What is AWS Billing?

Welcome to the Billing User Guide.

The AWS Billing console contains features to pay your AWS bills, organize and report your AWS cost and usage, and manage your consolidated billing if you're a part of AWS Organizations.

The Billing console works closely with the AWS Cost Management console. You can use both for a holistic approach to managing your costs. The Billing console contains resources to manage your ongoing payments and payment methods registered to your AWS account. Next, you can use the features in the AWS Cost Management console to optimize your future costs. For information about AWS resources to optimize your costs, see the AWS Cost Management User Guide.

Amazon Web Services automatically charges the credit card that you provided when you sign up for an AWS account. You can view or update your credit card information at any time, including designating a different credit card for AWS to charge. You can do this on the Payment Methods page in the Billing console. For more details on Billing features, see Features of Billing (p. 2).

With the AWS Cost Management console and the Billing console, you can do the following tasks:

<table>
<thead>
<tr>
<th>Use cases</th>
<th>Description</th>
<th>AWS Cost Management feature names</th>
<th>Billing console feature names</th>
</tr>
</thead>
</table>
| Organize  | Construct your cost allocation and governance foundation with your own tagging strategy. | - | AWS Cost Categories  
AWS Cost Allocation Tags |
| Report    | Raise awareness and accountability of your cloud spend with the detailed, allocable cost data. | AWS Cost Explorer | AWS Cost and Usage Reports |
| Access    | Track billing information across the organization in one consolidated view. | - | AWS Consolidated Billing

| Control   | Establish effective governance mechanisms with the right guardrails in place. | AWS Cost Anomaly Detection | - |
| Forecast  | Estimate your resource utilization and spend with forecast dashboards that you create. | AWS Cost Explorer  
AWS Budgets | - |
Features of Billing

Manage your account

Manage your account settings using the AWS Management Console and Billing console. This includes designating your default currency, editing alternate contacts, adding or removing Regions, updating your tax information, and closing your AWS account. The close your account (p. 18) section calls out considerations such as terminating resources before you proceed with closing an account. This way, you aren’t charged for unused services.

Documentation: Managing your account (p. 10)

View your bill

You can use the Billing console to view your past bill details or your estimated charges for your current month at any time. This section outlines how you can view your bills, download PDF copies of your charges, and set up monthly emails to receive your invoices. It also covers how you can use other resources such as AWS Cost and Usage Reports.

Documentation: Viewing your bill (p. 35)

Managing your payments

You can view your estimated bills and pay your AWS invoices in your preferred currency by setting a payment currency. AWS converts your bill to your preferred currency after your bill is finalized. Until then, all of the preferred currency amounts shown in the console are estimated in USD. AWS guarantees your exchange rate. This is so that refunds use the same exchange rate as your original transaction.

Note

- AWS Marketplace invoices aren’t eligible for this service and are processed in US dollar.
- This service is available only if your default payment method is Visa or MasterCard.
- The rates change daily. The rate that’s applied to your invoice is the current rate at the time when your invoice was created. You can check the current rate on the Billing console.

• Currency conversion is provided by Amazon Services LLC.

Documentation: Managing Your Payments (p. 37).

AWS Purchase Order Management

Manage your AWS purchase orders in a self-service fashion by taking care of multiple purchase orders all in one place. This can help to reduce your overhead costs and increase the accuracy and efficiency in your overall procure-to-pay process. Use the Billing console to manage your purchase orders and configure how they reflect on your invoices. In this chapter, learn how to add, edit, view details, and set up notifications regarding your purchase orders in the console.

Documentation: Managing your purchase orders (p. 61)

AWS Cost Categories

Manage your AWS costs with AWS Cost Categories by mapping your cost and usage into meaningful categories. This section defines terms that are used in the console for supported dimensions, operations, rule types, and status. The section also provides more information on how you can create, edit, delete, and split the charges within cost categories.

Documentation: Managing your costs with AWS Cost Categories (p. 72)

Payment profile

You can use payment profile to assign more than one payment method to your automatic payments. In this section, learn how to use the Billing console to set up custom payment profile.

Consolidate billing for AWS Organizations

Use the consolidated billing feature for AWS Organizations to combine your billing for multiple AWS accounts. This chapter outlines the consolidated billing process, differences for Amazon Internet Services Pvt. Ltd accounts, and details for discounts.

Documentation: Consolidated billing for AWS Organizations (p. 109)

Related services

AWS Billing Conductor

AWS Billing Conductor is a custom billing service to group your accounts by financial owner, configure billing parameters, and generate AWS Cost and Usage Reports per group. AWS Billing Conductor is a fully managed service that can support the showback and chargeback workflows of AWS Solution Providers and Enterprise customers. For more information, see What is AWS Billing Conductor? in the AWS Billing Conductor User Guide.

IAM

The Billing service and AWS Cost Management service is closely integrated with AWS Identity and Access Management (IAM). You can use IAM with Billing to ensure that other people who work in your account have as much access as they need to get their jobs done.

You also use IAM to control access to all of your AWS resources, not only your billing information. It's important that you familiarize yourself with the major concepts and best practices of IAM before you get too far along with setting up the structure of your AWS account.

For information about how to work with IAM and why it's important to do so, see IAM Concepts and IAM Best Practices in the IAM User Guide.

AWS Organizations (Consolidated Billing)

You can use AWS products and services to accommodate a company of any size, from small start-ups to enterprises. If your company is large or likely to grow, you might want to set up multiple AWS
accounts that reflect your company’s specific structure. For example, you can have one account for the entire company and accounts for each employee, or an account for the entire company with IAM users for each employee. You can have an account for the entire company, accounts for each department or team within the company, and accounts for each employee.

If you create multiple accounts, you can use the consolidated billing feature of AWS Organizations to combine all member accounts under a management account. That way, you can receive a single bill for all of your member accounts. For more information, see Consolidated billing for AWS Organizations (p. 109).
Getting help with AWS Billing and Cost Management

There are many resources available for you if you have any questions about your AWS Billing and Cost Management console tools, your charges, or payment methods.

Topics
- AWS Knowledge Center (p. 5)
- Contacting AWS Support (p. 5)
- Understanding your charged usage (p. 6)
- Monitoring your Free Tier usage (p. 6)

AWS Knowledge Center

All AWS account owners have access to account and billing support free of charge. You can find answers to your questions quickly by visiting the AWS Knowledge Center.

To find your question or request
1. Open AWS Knowledge Center.
2. Choose Billing Management.
3. Scan the list of topics to locate a question that is similar to yours.

Contacting AWS Support

Contacting AWS Support is the fastest and most direct method for communicating with an AWS associate about your questions. AWS Support does not publish a direct phone number for reaching a support representative. You can use the following process to have an associate contact to you by email or phone instead.

Only personalized technical support requires a support plan. For more information, visit AWS Support.

To open an AWS Support case where you specify Regarding: Account and Billing Support, you must either be signed into AWS as the root account owner, or have IAM permissions to open a support case. For more information, see Accessing AWS Support in the AWS Support User Guide.

If you have closed your AWS account, you can still sign in to AWS Support and view past bills.

To contact AWS Support
1. Sign in and navigate to the AWS Support Center. If prompted, enter the email address and password for your account.
2. Choose Create case.
3. On the Create case page, choose Account and billing support and fill in the required fields on the form.
4. After you complete the form, under Contact options, choose either Web for an email response, or Phone to request a telephone call from an AWS Support representative. Instant messaging support is not available for billing inquiries.

**To contact AWS Support when you can't sign in to AWS**

1. Recover your password or submit a form at AWS account support.
2. Choose an inquiry type in the Request information section.
3. Fill out the How can we help you? section.
4. Choose Submit.

**Understanding your charged usage**

If you want to see the usage behind your charged amount, you can check your usage yourself by enabling Cost Explorer. This tool enables you to analyze your costs in depth by providing you with premade reports and graphs.

Cost Explorer is available 24 hours after you activate the feature.

For more information about Cost Explorer, see Analyzing your costs with AWS Cost Explorer.

**Monitoring your Free Tier usage**

You can track your AWS Free Tier usage to keep you under the Free Tier limits. You can set up alerts on your AWS account when your Free Tier limits reach a threshold, and monitor your usage through the Billing and Cost Management console.

For more information about using these features, see Tracking your AWS Free Tier usage (p. 25).

To see details for usage that was charged beyond your Free Tier limit, see the Understanding your charged usage (p. 6) section.
Getting started

This section provides information that you need to get started with using the Billing console.

Topics
- Step 1: Sign up for AWS (p. 7)
- Step 2: Attach the required IAM policy to an IAM identity (p. 7)
- Step 3: Review your bills and usage (p. 7)
- Step 4: Download or print your bill (p. 8)
- Step 5: Learn more about the Billing features (p. 8)
- What do I do next? (p. 8)

Step 1: Sign up for AWS

If you're new to AWS, create an AWS account. For more information, see Getting Started with AWS.

Step 2: Attach the required IAM policy to an IAM identity

AWS account owners can delegate access to specific IAM users who need to view or manage the Billing data for an AWS account. To start activating access to the Billing console and AWS Cost Management console, see IAM tutorial: Delegate access to the billing console in the IAM User Guide.

For detailed information about IAM policies specific for Billing, see Using identity-based policies (IAM policies) for AWS Billing (p. 129).

To reference a list of Billing policy examples, see AWS Billing policy examples (p. 134).

Step 3: Review your bills and usage

Use features in the Billing console to view your current AWS charges and AWS usage.

To open the Billing console and view your usage and charges

2. Choose Bills to see details about your current charges.
   - Choose Payments to see your historical payment transactions.
   - Choose AWS Cost and Usage Reports to see reports that break down your costs.

For more information about setting up and using AWS Cost and Usage Reports, see the AWS Cost and Usage Reports User Guide.
Step 4: Download or print your bill

AWS Billing closes the billing period at midnight on the last day of each month and calculates your bill. Most bills are ready for you to download by the seventh accounting day of the month.

To download your bill

2. On the navigation pane, choose Bills.
3. For Date, choose the month of the bill you want to work with.
4. Choose Download CSV to download a comma-separated variable file or choose Print.

Step 5: Learn more about the Billing features

Understand the features available to you in the Billing console.

- **Account settings**: Managing your account (p. 10)
- **AWS Free Tier**: Using the AWS Free Tier (p. 24)
- **Payments**: Managing Your Payments (p. 37)
- **Viewing your bills**: Viewing your bill (p. 35)
- **AWS Cost Categories**: Managing your costs with AWS Cost Categories (p. 72)
- **Cost Allocation Tags**: Using Cost Allocation Tags (p. 80)
- **AWS Purchase Orders**: Managing your purchase orders (p. 61)
- **AWS Cost and Usage Reports**: Using AWS Cost and Usage Reports
- **Using AWS CloudTrail**: Logging Billing and Cost Management API calls with AWS CloudTrail (p. 100)
- **Consolidated billing**: Consolidated billing for AWS Organizations (p. 109)

What do I do next?

Now that you can view and pay your AWS bill, you're ready to use the features available to you. The rest of this guide helps you navigate your journey using the console.

Optimize your spending using AWS Cost Management features

Use the AWS Cost Management features to budget and forecast costs so you can optimize your AWS spends and reduce your overall AWS bill. Combine and use the Billing console resources to manage your payments, while using AWS Cost Management features to optimize your future costs.

For more information about AWS Cost Management features, see the AWS Cost Management User Guide.

Using the Billing and Cost Management API

Use the AWS Billing and Cost Management API Reference to programmatically use some AWS Cost Management features.
Learn more

You can find more information about Billing features including presentations, virtual workshops, and blog posts on the marketing page Cloud Financial Management with AWS.

You can find virtual workshops by choosing the Services drop-down and selecting your feature.

Get help

If you have questions about any Billing features, there are many resources available for you. To learn more, see Getting help with AWS Billing and Cost Management (p. 5).
Managing your account

Use the procedures in this chapter to manage your account settings, your default currency, your alternate contacts, and more.

Topics

• Managing an AWS account (p. 10)
• Managing an account in India (p. 15)
• Closing an account (p. 18)

Managing an AWS account

You can use the Billing and Cost Management console to change account settings, including your contact and alternate contact information, the currency that you pay your bills in, the Regions that you can create resources in, and your tax registration numbers.

Note
Some sections can only be edited by the AWS account root user. If you do not see the Edit option, switch to the root user.

Topics

• Editing Your Account name, root user password, and root user email address (p. 10)
• Editing contact information (p. 11)
• Changing the currency to pay your bill (p. 11)
• Adding, changing, or removing alternate contacts (p. 11)
• Enabling and disabling regions (p. 12)
• Updating and deleting tax registration numbers (p. 13)
• Turning on tax setting inheritance (p. 14)
• Managing your US tax exemptions (p. 14)

Editing Your Account name, root user password, and root user email address

To edit your account name, root user password, or email address, perform the following procedure. Email in this case refers to the AWS account root user email address. This is the email address you use to sign in.

To edit your account name, root user password, or root user email address

You can also find this by signing into the Billing and Cost Management console (https://console.aws.amazon.com/billing/), selecting your account name on the top right, and choose Account.
2. On the **Account Settings** page, next to **Account Settings**, choose **Edit**.
3. Next to the field to update, choose **Edit**.
4. After you have entered your changes, choose **Save changes**.
5. After you have made all of your changes, choose **Done**.

## Editing contact information

You can change the contact information associated with your account, including your mailing address, telephone number, and website address. To edit your contact information, perform the following procedure.

### To edit your contact information

2. On the navigation bar in the upper-right corner, choose your account name (or alias), and choose **Account**.
3. Under **Contact Information**, choose **Edit**.
4. For the fields to change, enter your updated information and then choose **Update**.

**Note**

You can add an email address for billing in the **Alternate Contacts** section to have AWS send a copy of billing-related emails to that email address. For example, AWS sends your **Billing contact address** a message that your monthly bill is ready.

## Changing the currency to pay your bill

To change the currency that you use to pay your bill, for example, from Danish kroner to South African rand, perform the following procedure.

### To change the local currency associated with your account

2. On the navigation bar in the upper-right corner, choose your account name (or alias), and choose **Account**.
3. On the **Payment Currency Preference** section, choose **Edit**.
4. For **Select Payment Currency**, select the new currency to pay your bill.
5. Choose **Update**.

## Adding, changing, or removing alternate contacts

Alternate contacts allows AWS to contact another person about issues with your account, even if you're unavailable. The alternate contact doesn't have to be a specific person. You could instead add an email distribution list if you have a team that is responsible for managing billing, operations and security related issues. To add, change, or delete alternate contacts for your account, perform the following procedure.

### To add, update, or remove alternate contacts
2. On the navigation bar in the upper-right corner, choose your account name (or alias), and choose Account.
3. Scroll down to the Alternate Contacts section and choose Edit.
4. For the fields to change, enter your updated information and choose Update.

Examples for alternate contacts

We would reach out to each contact type in the following scenarios:

- **Billing** - When your monthly invoice is available, or your payment method needs to be updated. If your Receive PDF Invoice By Email is turned on in your Billing preferences, your alternate billing contact will receive the PDF invoices as well. Notifications can be from AWS Support, or other AWS service teams.
- **Operations** - When your service is, or will be, temporarily unavailable in one of more Regions. Any notification related to operations. Notifications can be from AWS Support, or other AWS service teams
- **Security** - When you have notifications from the AWS Security, AWS Trust and Safety, or AWS service teams. These notifications might include security issues or potential abusive or fraudulent activities on your AWS account. Notifications can be from AWS Support, or other AWS service teams concerning security related topics associated with your AWS account usage. Do not include sensitive information in the subject line or full name fields since this might be used in email communications to you.

Enabling and disabling regions

AWS originally activates all new Regions by default, which allows your users to create resources in any Region. Now when AWS adds a Region, the new Region is deactivated by default. If you want your users to be able to create resources in a new Region, you activate the Region.

Note the following about activating and deactivating Regions:

**You can use IAM permissions to control access to Regions**

IAM added three new permissions, which let you control which users can activate, deactivate, and list Regions. For more information, see AWS Billing actions policies (p. 129).

**Activating a Region is free**

There is no charge to activate a Region. You're only charged for resources that you create in the new Region.

**Deactivating a Region removes access to resources in the Region**

If you deactivate a Region that still includes AWS resources, such as Amazon EC2 instances, you can't access the resources in that Region. For example, you can't use the AWS Management Console or any programmatic method to view or change the configuration of any EC2 instances in that Region.

**Charges continue if you deactivate a Region**

If you deactivate a Region that still includes AWS resources, charges for those resources (if any) continue to accrue at the standard rate. For example, if you deactivate a Region that contains Amazon EC2 instances, you still have to pay the charges for those instances even though the instances are inaccessible.

**Deactivate a Region isn't always immediately visible**

If you deactivate a Region, the change takes time to become visible in all possible endpoints. Deactivating a Region can take between a few seconds to minutes to take effect.
Existing Regions are active by default

The original Regions (the Regions that existed before we added the ability to activate and deactivate Regions) are all activated by default and can't be deactivated.

Activating a Region takes a few minutes for most accounts

Activating a Region generally takes effect in a few minutes, although it can take longer for some accounts. If activating a Region takes longer than nine hours, sign in to the AWS Support Center and open a case with AWS Support.

Perform the applicable procedure:

- Enable a Region (p. 13)
- Disable a region (p. 13)

To activate a Region

2. On the navigation bar in the upper-right corner, choose your account name (or alias), and choose Account.
3. Under AWS Regions, next to the Region to activate, choose Enable.
   Older Regions are activated by default.
4. In the dialog box, choose Enable region.

For more information about enabling a Region, including the permissions required, see Managing AWS Regions.

To deactivate a Region

2. On the navigation bar in the upper-right corner, choose your account name (or alias), and choose Account.
3. Under AWS Regions, next to the Region to deactivate, choose Disable.
   Not all Regions can be deactivated.
4. In the dialog box, for To confirm disabling in this region, enter disable and choose Disable region.

Updating and deleting tax registration numbers

Use the following steps to update or delete one or more tax registration numbers.

To update tax registration numbers

2. In the navigation pane, choose Tax Settings.
3. Under Manage Tax Registration Numbers, select the numbers to edit.
4. For Manage Tax Registration, choose Edit.
5. Update the fields to change and choose **Update**.

### To delete tax registration numbers

You can remove one or more tax registration numbers.

2. In the navigation pane, choose **Tax Settings**.
3. Under **Manage Tax Registration Numbers**, select the tax registration numbers to delete.
4. For **Manage Tax Registration**, choose **Delete**.
5. In the **Delete tax registration** dialog box, choose **Delete**.

### Turning on tax setting inheritance

You can use your tax registration information with your member accounts by turning on your **Tax Settings Inheritance**. After you activate it, your tax registration information is added to your other AWS Organizations accounts, saving you the effort of registering redundant information. Tax invoices are processed with the consistent tax information, and your usage from member accounts will consolidate to a single tax invoice.

**Note**

Tax inheritance settings are only available to accounts after a member account is added. If you turn off tax inheritance, the member accounts revert to the account's original TRN setting. If there was no TRN originally set for the account, no TRN will be assigned.

Tax registration information includes:

- Business legal name
- Tax address
- Tax registration number
- Special exemptions (does not apply for US sales tax exemptions)

### To turn on tax setting inheritance

2. In the navigation pane, choose **Tax Settings**.
3. Under **Manage Tax Registration Numbers**, select **Enable Tax Settings Inheritance**.
4. Choose **Continue**.

### Managing your US tax exemptions

If your state is eligible, you can manage your US tax exemptions on the **Tax Settings** page. The documents you upload for the exemption are reviewed by AWS Support within 24 hours.

### To upload or add your US tax exemption

1. (Prerequisite) Ensure you have the IAM permissions to view the **Tax exemptions** tab on the **Tax Settings** page in the Billing console.
For an example IAM policy, see Allow IAM users to view US tax exemptions and create AWS Support cases (p. 147).

2. Sign in to the AWS Management Console and open the AWS Billing console at https://console.aws.amazon.com/billing/.
3. In the navigation pane, choose Tax Settings.
4. Choose Set up tax exemption.
   • (If you have existing tax exemptions uploaded) Choose Add tax exemption.
5. Specify your exemption type and jurisdiction.
6. Upload certificate documents.
7. Review your information, and choose Submit.

Within 24 hours, AWS Support will notify you through a support case if they need additional information, or if any of your documents weren't valid.

Once the exemption is approved, you'll see it under the Tax exemption tab with an Active validity period.

You'll be notified through a support case contact if your exemption was rejected.

Managing an account in India

If you sign up for a new account and choose India for your contact address, your user agreement is with Amazon Internet Services Pvt. Ltd (AISPL), a local AWS seller in India. AISPL manages your billing, and your invoice total is listed in rupees instead of dollars. After you create an account with AISPL, you can't change the country in your contact information.

If you have an existing account with an India address, your account is either with AWS or AISPL, depending on when you opened the account. To learn whether your account is with AWS or AISPL, see the procedure Determining Which Company Your Account is With (p. 15). If you're an existing AWS customer, you can continue to use your AWS account. You also can choose to have both an AWS account and an AISPL account, though they can't be consolidated into the same payment family. For information about managing an AWS account, see Managing an AWS account (p. 10).

If your account is with AISPL, follow the procedures in this chapter to manage your account. This chapter explains how to sign up for an AISPL account, edit information about your AISPL account, and add or edit your Permanent Account Number (PAN).

As part of the credit card verification during signup, AISPL charges your credit card 2 INR. AISPL refunds the 2 INR after verification is done. You might be redirected to your bank as part of the verification process.

Topics
- Determining which company your account is with (p. 15)
- Signing up for AISPL (p. 16)
- Managing your AISPL account (p. 16)

Determining which company your account is with

AWS services are provided by both AWS and AISPL. Use this procedure to determine which seller your account is with.
To determine which company your account is with

2. In the page footer, look at the copyright notice. If the copyright is for Amazon Web Services, then your account is with AWS. If the copyright is for Amazon Internet Services Private Ltd., then your account is with AISPL.

Signing up for AISPL

AISPL is a local seller of AWS. Use the following procedure to sign up for an AISPL account if your contact address is in India.

To sign up for an AISPL account

If your contact address is in India and you want to open an account, you sign up with AISPL instead of AWS.

1. Go to https://console.aws.amazon.com/, and then choose Sign In to the Console.
2. On the Sign In page, type the email address that you want to use.
3. Under your email address, select I am a new user, and then choose Sign in using our secure server.
4. For each of the login credential fields, type your information, and then choose Create account.
5. For each of the contact information fields, type your information.
6. After you have read the customer agreement, select the terms and conditions check box, and then choose Create Account and Continue.
7. On the Payment Information page, enter the payment method that you want to use.
8. Under PAN Information, choose No if you do not have a Permanent Account Number (PAN) or want to add it later. If you have a PAN and want to add it now, choose Yes, and in the PAN field type your PAN.
9. Choose Verify Card and Continue. You must provide your CVV as part of the verification process. AISPL charges your card 2 INR as part of the verification process. AISPL refunds the 2 INR after verification is done.
10. For Provide a telephone number, type your phone number. If you have a phone extension, for Ext, type your phone extension.
11. Choose Call Me Now. After a few moments, a four-digit pin will appear on your screen.
12. Accept the automated call from AISPL. On your phone keypad, type the four-digit pin displayed on your screen.
13. Once the automated call verifies your contact number, choose Continue to Select Your Support Plan.
14. On the Support Plan page, select your support plan, and then choose Continue. After your payment method is verified and your account is activated, you receive an email confirming the activation of your account.

Managing your AISPL account

Use the Account Settings and Tax Settings pages of the Billing and Cost Management console to perform the following tasks:

- Edit your user name, password, or email address
- Edit your contact information
• Add, update, or remove alternate contacts
• Add or edit a Permanent Account Number (PAN)
• Edit multiple Permanent Account Numbers (PANs)
• Edit multiple Goods and Services Tax Numbers (GSTs)
• View a tax invoice

To edit your user name, password, or email address
You can change the name, password, and email address associated with your AISPL account.

2. On the navigation bar in the upper-right corner, choose your account name (or alias), and choose Account.
3. Next to Account Settings, choose Edit.
4. Next to the field that you want to update, choose Edit.
5. After you have entered your changes, choose Save changes.
6. After you have made your changes, choose Done.

To edit your contact information
You can change the contact information associated with your AISPL account, including your mailing address, telephone number, and website address. You cannot change your country.

2. On the navigation bar in the upper-right corner, choose your account name (or alias), and choose Account.
3. Under Contact Information, choose Edit.
4. For the fields that you want to change, type your updated information, and then choose Update.

Note
You can choose to add an email address for billing in the Alternate Contacts section to have AISPL send a copy of billing-related emails to that email address. For example, AISPL sends a copy of your monthly bill to your Billing contact address.

To add, update, or remove alternate contacts
You can add alternate contacts to your account. Alternate contacts enable AISPL to contact another person about issues with your account. This is even the case if you're unavailable.

2. On the navigation bar in the upper-right corner, choose your account name (or alias), and choose Account.
3. Scroll down to the Alternate Contacts section, and then choose Edit.
4. For the fields that you want to change, type your updated information, and then choose Update.

To add or edit a PAN
You can add your Permanent Account Number (PAN) to your account and edit it.
2. In the navigation pane, choose Tax Settings.
3. On the Tax Settings navigation bar, choose Edit.
4. For Permanent Account Number (PAN), enter your PAN, and then choose Update.

To edit multiple PAN numbers

You can edit multiple Permanent Account Numbers (PANs) in your account.

2. In the navigation pane, choose Tax Settings.
3. Under Manage Tax Registration Numbers, select the PAN numbers that you want to edit.
4. For Manage Tax Registration, choose Edit.
5. Update the fields that you want to change, and then choose Update.

To edit multiple GST numbers

You can edit multiple Goods and Services Tax numbers (GSTs) in your account.

2. On the navigation pane, choose Tax Settings.
3. Under Manage Tax Registration Numbers, select the GST numbers that you want to edit or choose Edit all.
4. For Manage Tax Registration, choose Edit.
5. Update the fields that you want to change and choose Update.

To view a tax invoice

You can view your tax invoices in the console.

2. On the navigation pane, choose Bills.
3. Under Summary, under Credits and Tax Invoices, choose Tax Invoices.
4. Choose an invoice hyperlink.

Note
The Tax Invoices is only visible if there are tax invoices available.

Closing an account

This page highlights some key concepts for those considering closing your AWS account. If you have any questions throughout the process, you can contact your account representative or contact AWS Support for assistance. For more information about contacting AWS Support, see Contacting AWS Support (p. 5).
For details about closing your AWS Organizations accounts, see Closing an AWS account in the AWS Organizations User Guide.

Topics

• Considerations before you close your AWS account (p. 19)
• Troubleshooting errors when closing an AWS account (p. 22)
• Closing your AWS account (p. 22)
• Accessing your AWS account after closure (p. 22)
• After the post-closure period (p. 22)

Considerations before you close your AWS account

Before closing your AWS account, consider the following:

Topics

• Your agreement with AWS (p. 19)
• AWS management console access (p. 20)
• Existing content and services still in use (p. 20)
• Your payment method (p. 20)
• Accounts protected by MFA (p. 20)
• On-Demand charges (p. 20)
• Domains registered with Amazon Route 53 (p. 21)
• Charges if you reopen your AWS account (p. 21)
• Closing a member account (p. 21)
• Cross-account access to the account you're closing (p. 21)
• Removing Amazon VPC peering connection (p. 21)

Your agreement with AWS

Your closure of your AWS account serves as a notice to us that you want to terminate the AWS customer agreement or other agreements with AWS that governs your AWS account, solely with respect to the specific AWS account. If you reopen your AWS account during the post-closure period (that is, within 90 days after your account is closed), you agree that the same agreement terms will govern your access to and use of the service offerings through your reopened AWS account.

If you close the account that you're using for the AWS Firewall Manager administrator, AWS and Firewall Manager handle the closure as follows:

AWS retains the policy data for the account for 90 days from the effective date of the administrator account closure. At the end of the 90 day period, AWS permanently deletes all policy data for the account.

• To retain findings for more than 90 days, you can archive the policies. You can also use a custom action with an EventBridge rule to store the findings in an S3 bucket.
• As long as AWS retains the policy data, when you reopen the closed account, AWS reassigns the account as the service administrator and recovers the service policy data for the account.

Important
For customers in the AWS GovCloud (US) Regions:
Considerations before you close your AWS account

- Before closing your account, back up and then delete your policy data and other account resources. You will no longer have access to them after you close the account.

**AWS management console access**

Your access to the AWS Management Console for the closed AWS account is restricted. During the post-closure period, you can still sign in to your AWS account to view your past billing information and access AWS Support. You can't access any other AWS services or start any new AWS services in the closed account.

**Existing content and services still in use**

Before you close your AWS account, we recommend that you retrieve the content that you want to keep and delete the remaining resources. For instructions on how to retrieve data and delete resources, see the documentation for that service.

After the post-closure period, any remaining content in your AWS account is deleted, and services that are still in use are terminated. For more information about the post-closure period, see Accessing your AWS account after closure (p. 22).

**Your payment method**

We charge you through your designated payment method for any usage fees incurred before you closed your AWS account. We might issue you any refunds that are due through that same payment method. If you have active subscriptions, even after your account is closed, you might continue to be charged for the subscription until the subscription expires or is sold according to the terms governing the subscription. If you're charged, you're charged through your designated payment method. This situation might apply to you if, for example, you have a Reserved Instance that you pay for on a monthly basis. These charges and refunds might occur after you close your account.

In addition, if you reopen your account, you might be charged for the cost of running AWS services during the post-closure period. This is specifically for any services that you didn't terminate before closing your account.

**Important**

Closing your AWS account doesn't affect payment methods that you use on Amazon.com or other Amazon websites.

**Accounts protected by MFA**

If you've turned on multi-factor authentication (MFA) on your AWS account root user, or configured an MFA device on an IAM user, the MFA isn't removed automatically when you close the account. If you choose to leave the MFA turned on during the 90 days post-closure period, keep the virtual hardware MFA device active until the post-closure period expired in case you need to access the account during that time.

You have the option to turn off the MFA device before closing the account. MFA devices for IAM users must be deleted by the account administrator.

**On-Demand charges**

During the post-closure period, billing for On-Demand charges stops. However, you're billed for any usage that has accrued up until the time you closed your account. You'll be charged for that usage at the beginning of the next month. In addition, if you purchased any subscriptions with ongoing payment obligations, you might continue to be charged for them after your account is closed.
Important
If you don’t terminate your resources, you will continue to generate costs.

Domains registered with Amazon Route 53

Domains that are registered with Route 53 are not deleted automatically. When you’re closing your AWS account, you have three options:

- You can disable automatic renewal, and the domains are deleted when the registration period expires. For more information, see Enabling or Disabling Automatic Renewal for a Domain in the Amazon Route 53 Developer Guide.
- You can transfer the domains to another AWS account. For more information, see Transferring a Domain to a Different AWS account.
- You can transfer the domains to another domain registrar. For more information, see Transferring a Domain from Route 53 to Another Registrar.

If you already closed the account, you can open a case with AWS Support to get help with disabling automatic renewal or transferring your domains. For more information, see Contacting AWS Support About Domain Registration Issues. There is no charge to open a case for domain registration issues.

Charges if you reopen your AWS account

If you reopen your AWS account during the post-closure period, you might be billed for the cost of any AWS services that aren’t terminated before you closed your account.

Example

You reopen your AWS account 30 days after closure, and your AWS account had only an active t-example.example Amazon EC2 instance at closure. The price for a t-example.example Amazon EC2 instance in your AWS Region is $0.01 each hour. In this case, you might be charged for 30 days x 24 hours x $0.01 per hour = $7.20 for your AWS services.

Closing a member account

When you close an account that was created with AWS Organizations, that account isn’t removed from the organization until after the post-closure period. During the post-closure period, a closed member account still counts toward your quota of accounts in the organization.

To avoid having the account count against the limit, remove member accounts from the organization before closing it. For more information, see Closing an AWS account in the AWS Organizations User Guide.

Cross-account access to the account you’re closing

After you close your AWS account, any access requests to your closed account's AWS services from other AWS accounts fail. This occurs even if you have granted the other accounts permission to access your account’s AWS services. If you reopen your AWS account, other AWS accounts can access your account's AWS services if you have granted the other accounts the necessary permissions.

Removing Amazon VPC peering connection

AWS currently doesn’t delete Amazon VPC peering connections when you close one of the accounts participating in the VPC peering connection. Any traffic that’s destined for the VPC peering connection and originates from other active accounts is dropped. This is because AWS terminates instances and deletes any security groups in the closed account. To remove the VPC peering connection, you can delete it from your account using the Amazon VPC console, AWS CLI, or Amazon EC2 API.
Troubleshooting errors when closing an AWS account

If you receive an error message while trying to close your AWS account, you can contact your account representative or contact us to open a billing or account support case. Common reasons why you can't close your AWS account include the following situations:

- Your account is the management account of an organization in AWS Organizations with open member accounts.
- You have unpaid invoices for your account.
- You aren't signed in to the account as the root user.
- You are an active AWS Marketplace seller.

Closing your AWS account

You can close your AWS account using the following procedure.

To close your AWS account

2. On the navigation bar in the upper-right corner, choose your account name (or alias), and choose Account.
3. Scroll to the end of the page to the Close Account section. Read and ensure that you understand the text next to the check box. After you close an AWS account, you can no longer use it to access AWS services.
   - If the account has a multi-factor authentication (MFA) device turned on, keep your MFA device until the 90 day post-closure period expires, or turn off before closing the account.
4. Select the check box to accept the terms, and choose Close Account.
5. In the confirmation box, choose Close Account.

Accessing your AWS account after closure

After you close an AWS account following the process described in the preceding steps, you can no longer use it to access AWS services. However, during the Post-Closure Period, which are the 90 days after your account is closed, you can still view your AWS account's past billing information and access AWS Support.

During the Post-Closure Period, AWS might retain any content that you didn't delete and any AWS services that you didn't terminate before you closed your AWS account. You can access any remaining content or AWS services only by reopening your account during the Post-Closure Period. You can reopen your AWS account by contacting AWS Support. If you choose to reopen your account, you can access the content that you didn't delete and AWS services that you didn't terminate before closing your account. However, you might be charged for the cost of running those AWS services during the Post-Closure Period. You can estimate the cost of running AWS services using the AWS Pricing Calculator in the AWS Pricing Calculator User Guide.

After the post-closure period

After the Post-Closure Period, we permanently close your AWS account, and you can't reopen it. Any content that you didn't delete is deleted, and any AWS services that you didn't terminate are terminated. Service attributes can be retained as long as needed for billing and administration purposes. You also
can't create a new AWS account using the same alias or email address that was registered to your AWS account at the time of its closure.

If you close the account that you're using for the AWS Firewall Manager administrator, AWS and Firewall Manager handle the closure as follows:

AWS retains the policy data for the account for 90 days from the effective date of the administrator account closure. At the end of the 90 day period, AWS permanently deletes all policy data for the account.

- To retain findings for more than 90 days, you can archive the policies. You can also use a custom action with an EventBridge rule to store the findings in an S3 bucket.
- As long as AWS retains the policy data, when you reopen the closed account, AWS reassigns the account as the service administrator and recovers the service policy data for the account.

**Important**
For customers in the AWS GovCloud (US) Regions:

- Before closing your account, back up and then delete your policy data and other account resources. You will no longer have access to them after you close the account.
Using the AWS Free Tier

When you create an AWS account, you're automatically signed up for the AWS Free Tier for 12 months. The AWS Free Tier allows you to try some AWS services free of charge within certain usage limits.

For the list of services that offer AWS Free Tier benefits and their Free Tier usage limits, see AWS Free Tier.

For more information on how to avoid charges while you're eligible for the AWS Free Tier, see the following resources:

- Tracking your AWS Free Tier usage (p. 25)
- Avoiding unexpected charges after the AWS Free Tier (p. 24)

Eligibility for the AWS Free Tier

Your AWS usage stays within the AWS Free Tier limits when all of these conditions are met:

- You’re within the first 12 months of creating your AWS account.
- You use only AWS services that offer AWS Free Tier benefits.
- Your usage stays within the AWS Free Tier limits of those services.

If you use AWS services beyond one or more of these conditions, then that usage exceeds the Free Tier limits. You're charged at the standard AWS billing rates for usage that exceeds the Free Tier limits.

To confirm if your account is still within the 12-month period for the AWS Free Tier, open the AWS Billing console. Then, from the Billing and Cost Management Dashboard, scroll down the page to the Alerts and Notifications section. Check the Alerts and Notifications section for a message that confirms you’re eligible for the AWS Free Tier.

To learn more about the AWS Free Tier limits, see AWS Free Tier.

Note
For AWS Organizations, the AWS Free Tier eligibility for all member accounts begins on the day that the management account is created. For more information, see the AWS Organizations User Guide.

Avoiding unexpected charges after the AWS Free Tier

Your eligibility for the AWS Free Tier expires 12 months after you first create your account. You can't extend your Free Tier eligibility after this time.

Note
You can continue to use Always Free offers, even after your Free Tier eligibility expires. To learn more about available Always Free offers, see AWS Free Tier.

As the expiration date of your AWS Free Tier eligibility approaches, we recommend that you terminate any resources you no longer need. After your eligibility expires, you're charged at the standard AWS billing rates for usage.
Even if you aren't regularly logging in to your account, you might have active resources running. Use the following procedure to identify your account's active resources.

**To identify your account's active resources**

2. Next to **Details**, choose **Expand All**.
3. Review the list under **AWS Service Charges**. This list shows you the services with active resources by AWS Region.

Note the services and AWS Regions with resources that you no longer need. For instructions on how to terminate those resources, see the documentation for that service.

You might decide to close your AWS account. To avoid generating future charges, we recommend that you retrieve the content you want to keep and terminate any remaining resources before you close your account. Closing your account might not automatically terminate all your active resources and you might continue to incur charges. Make sure to review your content and resources across different AWS Regions. For more information and important considerations, see close your account (p. 18).

**Tracking your AWS Free Tier usage**

You can track your AWS Free Tier usage in the following ways:

- Set up Free Tier alerts using AWS Budgets. By default, AWS Budgets automatically notifies you over email when you exceed 85 percent of the Free Tier limit for each service. You can also configure AWS Budgets to track your usage to 100 percent of the Free Tier limit.
- Review your AWS Free Tier usage using the **Top Free Tier Services by Usage** table in the Billing console.

**Topics**

- AWS Free Tier usage alerts using AWS Budgets (p. 25)
- Top AWS Free Tier services table (p. 26)
- Trackable AWS Free Tier services (p. 26)

**AWS Free Tier usage alerts using AWS Budgets**

AWS Budgets allows you to track and take action on your cost and usage. For more information about this feature, see Managing your costs with AWS Budgets.

AWS Budgets automatically notifies you over email when you exceed 85 percent of your Free Tier limit for each service. For additional tracking, you can set up AWS Budgets to track your usage to 100 percent of the Free Tier limit for each service. For example, you can set up a budget to send you an alert when you're forecasted to exceed 100 percent of the Free Tier limit for Amazon Elastic Block Store. For instructions on how to set up a usage budget, see Creating a usage budget.

AWS Free Tier usage alerts cover non-expiring Free Tier offerings, such as the first 25 GB of Amazon DynamoDB storage or the first 10 custom Amazon CloudWatch metrics. The alerts also cover AWS Free Tier offerings that expire after 12 months, such as the 750 hours per month of Amazon EC2 Windows t2.micro instance usage and the first 5 GB of standard Amazon S3 storage. The alerts don't cover Free Tier offerings that expire in less than 12 months, such as the first 30 days of using Amazon Lightsail.
When you exceed the Free Tier limit for a service, AWS sends an email to the email address that you used to create your account. Use the following procedure to change the email address for AWS Free Tier usage alerts.

**To change the email address for AWS Free Tier usage alerts**

2. Under Preferences in the navigation pane, choose Billing preferences.
3. Under Cost Management Preferences, under Receive AWS Free Tier Usage Alerts in the Email Address dialog box, enter the email address where you want to receive the usage alerts.
4. Scroll to the end of the page and choose Save preferences.

AWS Budgets usage alerts for 85 percent of the Free Tier limit are automatically activated for all individual AWS accounts, but not for a management account in an AWS Organizations. If you own a management account, you must opt in to get AWS Free Tier usage alerts. Use the following procedure to opt in or out of Free Tier usage alerts.

**To opt in or out of AWS Free Tier usage alerts**

2. Under Preferences in the navigation pane, choose Billing preferences.
3. Under Cost Management Preferences, select Receive AWS Free Tier Usage Alerts to opt in to Free Tier usage alerts. To opt out, clear the Receive AWS Free Tier Usage Alerts check box.

**Top AWS Free Tier services table**

If you’re eligible for the AWS Free Tier and you use an AWS Free Tier offering, you can track your usage with the Top AWS Free Tier Services by Usage table on the dashboard of the AWS Billing console. The dashboard shows your account’s top five AWS Free Tier service measurements.

To see more details about your AWS Free Tier usage, including all of your active Free Tier services, choose View all in the Top AWS Free Tier Services by Usage table. The detailed table includes additional information about your forecasted usage for each Free Tier service measurement.

The Top AWS Free Tier Service by Usage table is grouped by service limit. A service might have multiple lines, enabling you to track each AWS Free Tier limit closely. For example, each month you get 2,000 Amazon S3 Put operations and 5 GB of Amazon S3 storage. The AWS Free Tier usage table has two lines, one for S3 - Puts and one for S3 - Storage.

The following conditions might limit whether you see the Free Tier table data:

- You use an AWS service that doesn't offer a AWS Free Tier.
- Your AWS Free Tier has expired.
- You access AWS through an AWS Organizations member account.
- You use an AWS service in the AWS GovCloud (US-West) or AWS GovCloud (US-East) Regions.

**Trackable AWS Free Tier services**

With AWS, you can track how much you used AWS Free Tier services and what service usage types you used. Usage types are the specific type of usage that AWS tracks. For example, the usage type Global-BoxUsage:freetier.micro means that you used an Amazon EC2 micro instance.
The AWS Free Tier usage alerts and the **Top AWS Free Tier Services by Usage** table cover both expiring and non-expiring AWS Free Tier offerings. You can track the following services and usage types.

Version 2.0
Understanding your customer carbon footprint tool

You can use the customer carbon footprint tool to view estimates of the carbon emissions associated with your AWS products and services.

Topics
- Getting started with customer carbon footprint tool (p. 32)
- Understanding your customer carbon footprint tool overview (p. 32)
- Understanding your carbon emission estimations (p. 33)

Getting started with customer carbon footprint tool

The customer carbon footprint tool is available for all accounts. If a report isn't available for your account, your account might be too new to show data. After each month, you might have a delay of up to three months for AWS to show your carbon emission estimates.

To view your customer carbon footprint tool

2. On the navigation bar, choose Cost & Usage Reports.
3. Under date range, choose your start month and end month.

IAM policies

You must have the IAM permission sustainability:GetCarbonFootprintSummary to access the customer carbon footprint tool and data. For more information regarding IAM permissions, see AWS Identity and Access Management for AWS Billing (p. 125).

AWS Organizations users

If you're logged in as a management account of AWS Organizations, the customer carbon footprint tool reports the member account data for the duration that those accounts were a part of your management account. If you're a member account, the customer carbon footprint tool reports emission data for all the periods. This is regardless of any changes that might have occurred to your account's associated membership in one of the AWS Organizations.

Understanding your customer carbon footprint tool overview

Your customer carbon footprint tool page contains the following sections. This page defines each console section, so you can understand the information provided in depth.
The unit of measurement for carbon emissions is metric tons of carbon dioxide-equivalent (MTCO2e), an industry-standard measure. This measurement considers multiple greenhouse gases, including carbon dioxide, methane, and nitrous oxide. All greenhouse gas emissions are converted to the amount of carbon dioxide that would result in equivalent warming.

Carbon emissions data is available from January 2020 onwards. New data is available monthly, with a delay of three months as AWS gathers and processes the data that's required to provide your carbon emissions estimates. All values in the customer carbon footprint tool are rounded to the nearest one-tenth ton.

Your carbon emissions summary

This section shows your estimated AWS emissions and estimated emissions savings, relative to an equivalent on-premises workload. This is summarized under two categories:

- Emission savings from AWS cloud infrastructure efficiencies
- Emission savings from AWS purchase of renewable energy

Your emissions by geography

This section shows the carbon emissions associated with each applicable geographical region. This information shows high-level geographical groupings such as AMER, EMEA, and not by AWS Regions.

Your emissions by service

This section shows the carbon emissions resulting from your usage of Amazon Elastic Compute Cloud (EC2), Amazon Simple Storage Service (S3), and any other AWS products and services.

Your carbon emissions statistics

This section shows trends in your carbon emissions over time. You can choose between a monthly, quarterly, or annual view.

Path to 100% renewable energy

This graph shows how your carbon emissions will change over time as AWS moves toward its goal of powering its operations with 100% renewable energy. These figures are based on your current AWS usage profile.

The Path to 100% renewable energy graph isn't impacted by your date range selection.

Understanding your carbon emission estimations

Carbon emissions data in the customer carbon footprint tool adhere to the Greenhouse Gas Protocol and ISO. Carbon footprint estimates for AWS include Scope 1 (emissions from direct operations) and Scope 2 (emissions from electricity production) data. For more information about carbon emissions, see the EPA Scope 1 and Scope 2 Inventory Guidance.

The Scope 2 portion of the estimate is calculated using the GHGP market-based method. This means it factors in Amazon enabled renewable projects on the grids where the customer footprint is being estimated. Because we use the market-based method to calculate Scope 2 emissions, only purchased renewables on the grid where your workloads are running are included in the carbon footprint estimates. Estimates factor the grid mix of the AWS Regions where you run your workloads, following GHGP guidance. Carbon emission estimates also factor in the AWS power usage effectiveness (PUE) in our data centers.

To estimate your emissions savings compared to on-premises workload equivalent, we use data from 451 Research, which is a part of S&P Global Market Intelligence. This research found that AWS can lower a workload's carbon footprint by 88% for the median surveyed US enterprise data centers, and compared to European data enterprise centers, up to 96% once AWS is powered with 100% renewable energy. This
target is on path to meet by the year 2025. For more information, see Reducing carbon by moving to AWS.

Regions, usage, and billing data factors

Electricity grids in different parts of the world use various sources of power. Some use carbon-intense fuels (for example, coal), and some are primarily low-carbon hydro or other renewables. The locations of Amazon's renewable energy projects also play a role, because the energy produces by these projects are accounted against our emissions from Regions on the same grid. As a result, not all AWS Regions have the same carbon intensity.

There are some Regions where high usage result in relatively low emissions. There are others where the low usage results in higher emissions. For carbon reports, EMEA Regions are often shown as under represented in estimates since there are more renewables on the grid. APAC Regions are often shown over represented in estimates. This is because sourcing renewable energy is difficult. Carbon estimates are based on usage only, and one-time charges such as upfront Savings Plan purchases, won't result in similar increases in carbon emissions.

Customer carbon footprint tool and Amazon's carbon footprint report

Amazon's carbon footprint report is a part of our annual sustainability report. This covers Scope 1 through 3 emissions for all Amazon operations, including Amazon Web Services. The customer carbon footprint report provides you with the emissions that attribute to your own AWS usage. For more information, see Amazon Sustainability.
Viewing your bill

You receive AWS invoices monthly for usage charges and recurring fees. For one-time fees, such as fees for purchasing an All Upfront Reserved Instance, you are charged immediately.

At any time, you can view estimated charges for the current month and final charges for previous months. This section describes how to view your monthly bill and past bills and how to receive and read billing reports.

Topics

• Viewing your monthly charges (p. 35)
• Getting an invoice emailed to you (p. 36)
• Cost and Usage Reports
• Managing Your Payments (p. 37)

Viewing your monthly charges

At the end of a billing cycle or at the time you choose to incur a one-time fee, AWS charges the credit card you have on file and issues your invoice as a PDF file. You can download the PDF from the Account Activity page in the Billing and Cost Management console using the following steps.

Note
IAM users need explicit permission to see some of the pages in the Billing and Cost Management console.

To view your monthly charges

2. In the navigation pane, choose Bills.
3. For Date, choose a month.

The Summary section displays a summary and details of your charges for that month. It is not an invoice, however, until the month's activity closes and AWS calculates final charges.

If you use the consolidated billing feature in AWS Organizations, the Bills page lists totals for all accounts on the Consolidated Bill Details tab. Choose the Bill Details by Account tab to see the activity for each account in the organization. For more information about consolidated billing, see Consolidated billing for AWS Organizations (p. 109).

To view your charges for a different month

• On the Bills page, select the month you want from the Date list.

To download a copy of your charges as a PDF document

1. On the Bills page, select a month from the Date list for which all activity is closed.
2. Under Total, choose Amazon Web Services, Inc. - Service Charges.
3. Choose Invoice <invoiceID>.
4. (For entities other than AWS EMEA SARL) To download a copy of a particular tax invoice, choose the Invoice <invoiceID> in the Tax Invoices section.

5. (For AWS EMEA SARL) To download a copy of a particular tax invoice, choose the Invoice <invoiceID> in the Amazon Web Services EMEA SARL – Service Charges section.

**To download a monthly report**

Once you turn on the reports, you can download CSV files for any future billing periods.

1. Turn on monthly reports by choosing Billing preferences in the navigation pane.
2. Under Detailed Billing Reports, select Turn on the legacy Detailed Billing Reports feature to receive ongoing reports of your AWS charges.
3. Choose Configure to specify where your reports will be delivered to.
   - Under Select existing bucket, choose an existing Amazon S3 bucket name as your report destination.
   - If you prefer to create a new Amazon S3 bucket to deliver reports to, enter an Amazon S3 bucket name and Region under Create a bucket.
     a. Choose Next.
     b. Verify your IAM policy and select I have confirmed that this policy is correct.
     c. Choose Save.
4. Choose Save preferences.
5. On the Bills page, choose Download CSV.

**Getting an invoice emailed to you**

Follow these steps to have a PDF copy of your monthly invoice sent to the email address associated with your account.

2. Choose Billing preferences on the navigation pane.
3. Select the Receive PDF Invoice by Email check box.
4. Choose Save preferences.

The monthly invoices are sent to the account's root user and the alternate billing contact. To edit the root user email address, see Editing Your Account name, root user password, and root user email address (p. 10). To add or update the alternate billing contact, see Adding, changing, or removing alternate contacts (p. 11).
Managing your payments

To open an AWS account, you must have a valid payment method on file. Use the procedures in this section to add, update, or remove payment methods and to make payments.

Topics
- Managing your AWS payments (p. 37)
- Managing your payments in India (p. 46)
- Managing your payments in AWS Europe (p. 48)
- Managing your Advance Pay (p. 55)
- Managing your payment profiles (p. 56)

Managing your AWS payments

You can use the Payment Methods page of the Billing and Cost Management console to manage your AWS payment methods and the Payments page on the Billing and Cost Management console to manage your payments.

Topics
- Managing your AWS payment methods (p. 37)
- Making payments, checking unapplied funds, and viewing your payment history (p. 38)
- Managing your credit card payment methods (p. 40)
- Managing your ACH direct debit payment methods (p. 41)
- Managing your AWS payments in CNY (p. 42)

Managing your AWS payment methods

You can use the Payment Methods page of the Billing and Cost Management console to perform the following tasks for all payment types:

Topics
- View your payment methods (p. 37)
- Designate a default payment method (p. 38)
- Remove a payment method (p. 38)

In addition, you can use the Payment Methods page of the Billing and Cost Management console to manage your credit cards and direct debit accounts. For more information, see Managing your credit card payment methods (p. 40) and Managing your ACH direct debit payment methods (p. 41).

View your payment methods

You can use the console to view the payment methods that are associated with your account.
To view payment methods associated with your AWS account

2. In the navigation pane, choose Payment methods.

Designate a default payment method

You can use the console to designate a default payment method for your AWS account.

To designate a default payment method

2. In the navigation pane, choose Payment methods.
3. Next to the payment method that you want to use as your default payment method, choose Make Default.

Remove a payment method

You can use the console to remove a payment method from your account.

To remove a payment method from your AWS account

2. In the navigation pane, choose Payment methods.
3. Ensure that your account has another valid payment method set as the default.
4. Next to the payment method that you want to remove, choose Delete.
5. In the Delete Credit Card or Delete your bank account dialog box, choose Delete.

Making payments, checking unapplied funds, and viewing your payment history

You can use the Payments page of the AWS Billing and Cost Management console to perform the following tasks for all payment types:

- Make a payment
- View outstanding invoices
- View unapplied funds
- View payment history

Make a payment

AWS charges your default payment method automatically at the beginning of each month. If that charge doesn’t process successfully, you can use the console to update your payment method and make a payment.

Note
If you pay by ACH direct debit, AWS provides you with your invoice and initiates the charge to your payment method within 10 days of the start of the month. It can take 3–5 days for
your payment to succeed. For more information, see Managing your ACH direct debit payment methods (p. 41).

Before making a payment, ensure that the payment method that you want automatically charged in the future is set as your default payment method. If you are using a credit card, confirm that your credit card has not expired. For more information, see Designate a default payment method (p. 38) and Managing your credit card payment methods (p. 40).

To make a payment

2. In the navigation pane, choose Payments.
   
   The Payments due table lists all outstanding invoices. If there are no invoices listed, you don’t need to take action at this time.
3. If there are outstanding invoices, select the invoice you want to pay in the Payments due table, and then choose Complete payment.
4. On the Complete a payment page, your default payment method is selected if it is eligible for you to use to pay the invoice. If you want to use a different payment method or choose an eligible payment method, choose Change.
5. Confirm that the summary matches what you want to pay, and choose Verify and pay.

After your bank processes your payment, you’re redirected to the Payments page.

If you pay by ACH direct debit, and you receive an email from AWS saying that AWS can’t charge your bank account and will try again, work with your bank to understand what went wrong.

If you receive an email saying that AWS failed the last attempt to charge your bank account, select the invoice to pay in the Payments due table. Then choose Complete payment to pay the invoice. If you have questions about issues with charging your bank account or paying an overdue balance, create a case in the Support Center.

If you pay by electronic funds transfer and your account payment is overdue, create a case in the Support Center.

View outstanding invoices, unapplied funds, and payment history

You can search and filter the Payments due, Unapplied funds, and Payment history tables described in the following procedures. Choose the gear icon to change the default columns and customize other table settings. Download items individually by choosing the appropriate ID, or choose Download, and then Download CSV to download a CSV file of the table for reporting purposes.

To view outstanding invoices

2. In the navigation pane, choose Payments.
3. Choose the Payments due tab to view the Payments due table.

   The Payments due table lists all your outstanding invoices.

   The table includes the following statuses:
   • Due – Outstanding invoices with an approaching due date.
   • Past due – Outstanding invoices where a payment has not been made by the due date.
Managing your credit card payment methods

You can use the Payment Methods page of the Billing and Cost Management console to perform the following credit card tasks:

- Add a credit card (p. 40)
- Update your credit card (p. 40)
- Confirm credit card information (p. 41)
- Use a Chinese yuan credit card (p. 44)

Add a credit card

You can use the console to add a credit card to your account.

To add a credit card to your AWS account

2. In the navigation pane, choose Payment methods.
3. Choose Add a card.
4. Enter the credit card information, and then choose Continue.
5. Enter your card billing address.
6. Choose Continue.

Update your credit card

You can update the name, address, or phone number that is associated with your credit card.

To update your credit card

2. In the navigation pane, choose Payment methods.
3. Next to the credit card that you want to edit, choose Edit.
4. Update the information that you want to change.
5. At the bottom on the page, choose Update.

Confirm credit card information

To make a payment, you must have a valid, unexpired credit card on file.

To confirm that your credit card is up to date
2. In the navigation pane, choose Payment methods.
3. Ensure that the Expires On date for your card is in the future. If your card has expired, add a new card or update your current card.

Managing your ACH direct debit payment methods

If you meet the eligibility requirements, you can add a US bank account as an ACH direct debit payment method to your payment methods.

To be eligible, your account must meet the following requirements:

• It is an Amazon Web Services customer.
• It is at least 60 days old.
• It has paid at least one invoice in full in the previous 12 months.
• It has paid at least $100 cumulative over the previous 12 months.
• It uses USD as the preferred currency.

If you pay by ACH direct debit, AWS provides you with your invoice and initiates the charge to your payment method within 10 days of the start of the month. It can take up to 20 days for the payment to complete successfully, even if the payment shows as Succeeded on the Billing and Cost Management console.

You can use the Payment Methods page of the Billing and Cost Management console to add or update a direct debit account.

To add a direct debit account to your AWS payment methods

You can use the Billing and Cost Management console to add a direct debit account to your AWS payment methods. You can use any personal or business bank account, provided that the account is located at a branch in the US.

To add an ACH direct debit account, you must have the following information ready:

• A US bank account number
• A US bank account routing number
• The address that the bank associates with the account
• (For a personal bank account) A US driver's license number or state-issued ID number
(For a business bank account) A Federal tax ID number

2. In the navigation pane, choose Payment methods.
3. Choose Add a bank account.
4. For Account Holder Name, enter the name of the principal account holder.
5. For Bank Routing Number, enter the nine-digit routing number.
   
   Routing numbers are always nine digits long. Some banks list the routing number first on a check, and other banks list the account number first.
6. For Bank Account Number, enter the account number. Account numbers might have up to 17 digits. The account must be an ACH-enabled checking account at a bank located in the US.
7. For Bank Account Type, choose Personal or Business.
8. (Personal) For Driver's License Number, enter the primary account holder's valid US driver's license or state-issued ID number.
   
   For State, enter the name of the state where the ID was issued.
9. (Business) For Federal tax ID, enter the Federal tax ID for the business.
10. For Make Default, select whether you want this direct debit account to be your default payment method.
11. For Billing Address Information, enter the valid US billing address of the primary account holder.
12. Choose Create to agree to the Terms and Conditions and add your direct debit account.

To update your direct debit account

You can update the name, address, or phone number associated with your direct debit account.

2. In the navigation pane, choose Payment methods.
3. Next to the direct debit account that you want to edit, choose Edit.
4. Update the information that you want to change.
5. At the bottom of the dialog box, choose Update.

Managing your AWS payments in CNY

You can make payments using the Chinese yuan currency if you're an AWS Inc. customer.

Using the China bank redirect payment method

If you're a customer based in China, you can use the China bank redirect payment method to complete payments. To do this, you must have Chinese yuan payments activated and set as your preferred currency. With the China bank redirect method, you can make payments in Chinese yuan for AWS Inc.

Topics

- Requirements for using China bank redirect payments (p. 43)
- Setting up China bank redirect payments (p. 43)
- Making payments using China bank redirect (p. 44)
- Switching from China bank redirect to Pay by invoice (p. 44)
Requirements for using China bank redirect payments

To use China bank redirect as your payment method, your account must meet the following requirements:

- Your account must be an Amazon Web Services, Inc. customer.
- You must have Chinese yuan payments activated.
- You must have Chinese yuan set as your preferred currency.

Setting up China bank redirect payments

To use China bank redirect as your payment method, you must activate Chinese yuan payments on the Billing and Cost Management console.

To activate Chinese yuan payments, you must submit information for identity verification. For a personal account, you need your national ID number for verification. For a business account, you must have the following information:

- Your uniform social credit code or organization code
- Your business license image

After you gathered the required information, use the following procedure to change your preferred currency to Chinese yuan and to set up China bank redirect payments.

To activate Chinese yuan payments and set up the China bank redirect payment method

2. In the navigation pane, choose Payment methods.
3. In the Pay with Chinese yuan section, choose Get started or Pay in Chinese yuan.
4. Review the Terms and Conditions for Chinese Yuan Payments. Then, select I have read and agree to the Terms and Conditions for Chinese Yuan Payments.
5. Choose Next.
6. If you have a personal account:
   - For Full name, enter your full name in Chinese.
   - For Identity card number, enter your national ID number.

   If you have a business account:
   - For Company name, enter the company name in Chinese.
   - For Contact name, enter the contact name in Chinese.
   - For Contact phone number, enter the contact phone number for your company.
   - For Uniform social credit code or organization code, enter your company’s code.
   - For Company business license, upload the image of your company’s business license.

   Note
   If applicable to your account, you might be required to add a China UnionPay credit card.
   For more information, see Use a Chinese yuan credit card (p. 44).
7. Choose Next.
8. Review the identity information that you entered. Then, choose Submit.
It can take up to one business day to verify your identity information. After your identity is successfully verified, your default currency automatically changes to Chinese yuan. Additionally, the China bank redirect payment method is made available to you in the Pay with Chinese yuan section of the Payment Methods console page.

Making payments using China bank redirect

After setting up the payment method, you can use China bank redirect to make payments on your invoices.

To pay invoices using China bank redirect

2. In the navigation pane, choose Payments.
3. Select the invoice that you want to pay, and then choose Complete payment.
4. For Select payment option, choose China bank redirect.
5. For payments that are more than $50,000, you must confirm that you fulfilled the applicable tax and surcharge withholding obligations. To do so, select I confirm that I fulfilled the Chinese tax and surcharge withholding obligations according to Chinese tax laws and regulations.
6. Choose Verify and pay.
7. To proceed with the redirect, choose OK.

After you're redirected, choose your bank from the dropdown menu and complete your payment on your bank's website. It can take up to 24 hours for your transaction request to process.

Switching from China bank redirect to Pay by invoice

To change your default payment method to Pay by invoice, follow these steps.

To switch to the Pay by invoice method

2. In the navigation pane, choose Payment methods.
3. In the Pay by invoice section, choose Make default next to the default payment method that you want to use.
4. In the Change your payment method and currency dialog box, choose Yes, I want to proceed.

After you change your payment method, your preferred currency defaults to US dollars. To change your preferred currency back to Chinese yuan, choose Make default next to the China bank redirect payment method. To change your preferred currency to another supported currency, see Changing the currency to pay your bill (p. 11).

Use a Chinese yuan credit card

If you have an account with AWS Inc., are charged in USD, and are based in China, you can use the following sections to add a Chinese yuan (CNY) credit card to your account.

You can use the Payment Methods page of the Billing and Cost Management console to perform the following tasks:

- the section called “Set up a Chinese yuan credit card” (p. 45)
- the section called “Switch from a Chinese yuan credit card to an international credit card” (p. 45)
- the section called “Add a new Chinese yuan credit card” (p. 46)
Set up a Chinese yuan credit card

To change your preferred currency to CNY and add a credit card, you must have the following information:

- National ID number
- Business license number (if applicable)
- Business license image (if applicable)

After you have the required information, you can use the following procedure to change your preferred currency and add your first Chinese credit card.

To add your first Chinese credit card

2. In the navigation pane, choose Payment methods.
3. Choose Pay with Chinese yuan.
4. In the Setting up Chinese yuan payment dialog box, read the Terms and Conditions for Chinese yuan payments, select I've already read and agree to the above terms and conditions, and choose Next.
5. For Verify customer identity, provide the following information:
   - National ID name
   - Contact number
   - (Business only) Company Name
   - National ID number
   - (Business only) Business License number
   - (Business only) Business License image

   After you have provided the required information, choose Next.
6. For Add a China Union Pay credit card, for the credit card fields, enter the information about the card and bank.
7. Choose Get Code, enter the provided code, and choose Next.
8. Review your information, select I have confirmed that the provided information is accurate and valid, and choose Submit.

It can take up to one business day to verify your customer information. AWS emails you after your information is fully verified.

Switch from a Chinese yuan credit card to an international credit card

To switch from a Chinese yuan credit card to an international credit card, you must change your preferred currency. You can use the following procedure to change your default payment method and preferred currency at the same time.

To change your default payment methods and currency

2. In the navigation pane, choose Payment methods.
3. Next to the international credit card that you want to use as your default payment method, choose Make Default.
4. In the dialog box, for **Select payment currency**, choose the currency that you want to use. Then choose **Yes, I want to proceed**.

**Add a new Chinese yuan credit card**

Use the following procedure to add other Chinese yuan credit cards.

**To add another Chinese credit card**

2. In the navigation pane, choose **Payment methods**.
3. Choose **Add a Chinese yuan credit card**.
4. For the credit card boxes, enter the information about the card and bank.
5. Choose **Get Code**, enter the provided code, and choose **Continue**.

If you have questions about payments or payment methods, see **Getting help with AWS Billing and Cost Management** (p. 5).

**Managing your payments in India**

If your account is with AISPL, follow the procedures in this section to manage your payment methods and payments and to verify credit or debit card payments with your bank. To learn whether your account is with AWS or AISPL, see the procedure **Determining Which Company Your Account is With** (p. 15).

**Note**

If you have questions about payment methods, see **Getting help with AWS Billing and Cost Management** (p. 5).

**Topics**

- Supported payment methods (p. 46)
- View your credit or debit cards (p. 46)
- Add a credit or debit card (p. 47)
- Add a net banking account (p. 47)
- Make a payment using a credit or debit card (p. 47)
- Make a payment using net banking (p. 48)
- Remove a payment method (p. 48)

**Supported payment methods**

AWS supports Visa, Mastercard, and American Express credit and debit cards for AISPL accounts.

**View your credit or debit cards**

You can use the console to view the credit or debit cards associated with your account.

**To view credit or debit cards associated with your AISPL account**

2. In the navigation pane, choose **Payment Methods**.
Add a credit or debit card

You can use the console to add a credit or debit card to your account.

Note
AISPL charges your card 2 INR as part of the credit or debit card verification process. AISPL refunds the 2 INR after verification is complete. If you use Visa or Mastercard, you might be redirected to your bank to authorize the verification charge.

To add a credit or debit card to your AISPL account
2. In the navigation pane, choose Payment Methods.
3. Choose Add a card.
4. For the credit or debit card fields, enter the information, including the card verification value (CVV), and then choose Continue.
5. For the credit or debit card information fields, enter your card billing address.
6. (Optional) Select Make Default.
7. Choose Continue.
8. (If you chose Make Default) In the dialog box, choose Ok.

Add a net banking account

You can use the console to add internet banking (Net Banking) accounts as your payment method. This payment option is available to all AISPL customers.

To add a net banking account to your AISPL account
2. In the navigation pane, choose Payment Methods.
3. Choose Add an account.
4. Under Net Banking information, select your bank name,
5. In the Billing Address Information section, enter your name, billing address, and phone number.
6. Choose Create.

Make a payment using a credit or debit card

You can use the console to pay your AISPL bills.

To pay your AISPL bill
2. In the navigation pane, choose Orders and invoices.
3. Next to the invoice that you want to pay, choose Verify and pay. You're redirected to your payment methods.
4. On the Payment Methods page, select the payment method that you want to use.
5. In the **Make Payment** box, enter the three-digit or four-digit security code of your payment method and then choose **Make Payment**.

6. In the dialog box, choose **Ok**.

7. For Visa and Mastercard payment methods, you're redirected to your bank to verify your payment. For American Express payment methods, your bank processes your payment with no action required from you. After your payment is verified, you're redirected to your account page. Your invoice shows the **Verify and pay** link until your bank processes your payment.

### Make a payment using net banking

You can use the console to pay your AISPL bills using Net Banking.

**Note**

Due to the current AISPL regulations, you're redirected to your bank to authorize the charge with each AWS payment. You can't use Net Banking for automatic payments.

**To pay your AISPL bill**

2. In the navigation pane, choose **Orders and invoices**.
3. Next to the invoice that you want to pay, choose **Verify and pay**. You're redirected to your payment methods.
4. On the **Payment Methods** page, select your Net Banking account.
5. Choose **Make Payment**.
6. You're redirected to your bank's website to verify your payment. Log in and follow the prompts to approve the payment.
7. After your payment is verified, you're redirected to your account page, which shows a success message at the top.

### Remove a payment method

You can use the console to remove a credit or debit card from your account.

**To remove a credit or debit card from your AISPL account**

2. In the navigation pane, choose **Payment Methods**.
3. Ensure that your account has another valid payment method set as the default.
4. Next to the card that you want to remove, choose **Delete**.

### Managing your payments in AWS Europe

If your account is with AWS Europe, follow the procedures in this section to manage your payment methods and payments.

**Topics**

- Managing your AWS Europe payment methods (p. 49)
- Making payments, checking unapplied funds, and viewing your payment history in AWS Europe (p. 49)
Managing your AWS Europe payment methods

You can use the Payment Methods page of the Billing and Cost Management console to perform the following tasks for all payment types:

- View payment methods associated with your account
- Designate a default payment method
- Remove a payment method from your AWS Europe account

In addition, you can use the Payment Methods page of the Billing and Cost Management console to manage your credit cards and direct debit accounts. For more information, see Managing your credit card payment methods (p. 40) and Managing your SEPA direct debit payment methods (p. 54).

To view payment methods associated with your AWS account

You can use the console to view the payment methods associated with your account.

2. In the navigation pane, choose Payment Methods.

To designate a default payment method

2. In the navigation pane, choose Payment Methods.
3. Next to the payment method that you want to use as your default payment method, choose Make Default.

To remove a payment method from your AWS Europe account

You can use the console to remove a payment method from your account.

2. In the navigation pane, choose Payment Methods.
3. Ensure that your account has another valid payment method set as the default.
4. Next to the payment method that you want to remove, choose Delete.
5. In the Delete Credit Card or Delete your bank account dialog box, choose Delete.

Making payments, checking unapplied funds, and viewing your payment history in AWS Europe

You can use the Payments page of the AWS Billing and Cost Management console to perform the following tasks for all payment types:
• Make a payment
• View outstanding invoices
• View unapplied funds
• View payment history

Make a payment

AWS Europe charges your default payment method automatically at the beginning of each month. If that charge doesn't process successfully, you can use the console to update your payment method and make a payment.

Note
If you pay by SEPA direct debit, AWS provides you with your invoice and initiates the charge to your payment method either the following day or the invoice due date, whichever is latest. It can take up to 5 business days for your payment to succeed. For more information, see Managing your SEPA direct debit payment methods (p. 54).

Before making a payment, ensure that the payment method that you want automatically charged in the future is set as your default payment method. If you are using a credit card, confirm that your credit card has not expired. For more information, see Designate a default payment method (p. 49) and Managing your AWS Europe credit card payment methods (p. 51).

To make a payment

2. In the navigation pane, choose Payments.
   
The Payments due table lists all outstanding invoices. If there are no invoices listed, you don’t need to take action at this time.
3. If there are outstanding invoices, select the invoice you want to pay in the Payments due table, and then choose Complete payment.
4. On the Complete a payment page, your default payment method is selected if it is eligible for you to use to pay the invoice. If you want to use a different payment method or select an eligible payment method, choose Change.
5. Confirm that the summary matches what you want to pay, and choose Verify and pay.

After your bank processes your payment, you’re redirected to the Payments page.

If you pay by SEPA direct debit, and you receive an email from AWS Europe saying that AWS Europe can’t charge your bank account and will try again, work with your bank to understand what went wrong.

If you receive an email saying that AWS Europe failed the last attempt to charge your bank account, choose Verify and pay on the console to pay your invoice. If you have questions about issues with charging your bank account or paying an overdue balance, create a case in the Support Center.

If you pay by electronic funds transfer and your account payment is overdue, create a case in the Support Center.

View outstanding invoices, unapplied funds, and payment history

You can search and filter the Payments due, Unapplied funds, and Payment history tables described in the following procedures. Choose the gear icon to change the default columns and customize other table
settings. Download items individually by choosing the appropriate ID, or choose **Download** and then **Download CSV** to download a CSV file of the table for reporting purposes.

**To view outstanding invoices**

2. In the navigation pane, choose **Payments**.
3. Choose the **Payments due** tab to view the **Payments due** table.

   The **Payments due** table lists all your outstanding invoices.

   The table includes the following statuses:
   
   - **Due** – Outstanding invoices with an approaching due date.
   - **Past due** – Outstanding invoices where a payment has not been made by the due date.
   - **Scheduled** – Invoices with an upcoming scheduled payment.
   - **Processing** – Invoices for which we are currently scheduling a payment.

**To view unapplied funds**

2. In the navigation pane, choose **Payments**.
3. Choose the **Unapplied funds** tab to view the **Unapplied funds** table.

   The **Unapplied funds** table lists all unapplied funds and credit memos.

**To view payment history**

2. In the navigation pane, choose **Payments**.
3. Choose the **Transactions** tab to view the **Transactions** table.

   The **Transactions** table lists all completed transactions with AWS.

**Managing your AWS Europe credit card payment methods**

You can use the **Payment Methods** page of the Billing and Cost Management console to perform the following credit card tasks:

- **Add a credit card to your AWS Europe account**
- **Update your credit card**
- **Confirm that your credit card is up to date**

**To add a credit card to your AWS Europe account**

You can use the console to add a credit card to your account.

2. In the navigation pane, choose **Payment Methods**.
3. Choose **Add a card**.
4. For the credit card fields, enter the information and then choose **Continue**.
5. For the credit card information fields, enter your card billing address.
6. Choose **Continue**.

**To update your credit card**

You can update the name, address, or phone number associated with your credit card.

2. In the navigation pane, choose **Payment Methods**.
3. Next to the credit card that you want to edit, choose **Edit**.
4. Update the fields that you want to change.
5. At the bottom on the page, choose **Update**.

**To confirm that your credit card is up to date**

You must have a valid, unexpired credit card on file to make a payment.

2. In the navigation pane, choose **Payment Methods**.
3. Ensure that the **Expires On** date for your card is in the future. If your card has expired, add a new card or update your current card.

**Managing your AWS Europe credit card payment verifications**

To comply with the recent EU regulation, your bank might ask you for verification whenever you use a credit card to pay AWS online, add or update a credit card, or register a new AWS account. Banks typically verify by sending unique security codes to credit card holders before online purchases are completed. If your bank needs to verify your payment, you will receive an email from AWS. After verification, you're redirected to the AWS website.

If you prefer not to verify payments, register a bank account as your payment method. For more information about direct debit payment eligibility, see the section called “Managing your SEPA direct debit payment methods”.

To learn more about the EU regulation, see the [European Commission's website](https://ec.europa.eu/commission/presscorner/data/press/release/2014 fr619.en.html).

- the section called “Best practices for verification”
- the section called “Payment verification”
- the section called “Troubleshooting payment verification”
- the section called “AWS Organizations”
- the section called “Subscription purchases”

**Best practices for verification**

- Confirm that your credit card information is up to date. Banks send verification codes only to the registered card owner.
• Enter the newest code. If you close the authentication portal or request a new code, you might experience a delay in receiving your newest code.
• Enter the code as prompted. Don’t enter the phone number that the code is sent from.

**Payment verification**

You can use the Billing and Cost Management console to confirm that you payment requires verification or to reattempt any failed payments.

**To verify your payment**

2. In the navigation pane, choose **Orders and invoices**.
3. Under **Payments due**, locate the invoice that you want to pay and choose **Verify and pay**.
4. On the choose **Payment Methods** page, select the preferred payment method.
5. Choose **Complete payment**.
6. If your payment requires verification, you’re redirected to your bank's website. To complete verification, follow the provided prompts.

After your bank has processed our payment, you’re redirected to the **Orders and invoices** page.

**Note**

Your invoice appears with the status of **Payment processing** until your bank completes the payment process.

**Troubleshooting payment verification**

If you can’t successfully complete your verification, we recommend that you take any of the following actions:

• Contact your bank to confirm that your contact information is up to date
• Contact your bank for details about why your verification has failed
• Clear your cache and cookies or use a different browser
• Navigate to the **Payment Methods** page of the Billing and Cost Management console and update your billing contact information

**AWS Organizations**

If you’re a member account in AWS Organizations, your purchased services that require upfront payments might not activate until the Management account user verifies the payment. If verification is required, AWS notifies the billing contact of the Management account by email.

Establish a communication process between your Management account and member accounts. To change your payment method, see the section called “Managing your AWS Europe credit card payment methods”.

**Subscription purchases**

If you purchase multiple subscriptions at a time (or in bulk) and your bank requests verification, the bank might ask you to verify each individual purchase.
Subscriptions can include immediate purchases such as Reserved Instances, Business support plan, and Route 53 domains. Subscriptions don't include AWS Marketplace charges.

Be sure to complete validation for all purchases or register a bank account as your payment method. For more information about eligibility for direct debit payment, see the section called “Managing your SEPA direct debit payment methods”.

Managing your SEPA direct debit payment methods

If you meet the eligibility requirements, you can add an EU bank account as a SEPA direct debit payment method to your payment methods. To meet these requirements, your account must:

• Be an AWS Europe customer
• Have accepted SEPA terms and conditions
• Have paid at least one invoice in full in the previous 12 months
• Have paid at least $100 cumulative over the previous 12 months
• Use euro as the preferred currency

If you pay by SEPA direct debit, AWS provides you with your invoice and initiates the charge to your payment method either the following day or the invoice due date, whichever is latest. It can take up to 5 business days for the payment to complete successfully, even if the payment shows as Succeeded in the Billing and Cost Management console.

You can use the Payment Methods page of the Billing and Cost Management console to perform the following SEPA direct debit tasks:

• Add a direct debit account to your AWS Europe payment methods
• Update your linked debit account

To add a direct debit account to your AWS Europe payment methods

You can use the Billing and Cost Management console to add a direct debit account to your AWS Europe payment methods. You can use any personal or business bank account, provided that the account is located at a branch in a SEPA-supported country.

To add a SEPA direct debit account, you must have the following information ready:

• Bank Identifier Code (BIC)
• International Bank Account Number (IBAN)
• The address that the bank associates with the account

2. In the navigation pane, choose Payment Methods.
3. Choose Add a bank account.
4. For Account Holder Name, enter the name of the principal account holder.
5. For BIC (Swift Code), enter the 8- or 11-digit number.
   Routing numbers are always either 8 or 11 digits long.
6. For Confirm BIC (Swift Code), reenter the BIC. Don't copy and paste.
7. For IBAN, enter the digits for the IBAN.
8. For **Confirm IBAN**, reenter the IBAN. Don't copy and paste.
9. For **Make Default**, select whether you want this direct debit account to be your default payment method.
10. For **Billing Address Information**, enter the billing address of the primary account holder.
11. Choose **Create** to agree to the **Terms and Conditions** and add your direct debit account.

**To update your direct debit account**

You can update the name, address, or phone number associated with your direct debit account.

2. In the navigation pane, choose **Payment Methods**.
3. Next to the direct debit account that you want to edit, choose **Edit**.
4. Update the fields that you want to change.
5. At the bottom of the dialog box, choose **Update**.

If you have questions about payment methods, see [Getting help with AWS Billing and Cost Management](p. 5).

---

**Managing your Advance Pay**

Advance pay is in public preview for AWS Billing and Cost Management and is subject to change. This feature is available for a select group of customers. Your use of advance pay is subject to the Betas and Previews terms of the AWS Service Terms (Section 2).

Use **Advance Pay** to pay for your AWS usage in advance. AWS uses the funds to pay for your invoices automatically when they are due.

You can register for Advance Pay in the AWS Billing and Cost Management console. You can add funds to Advance Pay using electronic fund transfer, or by using any personal or business bank account. If you're adding funds using a bank account, the bank must be a US branch location.

For a full list of service restrictions for Advance Pay, see [Advance Pay](p. 152) on the Quotas and restrictions page.

**Topics**

- Registering your Advance Pay (p. 55)
- Adding funds to your Advance Pay (p. 56)

---

**Registering your Advance Pay**

You can use the AWS Billing and Cost Management console to register for Advance Pay.

**To register for Advance Pay**

2. In the navigation pane, choose **Payments**.
3. Choose the **Advance Pay** tab.
Adding funds to your Advance Pay

You can add funds to Advance Pay using electronic funds transfer, or a personal or business bank account.

To add funds to your Advance Pay using electronic funds transfer

2. In the navigation pane, choose Payments.
3. Choose the Advance Pay tab.
4. Choose Add funds.
5. Under Amount, enter the fund amount that you want to add.
   The amount must be entered in US dollars.
6. Under Payment method, choose Choose payment method.
7. Choose Wire transfer.
8. Choose Use this payment method.
9. Review the payment details, and choose Verify.
10. Complete your electronic funds transfer by using the instructions in the Payment summary section.

To add funds to your Advance Pay using a bank account

2. In the navigation pane, choose Payments.
3. Choose the Advance Pay tab.
4. Choose Add funds.
5. Under Amount, enter the fund amount that you want to add.
   The amount must be entered in US dollars.
6. Under Payment method, choose Choose payment method.
7. Choose Bank account.
8. Choose Use this payment method.
9. Review the payment details, and choose Add funds.

Your bank account will automatically be charged with the fund amount that you entered.

You can download the funding summary document from the Advance pay summary page.

Managing your payment profiles

You can use payment profiles to assign payment methods that are different than your default payment method to pay your invoices automatically. If you receive invoices from more than one AWS service provider ("seller of record"), use payment profiles to assign a unique payment method for each one.
After you create a payment profile for a service provider, your payment profile pays your AWS bills automatically. It does so using the currency and payment method that you specify.

Payment profiles are useful in avoiding situations such as incomplete payments, failed subscription orders, or unprocessed contract renewals despite having a valid default payment method. By using payment profiles, you can do the following:

- Use different payment methods for different AWS service providers.
- Customize your payment preferences for your AWS Organizations member accounts that use different service providers.
- Always have valid payment methods for your automatic bill payments.
- Avoid service interruptions and incomplete balances.

**Note**
Due to some country and technological limitations, not all payment methods are available for all providers. If your default payment method isn't valid for different service providers, create payment profiles using payment methods accepted by your service provider. For more information, see Creating your payment profiles (p. 57).

**Topics**
- Creating your payment profiles (p. 57)
- Editing your payment profiles (p. 59)
- Deleting your payment profiles (p. 59)

## Creating your payment profiles

You can create new custom profiles using the following steps in the Billing and Cost Management console.

**To create payment profiles**

2. In the navigation pane under **Preferences**, choose **Payment methods**.
3. Under the **Payment profiles** section, choose **Visit payment profiles**.
4. Under the **Payment profiles** section, choose **Create payment profiles**.
5. Choose a service provider that matches your invoice.
6. Choose a payment currency that matches your invoice from your service provider.
7. (Optional) Enter a name for your payment profiles.
8. Under the **Payment method** section, choose the payment method to pay your specified service provider and currency with.
   - To add a new payment method
     a. Choose **Add a new payment method** to open a new tab.
     b. Add a new payment method to your account. For more information, see Managing Your Payments (p. 37).
     c. Return to the **Create payment profile** tab.
     d. Under the **Payment method** section, choose the refresh icon.
     e. Choose the new payment method that you created.
9. Choose **Create payment profile**.
Creating your payment profiles

Note
Check that your payment profile currency matches the currency of your invoice for the same service provider.

Example: Creating a payment profile for AWS Inc. bills

This section shows an example of how to create a payment profile for the bills that you receive from the AWS Inc. service provider. In this example, your AWS Organizations management account is with AWS Europe (shown as "AWS EMEA SARL" as the service provider). Your default payment currency is Euro (EUR).

If you have a valid default payment method on file, you can pay your AWS Europe invoices automatically. Examples of a valid payment method include a credit card and a SEPA direct debit account. For more information, see Managing your payments in AWS Europe (p. 48).

For your AWS Inc. invoices, you can create a payment profile to pay using a EUR currency credit card that’s eligible for AWS Inc.

To create a payment profile for this AWS Inc. example

2. In the navigation pane under Preferences, choose Payment methods.
3. Under the Payment profiles section, choose Visit payment profiles.
4. Under the Payment profiles section, choose Create payment profiles.
5. For Service provider, choose AWS Inc.
7. (Optional) Enter a name for your payment profiles (for example, My AWS Inc. payment profile).
8. Under the Payment method section, choose the payment method to pay your specified service provider and currency with.
9. Choose Create payment profile.

After this payment profile is created, your AWS Inc. invoices are paid automatically using EUR currency and the payment method that you specified.

Example: Creating a payment profile for AWS Europe bills

This section shows an example of how to create a payment profile for the bills that you receive from the AWS Europe ("AWS EMEA SARL") service provider. In this example, your AWS Organizations management account is with AWS Inc. Your default payment currency is US dollars (USD).

If you have a valid default payment method on file, you can pay your AWS Inc. invoices automatically. Examples of a valid payment method include a credit card and a US bank account for ACH direct debit payments. For more information, see Managing your AWS payments (p. 37).

For your AWS Europe invoices, you can create a payment profile to pay using a USD currency credit card that’s eligible for AWS Europe.

To create a payment profiles for this AWS Europe example

2. In the navigation pane under Preferences, choose Payment methods.
3. Under the Payment profiles section, choose Visit payment profiles.
4. Under the Payment profiles section, choose Create payment profiles.
5. For Service provider, choose AWS EMEA SARL.
6. For Currency, choose USD - US dollar.
7. (Optional) Enter a name for your payment profiles (for example, My AWS Europe payment profile).
8. Under the Payment method section, choose the payment method to pay your specified service provider and currency with.
9. Choose Create payment profile.

Example: Creating a payment profile for AWS Brazil bills

This section shows an example of how to create a payment profile for the bills that you receive from the AWS Brazil ("Amazon AWS Serviços Brasil Ltda.") service provider. In this example, your AWS Organizations management account is with AWS Inc. Your default payment currency is US dollars (USD).

If you have a valid default payment method on file, you can pay your AWS Inc. invoices automatically. Examples of a valid payment method include a credit card and a US bank account for ACH direct debit payments. For more information, see Managing your AWS payments (p. 37).

For your AWS Brazil invoices, you can create a payment profile to pay using a Brazilian real (BRL) currency credit card that’s eligible for AWS Brazil.

To create a payment profiles for this AWS Brazil example

2. In the navigation pane under Preferences, choose Payment methods.
3. Under the Payment profiles section, choose Visit payment profiles.
4. Under the Payment profiles section, choose Create payment profiles.
5. For Service provider, choose Amazon AWS Serviços Brasil Ltda..
6. For Currency, choose BRL – Brazilian real.
7. (Optional) Enter a name for your payment profiles (for example, My AWS Brazil payment profile).
8. Under the Payment method section, choose the payment method to pay your specified service provider and currency with.
9. Choose Create payment profile.

Editing your payment profiles

After you create a payment profile, you can edit the details using the Billing and Cost Management console at any time.

To edit a payment profile

2. In the navigation pane under Preferences, choose Payment methods.
3. Under the Payment profiles section, choose Visit payment profiles.
4. Under the Payment profiles section, choose a payment profile and choose Edit.
5. Update your payment profile and choose Save changes.

Deleting your payment profiles

You can delete your payment profiles using the Billing and Cost Management console at any time.
To edit a payment profile

2. In the navigation pane under Preferences, choose Payment methods.
3. Under the Payment profiles section, choose Visit payment profiles.
4. Under the Payment profiles section, choose a payment profile and choose Delete.
Managing your purchase orders

You can use your Billing and Cost Management console to manage your purchase orders and configure how they reflect on your invoices. You have the option to add multiple purchase orders with multiple line items. Based on your configurations, we select the purchase order that best matches with your invoice. You can manage purchase orders if you’re using a regular AWS account or an AWS Organizations management account. For more information about accessing the feature, see Overview of managing access permissions (p. 127).

Each purchase order can have several line items, and every line item is used for matching with invoices. The following types of line items are available:

- **ALL** – All charges on your AWS account.
- **AWS Monthly Usage** – Your AWS monthly invoice charges.
- **AWS Subscription Purchase** – Your subscription invoice charges; for example, upfront charges for Reserved Instances (RI) and AWS Support charges.
- **AWS Marketplace Transaction** – Your purchase order line item for invoice charges from an AWS Marketplace contract subscription. This is available only for the AWS Inc. and AWS EMEA SARL entity, because all AWS Marketplace invoices are generated from AWS Inc and AWS EMEA SARL. Currently, this line item only supports invoices outside of your normal monthly billing cycle.
- **AWS Marketplace Blanket Usage** – Your default purchase order for AWS Marketplace invoice charges. This is available only for the AWS Inc. and EMEA SARL entity, because all AWS Marketplace invoices are generated from AWS Inc. and AWS EMEA SARL. All invoices with AWS Marketplace subscriptions contain an **AWS Marketplace Blanket Usage** line item, unless the subscription has a transaction-specific purchase order. If the subscription has a transaction-specific purchase order, then your invoice has an **AWS Marketplace Transaction** line item instead.

Many criteria and parameters are used to determine the optimal purchase order for your invoices. You can create up to 100 active purchase orders with up to 100 line items for each regular account or AWS Organizations management account.

When an invoice is generated, all purchase orders that are added to your management account are considered for association. Then, expired or suspended purchase orders are filtered out, leaving only the active purchase orders. Your invoice’s billing entity is matched with the “Bill from” entity in your purchase order, filtering out those that don’t match. For example, if you have a purchase order added for the AWS Inc. entity (PO_1), and another one for the AWS EMEA SARL entity (PO_2). If you purchase a Reserved Instance from AWS Europe, only PO_2 will be considered for invoice association.

Next, we evaluate line item configurations to determine the best fit for your invoice. To be matched with a line item, the invoice’s billing period must be within the line item’s start and end month, and it must also match the line item type. If multiple line items match, we use the line item with the most specific type for invoice association. For example, if you have an RI invoice, we use the subscription line item instead of ALL if both are configured.

Lastly, the line items with enough balance to cover your invoice amount are selected above the out of balance line items. If line items that belong to multiple purchase orders match all criteria precisely, we use the purchase order that was most recently updated to match the invoice.

Topics
- Setting up purchase order configurations (p. 62)
- Adding a purchase order (p. 63)
- Editing your purchase orders (p. 65)
- Deleting your purchase orders (p. 66)
Setting up purchase order configurations

You can use purchase orders and their line item attributes to flexibly define a configuration that best fits your needs. The following are examples of purchase order configuration scenarios that you can use.

You can configure separate purchase orders for different time periods by choosing distinct effective and expiration months.

**Note**
To be matched with a line item, the invoice's billing period must be within the line item's start and end month, and it must also match the line item type.

**Example Example 1**

If you use monthly purchase orders, you can define one purchase order for each month by selecting the same effective and expiration month for each purchase order. The purchase order will only apply to invoices that are generated during that month.

Here are a few purchase order configurations that you can use for this setup:

- **PO #M1_2021** with the effective month set to Jan 2021 and expiration month Jan 2021.
- **PO #M2_2021** with the effective month set to Feb 2021 and expiration month Feb 2021.
- **PO #M3_2021** with the effective month set to Mar 2021 and expiration month Mar 2021.

Here is an example of how you can also define a purchase order for a particular quarter, half-year, or the entire year:

- **PO #Q4_2021** with the effective month set to Apr 2021 and expiration month Jun 2021.
- **PO #2H_2021** with the effective month set to Jul 2021 and expiration month Dec 2021.
- **PO #2022Y** with the effective month set to Jan 2022 and expiration month as Dec 2022.

**Example Example 2**

You can configure separate purchase orders for different types of invoices through line item configurations.

- **PO #Anniversary_Q4_2021** with the effective month set to Apr 2021, and expiration month Jun 2021, Line item type = AWS monthly usage.
- **PO #Subscriptions_Q4_2021** with the effective month set to Apr 2021, and expiration month Jun 2021, Line item type = AWS Subscription Purchase.
- **PO #Marketplace_Q4_2021** with the effective month set to Apr 2021, and expiration month Jun 2021, Line item type = AWS Marketplace Purchase.

You can track the balance of a given purchase order for different time periods by configuring granular line item start and end months.

**Example Example 3**

Consider **PO #Q4_2021** from Example 1 with an effective month of Apr 2021 and an expiration month Jun 2021. You can track this PO's balance on a monthly basis by setting up the following line items:
Adding a purchase order

You can use the Billing and Cost Management console to add purchase orders to use in your invoices. Adding a purchase order is a two-step process involving purchase orders and line item configurations. First, you enter your purchase order details (for example, purchase order ID, shipping address, effective and expiration month). Then, you define the purchase order line item configurations that are used to match the purchase order with an invoice. If you add multiple purchase orders, we use the purchase order that has the line item best matching the invoice being generated.

**To add a purchase order**

2. In the navigation pane, choose **Purchase orders**.
3. Choose **Add purchase order**.
4. For **Purchase order ID**, enter a unique identifier for your purchase order ID. Purchase order IDs must be unique within your account. For details about character restrictions for your purchase ID, see **Purchase orders** (p. 151).
5. (Optional) For **Description**, describe your purchase order, including any notes for your reference.

6. For **Bill from**, choose the AWS billing entity that you are invoiced from.

   **Note**
   Remittance details are different for each **Bill from** location. Be sure to verify your **Bill from** selection. You must make your payments to the legal entity that you’re billed from. We don’t recommend configuring more than one **Bill from** location for a purchase order.

7. (Optional) If your purchase order is invoiced from the Amazon Web Services EMEA SARL billing entity: For **Tax registration number**, select the tax registration numbers that you want to associate with your purchase order. Your purchase order is associated with only the invoices generated for the tax registration numbers that you select.

   **Note**
   The **Tax registration number** selection is available for only the Amazon Web Services EMEA SARL billing entity. For more information on your tax registration number settings, see Managing your account (p. 10).

8. For **Ship to**, enter your shipping address.

   (Optional) Select **Copy Bill to address** to copy and edit the address populated from your **Bill to** field.

9. For **Effective month**, choose the month you want your purchase order to start from. Your purchase order is eligible for invoice associations starting from this month.

10. For **Expiration month**, choose the month you want your purchase order to end. Your purchase order expires at the end of this month, and is not used for invoice associations going forward.

11. (Optional) For **Purchase order contacts**, enter the contact name, email address, and phone number. You can add up to 10 contacts.

12. Choose **Configure line items**.

13. For **Line item number**, enter a unique identifier for your line item number.

14. (Optional) For **Description**, enter a description for your line item.

15. For **Line item type**, choose your preferred line item type. For a detailed description for each line item type, see Managing your purchase orders (p. 61).

16. For **Start month**, choose the month you want your line item to start from. This date cannot be earlier than your purchase order **Effective month**.

17. For **End month**, choose the month you want your line item to end. This date cannot be later than your purchase order **Expiration month**.

18. (Optional) Choose **Enable balance tracking** to track the balance of your line item.

19. For **Amount**, enter the total amount of your purchase order line item.

20. For **Quantity**, enter the quantity amount.

21. (Optional) For **Tax**, enter the tax amount. This can be an absolute value or a percentage of the line item amount.

   For **Tax type**, choose **% of amount** to enter a percentage, or **amount in $** to enter an absolute tax amount.

22. To add other line items, choose **Add new line item**. You can add up to 100 line items.

23. Choose **Submit purchase order**.

Some fields are automatically filled and cannot be edited. Here is a list of where the automated fields are referenced from:

- **Bill to** – The **Bill to** address for your invoice. This field is included as a reference, because your purchase order billing address should match your invoice billing address.

- **Payment terms** – Your negotiated payment terms.

- **Currency** – Your preferred invoice currency.
Editing your purchase orders

You can edit your purchase order, line item information, and status using the Billing and Cost Management console. You can’t change your purchase order ID in this process.

To edit a purchase order

2. In the navigation pane, choose Purchase orders.
3. Select the purchase order that you want to edit.
4. Choose Edit purchase order.
5. Change any parameter of your choice. Purchase order IDs cannot be changed.
6. Choose Configure line items.
7. Choose Submit purchase order.

To update contacts

2. In the navigation pane, choose Purchase orders.
3. Choose the purchase order that you want to edit.
4. Choose Manage contacts.
5. Change the contacts information as needed.
6. Choose Save changes.

To change the status of your purchase order

2. In the navigation pane, choose Purchase orders.
3. Choose the purchase order that you want to edit.
5. Choose a status:
   • Suspended – Your purchase order will no longer be used for invoice association.
   • Active – Your purchase order will be used for invoice association.
6. Choose Change status.

Note
You can use a suspended purchase order for invoice association when it is past its expiration date and set to Suspended-Expired status. To do so, you must change the status to Expired and update the expiration month to make it Active. Be sure to update your line item end months accordingly.

To add a line item

2. In the navigation pane, choose Purchase orders.
3. Choose the purchase order you want to edit.
4. In the Line items section, choose Add line item.
Deleting your purchase orders

You can use the Billing and Cost Management console to delete your purchase order at any time, along with all of its notifications and associated contacts. A deleted purchase order can't be recovered.

To delete a purchase order

2. In the navigation pane, choose Purchase orders.
3. Select all of the purchase orders that you want to delete.
4. Choose Delete purchase order.
5. Choose Confirm.

Viewing your purchase orders

Your purchase order dashboard on the Billing and Cost Management console shows you the state of your purchase orders at a glance. Your purchase orders are listed on the dashboard, along with the following information.

- Purchase order ID – The unique identifier for your purchase order.
- Value – Your purchase order amount. This is the sum of all line item amounts.
- Balance – The sum of all line item balances. This sum is updated whenever an invoice is associated.
- Effective and Expiration – The start and end of your purchase order ID.
- Status – The current status of your purchase order.
- Updated on – The most recent date you updated your purchase order.
To view your purchase orders

2. In the navigation pane, choose Purchase orders.
3. Choose a purchase order to see the Purchase order details page.

Reading your purchase order details page

You can review the contents of your individual purchase orders on the Purchase order details page of the Billing and Cost Management console.

To change your purchase order or line items, see Editing your purchase orders (p. 65).

- **Bill to** – The address reflected on your invoice. To change your billing address, update the information from your Payment methods.
- **Ship to** – Your purchase order’s shipping address.
- **Bill from** – The AWS legal entity you’re billed from.
- **Tax registration numbers** – The tax registration numbers that you selected for your purchase order. Your purchase order is associated with the invoices generated for these tax registration numbers.

  **Note**
  The Tax registration number selection is available for only the Amazon Web Services EMEA SARL billing entity. For more information on your tax registration number settings, see Managing your account (p. 10).

- **Payment terms** – Your negotiated AWS payment terms.
- **Currency** – Your preferred invoice payment currency.
- **Effective month** – The month your purchase order is effective from. Your purchase order is used for generated invoices starting this month.
- **Expiration month** – The month your purchase order expires. Your purchase order is not used for any invoices that are generated past this month.
- **Contacts** – A list of all contacts for this purchase order. Choose Manage contacts to see all listed.
- **Status** – The current status of your purchase order.
  - **Active** – Eligible for invoice association.
  - **Suspended** – Not eligible for invoice association. You can suspend an active or expired purchase order.
  - **Expired** – A purchase order that is past its expiration date, and is no longer eligible for invoice association.
  - **Suspended-expired** – A suspended purchase order that is also past its expiration date.
- **Balance amount** – The balance remaining on your purchase order. This is the total balance amount of all line items configured on your purchase order.
- **Total amount** – The sum of your total values for all line items configured in your purchase order.
- **Line items** – The line item details you used when adding the purchase order.
  - **Number** – The unique identifier for your line item.
  - **Type** – Your line item type.
  - **Start month** – The month that your line is effective from. The line item is eligible for invoice association from this month.
  - **End month** – The month your line item expires. The line item is not eligible for invoice association at the end of this month.
  - **Amount** – The unit price amount.
  - **Quantity** – The number of units.
Enabling purchase order notifications

You can enable email notifications on the Billing and Cost Management console by adding contacts to your purchase orders. You need at least one purchase order contact added to receive notifications.

Notifications are beneficial to proactively take action on your expiring, or out of balance purchase orders. This helps you make payments without delay. To update your contacts information, see Editing your purchase orders (p. 65).

Purchase order notifications are sent to your contacts for the following scenarios:

- **Balance tracking** – When your purchase order's line item balance drops below the 75% threshold. The purchase order balance is tracked at the line item level, and must be enabled at each level.
- **Expiration tracking** – When your purchase order is approaching its expiration. Your contacts receive notifications leading up to your expiration date. If your purchase order expiration is less than one month away, notifications are sent one week prior and on the expiration date. If your expiration date is one to three months away, a notification is sent one month before the expiration date. If the expiration is more than three months away, notifications are sent two months before the expiration date.
Managing your costs with AWS Cost and Usage Reports

The AWS Cost and Usage Reports (AWS CUR) contains the most comprehensive set of cost and usage data available. You can use AWS Cost and Usage Reports to publish your AWS billing reports to an Amazon Simple Storage Service (Amazon S3) bucket that you own.

For more information, see What are AWS Cost and Usage Reports in the AWS Cost and Usage Reports User Guide.
Monitoring your usage and costs

You can monitor your AWS usage with the following methods.

For information about AWS Cost and Usage Reports, see the Cost and Usage Report Guide.

Topics

- Using the AWS Billing console dashboard (p. 70)
- Managing your costs with AWS Cost Categories (p. 72)
- Using Cost Allocation Tags (p. 80)
- Using the AWS Price List API (p. 89)
- Logging Billing and Cost Management API calls with AWS CloudTrail (p. 100)
- Avoiding unexpected charges (p. 105)

Using the AWS Billing console dashboard

You can use the dashboard page of the AWS Billing console to gain a general view of your AWS spending. You can also use it to identify your highest cost service or Region and view trends in your spending over the past few months. You can use the dashboard page to see various breakdowns of your AWS usage. This is especially useful if you're a Free Tier user. To view more details about your AWS costs and invoices, choose Billing details in the left navigation pane. You can customize your dashboard layout at any time by choosing the gear icon at the top of the page to match your use case.

Viewing your AWS costs in the AWS Billing console dashboard doesn't require turning on Cost Explorer. To turn on Cost Explorer to access additional views of your cost and usage data, see Enabling AWS Cost Explorer.

To open the AWS Billing console and dashboard

- Sign in to the AWS Management Console and open the AWS Billing console at https://console.aws.amazon.com/billing/.

By default, the console shows the AWS Billing Dashboard page.

Understanding your dashboard page

Your AWS Billing console dashboard contains the following sections. To create your preferred layout, drag and drop sections of the Dashboard page. To customize the visible sections and layout, choose the gear icon at the top of the page. These preferences are stored for ongoing visits to the Dashboard page. To temporarily remove sections from your view, choose the x icon for each section. To make all sections visible, choose refresh at the top of the page.

AWS summary

This section is an overview of your AWS costs across all accounts, AWS Regions, service providers, and services, and other KPIs. Total compared to prior period displays your total AWS costs for the most recent closed month. It also provides a comparison to your total forecasted costs for the current month. Choose the gear icon on the card to decide which KPIs you want to display.

Highest cost and usage details

This section shows your top service, account, or AWS Region by estimated month-to-date (MTD) spend. To choose which to view, choose the gear icon on the top right.
Cost trend by top five services

In this section, you can see the cost trend for your top five services for the most recent three to six closed billing periods.

You can choose between chart types and time periods on the top of the section. You can adjust additional preferences using the gear icon.

The columns provide the following information:
- **Average**: The average cost over the trailing three months.
- **Total**: The total for the most recent closed month.
- **Trend**: Compares the Total column with the Average column.

Account cost trend

This section shows the cost trend for your account for the most recent three to six closed billing periods. If you're a management account of AWS Organizations, the cost trend by top five section shows your top five AWS accounts for the most recent three to six closed billing periods. If invoices weren't already issued, the data isn't visible in this section.

You can choose between chart types and time periods on the top of the section. Adjust additional preferences using the gear icon.

The columns provide the following information:
- **Average**: The average cost over the trailing three months.
- **Total**: The total for the most recent closed month.
- **Trend**: Compares the Total column with the Average column.

Understanding your dashboard (old console)

On the dashboard, you can view the following graphs:

- **Spend Summary**
- **Month-to-Date Spend by Service**
- **Month-to-Date Top Services by Spend**

Spend Summary

The Spend Summary graph shows you how much you spent last month, the estimated costs of your AWS usage for the month-to-date, and a forecast for how much you are likely to spend this month. The forecast is an estimate that's based on your past AWS costs. Therefore, your actual monthly costs might not match the forecast.

Month-to-Date Spend by Service

The Month-to-Date Spend by Service graph shows the top services that you use most and the proportion of your costs that service contributed to. The Month-to-Date Spend by Service graph doesn't include forecasting.

Month-to-Date Top Services by Spend

The Month-to-Date Top Services by Spend graph shows the services that you use most, along with the costs incurred for the month to date. The Month-to-Date Top Services by Spend graph doesn't include forecasting.

Note

The Billing and Cost Management console has a refresh time of approximately 24 hours to reflect your billing data.
Managing your costs with AWS Cost Categories

You can use AWS Cost Categories to map your AWS costs and usage into meaningful categories. With cost categories, you can organize your costs using a rule-based engine. The rules that you configure organize your costs into categories. You can then use these categories across multiple products in the AWS Billing and Cost Management console. This includes Cost Explorer, AWS Budgets, AWS Cost and Usage Reports (AWS CUR), and Cost Anomaly Detection.

You can create groupings of costs using cost categories. For example, assume that your business is organized by teams and that each team has multiple accounts within. To build this structure in cost categories, create a cost category named Team. Then, you can map costs to a cost category value that's named Team 1.

Companies commonly have multiple perspectives on their business. These can include projects, cost centers, and applications. You can create cost categories to match these perspectives. Cost category values are groups within cost categories. They're similar to Team 1 or Team 2 from the previous example. By creating cost categories, you can view your business from multiple, corresponding perspectives. Furthermore, you can create multilevel hierarchical relationships among your cost categories to replicate your organizational structure. For example, you can create a cost category named Business Unit that includes groupings of multiple teams. You can then define a cost category value that's named BU1 with Team 1 and Team 2 selected from your Teams cost category and a cost category value BU2 with Team 3 and Team 4 selected from the Teams cost category.

You can start using cost categories by creating a unique category name. Then, map costs to cost category values within the cost categories. In each cost category value, map the type of costs that belong to that value. For example, if your Team 1 consists of multiple accounts, you can write that expression by choosing the accounts dimension (is option) and selecting the applicable accounts. After creating the cost category value, continue to create other teams by adding values.

**Note**
To create hierarchical relationships among your cost categories, you select the cost category dimension from the parent cost category. This was Business Unit in the previous example. The child cost category is the cost category name. This was Teams in the previous example. You can then select values that belong to the child cost category, such as Team 1 and Team 2, into the parent cost category value. This is BU 1 in the previous example.

After you create the cost categories, they appear in Cost Explorer, AWS Budgets, AWS CUR, and Cost Anomaly Detection. In Cost Explorer and AWS Budgets, a cost category appears as an additional billing dimension. You can use this to filter for the specific cost category value, or group by the cost category. In AWS CUR, the cost category appears as a new column with the cost category value in each row. In Cost Anomaly Detection, you can use cost category as a monitor type to monitor your total costs across specified cost category values.

**Note**
Cost categories are effective at the start of the current month. If you create or update your cost category in the middle of the month, it retroactively takes effect on cost and usage from the beginning of the month.

This is an administrative feature, and it can only be customized by the management account or regular accounts in AWS Organizations.

**Topics**
- Supported dimensions (p. 73)
- Supported operations (p. 73)
- Supported rule types (p. 74)
- Default value (p. 74)
- Status (p. 74)
Supported dimensions

You can select from a list of billing dimensions to create your cost category rules. These billing dimensions are used to group your data. For example, assume that you wanted to group a set of accounts to form a team. You need to choose the account billing dimension, and then choose the list of accounts that you want to include in the team.

The following billing dimensions are supported.

**Account**

This can be the AWS account name or the account ID, depending on the operation. If you're using an exact match operation (is or is not), account refers to the account ID. If you're using an approximate match operation (starts with, ends with, or contains), account refers to account name.

**Service**

AWS services, such as Amazon EC2, Amazon RDS, and Amazon S3.

**Charge type**

The type of charges based on line items details. Also referred to as the RECORD_TYPE in the Cost Explorer API. For more information, see Term comparisons (p. 75).

**Tag key**

The cost allocation tag keys that are specified on the resource. For more information, see Using Cost Allocation Tags (p. 80).

**Cost category**

A dimension from another cost category. Using cost categories as a dimension helps you organize the levels of categories.

Supported operations

You can use these operations to create the filter expression when you're creating a cost category rule.

The following operations are supported.

**Is**

The exact match operation that's used to filter for the exact value specified.

**Is not**

The exact match operation that's used to filter for the exact value that isn't specified.
Supported rule types

Use rule type to define which cost category values to use to categorize your costs.

The following rule types are supported.

Regular Rule
This rule type adds statically defined cost category values that categorize costs based on the defined dimension rules.

Inherited Value
This rule type adds the flexibility of defining a rule that dynamically inherits the cost category value from the dimension value defined. For example, assume that you wanted to dynamically group costs based on the value of a specific tag key. You need to choose the inherited value rule type, then choose the Tag dimension and specify the tag key to use. Optionally, you can use a tag key, teams, to tag your resources. They can tag them with values such as alpha, beta, and gamma. Then, with an inherited value rule, you can select Tag as the dimension and use teams as the tag key. This generates the dynamic cost category values of alpha, beta, and gamma.

Default value
Optionally, if no rules are matched for the cost category, you can define this value to be used instead.

Status

You can use the console to confirm the status of whether your cost categories completed processing the cost and usage information. After you create or edit a cost category, it can take up to 24 hours before it has categorized your cost and usage information in the AWS Cost and Usage Report, Cost Explorer, and other cost management products.

There are two status states.

Applied
Cost categories completed processing, and the information in AWS Cost and Usage Report, Cost Explorer, and other cost management products is up to date with the new rules.

Processing
The cost category updates are still in progress.
Quotas

For more information about cost categories quotas, see Quotas and restrictions (p. 150).

Term comparisons

`CHARGE_TYPE` is a dimension supported for cost category expressions. It's the `RECORD_TYPE` value in the Cost Explorer API. This dimension uses different terms, depending on whether you're using the console or the API/JSON editor. The following table compares the terminology used for both scenarios.

<table>
<thead>
<tr>
<th>Term comparison</th>

Creating cost categories

You can create cost categories to organize your cost and usage information. Regular accounts and the management account in AWS Organizations have default access to create cost categories. Rules aren’t mutually exclusive, and you can control the order that the rules apply in. Allow up to 24 hours after creating a cost category for your usage records to be updated with values.

There are three major steps in creating cost categories.

1. Define a name for your cost category (for example, business units, Teams).
2. (Optional) Add a tag to your cost category. For more information about tags, see Tagging AWS resources in the AWS General Reference guide.
3. Write the rules to categorize your costs into cost category values (for example, Team-A, Team-B, Team-C).
4. (Optional) Define rules to split charges between your cost category values.

For more information about split charges, see Splitting charges within cost categories (p. 79).

Use the following procedure to create a new cost category.

To create a cost category

2. In the navigation pane, choose AWS Cost Categories.
3. At the top of the page, choose Create Cost category.
4. Under Cost category details, enter the name of your cost category. Your cost category name must be unique within your account.
5. (Optional) To add a tag, choose Add new resource tag and enter a key and value.
6. Choose Next.
7. Choose Define category values.
   - Use either the Rule Builder or JSON editor to define your cost categories.
   - For more information about the JSON request syntax, see the AWS Billing and Cost Management API Reference.
8. For Value, enter the name of the cost category value.
9. Choose a Rule Type, either Regular or Inherited value.
10. Choose a billing Dimension from the dropdown list. For a regular rule type, you can choose Accounts, Service, Charge Type (for example, recurring reservation fee), Tag key, or Cost Category. (You can choose Cost Category to create hierarchical relationships among your cost categories.) For an inherited value rule type, you can choose Account or Tag key (Cost Allocation tag key).
11. For a regular rule type, choose Operator from the dropdown list. Your options are Is, Contains, Starts with, and Ends with.
   - Note: Contains, Starts with, and Ends with are only supported with Accounts and Tag dimensions. If you use these operators with Accounts, the engine evaluates against account name, and not account ID.
   - Choose a filtered value for your Dimension in the attribute selector.
12. For an inherited value rule type, choose Account or Tag for Dimension. If Tag is the Dimension, choose the Tag key to inherit the cost category value from.
   - Note: The Account dimension uses account names, not account IDs for the inherited cost category value.
13. (Optional) Add a default value. It categorizes all unmatched costs to this value.
14. (Optional) To rearrange the rule order, use the arrows or change the number on the top right of each rule.
15. (Optional) To delete a rule, choose Remove on the top right of each rule.
16. (Optional) Under Define split charges, choose Next.
   - For more information about split charge rules, see Splitting charges within cost categories (p. 79).
   a. Choose Add a split charge.
   b. Under Source value, choose your cost category value.
      - Uncategorized cost isn't an option at this time, but is an available source if you edit your cost category. For more information, see Editing cost categories (p. 78).
   c. Under Target values, choose one or more cost category values you wish to allocate split charges to.
   d. Under Charge allocation method, choose how you want to allocate your costs. Your choices are proportional, fixed, and even split.
      - For fixed charge allocation, enter the percentage amount to allocate each target cost category value.
   e. Choose Create split charge.
   f. Choose Add a split charge and repeat steps to define more split charges.
17. Choose **Create cost category**.

## Tagging cost categories

Tagging cost categories is beneficial to control access to cost categories. For more information, see *Controlling access to AWS resources using tags* in the *IAM User Guide*.

You can tag your existing cost categories using the following procedure:

**To tag a cost category**

2. In the navigation pane, choose **AWS Cost Categories**.
3. Choose the cost category you want to tag.
4. Navigate to the **Resource tags** section.
5. Choose **Manage resource tags**.
6. Choose **Add new resource tag**.
7. Enter a **Key** and **Value**.
8. Once you configure the tags, choose **Save changes**.

## Viewing cost categories

From the cost categories dashboard in AWS Billing and Cost Management, you go to the details page. There comprehensive information about your category details and values is displayed.

**Topics**

- Navigating to your cost category details page (p. 77)
- Understanding your cost category details page (p. 77)
- Your cost category month-to-date categorizations (p. 78)
- Download your cost category values (p. 78)

### Navigating to your cost category details page

You can choose any cost category name in the Billing and Cost Management console to open a details page. The details page is also shown when you add or edit a cost category.

**To view your cost category details page**

2. In the navigation pane, choose **Cost categories**.
3. Under the **Cost category** column, choose a cost category name.

### Understanding your cost category details page

Your cost category details page breaks down your month-to-date cost allocations using the **Category details** and **Category values** sections.
• Use the **month selector** on the top right of the page to change the month you’re viewing. You can see a detailed breakdown of cost category value cost allocations within your cost category.

• Under the **Category details** section, you can view your current **status** (p. 74), **default value** (p. 74), value count, and your total month-to-date net amortized costs.

• The graph under **Categorized costs** shows the allocation of cost category values in your monthly spend. Any uncategorized costs are shown as **Uncategorized**.

### Your cost category month-to-date categorizations

In the **Category values** section, you can see the month-to-date spend for each configured cost category value. The amounts that are shown are the net amortized costs.

To further explore your costs, open Cost Explorer by choosing **View in AWS Cost Explorer**.

### Download your cost category values

You can download an offline copy of your month-to-date cost category spend.

**To download your cost category details page**

2. In the navigation pane, choose **Cost categories**.
3. Under the **Cost category** column, choose a cost category name.
4. Choose **Download CSV** to download a comma-separated values file.

### Editing cost categories

You can edit your AWS Cost Categories using the following procedure. Cost category names can’t be edited. If you’re using split charges, you can choose **Uncategorized** cost as your source value at this time.

**To edit a cost category**

2. In the navigation pane, choose **Cost categories**.
3. Select the cost category to edit.
4. Choose **Edit cost category**.
5. Make changes to parameters and choose **Confirm cost category**.

### Deleting cost categories

You can delete your cost categories using the following procedure.

**To delete a cost category**

2. In the navigation pane, choose **Cost categories**.
3. Select the cost category to delete.
4. Choose **Delete cost category**.
Splitting charges within cost categories

You can use split charge rules to allocate your charges between your cost category values. Splitting charges is useful when you have costs that aren't directly attributed to a single owner. Therefore, the costs can't be categorized into a single cost category value. For example, your organization has a set of costs shared by multiple teams, business units, and financial owners that incur data transfer costs, enterprise support, and operating costs. You can define split charge rules when you create or edit your cost categories. For more information about these processes, see Creating cost categories (p. 75) and Editing cost categories (p. 78).

This is a list of terms you'll see when configuring your split charges.

Source
The group of shared costs you want to split. Sources can be any of your existing cost category values.

Targets
The cost category values you want to split your costs across, defined by the source.

Allocation method
How you want your source costs split between your targets. You can choose from the following methods:

- **Proportional** - Allocates costs across your targets based on the proportional weighted cost of each target.
- **Fixed** - Allocates costs across your targets based on your defined allocation percentage.
- **Even split** - Allocates costs evenly across all targets.

Prerequisites
Before you define your split charge rules, you must categorize your costs into the appropriate cost category values.

Example Example
You define a business unit view of your organization, using a Business unit cost category, with values engineering, marketing, and FinOps. Your organization is also operating a shared infrastructure platform that supports engineering and marketing business units.

To allocate costs of this shared infrastructure platform to the target business unit, categorize its costs into a new cost category value, Infrastructure Platform using the appropriate dimensions (p. 73).

We recommend that you move your cost category values containing shared costs to the top of the rule list. Because cost category rules are evaluated in a top-down order, your shared costs are categorized before individual business units are categorized. After these shared costs are categorized, they can then be split across your business units.

Understanding split charge best practices
For instructions on how to configure your split charges, see Creating cost categories (p. 75) step 15. After you define split charge rules, you can view the split and allocated costs on the cost categories details page in the console. The details page provides an overview of your costs for each cost category value. This includes the costs for before and after calculating the split charges. You can also download a CSV report from the details page.
Note the following scenarios when configuring your split charges:

- A cost category value can be used as a source only once across all split charge rules. This means that, if a value is used as a source, it can’t be used as a target. If the value is used as a target, it can’t be used as a source. A value can be used as a target in multiple split charge rules.
- If you want to use cost category values as a source or split charge target when the value was created from inherited values (p. 74) rules, you must wait until the cost category status (p. 74) changes to Applied.
- Split charge rules and the total allocated costs are only presented on the cost categories details page. These costs do not appear and don’t impact your AWS Cost and Usage Reports, Cost Explorer, and other AWS Cost Management tools.
- You can define up to 10 split charge rules for a cost category.

For more information about cost category quotas, see AWS Cost Categories (p. 150).

Using Cost Allocation Tags

A tag is a label that you or AWS assigns to an AWS resource. Each tag consists of a key and a value. For each resource, each tag key must be unique, and each tag key can have only one value. You can use tags to organize your resources, and cost allocation tags to track your AWS costs on a detailed level. After you activate cost allocation tags, AWS uses the cost allocation tags to organize your resource costs on your cost allocation report, to make it easier for you to categorize and track your AWS costs. AWS provides two types of cost allocation tags, an AWS generated tags and user-defined tags. AWS, or AWS Marketplace ISV defines, creates, and applies the AWS generated tags for you, and you define, create, and apply user-defined tags. You must activate both types of tags separately before they can appear in Cost Explorer or on a cost allocation report.

The following diagram illustrates the concept. In the example, you’ve assigned and activated tags on two Amazon EC2 instances, one tag called Cost Center and another tag called Stack. Each of the tags has an associated value. You also activated the AWS generated tags, createdBy before creating these resources. The createdBy tag tracks who created a resource. The user-defined tags use the user prefix, and the AWS generated tag uses the aws: prefix.

![Diagram of cost allocation tags]

After you or AWS applies tags to your AWS resources (such as Amazon EC2 instances or Amazon S3 buckets) and you activate the tags in the Billing and Cost Management console, AWS generates a cost...
allocation report as a comma-separated value (CSV file) with your usage and costs grouped by your active tags. You can apply tags that represent business categories (such as cost centers, application names, or owners) to organize your costs across multiple services.

The cost allocation report includes all of your AWS costs for each billing period. The report includes both tagged and untagged resources, so that you can clearly organize the charges for resources. For example, if you tag resources with an application name, you can track the total cost of a single application that runs on those resources. The following screenshot shows a partial report with columns for each tag.

<table>
<thead>
<tr>
<th>Total Cost</th>
<th>user:Owner</th>
<th>user:Stack</th>
<th>user:Cost Center</th>
<th>user:Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.95</td>
<td>DbAdmin</td>
<td>Test</td>
<td>80432</td>
<td>Widget2</td>
</tr>
<tr>
<td>0.01</td>
<td>DbAdmin</td>
<td>Test</td>
<td>80432</td>
<td>Widget2</td>
</tr>
<tr>
<td>3.84</td>
<td>DbAdmin</td>
<td>Prod</td>
<td>80432</td>
<td>Widget2</td>
</tr>
<tr>
<td>6.00</td>
<td>DbAdmin</td>
<td>Test</td>
<td>78925</td>
<td>Widget1</td>
</tr>
<tr>
<td>234.63</td>
<td>SysEng</td>
<td>Prod</td>
<td>78925</td>
<td>Widget1</td>
</tr>
<tr>
<td>0.73</td>
<td>DbAdmin</td>
<td>Test</td>
<td>78925</td>
<td>Widget1</td>
</tr>
<tr>
<td>0.00</td>
<td>DbAdmin</td>
<td>Prod</td>
<td>80432</td>
<td>Portal</td>
</tr>
<tr>
<td>2.47</td>
<td>DbAdmin</td>
<td>Prod</td>
<td>78925</td>
<td>Portal</td>
</tr>
</tbody>
</table>

At the end of the billing cycle, the total charges (tagged and untagged) on the billing report with cost allocation tags reconciles with the total charges on your Bills page total and other billing reports for the same period.

You can also use tags to filter views in Cost Explorer. For more information about Cost Explorer, see Analyzing your costs with AWS Cost Explorer.

For more information about activating the AWS generated tags, see Activating the AWS-Generated Cost Allocation Tags (p. 84). For more information about applying and activating user-defined tags, see User-Defined Cost Allocation Tags (p. 85). All tags can take up to 24 hours to appear in the Billing and Cost Management console.

**Note**

- As a best practice, do not include sensitive information in tags.
- Only management account in an organization and single accounts that are not members of an organization have access to the Cost Allocation Tags manager in the Billing console.

**Topics**

- AWS-Generated Cost Allocation Tags (p. 81)
- User-Defined Cost Allocation Tags (p. 85)
- Monthly cost allocation report (p. 87)

**AWS-Generated Cost Allocation Tags**

The AWS generated tags crééedBy is a tag that AWS defines and applies to supported AWS resources for cost allocation purposes. To use the AWS generated tags, a management account owner must activate it in the Billing and Cost Management console. When a management account owner activates the tag, the tag is also activated for all member accounts. After the tag is activated, AWS starts applying the tag to resources that are created after the AWS generated tags was activated. The AWS generated tags is available only in the Billing and Cost Management console and reports, and doesn't appear anywhere else in the Amazon Web Services (AWS) console, including the AWS Tag Editor. The créeedBy tag does not count towards your tags per resource quota.

The créeedBy tag uses the following key-value definition:
key = aws:createdBy

value = account-type:account-ID or access-key:user-name or role session name

Not all values include all of the value parameters. For example, the value for a AWS generated tag for a root account doesn't always have a user name.

Valid values for the **account-type** are Root, IAMUser, AssumedRole, and FederatedUser.

If the tag has an account ID, the **account-id** tracks the account number of the root account or federated user who created the resource. If the tag has an access key, then the **access-key** tracks the IAM access key used and, if applicable, the session role name.

The **user-name** is the user name, if one is available.

Here are some examples of tag values:

- Root:1234567890
- Root: 111122223333 :exampleUser
- IAMUser: AIDACKCEVSQ6C2EXAMPLE :exampleUser
- AssumedRole: AKIAIOSFODNN7EXAMPLE :exampleRole
- FederatedUser:1234567890:exampleUser

For more information about IAM users, roles, and federation, see the [IAM User Guide](#).

AWS-generated cost allocation tags are applied on a best-effort basis. Issues with services that AWS generated tags depend on, such as CloudTrail, can cause a gap in tagging.

The **createdBy** tag is applied only to the following services and resources after the following events.

<table>

</table>
**AWS Product** | **API or Console Event** | **Resource Type**
---|---|---
Amazon Simple Storage Service (Amazon S3) | CreateBucket | Bucket
AWS Storage Gateway (Storage Gateway) | ActivateGateway | Gateway

**Note**
The `CreateDBSnapshot` tag isn't applied to the snapshot backup storage.

**AWS Marketplace vendor-provided tags**

Certain AWS Marketplace vendors can create tags and associate them with your software usage. These tags will have the prefix `aws:marketplace:isv:`. To use the tags, a management account owner must activate the tag in the Billing and Cost Management console. When a management account owner activates the tag, the tag is also activated for all member accounts. Similar to `aws:createdBy` tags, these tags appear only in the Billing and Cost Management console and they don't count towards your tags per resource quota. You can find the tag keys that apply to the product on the AWS Marketplace product pages.

**Activating the AWS-Generated Cost Allocation Tags**

Management account owners can activate the AWS generated tags in the Billing and Cost Management console. When a management account owner activates the tag, it's also activated for all member accounts. This tag is visible only in the Billing and Cost Management console and reports.

**To activate the AWS generated tags**

You can activate the `createdBy` tag in the Billing and Cost Management console.

2. In the navigation pane, choose **Cost Allocation Tags**.
3. Under **AWS-Generated Cost Allocation Tags**, choose the `createdBy` tag.
4. Choose **Activate**.

It can take up to 24 hours for tags to activate.

**Deactivating the AWS-Generated Cost Allocation Tags**

Management account owners can deactivate the AWS generated tags in the Billing and Cost Management console. When a management account owner deactivates the tag, it's also deactivated for all member accounts. After you deactivate the AWS generated tags, AWS no longer applies the tag to new resources. Previously tagged resources remain tagged.

**To deactivate the AWS generated tags**

2. In the navigation pane, choose **Cost Allocation Tags**.

It can take up to 24 hours for tags to deactivate.
Restrictions on AWS-Generated Cost Allocation Tags

The following restrictions apply to the AWS generated tags:

- Only a management account can activate AWS generated tags.
- You can't update, edit, or delete AWS generated tags.
- AWS-generated cost allocation tags aren't applied to resources that were created before the tag was activated.
- The maximum active tag keys for Billing and Cost Management reports is 500.
- AWS generated tags are created using CloudTrail logs. CloudTrail logs over a certain size cause AWS generated tag creation to fail.
- The reserved prefix is `aws:`.

AWS generated tag names and values are automatically assigned the `aws:` prefix, which you can't assign. AWS generated tag names don't count towards the user-defined resource tag quota of 50. User-defined tag names have the prefix `user:` in the cost allocation report.

- Null tag values will not appear in Cost Explorer and AWS Budgets. If there is only one tag value that is also null, the tag key will also not appear in Cost Explorer or AWS Budgets.

User-Defined Cost Allocation Tags

User-defined tags are tags that you define, create, and apply to resources. After you have created and applied the user-defined tags, you can activate by using the Billing and Cost Management console for cost allocation tracking. Cost Allocation Tags appear on the console after you've enabled Cost Explorer, Budgets, AWS Cost and Usage Reports, or legacy reports. After you activate the AWS services, they appear on your cost allocation report. You can then use the tags on your cost allocation report to track your AWS costs. Tags are not applied to resources that were created before the tags were created.

Note

- As a best practice, reactivate your cost allocation tags when moving organizations. When an account moves to another organization as a member, previously activated cost allocation tags for that account lose their "active" status and need to be activated again by the new management account.
- As a best practice, do not include sensitive information in tags.
- Only a management account in an organization and single accounts that aren't members of an organization have access to the Cost Allocation Tags manager in the Billing and Cost Management console.

Applying User-Defined Cost Allocation Tags

For ease of use and best results, use the AWS Tag Editor to create and apply user-defined tags. The Tag Editor provides a central, unified way to create and manage your user-defined tags. For more information, see Working with Tag Editor in the AWS Resource Groups User Guide.

For supported services, you can also apply tags to resources using the API or the AWS Management Console. Each AWS service has its own implementation of tags. You can work with these implementations individually or use Tag Editor to simplify the process. For a full list of services that support tags, see Supported Resources for Tag-based Groups and Resource Groups Tagging API Reference.

Note

The behavior of cost allocation tags varies across AWS services. To learn more about the cost allocation tag behavior for a supported service, refer to the service's documentation. For
example, to learn more about using cost allocation tags with Amazon ECS, see Tagging your Amazon ECS resources in the Amazon Elastic Container Service Developer Guide.

After you create and apply user-defined tags, you can activate them (p. 86) for cost allocation. If you activate your tags for cost allocation, it’s a good idea to devise a set of tag keys that represent how you want to organize your costs. Your cost allocation report displays the tag keys as additional columns with the applicable values for each row, so it’s easier to track your costs if you use a consistent set of tag keys.

Some services launch other AWS resources that the service uses, such as Amazon EMR launching an EC2 instance. If the supporting service (EC2) supports tagging, you can tag the supporting resources (such as the associated Amazon EC2 instance) for your report. For a full list of resources that can be tagged, use the Tag Editor to search. For more information about how to search for resources using Tag Editor, see Searching for Resources to Tag.

Note
AWS Marketplace line items are tagged with the associated Amazon EC2 instance tag.

Activating User-Defined Cost Allocation Tags

For tags to appear on your billing reports, you must activate your applied tags in the Billing and Cost Management console.

To activate your tags

2. In the navigation pane, choose Cost Allocation Tags.
3. Select the tags that you want to activate.
4. Choose Activate.

After you create and apply user-defined tags to your resources, it can take up to 24 hours for the tags to appear on your Cost Allocation Tags page for activation. After you select your tags for activation, it can take up to 24 hours for tags to activate.

For an example of how tags appear in your billing report with cost allocation tags, see Viewing a cost allocation report (p. 88).

User-Defined Tag Restrictions

For basic tag restrictions, see Tag Restrictions in the Amazon EC2 User Guide.

The following restrictions apply to user-defined tags for Cost Allocation:

- The reserved prefix is aws:

  AWS generated tag names and values are automatically assigned the aws: prefix, which you can’t assign. User-defined tag names have the prefix user: in the cost allocation report.

- Use each key only once for each resource. If you attempt to use the same key twice on the same resource, your request will be rejected.

- In some services, you can tag a resource when you create it. For more information, see the documentation for the service where you want to tag resources.

- You can’t backdate the application of a tag. This means that tags only start appearing on your cost allocation report after you apply them and don’t appear on earlier reports.

- If you need characters outside of those listed in Tag Restrictions, you can apply standard base-64 encoding to your tag. Billing and Cost Management does not encode or decode your tag for you.

- User-defined tags on non-metered services can be activated (for example, Account Tagging). However, these tags will not populate in the Cost Management suite because these services are not metered.
Monthly cost allocation report

The monthly cost allocation report lists the AWS usage for your account by product category and linked account user. The report contains the same line items as the detailed billing report (see the Cost and Usage Reports Guide) and additional columns for your tag keys. For more information, see the following topics.

Topics
- Setting up a monthly cost allocation report (p. 87)
- Getting an hourly cost allocation report (p. 88)
- Viewing a cost allocation report (p. 88)

Setting up a monthly cost allocation report

By default, new tag keys that you add using the API or the AWS Management Console are automatically excluded from the cost allocation report. You can add them using the procedures described in this topic.

When you select tag keys to include in your cost allocation report, each key becomes an additional column that lists the value for each corresponding line item. Because you might use tags for more than just your cost allocation report (for example, tags for security or operational reasons), you can include or exclude individual tag keys for the report. This ensures that you’re seeing meaningful billing information that helps organize your costs. A small number of consistent tag keys makes it easier to track your costs. For more information, see Viewing a cost allocation report (p. 88).

Note
AWS stores billing reports in an Amazon S3 bucket that you create and own. You can retrieve these reports from the bucket using the Amazon S3 API, AWS Management Console for Amazon S3, or the Amazon S3 command line interface (CLI). You can't download the cost allocation report from the Account Activity page of the Billing and Cost Management console.

To set up the cost allocation report and activate tags

2. Under Preferences in the navigation pane, choose Billing Preferences.
3. For Detailed Billing Reports [Legacy], select the check box Turn on the legacy Detailed Billing Reports feature to receive ongoing reports of your AWS charges.
4. For Save to S3 Bucket, enter a valid Amazon S3 bucket name and choose Verify.
5. In the Report list, select the check box for Cost allocation report.
6. Choose Manage report tags, as shown in the following screenshot.

The page displays a list of tags that you’ve created using either the API or the console for the applicable AWS service. Tag keys that currently appear in the report are selected, and the check boxes for excluded tag keys are cleared.

7. For Filter, choose Inactive tags in the dropdown list and select the tags that you want to activate for your report.
8. Choose Activate.

If you own the management account in an organization, your cost allocation report includes all the usage, costs, and tags for the member accounts. By default, all keys registered by member accounts are available for you to include or exclude from your report. The detailed billing report with resources and tags also includes any cost allocation tag keys that you select using the preceding steps.
Getting an hourly cost allocation report

The cost allocation report is one of several reports that AWS publishes to an Amazon S3 bucket several times a day.

Note
During the current billing period (monthly), AWS generates an estimated cost allocation report. The current month's file is overwritten throughout the billing period until a final report is generated at the end of the billing period. Then a new file is created for the next billing period. The reports for the previous months remain in the designated Amazon S3 bucket.

Viewing a cost allocation report

The following example tracks the charges for several cost centers and applications. Resources (such as Amazon EC2 instances and Amazon S3 buckets) are assigned tags like "Cost Center"="78925" and "Application"="Widget1". In the cost allocation report, the user-defined tag keys have the prefix `user`, such as `user:Cost Center` and `user:Application`. AWS generated tag keys have the prefix `aws`. The keys are column headings identifying each tagged line item's value, such as "78925".

<table>
<thead>
<tr>
<th>Total Cost</th>
<th>user:Owner</th>
<th>user:Stack</th>
<th>user:Cost Center</th>
<th>user:Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>0.95</td>
<td>DbAdmin</td>
<td>Test</td>
<td>80432</td>
<td>Widget2</td>
</tr>
<tr>
<td>0.01</td>
<td>DbAdmin</td>

<td>78925</td>
<td>Widget1</td>
</tr>
<tr>
<td>0.00</td>
<td>DbAdmin</td>
<td>Prod</td>
<td>80432</td>
<td>Portal</td>
</tr>
<tr>
<td>2.47</td>
<td>DbAdmin</td>
<td>Prod</td>
<td>78925</td>
<td>Portal</td>
</tr>
</tbody>
</table>

Pick your keys carefully so that you have a consistent hierarchy of values. Otherwise, your report won't group costs effectively, and you will have many line items.

Note
If you add or change the tags on a resource partway through a billing period, costs are split into two separate lines in your cost allocation report. The first line shows costs before the update, and the second line shows costs after the update.

Unallocated resources in your report

Any charges that cannot be grouped by tags in your cost allocation report default to the standard billing aggregation (organized by Account/Product/Line Item) and are included in your report. Situations where you can have unallocated costs include:

- You signed up for a cost allocation report mid-month.
- Some resources aren't tagged for part, or all, of the billing period.
- You are using services that currently don't support tagging.
- Subscription-based charges, such as Premium Support and AWS Marketplace monthly fees, can't be allocated.
- One-time fees, such as Amazon EC2 Reserved Instance upfront charges, can't be allocated.

Unexpected costs associated with tagged resources

You can use cost allocation tags to see what resources are contributing to your usage and costs, but deleting or deactivating the resources doesn't always reduce your costs. For more information on reducing unexpected costs, see Avoiding unexpected charges (p. 105).
Using the AWS Price List API

AWS offers two APIs that you can use to query prices:

- With the AWS Price List Bulk API, you can query the prices of AWS services in bulk. The API returns either a JSON or a CSV file. The bulk API retains all historical versions of the price list.
- With the AWS Price List Query API, you can query specific information about AWS services, products, and pricing using an AWS SDK or the AWS CLI. This API can retrieve information about certain products or prices, rather than retrieving prices in bulk. This allows you to get pricing information in environments that might not be able to process a bulk price list, such as in mobile or web browser-based applications. For example, you can use the query API to fetch pricing information for Amazon EC2 instances with 64 vCPUs, 256 GiB of memory, and pre-installed SQL Server Enterprise in the Asia Pacific (Mumbai) Region. The query API serves the current prices and doesn't retain historical prices.

Topics
- Using the query API (p. 89)
- Using the bulk API (p. 90)
- Setting up notifications (p. 100)

Using the query API

The AWS Price List Query API is a centralized and convenient way to programmatically query AWS for services, products, and pricing information. The query API uses standardized product attributes such as Location, Storage Class, and Operating System, and provides prices at the SKU level. You can use the query API to build cost control and scenario planning tools, reconcile billing data, forecast future spend for budgeting purposes, and provide cost benefit analyses that compare your internal workloads with AWS. The query API does not support Savings Plans prices.

If you use a programming language that AWS provides an SDK for, we recommend that you use the SDK. All of the AWS SDKs greatly simplify the process of signing requests and save you a significant amount of time when compared with using the query API. In addition, the SDKs integrate easily with your development environment and provide easy access to related commands.

Note
The AWS Price List Query API provides pricing details for your information only. If there is a discrepancy between the offer file and a service pricing page, AWS charges the prices that are listed on the service pricing page. For more information about AWS service pricing, see Cloud Services Pricing.

For more information about available SDKs, see Tools for Amazon Web Services. For more information about the AWS Price List Query API, see the AWS Billing and Cost Management API Reference.

Service endpoint

The AWS Price List Query API provides the following two endpoints:

- https://api.pricing.us-east-1.amazonaws.com
- https://api.pricing.ap-south-1.amazonaws.com

Granting IAM permissions to use the AWS Price List Query API

An IAM user must be granted explicit permission to query the AWS Price List Query API. For the policy that grants the necessary permissions to an IAM user, see Find products and prices (p. 140).
Using the bulk API

The AWS Price List Bulk API is actually a URL that provides up-to-date pricing information on the current AWS products and services. To access pricing information using the bulk API, download the offer file:

- **Offer file** – A JSON or CSV file that lists the products and prices for either a single AWS service in all Regions or a single AWS service in a specific Region. For more information, see Downloading an offer file (p. 90).

To find a list of all available offer files, download the offer index file:

- **Offer index file** – A JSON file that lists the supported AWS services, with a URL for each offer file where you can download pricing details. The file also includes metadata about the offer index file itself, URLs for service offer files, and URLs for regional offer index files. For more information, see Downloading an offer index file (p. 90).

Offer files don't include information about expiring free tier offers or Amazon EC2 Spot Instances.

**Note**

The AWS Price List Bulk API provides pricing details for your information only. If there is a discrepancy between the offer file and a service pricing page, AWS charges the prices that are listed on the service pricing page. For more information about AWS service pricing, see Cloud Services Pricing.

**Topics**

- Downloading an offer index file (p. 90)
- Downloading an offer file (p. 90)
- Finding prices in an offer file (p. 91)
- Finding Savings Plan prices in an offer file (p. 94)
- Reading an offer file (p. 94)
- Reading the offer index file (p. 98)

To receive SNS notifications when prices change, see Setting up notifications (p. 100).

### Downloading an offer index file

To download the offer index file, go to the following URL:

```
https://pricing.us-east-1.amazonaws.com/offers/v1.0/aws/index.json
```

The URL opens the offer index file. In the offer index file, search for the service that you want prices for. You need the service code to download the service-specific offer file. To download an offer index file for a specific service and Region, find the service that you want prices for and open the regional offer index file.

For more information, see Reading the offer index file (p. 98).

### Downloading an offer file

To download the offer file for the service that you want, go to the URL for that offer file. For example, to download the current JSON version of the Amazon EC2 offer file, go to the following URL:

```
https://pricing.us-east-1.amazonaws.com/offers/v1.0/aws/AmazonEC2/current/index.json
```
The offer index file includes the JSON URLs. To download the CSV version, replace the .json extension in the offer file URL with .csv. If you want to download the offer file for a specific service and you know the service code, replace the `AmazonEC2` in the URL with the service code to download the offer file for that service. If you don't know the service code, download the offer index file to find it. If you want to download the offer file for a specific service in a specific Region and you know the service code and Region, use the URL for that regional offer file. For example, to download the current JSON version of the Amazon EC2 offer file for US East (N. Virginia), use the following URL:

```
https://pricing.us-east-1.amazonaws.com/offers/v1.0/aws/AmazonEC2/current/us-east-1/index.json
```

To download the offer file for Savings Plans that apply to a particular service, go to the Savings Plans URL for that service. For example, to download the current JSON version of Compute Savings Plans, use the following URL. You can use this URL for the regional offer files directly.

```
https://pricing.us-east-1.amazonaws.com/savingsPlan/v1.0/aws/AWSComputeSavingsPlan/current/index.json
```

To download the current JSON version of SageMaker Savings Plans, use the following URL.

```
https://pricing.us-east-1.amazonaws.com/savingsPlan/v1.0/aws/AWSMachineLearningSavingsPlans/current/index.json
```

If you access the offer files programmatically, you can use the offer index file to find the current URLs. For more information about the offer index file, see Finding prices in an offer file (p. 91), Finding Savings Plan prices in an offer file (p. 94), and Reading an offer file (p. 94).

### Finding prices in an offer file

The AWS Price List Bulk API provides prices for all AWS products for informational purposes, including On-Demand and Reserved Instance pricing.

You can use the offer files to find the prices and terms for a specific product. For example, you can find a list of Amazon EC2 instance prices.

**Note**
The AWS Price List Bulk API is not a comprehensive source for limited period Free Tiers, such as AWS Free Tier pricing. For complete information on Free Tier prices, see [AWS Free Tier](#).

Use the following procedures to find prices for the products you're interested in.

**Topics**
- Finding On-Demand prices for services (p. 91)
- Finding tiered prices for services (p. 92)
- Finding tiered prices for services with free tier (p. 92)
- Finding prices for services with reserved instances (p. 93)

### Finding On-Demand prices for services

The following procedure shows how to find On-Demand prices for services (for example, Amazon EC2).

**To find an On-Demand price using the csv file**

1. Download the csv file for the service.
2. Open the csv file with your program of choice.
3. Under the TermType column, filter to show OnDemand.
4. Find the usage type and operation of your choice.
5. In the PricePerUnit column, see the corresponding price.

**To find an On-Demand price using the JSON file**

1. Download the JSON file for the service.
2. Open the JSON file with your program of choice.
3. Under terms and On-Demand, find the SKU of interest.
   
   If you don't know the SKU, search under products for the usage type and operation.
4. See the pricePerUnit to find the corresponding On-Demand price for the SKU.

**Finding tiered prices for services**

The following procedure shows how to find tiered prices for services (for example, Amazon S3).

**To find tiered prices for services using the csv file**

1. Download the csv file for the service.
2. Open the csv file with your program of choice.
3. Under the TermType column, filter to show OnDemand.
4. Find the usage type and operation of your choice.
5. In the PricePerUnit column, see the corresponding price for each StartingRange and EndingRange.

**To find tiered prices for services using the JSON file**

1. Download the JSON file.
2. Open the JSON file with your program of choice.
3. Under terms and On-Demand find the SKU of interest.
   
   If you don't know the SKU, search under products for the usage type and operation.
4. Under each beginRange and endRange, see the pricePerUnit to find the corresponding tiered prices.

**Finding tiered prices for services with free tier**

The following procedure shows how to find AWS services that publish free tier prices in the AWS Price List Bulk API (for example, AWS Lambda).

All Free Tier prices are subject to the terms documented in AWS Free Tier.

**To find prices for services with free tier using csv**

1. Download the csv file for the service.
2. Open the csv file with your program of choice.
3. Under the TermType column, filter to show OnDemand.
4. Under the Location column, filter to show Any.
Any does not represent all AWS Regions in this scenario. It is a subset of Regions defined by other line items in the csv file, with a RelatedTo column matching the SKU for the location Any entry.

5. To find a list of all eligible locations and products for a given Free Tier SKU, find the Free Tier SKU under the RelatedTo column.

6. To find the covered usage by Free Tier across all eligible locations, see the StartingRange and EndingRange for the location Any.

Example

This example assumes there are no more entries in the price file where RelatedTo equals to the SKU ABCD.

The free tier offer with SKU ABCD is valid in Regions Asia Pacific (Singapore) and US East (Ohio), but not in AWS GovCloud (US). The covered usage by Free Tier is 400,000 seconds total, used across both eligible Regions.

<table>
<thead>
<tr>
<th>SKU</th>
<th>StartingRange</th>
<th>EndingRange</th>
<th>Unit</th>
<th>RelatedTo</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>ABCD</td>
<td>0</td>
<td>400000</td>
<td>seconds</td>
<td>Any</td>
<td></td>
</tr>
<tr>
<td>QWER</td>
<td>0</td>
<td>Inf</td>
<td>seconds</td>
<td>ABCD</td>
<td>Asia Pacific (Singapore)</td>
</tr>
<tr>
<td>WERT</td>
<td>0</td>

<td>US East (Ohio)</td>
</tr>
<tr>
<td>ERTY</td>
<td>0</td>
<td>Inf</td>
<td>seconds</td>
<td>AWS GovCloud (US)</td>
<td></td>
</tr>
</tbody>
</table>

To find tiered prices for services with free tier using the JSON file

1. Download the JSON file for the service.
2. Open the JSON file with your program of choice.
3. Under products, find the usagetype with the Region prefix Global.
4. Take note of the SKU and look for the same SKU under terms and OnDemand.
5. For the amount of Free Tier usage, see the BeginRange and EndRange.

For a list of products and Regions covered by Free Tier, see appliesTo.

Finding prices for services with reserved instances

The following procedure shows how to find prices for services with Reserved Instances (for example, Amazon RDS).

To find an Reserved Instance using the csv file

1. Download the EC2 csv file for the service.
2. Open the csv file with your program of choice.
3. Under the TermType column, filter to show reserved.
4. Find the usage type and operation of your choice.
5. For each LeaseContractLength, PurchaseOption, and OfferingClass, see the PricePerUnit column for the corresponding price.

To find an prices for Reserved Instance using the JSON file

1. Download the JSON file for the service.
2. Open the JSON file with your program of choice.
3. Under terms and Reserved, find the SKU of interest.

   If you don't know the SKU, search under products for the usage type and operation.

You can find prices for all LeaseContractLength, PurchaseOption, and OfferingClass for the same product.

Finding Savings Plan prices in an offer file

You can use the offer files to find prices and discounts when Savings Plans are applied to your usage.

The following procedures show how to find products participating in Savings Plans by downloading a Savings Plans CSV or JSON file.

To find Savings Plans for a service

1. Download the index file.
2. Navigate to your relevant service.
3. Search for savingsPlanVersionIndexUrl to find Savings Plans rates that apply to the service.

   Note
   Some services might not have Savings Plans that apply.

To find Savings Plans rates for a service

1. Download the Savings Plans index file.
2. Find the relevant regionalIndexURLs for the Regions.

   The Compute Savings Plans that apply across multiple Regions will be in the global Region.
3. Download the Savings Plans offer file.

   • Terms includes the contract length and rates for all available Savings Plans.
   • Rates lists all SKUs that are covered by Savings Plans along with the applicable rate. Details of these SKUs are available in the individual service files. For example, Amazon EC2, Fargate, and AWS Lambda.

Files are available in both CSV and JSON format.

Reading an offer file

An offer file lists the products and prices for a single AWS service in all Regions or a single AWS service in a specific Region. Offer files are available as either CSV or JSON files. You can read the files in multiple ways, such as using a spreadsheet program to read and sort the CSV file, a text program to read the file, or a program that parses JSON.

Offer files include the following types of information:
• **Offer file details** – File metadata about the offer file itself, such as the format version and the publication date.

• **Product details** – Product metadata that lists the products in an offer file along with product information.

• **Pricing details (terms)** – Prices for all the products in this offer file.

**Note**
In a CSV file, the product and pricing details are combined into one section. In a JSON file, the product details and pricing details are in separate sections.

**Topics**
- CSV file (p. 95)
- JSON file (p. 95)
- Offer file definitions (p. 96)

**CSV file**
The first five rows of the CSV are the metadata for the offer file. The sixth row has all the column names for the products and their attributes, such as the SKU, the OfferTermCode, the RateCode, the TermType, and more. The number of columns varies depending on the service. The first 12 columns contain all the pricing details, while the other columns contain the product details for a service.

**JSON file**
In the JSON files, the product details and pricing details are in separate sections. The same product can be offered under multiple terms, and the same term could apply to multiple products. For example, an EC2 instance is available for an Hourly or Reserved term. Use the SKU of a product to identify the terms that are available for that product.

A JSON offer file looks like this:

```json
{
  "formatVersion": "The version of the file format",
  "disclaimer": "The disclaimers for the offer file",
  "offerCode": "The code for the service",
  "version": "The version of the offer file",
  "publicationDate": "The publication date of the offer file",
  "Products (p. 97)": {
    "sku": {
      "sku": "The SKU of the product",
      "productFamily": "The product family of the product",
      "attributes": {
        "attributeName": "attributeValue",
      }
    }
  },
  "Terms (p. 97)": {
    "termType": {
      "sku": {
        "offerTermCode": "The term code of the product",
        "sku": "The SKU of the product",
        "effectiveDate": "The effective date of the pricing details",
        "termAttributesType": "The attribute type of the terms",
        "termAttributes": {
          "attributeName": "attributeValue",
        }
      },
    }
  }
}
```
"priceDimensions": {
  "rateCode": {
    "rateCode": "The rate code of the price",
    "description": "The description of the term",
    "unit": "The usage measurement unit for the price",
    "startingRange": "The start range for the term",
    "endingRange": "The end range for the term",
    "pricePerUnit": {
      "currencyCode": "currencyRate",
    }
  }
}

Offer file definitions

Each of the sections in an offer file includes specific details about that product:

- Offer file details – File metadata about the offer file itself, such as the format version and the publication date.
- Product details – Product metadata that lists the products in an offer file along with product information.
- Pricing details (terms) – Prices for all the products in this offer file.

Note
In a CSV file, the product and pricing details are combined into one section. In a JSON file, the product details and pricing details are in separate sections.

The following lists provide definitions for each detail.

Offer file details

This section provides metadata about the offer file itself.

Format Version

An attribute that tracks which format version the offer file is in. The formatVersion of the file is updated when the structure is changed. For example, the version will change from v1 to v2.

Disclaimer

Any disclaimers that apply to the offer file.

Offer Code

A unique code for the product of an AWS service. For example, AmazonEC2 for Amazon EC2 or AmazonS3 for Amazon S3.

Version

An attribute that tracks the version of the offer file. Each time a new file is published, it contains a new version number. For example, 20150409T022205 and 20150910T182105.

Publication Date

The date and time (UTC) when an offer file was published. For example, 2015-04-09T02:22:05Z, 2015-09-10T18:21:05Z.
Product details

This section provides information about products in an AWS service offer file. Products are indexed by SKU.

Product Details:SKU

A unique code for a product. Use the SKU code to correlate product details and pricing. For example, a product with a SKU of HCNSHWWAJSGVAHMH is available only for a price that also lists HCNSHWWAJSGVAHMH as a SKU.

Product Details:SKU:Product Family

The category for the type of product. For example, compute for Amazon EC2 or storage for Amazon S3.

Product Details:SKU:Attributes

A list of all of the product attributes.

Product Details:SKU:Attributes:Attribute Name

The name of a product attribute. For example, Instance Type, Processor, or OS.

Product Details:SKU:Attributes:Attribute Value

The value of a product attribute. For example, m1.small (an instance type), xen (a type of processor), or Linux (a type of OS).

Pricing details (terms)

This section provides information about the prices for products in an AWS service offer file. Prices are indexed first by the terms (onDemand and reserved), and then by SKU.

Pricing Details:Term Type

The specific type of term that a term definition describes. The valid term types are reserved and onDemand.

Pricing Details:Term Type:SKU

A unique code for a product. Use the SKU code to correlate product details and pricing. For example, a product with a SKU of HCNSHWWAJSGVAHMH is available only for a price that also lists HCNSHWWAJSGVAHMH as a SKU.

Pricing Details:Term Type:SKU:Offer Term Code

A unique code for a specific type of term. For example, KCAKZHGHG. Product and price combinations are referenced by the SKU code followed by the term code, separated by a period. For example, U7ADXS4BEK5XXHRU.KCAKZHGHG.

Pricing Details:Term Type:SKU:Effective Date

The date that an offer file goes into effect. For example, if a term has an EffectiveDate of November 1, 2017, the price is not valid before November 1, 2017.

Pricing Details:Term Type:SKU:Term Attributes Type

A unique code for identifying what product and product offering are covered by a term. For example, an EC2-Reserved attribute type means that a term is available for EC2 reserved hosts.

Pricing Details:Term Type:SKU:Term Attributes

A list all of the attributes that are applicable to a term type, in the format attribute-name: attribute-value. For example, length of term and type of purchase covered by the term.
Pricing Details: Term Type: SKU: Term Attributes: Attribute Name

The name of a TermAttribute. You can use it to look up specific attributes. For example, you can look up terms by length or PurchaseOption.

Pricing Details: Term Type: SKU: Term Attributes: Attribute Value

The value of a TermAttribute. For example, terms can have a length of one year and a purchase option of All Upfront.

Pricing Details: Term Type: SKU: Price Dimensions

The pricing details for the offer file, such as how usage is measured, the currency that you can use to pay with, and the pricing tier limitations.

Pricing Details: Term Type: SKU: Price Dimensions: Rate Code

A unique code for a product/offer/pricing-tier combination. Product and term combinations can have multiple price dimensions, such as a free tier, a low use tier, and a high use tier.

Pricing Details: Term Type: SKU: Price Dimensions: Rate Code: Description

The description for a price or rate.

Pricing Details: Term Type: SKU: Price Dimensions: Rate Code: Unit

The type of unit that each service uses to measure usage for billing. For example, EC2 uses hours as a measuring unit, and S3 uses GB as a measuring unit.

Pricing Details: Term Type: SKU: Price Dimensions: Rate Code: Starting Range

The lower limit of the price tier covered by this price. For example, 0 GB or 1,001 API calls.

Pricing Details: Term Type: SKU: Price Dimensions: Rate Code: Ending Range

The upper limit of the price tier covered by this price. For example, 1,000 GB or 10,000 API calls.

Pricing Details: Term Type: SKU: Price Dimensions: Rate Code: Price Per Unit

A calculation of how much a single measured unit for a service costs.

Pricing Details: Term Type: SKU: Price Dimensions: Rate Code: Price Per Unit: Currency Code

A code that indicates the currency for prices for a specific product.

Pricing Details: Term Type: SKU: Price Dimensions: Rate Code: Price Per Unit: Currency Rate

The rate for a product in various supported currencies. For example, $1.2536 per unit.

Reading the offer index file

After you have the offer index file, you can use it to find an offer file.

Topics

- Offer index file (p. 98)
- Offer index definitions (p. 99)

Offer index file

The offer index file is available as a JSON file. You can read the file multiple ways, such as using a text program to read the JSON file or a program that parses the JSON.
The offer index file consists of two main sections: the metadata about the offer index file itself, and either a list of the services that AWS offers (for the offer index file) or a list of Regions where a service is offered (for the regional offer index file). The information about an offer file includes the URL where you can download the prices and a URL for a regional offer index file for that service.

The offer index file looks like this:

```json
{
  "formatVersion":"The version number for the offer index format",
  "disclaimer":"The disclaimers for this offer index",
  "publicationDate":"The publication date of this offer index",
  "offers":{
    "firstService":{
      "offerCode":"The service that this price list is for",
      "currentVersionUrl":"The URL for this offer file",
      "currentRegionIndexUrl":"The URL for the regional offer index file",
      "savingsPlanVersionIndexUrl":"The URL for the Savings Plan index file (if applicable)"
    },
    "secondService":{
      "offerCode": ...,
      "currentVersionUrl": ...,
      "currentRegionIndexUrl": ...,
      "savingsPlanVersionIndexUrl": ...
    },
    ...
  }
}
```

**Offer index definitions**

The following list defines the terms that are used in the offer index file:

**FormatVersion**

An attribute that tracks which format version the offer index file is in. The `formatVersion` of the file is updated when the structure is changed. For example, the version will change from v1 to v2.

**Disclaimer**

Any disclaimers that apply to the offer index file.

**PublicationDate**

The date and time (UTC) when an offer index file was published. For example, 2015-04-09T02:22:05Z, 2015-09-10T18:21:05Z.

**Offers**

A list of available offer files.

**Offers:OfferCode**

A unique code for the product of an AWS service. For example, `AmazonEC2` or `AmazonS3`. The `OfferCode` is used as the lookup key for the index.

**Offers:CurrentVersionUrl**

The URL where you can download the most up-to-date offer file.

**Offers:currentRegionIndexUrl**

A list of available regional offer files.
Setting up notifications

You can sign up to receive notifications when AWS prices change, such as when AWS cuts prices, when new instance types are launched, or when new services are introduced. You can sign up to be notified every time a price changes or once a day. If you sign up to be notified once a day, the notification includes all price changes applied during that day.

You can use the console to sign up for Amazon SNS notifications.

**To sign up for price update notifications**

2. If you are new to Amazon SNS, choose Get Started.
3. If necessary, change the Region on the navigation bar to US East (N. Virginia).
4. On the navigation pane, choose Subscriptions.
5. Choose Create Subscription.
6. For Topic ARN, do the following as appropriate:
   - For service pricing – If you want to be notified every time a price changes, enter arn:aws:sns:us-east-1:278350005181:price-list-api. If you want to be notified about price changes once a day, enter arn:aws:sns:us-east-1:278350005181:daily-aggregated-price-list-api instead.
7. For Protocol, use the default HTTP setting.
8. For Endpoint, choose the format that you want to receive the notification in, such as Amazon SQS, Lambda, or email.
9. Choose Create Subscription.

**Important**

If you get an error message Couldn’t create subscription. Error code: InvalidParameter - Error message: Invalid parameter: TopicArn, it’s likely that your Region is not set to US East (N. Virginia). The billing metric data is stored in this Region, even for resources in other Regions. Repeat the process with close attention to step 3.

Logging Billing and Cost Management API calls with AWS CloudTrail

Billing and Cost Management is integrated with AWS CloudTrail, a service that provides a record of actions taken by a user, role, or an AWS service in Billing and Cost Management. CloudTrail captures API calls for Billing and Cost Management as events, including calls from the Billing and Cost Management console and from code calls to the Billing and Cost Management APIs. For a full list of CloudTrail events related to Billing, see Billing CloudTrail events (p. 101).

If you create a trail, you can enable continuous delivery of CloudTrail events to an Amazon S3 bucket, including events for Billing and Cost Management. If you don’t configure a trail, you can still view
the most recent events in the CloudTrail console in **Event history**. Using the information collected by CloudTrail, you can determine the request that was made to Billing and Cost Management, the IP address from which the request was made, who made the request, when it was made, and additional details.

To learn more about CloudTrail, including how to configure and enable it, see the [AWS CloudTrail User Guide](https://docs.aws.amazon.com/CloudTrail/latest/userguide/).

**Billing CloudTrail events**

This section shows a full list of the CloudTrail events related to Billing and Cost Management.

**Note**

The event source for `CreateCustomerCase` and `GetTaxExemptionsHistory` are `taxconsole.amazonaws.com` instead of `billingconsole.amazonaws.com`.

<table>
<thead>
<tr>
<th>Event name</th>
<th>Definition</th>
</tr>
</thead>
<tbody>
<tr>
<td>AcceptFxPaymentCurrencyTermsAndConditions</td>
<td>Logs the acceptance of the terms and conditions of paying in a currency other than USD.</td>

<tr>
<td>UpdateOrigamiReportPreference</td>
<td>Logs the update of the cost and usage report; management account only.</td>
</tr>
<tr>
<td>ValidateAddress</td>
<td>Logs the validation of the tax address of an account.</td>
</tr>
</tbody>
</table>

**Billing and Cost Management information in CloudTrail**

CloudTrail is enabled on your AWS account when you create the account. When supported event activity occurs in Billing and Cost Management, that activity is recorded in a CloudTrail event along with other AWS service events in Event history. You can view, search, and download recent events in your AWS account. For more information, see Viewing Events with CloudTrail Event History in the AWS CloudTrail User Guide.

For an ongoing record of events in your AWS account, including events for Billing and Cost Management, create a trail. A trail enables CloudTrail to deliver log files to an Amazon S3 bucket. By default, when you create a trail in the console, the trail applies to all AWS Regions. The trail logs events from all Regions in the AWS partition and delivers the log files to the Amazon S3 bucket that you specify. Additionally, you can configure other AWS services to further analyze and act upon the event data collected in CloudTrail logs.

For more information, see the following:

- Overview for Creating a Trail
- CloudTrail Supported Services and Integrations
- Configuring Amazon SNS Notifications for CloudTrail
- Receiving CloudTrail Log Files from Multiple Regions and Receiving CloudTrail Log Files from Multiple Accounts

Every event or log entry contains information about who generated the request. The identity information helps you determine the following:

- Whether the request was made with root or IAM user credentials.
- Whether the request was made with temporary security credentials for a role or federated user.
- Whether the request was made by another AWS service.

For more information, see the CloudTrail userIdentity Element in the AWS CloudTrail User Guide.

**CloudTrail log entry examples**

The following examples are provided for specific Billing and Cost Management CloudTrail log entry scenarios.

**Topics**

- Billing and Cost Management log file entries (p. 104)
Billing and Cost Management log file entries

A *trail* is a configuration that enables delivery of events as log files to an Amazon S3 bucket that you specify. CloudTrail log files contain one or more log entries. An event represents a single request from any source and includes information about the requested action, the date and time of the action, request parameters, and so on. CloudTrail log files are not an ordered stack trace of the public API calls, so they don't appear in any specific order.

The following example shows a CloudTrail log entry that demonstrates the `SetContactAddress` action.

```json
{
    "eventVersion": "1.05",
    "userIdentity": {
        "accountId": "111122223333",
        "accessKeyId": "AIDACKCEVSQ6C2EXAMPLE"
    },
    "eventTime": "2018-05-30T16:44:04Z",
    "eventSource": "billingconsole.amazonaws.com",
    "eventName": "SetContactAddress",

```
Avoiding unexpected charges

Here are some suggestions to help you avoid unexpected charges on your bill. The next items address specific features or behaviors within individual services from AWS that can sometimes result in unexpected charges, particularly if you unsubscribe from the service or close your account.

**Note**

If you close your account or unsubscribe from a service, make sure that you take the appropriate steps for every region in which you’ve allocated AWS resources.

**Topics**

- Usage exceeds AWS Free Tier (p. 105)
- Bill received after account closure (p. 105)
- Disabled regions (p. 106)
- Elastic Beanstalk environments (p. 106)
- Elastic Load Balancing (ELB) (p. 106)
- Services started in AWS OpsWorks (p. 106)
- Amazon EC2 instances (p. 106)
- Amazon Elastic Block Store volumes and snapshots (p. 106)
- Elastic IP addresses (p. 107)
- Services launched by other services (p. 108)
- Storage services (p. 108)

**Usage exceeds AWS Free Tier**

For more information on avoiding unexpected charges related to the AWS Free Tier, see Avoiding unexpected charges after the AWS Free Tier (p. 24).

**Bill received after account closure**

Each month’s usage is calculated and billed at the beginning of the following month. If you close your account but use opt-in services during the month, you receive a bill for the opt-in service usage at the beginning of the following month.
Disabled regions

If you disable a Region and you still have resources in that Region, you continue to incur charges for those resources. (There is no charge for enabling a Region, only charges for the resources that you create in a Region.) For more information, see Enabling and disabling regions (p. 12).

Elastic Beanstalk environments

Elastic Beanstalk is designed to ensure that all the resources that you need are running, which means that it automatically relaunches any services that you stop. To avoid this, you must terminate your Elastic Beanstalk environment before you terminate resources that Elastic Beanstalk has created. For more information, see Terminating an Environment in the AWS Elastic Beanstalk Developer Guide.

Elastic Load Balancing (ELB)

Like Elastic Beanstalk environments, ELB load balancers are designed to keep a minimum number of Amazon Elastic Compute Cloud (Amazon EC2) instances running. You must terminate your load balancer before you delete the Amazon EC2 instances that are registered with it. For more information, see Delete Your Load Balancer in the Elastic Load Balancing User Guide.

Services started in AWS OpsWorks

If you use the AWS OpsWorks environment to create AWS resources, you must use AWS OpsWorks to terminate those resources or AWS OpsWorks restarts them. For example, if you use AWS OpsWorks to create an Amazon EC2 instance, but then terminate it by using the Amazon EC2 console, the AWS OpsWorks auto healing feature categorizes the instance as failed and restarts it. For more information, see AWS OpsWorks User Guide.

Amazon EC2 instances

After you remove load balancers and Elastic Load Balancing environments, you can stop or terminate Amazon EC2 instances. Stopping an instance allows you to start it again later, but you might be charged for storage. Terminating an instance permanently deletes it. For more information, see Instance Lifecycle in the Amazon EC2 User Guide for Linux Instances, particularly Stop and Start Your Instance and Terminate Your Instance.

**Note**

Amazon EC2 instances serve as the foundation for multiple AWS services. They can appear in the Amazon EC2 console Instances list even if they were started by other services. For example, Amazon Relational Database Service (Amazon RDS) instances run on Amazon EC2 instances. If you terminate an underlying Amazon EC2 instance, the service that started it might interpret the termination as a failure and restart the instance. For example, the AWS OpsWorks service has a feature called *auto healing* that restarts resources when it detects failures. In general, it is a best practice to delete resources through the services that started them.

Additionally, if you create Amazon EC2 instances from an Amazon Machine Image (AMI) that is backed by an instance store, check Amazon S3 for the related bundle. Deregistering an AMI does not delete the bundle. For more information, see Deregistering Your AMI.

Amazon Elastic Block Store volumes and snapshots

Most Amazon EC2 instances are configured so that their associated Amazon EBS volumes are deleted when they are terminated, but it is possible to set up an instance that preserves its volume and the data. Check the Volumes pane in the Amazon EC2 console for volumes that you don’t need anymore. For more information, see Deleting an Amazon EBS Volume in the Amazon EC2 User Guide for Linux Instances.
If you have stored snapshots of your Amazon EBS volumes and no longer need them, you should delete them as well. Deleting a volume does not automatically delete the associated snapshots.

For more information about deleting snapshots, see Deleting an Amazon EBS Snapshot.

**Note**
Deleting a snapshot might not reduce your organization's data storage costs. Other snapshots might reference that snapshot's data, and referenced data is always preserved. For example, when you take the first snapshot of a volume with 10 GiB of data, the size of the snapshot is also 10 GiB. Because snapshots are incremental, the second snapshot that you take of the same volume contains only blocks of data that changed since the first snapshot was taken. The second snapshot also references the data in the first snapshot. That is, if you modify 4 GiB of data and take a second snapshot, the size of the second snapshot is 4 GiB. In addition, the second snapshot references the unchanged 6 GiB in the first snapshot. For more information, see How Incremental Snapshots Work.

The previous example will show two entries in your daily AWS Cost and Usage Reports (AWS CUR). AWS CUR captures the snapshot usage amount for a single day. In this example, the usage is 0.33 GiB (10 GiB/30 days) for snap-A, and 0.1333 GiB (4 GiB/30 days) for snap-B. Using the rate of $0.05 per GB month, snap-A costs you 0.33 GiB x $0.05 = $0.0165. Snap-B costs you 0.133 GiB x $0.05 = $0.0066, and you are charged $0.0231 per day for both snapshots. For more information about AWS Cost and Usage Reports, see the AWS Cost and Usage Reports user guide.

<table>
<thead>
<tr>
<th>lineItem/Operation</th>
<th>lineItem/ResourceId</th>
<th>lineItem/UsageAmount</th>
<th>lineItem/UnblendedCost</th>
<th>resourceTags/user:usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>CreateSnapshot</td>
<td>arn:aws:ec2:us-east-1:123:snapshot/snap-A</td>
<td>0.33</td>
<td>0.0165</td>
<td>dev</td>
</tr>
<tr>
<td>CreateSnapshot</td>
<td>arn:aws:ec2:us-east-1:123:snapshot/snap-B</td>
<td>0.133</td>
<td>0.0066</td>
<td>dev</td>
</tr>
</tbody>
</table>

If you delete the first snapshot (snap-A in the first row of the preceding table), any data that is referenced by the second snapshot (snap-B in the second row of the preceding table) is preserved. Remember that the second snapshot contains the 4 GiB of incremental data, and references 6 GiB from the first snapshot. Once you delete snap-A, the size of snap-B becomes 10 GiB (4 changed GiB from the snap-B and 6 unchanged GiB from snap-A).

In your daily AWS CUR, you will then see the usage amount for snap-B as 0.33 GiB (10 GiB/30 days), charged at $0.0165 per day. When you delete a snapshot, the charges for the remaining snapshots are recalculated daily, resulting in the possibility that the cost for each snapshot can change daily as well. For more information, see Cost Allocation for EBS Snapshots.

<table>
<thead>
<tr>
<th>lineItem/Operation</th>
<th>lineItem/ResourceId</th>
<th>lineItem/UsageAmount</th>
<th>lineItem/UnblendedCost</th>
<th>resourceTags/user:usage</th>
</tr>
</thead>
<tbody>
<tr>
<td>CreateSnapshot</td>
<td>arn:aws:ec2:us-east-1:123:snapshot/snap-B</td>
<td>0.33</td>
<td>0.0165</td>
<td>dev</td>
</tr>
</tbody>
</table>

**Elastic IP addresses**

Any Elastic IP addresses that are attached to an instance that you terminate are unattached, but they are still allocated to you. If you don’t need that IP address anymore, release it to avoid additional charges.
For more information, see Releasing an Elastic IP Address in the Amazon EC2 User Guide for Linux Instances.

Services launched by other services

A number of AWS services can launch resources, so be sure to check for anything that might have launched through any service that you've used.

Storage services

When you are minimizing costs for AWS resources, keep in mind that many services might incur storage costs, such as Amazon RDS and Amazon S3.
Consolidated billing for AWS Organizations

You can use the consolidated billing feature in AWS Organizations to consolidate billing and payment for multiple AWS accounts or multiple Amazon Internet Services Pvt. Ltd (AISPL) accounts. Every organization in AWS Organizations has a management account that pays the charges of all the member accounts. For more information about organizations, see the AWS Organizations User Guide.

Consolidated billing has the following benefits:

- **One bill** – You get one bill for multiple accounts.
- **Easy tracking** – You can track the charges across multiple accounts and download the combined cost and usage data.
- **Combined usage** – You can combine the usage across all accounts in the organization to share the volume pricing discounts, Reserved Instance discounts, and Savings Plans. This can result in a lower charge for your project, department, or company than with individual standalone accounts. For more information, see Volume discounts (p. 111).
- **No extra fee** – Consolidated billing is offered at no additional cost.

**Note**
The member account bills are for informational purpose only. The management account might reallocate the additional volume discounts, Reserved Instance, or Savings Plans discounts that your account receives.

If you have access to the management account, you can see a combined view of the AWS charges that the member accounts incur. You also can get a cost report for each member account.

AWS and AISPL accounts can't be consolidated together. If your contact address is in India, you can use AWS Organizations to consolidate AISPL accounts within your organization.

**Important**
When a member account leaves an organization, the member account can no longer access Cost Explorer data that was generated when the account was in the organization. The data isn't deleted, and the management account in the organization can still access the data. If the member account rejoins the organization, the member account can access the data again.

- Consolidated billing in India (p. 110)
- Effective billing date (p. 111)
- Billing and account activity (p. 111)
- Volume discounts (p. 111)
- AWS credits (p. 112)
- Reserved instances (p. 114)
- Understanding Consolidated Bills (p. 117)
Consolidated billing process

AWS Organizations provides consolidated billing so that you can track the combined costs of all the member accounts in your organization. The following steps provide an overview of the process for creating an organization and viewing your consolidated bill.

1. Open the AWS Organizations console or the AWS Billing and Cost Management console. If you open the AWS Billing and Cost Management console, choose Consolidated Billing, and then choose Get started. You are redirected to the AWS Organizations console.
2. Choose Create organization on the AWS Organizations console.
3. Create an organization from the account that you want to be the management account of your new organization. For details, see Creating an Organization. The management account is responsible for paying the charges of all the member accounts.
4. (Optional) Create accounts that are automatically member to the organization. For details, see Creating an AWS account in Your Organization.
5. (Optional) Invite existing accounts to join your organization. For details, see Inviting an AWS account to Join Your Organization.
6. Each month AWS charges your management account for all the member accounts in a consolidated bill.

The management account is billed for all charges of the member accounts. However, unless the organization is changed to support all features in the organization (not consolidated billing features only) and member accounts are explicitly restricted by policies, each member account is otherwise independent from the other member accounts. For example, the owner of a member account can sign up for AWS services, access resources, and use AWS Premium Support unless the management account restricts those actions. Each account owner continues to use their own IAM user name and password, with account permissions assigned independently of other accounts in the organization.

Securing the consolidated billing management account

The owner of the management account in an organization should secure the account by using AWS Multi-Factor Authentication and a strong password that has a minimum of eight characters with both uppercase and lowercase letters, at least one digit, and at least one special character. You can change your password on the AWS Security Credentials page.

Consolidated billing in India

If you sign up for a new account and choose India for your contact address, your user agreement is with Amazon Internet Services Pvt. Ltd (AISPL), a local AWS seller in India. AISPL manages your billing, and your invoice total is listed in rupees instead of in dollars. After you create an account with AISPL, you can't change the country in your contact information.

If you have an existing account with an India address, your account is either with AWS or AISPL, depending on when you opened the account. To learn whether your account is with AWS or AISPL, see the procedure Determining Which Company Your Account Is With. If you're an existing AWS customer, you can continue to use your AWS account. You can also choose to have both an AWS account and an AISPL account, although they can't be consolidated into the same organization. (Currently, you can't migrate an existing account from AWS to AISPL.) If you are in an AISPL organization, the management account can edit the PAN numbers of all member accounts.
If you create an organization from a management account that is with AISPL, you can invite only other AISPL accounts to join your organization. You can't invite AWS accounts.

If you create an organization from a management account that is with AWS, you can invite only other AWS accounts to join your organization. You can't invite AISPL accounts.

**Effective billing date**

When the member account owner accepts your request to join the organization, you immediately become responsible for the member account's charges. If the member account joins in the middle of the month, the management account is billed only for the latter part of the month.

For example, if a member account joins an organization on March 10, then AWS bills the management account for the member account's period of usage starting on March 10. The member account's original owner is still billed for the first part of the month.

**Billing and account activity**

Each month, AWS charges the management account owner, and not the owners of the member accounts. To see the total usage and charges across all the accounts in an organization, see the Bills page of the management account. AWS updates the page multiple times each day. Additionally, AWS makes a downloadable cost report available each day.

Although the owners of the member accounts aren't charged, they can still see their usage and charges by going to their AWS Bills pages. They can't view or obtain data for the management account or any other member accounts on the bill.

**Volume discounts**

For billing purposes, AWS treats all of the accounts in the organization as if they were one account. Some services, such as AWS Data Transfer and Amazon S3, have volume pricing tiers across certain usage dimensions that give you lower prices the more you use the service. With consolidated billing, AWS combines the usage from all accounts to determine which volume pricing tiers to apply, giving you a lower overall price whenever possible. AWS then allocates each member account a portion of the overall volume discount based on the account's usage.

For example, let's say that Bob's consolidated bill includes both Bob's own account and Susan's account. Bob's account is the management account, so he pays the charges for both himself and Susan.

Bob transfers 8 TB of data during the month and Susan transfers 4 TB.

For the purposes of this example, AWS charges $0.17 per GB for the first 10 TB of data transferred and $0.13 for the next 40 TB. This translates into $174.08 per TB (= .17*1024) for the first 10 TB, and $133.12 per TB (= .13*1024) for the next 40 TB. Remember that 1 TB = 1024 GB.

For the 12 TB that Bob and Susan used, Bob's management account is charged ($174.08 * 10 TB) + ($133.12 * 2 TB) = $1740.80 + $266.24 = $2,007.04.

Without the benefit of tiering across the consolidated bill, AWS would have charged Bob and Susan each $174.08 per TB for their usage, for a total of $2,088.96.

To learn more about pricing, see AWS Pricing.
AWS Free Tier for AWS Organizations

For services such as Amazon EC2 that support a free tier, AWS applies the free tier to the total usage across all accounts in an AWS organization. AWS doesn't apply the free tier to each account individually.

AWS provides budgets that track whether you exceed the free tier limits or are forecasted to go over the free tier limits. Free tier budgets are not enabled for organizations by default. Management account can opt in to free tier usage alerts through the Billing and Cost Management console. Free tier usage alerts aren't available to individual member accounts.

For more information about free tiers, see AWS Free Usage Tier FAQs. For more information about AWS Free Tier usage alerts through AWS Budgets and opting in, see AWS Free Tier usage alerts using AWS Budgets (p. 25).

AWS credits

AWS credits are automatically applied to bills to help cover costs that are associated with eligible services. For more information about eligible services, see Redeem Your AWS Promotional Credit. Credits are applied until they are exhausted or they expire.

- Applying AWS credits (p. 112)
- Applying AWS credits across single and multiple accounts (p. 113)
- Sharing AWS credits (p. 114)

Applying AWS credits

Credits are applied using the following process:

1. the section called “selecting-credits-to-apply” (p. 112)
2. the section called “Selecting where to apply credits” (p. 112)

Selecting credits to apply

When selecting credits to apply, AWS prioritizes the credits based on the following parameters:

1. Soonest to expire
2. Least number of applicable products
3. Oldest credit

For example, Jorge has two credits available to him. Credit one is for 10 dollars, it expires January 2019, and it can be used for either Amazon S3 or Amazon EC2. Credit two is for 5 dollars, it expires December 2019, and it can be used only for Amazon EC2. Jorge has sufficient AWS charges to apply all credits. AWS selects credit one for application first because it expires sooner than credit two.

Note

Credits don't require customer selection to apply during the billing process. AWS will automatically apply eligible credits to applicable services.

Selecting where to apply credits

When selecting usage to apply credits to, AWS prioritizes the credits based on the following:
Applying AWS credits to multiple accounts

1. Account that owns the credit
2. Account with the highest spend
3. Service with the highest spend within that account
4. SKU with the highest spend within that service

AWS repeats this process until the applicable credits are exhausted.

AWS applies the credit to the largest available charge across all eligible sellers of record. This means that AWS tries to apply your credits before they expire. So they might use a generic credit for a specific service.

For example, Jorge has two credits available to him. Credit one is for 10 dollars, expires January 2019, and can be used for either Amazon S3 or Amazon EC2. Credit two is for 5 dollars, expires December 2019, and can be used only for Amazon EC2. Jorge has two AWS charges: 100 dollars for Amazon EC2 and 50 dollars for Amazon S3. AWS applies credit one, which expires in January, to the Amazon EC2 charge, which leaves him with a 90-dollar Amazon EC2 charge and a 50-dollar Amazon S3 charge. AWS applies credit two to the remaining 90 dollars of Amazon EC2 usage, and Jorge has to pay 85 dollars for Amazon EC2 and 50 dollars for Amazon S3. He has now used all of his credits.

Applying AWS credits across single and multiple accounts

The following rules specify how AWS applies credits to bills for single accounts and for organizations by default (Credit sharing turned on):

- The billing cycle begins on the first day of each month.
- If an account is owned on the first day of the month by an individual who is not part of an organization, but joins the organization later in the month, AWS applies credits that are owned by the individual to that individual's bill for their usage for that month. The next month, AWS applies credits to the organization the individual joined.
- If an account is owned by an organization at the start of the month, AWS applies credits redeemed by the payer account or by any linked account to the organization's bill, even if the account leaves the organization in the same month. The start of the month begins one second after 0:00 UTC+0. For example, assume that an account leaves an organization on August 1. AWS still applies the August credits the account redeemed to the organization's bill because the account belonged to the organization during that calendar month.
- If an individual leaves an organization during the month, AWS begins applying credits to the individual's account on the first day of the following month.
- Credits are shared with all accounts that join an organization at any point in the month. However, the organization's shared credit pool consists of only credits from accounts that have been part of the organization since the first day of the month.

For example, assume that Susan owns a single account on the first day of the month and then joins an organization during the month. Also assume that she redeems her credits on any day after she joins the organization. AWS applies her credits to her account for usage she incurred from the first of the month to the day that she joined the organization. However, from the first day of the next month, AWS applies the credits to the organization's bill. If Susan leaves the organization, any credits that she redeems are also applied to the organization's bill until the first of the month after her departure. Starting the month after her departure, AWS applies Susan's credits to her bill instead of the organization's bill.

In another example, assume that Susan owns a single account on January 1 and joins an organization on January 11. If Susan redeems 100 dollars of credits on January 18, AWS applies them to her account for the usage that she incurred for the month of January. From February 1st onwards, Susan's credits
are applied to the organization's consolidated bill. If Susan has 50 dollars of credits and leaves the organization on April 16, her credits are applied to the organization's consolidated bill for April. From May onward, Susan's credits are applied to her account.

### Sharing AWS credits

You can turn off credit sharing on the Billing preferences page on the Billing console. The following rules specify how credits are applied to bills for single accounts and for organizations when credit sharing is turned off:

- The billing cycle begins on the first day of each month.
- Credits are applied to only the account that received the credits.
- Bills are calculated using the credit sharing preference that is active on the last day of the month.
- In an organization, only the payer account can turn credit sharing off or on. The credit sharing preference applies to all accounts in an organization.

#### To turn off credit sharing

You can turn off credit sharing through the Billing console.

2. In the navigation pane, choose Billing preferences.
3. Select Disable credit sharing.
4. Choose Save preferences.

### Reserved instances

For billing purposes, the consolidated billing feature of AWS Organizations treats all the accounts in the organization as one account. This means that all accounts in the organization can receive the hourly cost benefit of Reserved Instances that are purchased by any other account.

You can turn off Reserved Instance discount sharing on the Preferences page on the Billing and Cost Management console. For more information, see the section called “Turning off reserved instances and Savings Plans discount sharing” (p. 116).

#### Topics

- Billing examples for specific services (p. 114)
- Turning off reserved instances and Savings Plans discount sharing (p. 116)

### Billing examples for specific services

There are a few other things to know about how consolidated billing works with specific services in AWS.

#### Amazon EC2 reserved instances

For an Amazon EC2 Reserved Instances example, suppose that Bob and Susan each have an account in an organization. Susan has five Reserved Instances of the same type, and Bob has none. During one particular hour, Susan uses three instances and Bob uses six, for a total of nine instances on the organization's consolidated bill. AWS bills five instances as Reserved Instances, and the remaining four instances as regular instances.
Bob receives the cost benefit from Susan's Reserved Instances only if he launches his instances in the same Availability Zone where Susan purchased her Reserved Instances. For example, if Susan specifies us-west-2a when she purchases her Reserved Instances, Bob must specify us-west-2a when he launches his instances to get the cost benefit on the organization's consolidated bill. However, the actual locations of Availability Zones are independent from one account to another. For example, the us-west-2a Availability Zone for Bob's account might be in a different location than the location for Susan's account.

Amazon RDS reserved DB instances

For an Amazon RDS Reserved DB Instances example, suppose that Bob and Susan each have an account in an organization. Susan has five Reserved DB Instances, and Bob has none. During one particular hour, Susan uses three DB Instances and Bob uses six, for a total of nine DB Instances on the consolidated bill. AWS bills five as Reserved DB Instances, and the remaining four as On-Demand DB Instances (for Amazon RDS Reserved DB Instance charges, see the pricing page). Bob receives the cost benefit from Susan's Reserved DB Instances only if he launches his DB Instances in the same region where Susan purchased her Reserved DB Instances.

Also, all of the relevant attributes of Susan's Reserved DB Instances should match the attributes of the DB Instances launched by Bob as described in Reserved DB Instances. For example, let's say Susan purchased a Reserved DB Instance in us-west-2 with the following attributes:

- DB Engine: Oracle
- DB Instance Class: m1.xlarge
- Deployment Type: Multi-AZ

This means that Bob must launch his DB Instances in us-west-2 with the exact same attributes to get the cost benefit on the organization's consolidated bill.

Amazon ElastiCache reserved node instances

For an Amazon ElastiCache Reserved Nodes example, suppose Bob and Susan each have an account in an organization. Susan has five Reserved Nodes, and Bob has none. During one particular hour, Susan uses three nodes and Bob uses six. This makes a total of nine nodes used on the consolidated bill. AWS bills five as Reserved Nodes. AWS bills the remaining four as On-Demand nodes. (For Amazon ElastiCache Reserved Nodes charges, see Amazon ElastiCache Pricing.) Bob receives the cost benefit from Susan's Reserved Nodes only if he launches his On-Demand nodes in the same region where Susan purchased her Reserved Nodes.

Also, to receive the cost benefit of Susan's Reserved Nodes, all attributes of Bob's nodes must match the attributes of the nodes launched by Susan. For example, let's say Susan purchased Reserved Nodes in us-west-2 with the following attributes:

- Cache engine: Redis
- Node type: cache.r3.large

Bob must launch his ElastiCache nodes in us-west-2 with the same attributes to get the cost benefit on the organization's consolidated bill.

Amazon OpenSearch Service reserved instances

For an Amazon OpenSearch Service Reserved Nodes example, suppose Bob and Susan each have an account in an organization. Susan has five Reserved Instances, and Bob has none. During one particular
hour, Susan uses three instances and Bob uses six. This makes a total of nine instances used on the consolidated bill.

AWS bills five as Reserved Instances. AWS bills the remaining four as On-Demand instances. (For Amazon OpenSearch Service Reserved Instance charges, see Amazon OpenSearch Service Pricing.) Bob receives the cost benefit from Susan's Reserved Instances only if he launches his On-Demand instances in the same region where Susan purchased her Reserved Instances.

To receive the cost benefit of Susan's Reserved Instances, Bob also must use the same instance type that Susan reserved. For example, let's say Susan purchased m4.large.elasticsearch instances in us-west-2. Bob must launch his Amazon OpenSearch Service domains in us-west-2 with the same instance type to get the cost benefit on the organization's consolidated bill.

**Turning off reserved instances and Savings Plans discount sharing**

The management account of an organization can turn off Reserved Instance (RI) discount and Savings Plans discount sharing for any accounts in that organization, including the management account. This means that RIs and Savings Plans discounts aren't shared between any accounts that have sharing turned off. To share an RI or Savings Plans discount with an account, both accounts must have sharing turned on. This preference isn't permanent, and you can change it at any time. Each estimated bill is computed using the last set of preferences. The final bill for the month is calculated based on the preferences set at 23:59:59 UTC time on the last day of the month.

**Important**

Turning off RI and Savings Plans discount sharing can result in a higher monthly bill.

**Topics**

- Turning off shared reserved instances and Savings Plans discounts (p. 116)
- Turning on shared reserved instances and Savings Plans discounts (p. 117)

**Turning off shared reserved instances and Savings Plans discounts**

You can turn off RI sharing discounts for individual member accounts.

You can't share Savings Plans with a set of accounts. You can choose to restrict the benefit to the account that purchased the Savings Plans, but not share amongst a group of accounts.

**To turn off shared reserved instances and Savings Plans discounts**

2. In the navigation pane, choose Billing preferences.
3. Expand RI and Savings Plans discount sharing by selecting the arrow symbol.
4. Under RI and Savings Plans discount sharing enabled, select the accounts that you want to disable RI discount sharing for.
5. Choose Add to list to add the accounts to the RI and Savings Plans discount sharing disabled accounts.
6. Choose Save preferences.
7. In the Manage RI Discount, Savings Plans Discount and Credit Sharing dialog box, choose Save.
Turning on shared reserved instances and Savings Plans discounts

You can use the console to turn RI sharing discounts back on for an account.

You can share Savings Plans with a set of accounts. You can either choose to not share the benefit with other accounts, or to open up line item eligibility for the entire consolidated billing family of accounts.

To turn on shared reserved instances discounts

   
   Note
   
   Ensure you're logged in to the management account of your AWS Organizations.

2. In the navigation pane, choose Billing Preferences.

3. Expand RI and Savings Plans discount sharing by selecting the arrow symbol.

4. Under RI and Savings Plans discount sharing disabled, select the accounts that you want to enable RI discount sharing for.

5. Choose Remove from list to remove the accounts from the RI and Savings Plans discount sharing disabled accounts.

6. Choose Save preferences.

7. In the Manage RI Discount and Credit Sharing dialog box, choose Save.

Understanding Consolidated Bills

If you manage an organization in AWS Organizations, you can use consolidated billing to view aggregated usage costs for accounts in the organization. Consolidated billing can also help you reduce those costs. For example, to ensure that you pay the lowest available prices for AWS products and services, AWS offers pricing tiers that reward higher usage with lower prices and discounted rates for purchasing instances in advance (known as reservations or Reserved Instances). Using consolidated billing, you can combine usage from multiple accounts into a single invoice, allowing you to reach the tiers with lower prices faster. You can also apply unused reservations from one account to another account's instance usage.

Topics

- Calculating Consolidated Bills (p. 117)
- Pricing Tiers (p. 118)
- Reserved Instances (p. 120)
- Savings Plans (p. 121)
- Blended Rates and Costs (p. 121)

Calculating Consolidated Bills

In an organization, the management account is responsible for paying all charges that the member accounts incur. If you're an administrator of a management account and you have the appropriate permissions, you can view aggregated usage costs for Reserved Instance discounts and volume tiering for all member accounts. You can also view the charges that individual member accounts incur, because AWS creates a separate bill for each member account based on that account's usage. AWS also includes invoice summaries for each account in the management account invoice. During each billing period,
AWS calculates your estimated charges several times each day so that you can track your costs as your organization incurs them. Your bill is not finalized until the beginning of the next month.

**Note**
Like member accounts, a management account can incur usage charges. However, as a best practice you shouldn't use the management account to run AWS services. An exception is for services and resources that are required to manage the organization itself. For example, as part of managing your consolidated billing you might create an S3 bucket in the management account to store AWS Cost and Usage Reports.

## Pricing Tiers

Some AWS services are priced in tiers, which specify unit costs for defined amounts of AWS usage. As your usage increases, your usage crosses thresholds into new pricing tiers that specify lower unit costs for additional usage in a month. Your AWS usage is measured every month. To measure usage, AWS treats all accounts in an organization as a single account. Member accounts don't reach tier thresholds individually. Instead, all usage in the organization is aggregated for each service, which ensures faster access to lower-priced tiers. As each month begins, your service usage is reset to zero.

Each AWS service publishes its pricing information independently. You can access all individual pricing pages from the [AWS Pricing](https://aws.amazon.com/pricing) page.

### Calculating Costs for Amazon S3 Standard Storage

The following table shows an example of pricing tiers (your costs might vary). For more information, see [Amazon S3 pricing](https://aws.amazon.com/s3/pricing).

#### Amazon S3 Pricing Tiers

<table>
<thead>
<tr>
<th>Tier description</th>
<th>Price per GB</th>
<th>Price per TB</th>
</tr>
</thead>
<tbody>
<tr>
<td>First 1 TB/month</td>
<td>$0.10</td>
<td>$100.00</td>
</tr>
<tr>
<td>Next 49 TB/month</td>
<td>$0.08</td>
<td>$80.00</td>
</tr>
<tr>
<td>Next 450 TB/month</td>
<td>$0.06</td>
<td>$60</td>
</tr>
</tbody>
</table>

The following table shows Amazon S3 usage for an organization that includes a management account and three member accounts.

#### Example S3 Usage Blended Cost

<table>
<thead>
<tr>

<tr>
<td>Next 49 TB/ month</td>
<td>20,000</td>
<td>20</td>
<td>$0.08</td>
<td>80</td>
<td>$1,600.00</td>
<td>0.070737</td>
</tr>
<tr>
<td>Next 450 TB/ month</td>
<td>15,000</td>
<td>15</td>
<td>$0.06</td>
<td>60</td>
<td>$900.00</td>
<td>0.070737</td>
</tr>
<tr>
<td><strong>Member 3</strong></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Next 49 TB/ month</td>
<td>15,000</td>
<td>15</td>
<td>$0.08</td>
<td>80</td>
<td>$1,200.00</td>
<td>0.070737</td>
</tr>
<tr>
<td>Next 450 TB/ month</td>
<td>15,000</td>
<td>15</td>
<td>$0.06</td>
<td>60</td>
<td>$900.00</td>
<td>0.070737</td>
</tr>
</tbody>
</table>

The costs in the preceding table are calculated as follows:
1. All usage for the organization adds up to 95 TB or 95,000 GB. This is rolled up into the management account for recording purposes. The management account has no usage of its own. Only the member accounts incur usage. Member 1 uses 1 TB of storage. This satisfies the first pricing tier for the organization. The second pricing tier is satisfied by all three member accounts (14 TB for member 1 + 20 TB for member 2 + 15 TB for member 3 = 49 TB). The third pricing tier is applied to any usage over 49 TB. In this example, the third pricing tier is applied to total member account usage of 45 TB.

2. The total cost is calculated by adding the cost of the first TB (1,000 GB * $0.10 = 1 TB * $100.00 = $100.00) to the cost of the next 49 TB (49,000 GB * $0.08 = 49 TB * $80.00 = $3920.00) and the cost of the remaining 45 TB (45,000 GB * $0.06 = 45 TB * $60.00 = $2700.00), for a total of $6,720 ($100.00 + $3920.00 + $2700.00 = $6720.00).

The preceding example shows how using consolidated billing in AWS Organizations helps lower the overall monthly cost of storage. If you calculate the cost for each member account separately, the total cost is $7,660 rather than $6,720. By aggregating the usage of the three accounts, you reach the lower-priced tiers sooner. The most expensive storage, the first TB, is charged at the highest price just once, rather than three times. For example, three TB of storage at the most expensive rate of $100/TB would result in a charge of $300. Charging this storage as 1 TB ($100) and two additional TB at $80 ($160) results in a total charge of $260.

**Reserved Instances**

AWS also offers discounted hourly rates in exchange for an upfront fee and term contract.

**Zonal Reserved Instances**

A Reserved Instance is a reservation that provides a discounted hourly rate in exchange for an upfront fee and term contract. Services such as Amazon Elastic Compute Cloud (Amazon EC2) and Amazon Relational Database Service (Amazon RDS) use this approach to sell reserved capacity for hourly use of Reserved Instances. It is not a virtual machine. It is a commitment to pay in advance for specific Amazon EC2 or Amazon RDS instances. In return, you get a discounted rate as compared to On-Demand Instance usage. From a technical perspective, there is no difference between a Reserved Instance and an On-Demand Instance. When you launch an instance, AWS checks for qualifying usage across all accounts in an organization that can be applied to an active reservation. For more information, see Reserved Instances in the Amazon EC2 User Guide for Linux Instances and Working with Reserved DB Instances in the Amazon Relational Database Service Developer Guide.

When you reserve capacity with Reserved Instances, your hourly usage is calculated at a discounted rate for instances of the same usage type in the same Availability Zone.

**Regional Reserved Instances**

Regional Reserved Instances don't reserve capacity. Instead, they provide Availability Zone flexibility and in certain cases instance size flexibility. Availability Zone flexibility allows you to run one or more instances in any Availability Zone in your reserved AWS Region. The Reserved Instance discount is applied to any usage in any Availability Zone. Instance size flexibility provides the Reserved Instance discount to instance usage regardless of size, within that instance family. Instance size flexibility applies to only regional Reserved Instances on the Linux/Unix platform with default tenancy. For more information about regional Reserved Instances, see see Reservation Details in the Cost and Usage Reports Guide in this documentation and Applying Reserved Instances in the Amazon Elastic Compute Cloud User Guide for Linux Instances.

**Calculating Costs for Amazon EC2 with Reserved Instances**

AWS calculates the charges for Amazon EC2 instances by aggregating all the EC2 usage for a specific instance type in a specific AWS Region for an organization.
Calculation Process

AWS calculates blended rates for Amazon EC2 instances using the following logic:

1. AWS aggregates usage for all accounts in an organization for the month or partial month, and calculates costs based on unblended rates such as rates for On-Demand and Reserved Instances. Line items for these costs are created for the management account. This bill computation model attempts to apply the lowest unblended rates that each line item is eligible for. The allocation logic first applies Reserved Instance hours, then free tier hours, and then On-Demand rates to any remaining usage. In the AWS Cost and Usage Reports, you can see line items for these aggregated costs.

2. AWS identifies each Amazon EC2 usage type in each AWS Region and allocates cost from the aggregated management account to the corresponding member account line items for identical usage types in the same region. In the AWS Cost and Usage Reports, the Unblended Rate column shows that rate applied to each line item.

   Note
   When AWS assigns Reserved Instance hours to member accounts, it always starts with the account that purchased the reservation. If there are hours from the capacity reservation left over, AWS applies them to other accounts that operate identical usage types in the same Availability Zone.

   AWS allocates a regional RI by instance size: The RI is applied first to the smallest instance in the instance family, then to the next smallest, and so on. AWS applies an RI or a fraction of an RI based on the normalization factor of the instance. The order in which AWS applies RIs doesn't result in a price difference.

Savings Plans

Savings Plans is a flexible pricing model that can help you reduce your AWS usage bill. Compute Savings Plans enables you to commit to an amount each hour, and receive discounted Amazon EC2, Fargate, and AWS Lambda usage up to that amount.

Calculating Costs with Savings Plans

AWS calculates the charges for Amazon EC2, Fargate, and AWS Lambda by aggregating all usage that's not covered by Reserved Instances, and applying the Savings Plans rates starting with the highest discount.

The Savings Plans are applied to the account that owns the Savings Plans. Then, it is shared with other accounts in the AWS organization. For more information, see Understanding How Savings Plans are Applied to Your Usage in the Savings Plans User Guide.

Blended Rates and Costs

Blended rates are the averaged rates of the Reserved Instances and On-Demand Instances that are used by member accounts in an organization in AWS Organizations. AWS calculates blended costs by multiplying the blended rate for each service with an account's usage of that service.

   Note
   - AWS shows each member account their charges as unblended costs. AWS continues to apply all of the consolidated billing benefits such as reservations and tiered prices across all member accounts in AWS Organizations.
   - Blended rates for Amazon EC2 are calculated at the hourly level.

This section includes examples that show how AWS calculates blended rates for the following services.
Calculating Blended Rates for Amazon S3 Standard Storage

AWS calculates blended rates for Amazon S3 standard storage by taking the total cost of storage and dividing by the amount of data stored per month. Using the example from Calculating Consolidated Bills (p. 117) where we calculated a cost of $6,720 for a management account and three member accounts, we calculate the blended rates for the accounts using the following logic:

1. The blended rate in GB is calculated by dividing the total cost ($6,720) by the amount of storage (95,000 GB) to produce a blended rate of $0.070737/GB. The blended rate in TB is calculated by dividing the total cost ($6,720) by the amount of storage (95 TB) to produce a blended rate of $70.737/TB.
2. The blended cost for each member account is allocated by multiplying the blended rate (for GB or TB) by the usage, resulting in the amounts listed in the Blended Cost column. For example, Member 1 uses 14,000 GB of storage priced at the blended rate of $0.070737 (or 14 TB priced at $70.737) for a blended cost of $990.318.

Calculating Blended Rates for Amazon EC2

The following example shows how the consolidated billing logic aggregates Amazon EC2 costs to the management account and then allocates it to the member accounts based on proportional usage. For this example, all usage is of the same usage type, occurs in the same Availability Zone, and is for the same Reserved Instance term. This example covers Full Upfront and Partial Upfront Reserved Instances.

The following table shows line items that represent the calculation of line items for Amazon EC2 usage for a 720-hour (30-day) month. Each instance is of the same usage type (t2.small) running in the same Availability Zone. The organization has purchased three Reserved Instances for a one-year term. Member Account 1 has three Reserved Instances. Member Account 2 has no Reserved Instances, but uses an On-Demand Instance.

<table>
<thead>
<tr>
<th>Line item account</th>
<th>Billing type</th>

<td>2160</td>
<td>2880</td>
<td>$16.56</td>
<td>$16.56</td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
The data in the preceding table shows the following information:

- The organization purchased 1,440 hours of Reserved Instance capacity at a Full Upfront rate (two EC2 instances).
- The organization purchased 720 hours of Reserved Instance capacity at a Partial Upfront rate (one EC2 instance).
- Member account 1 completely uses the two Full Upfront Reserved Instances and the one Partial Upfront Reserved Instance for a total usage of 2,160 hours. Member account 2 uses 720 hours of an On-Demand Instance. Total usage for the organization is 2,880 hours (2160 + 720 = 2,880).
- The unblended rate for the three Reserved Instances is $0.00. The unblended cost of an RI is always $0.00 because RI charges are not included in blended rate calculations.
- The unblended rate for the On-Demand Instance is $0.023. Unblended rates are associated with the current price of the product. They can't be verified from information in the preceding table.
- The blended rate is calculated by dividing the total cost ($16.56) by the total amount of Amazon EC2 usage (2,880 hours). This produces a rate of $0.005750000 dollars per hour.

AWS Support charges for accounts in an AWS Organizations

AWS calculates AWS Support fees independently for each member account. Typically an AWS Support subscription for a member account does not apply to the entire organization. Each account subscribes independently. Enterprise Support plan customers have the option to include multiple accounts in an aggregated monthly billing. Monthly charges for the Developer, Business, and Enterprise Support plans are based on each month's AWS usage, subject to a monthly minimum. AWS Support fees associated with Reserved Instance and Savings Plan purchases apply to the member accounts that made the purchase. For more information, see AWS Support Plan Pricing.
Security in AWS Billing and Cost Management

Cloud security at AWS is the highest priority. As an AWS customer, you benefit from a data center and network architecture that is built to meet the requirements of the most security-sensitive organizations.

Security is a shared responsibility between AWS and you. The shared responsibility model describes this as security of the cloud and security in the cloud:

- **Security of the cloud** – AWS is responsible for protecting the infrastructure that runs AWS services in the AWS Cloud. AWS also provides you with services that you can use securely. Third-party auditors regularly test and verify the effectiveness of our security as part of the AWS Compliance Programs. To learn about the compliance programs that apply to AWS Billing and Cost Management, see AWS Services in Scope by Compliance Program.
- **Security in the cloud** – Your responsibility is determined by the AWS service that you use. You are also responsible for other factors including the sensitivity of your data, your company’s requirements, and applicable laws and regulations.

This documentation helps you understand how to apply the shared responsibility model when using Billing and Cost Management. The following topics show you how to configure Billing and Cost Management to meet your security and compliance objectives. You also learn how to use other AWS services that help you to monitor and secure your Billing and Cost Management resources.

Topics
- Data protection in AWS Billing and Cost Management (p. 124)
- AWS Identity and Access Management for AWS Billing (p. 125)
- Logging and monitoring in AWS Billing and Cost Management (p. 147)
- Compliance validation for AWS Billing and Cost Management (p. 148)
- Resilience in AWS Billing and Cost Management (p. 148)
- Infrastructure security in AWS Billing and Cost Management (p. 149)

Data protection in AWS Billing and Cost Management

The AWS shared responsibility model applies to data protection in AWS Billing and Cost Management. As described in this model, AWS is responsible for protecting the global infrastructure that runs all of the AWS Cloud. You are responsible for maintaining control over your content that is hosted on this infrastructure. This content includes the security configuration and management tasks for the AWS services that you use. For more information about data privacy, see the Data Privacy FAQ. For information about data protection in Europe, see the AWS Shared Responsibility Model and GDPR blog post on the AWS Security Blog.

For data protection purposes, we recommend that you protect AWS account credentials and set up individual user accounts with AWS Identity and Access Management (IAM). That way each user is given
only the permissions necessary to fulfill their job duties. We also recommend that you secure your data in the following ways:

- Use multi-factor authentication (MFA) with each account.
- Use SSL/TLS to communicate with AWS resources. We recommend TLS 1.2 or later.
- Set up API and user activity logging with AWS CloudTrail.
- Use AWS encryption solutions, along with all default security controls within AWS services.
- Use advanced managed security services such as Amazon Macie, which assists in discovering and securing personal data that is stored in Amazon S3.
- If you require FIPS 140-2 validated cryptographic modules when accessing AWS through a command line interface or an API, use a FIPS endpoint. For more information about the available FIPS endpoints, see Federal Information Processing Standard (FIPS) 140-2.

We strongly recommend that you never put confidential or sensitive information, such as your customers' email addresses, into tags or free-form fields such as a Name field. This includes when you work with Billing and Cost Management or other AWS services using the console, API, AWS CLI, or AWS SDKs. Any data that you enter into tags or free-form fields used for names may be used for billing or diagnostic logs. If you provide a URL to an external server, we strongly recommend that you do not include credentials information in the URL to validate your request to that server.

AWS Identity and Access Management for AWS Billing

AWS Identity and Access Management (IAM) is an AWS service that helps an administrator securely control access to AWS resources. IAM administrators control who can be authenticated (signed in) and authorized (have permissions) to use Billing resources. IAM is an AWS service that you can use with no additional charge.

To start activating access to the Billing console, see Tutorial: Delegate Access to the Billing Console in the IAM User Guide.

Topics
- Audience (p. 125)
- Overview of managing access permissions (p. 127)
- Using identity-based policies (IAM policies) for AWS Billing (p. 129)
- AWS Billing policy examples (p. 134)

Audience

How you use IAM differs, depending on the work you do in AWS Billing.

Service user – If you use the AWS Billing service to do your job, your administrator provides you with the credentials and permissions that you need. As you use more Billing and Cost Management features, you might need additional permissions. Understanding how access is managed helps you request the right permissions from your administrator.

Service administrator – If you're in charge of AWS Billing resources, you probably have full access to AWS Billing. You're responsible to determine which AWS Billing features and resources employees access.
You're also responsible for submitting requests to your IAM administrator to change the permissions of your service users. Review the information on this page to understand the basic concepts of IAM.

IAM administrator – If you're an IAM administrator, you might want to learn more about how you can write policies to manage access to AWS Billing.

This table summarizes the default actions that are permitted in AWS Billing for each type of billing user.

### User types and billing permissions

<table>
<thead>
<tr>
<th>User type</th>
<th>Description</th>
<th>Billing permissions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Account owner</td>
<td>The person or entity that your account is set up under.</td>
<td>• Has full control of all Billing and Cost Management resources.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Receives a monthly invoice of AWS charges.</td>
</tr>
<tr>
<td>IAM user</td>
<td>A person or application that's defined as a user in an account by an account owner or administrative user. Accounts can contain multiple IAM users.</td>
<td>• Has permissions explicitly granted to the user or a group that includes the user.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Can be granted permission to view Billing and Cost Management console pages. For more information, see Overview of managing access permissions (p. 127).</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Can't close accounts.</td>
</tr>
<tr>
<td>Organization management account owner</td>
<td>The person or entity that's associated with an AWS Organizations management account. The management account pays for AWS usage that's incurred by a member account in an organization.</td>
<td>• Has full control of all Billing and Cost Management resources for the management account only.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Receives a monthly invoice of AWS charges for the management account and member accounts.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Views the activity of member accounts in the billing reports for the management account.</td>
</tr>
<tr>
<td>Organization member account owner</td>
<td>The person or entity that's associated with an AWS Organizations member account. The management account pays for AWS usage that's incurred by a member account in an organization.</td>
<td>• Doesn't have permission to review any usage reports or account activity except for its own. Doesn't have access to usage reports or account activity for other member accounts in the organization or for the management account.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Doesn't have permission to view billing reports.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Has permission to update account information only for its own account. Can't access other member accounts or the management account.</td>
</tr>
</tbody>
</table>
Overview of managing access permissions

AWS Billing integrates with the AWS Identity and Access Management (IAM) service so that you can control who in your organization has access to specific pages on the AWS Billing console. You can control access to invoices and detailed information about charges and account activity, budgets, payment methods, and credits.

For instructions on how to activate access to the AWS Billing console, see Tutorial: Delegate Access to the Billing Console in the IAM User Guide.

Topics
- Granting access to your billing information and tools (p. 127)
- Activating access to the AWS Billing console (p. 127)

Granting access to your billing information and tools

The AWS account owner can access billing information and tools by signing in to the AWS Management Console using the account password. We don't recommend that you use the account password for everyday access to the account or share your account credentials with others.

Instead, you should create a special user identity that's called an IAM user for anyone who might need access to the account. This approach provides individual sign-in information for each user, and you can grant each user only the permissions they need. More specifically, you can grant some users limited access to some of your billing information and tools. Then, grant others complete access to all of the information and tools. We also recommend that the account owner also access the account by using an IAM user identity.

By default, IAM users don't have access to the AWS Billing console. You or your account administrator must grant users access. You can do this by activating IAM user access to the Billing console and attaching an IAM policy to your users. This can be either managed or custom. Then, you must activate IAM user access for IAM policies to take effect. You only need to activate IAM user access once.

Note
IAM is a feature of your AWS account. If you're already signed up for a product that's integrated with IAM, you don't need to do anything else to sign up for IAM. Moreover, you're not charged for using IAM.
Permissions for Cost Explorer apply to all accounts and member accounts, regardless of the IAM policies. For more information about Cost Explorer access, see Controlling access for AWS Cost Explorer.

Activating access to the AWS Billing console

By default, IAM users and roles within an AWS account can't access the Billing console pages. This is true even if the IAM user or role has IAM policies that grant access to certain Billing features. The AWS account root user can allow IAM users and roles access to Billing console pages by using the Activate IAM Access setting.

On the Billing console, the Activate IAM Access setting controls IAM user and role access to the following pages:

- Home
- Cost Explorer
- Budgets
- Budgets Reports
- AWS Cost and Usage Reports
- Cost categories
• Cost allocation tags
• Bills
• Payments
• Credits
• Purchase Order
• Billing preferences
• Payment methods
• Tax settings

On the Cost Management console, the **Activate IAM Access** setting controls IAM user and role access to the following pages:

• Home
• Cost Explorer
• Reports
• Rightsizing recommendations
• Savings Plans recommendations
• Savings Plans utilization report
• Savings Plans coverage report
• Reservations overview
• Reservations recommendations
• Reservations utilization report
• Reservations coverage report
• Preferences

**Important**
Activating IAM access alone doesn't grant IAM users and roles the necessary permissions for these Billing console pages. In addition to activating IAM access, you must also attach the required IAM policies to those users or roles. For more information, see [Using identity-based policies (IAM policies) for AWS Billing](p. 129).

The **Activate IAM Access** setting doesn't control access to the following pages and resources:

• The console pages for AWS Cost Anomaly Detection, Savings Plans overview, Savings Plans inventory, Purchase Savings Plans, and Savings Plans cart
• The Cost Management view in the AWS Console Mobile Application
• The Billing SDK APIs (AWS Cost Explorer, AWS Budgets, and AWS Cost and Usage Reports APIs)
• The cost and usage widget on the AWS Console and AWS Systems Manager Application Manager.

To activate the **Activate IAM Access** setting, you must log in to your AWS account using the root user credentials, and then select the setting in the **My Account** page. Activate this setting in each account where you want to allow IAM user and role access to the Billing console pages. If you use AWS Organizations, activate this setting in each management or member account where you want to allow IAM user and role access to console pages.

**Note**
The **Activate IAM Access** setting isn't available to IAM users with administrator access. This setting is available only to the root user of the account.

If the **Activate IAM Access** setting isn't activated, then IAM users and roles in the account can't access the Billing console pages. This is true even if they have administrator access or the required IAM policies.
To activate IAM user and role access to the Billing and Cost Management console

1. Sign in to the AWS Management Console with your root account credentials (specifically, the email address and password that you used to create your AWS account).
2. On the navigation bar, choose your account name, and then choose My Account.
4. Select the Activate IAM Access check box to activate access to the Billing and Cost Management console pages.
5. Choose Update.

After you activate IAM access, you must also attach the required IAM policies to the IAM users or roles. The IAM policies can grant or deny access to specific Billing features. For more information, see Using identity-based policies (IAM policies) for AWS Billing (p. 129).

Using identity-based policies (IAM policies) for AWS Billing

This topic provides examples of several identity-based policies. These policies that demonstrate how an account administrator attaches permissions policies to IAM identities (users, groups, and roles) to grant permissions for performing operations on Billing resources.

For a full discussion of AWS accounts and IAM users, see What Is IAM? in the IAM User Guide.

For instructions on how you can update customer managed policies, see Editing customer managed policies (console) in the IAM User Guide.

Topics
- AWS Billing actions policies (p. 129)
- Managed policies (p. 133)

AWS Billing actions policies

This table summarizes the permissions that allow or deny IAM users access to your billing information and tools. For examples of policies that use these permissions, see AWS Billing policy examples (p. 134).

For a list of actions policies for the AWS Cost Management console, see AWS Cost Management actions policies in the AWS Cost Management user guide.

<table>

## Using IAM policies for Billing

<table>
<thead>
<tr>
<th>Permission name</th>
<th>Description</th>
</tr>
</thead>
</table>
|                                  | • Payment methods  
|                                  | • Purchase orders  
|                                  | • Cost Allocation Tags  |

To allow IAM users to modify these console pages, you must allow both `ModifyBilling` and `ViewBilling`. For an example policy, see Allow IAM users to modify billing information (p. 138).

| aws-portal:ViewAccount          | Allow or deny IAM users permission to view the following Billing and Cost Management console pages:  
|                                 | • Billing Dashboard  
|                                 | • Account Settings  |

| aws-portal:ModifyAccount       | Allow or deny IAM users permission to modify Account Settings.  
|                                 | To allow IAM users to modify account settings, you must allow both `ModifyAccount` and `ViewAccount`.  
|                                 | For an example of a policy that explicitly denies an IAM user access to the Account Settings console page, see Deny access to account settings, but allow full access to all other billing and usage information (p. 139).

| aws-portal:ViewPaymentMethods  | Allow or deny IAM users permission to view Payment Methods.  
| aws-portal:ModifyPaymentMethods| Allow or deny IAM users permission to modify Payment Methods.  
|                                 | To allow users to modify payment methods, you must allow both `ModifyPaymentMethods` and `ViewPaymentMethods`.  

| cur:DescribeReportDefinitions  | Allow or deny IAM users permission to view AWS Cost and Usage Reports.  
|                                 | AWS Cost and Usage Reports permissions apply to all reports that are created using the AWS Cost and Usage Reports Service API and the Billing and Cost Management console. If you create reports using the Billing and Cost Management console, we recommend that you update the permissions for IAM users. Not updating the permissions will result in users losing access to viewing, editing, and removing reports on the console reports page.  
|                                 | For an example of a policy, see Allow IAM users to access the reports console page (p. 136).

</tr>
</tbody>
</table>

**Managed policies**

Managed policies are standalone identity-based policies that you can attach to multiple users, groups, and roles in your AWS account. You can use AWS managed policies to control access in Billing.

An AWS managed policy is a standalone policy that's created and administered by AWS. AWS managed policies are designed to provide permissions for many common use cases. AWS managed policies make it
easier for you to assign appropriate permissions to users, groups, and roles than if you had to write the policies yourself.

You can't change the permissions defined in AWS managed policies. AWS occasionally updates the permissions that are defined in an AWS managed policy. When this occurs, the update affects all principal entities (users, groups, and roles) that the policy is attached to.

Billing provides several AWS managed policies for common use cases.

**Allow full access to the Billing console and to manage purchase orders**

Managed policy name: `AWSPurchaseOrdersServiceRolePolicy`

This managed policy grants full access to the Billing console and to the Purchase orders console. The policy allows the user to view, create, update, and delete the account's purchase orders.

```json
{
  "Version":"2012-10-17",
  "Statement": [;
    {;
      "Effect":"Allow",
      "Action": [
        "aws-portal:*Billing",
        "purchase-orders:*PurchaseOrders"
      ],
      "Resource": "*"
    }
  ]
}
```

**AWS Billing updates to AWS managed policies**

View details about updates to AWS managed policies for AWS Billing since this service began tracking these changes. For automatic alerts about changes to this page, subscribe to the RSS feed on the AWS Billing Document history page.

**AWS Billing policy examples**

This topic contains example policies that you can attach to your IAM user or group to control access to your account's billing information and tools. The following basic rules apply to IAM policies for Billing and Cost Management:

- **Version** is always `2012-10-17`.
- **Effect** is always *Allow* or *Deny*.
- **Action** is the name of the action or a wildcard (`*`).

The action prefix is `budgets` for AWS Budgets, `cur` for AWS Cost and Usage Reports, `aws-portal` for AWS Billing, or `ce` for Cost Explorer.
• **Resource** is always `*` for AWS Billing.

For actions that are performed on a budget resource, specify the budget Amazon Resource Name (ARN).

• It's possible to have multiple statements in one policy.

For a list of actions policies for the AWS Cost Management console, see AWS Cost Management policy examples in the AWS Cost Management user guide.

**Note**

These policies require that you activate IAM user access to the Billing and Cost Management console on the Account Settings console page. For more information, see Activating access to the AWS Billing console (p. 127).

**Topics**

• Allow IAM users to view your billing information (p. 135)
• Allow IAM users to access the reports console page (p. 136)
• Deny IAM users access to the Billing and Cost Management consoles (p. 136)
• Deny AWS Console cost and usage widget access for member accounts (p. 137)
• Deny AWS Console cost and usage widget access for specific IAM users and roles (p. 137)
• Allow full access to AWS services but deny IAM users access to the Billing and Cost Management consoles (p. 137)
• Allow IAM users to view the Billing and Cost Management consoles except for account settings (p. 138)
• Allow IAM users to modify billing information (p. 138)
• Deny access to account settings, but allow full access to all other billing and usage information (p. 139)
• Deposit reports into an Amazon S3 bucket (p. 139)
• Find products and prices (p. 140)
• View costs and usage (p. 140)
• Enable and disable AWS Regions (p. 140)
• View and manage cost categories (p. 140)
• Create, view, edit, or delete AWS Cost and Usage Reports (p. 141)
• View and manage purchase orders (p. 141)
• View and update the Cost Explorer preferences page (p. 142)
• View, create, update, and delete using the Cost Explorer reports page (p. 143)
• View, create, update, and delete reservation and Savings Plans alerts (p. 144)
• Allow read-only access to AWS Cost Anomaly Detection (p. 145)
• Allow AWS Budgets to apply IAM policies and SCPs (p. 146)
• Allow AWS Budgets to apply IAM policies and SCPs and target EC2 and RDS instances (p. 146)
• Allow IAM users to view US tax exemptions and create AWS Support cases (p. 147)

**Allow IAM users to view your billing information**

To allow an IAM user to view your billing information without giving the IAM user access to sensitive account information, use a policy similar to the following example policy. Such a policy prevents users from accessing your password and account activity reports. This policy allows IAM users to view the
following Billing and Cost Management console pages, without giving them access to the **Account Settings** or **Reports** console pages:

- Dashboard
- Cost Explorer
- Bills
- Orders and invoices
- Consolidated Billing
- Preferences
- Credits
- Advance Payment

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": "aws-portal:ViewBilling",
      "Resource": "*"
    }
  ]
}
```

**Allow IAM users to access the reports console page**

To allow an IAM user to access the **Reports** console page and to view the usage reports that contain account activity information, use a policy similar to this example policy.

For definitions of each action, see [AWS Billing actions policies](#).

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "aws-portal:ViewUsage",
        "aws-portal:ViewBilling",
        "cur:DescribeReportDefinitions",
        "cur:PutReportDefinition",
        "cur:DeleteReportDefinition",
        "cur:ModifyReportDefinition"
      ],
      "Resource": "*"
    }
  ]
}
```

**Deny IAM users access to the Billing and Cost Management consoles**

To explicitly deny an IAM user access to the all Billing and Cost Management console pages, use a policy similar to this example policy.

```
{

}
```
Deny AWS Console cost and usage widget access for member accounts

To restrict member (linked) account access to cost and usage data, use your management (payer) account to access the Cost Explorer preferences tab and uncheck **Linked Account Access**. This will deny access to cost and usage data from the Cost Explorer (AWS Cost Management) console, Cost Explorer API, and AWS Console Home page's cost and usage widget regardless of the IAM actions a member account's IAM user or role has.

Deny AWS Console cost and usage widget access for specific IAM users and roles

To deny AWS Console cost and usage widget access for specific IAM users and roles, use the permissions policy below.

**Note**
Adding this policy to an IAM user or role will deny users access to Cost Explorer (AWS Cost Management) console and Cost Explorer APIs as well.

```
{
    "Version": "2012-10-17",
    "Statement": [
        {
            "Effect": "Deny",
            "Action": "ce:*",
            "Resource": "*"
        }
    ]
}
```

Allow full access to AWS services but deny IAM users access to the Billing and Cost Management consoles

To deny IAM users access to everything on the Billing and Cost Management console, use the following policy. Deny user access to AWS Identity and Access Management (IAM) to prevent access to the policies that control access to billing information and tools.

**Important**
This policy doesn't allow any actions. Use this policy in combination with other policies that allow specific actions.

```
{
    "Version": "2012-10-17",
    "Statement": [
        {
            "Effect": "Deny",
            "Action": "aws-portal:*",
            "Resource": "*"
        }
    ]
}
```
Allow IAM users to view the Billing and Cost Management consoles except for account settings

This policy allows read-only access to all of the Billing and Cost Management console. This includes the Payments Method and Reports console pages. However, this policy denies access to the Account Settings page. This means it protects the account password, contact information, and security questions.

```
{
   "Version": "2012-10-17",
   "Statement": [
      {
         "Effect": "Allow",
         "Action": "aws-portal:*Account",
         "Resource": "*"
      },
      {
         "Effect": "Deny",
         "Action": "aws-portal:*Account",
         "Resource": "*"
      }
   ]
}
```

Allow IAM users to modify billing information

To allow IAM users to modify account billing information in the Billing and Cost Management console, allow IAM users to view your billing information. The following policy example allows an IAM user to modify the Consolidated Billing, Preferences, and Credits console pages. It also allows an IAM user to view the following Billing and Cost Management console pages:

- Dashboard
- Cost Explorer
- Bills
- Orders and invoices
- Advance Payment

```
{
   "Version": "2012-10-17",
   "Statement": [
      {
         "Effect": "Allow",
         "Action": "aws-portal:*Billing",
         "Resource": "*"
      }
   ]
}
```
Deny access to account settings, but allow full access to all other billing and usage information

To protect your account password, contact information, and security questions, deny IAM user access to Account Settings while still enabling full access to the rest of the functionality in the Billing and Cost Management console. The following is an example policy.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "aws-portal:*Billing",
        "aws-portal:*Usage",
        "aws-portal:*PaymentMethods"
      ],
      "Resource": "*
    },
    {
      "Effect": "Deny",
      "Action": "aws-portal:*Account",
      "Resource": "*
    }
  ]
}
```

Deposit reports into an Amazon S3 bucket

The following policy allows Billing and Cost Management to save your detailed AWS bills to an Amazon S3 bucket if you own both the AWS account and the Amazon S3 bucket. This policy must be applied to the Amazon S3 bucket, rather than an IAM user. This is because it's a resource-based policy, not a user-based policy. We recommend that you deny IAM user access to the bucket for IAM users who don't need access to your bills.

Replace `bucketname` with the name of your bucket.

For more information, see Using Bucket Policies and User Policies in the Amazon Simple Storage Service User Guide.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Principal": {
        "Service": "billingreports.amazonaws.com"
      },
      "Action": [
        "s3:GetBucketAcl",
        "s3:GetBucketPolicy"
      ],
      "Resource": "arn:aws:s3:::bucketname"
    },
    {
      "Effect": "Allow",
      "Principal": {
        "Service": "billingreports.amazonaws.com"
      },
      "Action": "s3:PutObject",
      "Resource": "arn:aws:s3:::bucketname"}
  ]
}
```
Find products and prices

To allow an IAM user to use the AWS Price List Service API, use the following policy to grant them access.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [
        "pricing:DescribeServices",
        "pricing:GetAttributeValues",
        "pricing:GetProducts"
      ],
      "Resource": [ "*" ]
    }
  ]
}
```

View costs and usage

To allow IAM users to use the AWS Cost Explorer API, use the following policy to grant them access.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [ "ce:*" ],
      "Resource": [ "*" ]
    }
  ]
}
```

Enable and disable AWS Regions

For an example IAM policy that allows users to enable and disable Regions, see AWS: Allows Enabling and Disabling AWS Regions in the IAM User Guide.

View and manage cost categories

To allow IAM users to use, view, and manage cost categories, use the following policy to grant them access.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Effect": "Allow",
      "Action": [ "ce:*" ]
    }
  ]
}
```
Create, view, edit, or delete AWS Cost and Usage Reports

This policy allows an IAM user to create, view, edit, or delete sample-report using the API.

```
{
    "Version": "2012-10-17",
    "Statement": [
        {
            "Sid": "ManageSampleReport",
            "Effect": "Allow",
            "Action": [
                "cur:PutReportDefinition",
                "cur:DeleteReportDefinition",
                "cur:ModifyReportDefinition"
            ],
            "Resource": "arn:aws:cur:*:123456789012:definition/sample-report"
        },
        {
            "Sid": "DescribeReportDefs",
            "Effect": "Allow",
            "Action": "cur:DescribeReportDefinitions",
            "Resource": "*"
        }
    ]
}
```

View and manage purchase orders

This policy allows an IAM user to view and manage purchase orders, using the following policy to grant access.

```
{
    "Version": "2012-10-17",
    "Statement": [
        {
            "Sid": "VisualEditor0",
            "Effect": "Allow",
            "Action": [
                "aws-portal:ViewBilling",
                "purchase-orders:ViewPurchaseOrders",
                "purchase-orders:ModifyPurchaseOrders"
            ],
            "Resource": "*"
        }
    ]
}
```
View and update the Cost Explorer preferences page

This policy allows an IAM user to view and update using the Cost Explorer preferences page.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "VisualEditor0",
      "Effect": "Allow",
      "Action": [
        "aws-portal:ViewBilling",
        "ce:UpdatePreferences"
      ],
      "Resource": "*
    }
  ]
}
```

The following policy allows IAM users to view Cost Explorer, but deny permission to view or edit the Preferences page.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "VisualEditor0",
      "Effect": "Allow",
      "Action": [
        "aws-portal:ViewBilling"
      ],
      "Resource": "*
    },
    {
      "Sid": "VisualEditor1",
      "Effect": "Deny",
      "Action": [
        "ce:GetPreferences",
        "ce:UpdatePreferences"
      ],
      "Resource": "*
    }
  ]
}
```

The following policy allows IAM users to view Cost Explorer, but deny permission to edit the Preferences page.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "VisualEditor0",
      "Effect": "Allow",
      "Action": [
        "aws-portal:ViewBilling"
      ]
    }
  ]
}
```
View, create, update, and delete using the Cost Explorer reports page

This policy allows an IAM user to view, create, update, and delete using the Cost Explorer reports page.

```json
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "VisualEditor0",
      "Effect": "Allow",
      "Action": [
        "aws-portal:ViewBilling",
        "ce:CreateReport",
        "ce:UpdateReport",
        "ce:DeleteReport"
      ],
      "Resource": "*"
    }
  ]
}
```

The following policy allows IAM users to view Cost Explorer, but deny permission to view or edit the Reports page.

```json
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "VisualEditor0",
      "Effect": "Allow",
      "Action": [
        "aws-portal:ViewBilling"
      ],
      "Resource": "*"
    },
    {
      "Sid": "VisualEditor1",
      "Effect": "Deny",
      "Action": [
        "ce:DescribeReport",
        "ce:CreateReport",
        "ce:UpdateReport",
        "ce:DeleteReport"
      ],
      "Resource": "*"
    }
  ]
}
```
The following policy allows IAM users to view Cost Explorer, but deny permission to edit the Reports page.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "VisualEditor0",

        "ce:CreateReport",
        "ce:UpdateReport",
        "ce:DeleteReport"
      ],
      "Resource": "*
    }
  ]
}
```

**View, create, update, and delete reservation and Savings Plans alerts**

This policy allows an IAM user to view, create, update, and delete reservation expiration alerts and Savings Plans alerts. To edit reservation expiration alerts or Savings Plans alerts, a user needs all three granular actions: `ce:CreateNotificationSubscription`, `ce:UpdateNotificationSubscription`, and `ce:DeleteNotificationSubscription`.

```
{
  "Version": "2012-10-17",
  "Statement": [
    {
      "Sid": "VisualEditor0",
      "Effect": "Allow",
      "Action": [
        "aws-portal:ViewBilling",
        "ce:CreateNotificationSubscription",
        "ce:UpdateNotificationSubscription",
        "ce:DeleteNotificationSubscription"
      ],
      "Resource": "*
    }
  ]
}
```

The following policy allows IAM users to view Cost Explorer, but denies permission to view or edit the Reservation Expiration Alerts and Savings Plans alert pages.

```
{
  "Version": "2012-10-17",
  "Statement": [
```
The following policy allows IAM users to view Cost Explorer, but denies permission to edit the Reservation Expiration Alerts and Savings Plans alert pages.

To allow IAM users read-only access to AWS Cost Anomaly Detection, use the following policy to grant them access. ce:ProvideAnomalyFeedback is optional as a part of the read-only access.
Allow AWS Budgets to apply IAM policies and SCPs

This policy allows AWS Budgets to apply IAM policies and service control policies (SCPs) on behalf of the user.

```json
{
    "Version": "2012-10-17",
    "Statement": [
        {
            "Effect": "Allow",
            "Action": [
                "iam:AttachGroupPolicy",
                "iam:AttachRolePolicy",
                "iam:AttachUserPolicy",
                "iam:DetachGroupPolicy",
                "iam:DetachRolePolicy",
                "iam:DetachUserPolicy",
                "organizations:AttachPolicy",
                "organizations:DetachPolicy"
            ],
            "Resource": "*"
        }
    ]
}
```

Allow AWS Budgets to apply IAM policies and SCPs and target EC2 and RDS instances

This policy allows AWS Budgets to apply IAM policies and service control policies (SCPs), and to target Amazon EC2 and Amazon RDS instances on behalf of the user.

Trust policy

```json
{
    "Version": "2012-10-17",
    "Statement": [
        {
            "Effect": "Allow",
            "Principal": {
                "Service": "budgets.amazonaws.com"
            },
            "Action": "sts:AssumeRole"
        }
    ]
}
```

Permissions policy

```json
{
    "Version": "2012-10-17",
    "Statement": [
        {
            "Effect": "Allow",
            "Action": [
```
Allow IAM users to view US tax exemptions and create AWS Support cases

This policy allows an IAM user to view US tax exemptions and create AWS Support cases to upload exemption certificates in the tax exemption console.

```
{
    "Version": "2012-10-17",
    "Statement": [
        {
            "Action": [
                "aws-portal:*",
                "tax:GetExemptions",
                "tax:UpdateExemptions",
                "support:CreateCase",
                "support:AddAttachmentsToSet"
            ],
            "Resource": ["*"]
        }
    ],
    "Effect": "Allow"
}
```

Logging and monitoring in AWS Billing and Cost Management

Monitoring is an important part of maintaining the reliability, availability, and performance of your AWS account. There are several tools available to monitor your Billing and Cost Management usage.

AWS Cost and Usage Reports

AWS Cost and Usage Reports tracks your AWS usage and provides estimated charges associated with your account. Each report contains line items for each unique combination of AWS products, usage type,
and operation that you use in your AWS account. You can customize the AWS Cost and Usage Reports to aggregate the information either by the hour or by the day.

For more information about AWS Cost and Usage Reports, see the Cost and Usage Report Guide.

AWS CloudTrail

Billing and Cost Management is integrated with AWS CloudTrail, a service that provides a record of actions taken by a user, role, or an AWS service in Billing and Cost Management. CloudTrail captures all write and modify API calls for Billing and Cost Management as events, including calls from the Billing and Cost Management console and from code calls to the Billing and Cost Management APIs.

For more information about AWS CloudTrail, see the Logging Billing and Cost Management API calls with AWS CloudTrail (p. 100).

Compliance validation for AWS Billing and Cost Management

Third-party auditors assess the security and compliance of AWS services as part of multiple AWS compliance programs. Billing and Cost Management is not in scope of any AWS compliance programs.

For a list of AWS services in scope of specific compliance programs, see AWS Services in Scope by Compliance Program. For general information, see AWS Compliance Programs.

You can download third-party audit reports using AWS Artifact. For more information, see Downloading Reports in AWS Artifact.

Your compliance responsibility when using Billing and Cost Management is determined by the sensitivity of your data, your company's compliance objectives, and applicable laws and regulations. AWS provides the following resources to help with compliance:

- **Security and Compliance Quick Start Guides** – These deployment guides discuss architectural considerations and provide steps for deploying security- and compliance-focused baseline environments on AWS.
- **AWS Compliance Resources** – This collection of workbooks and guides might apply to your industry and location.
- **Evaluating Resources with Rules** in the AWS Config Developer Guide – The AWS Config service assesses how well your resource configurations comply with internal practices, industry guidelines, and regulations.
- **AWS Security Hub** – This AWS service provides a comprehensive view of your security state within AWS that helps you check your compliance with security industry standards and best practices.

Resilience in AWS Billing and Cost Management

The AWS global infrastructure is built around AWS Regions and Availability Zones. AWS Regions provide multiple physically separated and isolated Availability Zones, which are connected with low-latency, high-throughput, and highly redundant networking. With Availability Zones, you can design and operate applications and databases that automatically fail over between zones without interruption. Availability Zones are more highly available, fault tolerant, and scalable than traditional single or multiple data center infrastructures.

For more information about AWS Regions and Availability Zones, see AWS Global Infrastructure.
Infrastructure security in AWS Billing and Cost Management

As a managed service, AWS Billing and Cost Management is protected by the AWS global network security procedures that are described in the Amazon Web Services: Overview of Security Processes whitepaper.

You use AWS published API calls to access Billing and Cost Management through the network. Clients must support Transport Layer Security (TLS) 1.0 or later. We recommend TLS 1.2 or later. Clients must also support cipher suites with perfect forward secrecy (PFS) such as Ephemeral Diffie-Hellman (DHE) or Elliptic Curve Ephemeral Diffie-Hellman (ECDHE). Most modern systems such as Java 7 and later support these modes.

Additionally, requests must be signed by using an access key ID and a secret access key that is associated with an IAM principal. Or you can use the AWS Security Token Service (AWS STS) to generate temporary security credentials to sign requests.
Quotas and restrictions

The following table describes the current quotas, restrictions, and naming constraints within AWS Billing and Cost Management.

**Topics**
- Budgets (p. 150)
- Budget reports (p. 150)
- AWS Cost Categories (p. 150)
- Cost Explorer (p. 151)
- Purchase orders (p. 151)
- AWS Cost Anomaly Detection (p. 151)
- Advance Pay (p. 152)

### Budgets

<table>
<thead>
<tr>

</tr>
</thead>
<tbody>
<tr>
<td>The number of free budgets allowed for an account</td>
<td>2</td>
</tr>
<tr>
<td>The total number of budgets allowed for a management account</td>
<td>20,000</td>
</tr>
<tr>
<td>The number and type of characters that are allowed in a budget name</td>
<td></td>
</tr>
<tr>
<td>• 0–9</td>
<td></td>
</tr>
<tr>
<td>• A–Z and a–z</td>
<td></td>
</tr>
<tr>
<td>• Space</td>
<td></td>
</tr>
<tr>
<td>• The following symbols: _ . : /=+-%@</td>
<td></td>
</tr>
</tbody>
</table>

### Budget reports

<table>
<thead>
<tr>
<th>Description</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>The maximum number of budget reports allowed</td>
<td>50</td>
</tr>
<tr>
<td>The maximum number of budgets allowed in a budget report</td>
<td>50</td>
</tr>
<tr>
<td>The maximum number of email recipients allowed in a budget report</td>
<td>50</td>
</tr>
</tbody>
</table>

### AWS Cost Categories

<table>
<thead>
<tr>
<th>Description</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>The total number of AWS Cost Categories for a management account</td>
<td>50</td>
</tr>
</tbody>
</table>
The number of cost category rules for a cost category (API) 500

The number of cost category rules for a cost category (UI) 100

Names
- Names must be unique
- Case sensitive

value names
- Names don’t have to be unique

The type and number of characters allowed in a name and value name
- Numbers: 0–9
- Unicode letters
- Space, if it’s not used at the beginning or end of the name
- The following symbols: _ –

The number of split charge rules for a cost category 10

Cost Explorer

The maximum number of reports that you can save for an account 50

The maximum number of filters in the GetCostAndUsage operation (API) 100

Purchase orders

The type of characters that are allowed in a purchase order ID
- A–Z and a–z
- Space
- The following symbols: _ : / = + % @

The number of characters allowed in a purchase order ID 100

The number of line items allowed for a purchase order 100

AWS Cost Anomaly Detection

The maximum number of monitors that you can create for an AWS service monitor type 1 monitor for each account

The maximum number of monitors that you can create for other monitor types (member account, cost category, cost allocation tag) 100 total monitors for each management account
Unsupported services

- AWS Marketplace
- AWS Support
- WorkSpaces
- Cost Explorer
- Budgets
- AWS Shield
- Amazon Route 53
- AWS Certificate Manager
- Upfront and recurring reserved fee and Savings Plan fees

Advance Pay

<table>
<thead>
<tr>
<th>User entity</th>
<th>AWS Inc</th>
</tr>
</thead>
<tbody>
<tr>
<td>Currency</td>
<td>USD</td>
</tr>
</tbody>
</table>

Fund usage after funds are added to your Advance Pay

- Funds can only be used to pay for eligible AWS charges. Non-eligible charges (for example, AWS Marketplace invoices) are charged using the default payment method at the time of Advance Pay registration.
- Funds can't be withdrawn, refunded, or transferred.
- Funds can't be converted to other currencies.

If there are unused funds in your Advance Pay

- You can't change your seller on record.
- You can't change your preferred currency.
- You can't change your default payment method.
## Document history

The following table describes the documentation for this release of the *AWS Billing and Cost Management User Guide*.

<table>
<thead>
<tr>
<th>Update-histroy-change</th>
<th>Update-history-description</th>
<th>Update-history-date</th>
</tr>
</thead>
<tbody>
<tr>
<td>New customer carbon footprint tool</td>
<td>Added a new customer carbon footprint tool feature to view estimates of the carbon emissions associated with your AWS products and services.</td>
<td>February 28, 2022</td>
</tr>
<tr>
<td>New payment profiles</td>
<td>Added a new payment profiles feature to assign automatic payment methods to invoices.</td>
<td>February 17, 2022</td>
</tr>
<tr>
<td>AWSPurchaseOrdersServiceRolePolicy – Update to an existing policy</td>
<td>AWS Billing removed unnecessary permissions.</td>
<td>November 18, 2021</td>
</tr>
<tr>
<td>AWS Billing started tracking changes for AWS managed policies</td>
<td>AWS Billing started tracking changes for its AWS managed policies.</td>
<td>November 18, 2021</td>
</tr>
<tr>
<td>New AWS Cost Management guide</td>
<td>Split the Billing and Cost Management user guide and aligned the feature details into the Billing guide and AWS Cost Management guide to align with the console.</td>
<td>October 20, 2021</td>
</tr>
<tr>
<td>New AWS Cost Anomaly Detection</td>
<td>Added a new AWS Cost Anomaly Detection feature that uses machine learning to continuously monitor your cost and usage to detect unusual spends.</td>
<td>December 16, 2020</td>
</tr>
<tr>
<td>New Purchase Order Management</td>
<td>Added a new purchase order feature to configure how your purchases are reflected on your invoices.</td>
<td>October 15, 2020</td>
</tr>
<tr>
<td>New Budget Actions</td>
<td>Added a new AWS Budget actions feature to run an action on your behalf when a budget exceeds a certain cost or usage threshold.</td>
<td>October 15, 2020</td>
</tr>
<tr>
<td>New AWS Cost Categories</td>
<td>Added a new AWS Cost Categories feature to map AWS costs into meaningful categories.</td>
<td>April 20, 2020</td>
</tr>
<tr>
<td>New Heritage Tax feature</td>
<td>Added a new feature that enables you to use your tax registration information with your linked accounts.</td>
<td>March 19, 2020</td>

<tr>
<td>Added a new Cost Explorer dimension and AWS Cost and Usage Reports line item (p. 153)</td>
<td>Added a new Cost Explorer dimension and AWS Cost and Usage Reports line item.</td>
<td>March 27, 2018</td>
</tr>
<tr>
<td>Added purchase recommendations to the Cost Explorer API</td>
<td>Added access to the Amazon EC2 Reserved Instance (RI) purchase recommendations via the Cost Explorer API.</td>
<td>March 20, 2018</td>
</tr>
<tr>
<td>Added RI coverage for Amazon RDS, Amazon Redshift, and ElastiCache</td>
<td>Reserved Instance (RI) coverage for Amazon RDS, Amazon Redshift, and ElastiCache.</td>
<td>March 13, 2018</td>
</tr>
<tr>
<td>Added RI coverage to the Cost Explorer API</td>
<td>Added <code>GetReservationCoverage</code> to the Cost Explorer API.</td>
<td>February 22, 2018</td>
</tr>
<tr>
<td>Added AWS free tier alerts</td>
<td>Added AWS Free Tier alerts that enable you stay under the free tier limits.</td>
<td>December 13, 2017</td>
</tr>
<tr>
<td>RI recommendations</td>
<td>Added RI recommendations based on previous usage.</td>
<td>November 20, 2017</td>
</tr>
<tr>
<td>Cost Explorer API</td>
<td>Enabled programmatic access to Cost Explorer via API.</td>
<td>November 20, 2017</td>
</tr>
<tr>
<td>RI utilization alerts for additional services</td>
<td>Added notifications for additional services.</td>
<td>November 10, 2017</td>
</tr>
<tr>
<td>Added RI reports</td>
<td>Expanded RI reports to Amazon RDS, Redshift, and ElastiCache.</td>
<td>November 10, 2017</td>
</tr>
<tr>
<td>Discount sharing preferences</td>
<td>Updated preferences so that AWS credits and RI discount sharing can be turned off.</td>
<td>November 6, 2017</td>
</tr>
<tr>
<td>New Amazon S3 console (p. 153)</td>
<td>Updated for the new Amazon S3 console.</td>
<td>September 15, 2017</td>
</tr>
<tr>
<td>RI utilization alerts</td>
<td>Added notifications for when RI utilization drops below a preset percentage-based threshold.</td>
<td>August 21, 2017</td>
</tr>
<tr>
<td>Updated Cost Explorer UI</td>
<td>Released a new Cost Explorer UI.</td>
<td>August 16, 2017</td>
</tr>
<tr>
<td>AWS Marketplace data integration (p. 153)</td>
<td>Added AWS Marketplace so that customers can see their data reflected in all billing artifacts, including the Bills page, Cost Explorer, and more.</td>
<td>August 10, 2017</td>
</tr>
<tr>
<td>Consolidated billing with organizations</td>
<td>Updated the consolidated billing with organizations behavior.</td>
<td>June 20, 2017</td>
</tr>
<tr>
<td>Feature</td>
<td>Description</td>
<td>Date</td>
</tr>
<tr>
<td>----------------------------------------------</td>
<td>-----------------------------------------------------------------------------</td>
<td>-------------------</td>
</tr>
<tr>
<td>Linked account access and usage type groups in budgets</td>
<td>Added support for creating cost and usage budgets based on specific usage types and usage type groups, and extended budget creation capabilities to all account types.</td>
<td>June 19, 2017</td>
</tr>
<tr>
<td>Regional offer files</td>
<td>The AWS Price List API now offers regional offer files for each service.</td>
<td>April 20, 2017</td>
</tr>
<tr>
<td>Added Cost Explorer advanced options</td>
<td>You can now filter Cost Explorer reports by additional advanced options, such as refunds, credits, RI upfront fees, RI recurring charges, and support charges.</td>
<td>March 22, 2017</td>
</tr>
<tr>
<td>Added a Cost Explorer report</td>
<td>You can now track your Reserved Instance (RI) coverage in Cost Explorer.</td>
<td>March 20, 2017</td>
</tr>
<tr>
<td>Added Cost Explorer filters</td>
<td>You can now filter Cost Explorer reports by tenancy, platform, and the Amazon EC2 Spot and Scheduled Reserved Instance purchase options.</td>
<td>March 20, 2017</td>
</tr>
<tr>
<td>Cost Explorer and budgets for AISPL</td>
<td>AISPL users can now use Cost Explorer and budgets.</td>
<td>March 6, 2017</td>
</tr>
<tr>
<td>Added grouping for Cost Explorer usage types</td>
<td>Cost Explorer supports grouping for both cost and usage data, enabling customers to identify their cost drivers by cross-referencing their cost and usage charts.</td>
<td>February 24, 2017</td>
</tr>
<tr>
<td>Added a Cost Explorer report</td>
<td>You can now track your monthly Amazon EC2 Reserved Instance (RI) utilization in Cost Explorer.</td>
<td>December 16, 2016</td>
</tr>
<tr>
<td>Added a Cost Explorer report</td>
<td>You can now track your daily Amazon EC2 Reserved Instance (RI) utilization in Cost Explorer.</td>
<td>December 15, 2016</td>
</tr>
<tr>
<td>Added AWS-generated cost allocation tags</td>
<td>You can now activate the AWS-generated tag <code>createdBy</code> to track who created an AWS resource.</td>
<td>December 12, 2016</td>
</tr>
<tr>
<td>Added Cost Explorer advanced options</td>
<td>You can now exclude tagged resources from your Cost Explorer reports.</td>
<td>November 18, 2016</td>
</tr>
<tr>
<td>Amazon QuickSight integration for AWS Cost and Usage Reports (p. 153)</td>
<td>AWS Cost and Usage Reports now provide customized queries for uploading your data into Amazon QuickSight.</td>

### IAM user permissions
You can now enable AWS Identity and Access Management (IAM) users and federated users to access and manage your account settings, view your bills, and perform cost management. For example, you can grant people in your finance department full access to the financial setup and control of your AWS account, without having to give them access to your production AWS environment.  

**July 7, 2014**

### Cost Explorer launched
Cost Explorer provides a visualization of your AWS costs that enables you to analyze your costs in multiple ways.  

**April 8, 2014**

### Version 2.0 published (p. 153)
The *AWS Billing and Cost Management User Guide* has been reorganized and rewritten to use the new Billing and Cost Management console.  

**October 25, 2013**
