** pane, under **Authentication and encryption**, select the **S3 Encryption (with EMRFS)** option to use.

> **Note**
>
> **S3 server-side encryption with KMS Key Management** (SSE-KMS) is not available when using Amazon EMR release version 4.4 or earlier.

- If you choose an option that uses **AWS Key Management**, choose an **AWS KMS Key ID**. For more information, see Using AWS KMS keys for EMRFS encryption.
- If you choose **S3 client-side encryption with custom materials provider**, provide the **Class name** and the **JAR location**. For more information, see Amazon S3 client-side encryption.

7. Choose other options as appropriate for your application and then choose **Create Cluster**.

Using AWS KMS keys for EMRFS encryption

The AWS KMS encryption key must be created in the same Region as your Amazon EMR cluster instance and the Amazon S3 buckets used with EMRFS. If the key that you specify is in a different account from the one that you use to configure a cluster, you must specify the key using its ARN.

The role for the Amazon EC2 instance profile must have permissions to use the KMS key you specify. The default role for the instance profile in Amazon EMR is `EMR_EC2_DefaultRole`. If you use a different role for the instance profile, or you use IAM roles for EMRFS requests to Amazon S3, make sure that each role is added as a key user as appropriate. This gives the role permissions to use the KMS key. For more information, see Using Key Policies in the *AWS Key Management Service Developer Guide* and Configure IAM roles for EMRFS requests to Amazon S3.

You can use the AWS Management Console to add your instance profile or EC2 instance profile to the list of key users for the specified KMS key, or you can use the AWS CLI or an AWS SDK to attach an appropriate key policy.

Note that Amazon EMR supports only symmetric KMS keys. You cannot use an asymmetric KMS key to encrypt data at rest in an Amazon EMR cluster. For help determining whether a KMS key is symmetric or asymmetric, see Identifying symmetric and asymmetric KMS keys.

The procedure below describes how to add the default Amazon EMR instance profile, `EMR_EC2_DefaultRole` as a *key user* using the AWS Management Console. It assumes that you have already created a KMS key. To create a new KMS key, see Creating Keys in the *AWS Key Management Service Developer Guide*.

To add the EC2 instance profile for Amazon EMR to the list of encryption key users

1. Sign in to the AWS Management Console and open the AWS Key Management Service (AWS KMS) console at https://console.aws.amazon.com/kms.
2. To change the AWS Region, use the Region selector in the upper-right corner of the page.
3. Select the alias of the KMS key to modify.
4. On the key details page under **Key Users**, choose **Add**.
5. In the **Add key users** dialog box, select the appropriate role. The name of the default role is `EMR_EC2_DefaultRole`.
6. Choose **Add**.

Amazon S3 server-side encryption

When you set up Amazon S3 server-side encryption, Amazon S3 encrypts data at the object level as it writes the data to disk and decrypts the data when it is accessed. For more information about SSE, see Protecting data using server-side encryption in the *Amazon Simple Storage Service User Guide*.

You can choose between two different key management systems when you specify SSE in Amazon EMR:

- **SSE-S3** – Amazon S3 manages keys for you.
- **SSE-KMS** – You use an AWS KMS key to set up with policies suitable for Amazon EMR. For more information about key requirements for Amazon EMR, see Using AWS KMS keys for encryption.

SSE with customer-provided keys (SSE-C) is not available for use with Amazon EMR.

To create a cluster with SSE-S3 enabled using the AWS CLI

- Type the following command:

```
aws emr create-cluster --release-label emr-4.7.2 or earlier \
--instance-count 3 --instance-type m5.xlarge --emrfs Encryption=ServerSide
```

You can also enable SSE-S3 by setting the fs.s3.enableServerSideEncryption property to true in `emrfs-site` properties. See the example for SSE-KMS below and omit the property for Key ID.

To create a cluster with SSE-KMS enabled using the AWS CLI

> **Note**
>
> SSE-KMS is available only in Amazon EMR release version 4.5.0 and later.

- Type the following AWS CLI command to create a cluster with SSE-KMS, where *keyID* is an AWS KMS key, for example, *a4567b8-9900-12ab-1234-123a45678901*:

  ```
  aws emr create-cluster --release-label emr-4.7.2 or earlier --instance-count 3 \
  --instance-type m5.xlarge --use-default-roles \
  --emrfs Encryption=ServerSide,Args=[fs.s3.serverSideEncryption.kms.keyId=keyId]
  ```

  --OR--

  Type the following AWS CLI command using the `emrfs-site` classification and provide a configuration JSON file with contents as shown similar to `myConfig.json` in the example below:

  ```
  aws emr create-cluster --release-label emr-4.7.2 or earlier --instance-count 3
   --instance-type m5.xlarge --applications Name=Hadoop --configurations file://
  myConfig.json --use-default-roles
  ```

  Example contents of **myConfig.json**:

  ```
  [
    {
      "Classification":"emrfs-site",
      "Properties": {
         "fs.s3.enableServerSideEncryption": "true",
         "fs.s3.serverSideEncryption.kms.keyId":"a4567b8-9900-12ab-1234-123a45678901"
      }
    }
  ]
  ```

Configuration properties for SSE-S3 and SSE-KMS

These properties can be configured using the `emrfs-site` configuration classification. SSE-KMS is available only in Amazon EMR release version 4.5.0 and later.

Property	Default value	Description
`fs.s3.enableServerSideEncryption`	**`false`**	When set to **`true`**, objects stored in Amazon S3 are encrypted using server-side encryption. If no key is specified, SSE-S3 is used.
`fs.s3.serverSideEncryption.kms.keyId`	**`n/a`**	Specifies an AWS KMS key ID or ARN. If a key is specified, SSE-KMS is used.

Amazon S3 client-side encryption

With Amazon S3 client-side encryption, the Amazon S3 encryption and decryption takes place in the EMRFS client on your cluster. Objects are encrypted before being uploaded to Amazon S3 and decrypted after they are downloaded. The provider you specify supplies the encryption key that the client uses. The client can use keys provided by AWS KMS (CSE-KMS) or a custom Java class that provides the client-side root key (CSE-C). The encryption specifics are slightly different between CSE-KMS and CSE-C, depending on the specified provider and the metadata of the object being decrypted or encrypted. For more information about these differences, see [Protecting data using client-side encryption] in the *Amazon Simple Storage Service User Guide*.

> **Note**
>
> Amazon S3 CSE only ensures that EMRFS data exchanged with Amazon S3 is encrypted; not all data on cluster instance volumes is encrypted. Furthermore, because Hue does not use EMRFS, objects that the Hue S3 File Browser writes to Amazon S3 are not encrypted.

To specify CSE-KMS for EMRFS data in Amazon S3 using the AWS CLI

- Type the following command and replace *MyKMSKeyID* with the Key ID or ARN of the KMS key to use:

```
aws emr create-cluster --release-label emr-4.7.2 or earlier
--emrfs Encryption=ClientSide,ProviderType=KMS,KMSKeyId=MyKMSKeyId
```

Creating a custom key provider

Depending on the type of encryption you use when creating a custom key provider, the application must also implement different EncryptionMaterialsProvider interfaces. Both interfaces are available in the AWS SDK for Java version 1.11.0 and later.

- To implement Amazon S3 encryption, use the [com.amazonaws.services.s3.model.EncryptionMaterialsProvider interface](https://docs.aws.amazon.com/AWSJavaSDK/latest/javadoc/com/amazonaws/services/s3/model/EncryptionMaterialsProvider.html).
- To implement local disk encryption, use the com.amazonaws.services.elasticmapreduce.spi.security.EncryptionMaterialsProvider interface.

You can use any strategy to provide encryption materials for the implementation. For example, you might choose to provide static encryption materials or integrate with a more complex key management system.

If you're using Amazon S3 encryption, you must use the encryption algorithms **AES/GCM/NoPadding** for custom encryption materials.

If you're using local disk encryption, the encryption algorithm to use for custom encryption materials varies by EMR release. For Amazon EMR 7.0.0 and lower, you must use **AES/GCM/NoPadding**. For Amazon EMR 7.1.0 and higher, you must use **AES**.

The EncryptionMaterialsProvider class gets encryption materials by encryption context. Amazon EMR populates encryption context information at runtime to help the caller determine the correct encryption materials to return.

Example Example: Using a custom key provider for Amazon S3 encryption with EMRFS

When Amazon EMR fetches the encryption materials from the EncryptionMaterialsProvider class to perform encryption, EMRFS optionally populates the materialsDescription argument with two fields: the Amazon S3 URI for the object and the JobFlowId of the cluster, which can be used by the EncryptionMaterialsProvider class to return encryption materials selectively.

For example, the provider may return different keys for different Amazon S3 URI prefixes. It is the description of the returned encryption materials that is eventually stored with the Amazon S3 object rather than the materialsDescription value that is generated by EMRFS and passed to the provider. While decrypting an Amazon S3 object, the encryption materials description is passed to the EncryptionMaterialsProvider class, so that it can, again, selectively return the matching key to decrypt the object.

An EncryptionMaterialsProvider reference implementation is provided below. Another custom provider, EMRFSRSAEncryptionMaterialsProvider, is available from GitHub.

```
import com.amazonaws.services.s3.model.EncryptionMaterials;
import com.amazonaws.services.s3.model.EncryptionMaterialsProvider;
import com.amazonaws.services.s3.model.KMSEncryptionMaterials;
import org.apache.hadoop.conf.Configurable;
import org.apache.hadoop.conf.Configuration;

import java.util.Map;

/**
 * Provides KMSEncryptionMaterials according to Configuration
 */
public class MyEncryptionMaterialsProviders implements EncryptionMaterialsProvider,
 Configurable{
  private Configuration conf;
  private String kmsKeyId;
  private EncryptionMaterials encryptionMaterials;

  private void init() {
    this.kmsKeyId = conf.get("my.kms.key.id");
    this.encryptionMaterials = new KMSEncryptionMaterials(kmsKeyId);
  }

  @Override
  public void setConf(Configuration conf) {
    this.conf = conf;
    init();
  }

  @Override
```

```
  public Configuration getConf() {
    return this.conf;
  }

  @Override
  public void refresh() {

  }

  @Override
  public EncryptionMaterials getEncryptionMaterials(Map<String, String>
 materialsDescription) {
    return this.encryptionMaterials;
  }

  @Override
  public EncryptionMaterials getEncryptionMaterials() {
    return this.encryptionMaterials;
  }
}
```

Specifying a custom materials provider using the AWS CLI

To use the AWS CLI, pass the `Encryption`, `ProviderType`, `CustomProviderClass`, and `CustomProviderLocation` arguments to the `emrfs` option.

```
aws emr create-cluster --instance-type m5.xlarge --release-label emr-4.7.2 or earlier
 --emrfs Encryption=ClientSide,ProviderType=Custom,CustomProviderLocation=s3://
mybucket/myfolder/provider.jar,CustomProviderClass=classname
```

Setting `Encryption` to `ClientSide` enables client-side encryption, `CustomProviderClass` is the name of your `EncryptionMaterialsProvider` object, and `CustomProviderLocation` is the local or Amazon S3 location from which Amazon EMR copies `CustomProviderClass` to each node in the cluster and places it in the classpath.

Specifying a custom materials provider using an SDK

To use an SDK, you can set the property `fs.s3.cse.encryptionMaterialsProvider.uri` to download the custom `EncryptionMaterialsProvider` class that you store in Amazon S3 to each node in your cluster. You configure this in `emrfs-site.xml` file along with CSE enabled and the proper location of the custom provider.

For example, in the AWS SDK for Java using RunJobFlowRequest, your code might look like the following:

```
<snip>
  Map<String,String> emrfsProperties = new HashMap<String,String>();
      emrfsProperties.put("fs.s3.cse.encryptionMaterialsProvider.uri","s3://mybucket/
MyCustomEncryptionMaterialsProvider.jar");
      emrfsProperties.put("fs.s3.cse.enabled","true");
      emrfsProperties.put("fs.s3.consistent","true");

 emrfsProperties.put("fs.s3.cse.encryptionMaterialsProvider","full.class.name.of.EncryptionMate

  Configuration myEmrfsConfig = new Configuration()
      .withClassification("emrfs-site")
      .withProperties(emrfsProperties);

  RunJobFlowRequest request = new RunJobFlowRequest()
   .withName("Custom EncryptionMaterialsProvider")
   .withReleaseLabel("emr-7.2.0")
   .withApplications(myApp)
   .withConfigurations(myEmrfsConfig)
   .withServiceRole("EMR_DefaultRole_V2")
   .withJobFlowRole("EMR_EC2_DefaultRole")
   .withLogUri("s3://myLogUri/")
   .withInstances(new JobFlowInstancesConfig()
    .withEc2KeyName("myEc2Key")
    .withInstanceCount(2)
    .withKeepJobFlowAliveWhenNoSteps(true)
    .withMasterInstanceType("m5.xlarge")
    .withSlaveInstanceType("m5.xlarge")
   );

  RunJobFlowResult result = emr.runJobFlow(request);
</snip>
```

Custom EncryptionMaterialsProvider with arguments

You may need to pass arguments directly to the provider. To do this, you can use the `emrfs-site` configuration classification with custom arguments defined as properties. An example configuration is shown below, which is saved as a file, `myConfig.json`:

```
[
```

```
    {
      "Classification": "emrfs-site",
      "Properties": {
        "myProvider.arg1":"value1",
     "myProvider.arg2":"value2"
      }
    }
 ]
```

Using the `create-cluster` command from the AWS CLI, you can use the `--configurations` option to specify the file as shown below:

```
aws emr create-cluster --release-label emr-7.2.0 --instance-type m5.xlarge
 --instance-count 2 --configurations file://myConfig.json --emrfs
 Encryption=ClientSide,CustomProviderLocation=s3://mybucket/myfolder/
myprovider.jar,CustomProviderClass=classname
```

Configuring EMRFS S3EC V2 support

S3 Java SDK releases (1.11.837 and later) support encryption client Version 2 (S3EC V2) with various security enhancements. For more information, see the S3 blog post Updates to the Amazon S3 encryption client. Also, refer to Amazon S3 encryption client migration in the AWS SDK for Java Developer Guide.

Encryption client V1 is still available in the SDK for backward compatibility. By default EMRFS will use S3EC V1 to encrypt and decrypt S3 objects if CSE is enabled.

S3 objects encrypted with S3EC V2 cannot be decrypted by EMRFS on an EMR cluster whose release version is earlier than emr-5.31.0 (emr-5.30.1 and earlier, emr-6.1.0 and earlier).

Example Configure EMRFS to use S3EC V2

To configure EMRFS to use S3EC V2, add the following configuration:

```
{
  "Classification": "emrfs-site",
  "Properties": {
    "fs.s3.cse.encryptionV2.enabled": "true"
  }
}
```

`emrfs-site.xml` Properties for Amazon S3 client-side encryption

Property	Default value	Description
`fs.s3.cse.enabled`	**`false`**	When set to **`true`**, EMRFS objects stored in Amazon S3 are encrypted using client-side encryption.
`fs.s3.cse.encryptionV2.enabled`	**`false`**	When set to `true`, EMRFS uses S3 encryption client Version 2 to encrypt and decrypt objects on S3. Available for EMR version 5.31.0 and later.
`fs.s3.cse.encryptionMaterialsProvider.uri`	**N/A**	Applies when using custom encryption materials. The Amazon S3 URI where the JAR with the `EncryptionMaterialsProvider` is located. When you provide this URI, Amazon EMR automatically downloads the JAR to all nodes in the cluster.
`fs.s3.cse.encryptionMaterialsProvider`	**N/A**	The `EncryptionMaterialsProvider` class path used with client-side encryption. When using CSE-KMS, specify `com.amazon.ws.emr.hadoop.fs.cse.KMSEncryptionMaterialsProvider`.

Property	Default value	Description
fs.s3.cse.materialsDescription.enabled	**false**	When set to true, populates the materialsDescription of encrypted objects with the Amazon S3 URI for the object and the JobFlowId. Set to true when using custom encryption materials.
fs.s3.cse.kms.keyId	**N/A**	Applies when using CSE-KMS. The value of the KeyId, ARN, or alias of the KMS key used for encryption.
fs.s3.cse.cryptoStorageMode	**ObjectMetadata**	The Amazon S3 storage mode. By default, the description of the encryption information is stored in the object metadata. You can also store the description in an instruction file. Valid values are ObjectMetadata and InstructionFile. For more information, see Client-side data encryption with the AWS SDK for Java and Amazon S3.

Amazon CloudWatch agent

The Amazon CloudWatch agent on Amazon EMR is a tool that can monitor the Amazon EC2 instances in your EMR cluster. You can store and view the metrics that you collect with the CloudWatch agent in CloudWatch. For more information about the CloudWatch agent, see the *Amazon CloudWatch User Guide*.

> **Note**
>
> You incur additional charges if you use other AWS services to publish, query, or view Amazon CloudWatch agent metrics. See the following pages for more pricing information.
>
> - Amazon CloudWatch Pricing
> - Amazon Managed Service for Prometheus Pricing
> - Amazon Managed Grafana Pricing
>
> These metrics are separate from the free metrics that Amazon EMR provides under the `AWS/ElasticMapReduce` namespace in CloudWatch. For more information about the metrics that the CloudWatch agent doesn't publish, see Monitoring Amazon EMR metrics with CloudWatch.

With Amazon EMR 7.0 and higher, you can install a custom version of the Amazon CloudWatch agent on your cluster to collect metrics from your EMR cluster. The agent collects the metrics from all nodes in the cluster, gathers them on the primary node, and publishes the metrics from that node to the cloud.

You can install the agent when you create a new cluster in the console, or when you use the `create-cluster` API. For more information, see Create an EMR cluster that uses Amazon CloudWatch agent. By default, an Amazon EMR cluster that runs the release 7.x series publishes 34 system-level metrics to CloudWatch at 60-second intervals, but you can configure the agent to publish different metrics. Another option is to publish metrics to Amazon Managed Service for Prometheus, and you can choose which metrics to publish as well. For different use cases and setups, you might configure the agent to view and query the metrics in the CloudWatch console, Amazon Managed Grafana, or through the APIs for CloudWatch or Amazon Managed Service for Prometheus. These AWS services incur charges when you use them to store and query metrics.

The CloudWatch agent on Amazon EMR can publish system metrics as well as JMX metrics for the following services on your Amazon EMR cluster.

- Hadoop DataNode
- Hadoop NameNode
- Yarn NodeManager
- Yarn ResourceManager
- HBase Master – Amazon EMR 7.1+ only
- HBase RegionServer – Amazon EMR 7.1+ only
- HBase ThriftServer – Amazon EMR 7.1+ only

For more information about available metrics and how to configure the CloudWatch agent on Amazon EMR, see Configuring CloudWatch agent for Amazon EMR.

The following table lists the version of AmazonCloudWatchAgent included in the latest release of the Amazon EMR 7.x series, along with the components that Amazon EMR installs with AmazonCloudWatchAgent.

For the version of components installed with AmazonCloudWatchAgent in this release, see Release 7.2.0 Component Versions.

AmazonCloudWatchAgent version information for emr-7.2.0

Amazon EMR Release Label	AmazonCloudWatchAgent Version	Components Installed With AmazonCloudWatchAgent
emr-7.2.0	AmazonCloudWatchAgent 1.300032.2	adot-java-agent, emrfs, emr-amazon-cloudwatch-agent , emr-ddb, emr-goodies, emr-kinesis, emr-s3-dist-cp, hadoop-client, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-mapred, hadoop-yarn-nodemanager, hadoop-ya

- CloudWatch agent release history

Create an EMR cluster that uses Amazon CloudWatch agent

The procedures in this section describe the steps to create a cluster in Amazon EMR with Amazon CloudWatch agent from the AWS Management Console and the AWS CLI.

Topics

- Required IAM permissions for CloudWatch agent
- Required CloudWatch agent endpoint
- Create an EMR cluster

Required IAM permissions for CloudWatch agent

The CloudWatch agent requires the AWS Identity and Access Management (IAM) `cloudwatch:PutMetricData` permission in the Amazon EC2 instance profile for Amazon EMR. The Amazon EMR default role already has this permission. You can create the default role from the AWS CLI with `aws emr create-default-roles`. For more information, see Service role for cluster EC2 instances (EC2 instance profile) in the *Amazon EMR Management Guide*.

The following example IAM policy includes the `cloudwatch:PutMetricData` permission:

```
{
```

```
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": "cloudwatch:PutMetricData",
      "Resource": "*"
    }
  ]
}
```

Required CloudWatch agent endpoint

To publish metrics to CloudWatch for an EMR cluster in a private subnet, create a CloudWatch agent endpoint and associate with the VPC that the private subnet is in.

For more information about the CloudWatch endpoints for each AWS Region, see Amazon CloudWatch endpoints and quotas in the *AWS General Reference Guide*.

Create an EMR cluster

Once you have set up the required permissions and endpoint for use with the CloudWatch agent, use the AWS Management Console or the AWS CLI to create a new cluster with the agent installed.

Console

To create a cluster with Amazon CloudWatch agent from the console

1. Navigate to the Amazon EMR console.
2. Choose **Create cluster**.
3. Under **Name and applications**, choose an Amazon EMR release of 7.0.0 or higher.
4. Under **Application bundle**, select the bundle or apps that you want to install to your cluster, and include **CloudWatch agent** with your selections.
5. Proceed to create the cluster to serve your use case needs.

AWS CLI

In the AWS CLI, you can add Amazon CloudWatch agent to a cluster with the `--applications` parameter for `create-cluster`.

To create a cluster with Amazon CloudWatch agent from the AWS CLI

- When you create a cluster, use a command similar to the following to include the Amazon CloudWatch agent. Replace *myKey* with the name of your EC2 key pair.

```
aws emr create-cluster --name "Spark cluster with CloudWatch agent" \
--release-label emr-7.0.0 \
--applications Name=Spark Name=AmazonCloudWatchAgent \
--ec2-attributes KeyName=myKey --instance-type m7g.2xlarge \
--instance-count 3 --use-default-roles
```

For more details on how to use Amazon EMR with the AWS CLI, see the AWS CLI Command Reference.

Default metrics for CloudWatch agent with Amazon EMR

When you install the Amazon CloudWatch agent on Amazon EMR, the default configuration publishes the following system metrics for all of the instances in your cluster unless you configure the agent differently. For definitions of each metric, see Metrics collected by the CloudWatch agent in the *Amazon CloudWatch User Guide*.

CPU

CPU metrics

- `cpu_usage_active`
- `cpu_usage_guest`
- `cpu_usage_guest_nice`
- `cpu_usage_idle`
- `cpu_usage_iowait`
- `cpu_usage_irq`
- `cpu_usage_nice`
- `cpu_usage_softirq`
- `cpu_usage_steal`
- `cpu_usage_system`

- `cpu_usage_user`

Disk

Disk metrics

- `disk_free`
- `disk_total`
- `disk_used`
- `disk_used_percent`

Memory

Memory metrics

- `mem_active`
- `mem_available`
- `mem_available_percent`
- `mem_free`
- `mem_inactive`
- `mem_total`
- `mem_used`
- `mem_used_percent`
- `mem_buffered`
- `mem_cached`

Network IO

Network IO metrics

- `net_bytes_recv`
- `net_bytes_sent`
- `net_packets_recv`
- `net_packets_sent`

Process

Process metrics

- `processes_running`
- `processes_total`

Swap

Swap metrics

- `swap_free`
- `swap_used`
- `swap_used_percent`

By default, the agent publishes all metrics to CloudWatch under the custom namespace `CWAgent`, and under the schema `cluster.id`, `instance.id`, `node.type`, `service.name`. Use the following steps to view these default metrics that the CloudWatch agent publishes for Amazon EMR:

1. Navigate to the Amazon CloudWatch console.
2. Choose the **Metrics** tab, and then **All metrics**.
3. Under **Custom namespaces**, select **`CWAgent`**. Then, select the schema: **`cluster.id`, `instance.id`, `node.type`, `service.name`**.
4. Continue to query the metrics from the CloudWatch interface as your use case requires.

Amazon EMR attaches the following labels to each metric: `["cluster.id", "instance.id', "node.type", "service.name"]`. Consider the following with regard to these labels:

- The value of the `cluster.id` label is the ID of the EMR cluster that produced the metric. An example value for the `cluster.id` label is: `j-123456789ABC`.
- The value of the `instance.id` label is the ID of the instance in the EMR cluster that produced the metric. An example value for the `instance.id` label is `i-01bcf5f140f3355777`.
- The value of the `node.type` label represents the node type of the instance in the cluster that produced the metric. This value can be either `master`, `core`, or `task`.

- The value of the `service.name` label is the name of the service that produced the metric. The default `service.name` value for the default system metrics is `system`.

> **Note**
>
> Amazon EMR release 7.0.0 uses a slightly different metric label schema. `cluster.id` is `jobflow.id`, and `node.type` is unavailable. `instance.id` and `service.name` are available.

Configuring CloudWatch agent for Amazon EMR

Amazon EMR 7.0.0 and higher include the Amazon CloudWatch agent. The following sections describe how to configure the agent on your EMR cluster as described in Create an EMR cluster that uses Amazon CloudWatch agent.

Topics

- Configure CloudWatch agent for Amazon EMR 7.1.0
- Configure CloudWatch agent for Amazon EMR 7.0.0

Configure CloudWatch agent for Amazon EMR 7.1.0

Starting with Amazon EMR 7.1.0, you can configure the Amazon CloudWatch agent to use additional system metrics, add application metrics, and change metrics destination by using the Amazon EMR configuration API. For more information about how to use the EMR configuration API to configure your cluster's applications, see Configure applications.

> **Note**
>
> 7.1.0 only supports the reconfiguration type `OVERWRITE`. For more information about the reconfiguration types, see Considerations when you reconfigure an instance group.

Configuration schema

`emr-metrics` has the following classifications:

- `emr-system-metrics` — configure system metrics, such as CPU, disk, and memory.
- `emr-hadoop-hdfs-datanode-metrics` — configure Hadoop DataNode JMX metrics
- `emr-hadoop-hdfs-namenode-metrics` — configure Hadoop NameNode JMX metrics
- `emr-hadoop-yarn-nodemanager-metrics` — configure Yarn NodeManager JMX metrics
- `emr-hadoop-yarn-resourcemanager-metrics` — configure Yarn ResourceManager JMX metrics
- `emr-hbase-master-metrics` — configure HBase Master JMX metrics
- `emr-hbase-region-server-metrics` — configure HBase Region Server JMX metrics
- `emr-hbase-rest-server-metrics` — configure HBase REST Server JMX metrics
- `emr-hbase-thrift-server-metrics` — configure HBase Thrift Server JMX metrics

The following tables describe the available properties and configurations for all of the classifications.

emr-metrics properties

Property	Required	Description	Default value	Possible values	Notes
`metrics_destination`	Optional	Determines whether cluster metrics are published to Amazon CloudWatch or Amazon Managed	"CLOUDWATCH"	"CLOUDWATCH", "PROMETHEUS"	This property is case-insensitive. For example, "Cloudwatch" is the same as "CLOUDWATCH".

Property	Required	Description	Default value	Possible values	Notes
		Service for Prometheus.			
`prometheus_endpoint`	Optional	If `metrics_destination` is set to "PROMETHEUS", this property configures the CloudWatch agent to send metrics to the provided Amazon Managed Service for Prometheus remote write endpoint.	N/A	Any valid Amazon Managed Service for Prometheus remote write URL. The remote write URL format is `https://aps-workspaces.<region>.amazonaws.com/workspaces/<workspace_id>/api/v1/remote_write`	This field is required if `metrics_destination` is set to "PROMETHEUS". Provisioning will fail if you don't provide a key or if the value is an empty string.

emr-system-metrics properties

Property	Required	Description	Default value	Possible values	Notes
`metrics_collection_interval`	Optional	How often in seconds metrics are collected and	"60"	A string specifying the number of seconds.	You can override this property with the

Property	Required	Description	Default value	Possible values	Notes
		published from the CloudWatch agent.		Only accepts whole numbers.	`metrics_collection_interval` property from individual metric groups.

emr-system-metrics configurations

cpu

Property	Required	Description	Default value	Possible values	Notes
`metrics`	Optional	The list of CPU metrics for the agent to collect.	See Default metrics for CloudWatch agent with Amazon EMR	A comma-separated list of valid CPU metric names with or without the `cpu_` prefix, such as `usage_active` and `cpu_time_idle`. See Metrics collected by the CloudWatc	Specifying an empty string means to not publish any CPU metrics.

Property	Required	Description	Default value	Possible values	Notes
				h agent for valid metrics.	
`metrics_collection_interval`	Optional	How often in seconds the agent should collect and publish CPU metrics.	The value of the global `metrics_collection_interval` .	A string specifying the number of seconds. Accepts only whole numbers.	This value overrides the global `metrics_collection_interval` property only for CPU metrics.
`drop_original_metrics`	Optional	List of CPU metrics for which to not publish unaggregated metrics.	No unaggregated CPU metrics published.	A comma-separated list of CPU metrics that are also specified in the metrics property. An empty string means to publish all CPU metrics.	The CloudWatch agent aggregates all metrics by cluster ID, instance ID, node type, and service name. By default, the CloudWatch agent doesn't publish the per-resource metrics for metrics with multiple resources.

Property	Required	Description	Default value	Possible values	Notes
`resources`	Optional	Determines whether the agent will publish per-core metrics.	"*"	"*" enable per-core metrics. "" disable per-core metrics.	The CloudWatch agent only publishes per-core metrics for CPU metrics that aren't dropped in `drop_original_metrics` .

disk

Property	Required	Description	Default value	Possible values	Notes
`metrics`	Optional	The list of disk metrics for the agent to collect.	See [Default metrics for CloudWatch agent with Amazon EMR](#)	A comma-separated list of valid disk metric names with or without the `disk_` prefix, such as `disk_total` and `used_percent` . See [Metrics collected](#)	Specifying an empty string means to not publish any disk metrics.

Property	Required	Description	Default value	Possible values	Notes
				by the CloudWatch agent for valid metrics.	
`metrics_collection_interval`	Optional	How often in seconds the agent should collect and publish disk metrics.	The value of the global `metrics_collection_interval` .	A string specifying the number of seconds. Accepts only whole numbers.	This value overrides the global `metrics_collection_interval` property only for disk metrics.

Property	Required	Description	Default value	Possible values	Notes
`drop_original_metrics`	Optional	List of disk metrics for which to not publish unaggregated metrics.	No unaggregated disk metrics published.	A comma-separated list of disk metrics that are also specified in the metrics property. An empty string means to publish all disk metrics.	The CloudWatch agent aggregates all metrics by cluster ID, instance ID, node type, and service name. By default, the CloudWatch agent doesn't publish the per-resource metrics for metrics with multiple resources.

Property	Required	Description	Default value	Possible values	Notes
`resources`	Optional	Determines whether the agent will publish per-mount-point metrics.	"*"	"*" means all mount points, "" means no mount points, or a comma-separated list of mount points. For example, `"/,/emr"`.	The CloudWatch agent only publishes per-mount-point metrics for disk metrics that aren't dropped in `drop_original_metrics` .

diskio

Property	Required	Description	Default value	Possible values	Notes
`metrics`	Optional	The list of disk IO metrics for the agent to collect.	See [Default metrics for CloudWatch agent with Amazon EMR](#)	A comma-separated list of valid disk IO metric names with or without the `diskio_` prefix, such as `diskio_reads` and `writes`.	Specifying an empty string means to not publish any disk IO metrics.

Property	Required	Description	Default value	Possible values	Notes
				See [Metrics collected by the CloudWatch agent] for valid metrics.	
`metrics_collection_interval`	Optional	How often in seconds the agent should collect and publish disk IO metrics.	The value of the global `metrics_collection_interval` .	A string specifying the number of seconds. Accepts only whole numbers.	This value overrides the global `metrics_collection_interval` property only for disk IO metrics.

Property	Required	Description	Default value	Possible values	Notes
`drop_original_metrics`	Optional	List of disk IO metrics for which to not publish unaggregated metrics.	No unaggregated disk IO metrics published.	A comma-separated list of disk IO metrics that are also specified in the metrics property. An empty string means to publish all disk IO metrics.	The CloudWatch agent aggregates all metrics by cluster ID, instance ID, node type, and service name. By default, the CloudWatch agent doesn't publish the per-resource metrics for metrics with multiple resources.

Property	Required	Description	Default value	Possible values	Notes
`resources`	Optional	Determines whether the agent will publish per-device metrics.	"*"	"*" means all storage devices, "" means no storage devices, or a comma-separated list of device names. For example, `"nvme0n1, nvme1n1"`.	The CloudWatch agent only publishes per-device metrics for disk IO metrics that aren't dropped in `drop_original_metrics`.

mem

Property	Required	Description	Default value	Possible values	Notes
`metrics`	Optional	The list of memory metrics for the agent to collect.	See Default metrics for CloudWatch agent with Amazon EMR	A comma-separated list of valid memory metric names with or without the `mem_` prefix, such as `mem_available` and `available_percent`.	Specifying an empty string means to not publish any memory metrics.

Property	Required	Description	Default value	Possible values	Notes
				See Metrics collected by the CloudWatch agent for valid metrics.	
`metrics_collection_interval`	Optional	How often in seconds the agent should collect and publish memory metrics.	The value of the global `metrics_collection_interval`.	A string specifying the number of seconds. Accepts only whole numbers.	This value overrides the global `metrics_collection_interval` property only for memory metrics.

net

Property	Required	Description	Default value	Possible values	Notes
`metrics`	Optional	The list of network metrics for the agent to collect.	See Default metrics for CloudWatch agent with Amazon EMR	A comma-separated list of valid network metric names with or without the `net_` prefix,	Specifying an empty string means to not publish any network metrics.

Property	Required	Description	Default value	Possible values	Notes
				such as `net_packets_sent` and `packets_recv` . See [Metrics collected by the CloudWatch agent](#) for valid metrics.	
`metrics_collection_interval`	Optional	How often in seconds the agent should collect and publish network metrics.	The value of the global `metrics_collection_interval` .	A string specifying the number of seconds. Accepts only whole numbers.	This value overrides the global `metrics_collection_interval` property only for network metrics.

Property	Required	Description	Default value	Possible values	Notes
drop_original_metrics	Optional	List of network metrics for which to not publish unaggregated metrics.	No unaggregated network metrics published.	A comma-separated list of network metrics that are also specified in the metrics property. An empty string means to publish all network metrics.	The CloudWatch agent aggregates all metrics by cluster ID, instance ID, node type, and service name. By default, the CloudWatch agent doesn't publish the per-resource metrics for metrics with multiple resources.

Property	Required	Description	Default value	Possible values	Notes
`resources`	Optional	Determines whether the agent will publish per-interface metrics.	"*"	"*" means all network interfaces, "" means no network interfaces, or a comma-separated list of interfaces names. For example, `"eth0,eth1"`.	The CloudWatch agent only publishes per-interface metrics for network metrics that aren't dropped in `drop_original_metrics`.

netstat

Property	Required	Description	Default value	Possible values	Notes
`metrics`	Optional	The list of network statistics metrics for the agent to collect.	See [Default metrics for CloudWatch agent with Amazon EMR]()	A comma-separated list of valid memory metric names with or without the `netstat_` prefix, such as `tcp_listen` and	Specifying an empty string means to not publish any network statistic metrics.

Property	Required	Description	Default value	Possible values	Notes
				netstat_udp_socket . See [Metrics collected by the CloudWatch agent](#) for valid metrics.	
metrics_collection_interval	Optional	How often in seconds the agent should collect and publish network statistic metrics.	The value of the global metrics_collection_interval .	A string specifying the number of seconds. Accepts only whole numbers.	This value overrides the global metrics_collection_interval property only for network statistic metrics.

processes

Property	Required	Description	Default value	Possible values	Notes
metrics	Optional	The list of process metrics for the agent to collect.	See [Default metrics for CloudWatch agent with](#)	A comma-separated list of valid memory metric	Specifying an empty string means to not publish any

Property	Required	Description	Default value	Possible values	Notes
			Amazon EMR	names with or without the processes_ prefix, such as processes_running and total. See Metrics collected by the CloudWatch agent for valid metrics.	process metrics.
metrics_collection_interval	Optional	How often in seconds the agent should collect and publish system process metrics.	The value of the global metrics_collection_interval .	A string specifying the number of seconds. Accepts only whole numbers.	This value overrides the global metrics_collection_interval property only for system process metrics.

swap

Property	Required	Description	Default value	Possible values	Notes
`metrics`	Optional	The list of swap metrics for the agent to collect.	See [Default metrics for CloudWatch agent with Amazon EMR](#)	A comma-separated list of valid memory metric names with or without the `swap_` prefix, such as `swap_free` and `used_percent` . See [Metrics collected by the CloudWatch agent](#) for valid metrics.	Specifying an empty string means to not publish any swap metrics.
`metrics_collection_interval`	Optional	How often in seconds the agent should collect and publish swap metrics.	The value of the global `metrics_collection_interval` .	A string specifying the number of seconds. Accepts only whole numbers.	This value overrides the global `metrics_collection_interval` property only for

Property	Required	Description	Default value	Possible values	Notes
					swap metrics.

emr-hadoop-hdfs-datanode-metrics properties

Property	Required	Description	Default value	Possible values	
`<custom_bean_name>`	Optional	N/A	The MBean that CloudWatch agent should collect metrics from, such as `Hadoop:service=DataNode,name=DataNodeActivity` . You can find sample MBean names and their corresponding metrics in the [example JMX YAML files](#) for Amazon EMR release 7.0.	A string containing the comma-delimited list of metrics that are associated with the MBean. For example, `BlocksCached,BlocksRead` .	

Property	Required	Description	Default value	Possible values
`otel.metric.export.interval`	Optional	How often in milliseconds to collect Hadoop DataNode metrics.	"60000"	A string specifying the number of milliseconds. Accepts only whole numbers.

emr-hadoop-hdfs-namenode-metrics properties

Property	Required	Description	Default value	Possible values
<custom_bean_name>	Optional	N/A	The MBean that CloudWatch agent should collect metrics from, such as `Hadoop:service=NameNode,name=FSNamesystem` . You can find sample MBean names and their corresponding metrics in the	A string containing the comma-delimited list of metrics that are associated with the MBean. For example, `BlockCapacity,CapacityUsedGB` .

Property	Required	Description	Default value	Possible values
			example JMX YAML files for Amazon EMR release 7.0.	
`otel.metric.export.interval`	Optional	How often in milliseconds to collect Hadoop NameNode metrics.	"60000"	A string specifying the number of milliseconds. Accepts only whole numbers.

emr-hadoop-yarn-nodemanager-metrics properties

Property	Required	Description	Default value	Possible values
<custom_bean_name>	Optional	N/A	The MBean that CloudWatch agent should collect metrics from, such as `Hadoop:service=NodeManager,name=NodeManagerMetrics` . You can	A string containing the comma-delimited list of metrics that are associated with the MBean. For example, `MaxCapacity,AllocatedGB` .

			find sample MBean names and their correspon ding metrics in the [example JMX YAML files](#) for Amazon EMR release 7.0.	
`otel.metr ic.export .interval`	Optional	How often in milliseco nds to collect Hadoop YARN NodeManag er metrics.	"60000"	A string specifying the number of milliseco nds. Accepts only whole numbers.

emr-hadoop-yarn-resourcemanager-metrics properties

Property	Required	Description	Default value	Possible values
<custom_b ean_name>	Optional	N/A	The MBean that CloudWatch agent should collect metrics from, such as `Hadoop:se`	A string containing the comma-delimited list of metrics that are associate d with the

Property	Required	Description	Default value	Possible values
			`rvice=ResourceManager,name=PartitionQueueMetrics` . You can find sample MBean names and their corresponding metrics in the [example JMX YAML files](#) for Amazon EMR release 7.0.	MBean. For example, `MaxCapacity,MaxCapacityVCores` .
`otel.metric.export.interval`	Optional	How often in milliseconds to collect Hadoop YARN ResourceManager metrics.	"60000"	A string specifying the number of milliseconds. Accepts only whole numbers.

emr-hbase-master-metrics properties

Property	Required	Description	Default value	Possible values
<custom_bean_name>	Optional	N/A	The MBean that CloudWatch agent should collect metrics from, such as `Hadoop:service=HBase,name=Master,sub=AssignmentManager` . You can find sample MBean names and their corresponding metrics in the example JMX YAML files for Amazon EMR release 7.0.	A string containing the comma-delimited list of metrics that are associated with the MBean. For example, `AssignFailedCount`, `AssignSubmittedCount` .
`otel.metric.export.interval`	Optional	How often in milliseconds to collect HBase Master metrics.	"60000"	A string specifying the number of milliseconds. Accepts

Property	Required	Description	Default value	Possible values
				only whole numbers.

emr-hbase-region-server-metrics properties

Property	Required	Description	Default value	Possible values
`<custom_bean_name>`	Optional	N/A	The MBean that CloudWatch agent should collect metrics from, such as `Hadoop:service=HBase,name=RegionServer,sub=IPC` . You can find sample MBean names and their corresponding metrics in the [example JMX YAML files](#) for Amazon EMR release 7.0.	A string containing the comma-delimited list of metrics that are associated with the MBean. For example, `numActiveHandler,numActivePriorityHandler` .

Property	Required	Description	Default value	Possible values
otel.metric.export.interval	Optional	How often in milliseconds to collect HBase Region Server metrics.	"60000"	A string specifying the number of milliseconds. Accepts only whole numbers.

emr-hbase-rest-server-metrics properties

Property	Required	Description	Default value	Possible values
<custom_bean_name>	Optional	N/A	The MBean that CloudWatch agent should collect metrics from, such as `Hadoop:service=HBase,name=REST` . You can find sample MBean names and their corresponding metrics in the example JMX	A string containing the comma-delimited list of metrics that are associated with the MBean. For example, `successfulPut,successfulScanCount` .

Property	Required	Description	Default value	Possible values
			[YAML files](#) for Amazon EMR release 7.0.	
`otel.metric.export.interval`	Optional	How often in milliseconds to collect HBase Rest Server metrics.	"60000"	A string specifying the number of milliseconds. Accepts only whole numbers.

emr-hbase-thrift-server-metrics properties

Property	Required	Description	Default value	Possible values
<custom_bean_name>	Optional	N/A	The MBean that CloudWatch agent should collect metrics from, such as `Hadoop:service=HBase,name=Thrift,sub=ThriftOne` . You can find sample MBean	A string containing the comma-delimited list of metrics that are associated with the MBean. For example, `BatchGet_max,BatchGet_mean` .

Property	Required	Description	Default value	Possible values
			names and their correspon ding metrics in the [example JMX YAML files](#) for Amazon EMR release 7.0.	
`otel.metric.export.interval`	Optional	How often in milliseco nds to collect HBase Thrift server metrics.	"60000"	A string specifying the number of milliseco nds. Accepts only whole numbers.

System metrics configurations examples

The following example demonstrates how to configure the CloudWatch agent to stop exporting all system metrics.

```
[
  {
    "Classification": "emr-metrics",
    "Properties": {},
    "Configurations": [
      {
        "Classification": "emr-system-metrics",
        "Properties": {},
        "Configurations": []
      }
    ]
  }
```

```
]
```

The following example configures the CloudWatch agent to export the default system metrics. Doing so is a quick way to reset the agent back to only exporting the default system metrics if you've already reconfigured the system metrics at least once. This reset also removes any application metrics that were reconfigured before.

```
[
  {
    "Classification": "emr-metrics",
    "Properties": {},
    "Configurations": []
  }
]
```

The following example configures the cluster to export the `cpu`, `mem`, and the `disk` metrics.

```
[
  {
    "Classification": "emr-metrics",
    "Properties": {},
    "Configurations": [
      {
        "Classification": "emr-system-metrics",
        "Properties": {
          "metrics_collection_interval": "20"
        },
        "Configurations": [
          {
            "Classification": "cpu",
            "Properties": {
              "metrics": "cpu_usage_guest,cpu_usage_idle",
              "metrics_collection_interval": "30",
              "drop_original_metrics": "cpu_usage_guest"
            }
          },
          {
            "Classification": "mem",
            "Properties": {
              "metrics": "mem_active"
            }
          },
```

```
            {
             "Classification": "disk",
             "Properties": {
               "metrics": "disk_used_percent",
               "resources": "/,/mnt",
               "drop_original_metrics": ""
             }
           }
         ]
       }
     ]
   }
]
```

The previous example configuration has the following properties:

- Every 30 seconds, the agent collects the `cpu_guest` metric for all CPUs. You can find the aggregated metric under the CloudWatch namespace `CWAgent > cluster.id, instance.id, node.type, service.name`.
- Every 30 seconds, the agent collects the `cpu_idle` metric for all CPUs. You can find the aggregated metric under the CloudWatch namespace `CWAgent > cluster.id, instance.id, node.type, service.name`. The agent also collects the per-cpu metrics. You can find them in the same namespace. The agent collects this metric because the `drop_original_metrics` property doesn't contain `cpu_idle`, so the agent doesn't ignore the metric.
- Every 20 seconds, the agent collects the `mem_active` metric. You can find the aggregated metric under the CloudWatch namespace `CWAgent > cluster.id, instance.id, node.type, service.name`.
- Every 20 seconds, the agent collects the `disk_used_percent` metrics for the / and `/mnt` disk mounts. You can find the aggregated metrics under the CloudWatch namespace `CWAgent > cluster.id, instance.id, node.type, service.name`. The agent also collects the per-mount metrics. You can find them in the same namespace. The agent collects this metric because the `drop_original_metrics` property doesn't contain `disk_used_percent`, so the agent doesn't ignore the metric.

Application metrics configurations examples

The following example configures the CloudWatch agent to stop exporting metrics for the Hadoop Namenode service.

```
[
  {
    "Classification": "emr-metrics",
    "Properties": {},
    "Configurations": [
      {
        "Classification": "emr-hadoop-hdfs-namenode-metrics",
        "Properties": {},
        "Configurations": []
      }
    ]
  }
]
```

The following example configures a cluster to export Hadoop application metrics.

```
[
  {
    "Classification": "emr-metrics",
    "Properties": {},
    "Configurations": [
      {
        "Classification": "emr-hadoop-hdfs-namenode-metrics",
        "Properties": {
          "Hadoop:service=NameNode,name=FSNamesystem": "BlockCapacity,CapacityUsedGB",
          "otel.metric.export.interval": "20000"
        },
        "Configurations": []
      },
       {
        "Classification": "emr-hadoop-hdfs-datanode-metrics",
        "Properties": {
          "Hadoop:service=DataNode,name=JvmMetrics": "MemNonHeapUsedM",
          "otel.metric.export.interval": "30000"
        },
        "Configurations": []
      },
       {
```

```
        "Classification": "emr-hadoop-yarn-resourcemanager-metrics",
        "Properties": {
          "Hadoop:service=ResourceManager,name=CapacitySchedulerMetrics":
 "AllocateNumOps,NodeUpdateNumOps"
        },
        "Configurations": []
      }
    ]
  }
]
```

The previous example has the following properties:

- Every 20 seconds, the agent collects the `BlockCapacity` and `CapacityUsedGB` metrics from instances running the Hadoop Namenode service.
- Every 30 seconds, the agent collects `MemNonHeapUsedM` metrics from instances running the Hadoop Datanode service.
- Every 30 seconds, the agent collects the `AllocateNumOps` and `NodeUpdateNumOps` metrics from instances that run the Hadoop YARN ResourceManaager.

Amazon Managed Service for Prometheus example

The following example demonstrates how to configure the CloudWatch agent to export metrics to Amazon Managed Service for Prometheus.

If you are currently exporting metrics to Amazon Managed Service for Prometheus and want to reconfigure the metrics for the cluster and continue exporting metrics to Amazon Managed Service for Prometheus, you must include the properties `metrics_destination` and `prometheus_endpoint`.

```
[
  {
    "Classification": "emr-metrics",
    "Properties": {
      "metrics_destination": "prometheus",
      "prometheus_endpoint": "http://amp-workspace/api/v1/remote_write"
    },
    "Configurations": []
  }
]
```

To use the CloudWatch agent to export metrics to CloudWatch, use the following example.

```
[
  {
    "Classification": "emr-metrics",
    "Properties": {
      "metrics_destination": "cloudwatch"
    },
    "Configurations": []
  }
]
```

Note

The CloudWatch agent has a Prometheus exporter that renames certain attributes. For the default metrics labels, Amazon Managed Service for Prometheus uses underscore characters in place of the periods that Amazon CloudWatch uses. If you use Amazon Managed Grafana to visualize the default metrics in Amazon Managed Service for Prometheus, the labels appear as `cluster_id`, `instance_id`, `node_type`, and `service_name`.

Configure CloudWatch agent for Amazon EMR 7.0.0

You can configure the Amazon CloudWatch agent to use additional system metrics beyond those that the default CloudWatch agent configuration provides. The configuration for 7.0.0 requires the use of bootstrap actions, which we've provided examples for in the following sections. In an upcoming release, Amazon EMR will provide additional configuration options through the Amazon EMR API.

Topics

Configure additional system metrics with Amazon EMR 7.0.0

Use the following steps to configure the agent to use a different set of system metrics in Amazon EMR 7.0.0:

1. Create or choose a bucket in your Amazon S3 account where you want to store the configuration files that specify the CloudWatch agent metrics.
2. Create the `emr-amazon-cloudwatch-agent.json` configuration file with your preferred metrics specified. To do this, use one of the methods explained in Create the CloudWatch agent configuration file. For more information about the structure of the CloudWatch agent configuration file, see Manually create or edit the CloudWatch agent configuration file in the *Amazon CloudWatch User Guide*.
3. Next, navigate to the **aws-emr-utilities** repo on GitHub and download the following system metrics scripts:
    - **`install_system_metrics_launcher.sh`** – A script that downloads and then runs `install_system_metrics.sh` in the background so that the node can finish bootstrapping.
    - **`install_system_metrics.sh`** – A script that waits for the instance it runs on to finish bootstrapping, then downloads and applies the configuration in the JSON file.
4. Open each SH file and replace *`my-s3-bucket`* with the name of your bucket from Step 1.
5. Upload the one JSON and two SH files to your S3 bucket.
6. Now, you can navigate to the Amazon EMR console and create a new cluster with the CloudWatch agent. Under **EMR on EC2** in the left navigation, select **Clusters** and then **Create cluster**.
7. In the **Name and applications** section, choose an Amazon EMR release of 7.0.0 or higher.
8. Under **Application bundle**, select the bundle or apps that you want to install to your cluster, and include **Amazon CloudWatch Agent** with your selections.
9. In the **Bootstrap actions** section, select **Add**.
    - For the **Name**, insert **`install_system_metrics_launcher.sh`**.
    - For the **Script location**, insert **`s3://`*`my-s3-bucket`*`/install_system_metrics_launcher.sh`**. Replace *`my-s3-bucket`* with the path to your S3 bucket.
    - Leave the **Arguments** block empty.

10. Select **Add bootstrap action**.
11. Continue to create the cluster to serve your workload needs.

When your cluster launches, the CloudWatch agent publishes the system metrics that you specified in the configuration file to CloudWatch.

Configure application metrics with Amazon EMR 7.0.0

You can configure the Amazon CloudWatch agent to publish application metrics for HDFS and YARN in addition to system metrics. Use the following steps to configure the agent to publish application metrics:

1. Create or choose a bucket in your Amazon S3 account where you want to store the configuration files that specify the CloudWatch agent metrics.
2. Next, navigate to the **aws-emr-utilities** repo on GitHub and download the following scripts:
   - **`install_app_metrics_launcher.sh`** – A script that downloads and then runs `install_app_metrics.sh` in the background so that the node can finish bootstrapping.
   - **`install_app_metrics.sh`** – A script that waits for the instance it runs on to finish bootstrapping, then downloads and applies the configuration in the YAML files that you'll download in an upcoming step.
3. Open each file and replace *`my-s3-bucket`* with the name of your bucket from Step 1.
4. Next, download the following YAML mapping files. For information about how these YAML files are structured, see `javaagent` in the *OpenTelemetry Instrumentation for Java* GitHub repo.
   - **`datanode-metrics.yaml`** – The configuration for Hadoop DataNode metrics.
   - **`namenode-metrics.yaml`** – The configuration for Hadoop NameNode metrics.
   - **`nodemanager-metrics.yaml`** – The configuration for Yarn NodeManager metrics.
   - **`resourcemanager-metrics.yaml`** – The configuration for Yarn ResourceManager metrics.
5. Upload the two SH and four YAML files to your S3 bucket.
6. Now, you can navigate to the Amazon EMR console and create a new cluster with the CloudWatch agent. Under **EMR on EC2** in the left navigation, select **Clusters** and then **Create cluster**.
7. In the **Name and applications** section, choose an Amazon EMR release of 7.0.0 or higher.

8. Under **Application bundle**, select the bundle or custom group of apps that you want to install to your cluster, and include **CloudWatch agent** with your selections.
9. In the **Bootstrap actions** section, select **Add**.
   - For the **Name**, insert **`install_app_metrics_launcher.sh`**.
   - For the **Script location**, insert **`s3://my-s3-bucket/install_app_metrics_launcher.sh`**. Replace *`my-s3-bucket`* with the path to your S3 bucket.
   - Leave the **Arguments** block empty.
10. Select **Add bootstrap action**.
11. Continue to create the cluster to serve your workload needs.

When your cluster launches, The CloudWatch agent publishes the application metrics that you specified along with the system metrics to CloudWatch.

Configure Amazon Managed Service for Prometheus as cloud storage for metrics with Amazon EMR 7.0.0

You can configure the Amazon CloudWatch agent to publish metrics to Amazon Managed Service for Prometheus instead of CloudWatch.

> **Note**
>
> You can publish metrics from the Amazon CloudWatch agent to either Amazon Managed Service for Prometheus or to Amazon CloudWatch, but you can't publish the metrics to both services for the same cluster.

To configure the agent to publish metrics to Amazon Managed Service for Prometheus, you must add the `aps:RemoteWrite` AWS Identity and Access Management (IAM) permission to the Amazon EC2 instance profile for Amazon EMR. The following example policy contains the required permission:

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
```

```
        "Effect": "Allow",
        "Action": "aps:RemoteWrite",
        "Resource": "*"
      }
    ]
}
```

Use the CloudWatch agent on an EMR cluster to publish metrics to Amazon Managed Service for Prometheus

Once the service policy has the correct permissions, use the following steps to launch a cluster that uses the CloudWatch agent to publish metrics to Amazon Managed Service for Prometheus.

1. Use the AWS Management Console or AWS CLI to create an Amazon Managed Service for Prometheus workspace. For more information, see Create a workspace in the *Amazon Managed Service for Prometheus User Guide*.
2. Create or choose a bucket in your Amazon S3 account where you want to store the launch files that specify Amazon Managed Service for Prometheus as cloud storage.
3. Next, navigate to the **aws-emr-utilities** repo on GitHub and download the following scripts:
   - **add_prometheus_endpoint_launcher.sh** – A script that downloads and then runs `add_prometheus_endpoint.sh` in the background so that the node can finish bootstrapping.
   - **add_prometheus_endpoint.sh** – A script that waits for the instance it runs on to finish bootstrapping, then configures CloudWatch agent to publish to the Amazon Managed Service for Prometheus endpoint that you provide as an argument when you launch your cluster.
4. Open each file and replace *my-s3-bucket* with the name of your bucket from Step 2.
5. Use the AWS CLI to create an EMR cluster with the `add_prometheus_endpoint_launcher.sh` bootstrap action. In the following command, replace *my-s3-bucket* with the bucket that holds the bootstrap action, and replace *managedpro-remote-write-workspace-url* with the remote write endpoint for your Amazon Managed Service for Prometheus workspace. Be sure to specify an Amazon EMR release label of `emr-7.0.0` or higher.

```
aws emr create-cluster --name managedpro-cluster \
    --release-label emr-7.0.0 \
    --applications Name=Hadoop Name=AmazonCloudWatchAgent \
```

```
    --ec2-attributes KeyName=myKey --instance-type m7g.2xlarge \
    --instance-count 3 --use-default-roles
   --bootstrap-actions Name='Add Prometheus Endpoint',Path=s3://my-s3-bucket/
add_prometheus_endpoint_launcher.sh,Args='managedpro-remote-write-workspace-url'
```

When your cluster launches, the CloudWatch agent publishes the metrics it collects to Amazon Managed Service for Prometheus.

Use Amazon Managed Service for Prometheus as a data source for Amazon Managed Grafana

Once Amazon EMR has published the cluster metrics to Amazon Managed Service for Prometheus, you can use the following steps to visualize the metrics with Amazon Managed Grafana:

1. Use the AWS Management Console to create an Amazon Managed Grafana workspace and user with appropriate permissions. For more information, see Create a workspace in the *Amazon Managed Grafana User Guide*.
2. Add your Amazon Managed Service for Prometheus workspace as a data source to Amazon Managed Grafana. For more information, see Use AWS data source configuration to add Amazon Managed Service for Prometheus as a data source in the *Amazon Managed Grafana User Guide*.

Note

The CloudWatch agent has a Prometheus exporter that renames certain attributes. For the default metrics labels, Amazon Managed Service for Prometheus uses underscore characters in place of the periods that Amazon CloudWatch uses. So if you use Amazon Managed Grafana to visualize the default metrics in Amazon Managed Service for Prometheus, the labels appear as `jobflow_id`, `instance_id`, and `service_name`. Also, any **application** metrics that the CloudWatch agent publishes to Amazon Managed Service for Prometheus use the label `job` instead of `service_name`. However, **system** metrics continue to use the `service_name` label.

Considerations and limitations

- The native Amazon CloudWatch agent is available for clusters that you create with Amazon EMR releases 7.0.0 and higher.

- The configuration for CloudWatch agent in Amazon EMR 7.0.0 requires the use of bootstrap actions. In an upcoming release, Amazon EMR will provide additional configuration options through the Amazon EMR API.
- You can't install the Amazon EMR CloudWatch agent if you've already deployed the CloudWatch agent by another method such as AWS Systems Manager Agent (SSM Agent) in the Region where you create your cluster. Doing so will result in your cluster terminating with errors.

CloudWatch agent release history

The following table lists the version of AmazonCloudWatchAgent included in each release version of Amazon EMR, along with the components installed with the application. For component versions in each release, see the Component Version section for your release in Amazon EMR 7.x release versions, Amazon EMR 6.x release versions, or Amazon EMR 5.x release versions.

AmazonCloudWatchAgent version information

Amazon EMR Release label	AmazonCloudWatchAgent Version	Components installed with AmazonCloudWatchAgent
emr-7.2.0	1.300032.2	adot-java-agent, emrfs, emr-amazon-cloudwatch-agent , emr-ddb, emr-goodies, emr-kinesis, emr-s3-dist-cp, hadoop-client, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-mapred, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server
emr-7.1.0	1.300032.2	adot-java-agent, emrfs, emr-amazon-cloudwatch-agent , emr-ddb, emr-goodies, emr-kinesis, emr-s3-dist-

Amazon EMR Release label	AmazonCloudWatchAgent Version	Components installed with AmazonCloudWatchAgent
		cp, hadoop-client, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-mapred, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server
emr-7.0.0	1.300031.1	adot-java-agent, emr-amazon-cloudwatch-agent

Delta Lake

Delta Lake is a storage layer framework for lakehouse architectures commonly built on Amazon S3. With Amazon EMR releases 6.9.0 and higher, you can use Apache Spark 3.x on Amazon EMR clusters with Delta Lake tables. For more information about lakehouses with Delta Lake, see https://delta.io/.

The following table lists the version of Delta included in the latest release of the Amazon EMR 7.x series, along with the components that Amazon EMR installs with Delta.

For the version of components installed with Delta in this release, see Release 7.2.0 Component Versions.

Delta version information for emr-7.2.0

Amazon EMR Release Label	Delta Version	Components Installed With Delta
emr-7.2.0	Delta 3.1.0	Not available.

The following table lists the version of Delta included in the latest release of the Amazon EMR 6.x series, along with the components that Amazon EMR installs with Delta.

For the version of components installed with Delta in this release, see Release 6.15.0 Component Versions.

Delta version information for emr-6.15.0

Amazon EMR Release Label	Delta Version	Components Installed With Delta
emr-6.15.0	Delta 2.4.0	Not available.

Introduction to Delta Lake

Delta Lake is an open-source project that helps implement modern data lake architectures commonly built on Amazon S3. Delta Lake offers the following capabilities:

- Atomic, consistent, isolated, durable (ACID) transactions on Spark. Readers see a consistent view of the table during a Spark job.
- Scalable metadata handling with distributed processing by Spark.
- Combines streaming and batch uses cases with the same Delta table.
- Automatic schema enforcement to avoid bad records during data ingestion.
- Time travel with data versioning.
- Supports merge, update, and delete operations for complex use cases like change data capture (CDC), streaming upserts, and more.

Using a cluster with Delta Lake installed

Topics

Use a Delta Lake cluster with Flink

With Amazon EMR release 6.11 and higher, you can use Delta Lake with your Flink cluster. The following examples use the AWS CLI to work with Delta Lake on an Amazon EMR Flink cluster.

> **Note**
>
> Amazon EMR supports the Flink DataStream API when you use Delta Lake with a Flink cluster.

Create a Delta Lake cluster

1. Create a file, `delta_configurations.json`, with the following content:

```
[{"Classification":"delta-defaults",
    "Properties":{"delta.enabled":"true"}}]
```

2. Create a cluster with the following configuration. Replace the `example Amazon S3 bucket path` and the `subnet ID` with your own.

```
aws emr create-cluster
--release-label emr-6.11.0
--applications Name=Flink
--configurations file://delta_configurations.json
--region us-east-1  --name My_Spark_Delta_Cluster
--log-uri  s3://DOC-EXAMPLE-BUCKET/
--instance-type m5.xlarge
--instance-count 3
--service-role EMR_DefaultRole_V2
--ec2-attributes
 InstanceProfile=EMR_EC2_DefaultRole,SubnetId=subnet-1234567890abcdef0
```

Initialize a Flink yarn session

To initialize a Flink yarn session, run the following command:

```
flink-yarn-session -d
```

Build a Flink job with Delta Lake

The following examples show how to use sbt or Maven to build your Flink job with Delta Lake.

sbt

sbt is a build tool for Scala that you can use with little to no configuration when you have small projects.

```
libraryDependencies ++= Seq(
  "io.delta" %% "delta-flink" % deltaConnectorsVersion % "provided",
  "io.delta" %% "delta-standalone" % deltaConnectorsVersion % "provided",
  "org.apache.flink" %% "flink-clients" % flinkVersion % "provided",
  "org.apache.flink" %% "flink-parquet" % flinkVersion % "provided",
  "org.apache.hadoop" % "hadoop-client" % hadoopVersion % "provided",
  "org.apache.flink" % "flink-table-common" % flinkVersion % "provided",
  "org.apache.flink" %% "flink-table-runtime" % flinkVersion % "provided")
```

Maven

Maven is an open-source build automation tool from the Apache Software Foundation. With Maven, you can build, publish, and deploy a Flink job with Delta Lake on Amazon EMR.

```
<project>
<properties>
    <scala.main.version>2.12</scala.main.version>
    <delta-connectors-version>0.6.0</delta-connectors-version>
    <flink-version>1.16.1</flink-version>
    <hadoop-version>3.1.0</hadoop-version>
</properties>

<dependencies>
    <dependency>
        <groupId>io.delta</groupId>
        <artifactId>delta-flink</artifactId>
        <version>$delta-connectors-version</version>
        <scope>provided</scope>
    </dependency>
    <dependency>
        <groupId>io.delta</groupId>
        <artifactId>delta-standalone_$scala-main-version</artifactId>
        <version>$delta-connectors-version</version>
        <scope>provided</scope>
    </dependency>
    <dependency>
        <groupId>org.apache.flink</groupId>
        <artifactId>flink-clients</artifactId>
        <version>$flink-version</version>
        <scope>provided</scope>
    </dependency>
    <dependency>
        <groupId>org.apache.flink</groupId>
        <artifactId>flink-parquet</artifactId>
        <version>$flink-version</version>
        <scope>provided</scope>
    </dependency>
    <dependency>
        <groupId>org.apache.hadoop</groupId>
        <artifactId>hadoop-client</artifactId>
        <version>$hadoop-version</version>
        <scope>provided</scope>
    </dependency>
```

```
    <dependency>
        <groupId>org.apache.flink</groupId>
        <artifactId>flink-table-common</artifactId>
        <version>$flink-version</version>
        <scope>provided</scope>
    </dependency>
    <dependency>
        <groupId>org.apache.flink</groupId>
        <artifactId>flink-table-runtime</artifactId>
        <version>$flink-version</version>
        <scope>provided</scope>
    </dependency>
</dependencies>
```

Write to a Delta table with Flink Datastream API

Use the following example to create a DeltaSink to write to the table with a `deltaTablePath`:

```
public static DataStream<RowData> createDeltaSink(
        DataStream<RowData> stream,
        String deltaTablePath,
        RowType rowType) {
    Configuration configuration = new Configuration();
    DeltaSink<RowData> deltaSink = DeltaSink
            .forRowData(
                    new org.apache.flink.core.fs.Path(deltaTablePath),
                    configuration,
                    rowType)
            .build();
    stream.sinkTo(deltaSink);
    return stream;
}
```

Read from a Delta table with Flink Datastream API

Use the following example to create a bounded DeltaSource to read from the table with a `deltaTablePath`:

```
public static DataStream<RowData> createBoundedDeltaSourceAllColumns(
        StreamExecutionEnvironment env,
        String deltaTablePath) {
```

```
    Configuration configuration = new Configuration();
    DeltaSource<RowData> deltaSource = DeltaSource
            .forBoundedRowData(
                    new org.apache.flink.core.fs.Path(deltaTablePath),
                    configuration)
            .build();

    return env.fromSource(deltaSource, WatermarkStrategy.noWatermarks(), "delta-
source");
}
```

Sink creation with multi-cluster support for Delta Lake standalone

Use the following example to create a DeltaSink to write to table with a `deltaTablePath` and multi cluster support:

```
public DataStream<RowData> createDeltaSink(
        DataStream<RowData> stream,
        String deltaTablePath) {
    Configuration configuration = new Configuration();
    configuration.set("spark.delta.logStore.s3.impl",
 "io.delta.storage.S3DynamoDBLogStore");
    configuration.set("spark.io.delta.storage.S3DynamoDBLogStore.ddb.tableName",
 "delta_log");
    configuration.set("spark.io.delta.storage.S3DynamoDBLogStore.ddb.region", "us-
east-1");

    DeltaSink<RowData> deltaSink = DeltaSink
        .forRowData(
            new Path(deltaTablePath),
            configuration,
            rowType)
        .build();
    stream.sinkTo(deltaSink);
    return stream;
}
```

Run the Flink job

Use the following command to run your job:

```
flink run FlinkJob.jar
```

Use a Delta Lake cluster with Trino

With Amazon EMR releases 6.9.0 and higher, you can use Delta Lake with your Trino cluster.

In this tutorial, we will use the AWS CLI to work with Delta Lake on Amazon EMR Trino cluster.

Create a Delta Lake cluster

1. Create a file, `delta_configurations.json`, and set values for your chosen catalog. For example, if you want to use the Hive metastore as your catalog, your file should have the following content:

```
[{"Classification":"delta-defaults",
    "Properties":{"delta.enabled":"true"}},
    {"Classification":"trino-connector-delta",
    "Properties":{"hive.metastore.uri":"thrift://localhost:9083"}}]
```

   If you want to use the AWS Glue Catalog as your store, your file should have the following content:

```
[{"Classification":"delta-defaults",
    "Properties":{"delta.enabled":"true"}},
    {"Classification":"trino-connector-delta",
    "Properties":{"hive.metastore":"glue"}}]
```

2. Create a cluster with the following configuration, replacing the **`example Amazon S3 bucket path`** and the **`subnet ID`** with your own.

```
aws emr create-cluster
    --release-label emr-6.9.0
    --applications Name=Trino
    --configurations file://delta_configurations.json
    --region us-east-1  --name My_Spark_Delta_Cluster
    --log-uri  s3://DOC-EXAMPLE-BUCKET/
    --instance-type m5.xlarge
    --instance-count 2
    --service-role EMR_DefaultRole_V2
    --ec2-attributes
 InstanceProfile=EMR_EC2_DefaultRole,SubnetId=subnet-1234567890abcdef0
```

Initialize Trino session for Delta Lake

To initialize Trino session, run the following command

```
trino-cli --catalog delta
```

Write to a Delta Lake table

Create and write to your table with the following SQL commands:

```
SHOW SCHEMAS;

CREATE TABLE default.delta_table (id  int, data varchar, category varchar) WITH
( location =  's3://DOC-EXAMPLE-BUCKET/<prefix>');

INSERT INTO default.delta_table VALUES  (1,'a','c1'), (2,'b','c2'), (3,'c','c3');
```

Read from a Delta Lake table

Read from your table with the following SQL command:

```
SELECT * from default.delta_table;
```

Use a Delta Lake cluster with Spark

Starting with Amazon EMR version 6.9.0, you can use Delta Lake with your Spark cluster without the need for bootstrap actions. For Amazon EMR releases 6.8.0 and lower, you can use bootstrap actions to pre-install the necessary dependencies.

The following examples use the AWS CLI to work with Delta Lake on an Amazon EMR Spark cluster.

To use Delta Lake on Amazon EMR with the AWS Command Line Interface, first create a cluster. For information on how to specify the Delta Lake classification with AWS Command Line Interface, see Supply a configuration using the AWS Command Line Interface when you create a cluster or Supply a configuration with the Java SDK when you create a cluster.

1. Create a file, `configurations.json`, with the following content:

```
[{"Classification":"delta-defaults",  "Properties":{"delta.enabled":"true"} }]
```

2. Create a cluster with the following configuration, replacing the example Amazon S3 **bucket path** and the **subnet ID** with your own.

```
aws emr create-cluster
     --release-label  emr-6.9.0
     --applications Name=Spark
     --configurations file://delta_configurations.json
     --region us-east-1
     --name My_Spark_Delta_Cluster
     --log-uri  s3://DOC-EXAMPLE-BUCKET/
     --instance-type m5.xlarge
     --instance-count 2
     --service-role EMR_DefaultRole_V2
     --ec2-attributes
 InstanceProfile=EMR_EC2_DefaultRole,SubnetId=subnet-1234567890abcdef0
```

Alternatively, you can create an Amazon EMR cluster and Spark application with the following files as JAR dependencies in a Spark job:

```
/usr/share/aws/delta/lib/delta-core.jar,
/usr/share/aws/delta/lib/delta-storage.jar,
/usr/share/aws/delta/lib/delta-storage-s3-dynamodb.jar
```

Note

If you use Amazon EMR releases 6.9.0 or higher, use `/usr/share/aws/delta/lib/delta-spark.jar` instead of `/usr/share/aws/delta/lib/delta-core.jar`.

For more information, see Submitting Applications.

To include a jar dependency in the Spark job, you can add the following configuration properties to the Spark application:

```
--conf “spark.jars=/usr/share/aws/delta/lib/delta-core.jar,
     /usr/share/aws/delta/lib/delta-storage.jar,
```

```
    /usr/share/aws/delta/lib/delta-storage-s3-dynamodb.jar"
```

For more information about Spark job dependencies, see Dependency Management.

If you use Amazon EMR releases 6.9.0 or higher, add the `/usr/share/aws/delta/lib/delta-spark.jar` configuration instead.

```
--conf “spark.jars=/usr/share/aws/delta/lib/delta-spark.jar,
     /usr/share/aws/delta/lib/delta-storage.jar,
     /usr/share/aws/delta/lib/delta-storage-s3-dynamodb.jar"
```

Initialize a Spark session for Delta Lake

The following examples show how to launch the interactive Spark shell, use Spark submit, or use Amazon EMR Notebooks to work with Delta Lake on Amazon EMR.

spark-shell

1. Connect to the primary node using SSH. For more information, see Connect to the primary node using SSH in the *Amazon EMR Management Guide*.
2. Enter the following command to launch the Spark shell. To use the PySpark shell, replace `spark-shell` with `pyspark`.

```
spark-shell \
   --conf "spark.sql.extensions=io.delta.sql.DeltaSparkSessionExtension" \
   --conf
 "spark.sql.catalog.spark_catalog=org.apache.spark.sql.delta.catalog.DeltaCatalog"
```

If you run Amazon EMR releases 6.15.0 or higher, you must also use the following configurations to use fine-grained access control based on Lake Formation with Delta Lake.

```
spark-shell \
  --conf
 spark.sql.extensions=io.delta.sql.DeltaSparkSessionExtension,com.amazonaws.emr.recordserv
 \
  --conf
 spark.sql.catalog.spark_catalog=org.apache.spark.sql.delta.catalog.DeltaCatalog \

  --conf spark.sql.catalog.spark_catalog.lf.managed=true
```

spark-submit

1. Connect to the primary node using SSH. For more information, see [Connect to the primary node using SSH] in the *Amazon EMR Management Guide*.
2. Enter the following command to launch the Spark session for Delta Lake.

```
spark-submit
—conf "spark.sql.extensions=io.delta.sql.DeltaSparkSessionExtension"
—conf
 "spark.sql.catalog.spark_catalog=org.apache.spark.sql.delta.catalog.DeltaCatalog"
```

If you run Amazon EMR releases 6.15.0 or higher, you must also use the following configurations to use fine-grained access control based on Lake Formation with Delta Lake.

```
spark-submit \  `
--conf
 spark.sql.extensions=io.delta.sql.DeltaSparkSessionExtension,com.amazonaws.emr.recordserv
--conf
 spark.sql.catalog.spark_catalog=org.apache.spark.sql.delta.catalog.DeltaCatalog \

--conf spark.sql.catalog.spark_catalog.lf.managed=true
```

EMR Studio notebooks

To initialize a Spark session using Amazon EMR Studio notebooks, configure your Spark session using **%%configure** magic command in your Amazon EMR notebook, as in the following example. For more information, see [Use EMR Notebooks magics] in the *Amazon EMR Management Guide*.

```
%%configure -f
{
  "conf": {
    "spark.sql.extensions":  "io.delta.sql.DeltaSparkSessionExtension",
     "spark.sql.catalog.spark_catalog":
 "org.apache.spark.sql.delta.catalog.DeltaCatalog"
  }
}
```

If you run Amazon EMR releases 6.15.0 or higher, you must also use the following configurations to use fine-grained access control based on Lake Formation with Delta Lake.

```
%%configure -f
{
  "conf": {
    "spark.sql.extensions":
 "io.delta.sql.DeltaSparkSessionExtension,com.amazonaws.emr.recordserver.connector.spark.sql
    "spark.sql.catalog.spark_catalog":
 "org.apache.spark.sql.delta.catalog.DeltaCatalog",
    "spark.sql.catalog.spark_catalog.lf.managed": "true"
  }
}
```

Write to a Delta Lake table

The following example shows how to create a DataFrame and write it as a Delta Lake dataset. The example shows how to work with datasets with the Spark shell while connected to the primary node using SSH as the default hadoop user.

> **Note**
>
> To paste code samples into the Spark shell, type **:paste** at the prompt, paste the example, and then press **CTRL + D**.

PySpark

Spark includes a Python based shell, `pyspark`, that you can use to prototype Spark programs written in Python. Just as with `spark-shell`, invoke `pyspark` on the primary node.

```
## Create a DataFrame
data =  spark.createDataFrame([("100", "2015-01-01", "2015-01-01T13:51:39.340396Z"),
("101",  "2015-01-01", "2015-01-01T12:14:58.597216Z"),
("102", "2015-01-01", "2015-01-01T13:51:40.417052Z"),
("103",  "2015-01-01",  "2015-01-01T13:51:40.519832Z")],
["id", "creation_date",  "last_update_time"])

## Write a DataFrame as a Delta Lake dataset to the S3  location
spark.sql("""CREATE  TABLE IF NOT EXISTS delta_table (id string, creation_date
 string,
```

```
last_update_time string)
USING delta location
's3://DOC-EXAMPLE-BUCKET/example-prefix/db/delta_table'""");

data.writeTo("delta_table").append()
```

Scala

```
import org.apache.spark.sql.SaveMode
import org.apache.spark.sql.functions._

// Create a DataFrame
val data = Seq(("100",  "2015-01-01",  "2015-01-01T13:51:39.340396Z"),
("101",  "2015-01-01",  "2015-01-01T12:14:58.597216Z"),
("102",  "2015-01-01", "2015-01-01T13:51:40.417052Z"),
("103",  "2015-01-01",  "2015-01-01T13:51:40.519832Z")).toDF("id", "creation_date",
 "last_update_time")

// Write a DataFrame as a Delta Lake dataset to the S3  location
spark.sql("""CREATE  TABLE IF NOT EXISTS delta_table (id string,
creation_date string,
last_update_time string)
USING delta location
's3://DOC-EXAMPLE-BUCKET/example-prefix/db/delta_table'""");

data.write.format("delta").mode("append").saveAsTable("delta_table")
```

SQL

```
-- Create a Delta  Lake table with the S3 location
CREATE TABLE delta_table(id string,
creation_date string,
last_update_time string)
USING delta LOCATION
's3://DOC-EXAMPLE-BUCKET/example-prefix/db/delta_table';

-- insert data into the table
INSERT INTO delta_table VALUES  ("100", "2015-01-01",
 "2015-01-01T13:51:39.340396Z"),
("101",  "2015-01-01",  "2015-01-01T12:14:58.597216Z"),
("102",  "2015-01-01", "2015-01-01T13:51:40.417052Z"),
("103",  "2015-01-01", "2015-01-01T13:51:40.519832Z");
```

Read from a Delta Lake table

PySpark

```
ddf = spark.table("delta_table")
ddf.show()
```

Scala

```
val ddf =  spark.table("delta_table")
ddf.show()
```

SQL

```
SELECT * FROM delta_table;
```

Use a Delta Lake cluster with Spark and AWS Glue

To use the AWS Glue Catalog as the Metastore for Delta Lake tables, create a cluster with following steps. For information on specifying the Delta Lake classification using AWS Command Line Interface, see [Supply a configuration using the AWS Command Line Interface when you create a cluster] or [Supply a configuration using the Java SDK when you create a cluster].

Create a Delta Lake cluster

1. Create a file, `configurations.json`, with the following content:

```
[{"Classification":"delta-defaults",
"Properties":{"delta.enabled":"true"}},
{"Classification":"spark-hive-site",
"Properties":
{"hive.metastore.client.factory.class":"com.amazonaws.glue.catalog.metastore.AWSGlueDataCat
```

2. Create a cluster with the following configuration, replacing the **`example Amazon S3 bucket path`** and the **`subnet ID`** with your own.

```
aws emr create-cluster
```

```
    --release-label  emr-6.9.0
    --applications Name=Spark
    --configurations file://delta_configurations.json
    --region us-east-1
    --name My_Spark_Delta_Cluster
    --log-uri  s3://DOC-EXAMPLE-BUCKET/
    --instance-type m5.xlarge
    --instance-count 2
    --service-role EMR_DefaultRole_V2
    --ec2-attributes 
InstanceProfile=EMR_EC2_DefaultRole,SubnetId=subnet-1234567890abcdef0
```

Considerations and limitations

- Delta Lake is supported for use with Amazon EMR releases 6.9.0 and higher. You can use Apache Spark 3.x on Amazon EMR clusters with Delta tables.
- We recommend that you use s3 URI scheme for S3 location paths instead of s3a for best performance, security and reliability. For more information see Working with storage and file systems.
- With Amazon EMR 7.0, Delta Universal Format (UniForm) and convert-to-Iceberg statements aren't supported.
- With Amazon EMR 6.9 and 6.10, when you store Delta Lake table data in Amazon S3, column data becomes `NULL` after column rename operation. This issue is resolved with Amazon EMR 6.11. For more information about the experimental column rename operation, see Column rename operation in the Delta Lake User Guide.
- If you create a database in the AWS Glue Data Catalog outside of Apache Spark, the database could have an empty `LOCATION` field. Because Spark doesn't allow databases to be created with an empty location property, you'll get the following error if you use Spark in Amazon EMR to create a Delta table in a Glue database and the database has an empty `LOCATION` property:

  ```
  IllegalArgumentException: Can not create a Path from an empty string
  ```

  To resolve this issue, create the database in the Data Catalog with a valid, non-empty path for the `LOCATION` field. For steps to implement this solution, see Illegal argument exception when creating a table in the *Amazon Athena User Guide*.

Delta release history

The following table lists the version of Delta included in each release version of Amazon EMR, along with the components installed with the application. For component versions in each release, see the Component Version section for your release in Amazon EMR 7.x release versions, Amazon EMR 6.x release versions, or Amazon EMR 5.x release versions.

Delta version information

Amazon EMR Release label	Delta Version	Components installed with Delta
emr-7.2.0	3.1.0	Not available.
emr-7.1.0	3.0.0	Not available.
emr-7.0.0	3.0.0	Not available.
emr-6.15.0	2.4.0	Not available.

Apache Flink

Apache Flink is a streaming dataflow engine that you can use to run real-time stream processing on high-throughput data sources. Flink supports event time semantics for out-of-order events, exactly-once semantics, backpressure control, and APIs optimized to write both streaming and batch applications.

Additionally, Flink has connectors for third-party data sources, such as the following:

- Amazon Kinesis Data Streams
- Apache Kafka
- Flink Elasticsearch Connector
- Twitter Streaming API
- Cassandra

Amazon EMR supports Flink as a YARN application so that you can manage resources along with other applications within a cluster. Flink-on-YARN allows you to submit transient Flink jobs, or you can create a long-running cluster that accepts multiple jobs and allocates resources according to the overall YARN reservation.

Flink is included in Amazon EMR release versions 5.1.0 and later.

> **Note**
>
> Support for the `FlinkKinesisConsumer` class was added in Amazon EMR release version 5.2.1.

The following table lists the version of Flink included in the latest release of the Amazon EMR 7.x series, along with the components that Amazon EMR installs with Flink.

For the version of components installed with Flink in this release, see Release 7.2.0 Component Versions.

Flink version information for emr-7.2.0

Amazon EMR Release Label	Flink Version	Components Installed With Flink
emr-7.2.0	Flink 1.18.1	emrfs, hadoop-client, hadoop-mapred, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server, flink-client, flink-jobmanager-config, hudi, delta

The following table lists the version of Flink included in the latest release of the Amazon EMR 6.x series, along with the components that Amazon EMR installs with Flink.

For the version of components installed with Flink in this release, see Release 6.15.0 Component Versions.

Flink version information for emr-6.15.0

Amazon EMR Release Label	Flink Version	Components Installed With Flink
emr-6.15.0	Flink 1.17.1	emrfs, hadoop-client, hadoop-mapred, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server, flink-client,

Amazon EMR Release Label	Flink Version	Components Installed With Flink
		flink-jobmanager-config, hudi, delta-standalone-connectors

The following table lists the version of Flink included in the latest release of the Amazon EMR 5.x series, along with the components that Amazon EMR installs with Flink.

For the version of components installed with Flink in this release, see Release 5.36.2 Component Versions.

Flink version information for emr-5.36.2

Amazon EMR Release Label	Flink Version	Components Installed With Flink
emr-5.36.2	Flink 1.14.2	emrfs, hadoop-client, hadoop-mapred, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server, flink-client, flink-jobmanager-config

Creating a cluster with Flink

You can launch a cluster with the AWS Management Console, AWS CLI, or an AWS SDK.

To launch a cluster with Flink installed from the console

1. Open the Amazon EMR console at https://console.aws.amazon.com/emr.
2. Choose **Create cluster**, **Go to advanced options**.
3. For **Software Configuration**, choose **EMR Release emr-5.1.0** or later.
4. Choose **Flink** as an application, along with any others to install.
5. Select other options as necessary and choose **Create cluster**.

To launch a cluster with Flink from the AWS CLI

- Create the cluster with the following command:

```
aws emr create-cluster --release-label emr-7.2.0 \
--applications Name=Flink \
--configurations file://./configurations.json \
--region us-east-1 \
--log-uri s3://myLogUri \
--instance-type m5.xlarge \
--instance-count 2 \
--service-role EMR_DefaultRole_V2 \
--ec2-attributes KeyName=MyKeyName,InstanceProfile=EMR_EC2_DefaultRole \
--steps Type=CUSTOM_JAR,Jar=command-runner.jar,Name=Flink_Long_Running_Session,\
Args=flink-yarn-session,-d
```

> **Note**
>
> Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

Configuring Flink in Amazon EMR

Configure Flink with Hive Metastore and Glue Catalog

Amazon EMR releases 6.9.0 and higher support both Hive Metastore and AWS Glue Catalog with the Apache Flink connector to Hive. This section outlines the steps required to configure AWS Glue Catalog and Hive Metastore with Flink.

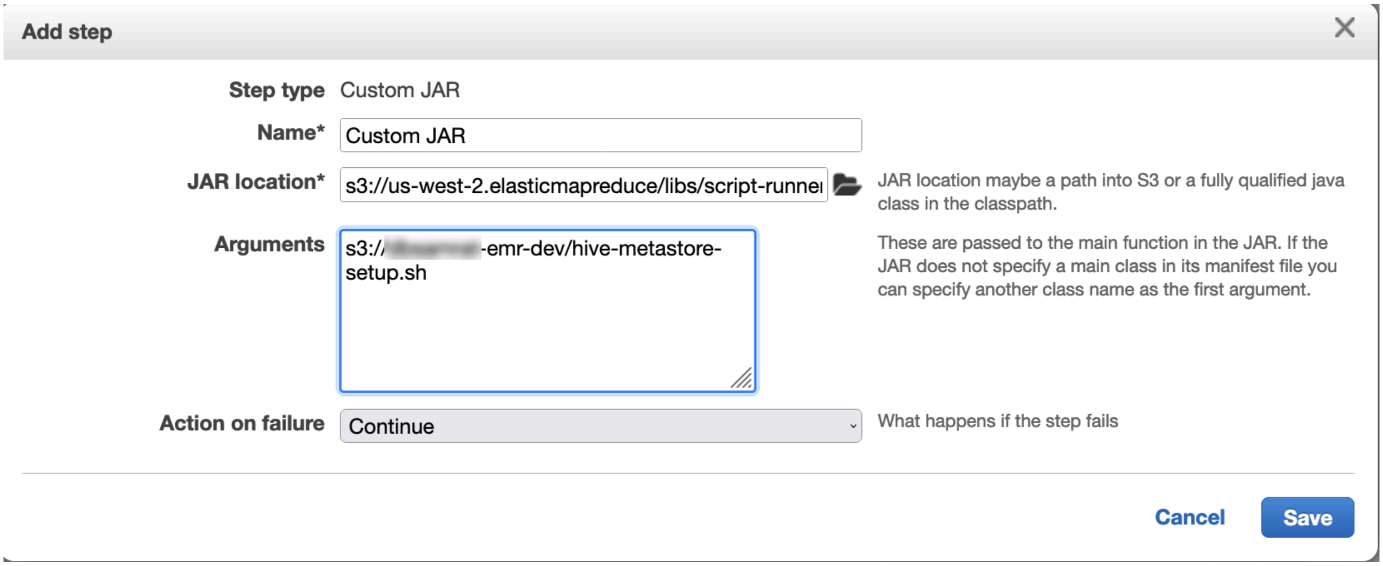
Topics

Use the Hive Metastore

1. Create an EMR cluster with release 6.9.0 or higher and at least two applications: **Hive** and **Flink**.
2. Use script runner to execute the following script as a step function:

   `hive-metastore-setup.sh`

```
sudo cp /usr/lib/hive/lib/antlr-runtime-3.5.2.jar /usr/lib/flink/lib
sudo cp /usr/lib/hive/lib/hive-exec-3.1.3*.jar /lib/flink/lib
sudo cp /usr/lib/hive/lib/libfb303-0.9.3.jar /lib/flink/lib
sudo cp /usr/lib/flink/opt/flink-connector-hive_2.12-1.15.2.jar /lib/flink/lib
sudo chmod 755 /usr/lib/flink/lib/antlr-runtime-3.5.2.jar
sudo chmod 755 /usr/lib/flink/lib/hive-exec-3.1.3*.jar
sudo chmod 755 /usr/lib/flink/lib/libfb303-0.9.3.jar
sudo chmod 755 /usr/lib/flink/lib/flink-connector-hive_2.12-1.15.2.jar
```

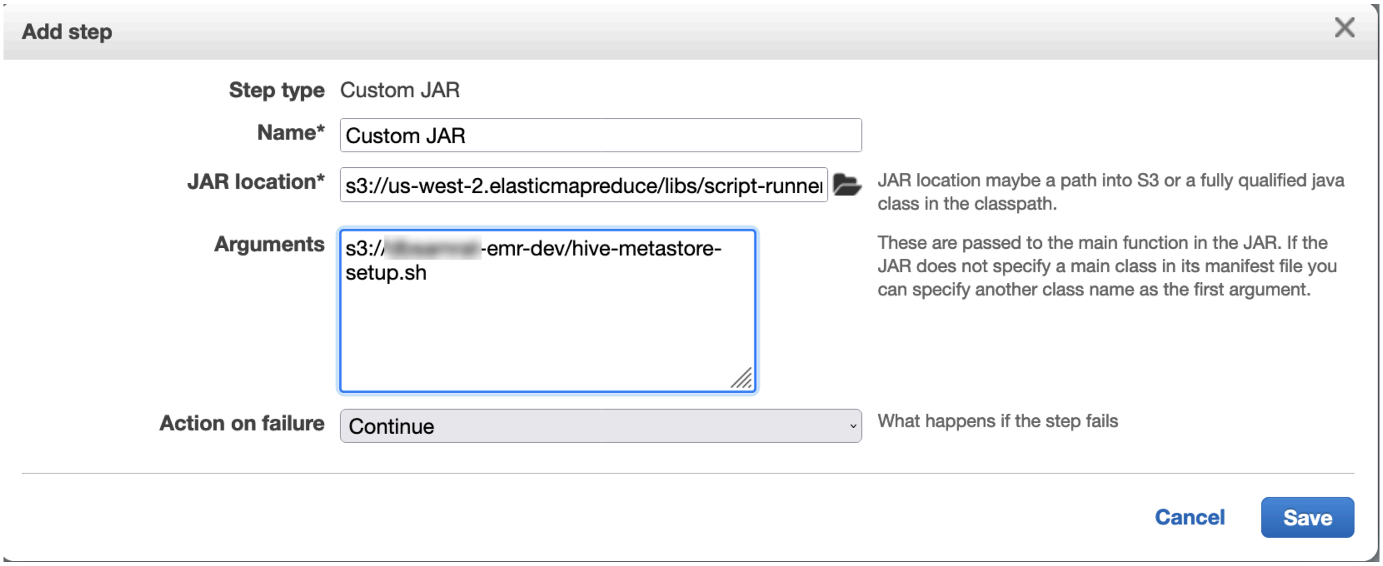


Use the AWS Glue Data Catalog

1. Create an EMR cluster with release 6.9.0 or higher and at least two applications: **Hive** and **Flink**.
2. Select **Use for Hive table metadata** in the AWS Glue Data Catalog settings to enable Data Catalog in the cluster.
3. Use script runner to execute the following script as a step function: Run commands and scripts on an Amazon EMR cluster:

   glue-catalog-setup.sh

```
sudo cp /usr/lib/hive/auxlib/aws-glue-datacatalog-hive3-client.jar /usr/lib/flink/
lib
sudo cp /usr/lib/hive/lib/antlr-runtime-3.5.2.jar /usr/lib/flink/lib
sudo cp /usr/lib/hive/lib/hive-exec-3.1.3*.jar /lib/flink/lib
sudo cp /usr/lib/hive/lib/libfb303-0.9.3.jar /lib/flink/lib
sudo cp /usr/lib/flink/opt/flink-connector-hive_2.12-1.15.2.jar /lib/flink/lib
sudo chmod 755 /usr/lib/flink/lib/aws-glue-datacatalog-hive3-client.jar
sudo chmod 755 /usr/lib/flink/lib/antlr-runtime-3.5.2.jar
sudo chmod 755 /usr/lib/flink/lib/hive-exec-3.1.3*.jar
sudo chmod 755 /usr/lib/flink/lib/libfb303-0.9.3.jar
sudo chmod 755 /usr/lib/flink/lib/flink-connector-hive_2.12-1.15.2.jar
```



Configure Flink with a configuration file

You can use the Amazon EMR configuration API to configure Flink with a configuration file. The files that are configurable within the API are:

- `flink-conf.yaml`
- `log4j.properties`
- `flink-log4j-session`
- `log4j-cli.properties`

The main configuration file for Flink is `flink-conf.yaml`.

To configure the number of task slots that are used for Flink from the AWS CLI

1. Create a file, `configurations.json`, with the following content:

```
[
    {
      "Classification": "flink-conf",
      "Properties": {
        "taskmanager.numberOfTaskSlots":"2"
      }
    }
```

```
]
```

2. Next, create a cluster with the following configuration:

```
aws emr create-cluster --release-label emr-7.2.0 \
--applications Name=Flink \
--configurations file://./configurations.json \
--region us-east-1 \
--log-uri s3://myLogUri \
--instance-type m5.xlarge \
--instance-count 2 \
--service-role EMR_DefaultRole_V2 \
--ec2-attributes KeyName=YourKeyName,InstanceProfile=EMR_EC2_DefaultRole
```

> **Note**
>
> You can also change some configurations with the Flink API. For more information, see *Concepts* in the Flink documentation.
> With Amazon EMR version 5.21.0 and later, you can override cluster configurations and specify additional configuration classifications for each instance group in a running cluster. You do this by using the Amazon EMR console, the AWS Command Line Interface (AWS CLI), or the AWS SDK. For more information, see Supplying a Configuration for an Instance Group in a Running Cluster.

Parallelism options

As the owner of your application, you know best what resources to assign to tasks within Flink. For the examples in this documentation, use the same number of tasks as the tasks instances that you use for the application. We generally recommend this for the initial level of parallelism, but you can also increase the granularity of parallelism with task slots, which should generally not exceed the number of virtual cores per instance. For more information about the Flink architecture, see *Concepts* in the Flink documentation.

Configuring Flink on an EMR cluster with multiple primary nodes

The JobManager of Flink remains available during the primary node failover process in an Amazon EMR cluster with multiple primary nodes. Beginning with Amazon EMR 5.28.0, JobManager high availability is also enabled automatically. No manual configuration is needed.

With Amazon EMR versions 5.27.0 or earlier, the JobManager is a single point of failure. When the JobManager fails, it loses all job states and will not resume the running jobs. You can enable JobManager high availability by configuring application attempt count, checkpointing, and enabling ZooKeeper as state storage for Flink, as the following example demonstrates:

```
[
  {
    "Classification": "yarn-site",
    "Properties": {
      "yarn.resourcemanager.am.max-attempts": "10"
    }
  },
  {
    "Classification": "flink-conf",
    "Properties": {
        "yarn.application-attempts": "10",
        "high-availability": "zookeeper",
        "high-availability.zookeeper.quorum": "%{hiera('hadoop::zk')}",
        "high-availability.storageDir": "hdfs:///user/flink/recovery",
        "high-availability.zookeeper.path.root": "/flink"
    }
  }
]
```

You must configure both maximum application master attempts for YARN and application attempts for Flink. For more information, see Configuration of YARN cluster high availability. You may also want to configure Flink checkpointing to make restarted JobManager recover running jobs from previously completed checkpoints. For more information, see Flink checkpointing.

Configuring memory process size

For Amazon EMR versions that use Flink 1.11.x, you must configure the total memory process size for both JobManager (`jobmanager.memory.process.size`) and TaskManager (`taskmanager.memory.process.size`) in `flink-conf.yaml`. You can set these values by either configuring the cluster with the configuration API or manually uncommenting these fields via SSH. Flink provides the following default values.

- `jobmanager.memory.process.size`: 1600m
- `taskmanager.memory.process.size`: 1728m

To exclude JVM metaspace and overhead, use the total Flink memory size (`taskmanager.memory.flink.size`) instead of `taskmanager.memory.process.size`. The default value for `taskmanager.memory.process.size` is 1280m. It's not recommended to set both `taskmanager.memory.process.size` and `taskmanager.memory.process.size`.

All Amazon EMR versions that use Flink 1.12.0 and later have the default values listed in the open-source set for Flink as the default values on Amazon EMR, so you don't need to configure them yourself.

Configuring log output file size

Flink application containers create and write to three types of log files: `.out` files, `.log` files, and `.err` files. Only `.err` files are compressed and removed from the file system, while `.log` and `.out` log files remain in the file system. To ensure these output files remain manageable and the cluster remains stable, you can configure log rotation in `log4j.properties` to set a maximum number of files and limit their sizes.

Amazon EMR versions 5.30.0 and later

Starting with Amazon EMR 5.30.0, Flink uses the log4j2 logging framework with the configuration classification name `flink-log4j`. The following example configuration demonstrates the log4j2 format.

```
[
  {
    "Classification": "flink-log4j",
    "Properties": {
      "appender.main.name": "MainAppender",
      "appender.main.type": "RollingFile",
      "appender.main.append" : "false",
      "appender.main.fileName" : "${sys:log.file}",
      "appender.main.filePattern" : "${sys:log.file}.%i",
      "appender.main.layout.type" : "PatternLayout",
      "appender.main.layout.pattern" : "%d{yyyy-MM-dd HH:mm:ss,SSS} %-5p %-60c %x - %m
%n",
      "appender.main.policies.type" : "Policies",
      "appender.main.policies.size.type" : "SizeBasedTriggeringPolicy",
      "appender.main.policies.size.size" : "100MB",
      "appender.main.strategy.type" : "DefaultRolloverStrategy",
      "appender.main.strategy.max" : "10"
    },
```

```
  }
]
```

Amazon EMR versions 5.29.0 and earlier

With Amazon EMR versions 5.29.0 and earlier, Flink uses the log4j logging framework. The following example configuration demonstrates the log4j format.

```
[
  {
    "Classification": "flink-log4j",
    "Properties": {
      "log4j.appender.file": "org.apache.log4j.RollingFileAppender",
      "log4j.appender.file.append":"true",
      # keep up to 4 files and each file size is limited to 100MB
      "log4j.appender.file.MaxFileSize":"100MB",
      "log4j.appender.file.MaxBackupIndex":4,
      "log4j.appender.file.layout":"org.apache.log4j.PatternLayout",
      "log4j.appender.file.layout.ConversionPattern":"%d{yyyy-MM-dd HH:mm:ss,SSS} %-5p
 %-60c %x - %m%n"
    },
  }
]
```

Configure Flink to run with Java 11

Amazon EMR releases 6.12.0 and higher provide Java 11 runtime support for Flink. The following sections describe how to configure the cluster to provide Java 11 runtime support for Flink.

Topics

Configure Flink for Java 11 when you create a cluster

Use the following steps to create an EMR cluster with Flink and Java 11 runtime. The configuration file where you add Java 11 runtime support is `flink-conf.yaml`.

Console

To create a cluster with Flink and Java 11 runtime in the console

1. Sign in to the AWS Management Console, and open the Amazon EMR console at https://console.aws.amazon.com/emr.
2. Choose **Clusters** under **EMR on EC2** in the navigation pane, and then **Create cluster**.
3. Select Amazon EMR release 6.12.0 or higher, and choose to install the Flink application. Select any other applications that you want to install on your cluster.
4. Continue setting up your cluster. In the optional **Software settings** section, use the default **Enter configuration** option and enter the following configuration:

```
[
    {
      "Classification": "flink-conf",
      "Properties": {
        "containerized.taskmanager.env.JAVA_HOME":"/usr/lib/jvm/jre-11",
        "containerized.master.env.JAVA_HOME":"/usr/lib/jvm/jre-11",
        "env.java.home":"/usr/lib/jvm/jre-11"
      }
    }
]
```

5. Continue to set up and launch your cluster.

AWS CLI

To create a cluster with Flink and Java 11 runtime from the CLI

1. Create a configuration file `configurations.json`that configures Flink to use Java 11.

```
[
    {
      "Classification": "flink-conf",
      "Properties": {
        "containerized.taskmanager.env.JAVA_HOME":"/usr/lib/jvm/jre-11",
        "containerized.master.env.JAVA_HOME":"/usr/lib/jvm/jre-11",
        "env.java.home":"/usr/lib/jvm/jre-11"
      }
    }
```

```
]
```

2. From the AWS CLI, create a new EMR cluster with Amazon EMR release 6.12.0 or higher, and install the Flink application, as shown in the following example:

```
aws emr create-cluster --release-label emr-6.12.0 \
--applications Name=Flink \
--configurations file://./configurations.json \
--region us-east-1 \
--log-uri s3://myLogUri \
--instance-type m5.xlarge \
--instance-count 2 \
--service-role EMR_DefaultRole_V2 \
--ec2-attributes KeyName=YourKeyName,InstanceProfile=EMR_EC2_DefaultRole
```

Configure Flink for Java 11 on a running cluster

Use the following steps to update a running EMR cluster with Flink and Java 11 runtime. The configuration file where you add Java 11 runtime support is `flink-conf.yaml`.

Console

To update a running cluster with Flink and Java 11 runtime in the console

1. Sign in to the AWS Management Console, and open the Amazon EMR console at https://console.aws.amazon.com/emr.
2. Choose **Clusters** under **EMR on EC2** in the navigation pane, and then select the cluster that you want to update.

> **Note**
>
> The cluster must use Amazon EMR release 6.12.0 or higher to support Java 11.

3. Select the **Configurations** tab.
4. In the **Instance group configurations** section, select the **Running** instance group that you want to update and then choose **Reconfigure** from the list actions menu.
5. Reconfigure the instance group with the **Edit attributes** option as follows. Select **Add new configuration** after each one.

Classification	Property	Value
flink-conf	containerized.taskmanager.env.JAVA_HOME	/usr/lib/jvm/jre-11
flink-conf	containerized.master.env.JAVA_HOME	/usr/lib/jvm/jre-11
flink-conf	env.java.home	/usr/lib/jvm/jre-11

6. Select **Save changes** to add the configurations.

AWS CLI

To update a running cluster to use Flink and Java 11 runtime from the CLI

Use the `modify-instance-groups` command to specify a new configuration for an instance group in a running cluster.

1. First, create a configuration file `configurations.json`that configures Flink to use Java 11. In the following example, replace *ig-1xxxxxxx9* with the ID for the instance group that you want to reconfigure. Save the file in the same directory where you will run the `modify-instance-groups` command.

```
[
   {
      "InstanceGroupId":"ig-1xxxxxxx9",
      "Configurations":[
         {
            "Classification":"flink-conf",
            "Properties":{
              "containerized.taskmanager.env.JAVA_HOME":"/usr/lib/jvm/jre-11",
              "containerized.master.env.JAVA_HOME":"/usr/lib/jvm/jre-11",
              "env.java.home":"/usr/lib/jvm/jre-11"
            },
            "Configurations":[]
         }
```

```
        ]
    }
]
```

2. From the AWS CLI, run the following command. Replace the ID for the instance group that you want to reconfigure:

```
aws emr modify-instance-groups --cluster-id j-2AL4XXXXXX5T9 \
--instance-groups file://configurations.json
```

Confirm the Java runtime for Flink on a running cluster

To determine the Java runtime for a running cluster, log in to the primary node with SSH as described in Connect to the primary node with SSH. Then run the following command:

```
ps -ef | grep flink
```

The `ps` command with the `-ef` option lists all running processes on the system. You can filter that output with `grep` to find mentions of the string `flink`. Review the output for the Java Runtime Environment (JRE) value, `jre-XX`. In the following output, `jre-11` indicates that Java 11 is picked up at runtime for Flink.

```
flink    19130     1  0 09:17 ?        00:00:15 /usr/lib/jvm/jre-11/bin/
java -Djava.io.tmpdir=/mnt/tmp -Dlog.file=/usr/lib/flink/log/flink-flink-
historyserver-0-ip-172-31-32-127.log -Dlog4j.configuration=file:/usr/lib/flink/conf/
log4j.properties -Dlog4j.configurationFile=file:/usr/lib/flink/conf/log4j.properties
 -Dlogback.configurationFile=file:/usr/lib/flink/conf/logback.xml -classpath /usr/lib/
flink/lib/flink-cep-1.17.0.jar:/usr/lib/flink/lib/flink-connector-files-1.17.0.jar:/
usr/lib/flink/lib/flink-csv-1.17.0.jar:/usr/lib/flink/lib/flink-json-1.17.0.jar:/usr/
lib/flink/lib/flink-scala_2.12-1.17.0.jar:/usr/lib/flink/lib/flink-table-api-java-
uber-1.17.0.jar:/usr/lib/flink/lib/flink-table-api-scala-bridge_2.12-1.17.0.
```

Alternatively, log in to the primary node with SSH and start a Flink YARN session with command `flink-yarn-session -d`. The output shows the Java Virtual Machine (JVM) for Flink, `java-11-amazon-corretto` in the following example:

```
2023-05-29 10:38:14,129 INFO  org.apache.flink.configuration.GlobalConfiguration
     [] - Loading configuration property: containerized.master.env.JAVA_HOME, /usr/lib/
jvm/java-11-amazon-corretto.x86_64
```

Working with Flink jobs in Amazon EMR

There are several ways to interact with Flink on Amazon EMR: through the console, the Flink interface found on the ResourceManager Tracking UI, and at the command line. You can submit a JAR file to a Flink application with any of these. Once submit a JAR file, it becomes a job that is managed by the Flink JobManager. The JobManager is located on the YARN node that hosts the Flink session Application Master daemon.

You can run a Flink application as a YARN job on a long-running cluster or on a transient cluster. On a long-running cluster, you can submit multiple Flink jobs to one Flink cluster running on Amazon EMR. If you run a Flink job on a transient cluster, your Amazon EMR cluster exists only for the time it takes to run the Flink application, so you are only charged for the resources and time used. You can submit a Flink job with the Amazon EMR `AddSteps` API operation, as a step argument to the `RunJobFlow` operation, and through the AWS CLI `add-steps` or `create-cluster` commands.

Start a Flink YARN application as a step on a long-running cluster

To start a Flink application that multiple clients can submit work to through YARN API operations, you need to either create a cluster or add a Flink application an existing cluster. For instructions on how to create a new cluster, see Creating a cluster with Flink. To start a YARN session on an existing cluster, use the following steps from the console, AWS CLI, or Java SDK.

> **Note**
>
> The `flink-yarn-session` command was added in Amazon EMR version 5.5.0 as a wrapper for the `yarn-session.sh` script to simplify execution. If you use an earlier version of Amazon EMR, substitute `bash -c "/usr/lib/flink/bin/yarn-session.sh -d"` for **Arguments** in the console or `Args`. in the AWS CLI command.

To submit a Flink job on an existing cluster from the console

Submit the Flink session with the `flink-yarn-session` command in an existing cluster.

1. Open the Amazon EMR console at https://console.aws.amazon.com/emr.
2. In the cluster list, select the cluster you previously launched.
3. In the cluster details page, choose **Steps**, **Add Step**.

4. Use the guidelines that follow to enter the parameters, and then choose **Add**.

Parameter	Description
Step type	**Custom JAR**
Name	A name to help you identify the step. For example, *<example-flink-step-name>*.
Jar location	**command-runner.jar**
Arguments	The `flink-yarn-session` command with arguments appropriate for your application. For example, *`flink-yarn-session -d`* starts a Flink session within your YARN cluster in a detached state (-d). See [YARN setup](#) in the latest Flink documentation for argument details.

To submit a Flink job on an existing cluster with the AWS CLI

- Use the `add-steps` command to add a Flink job to a long-running cluster. The following example command specifies `Args="flink-yarn-session", "-d"` to start a Flink session within your YARN cluster in a detached state (-d). See YARN setup in the latest Flink documentation for argument details.

```
aws emr add-steps --cluster-id <j-XXXXXXXX> --steps Type=CUSTOM_JAR,Name=<example-
flink-step-name>,Jar=command-runner.jar,Args="flink-yarn-session","-d"
```

Submit work to an existing Flink application on a long-running cluster

If you already have an existing Flink application on a long-running cluster, you can specify the cluster's Flink application ID in order to submit work to it. To obtain the application ID, run `yarn application -list` on the AWS CLI or through the YarnClient API operation:

```
$ yarn application -list
```

```
16/09/07 19:32:13 INFO client.RMProxy: Connecting to ResourceManager at
 ip-10-181-83-19.ec2.internal/10.181.83.19:8032

 100% http://ip-10-136-154-194.ec2.internal:33089
```

The application ID for this Flink session is `application_1473169569237_0002`, which you can use to submit work to the application from the AWS CLI or an SDK.

Example SDK for Java

```
List<StepConfig> stepConfigs = new ArrayList<StepConfig>();

HadoopJarStepConfig flinkWordCountConf = new HadoopJarStepConfig()
    .withJar("command-runner.jar")
    .withArgs("flink", "run", "-m", "yarn-cluster", "-yid",
 "application_1473169569237_0002", "-yn", "2", "/usr/lib/flink/examples/streaming/
WordCount.jar",
      "--input", "s3://myBucket/pg11.txt", "--output", "s3://myBucket/alice2/");

StepConfig flinkRunWordCount = new StepConfig()
  .withName("Flink add a wordcount step")
  .withActionOnFailure("CONTINUE")
  .withHadoopJarStep(flinkWordCountConf);

stepConfigs.add(flinkRunWordCount);

AddJobFlowStepsResult res = emr.addJobFlowSteps(new AddJobFlowStepsRequest()
   .withJobFlowId("myClusterId")
   .withSteps(stepConfigs));
```

Example AWS CLI

```
aws emr add-steps --cluster-id <j-XXXXXXXX> \
--steps Type=CUSTOM_JAR,Name=Flink_Submit_To_Long_Running,Jar=command-runner.jar,\
Args="flink","run","-m","yarn-cluster","-yid","application_1473169569237_0002",\
"/usr/lib/flink/examples/streaming/WordCount.jar",\
"--input","s3://myBucket/pg11.txt","--output","s3://myBucket/alice2/" \
```

```
--region <region-code>
```

Submit a transient Flink job

The following examples launch a transient cluster that runs a Flink job and then terminates on completion.

Example SDK for Java

```
import java.util.ArrayList;
import java.util.List;
import com.amazonaws.AmazonClientException;
import com.amazonaws.auth.AWSCredentials;
import com.amazonaws.auth.AWSStaticCredentialsProvider;
import com.amazonaws.auth.profile.ProfileCredentialsProvider;
import com.amazonaws.services.elasticmapreduce.AmazonElasticMapReduce;
import com.amazonaws.services.elasticmapreduce.AmazonElasticMapReduceClientBuilder;
import com.amazonaws.services.elasticmapreduce.model.*;

public class Main_test {

 public static void main(String[] args) {
  AWSCredentials credentials_profile = null;
  try {
   credentials_profile = new ProfileCredentialsProvider("default").getCredentials();
  } catch (Exception e) {
   throw new AmazonClientException(
     "Cannot load credentials from .aws/credentials file. " +
       "Make sure that the credentials file exists and the profile name is specified
 within it.",
     e);
  }

  AmazonElasticMapReduce emr = AmazonElasticMapReduceClientBuilder.standard()
    .withCredentials(new AWSStaticCredentialsProvider(credentials_profile))
    .withRegion(Regions.US_WEST_1)
    .build();

  List<StepConfig> stepConfigs = new ArrayList<StepConfig>();
  HadoopJarStepConfig flinkWordCountConf = new HadoopJarStepConfig()
    .withJar("command-runner.jar")
    .withArgs("bash", "-c", "flink", "run", "-m", "yarn-cluster", "-yn", "2",
```

```
      "/usr/lib/flink/examples/streaming/WordCount.jar", "--input", "s3://path/to/
input-file.txt", "--output",
      "s3://path/to/output/");

  StepConfig flinkRunWordCountStep = new StepConfig()
    .withName("Flink add a wordcount step and terminate")
    .withActionOnFailure("CONTINUE")
    .withHadoopJarStep(flinkWordCountConf);

  stepConfigs.add(flinkRunWordCountStep);

  Application flink = new Application().withName("Flink");

  RunJobFlowRequest request = new RunJobFlowRequest()
    .withName("flink-transient")
    .withReleaseLabel("emr-5.20.0")
    .withApplications(flink)
    .withServiceRole("EMR_DefaultRole")
    .withJobFlowRole("EMR_EC2_DefaultRole")
    .withLogUri("s3://path/to/my/logfiles")
    .withInstances(new JobFlowInstancesConfig()
      .withEc2KeyName("myEc2Key")
      .withEc2SubnetId("subnet-12ab3c45")
      .withInstanceCount(3)
      .withKeepJobFlowAliveWhenNoSteps(false)
      .withMasterInstanceType("m4.large")
      .withSlaveInstanceType("m4.large"))
    .withSteps(stepConfigs);

  RunJobFlowResult result = emr.runJobFlow(request);
  System.out.println("The cluster ID is " + result.toString());

 }

}
```

Example AWS CLI

Use the `create-cluster` subcommand to create a transient cluster that terminates when the Flink job completes:

```
aws emr create-cluster --release-label emr-5.2.1 \
--name "Flink_Transient" \
```

```
--applications Name=Flink \
--configurations file://./configurations.json \
--region us-east-1 \
--log-uri s3://myLogUri \
--auto-terminate
--instance-type m5.xlarge \
--instance-count 2 \
--service-role EMR_DefaultRole_V2 \
--ec2-attributes KeyName=<YourKeyName>,InstanceProfile=EMR_EC2_DefaultRole \
--steps Type=CUSTOM_JAR,Jar=command-runner.jar,Name=Flink_Long_Running_Session,\
Args="bash","-c","\"flink run -m yarn-cluster /usr/lib/flink/examples/streaming/
WordCount.jar
--input s3://myBucket/pg11.txt --output s3://myBucket/alice/""
```

Use the Scala shell

The Flink Scala shell for EMR clusters is only configured to start new YARN sessions. You can use the Scala shell by following the procedure below.

Use the Flink Scala shell on the primary node

1. Log in to the primary node with SSH as described in Connect to the primary node with SSH.
2. Type the following to start a shell:

   In Amazon EMR version 5.5.0 and later, you can use the following command to start a Yarn cluster for the Scala Shell with one TaskManager.

   ```
   % flink-scala-shell yarn 1
   ```

   In earlier versions of Amazon EMR, use:

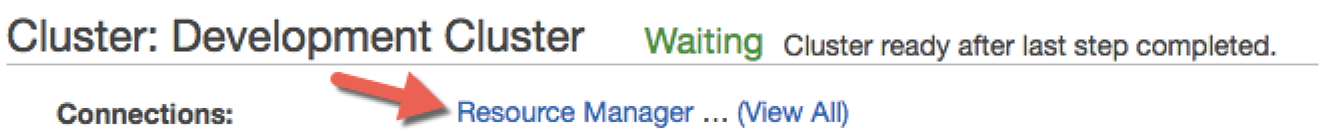
   ```
   % /usr/lib/flink/bin/start-scala-shell.sh yarn 1
   ```

   This starts the Flink Scala shell so you can interactively use Flink. Just as with other interfaces and options, you can scale the `-n` option value used in the example based on the number of tasks you want to run from the shell.

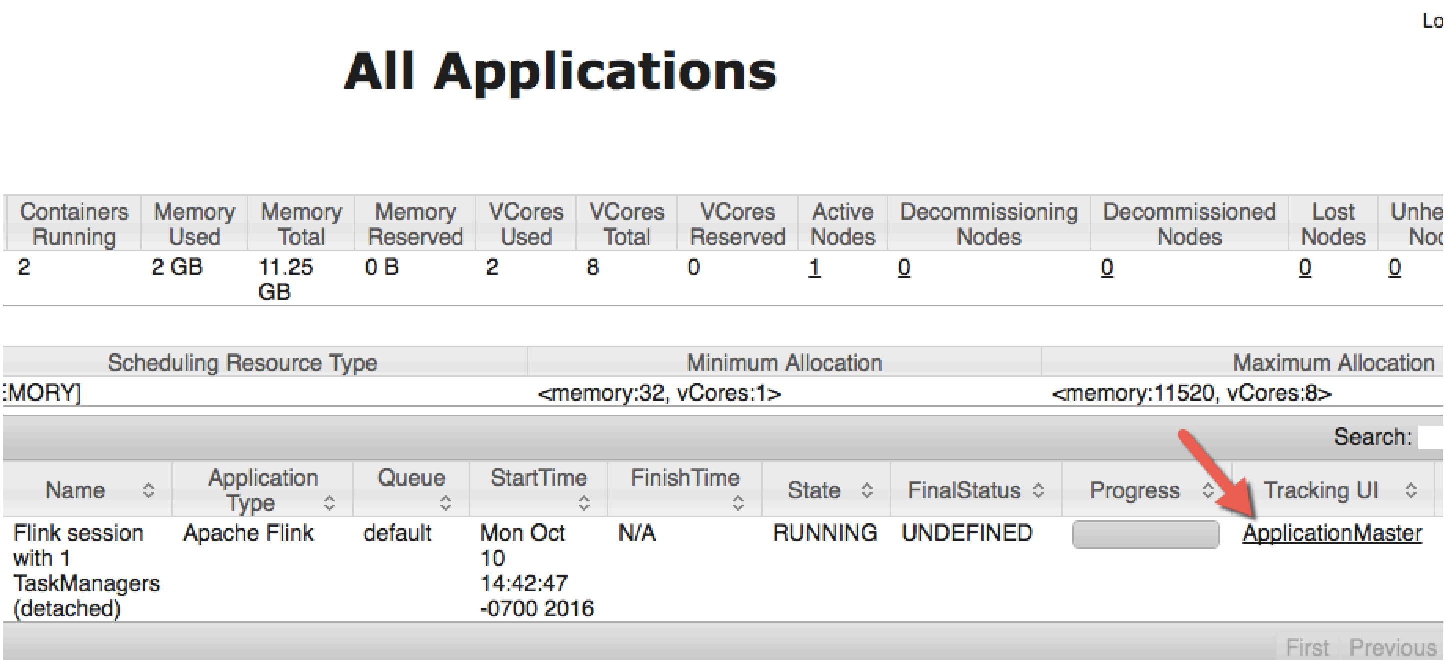
   For more information, see Scala REPL in the official Apache Flink documentation.

Finding the Flink web interface

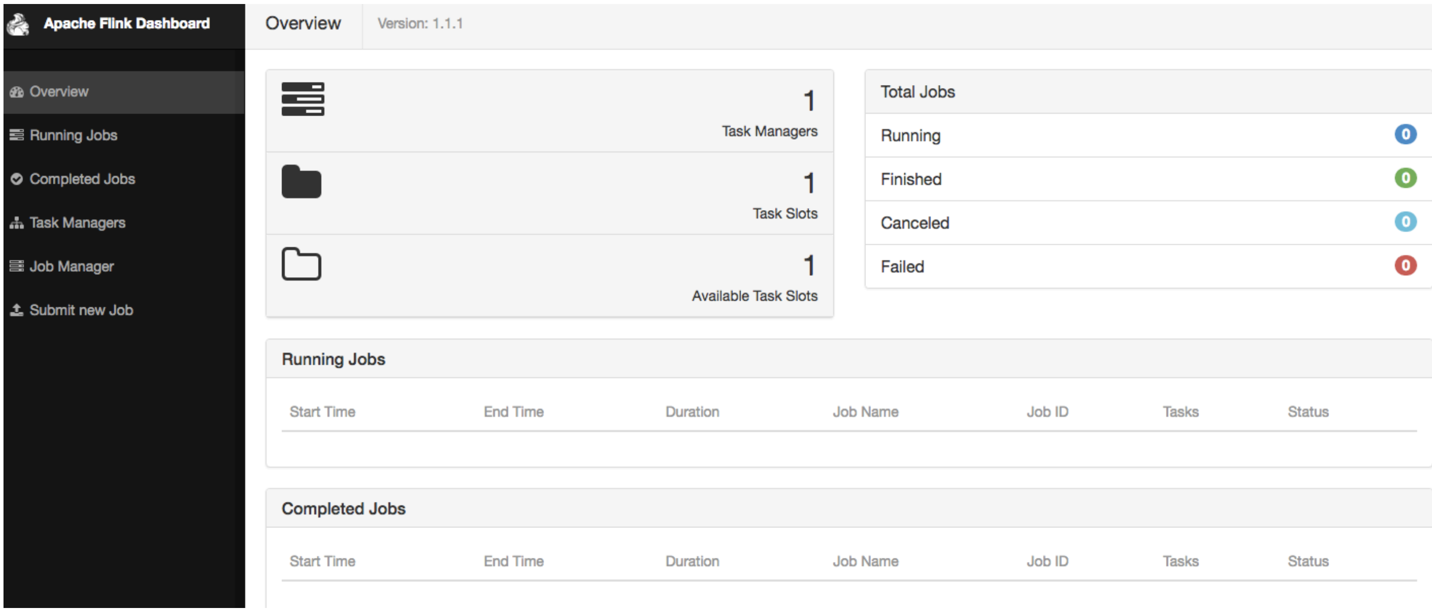
The Application Master that belongs to the Flink application hosts the Flink web interface. It is an alternative way to submit a JAR as a job or to view the current status of other jobs. The Flink web interface is active as long as you have a Flink session running. If you have a long-running YARN job already active, you can follow the instructions in the [Connect to the primary node with SSH](#) topic in the *Amazon EMR Management Guide* to connect to the YARN ResourceManager. For example, if you've set up an SSH tunnel and have activated a proxy in your browser, you choose the ResourceManager connection under **Connections** in your EMR cluster details page.



After you find the ResourceManager, select the YARN application that's hosting a Flink session. Choose the link under the **Tracking UI** column.



In the Flink web interface, you can view configuration, submit your own custom JAR as a job, or monitor jobs in progress.



Flink autoscaler

Overview

Amazon EMR releases 6.15.0 and higher support *Flink autoscaler*. The job autoscaler functionality collects metrics from running Flink streaming jobs, and automatically scales the individual job vertexes. This reduces the backpressure and satisfies the utilization target that you set.

For more information, see the Autoscaler section of the *Apache Flink Kubernetes Operator* documentation.

Considerations

- Flink autoscaler is supported with Amazon EMR 6.15.0 and higher.
- Flink autoscaler is supported only for streaming jobs.
- Only adaptive scheduler is supported. The default scheduler is not supported.
- We recommend that you enable cluster scaling to allow dynamic resource provision. Amazon EMR managed scaling is preferred `because the metric evaluation occurs every 5–10 seconds. At this interval, your cluster can more readily adjust to the change in the required cluster resources.

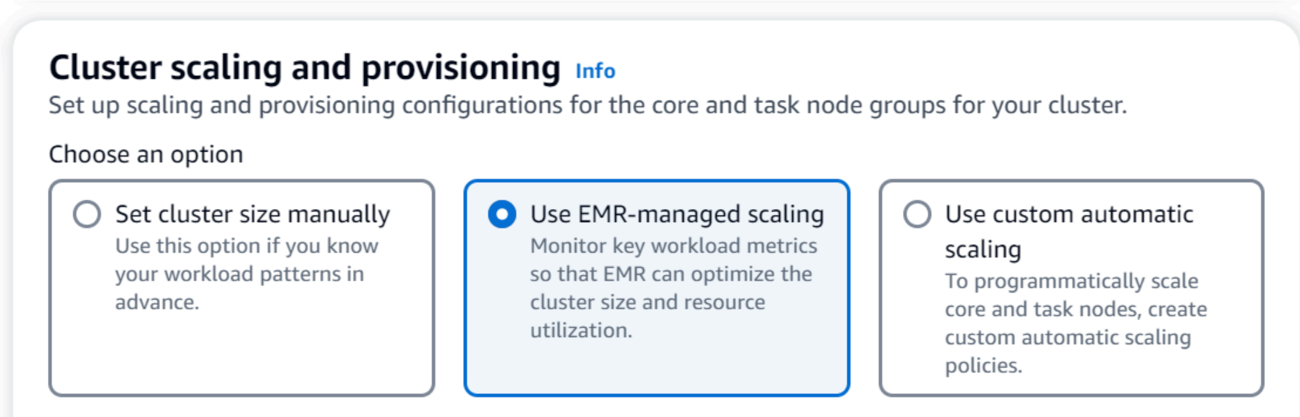
Enable autoscaler

Use the following steps to enable the Flink autoscaler when you create an Amazon EMR on EC2 cluster.

1. In the Amazon EMR console, create a new EMR cluster:

   a. Choose Amazon EMR release `emr-6.15.0` or higher. Select the **Flink** application bundle, and select any other applications that you might want to include on your cluster.

   b. For the **Cluster scaling and provisioning** option, select **Use EMR-managed scaling**.



2. In the **Software settings** section, enter the following configuration to enable Flink autoscaler. For testing scenarios, set the decision interval, metrics window interval, and stabilization interval to a lower value so that the job immediately makes a scaling decision for easier verification.

```
[
  {
    "Classification": "flink-conf",
    "Properties": {
      "job.autoscaler.enabled": "true",
      "jobmanager.scheduler": "adaptive",
      "job.autoscaler.stabilization.interval": "60s",
      "job.autoscaler.metrics.window": "60s",
      "job.autoscaler.decision.interval": "10s",
      "job.autoscaler.debug.logs.interval": "60s"
    }
  }
]
```

3. Select or configure any other settings as you prefer them, and create the Flink autoscaler-enabled cluster.

Autoscaler configurations

This section covers most of the configurations that you can change based on your specific needs.

> **Note**
>
> With time-based configurations like `time`, `interval` and `window` settings, the default unit when no unit is specified is milliseconds. So a value of `30` with no suffix equals

30 milliseconds. For other units of time, include the appropriate suffix of s for *seconds*, m for *minutes*, or h for *hours*.

Topics

- Autoscaler loop configurations
- Metrics aggregation and history configurations
- Job vertex level configurations
- Backlog processing configurations
- Scale operation configurations

Autoscaler loop configurations

Autoscaler fetches the job vertex level metrics for every few configurable time interval, converts them into scale actionables, estimates new job vertex parallelism, and recommends it to job scheduler. Metrics are collected only after the job restart time and cluster stabilization interval.

Config key	Default value	Description	Example values
`job.autoscaler.enabled`	`false`	Enable autoscaling on your Flink cluster.	`true`, `false`
`job.autoscaler.decision.interval`	`60s`	Autoscaler decision interval.	`30` (default unit is milliseconds), `5m`, `1h`
`job.autoscaler.restart.time`	`3m`	Expected restart time to be used until the operator can determine it reliably from history.	`30` (default unit is milliseconds), `5m`, `1h`
`job.autoscaler.stabilization.interval`	`300s`	Stabilization period in which no new scaling will be executed.	`30` (default unit is

Config key	Default value	Description	Example values
			milliseconds), 5m, 1h
job.autoscaler.debug.logs.interval	300s	Autoscaler debug logs interval.	30 (default unit is milliseconds), 5m, 1h

Metrics aggregation and history configurations

Autoscaler fetches the metrics, aggregates them over time based sliding window and these are evaluated into scaling decisions. The scaling decision history for each job vertex are utilised to estimate new parallelism. These have both age based expiry as well as history size (at-least 1).

Config key	Default value	Description	Example values
job.autoscaler.metrics.window	600s	Scaling metrics aggregation window size.	30 (default unit is milliseconds), 5m, 1h
job.autoscaler.history.max.count	3	Maximum number of past scaling decisions to retain per vertex.	1 to Integer.MAX_VALUE
job.autoscaler.history.max.age	24h	Minimum number of past scaling decisions to retain per vertex.	30 (default unit is milliseconds), 5m, 1h

Job vertex level configurations

The parallelism of each job vertex is modified on the basis of target utilisation and bounded by the min-max parallelism limits. It’s not recommended to set target utilisation close to 100% (i.e value of 1) and the utilisation boundary works as a buffer to handle the intermediate load fluctuations.

Config key	Default value	Description	Example values
`job.autoscaler.target.utilization`	`0.7`	Target vertex utilization.	`0` - `1`
`job.autoscaler.target.utilization.boundary`	`0.4`	Target vertex utilization boundary. Scaling won't be performed if the current processing rate is within [`target_rate / (target_utilization - boundary)` , and (`target_rate / (target_utilization + boundary)`]	`0` - `1`
`job.autoscaler.vertex.min-parallelism`	`1`	The minimum parallelism that the autoscaler can use.	`0` - `200`
`job.autoscaler.vertex.max-parallelism`	`200`	The maximum parallelism the autoscaler can use. Note that this limit will be ignored if it is higher than the max parallelism configured in the Flink config or directly on each operator.	`0` - `200`

Backlog processing configurations

The job vertex needs extra resources to handle the pending events, or backlogs, that accumulate during the scale operation time period. This is also referred as the `catch-up` duration. If the time to process backlog exceeds the configured `lag -threshold` value, the job vertex target utilization increases to max level. This helps prevent unnecessary scaling operations while the backlog processes.

Config key	Default value	Description	Example values
`job.autoscaler.backlog-processing.lag-threshold`	`5m`	Lag threshold which will prevent unnecessary scalings while removing the pending messages responsible for the lag.	`30` (default unit is milliseconds), `5m`, `1h`
`job.autoscaler.catch-up.duration`	`15m`	The target duration for fully processing any backlog after a scaling operation. Set to 0 to disable backlog based scaling.	`30` (default unit is milliseconds), `5m`, `1h`

Scale operation configurations

Autoscaler doesn't perform scale down operation immediately after a scale up operation within grace time period. This prevents un-necessary cycle of scale up-down-up-down operations caused by temporary load fluctuations.

We can use the scale down operation ratio to gradually decrease the parallelism and release resources to cater for temporary load spike. It also helps to prevent un-necessary minor scale up operation post major scale down operation.

We can detect an in-effective scale up operation based past job vertex scaling decision history to prevent further parallelism change.

Config key	Default value	Description	Example values
job.autoscaler.scale-up.grace-period	1h	Duration in which no scale down of a vertex is allowed after it has been scaled up.	30 (default unit is milliseconds), 5m, 1h
job.autoscaler.scale-down.max-factor	0.6	Max scale down factor. A value of 1 means no limit on scale down; 0.6 means job can only be scaled down with 60% of the original parallelism.	0 - 1
job.autoscaler.scale-up.max-factor	100000.	Maximum scale up ratio. A value of 2.0 means job can only be scaled up with 200% of the current parallelism.	0 - Integer.MAX_VALUE
job.autoscaler.scaling.effectiveness.detection.enabled	false	Whether to enable detection of ineffective scaling operations and allowing the autoscaler to block further scale ups.	true, false

Optimizing job restart times for task recovery and scaling operations

When a task fails or when a scaling operation occurs, Flink attempts to re-execute the task from the last completed checkpoint. The restart process could take a minute or longer to execute, depending on the size of the checkpoint state and the number of parallel tasks. During the restart period, backlog tasks can accumulate for the job. There are some ways though, that Flink optimizes the speed of recovery and restart of execution graphs to improve job stability.

This page describes some of the ways that Amazon EMR Flink can improve the job restart time during task recovery or scaling operations.

Topics

Task-local recovery

> **Note**
>
> Task-local recovery is supported with Amazon EMR 6.0.0 and higher.

With Flink checkpoints, each task produces a snapshot of its state that Flink writes to distributed storage like Amazon S3. In cases of recovery, the tasks restore their state from the distributed storage. Distributed storage provides fault tolerance and can redistribute the state during rescaling because it's accessible to all nodes.

However, a remote distributed store also has a disadvantage: all tasks must read their state from a remote location over the network. This can result in long recovery times for large states during task recovery or scaling operations.

This problem of long recovery time is solved by *task-local recovery*. Tasks write their state on checkpoint into a secondary storage that is local to the task, such as on a local disk. They also store their state in the primary storage, or Amazon S3 in our case. During recovery, the scheduler schedules the tasks on the same task manager where the tasks ran earlier so that they can recover from the local state store instead of reading from the remote state store. For more information, see Task-Local Recovery in the *Apache Flink Documentation*.

Our benchmark tests with sample jobs have shown that the recovery time has been reduced from minutes to a few seconds with task-local recovery enabled.

To enable task-local recovery, set the following configurations in your `flink-conf.yaml` file. Specify the checkpointing interval value in milliseconds.

```
state.backend.local-recovery: true
state.backend: hasmap or rocksdb
state.checkpoints.dir: s3://storage-location-bucket-path/checkpoint
execution.checkpointing.interval: 15000
```

Generic log-based incremental checkpoint

Note

Generic log-based incremental checkpointing is supported with Amazon EMR 6.10.0 and higher.

Generic log-based incremental checkpointing was added in Flink 1.16 to improve the speed of checkpoints. A faster checkpoint interval often results in a reduction of recovery work because fewer events need to be reprocessed after recovery. For more information, see Improving speed and stability of checkpointing with generic log-based incremental checkpoints on the *Apache Flink Blog*.

With sample jobs, our benchmark tests have shown that the checkpoint time reduced from minutes to a few seconds with the generic log-based incremental checkpoint.

To enable generic log-based incremental checkpoints, set the following configurations in your `flink-conf.yaml` file. Specify the checkpointing interval value in milliseconds.

```
state.backend.changelog.enabled: true
state.backend.changelog.storage: filesystem
dstl.dfs.base-path: s3://bucket-path/changelog
state.backend.local-recovery: true
state.backend: rocksdb
state.checkpoints.dir: s3://bucket-path/checkpoint
execution.checkpointing.interval: 15000
```

Fine-grained recovery

> **Note**
>
> Fine-grained recovery support for the default scheduler is available with Amazon EMR 6.0.0 and higher. Fine-grained recovery support in the adaptive scheduler is available with Amazon EMR 6.15.0 and higher.

When a task fails during execution, Flink resets the entire execution graph and triggers complete re-execution from the last completed checkpoint. This is more expensive than just re-executing the failed tasks. Fine-grained recovery restarts only the pipeline-connected component of the failed task. In the following example, the job graph has 5 vertices (`A` to `E`). All connections between the vertices are pipelined with pointwise distribution, and the `parallelism.default` for the job is set to `2`.

```
A # B # C # D # E
```

For this example, there are a total of 10 tasks running. The first pipeline (`a1` to `e1`) runs on a TaskManager (`TM1`), and the second pipeline (`a2` to `e2`) runs on another TaskManager (`TM2`).

```
a1 # b1 # c1 # d1 # e1
a2 # b2 # c2 # d2 # e2
```

There are two pipelined connected components: `a1 # e1`, and `a2 # e2`. If either `TM1` or `TM2` fails, the failure impacts only the 5 tasks in the pipeline where the TaskManager was running. The restart strategy only starts the affected pipelined component.

Fine-grained recovery works only with perfectly parallel Flink jobs. It's not supported with `keyBy()` or `redistribute()` operations. For more information, see [FLIP-1: Fine Grained Recovery from Task Failures](#) in the *Flink Improvement Proposal* Jira project.

To enable fine-grained recovery, set the following configurations in your `flink-conf.yaml` file.

```
jobmanager.execution.failover-strategy: region
restart-strategy: exponential-delay or fixed-delay
```

Combined restart mechanism in adaptive scheduler

> **Note**
>
> The combined restart mechanism in adaptive scheduler is supported with Amazon EMR 6.15.0 and higher.

Adaptive scheduler can adjust the parallelism of the job based on available slots. It automatically reduces the parallelism if not enough slots are available to fit the configured job parallelism. If new slots become available, the job is scaled up again to the configured job parallelism. An adaptive scheduler avoids downtime on the job when there are not enough resources available. This is the supported scheduler for Flink Autoscaler. We recommend adaptive scheduler with Amazon EMR Flink for these reasons. However, adaptive schedulers might do multiple restarts within a short period of time, one restart for every new resource added. This could lead to a performance drop in the job.

With Amazon EMR 6.15.0 and higher, Flink has a combined restart mechanism in adaptive scheduler that opens a restart window when the first resource is added, and then waits until the configured window interval of the default 1 minute. It performs a single restart when there are sufficient resources available to run the job with configured parallelism or when the interval times out.

With sample jobs, our benchmark tests have shown that this feature processes 10% of records more than the default behavior when you use adaptive scheduler and Flink autoscaler.

To enable the combined restart mechanism, set the following configurations in your `flink-conf.yaml` file.

```
jobmanager.adaptive-scheduler.combined-restart.enabled: true
jobmanager.adaptive-scheduler.combined-restart.window-interval: 1m
```

Working with Flink jobs from Zeppelin in Amazon EMR

Introduction

Amazon EMR releases 6.10.0 and higher support [Apache Zeppelin](https://zeppelin.apache.org/) integration with Apache Flink. You can interactively submit Flink jobs through Zeppelin notebooks. With the Flink interpreter, you can execute Flink queries, define Flink streaming and batch jobs, and visualize the output within Zeppelin notebooks. The Flink interpreter is built on top of the Flink REST API. This lets you access and manipulate Flink jobs from within the Zeppelin environment to perform real-time data processing and analysis.

There are four sub-interpreters in Flink interpreter. They serve different purposes, but are all in the the JVM and share the same pre-configured entry points to Flink (`ExecutionEnviroment`, `StreamExecutionEnvironment`, `BatchTableEnvironment`, `StreamTableEnvironment`). The interpreters are as follows:

- `%flink` – Creates `ExecutionEnvironment`, `StreamExecutionEnvironment`, `BatchTableEnvironment`, `StreamTableEnvironment`, and provides a Scala environment
- `%flink.pyflink` – Provides a Python environment
- `%flink.ssql` – Provides a streaming SQL environment
- `%flink.bsql` – Provides a batch SQL environment

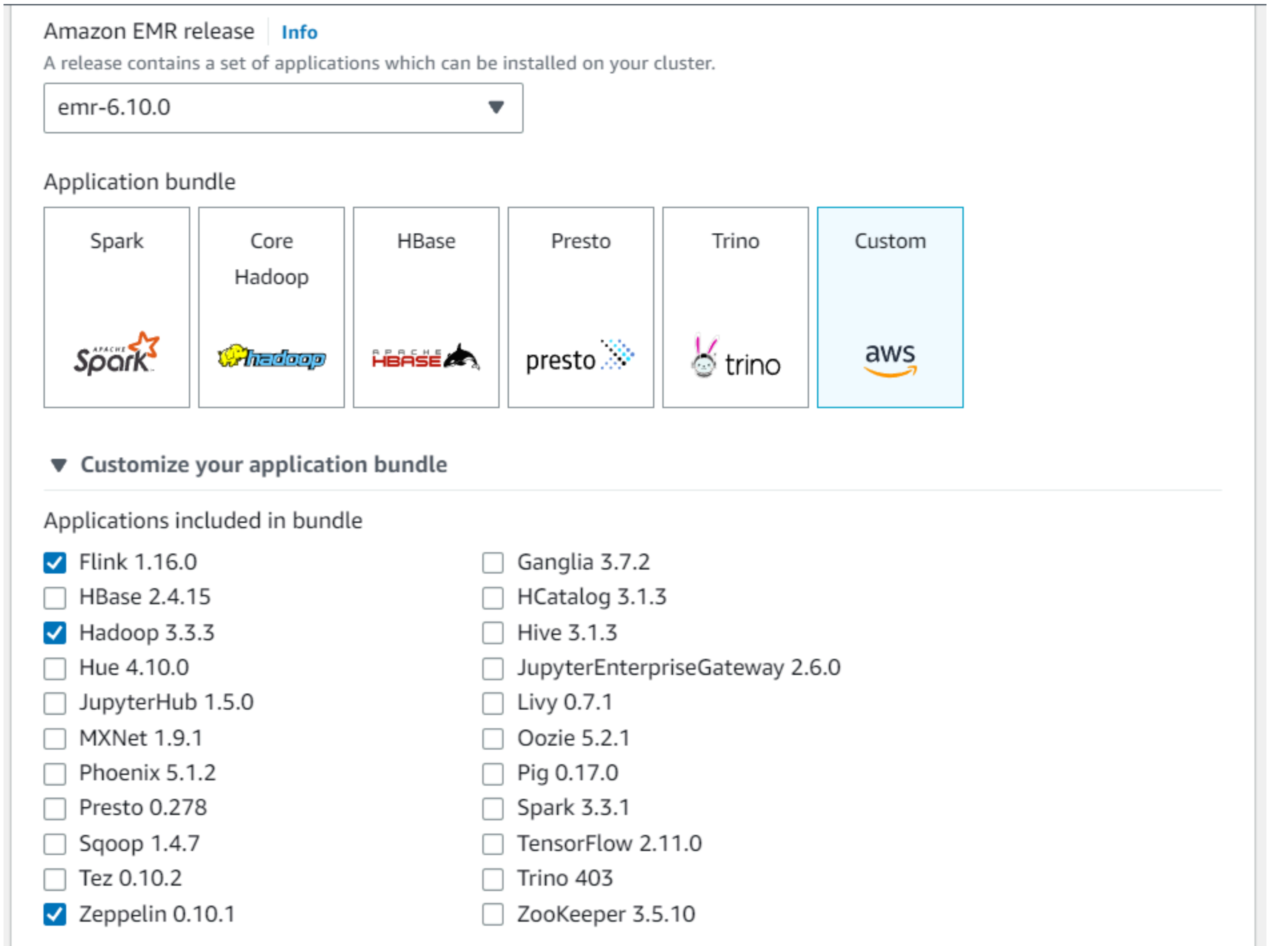
Prerequisites

- Zeppelin integration with Flink is supported for clusters created with Amazon EMR 6.10.0 and higher.
- To view web interfaces that are hosted on EMR clusters as required for these steps, you must configure an SSH tunnel to allow inbound access. For more information, see [Configure proxy settings to view websites hosted on the primary node](#).

Configure Zeppelin-Flink on an EMR cluster

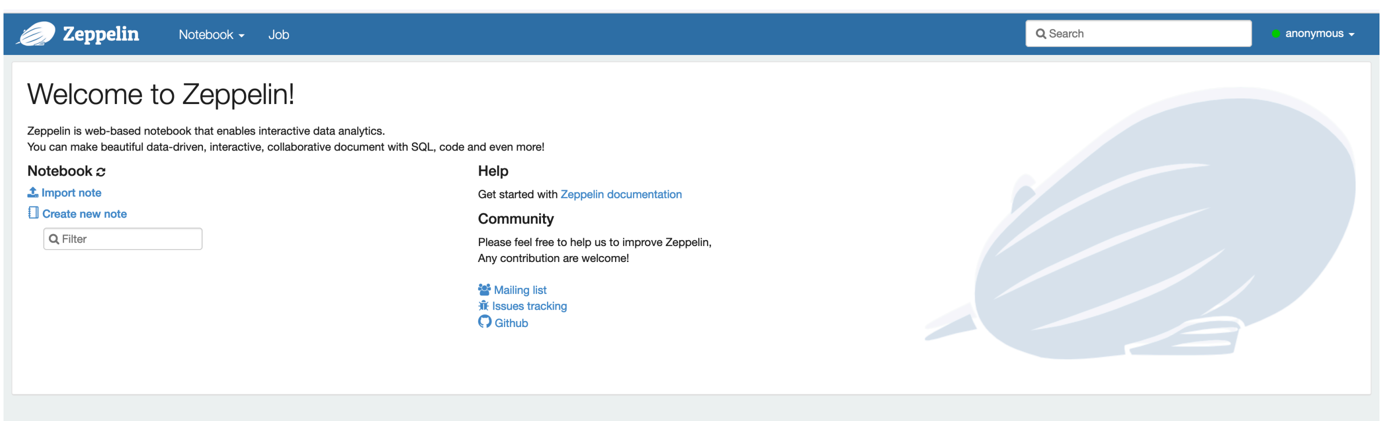
Use the following steps to configure Apache Flink on Apache Zeppelin to run on an EMR cluster:

1. Create a new cluster from the Amazon EMR console. Select emr-6.10.0 or higher for the Amazon EMR release. Then, choose to customize your application bundle with the Custom option. Include at least Flink, Hadoop, and Zeppelin in your bundle.

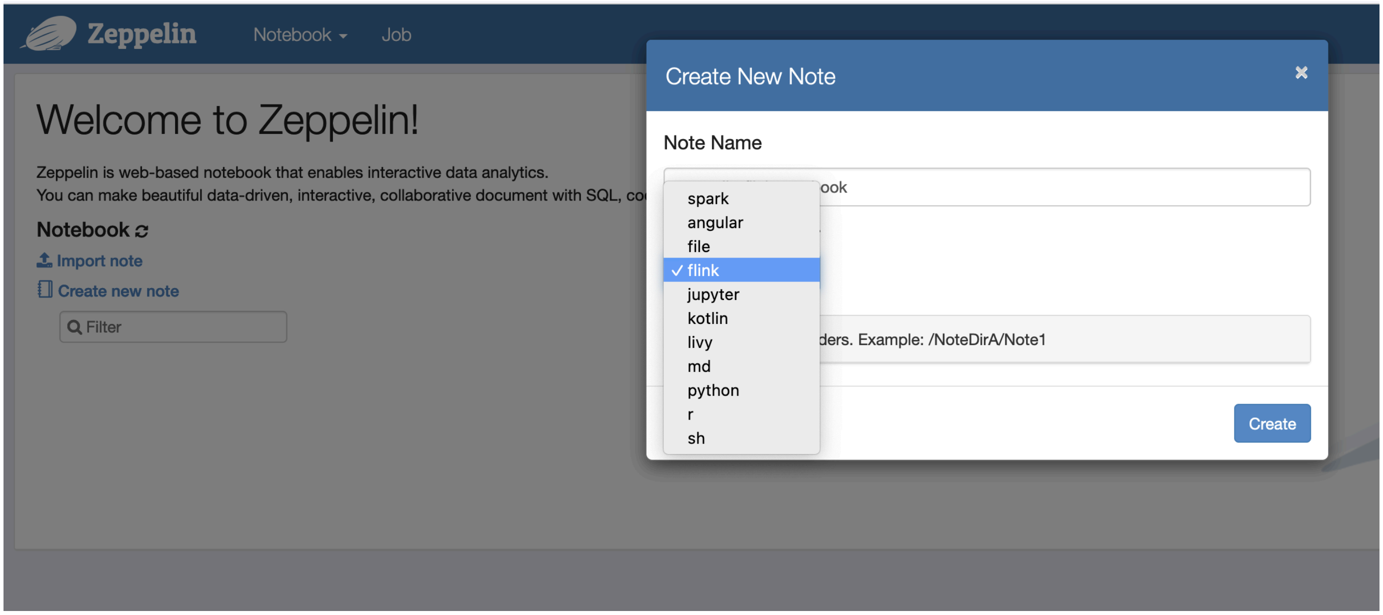


2. Create the rest of your cluster with the settings that you prefer.

3. Once your cluster is running, select the cluster in the console to view its details and open the Applications tab. Select Zeppelin from the Application user interfaces section to open the Zeppelin web interface. Be sure that you've set up access to the Zeppelin web interface with an SSH tunnel to the primary node and a proxy connection as described in the Prerequisites.



4. Now, you can create a new note in a Zeppelin notebook with Flink as the default interpreter.



5. Refer to the following code examples that demonstrate how to run Flink jobs from a Zeppelin notebook.

Run Flink jobs with Zeppelin-Flink on an EMR cluster

- Example 1, Flink Scala

  a) Batch WordCount Example (SCALA)

```
%flink

val data = benv.fromElements("hello world", "hello flink", "hello hadoop")
data.flatMap(line => line.split("\\s"))
             .map(w => (w, 1))
             .groupBy(0)
             .sum(1)
             .print()
```

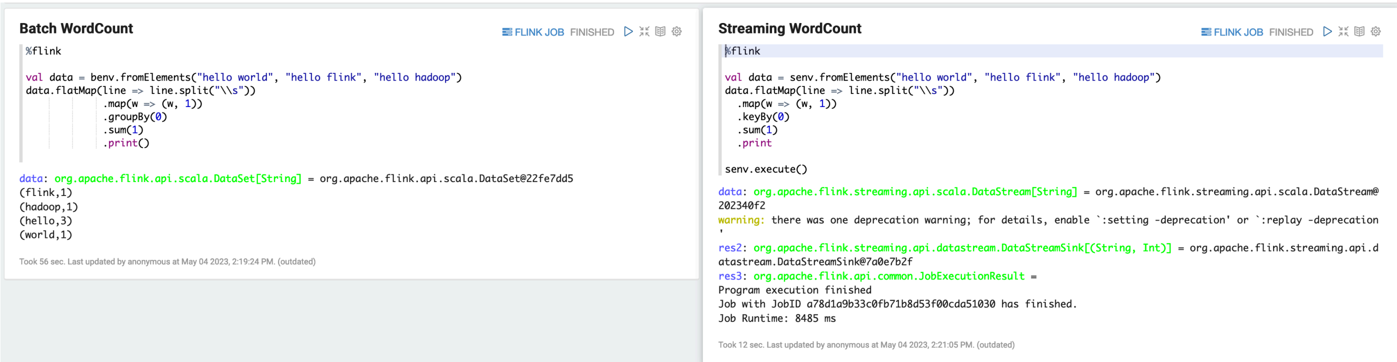
  b) Streaming WordCount Example (SCALA)

```
%flink

val data = senv.fromElements("hello world", "hello flink", "hello hadoop")
data.flatMap(line => line.split("\\s"))
  .map(w => (w, 1))
```

```
  .keyBy(0)
  .sum(1)
  .print

senv.execute()
```



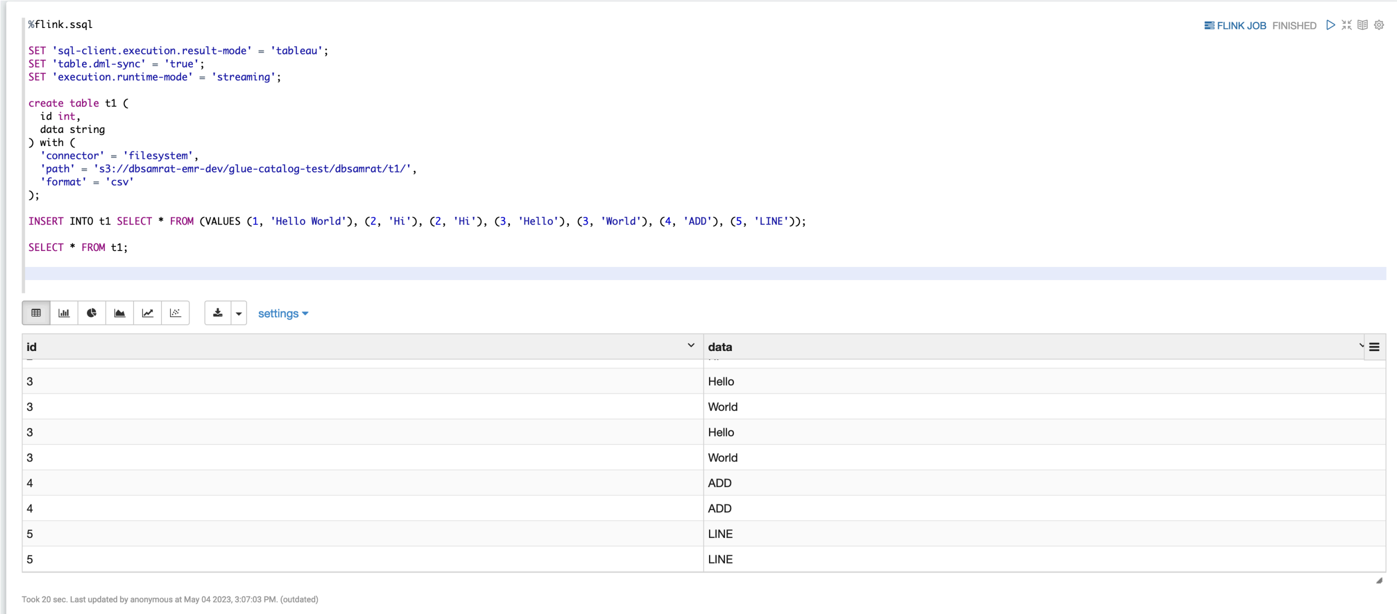
- Example 2, Flink Streaming SQL

```
%flink.ssql
SET 'sql-client.execution.result-mode' = 'tableau';
SET 'table.dml-sync' = 'true';
SET 'execution.runtime-mode' = 'streaming';

create table dummy_table (
  id int,
  data string
) with (
  'connector' = 'filesystem',
  'path' = 's3://s3-bucket/dummy_table',
  'format' = 'csv'
);

INSERT INTO dummy_table SELECT * FROM (VALUES (1, 'Hello World'), (2, 'Hi'), (2,
 'Hi'), (3, 'Hello'), (3, 'World'), (4, 'ADD'), (5, 'LINE'));

SELECT * FROM dummy_table;
```



- Example 3, Pyflink. Note that you must upload your own sample text file named `word.txt` to your S3 bucket.

```
%flink.pyflink

import argparse
import logging
import sys

from pyflink.common import Row
from pyflink.table import (EnvironmentSettings, TableEnvironment, TableDescriptor,
 Schema,
                           DataTypes, FormatDescriptor)
from pyflink.table.expressions import lit, col
from pyflink.table.udf import udtf

def word_count(input_path, output_path):
    t_env = TableEnvironment.create(EnvironmentSettings.in_streaming_mode())
    # write all the data to one file
    t_env.get_config().set("parallelism.default", "1")

    # define the source
    if input_path is not None:
        t_env.create_temporary_table(
            'source',
            TableDescriptor.for_connector('filesystem')
```

```
                            .schema(Schema.new_builder()
                                    .column('word', DataTypes.STRING())
                                    .build())
                            .option('path', input_path)
                            .format('csv')
                            .build())
        tab = t_env.from_path('source')
    else:
        print("Executing word_count example with default input data set.")
        print("Use --input to specify file input.")
        tab = t_env.from_elements(map(lambda i: (i,), word_count_data),
                                   DataTypes.ROW([DataTypes.FIELD('line', 
DataTypes.STRING())]))

    # define the sink
    if output_path is not None:
        t_env.create_temporary_table(
            'sink',
            TableDescriptor.for_connector('filesystem')
                            .schema(Schema.new_builder()
                                    .column('word', DataTypes.STRING())
                                    .column('count', DataTypes.BIGINT())
                                    .build())
                            .option('path', output_path)
                            .format(FormatDescriptor.for_format('canal-json')
                                    .build())
                            .build())
    else:
        print("Printing result to stdout. Use --output to specify output path.")
        t_env.create_temporary_table(
            'sink',

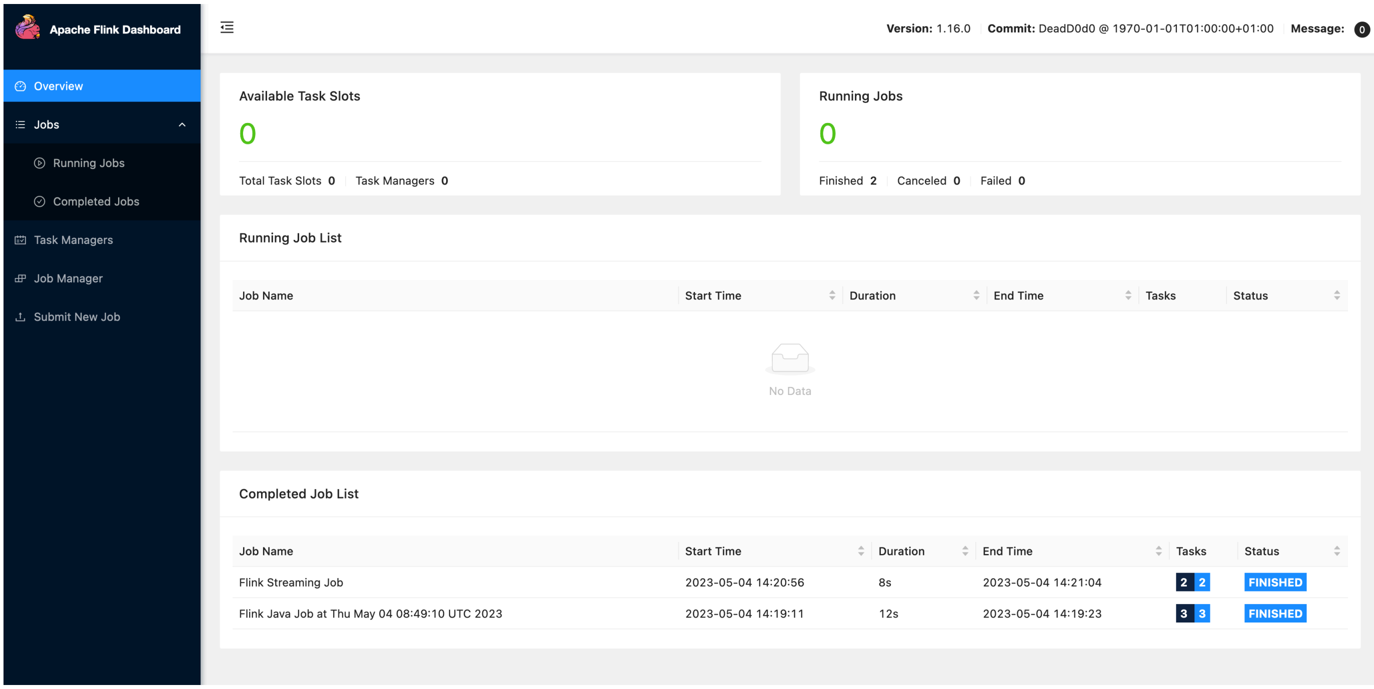
1. Choose **FLINK JOB** in the Zeppelin UI to access and view the Flink Web UI.

2. Choosing **FLINK JOB** routes to the Flink Web Console in another tab of your browser.



Flink release history

The following table lists the version of Flink included in each release version of Amazon EMR, along with the components installed with the application. For component versions in each release, see the Component Version section for your release in [Amazon EMR 7.x release versions](), [Amazon EMR 6.x release versions](), or [Amazon EMR 5.x release versions]().

Flink version information

Amazon EMR Release label	Flink Version	Components installed with Flink
emr-7.2.0	1.18.1	emrfs, hadoop-client, hadoop-mapred, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server,

Amazon EMR Release label	Flink Version	Components installed with Flink
		flink-client, flink-jobmanager-config, hudi, delta
emr-5.36.2	1.14.2	emrfs, hadoop-client, hadoop-mapred, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server, flink-client, flink-jobmanager-config
emr-7.1.0	1.18.1	emrfs, hadoop-client, hadoop-mapred, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server, flink-client, flink-jobmanager-config, hudi, delta

Amazon EMR Release label	Flink Version	Components installed with Flink

Flink release notes by version

See the following sections for the full release notes.

Amazon EMR 7.2.0 - Flink release notes

Type	Description
Improvement	Support adding custom labels to Kubernetes service per Flink job via configuration `kubernetes.service.labels` .

Ganglia

> **Note**
>
> The last release of Amazon EMR to include Ganglia was Amazon EMR 6.15.0. To monitor your cluster, releases higher than 6.15.0 include the Amazon CloudWatch agent.

The Ganglia open source project is a scalable, distributed system designed to monitor clusters and grids while minimizing the impact on their performance. When you enable Ganglia on your cluster, you can generate reports and view the performance of the cluster as a whole, as well as inspect the performance of individual node instances. Ganglia is also configured to ingest and visualize Hadoop and Spark metrics. For more information about the Ganglia open-source project, go to http://ganglia.info/.

When you view the Ganglia web UI in a browser, you see an overview of the cluster's performance, with graphs detailing the load, memory usage, CPU utilization, and network traffic of the cluster. Below the cluster statistics are graphs for each individual server in the cluster.

The following table lists the version of Ganglia included in the latest release of the Amazon EMR 6.x series, along with the components that Amazon EMR installs with Ganglia.

For the version of components installed with Ganglia in this release, see Release 6.15.0 Component Versions.

Ganglia version information for emr-6.15.0

Amazon EMR Release Label	Ganglia Version	Components Installed With Ganglia
emr-6.15.0	Ganglia 3.7.2	emrfs, emr-goodies, ganglia-monitor, ganglia-metadata-collector, ganglia-web, hadoop-client, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-

Amazon EMR Release Label	Ganglia Version	Components Installed With Ganglia
		yarn-resourcemanager, hadoop-yarn-timeline-server, webserver

The following table lists the version of Ganglia included in the latest release of the Amazon EMR 5.x series, along with the components that Amazon EMR installs with Ganglia.

For the version of components installed with Ganglia in this release, see Release 5.36.2 Component Versions.

Ganglia version information for emr-5.36.2

Amazon EMR Release Label	Ganglia Version	Components Installed With Ganglia
emr-5.36.2	Ganglia 3.7.2	emrfs, emr-goodies, ganglia-monitor, ganglia-metadata-collector, ganglia-web, hadoop-client, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-kms-server, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server, webserver

Topics

- Create a cluster with Ganglia

- Hadoop and Spark metrics in Ganglia
- Ganglia release history

Create a cluster with Ganglia

Note

The last release of Amazon EMR to include Ganglia was Amazon EMR 6.15.0. To monitor your cluster, releases higher than 6.15.0 include the Amazon CloudWatch agent.

To create a cluster with Ganglia using the console

1. Navigate to the new Amazon EMR console and select **Switch to the old console** from the side navigation. For more information on what to expect when you switch to the old console, see Using the old console.
2. Choose **Create cluster**.
3. In **Software configuration**, choose either **All Applications**, **Core Hadoop**, or **Spark**.
4. Proceed with creating the cluster with configurations as appropriate.

To add Ganglia to a cluster using the AWS CLI

In the AWS CLI, you can add Ganglia to a cluster by using `create-cluster` with the `--applications` parameter. If you specify only Ganglia using the `--applications` parameter, Ganglia is the only application installed.

- Type the following command to add Ganglia when you create a cluster and replace *myKey* with the name of your EC2 key pair.

  Note

  Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --name "Spark cluster with Ganglia" --release-label
 emr-6.15.0; \
--applications Name=Spark Name=Ganglia \
--ec2-attributes KeyName=myKey --instance-type m5.xlarge \
--instance-count 3 --use-default-roles
```

When you specify the instance count without using the `--instance-groups` parameter, a single master node is launched, and the remaining instances are launched as core nodes. All nodes use the instance type specified in the command.

> **Note**
>
> If you have not previously created the default EMR service role and EC2 instance profile, type `aws emr create-default-roles` to create them before typing the `create-cluster` subcommand.

For more information about using Amazon EMR commands in the AWS CLI, see https://docs.aws.amazon.com/cli/latest/reference/emr.

View Ganglia metrics

> **Note**
>
> The last release of Amazon EMR to include Ganglia was Amazon EMR 6.15.0. To monitor your cluster, releases higher than 6.15.0 include the Amazon CloudWatch agent.

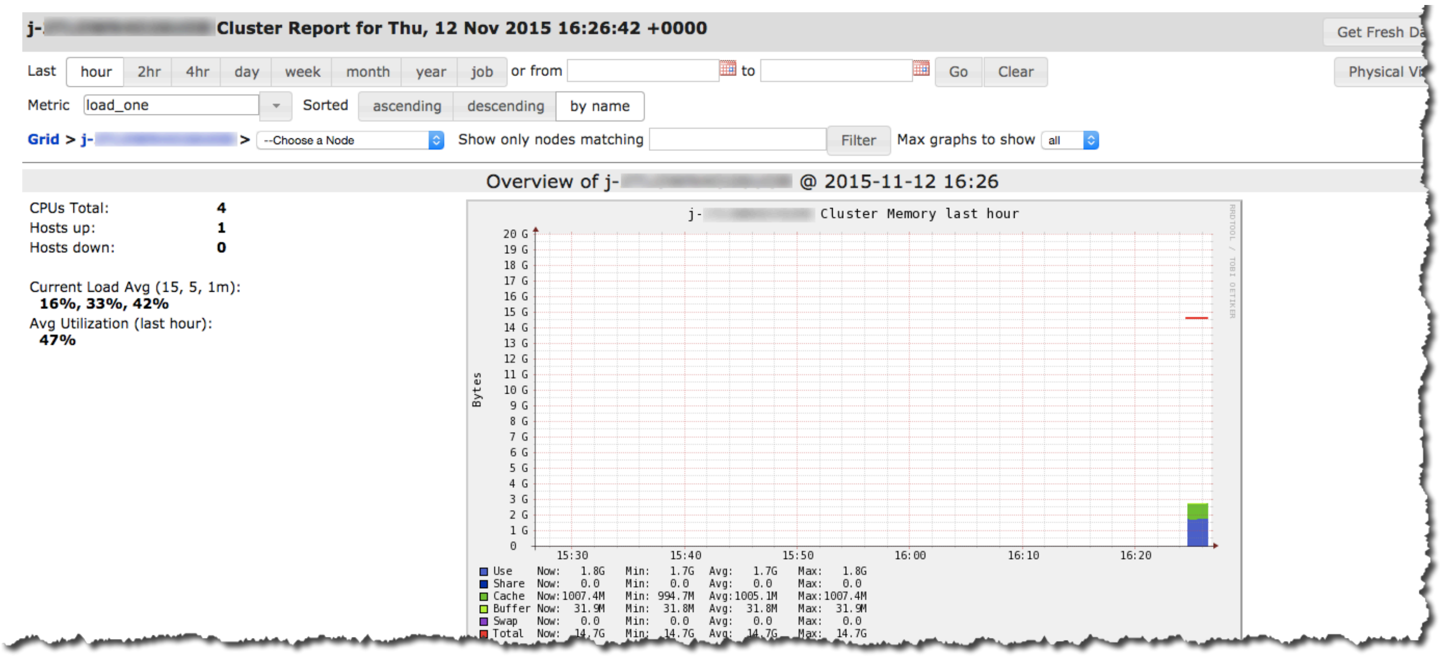
Ganglia provides a web-based user interface that you can use to view the metrics Ganglia collects. When you run Ganglia on Amazon EMR, the web interface runs on the master node and can be viewed using port forwarding, also known as creating an SSH tunnel. For more information about viewing web interfaces on Amazon EMR, see View web interfaces hosted on EMR clusters in the *Amazon EMR Management Guide*.

To view the Ganglia web interface

1. Use SSH to tunnel into the master node and create a secure connection. For information about how to create an SSH tunnel to the master node, see Option 2, part 1: Set up an SSH tunnel to the master node using dynamic port forwarding in the *Amazon EMR Management Guide*.
2. Install a web browser with a proxy tool, such as the FoxyProxy plug-in for Firefox, to create a SOCKS proxy for domains of the type *ec2*.amazonaws.com*. For more information, see

[Option 2, part 2: Configure proxy settings to view websites hosted on the master node](#) in the *Amazon EMR Management Guide*.

3. With the proxy set and the SSH connection open, you can view the Ganglia UI by opening a browser window with http://*master-public-dns-name*/ganglia/, where *master-public-dns-name* is the public DNS address of the master server in the EMR cluster.



Hadoop and Spark metrics in Ganglia

> **Note**
>
> The last release of Amazon EMR to include Ganglia was Amazon EMR 6.15.0. To monitor your cluster, releases higher than 6.15.0 include the [Amazon CloudWatch agent](#).

Ganglia reports Hadoop metrics for each instance. The various types of metrics are prefixed by category: distributed file system (dfs.*), Java virtual machine (jvm.*), MapReduce (mapred.*), and remote procedure calls (rpc.*).

YARN-based Ganglia metrics such as Spark and Hadoop are not available for EMR release versions 4.4.0 and 4.5.0. Use a later version to use these metrics.

Ganglia metrics for Spark generally have prefixes for YARN application ID and Spark DAGScheduler. So prefixes follow this form:

- DAGScheduler.*
- application_xxxxxxxxxx_xxxx.driver.*
- application_xxxxxxxxxx_xxxx.executor.*

Ganglia release history

> **Note**
>
> The last release of Amazon EMR to include Ganglia was Amazon EMR 6.15.0. To monitor your cluster, releases higher than 6.15.0 include the Amazon CloudWatch agent.

The following table lists the version of Ganglia included in each release version of Amazon EMR, along with the components installed with the application. For component versions in each release, see the Component Version section for your release in Amazon EMR 7.x release versions, Amazon EMR 6.x release versions, or Amazon EMR 5.x release versions.

Ganglia version information

Amazon EMR Release label	Ganglia Version	Components installed with Ganglia

Apache Hadoop

Apache Hadoop is an open-source Java software framework that supports massive data processing across a cluster of instances. It can run on a single instance or thousands of instances. Hadoop uses various processing models, such as MapReduce and Tez, to distribute processing across multiple instances and also uses a distributed file system called HDFS to store data across multiple instances. Hadoop monitors the health of instances in the cluster and can recover from the failure of one or more nodes. In this way, Hadoop provides increased processing and storage capacity, as well as high availability. For more information, see theHadoop documentation.

The following table lists the version of Hadoop included in the latest release of the Amazon EMR 7.x series, along with the components that Amazon EMR installs with Hadoop.

For the version of components installed with Hadoop in this release, see Release 7.2.0 Component Versions.

Hadoop version information for emr-7.2.0

Amazon EMR Release Label	Hadoop Version	Components Installed With Hadoop
emr-7.2.0	Hadoop 3.3.6	emrfs, emr-ddb, emr-goodies, emr-kinesis, emr-s3-dist-cp, hadoop-client, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-mapred, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server

The following table lists the version of Hadoop included in the latest release of the Amazon EMR 6.x series, along with the components that Amazon EMR installs with Hadoop.

For the version of components installed with Hadoop in this release, see Release 6.15.0 Component Versions.

Hadoop version information for emr-6.15.0

Amazon EMR Release Label	Hadoop Version	Components Installed With Hadoop
emr-6.15.0	Hadoop 3.3.6	emrfs, emr-ddb, emr-goodies, emr-kinesis, emr-s3-dist-cp, hadoop-client, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-mapred, hadoop-yarn-nodemanager, hadoop-yarn-resourcemanager, hadoop-yarn-timeline-server

The following table lists the version of Hadoop included in the latest release of the Amazon EMR 5.x series, along with the components that Amazon EMR installs with Hadoop.

For the version of components installed with Hadoop in this release, see Release 5.36.2 Component Versions.

Hadoop version information for emr-5.36.2

Amazon EMR Release Label	Hadoop Version	Components Installed With Hadoop
emr-5.36.2	Hadoop 2.10.1	emrfs, emr-ddb, emr-goodies, emr-kinesis, emr-s3-dist-cp, hadoop-client, hadoop-hdfs-datanode, hadoop-hdfs-library, hadoop-hdfs-namenode, hadoop-httpfs-server, hadoop-kms-server, hadoop-mapred, hadoop-yarn-nodemanager, hadoop-ya

Amazon EMR Release Label	Hadoop Version	Components Installed With Hadoop
		rn-resourcemanager, hadoop-yarn-timeline-server

Beginning with Amazon EMR 5.18.0, you can use the Amazon EMR artifact repository to build your job code against the exact versions of libraries and dependencies that are available with specific Amazon EMR releases. For more information, see Checking dependencies using the Amazon EMR artifact repository.

Topics

- Configure Hadoop
- Transparent encryption in HDFS on Amazon EMR
- Create or run a Hadoop application
- Read restored objects
- Turn on non-uniform memory access awareness for YARN containers
- Hadoop version history

Configure Hadoop

The following sections give default configuration settings for Hadoop daemons, tasks, and HDFS.

Topics

- Task configuration
- Hadoop daemon configuration settings
- HDFS configuration

Task configuration

You can set configuration variables to tune the performance of your MapReduce jobs. This section provides the default values for important settings. Default values vary based on the EC2 instance type of the node used in the cluster. HBase is available when using Amazon EMR release version

4.6.0 and later. Different defaults are used when HBase is installed. Those values are provided along with the initial defaults.

Hadoop 2 uses two parameters, `mapreduce.map.java.opts` and `mapreduce.reduce.java.opts`, to configure memory for map and reduce JVMs respectively. These replace the single `mapreduce.map.java.opts` configuration option from earlier Hadoop versions.

Similarly, `mapred.job.jvm.num.tasks` replaces `mapred.job.reuse.jvm.num.tasks` in Hadoop 2.7.2 and later. Amazon EMR sets this value to 20 regardless of EC2 instance type. You can override this setting using the `mapred-site` configuration classification. Setting a value of `-1` indicates that a JVM can be re-used for an infinite number of tasks within a single job, and a value of 1 indicates that a new JVM is spawned for each task.

For example, to set the value of `mapred.job.jvm.num.tasks` to -1 you can create a file with the following contents:

```
[
    {
      "Classification": "mapred-site",
      "Properties": {
        "mapred.job.jvm.num.tasks": "-1"
      }
    }
  ]
```

When you use the `create-cluster` command or `modify-instance-groups` command from the AWS CLI, you can then reference the JSON configuration file. In the following example, the configuration file is saved as `myConfig.json` and stored in Amazon S3.

> **Note**
>
> Linux line continuation characters (\) are included for readability. They can be removed or used in Linux commands. For Windows, remove them or replace with a caret (^).

```
aws emr create-cluster --release-label emr-7.2.0 --instance-type m5.xlarge \
--instance-count 3 --applications Name=Hadoop --configurations https://
s3.amazonaws.com/mybucket/myfolder/myConfig.json \
```

```
--use-default-roles
```

You can change default values listed below using the `mapred-site` configuration classification in the same way, and set multiple values and multiple configuration classifications using a single JSON file. For more information, see Configure applications.

With Amazon EMR version 5.21.0 and later, you can override cluster configurations and specify additional configuration classifications for each instance group in a running cluster. You do this by using the Amazon EMR console, the AWS Command Line Interface (AWS CLI), or the AWS SDK. For more information, see Supplying a Configuration for an Instance Group in a Running Cluster.

Default values for task configuration settings

Hadoop daemon configuration settings

Hadoop daemon settings are different depending on the EC2 instance type that a cluster node uses. The following tables list the default configuration settings for each EC2 instance type.

To customize these settings, use the `hadoop-env` configuration classification. For more information, see Configure applications.

Instance Types

- c1 instances
- c3 instances
- c4 instances
- c5 instances
- c5a instances
- c5ad instances
- c5d instances
- c5n instances
- c6a instances
- c6g instances
- c6gd instances
- c6gn instances
- c6i instances
- c6id instances

- c6in instances
- c7a instances
- c7g instances
