Edit in the Cloud on AWS

Publication date: June 12, 2022 (Diagram history)

This architecture helps you build a virtual, video editing environment on AWS to collaborate with your editors and creative professionals. This architecture can also be <u>deployed on AWS</u> using an AWS CloudFormation template that launches, configures, and runs the AWS services required to deploy this solution using AWS best practices for security and availability.

Edit in the Cloud on AWS

- 1. An Amazon Elastic Compute Cloud (Amazon EC2) instance for Windows Server 2019 with Teradici Cloud Access Software or NICE DCV and NVIDIA T4 GPU drivers for running your Non-Linear Editor (NLE) software of choice. During deployment, the solution gives you the option to install either Teradici's Cloud Access Software, or NICE DCV. Users can then access the cloud workstation using either Teradici's PC-over-IP (PCoIP) client or the NICE DCV client, accordingly.
- 2. **AWS Directory Service** for user authentication.

Edit in the Cloud on AWS

3. Amazon FSx for Windows File Server to access digital assets via the Amazon EC2 instance through your editor of choice. FSx for Windows File Server will auto-mount the network share upon startup of the Windows Amazon EC2 instance. FSx for Windows File Server will be used for storing your media assets to be used by your non-linear editor (NLE).
