Welcome

Amazon Connect is a cloud-based contact center solution that makes it easy to set up and manage a customer contact center and provide reliable customer engagement at any scale.

Amazon Connect provides rich metrics and real-time reporting that allow you to optimize contact routing. You can also resolve customer issues more efficiently by putting customers in touch with the right agents.

There are limits to the number of Amazon Connect resources that you can create and limits to the number of requests that you can make per second. For more information, see Amazon Connect Service Quotas in the Amazon Connect Administrator Guide.

To connect programmatically to an AWS service, you use an endpoint. For a list of Amazon Connect endpoints, see Amazon Connect Endpoints.

This document was last published on April 3, 2020.
Actions

The following actions are supported:

- CreateUser (p. 3)
- DeleteUser (p. 7)
- DescribeUser (p. 9)
- DescribeUserHierarchyGroup (p. 12)
- DescribeUserHierarchyStructure (p. 15)
- GetContactAttributes (p. 18)
- GetCurrentMetricData (p. 20)
- GetFederationToken (p. 26)
- GetMetricData (p. 28)
- ListContactFlows (p. 37)
- ListHoursOfOperations (p. 40)
- ListPhoneNumbers (p. 43)
- ListQueues (p. 46)
- ListRoutingProfiles (p. 49)
- ListSecurityProfiles (p. 52)
- ListTagsForResource (p. 55)
- ListUserHierarchyGroups (p. 57)
- ListUsers (p. 60)
- StartChatContact (p. 63)
- StartOutboundVoiceContact (p. 67)
- StopContact (p. 71)
- TagResource (p. 73)
- UntagResource (p. 75)
- UpdateContactAttributes (p. 77)
- UpdateUserHierarchy (p. 80)
- UpdateUserIdentityInfo (p. 82)
- UpdateUserPhoneConfig (p. 84)
- UpdateUserRoutingProfile (p. 86)
- UpdateUserSecurityProfiles (p. 88)
CreateUser

Creates a user account for the specified Amazon Connect instance.

For information about how to create user accounts using the Amazon Connect console, see Add Users in the Amazon Connect Administrator Guide.

Request Syntax

```
PUT /users/InstanceId HTTP/1.1
Content-type: application/json

{
    "DirectoryUserId": "string",
    "HierarchyGroupId": "string",
    "IdentityInfo": {
        "Email": "string",
        "FirstName": "string",
        "LastName": "string"
    },
    "Password": "string",
    "PhoneConfig": {
        "AfterContactWorkTimeLimit": number,
        "AutoAccept": boolean,
        "DeskPhoneNumber": "string",
        "PhoneType": "string"
    },
    "RoutingProfileId": "string",
    "SecurityProfileIds": [ "string" ],
    "Tags": {
        "string": "string"
    },
    "Username": "string"
}
```

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 3)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Request Body

The request accepts the following data in JSON format.

DirectoryUserId (p. 3)

The identifier of the user account in the directory used for identity management. If Amazon Connect cannot access the directory, you can specify this identifier to authenticate users. If you include the identifier, we assume that Amazon Connect cannot access the directory. Otherwise, the identity information is used to authenticate users from your directory.
This parameter is required if you are using an existing directory for identity management in Amazon Connect when Amazon Connect cannot access your directory to authenticate users. If you are using SAML for identity management and include this parameter, an error is returned.

Type: String
Required: No

HierarchyGroupId (p. 3)
The identifier of the hierarchy group for the user.
Type: String
Required: No

IdentityInfo (p. 3)
The information about the identity of the user.
Type: UserIdentityInfo (p. 119) object
Required: No

Password (p. 3)
The password for the user account. A password is required if you are using Amazon Connect for identity management. Otherwise, it is an error to include a password.
Type: String
Pattern: /^(?=.*[a-z])(?=.*[A-Z])(?=.*\d)[a-zA-Z\d\S]{8,64}$/
Required: No

PhoneConfig (p. 3)
The phone settings for the user.
Type: UserPhoneConfig (p. 120) object
Required: Yes

RoutingProfileId (p. 3)
The identifier of the routing profile for the user.
Type: String
Required: Yes

SecurityProfileIds (p. 3)
The identifier of the security profile for the user.
Type: Array of strings
Array Members: Minimum number of 1 item. Maximum number of 10 items.
Required: Yes

Tags (p. 3)
One or more tags.
Type: String to string map
Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!aws:)[a-zA-Z-+=._:/]+$  

Value Length Constraints: Maximum length of 256.

Required: No

Username (p. 3)

The user name for the account. For instances not using SAML for identity management, the user name can include up to 20 characters. If you are using SAML for identity management, the user name can include up to 64 characters from [a-zA-Z0-9-\._@]+.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

Response Syntax

HTTP/1.1 200
Content-type: application/json

{  
  "UserArn": "string",
  "UserId": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

UserArn (p. 5)

The Amazon Resource Name (ARN) of the user account.

Type: String

UserId (p. 5)

The identifier of the user account.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409
**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**LimitExceeded Exception**

The allowed limit for the resource has been exceeded.

HTTP Status Code: 429

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

**See Also**

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
DeleteUser

Deletes a user account from the specified Amazon Connect instance.

For information about what happens to a user's data when their account is deleted, see Delete Users from Your Amazon Connect Instance in the Amazon Connect Administrator Guide.

Request Syntax

```
DELETE /users/InstanceId/UserId HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>InstanceId (p. 7)</td>
<td>The identifier of the Amazon Connect instance.</td>
</tr>
<tr>
<td></td>
<td>Length Constraints: Minimum length of 1. Maximum length of 100.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>UserId (p. 7)</td>
<td>The identifier of the user.</td>
</tr>
</tbody>
</table>

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400
InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
DescribeUser

Describes the specified user account. You can find the instance ID in the console (it's the final part of the ARN). The console does not display the user IDs. Instead, list the users and note the IDs provided in the output.

Request Syntax

```
GET /users/InstanceId/UserId HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

**InstanceId (p. 9)**

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

**UserId (p. 9)**

The identifier of the user account.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "User": {
      "Arn": "string",
      "DirectoryUserId": "string",
      "HierarchyGroup": "string",
      "Id": "string",
      "IdentityInfo": {
         "Email": "string",
         "FirstName": "string",
         "LastName": "string"
      },
      "PhoneConfig": {
         "AfterContactWorkTimeLimit": number,
         "AutoAccept": boolean,
         "DeskPhoneNumber": "string",
         "PhoneType": "string"
      },
      "RoutingProfileId": "string",
      "SecurityProfileIds": [ "string" ],
      "Tags": {
         "string": "string"
      },
      "Username": "string"
   }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

User (p. 9)

Information about the user account and configuration settings.

Type: User (p. 117) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

• AWS SDK for PHP V3
• AWS SDK for Python
• AWS SDK for Ruby V3
DescribeUserHierarchyGroup

Describes the specified hierarchy group.

Request Syntax

```
GET /user-hierarchy-groups/\textit{InstanceId}/\textit{HierarchyGroupId} HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

**HierarchyGroupId (p. 12)**

The identifier of the hierarchy group.

**InstanceId (p. 12)**

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "HierarchyGroup": {
        "Arn": "string",
        "HierarchyPath": {
            "LevelFive": {
                "Arn": "string",
                "Id": "string",
                "Name": "string"
            },
            "LevelFour": {
                "Arn": "string",
                "Id": "string",
                "Name": "string"
            },
            "LevelOne": {
                "Arn": "string",
                "Id": "string",
                "Name": "string"
            },
            "LevelThree": {
                "Arn": "string",
                "Id": "string",
                "Name": "string"
            },
            "LevelTwo": {
                "Arn": "string",
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HierarchyGroup (p. 12)

Information about the hierarchy group.

Type: HierarchyGroup (p. 99) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

DescribeUserHierarchyStructure

Describes the hierarchy structure of the specified Amazon Connect instance.

Request Syntax

GET /user-hierarchy-structure/InstanceId HTTP/1.1

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 15)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

```json
{
  "HierarchyStructure": {
    "LevelFive": {
      "Arn": "string",
      "Id": "string",
      "Name": "string"
    },
    "LevelFour": {
      "Arn": "string",
      "Id": "string",
      "Name": "string"
    },
    "LevelOne": {
      "Arn": "string",
      "Id": "string",
      "Name": "string"
    },
    "LevelThree": {
      "Arn": "string",
      "Id": "string",
      "Name": "string"
    },
    "LevelTwo": {
      "Arn": "string",
      "Id": "string",
      "Name": "string"
    }
  }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

HierarchyStructure (p. 15)

Information about the hierarchy structure.

Type: HierarchyStructure (p. 103) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

GetContactAttributes

Retrieves the contact attributes for the specified contact.

Request Syntax

```
GET /contact/attributes/InstanceId/InitialContactId HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

- **InitialContactId** *(p. 18)*
  The identifier of the initial contact.
  Length Constraints: Minimum length of 1. Maximum length of 256.

- **InstanceId** *(p. 18)*
  The identifier of the Amazon Connect instance.
  Length Constraints: Minimum length of 1. Maximum length of 100.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json
{
  "Attributes": {
    "string": "string"
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

- **Attributes** *(p. 18)*
  Information about the attributes.
  Type: String to string map
  Key Length Constraints: Minimum length of 1. Maximum length of 32767.
  Value Length Constraints: Minimum length of 0. Maximum length of 32767.
Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

GetCurrentMetricData

Gets the real-time metric data from the specified Amazon Connect instance.

For a description of each metric, see Real-time Metrics Definitions in the Amazon Connect Administrator Guide.

Request Syntax

POST /metrics/current/InstanceId HTTP/1.1
Content-type: application/json

{
  "CurrentMetrics": [
    {
      "Name": "string",
      "Unit": "string"
    }
  ],
  "Filters": {
    "Channels": [ "string" ],
    "Queues": [ "string" ]
  },
  "Groupings": [ "string" ],
  "MaxResults": number,
  "NextToken": "string"
}

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 20)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Request Body

The request accepts the following data in JSON format.

CurrentMetrics (p. 20)

The metrics to retrieve. Specify the name and unit for each metric. The following metrics are available. For a description of each metric, see Real-time Metrics Definitions in the Amazon Connect Administrator Guide.

AGENTS_AFTER_CONTACT_WORK

Unit: COUNT

AGENTS_AVAILABLE

Unit: COUNT

AGENTS_ERROR

Unit: COUNT
AGENTS_NON_PRODUCTIVE
  Unit: COUNT
AGENTS_ON_CALL
  Unit: COUNT
AGENTS_ON_CONTACT
  Unit: COUNT
AGENTS_ONLINE
  Unit: COUNT
AGENTS_STAFFED
  Unit: COUNT
CONTACTS_IN_QUEUE
  Unit: COUNT
CONTACTS_SCHEDULED
  Unit: COUNT
OLDEST_CONTACT_AGE
  Unit: SECONDS
SLOTS_ACTIVE
  Unit: COUNT
SLOTS_AVAILABLE
  Unit: COUNT

Type: Array of CurrentMetric (p. 94) objects

Required: Yes

Filters (p. 20)

The queues, up to 100, or channels, to use to filter the metrics returned. Metric data is retrieved only for the resources associated with the queues or channels included in the filter. You can include both queue IDs and queue ARNs in the same request. The only supported channel is VOICE.

Type: Filters (p. 98) object

Required: Yes

Groupings (p. 20)

The grouping applied to the metrics returned. For example, when grouped by QUEUE, the metrics returned apply to each queue rather than aggregated for all queues. If you group by CHANNEL, you should include a Channels filter. The only supported channel is VOICE.

If no Grouping is included in the request, a summary of metrics is returned.

Type: Array of strings

Array Members: Maximum number of 2 items.
Valid Values: QUEUE | CHANNEL

Required: No

**MaxResults (p. 20)**

The maximum number of results to return per page.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

**NextToken (p. 20)**

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

The token expires after 5 minutes from the time it is created. Subsequent requests that use the token must use the same request parameters as the request that generated the token.

Type: String

Required: No

### Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "DataSnapshotTime": number,
  "MetricResults": [
    {
      "Collections": [
        {
          "Metric": {
            "Name": "string",
            "Unit": "string"
          },
          "Value": number
        }
      ],
      "Dimensions": {
        "Channel": "string",
        "Queue": {
          "Arn": "string",
          "Id": "string"
        }
      }
    }
  ],
  "NextToken": "string"
}
```

### Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
DataSnapshotTime (p. 22)

The time at which the metrics were retrieved and cached for pagination.

Type: Timestamp

MetricResults (p. 22)

Information about the real-time metrics.

Type: Array of CurrentMetricResult (p. 96) objects

NextToken (p. 22)

If there are additional results, this is the token for the next set of results.

The token expires after 5 minutes from the time it is created. Subsequent requests that use the token must use the same request parameters as the request that generated the token.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Example

The following example retrieves the specified real-time metrics.
Sample Request

```
{
  "InstanceId": "12345678-1234-5678-aabb-123456abcdef",
  "Filters": {
    "Queues": [
      "1111111-2222-fcfc-abab-333333333333",
    ],
    "Channels": ["VOICE"]
  },
  "Groupings": [
    "CHANNEL",
    "QUEUE"
  ],
  "CurrentMetrics": [
    {
      "Name": "AGENTS_ONLINE",
      "Unit": "COUNT"
    },
    {
      "Name": "AGENTS_AVAILABLE",
      "Unit": "COUNT"
    },
    {
      "Name": "OLDEST_CONTACT_AGE",
      "Unit": "SECONDS"
    },
    {
      "Name": "AGENTS_ERROR",
      "Unit": "COUNT"
    }
  ]
}
```

Sample Response

```
{
  "DataSnapshotTime": 1549059604.884,
  "MetricResults": [
    {
      "Collections": [
        {
          "Metric": {
            "Name": "AGENTS_ONLINE",
            "Unit": "COUNT"
          },
          "Value": 1
        },
        {
          "Metric": {
            "Name": "AGENTS_AVAILABLE",
            "Unit": "COUNT"
          },
          "Value": 1
        },
        {
          "Metric": {
            "Name": "OLDEST_CONTACT_AGE",
            "Unit": "SECONDS"
          },
          "Value": 0
        }
      ]
    }
  ]
}
```

GetFederationToken

Retrieves a token for federation.

Request Syntax

GET /user/federate/InstanceId HTTP/1.1

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 26)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
    "Credentials": {
        "AccessToken": "string",
        "AccessTokenExpiration": number,
        "RefreshToken": "string",
        "RefreshTokenExpiration": number
    }
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Credentials (p. 26)

The credentials to use for federation.

Type: Credentials (p. 93) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).
DuplicateResourceException

A resource with the specified name already exists.

HTTP Status Code: 409

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

UserNotFoundException

No user with the specified credentials was found in the Amazon Connect instance.

HTTP Status Code: 404

See Also

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
GetMetricData

Gets historical metric data from the specified Amazon Connect instance.

For a description of each historical metric, see Historical Metrics Definitions in the Amazon Connect Administrator Guide.

Request Syntax

POST /metrics/historical/InstanceId HTTP/1.1
Content-type: application/json

{
   "EndTime": number,
   "Filters": {
      "Channels": [ "string" ],
      "Queues": [ "string" ]
   },
   "Groupings": [ "string" ],
   "HistoricalMetrics": [
      {
         "Name": "string",
         "Statistic": "string",
         "Threshold": {
            "Comparison": "string",
            "ThresholdValue": number
         },
         "Unit": "string"
      }
   ],
   "MaxResults": number,
   "NextToken": "string",
   "StartTime": number
}

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 28)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

Request Body

The request accepts the following data in JSON format.

EndTime (p. 28)

The timestamp, in UNIX Epoch time format, at which to end the reporting interval for the retrieval of historical metrics data. The time must be specified using an interval of 5 minutes, such as 11:00, 11:05, 11:10, and must be later than the start time timestamp.

The time range between the start and end time must be less than 24 hours.

Type: Timestamp
Required: Yes

**Filters (p. 28)**

The queues, up to 100, or channels, to use to filter the metrics returned. Metric data is retrieved only for the resources associated with the queues or channels included in the filter. You can include both queue IDs and queue ARNs in the same request. The only supported channel is VOICE.

Type: Filters (p. 98) object

Required: Yes

**Groupings (p. 28)**

The grouping applied to the metrics returned. For example, when results are grouped by queue, the metrics returned are grouped by queue. The values returned apply to the metrics for each queue rather than aggregated for all queues.

The only supported grouping is QUEUE.

If no grouping is specified, a summary of metrics for all queues is returned.

Type: Array of strings

Array Members: Maximum number of 2 items.

Valid Values: QUEUE | CHANNEL

Required: No

**HistoricalMetrics (p. 28)**

The metrics to retrieve. Specify the name, unit, and statistic for each metric. The following historical metrics are available. For a description of each metric, see Historical Metrics Definitions in the Amazon Connect Administrator Guide.

<table>
<thead>
<tr>

Threshold: Only "Less than" comparisons are supported, with the following service level
thresholds: 15, 20, 25, 30, 45, 60, 90, 120, 180, 240, 300, 600

Type: Array of HistoricalMetric (p. 104) objects

Required: Yes
MaxResults (p. 28)
The maximum number of results to return per page.
Type: Integer
Valid Range: Minimum value of 1. Maximum value of 100.

Required: No
NextToken (p. 28)
The token for the next set of results. Use the value returned in the previous response in the next
request to retrieve the next set of results.
Type: String
Required: No
**StartTime (p. 28)**

The timestamp, in UNIX Epoch time format, at which to start the reporting interval for the retrieval of historical metrics data. The time must be specified using a multiple of 5 minutes, such as 10:05, 10:10, 10:15.

The start time cannot be earlier than 24 hours before the time of the request. Historical metrics are available only for 24 hours.

Type: Timestamp

Required: Yes

---

**Response Syntax**

HTTP/1.1 200
Content-type: application/json

{
  "MetricResults": [
    {
      "Collections": [
        {
          "Metric": {
            "Name": "string",
            "Statistic": "string",
            "Threshold": {
              "Comparison": "string",
              "ThresholdValue": number
            },
            "Unit": "string"
          },
          "Value": number
        }
      ],
      "Dimensions": {
        "Channel": "string",
        "Queue": {
          "Arn": "string",
          "Id": "string"
        }
      }
    },
    "NextToken": "string"
  }
}

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**MetricResults (p. 32)**

Information about the historical metrics.

If no grouping is specified, a summary of metric data is returned.

Type: Array of HistoricalMetricResult (p. 107) objects
Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

Example

The following example retrieves the specified historical metrics.

**Sample Request**

```json
{
   "InstanceId" : "12345678-1234-5678-aabb-123456abcdef",
   "StartTime": 1548979200,
   "EndTime": 1549051200,
   "Filters" : {
      "Queues" : ["11111111-2222-fcfc-abab-333333333333"],
      "Channels" : ["VOICE"]
   },
   "Groupings" : [
```
"QUEUE",
"CHANNEL"
],
"HistoricalMetrics" : [
  {
    "Name" : "AFTER_CONTACT_WORK_TIME",

ListContactFlows

Provides information about the contact flows for the specified Amazon Connect instance.

For more information about contact flows, see Contact Flows in the Amazon Connect Administrator Guide.

Request Syntax

```
GET /contact-flows-summary/InstanceId?
contactFlowTypes=ContactFlowTypes&maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

**ContactFlowTypes (p. 37)**

The type of contact flow.

Array Members: Maximum number of 10 items.

Valid Values: CONTACT_FLOW | CUSTOMER_QUEUE | CUSTOMER_HOLD | CUSTOMER_WHISPER | AGENT_HOLD | AGENT_WHISPER | OUTBOUND_WHISPER | AGENT_TRANSFER | QUEUE_TRANSFER

**InstanceId (p. 37)**

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

**MaxResults (p. 37)**

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

**NextToken (p. 37)**

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "ContactFlowSummaryList": [
        {
            "Arn": "string",
            "ContactFlowType": "string",
        }
    ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**ContactFlowSummaryList (p. 37)**

Information about the contact flows.

Type: Array of ContactFlowSummary (p. 92) objects

**NextToken (p. 37)**

If there are additional results, this is the token for the next set of results.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

ListHoursOfOperations

Provides information about the hours of operation for the specified Amazon Connect instance.

For more information about hours of operation, see Set the Hours of Operation for a Queue in the Amazon Connect Administrator Guide.

Request Syntax

```
GET /hours-of-operations-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken
HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 40)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

MaxResults (p. 40)

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken (p. 40)

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "HoursOfOperationSummaryList": [ 
      {
         "Arn": "string",
         "Id": "string",
         "Name": "string"
      }
   ],
   "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**HoursOfOperationSummaryList (p. 40)**

Information about the hours of operation.

Type: Array of [HoursOfOperationSummary](p. 108) objects

**NextToken (p. 40)**

If there are additional results, this is the token for the next set of results.

Type: String

---

**Errors**

For information about the errors that are common to all actions, see [Common Errors (p. 124)](#).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

---

ListPhoneNumbers

Provides information about the phone numbers for the specified Amazon Connect instance.

For more information about phone numbers, see Set Up Phone Numbers for Your Contact Center in the Amazon Connect Administrator Guide.

Request Syntax

GET /phone-numbers-summary/InstanceId?
maxResults=MaxResults&nextToken=NextToken&phoneNumberCountryCodes=PhoneNumberCountryCodes&phoneNumberTypes=PhoneNumberTypes
HTTP/1.1

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 43)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

MaxResults (p. 43)

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken (p. 43)

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

PhoneNumberCountryCodes (p. 43)

The ISO country code.

Array Members: Maximum number of 10 items.

PhoneNumberTypes (p. 43)

The type of phone number.
Array Members: Maximum number of 2 items.

Valid Values: TOLL_FREE | DID

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
    "NextToken": "string",
    "PhoneNumberSummaryList": [
        {
            "Arn": "string",
            "Id": "string",
            "PhoneNumber": "string",
            "PhoneNumberCountryCode": "string",
            "PhoneNumberType": "string"
        }
    ]
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken (p. 44)

If there are additional results, this is the token for the next set of results.

Type: String

PhoneNumberSummaryList (p. 44)

Information about the phone numbers.

Type: Array of PhoneNumberSummary (p. 110) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.
HTTP Status Code: 400
**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400
**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404
**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

**See Also**

ListQueues

Provides information about the queues for the specified Amazon Connect instance.

For more information about queues, see Queues: Standard and Agent in the Amazon Connect Administrator Guide.

Request Syntax

```
GET /queues-summary/InstanceId?
maxResults=MaxResults&nextToken=NextToken&queueTypes=QueueTypes HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

**InstanceId (p. 46)**

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

**MaxResults (p. 46)**

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

**NextToken (p. 46)**

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

**QueueTypes (p. 46)**

The type of queue.

Array Members: Maximum number of 2 items.

Valid Values: STANDARD | AGENT

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "NextToken": "string",
    "QueueSummaryList": [
        {
            "Arn": "string",
            "Id": "string",
            "Name": "string",
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

NextToken (p. 46)

If there are additional results, this is the token for the next set of results.

Type: String

QueueSummaryList (p. 46)

Information about the queues.

Type: Array of QueueSummary (p. 113) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

ListRoutingProfiles

Provides summary information about the routing profiles for the specified Amazon Connect instance.

For more information about routing profiles, see Routing Profiles and Create a Routing Profile in the Amazon Connect Administrator Guide.

Request Syntax

```
GET /routing-profiles-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

**InstanceId (p. 49)**

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

**MaxResults (p. 49)**

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

**NextToken (p. 49)**

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "NextToken": "string",
  "RoutingProfileSummaryList": [
    {
      "Arn": "string",
      "Id": "string",
      "Name": "string"
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**NextToken (p. 49)**

If there are additional results, this is the token for the next set of results.

Type: String

**RoutingProfileSummaryList (p. 49)**

Information about the routing profiles.

Type: Array of **RoutingProfileSummary (p. 114)** objects

---

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

---

ListSecurityProfiles

Provides summary information about the security profiles for the specified Amazon Connect instance.

For more information about security profiles, see Security Profiles in the Amazon Connect Administrator Guide.

Request Syntax

GET /security-profiles-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken
HTTP/1.1

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 52)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

MaxResults (p. 52)

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken (p. 52)

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
    "NextToken": "string",
    "SecurityProfileSummaryList": [
        {
            "Arn": "string",
            "Id": "string",
            "Name": "string"
        }
    ]
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**NextToken (p. 52)**

If there are additional results, this is the token for the next set of results.

Type: String

**SecurityProfileSummaryList (p. 52)**

Information about the security profiles.

Type: Array of SecurityProfileSummary (p. 115) objects

## Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

ListTagsForResource

Lists the tags for the specified resource.

For sample policies that use tags, see Amazon Connect Identity-Based Policy Examples in the Amazon Connect Administrator Guide.

Request Syntax

```
GET /tags/resourceArn HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

resourceArn (p. 55)

The Amazon Resource Name (ARN) of the resource.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "tags": {
    "string": "string"
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

tags (p. 55)

Information about the tags.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!:aws:)\[a-zA-Z+-=._:/\]+$ 

Value Length Constraints: Maximum length of 256.
Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

ListUserHierarchyGroups

Provides summary information about the hierarchy groups for the specified Amazon Connect instance.

For more information about agent hierarchies, see Set Up Agent Hierarchies in the Amazon Connect Administrator Guide.

Request Syntax

GET /user-hierarchy-groups-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken
HTTP/1.1

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 57)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

MaxResults (p. 57)

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken (p. 57)

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
    "NextToken": "string",
    "UserHierarchyGroupSummaryList": [
        {
            "Arn": "string",
            "Id": "string",
            "Name": "string"
        }
    ]
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**NextToken (p. 57)**

If there are additional results, this is the token for the next set of results.

Type: String

**UserHierarchyGroupSummaryList (p. 57)**

Information about the hierarchy groups.

Type: Array of HierarchyGroupSummary (p. 100) objects

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

ListUsers

Provides summary information about the users for the specified Amazon Connect instance.

Request Syntax

```
GET /users-summary/InstanceId?maxResults=MaxResults&nextToken=NextToken HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 60)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

MaxResults (p. 60)

The maximum number of results to return per page.

Valid Range: Minimum value of 1. Maximum value of 1000.

NextToken (p. 60)

The token for the next set of results. Use the value returned in the previous response in the next request to retrieve the next set of results.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
  "NextToken": "string",
  "UserSummaryList": [
    {
      "Arn": "string",
      "Id": "string",
      "Username": "string"
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
NextToken (p. 60)

If there are additional results, this is the token for the next set of results.

Type: String

UserSummaryList (p. 60)

Information about the users.

Type: Array of UserSummary (p. 121) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

StartChatContact

StartChatContact initiates a contact flow to start a new chat for the customer. Response of this API provides a token required to obtain credentials from the CreateParticipantConnection API in the Amazon Connect Participant Service.

When a new chat contact is successfully created, clients need to subscribe to the participant’s connection for the created chat within 5 minutes. This is achieved by invoking CreateParticipantConnection with WEBSOCKET and CONNECTION_CREDENTIALS.

For more information about how chat works, see Chat in the Amazon Connect Administrator Guide.

Request Syntax

```
PUT /contact/chat HTTP/1.1
Content-type: application/json

{
    "Attributes": {
        "string": "string"
    },
    "ClientToken": "string",
    "ContactFlowId": "string",
    "InitialMessage": {
        "Content": "string",
        "ContentType": "string"
    },
    "InstanceId": "string",
    "ParticipantDetails": {
        "DisplayName": "string"
    }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

**Attributes (p. 63)**

A custom key-value pair using an attribute map. The attributes are standard Amazon Connect attributes, and can be accessed in contact flows just like any other contact attributes.

There can be up to 32,768 UTF-8 bytes across all key-value pairs per contact. Attribute keys can include only alphanumeric, dash, and underscore characters.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: No
ClientToken (p. 63)
A unique, case-sensitive identifier that you provide to ensure the idempotency of the request.
Type: String
Length Constraints: Maximum length of 500.
Required: No

ContactFlowId (p. 63)
The identifier of the contact flow for the chat.
Type: String
Length Constraints: Maximum length of 500.
Required: Yes

InitialMessage (p. 63)
The initial message to be sent to the newly created chat.
Type: ChatMessage (p. 91) object
Required: No

InstanceId (p. 63)
The identifier of the Amazon Connect instance.
Type: String
Length Constraints: Minimum length of 1. Maximum length of 100.
Required: Yes

ParticipantDetails (p. 63)
Information identifying the participant.
Type: ParticipantDetails (p. 109) object
Required: Yes

Response Syntax

HTTP/1.1 200
Content-type: application/json

```
{
  "ContactId": "string",
  "ParticipantId": "string",
  "ParticipantToken": "string"
}
```

Response Elements
If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.
ContactId (p. 64)

The identifier of this contact within the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

ParticipantId (p. 64)

The identifier for a chat participant. The participantId for a chat participant is the same throughout the chat lifecycle.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

ParticipantToken (p. 64)

The token used by the chat participant to call CreateParticipantConnection. The participant token is valid for the lifetime of a chat participant.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 1000.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

LimitExceedededException

The allowed limit for the resource has been exceeded.

HTTP Status Code: 429

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

See Also

StartOutboundVoiceContact

This API places an outbound call to a contact, and then initiates the contact flow. It performs the actions in the contact flow that's specified (in ContactFlowId).

Agents are not involved in initiating the outbound API (that is, dialing the contact). If the contact flow places an outbound call to a contact, and then puts the contact in queue, that's when the call is routed to the agent, like any other inbound case.

There is a 60 second dialing timeout for this operation. If the call is not connected after 60 seconds, it fails.

Request Syntax

```
PUT /contact/outbound-voice HTTP/1.1
Content-type: application/json

{
  "Attributes": {
    "string": "string"
  },
  "ClientToken": "string",
  "ContactFlowId": "string",
  "DestinationPhoneNumber": "string",
  "InstanceId": "string",
  "QueueId": "string",
  "SourcePhoneNumber": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

Attributes (p. 67)

A custom key-value pair using an attribute map. The attributes are standard Amazon Connect attributes, and can be accessed in contact flows just like any other contact attributes.

There can be up to 32,768 UTF-8 bytes across all key-value pairs per contact. Attribute keys can include only alphanumeric, dash, and underscore characters.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: No

ClientToken (p. 67)

A unique, case-sensitive identifier that you provide to ensure the idempotency of the request. The token is valid for 7 days after creation. If a contact is already started, the contact ID is returned. If the contact is disconnected, a new contact is started.
Type: String
Length Constraints: Maximum length of 500.
Required: No

**ContactFlowId (p. 67)**
The identifier of the contact flow for the outbound call.
Type: String
Length Constraints: Maximum length of 500.
Required: Yes

**DestinationPhoneNumber (p. 67)**
The phone number of the customer, in E.164 format.
Type: String
Required: Yes

**InstanceId (p. 67)**
The identifier of the Amazon Connect instance.
Type: String
Length Constraints: Minimum length of 1. Maximum length of 100.
Required: Yes

**QueueId (p. 67)**
The queue for the call. If you specify a queue, the phone displayed for caller ID is the phone number specified in the queue. If you do not specify a queue, the queue defined in the contact flow is used. If you do not specify a queue, you must specify a source phone number.
Type: String
Required: No

**SourcePhoneNumber (p. 67)**
The phone number associated with the Amazon Connect instance, in E.164 format. If you do not specify a source phone number, you must specify a queue.
Type: String
Required: No

---

**Response Syntax**

```plaintext
HTTP/1.1 200
Content-type: application/json

{
   "ContactId": "string"
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**ContactId (p. 68)**

The identifier of this contact within the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Errors

For information about the errors that are common to all actions, see [Common Errors (p. 124)](https://aws.amazon.com/).

**DestinationNotAllowedException**

Outbound calls to the destination number are not allowed.

HTTP Status Code: 403

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**LimitExceededException**

The allowed limit for the resource has been exceeded.

HTTP Status Code: 429

**OutboundContactNotPermittedException**

The contact is not permitted.

HTTP Status Code: 403

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
StopContact

Ends the specified contact.

Request Syntax

```plaintext
POST /contact/stop HTTP/1.1
Content-type: application/json
{
   "ContactId": "string",
   "InstanceId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

ContactId (p. 71)
- The ID of the contact.
- Type: String
- Required: Yes

InstanceId (p. 71)
- The identifier of the Amazon Connect instance.
- Type: String
- Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).
ContactNotFoundException

The contact with the specified ID is not active or does not exist.
HTTP Status Code: 410

InternalServiceException

Request processing failed due to an error or failure with the service.
HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.
HTTP Status Code: 400

InvalidRequestException

The request is not valid.
HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.
HTTP Status Code: 404

TagResource

Adds the specified tags to the specified resource.

The supported resource type is users.

For sample policies that use tags, see Amazon Connect Identity-Based Policy Examples in the Amazon Connect Administrator Guide.

Request Syntax

```
POST /tags/{resourceArn} HTTP/1.1
Content-type: application/json
{
  "tags": {
    "String": "string"
  }
}
```

URI Request Parameters

The request requires the following URI parameters.

resourceArn (p. 73)

The Amazon Resource Name (ARN) of the resource.

Request Body

The request accepts the following data in JSON format.

tags (p. 73)

One or more tags. For example, { "tags": {"key1":"value1", "key2":"value2"} }.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^(?!:aws:)[a-zA-Z+-=._:/]+$%00

Value Length Constraints: Maximum length of 256.

Required: Yes

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.
Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

UntagResource

Removes the specified tags from the specified resource.

Request Syntax

```
DELETE /tags/resourceArn?tagKeys=tagKeys HTTP/1.1
```

URI Request Parameters

The request requires the following URI parameters.

resourceArn (p. 75)

The Amazon Resource Name (ARN) of the resource.

tagKeys (p. 75)

The tag keys.

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Pattern: `^(?!aws:\)[a-zA-Z+-=._:/]+$`

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see `Common Errors (p. 124)`.

InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400
InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

See Also

- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
UpdateContactAttributes

Creates or updates the contact attributes associated with the specified contact.

You can add or update attributes for both ongoing and completed contacts. For example, you can update the customer's name or the reason the customer called while the call is active, or add notes about steps that the agent took during the call that are displayed to the next agent that takes the call. You can also update attributes for a contact using data from your CRM application and save the data with the contact in Amazon Connect. You could also flag calls for additional analysis, such as legal review or identifying abusive callers.

Contact attributes are available in Amazon Connect for 24 months, and are then deleted.

**Important:** You cannot use the operation to update attributes for contacts that occurred prior to the release of the API, September 12, 2018. You can update attributes only for contacts that started after the release of the API. If you attempt to update attributes for a contact that occurred prior to the release of the API, a 400 error is returned. This applies also to queued callbacks that were initiated prior to the release of the API but are still active in your instance.

**Request Syntax**

```plaintext
POST /contact/attributes HTTP/1.1
Content-type: application/json

{  
  "Attributes": {
    "string" : "string"
  },
  "InitialContactId" : "string",
  "InstanceId" : "string"
}
```

**URI Request Parameters**

The request does not use any URI parameters.

**Request Body**

The request accepts the following data in JSON format.

**Attributes (p. 77)**

The Amazon Connect attributes. These attributes can be accessed in contact flows just like any other contact attributes.

You can have up to 32,768 UTF-8 bytes across all attributes for a contact. Attribute keys can include only alphanumeric, dash, and underscore characters.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 32767.

Value Length Constraints: Minimum length of 0. Maximum length of 32767.

Required: Yes
**InitialContactId (p. 77)**

The identifier of the contact. This is the identifier of the contact associated with the first interaction with the contact center.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Required: Yes

**InstanceId (p. 77)**

The identifier of the Amazon Connect instance.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

---

**Response Syntax**

HTTP/1.1 200

---

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 124).

- **InternalServiceException**
  
  Request processing failed due to an error or failure with the service.
  
  HTTP Status Code: 500

- **InvalidParameterException**
  
  One or more of the specified parameters are not valid.
  
  HTTP Status Code: 400

- **InvalidRequestException**
  
  The request is not valid.
  
  HTTP Status Code: 400

- **ResourceNotFoundException**
  
  The specified resource was not found.
  
  HTTP Status Code: 404

---

**See Also**

**UpdateUserHierarchy**

Assigns the specified hierarchy group to the specified user.

**Request Syntax**

```plaintext
POST /users/InstanceId/UserId/hierarchy HTTP/1.1
Content-type: application/json

{
  "HierarchyGroupId": "string"
}
```

**URI Request Parameters**

The request requires the following URI parameters.

- **InstanceId** (p. 80)
  
  The identifier of the Amazon Connect instance.
  
  Length Constraints: Minimum length of 1. Maximum length of 100.

- **UserId** (p. 80)
  
  The identifier of the user account.

**Request Body**

The request accepts the following data in JSON format.

- **HierarchyGroupId** (p. 80)
  
  The identifier of the hierarchy group.
  
  Type: String
  
  Required: No

**Response Syntax**

```plaintext
HTTP/1.1 200
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 124).
InternalServiceException
Request processing failed due to an error or failure with the service.
HTTP Status Code: 500

InvalidParameterException
One or more of the specified parameters are not valid.
HTTP Status Code: 400

InvalidRequestException
The request is not valid.
HTTP Status Code: 400

ResourceNotFoundException
The specified resource was not found.
HTTP Status Code: 404

ThrottlingException
The throttling limit has been exceeded.
HTTP Status Code: 429

UpdateUserIdentityInfo

Updates the identity information for the specified user.

Request Syntax

POST /users/InstanceId/UserId/identity-info HTTP/1.1
Content-type: application/json

{  
   "IdentityInfo": {  
      "Email": "string",  
      "FirstName": "string",  
      "LastName": "string"  
   }  
}

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 82)
   The identifier of the Amazon Connect instance.
   Length Constraints: Minimum length of 1. Maximum length of 100.

UserId (p. 82)
   The identifier of the user account.

Request Body

The request accepts the following data in JSON format.

IdentityInfo (p. 82)
   The identity information for the user.
   Type: UserIdentityInfo (p. 119) object
   Required: Yes

Response Syntax

HTTP/1.1 200

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).
InternalServiceException
Request processing failed due to an error or failure with the service.
HTTP Status Code: 500

InvalidParameterException
One or more of the specified parameters are not valid.
HTTP Status Code: 400

InvalidRequestException
The request is not valid.
HTTP Status Code: 400

ResourceNotFoundException
The specified resource was not found.
HTTP Status Code: 404

ThrottlingException
The throttling limit has been exceeded.
HTTP Status Code: 429

UpdateUserPhoneConfig

Updates the phone configuration settings for the specified user.

Request Syntax

POST /users/InstanceId/UserId/phone-config HTTP/1.1
Content-type: application/json

{
    "PhoneConfig": {
        "AfterContactWorkTimeLimit": number,
        "AutoAccept": boolean,
        "DeskPhoneNumber": "string",
        "PhoneType": "string"
    }
}

URI Request Parameters

The request requires the following URI parameters.

InstanceId (p. 84)

The identifier of the Amazon Connect instance.

Length Constraints: Minimum length of 1. Maximum length of 100.

UserId (p. 84)

The identifier of the user account.

Request Body

The request accepts the following data in JSON format.

PhoneConfig (p. 84)

Information about phone configuration settings for the user.

Type: UserPhoneConfig (p. 120) object

Required: Yes

Response Syntax

HTTP/1.1 200

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.
Errors

For information about the errors that are common to all actions, see Common Errors (p. 124).

**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

UpdateUserRoutingProfile

Assigns the specified routing profile to the specified user.

**Request Syntax**

```plaintext
POST /users/InstanceId/UserId/routing-profile HTTP/1.1
Content-type: application/json
{
    "RoutingProfileId": "string"
}
```

**URI Request Parameters**

The request requires the following URI parameters.

- **InstanceId** (p. 86)
  The identifier of the Amazon Connect instance.
  Length Constraints: Minimum length of 1. Maximum length of 100.

- **UserId** (p. 86)
  The identifier of the user account.

**Request Body**

The request accepts the following data in JSON format.

- **RoutingProfileId** (p. 86)
  The identifier of the routing profile for the user.
  Type: String
  Required: Yes

**Response Syntax**

```
HTTP/1.1 200
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 124).
**InternalServiceException**

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

**InvalidParameterException**

One or more of the specified parameters are not valid.

HTTP Status Code: 400

**InvalidRequestException**

The request is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 404

**ThrottlingException**

The throttling limit has been exceeded.

HTTP Status Code: 429

---

**See Also**

UpdateUserSecurityProfiles

Assigns the specified security profiles to the specified user.

**Request Syntax**

```bash
POST /users/InstanceId/UserId/security-profiles HTTP/1.1
Content-type: application/json
{
  "SecurityProfileIds": [ "string" ]
}
```

**URI Request Parameters**

The request requires the following URI parameters.

- **InstanceId (p. 88)**
  - The identifier of the Amazon Connect instance.

- **UserId (p. 88)**
  - The identifier of the user account.

**Request Body**

The request accepts the following data in JSON format.

- **SecurityProfileIds (p. 88)**
  - The identifiers of the security profiles for the user.
  - Type: Array of strings
  - Array Members: Minimum number of 1 item. Maximum number of 10 items.
  - Required: Yes

**Response Syntax**

```
HTTP/1.1 200
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see [Common Errors (p. 124)](#).
InternalServiceException

Request processing failed due to an error or failure with the service.

HTTP Status Code: 500

InvalidParameterException

One or more of the specified parameters are not valid.

HTTP Status Code: 400

InvalidRequestException

The request is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 404

ThrottlingException

The throttling limit has been exceeded.

HTTP Status Code: 429

Data Types

The Amazon Connect Service API contains several data types that various actions use. This section describes each data type in detail.

Note
The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- ChatMessage (p. 91)
- ContactFlowSummary (p. 92)
- Credentials (p. 93)
- CurrentMetric (p. 94)
- CurrentMetricData (p. 95)
- CurrentMetricResult (p. 96)
- Dimensions (p. 97)
- Filters (p. 98)
- HierarchyGroup (p. 99)
- HierarchyGroupSummary (p. 100)
- HierarchyLevel (p. 101)
- HierarchyPath (p. 102)
- HierarchyStructure (p. 103)
- HistoricalMetric (p. 104)
- HistoricalMetricData (p. 106)
- HistoricalMetricResult (p. 107)
- HoursOfOperationSummary (p. 108)
- ParticipantDetails (p. 109)
- PhoneNumberSummary (p. 110)
- QueueReference (p. 112)
- QueueSummary (p. 113)
- RoutingProfileSummary (p. 114)
- SecurityProfileSummary (p. 115)
- Threshold (p. 116)
- User (p. 117)
- UserIdentityInfo (p. 119)
- UserPhoneConfig (p. 120)
- UserSummary (p. 121)
ChatMessage

A chat message.

Contents

Content

The content of the chat message.

Type: String

Required: Yes

ContentType

The type of the content. Supported types are text/plain.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
ContactFlowSummary

Contains summary information about a contact flow.

Contents

Arn

The Amazon Resource Name (ARN) of the contact flow.

Type: String

Required: No

ContactFlowType

The type of contact flow.

Type: String

Valid Values: CONTACT_FLOW | CUSTOMER_QUEUE | CUSTOMER_HOLD | CUSTOMER_WHISPER
| AGENT_HOLD | AGENT_WHISPER | OUTBOUND_WHISPER | AGENT_TRANSFER |
QUEUE_TRANSFER

Required: No

Id

The identifier of the contact flow.

Type: String

Length Constraints: Maximum length of 500.

Required: No

Name

The name of the contact flow.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Credentials

Contains credentials to use for federation.

Contents

AccessToken

An access token generated for a federated user to access Amazon Connect.

Type: String
Required: No

AccessTokenExpiration

A token generated with an expiration time for the session a user is logged in to Amazon Connect.

Type: Timestamp
Required: No

RefreshToken

Renews a token generated for a user to access the Amazon Connect instance.

Type: String
Required: No

RefreshTokenExpiration

Renews the expiration timer for a generated token.

Type: Timestamp
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
CurrentMetric

Contains information about a real-time metric. For a description of each metric, see Real-time Metrics Definitions in the Amazon Connect Administrator Guide.

Contents

Name

The name of the metric.

Type: String

Valid Values: AGENTS_ONLINE | AGENTS_AVAILABLE | AGENTS_ON_CALL | AGENTS_NON_PRODUCTIVE | AGENTS_AFTER_CONTACT_WORK | AGENTS_ERROR | AGENTS_STAFFED | CONTACTS_IN_QUEUE | OLDEST_CONTACT_AGE | CONTACTS_SCHEDULED | AGENTS_ON_CONTACT | SLOTS_ACTIVE | SLOTSAVAILABLE

Required: No

Unit

The unit for the metric.

Type: String

Valid Values: SECONDS | COUNT | PERCENT

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
CurrentMetricData

Contains the data for a real-time metric.

Contents

Metric

Information about the metric.

Type: CurrentMetric (p. 94) object

Required: No

Value

The value of the metric.

Type: Double

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
CurrentMetricResult

Contains information about a set of real-time metrics.

Contents

Collections

The set of metrics.

Type: Array of CurrentMetricData (p. 95) objects

Required: No

Dimensions

The dimensions for the metrics.

Type: Dimensions (p. 97) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Dimensions

Contains information about the dimensions for a set of metrics.

Contents

Channel

The channel used for grouping and filters.

Type: String

Valid Values: VOICE | CHAT

Required: No

Queue

Information about the queue for which metrics are returned.

Type: QueueReference (p. 112) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Filters

Contains the filter to apply when retrieving metrics.

Contents

Channels

The channel to use to filter the metrics.

Type: Array of strings

Array Members: Maximum number of 1 item.

Valid Values: VOICE | CHAT

Required: No

Queues

The queues to use to filter the metrics. You can specify up to 100 queues per request.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 100 items.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
HierarchyGroup

Contains information about a hierarchy group.

Contents

Arn

The Amazon Resource Name (ARN) of the hierarchy group.

Type: String

Required: No

HierarchyPath

Information about the levels in the hierarchy group.

Type: HierarchyPath (p. 102) object

Required: No

Id

The identifier of the hierarchy group.

Type: String

Required: No

LevelId

The identifier of the level in the hierarchy group.

Type: String

Required: No

Name

The name of the hierarchy group.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
HierarchyGroupSummary

Contains summary information about a hierarchy group.

Contents

Arn
The Amazon Resource Name (ARN) of the hierarchy group.
Type: String
Required: No

Id
The identifier of the hierarchy group.
Type: String
Required: No

Name
The name of the hierarchy group.
Type: String
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
HierarchyLevel

Contains information about a hierarchy level.

Contents

Arn

The Amazon Resource Name (ARN) of the hierarchy level.

Type: String

Required: No

Id

The identifier of the hierarchy level.

Type: String

Required: No

Name

The name of the hierarchy level.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
HierarchPath

Contains information about the levels of a hierarchy group.

**Contents**

**LevelFive**

Information about level five.

Type: HierarchyGroupSummary (p. 100) object

Required: No

**LevelFour**

Information about level four.

Type: HierarchyGroupSummary (p. 100) object

Required: No

**LevelOne**

Information about level one.

Type: HierarchyGroupSummary (p. 100) object

Required: No

**LevelThree**

Information about level three.

Type: HierarchyGroupSummary (p. 100) object

Required: No

**LevelTwo**

Information about level two.

Type: HierarchyGroupSummary (p. 100) object

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
HierarchyStructure

Contains information about a hierarchy structure.

Contents

LevelFive

Information about level five.

Type: HierarchyLevel (p. 101) object

Required: No

LevelFour

Information about level four.

Type: HierarchyLevel (p. 101) object

Required: No

LevelOne

Information about level one.

Type: HierarchyLevel (p. 101) object

Required: No

LevelThree

Information about level three.

Type: HierarchyLevel (p. 101) object

Required: No

LevelTwo

Information about level two.

Type: HierarchyLevel (p. 101) object

Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
**HistoricalMetric**

Contains information about a historical metric. For a description of each metric, see Historical Metrics Definitions in the Amazon Connect Administrator Guide.

**Contents**

**Name**

The name of the metric.

Type: String

Valid Values: CONTACTS_QUEUED | CONTACTS_HANDLED | CONTACTS_ABANDONED | CONTACTS_CONSULTED | CONTACTS_AGENT_HUNG_UP_FIRST | CONTACTS_HANDLED_INCOMING | CONTACTS_HANDLED_OUTBOUND | CONTACTS_HOLD_ABANDONS | CONTACTS_TRANSFERRED_IN | CONTACTS_TRANSFERRED_OUT | CONTACTS_TRANSFERRED_IN_FROM_QUEUE | CONTACTS_TRANSFERRED_OUT_FROM_QUEUE | CONTACTS_MISSED | CALLBACK_CONTACTS_HANDLED | API_CONTACTS_HANDLED | OCCUPANCY | HANDLE_TIME | AFTER_CONTACT_WORK_TIME | QUEUED_TIME | ABANDON_TIME | QUEUE_ANSWER_TIME | HOLD_TIME | INTERACTION_TIME | INTERACTION_AND_HOLD_TIME | SERVICE_LEVEL

Required: No

**Statistic**

The statistic for the metric.

Type: String

Valid Values: SUM | MAX | AVG

Required: No

**Threshold**

The threshold for the metric, used with service level metrics.

Type: Threshold (p. 116) object

Required: No

**Unit**

The unit for the metric.

Type: String

Valid Values: SECONDS | COUNT | PERCENT

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
HistoricalMetricData

Contains the data for a historical metric.

Contents

Metric

Information about the metric.
Type: HistoricalMetric (p. 104) object
Required: No

Value

The value of the metric.
Type: Double
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
HistoricalMetricResult

Contains information about the historical metrics retrieved.

Contents

Collections

The set of metrics.

Type: Array of HistoricalMetricData (p. 106) objects

Required: No

Dimensions

The dimension for the metrics.

Type: Dimensions (p. 97) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
HoursofOperationSummary

Contains summary information about hours of operation for a contact center.

Contents

Arn

The Amazon Resource Name (ARN) of the hours of operation.

Type: String

Required: No

Id

The identifier of the hours of operation.

Type: String

Required: No

Name

The name of the hours of operation.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
ParticipantDetails

The customer's details.

Contents

DisplayName

Display name of the participant.
Type: String
Length Constraints: Minimum length of 1. Maximum length of 256.
Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
PhoneNumberSummary

Contains summary information about a phone number for a contact center.

Contents

Arn

The Amazon Resource Name (ARN) of the phone number.

Type: String

Required: No

Id

The identifier of the phone number.

Type: String

Required: No

PhoneNumber

The phone number.

Type: String

Required: No

PhoneNumberCountryCode

The ISO country code.

Type: String

Valid Values: AF | AL | DZ | AS | AD | AO | AI | AQ | AG | AR | AM | AW | AU |
AT | AZ | BS | BH | BD | BB | BY | BE | BZ | BJ | BM | ET | BO | BA | BW |
BR | IO | VG | BN | BG | BF | BI | KH | CM | CA | CV | KY | CF | TD | CL |
CN | CX | CC | CO | KM | CK | CR | HR | CU | CW | CY | CZ | CD | DK | DJ |
DM | DO | TL | EC | EG | SV | GQ | ER | EE | ET | FK | FO | FJ | FI | FR |
FF | GA | GM | GE | DE | GH | GI | GR | GL | GD | GU | GT | GG | GN | GW |
GY | HT | HN | HK | HU | IS | IN | ID | IR | IQ | IE | IM | IL | IT | CI |
JM | JP | JE | JO | KZ | KE | KI | KW | KG | LA | LV | LB | LS | LR | LY |
LI | LT | LU | MO | MK | MG | MW | MY | MV | ML | MT | MH | MR | MU | YT |
MX | FM | MD | MC | MN | ME | MS | MA | MZ | MM | NA | NR | NP | NL | AN |
NC | NZ | NI | NE | NG | NU | KP | MP | NO | OM | PK | FW | PA | PG | PY |
PE | PH | PN | PL | PT | PR | QA | CG | RE | RO | RU | RW | BL | SH | KN |
LC | MF | PM | VC | WS | SM | ST | SA | SN | RS | SC | SL | SG | SX | SK |
SI | SB | SO | ZA | KR | ES | DK | SR | SJ | SZ | SE | CH | SY | TW |
TJ | TZ | TH | TG | TK | TO | TT | TN | TR | TM | TC | TV | VI | UG | UA |
AE | GB | US | UY | UZ | VU | VA | VE | VN | WF | EH | YE | ZM | ZW |

Required: No

PhoneNumberType

The type of phone number.

Type: String

Valid Values: TOLL_FREE | DID
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
QueueReference

Contains information about a queue resource for which metrics are returned.

Contents

Arn

The Amazon Resource Name (ARN) of the queue.
Type: String
Required: No

Id

The identifier of the queue.
Type: String
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
QueueSummary

Contains summary information about a queue.

Contents

Arn

The Amazon Resource Name (ARN) of the queue.
Type: String
Required: No

Id

The identifier of the queue.
Type: String
Required: No

Name

The name of the queue.
Type: String
Length Constraints: Minimum length of 1. Maximum length of 256.
Required: No

QueueType

The type of queue.
Type: String
Valid Values: STANDARD | AGENT
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
RoutingProfileSummary

Contains summary information about a routing profile.

Contents

Arn

The Amazon Resource Name (ARN) of the routing profile.

Type: String

Required: No

Id

The identifier of the routing profile.

Type: String

Required: No

Name

The name of the routing profile.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
SecurityProfileSummary

Contains information about a security profile.

Contents

Arn

The Amazon Resource Name (ARN) of the security profile.

Type: String
Required: No

Id

The identifier of the security profile.

Type: String
Required: No

Name

The name of the security profile.

Type: String
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Threshold

Contains information about the threshold for service level metrics.

Contents

Comparison

The type of comparison. Only "less than" (LT) comparisons are supported.

Type: String

Valid Values: LT

Required: No

ThresholdValue

The threshold value to compare.

Type: Double

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
User

Contains information about a user account for a Amazon Connect instance.

Contents

Arn

The Amazon Resource Name (ARN) of the user account.

Type: String

Required: No

DirectoryUserId

The identifier of the user account in the directory used for identity management.

Type: String

Required: No

HierarchyGroupId

The identifier of the hierarchy group for the user.

Type: String

Required: No

Id

The identifier of the user account.

Type: String

Required: No

IdentityInfo

Information about the user identity.

Type: UserIdentityInfo (p. 119) object

Required: No

PhoneConfig

Information about the phone configuration for the user.

Type: UserPhoneConfig (p. 120) object

Required: No

RoutingProfileId

The identifier of the routing profile for the user.

Type: String

Required: No

SecurityProfileIds

The identifiers of the security profiles for the user.
Type: Array of strings
Array Members: Minimum number of 1 item. Maximum number of 10 items.
Required: No

Tags
The tags.
Type: String to string map
Key Length Constraints: Minimum length of 1. Maximum length of 128.
Key Pattern: ^(?!:aws:)[a-zA-Z0-9+-_.:/]+$
Value Length Constraints: Maximum length of 256.
Required: No

Username
The user name assigned to the user account.
Type: String
Length Constraints: Minimum length of 1. Maximum length of 100.
Required: No

See Also
For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
UserIdentityInfo

Contains information about the identity of a user.

Contents

Email

The email address. If you are using SAML for identity management and include this parameter, an error is returned.

Type: String

Required: No

FirstName

The first name. This is required if you are using Amazon Connect or SAML for identity management.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

LastName

The last name. This is required if you are using Amazon Connect or SAML for identity management.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
UserPhoneConfig

Contains information about the phone configuration settings for a user.

Contents

AfterContactWorkTimeLimit

The After Call Work (ACW) timeout setting, in seconds.

Type: Integer

Valid Range: Minimum value of 0.

Required: No

AutoAccept

The Auto accept setting.

Type: Boolean

Required: No

DeskPhoneNumber

The phone number for the user's desk phone.

Type: String

Required: No

PhoneType

The phone type.

Type: String

Valid Values: SOFT_PHONE | DESK_PHONE

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
UserSummary

Contains summary information about a user.

Contents

Arn

The Amazon Resource Name (ARN) of the user account.

Type: String

Required: No

Id

The identifier of the user account.

Type: String

Required: No

Username

The Amazon Connect user name of the user account.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Common Parameters

The following list contains the parameters that all actions use for signing Signature Version 4 requests with a query string. Any action-specific parameters are listed in the topic for that action. For more information about Signature Version 4, see Signature Version 4 Signing Process in the Amazon Web Services General Reference.

**Action**
- The action to be performed.
  - Type: string
  - Required: Yes

**Version**
- The API version that the request is written for, expressed in the format YYYY-MM-DD.
  - Type: string
  - Required: Yes

**X-Amz-Algorithm**
- The hash algorithm that you used to create the request signature.
  - Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.
  - Type: string
  - Valid Values: AWS4-HMAC-SHA256
  - Required: Conditional

**X-Amz-Credential**
- The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string (“aws4_request”). The value is expressed in the following format: access_key/YYYYMMDD/region/service/aws4_request.
  - For more information, see Task 2: Create a String to Sign for Signature Version 4 in the Amazon Web Services General Reference.
  - Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.
  - Type: string
  - Required: Conditional

**X-Amz-Date**
- The date that is used to create the signature. The format must be ISO 8601 basic format (YYYYMMDD'T'HHMMSS'Z'). For example, the following date time is a valid X-Amz-Date value: 20120325T120000Z.
  - Condition: X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is
not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see Handling Dates in Signature Version 4 in the Amazon Web Services General Reference.

Type: string

Required: Conditional

**X-Amz-Security-Token**

The temporary security token that was obtained through a call to AWS Security Token Service (AWS STS). For a list of services that support temporary security credentials from AWS Security Token Service, go to AWS Services That Work with IAM in the IAM User Guide.

Condition: If you're using temporary security credentials from the AWS Security Token Service, you must include the security token.

Type: string

Required: Conditional

**X-Amz-Signature**

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

**X-Amz-SignedHeaders**

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see Task 1: Create a Canonical Request For Signature Version 4 in the Amazon Web Services General Reference.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional
Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.

**AccessDeniedException**

You do not have sufficient access to perform this action.

HTTP Status Code: 400

**IncompleteSignature**

The request signature does not conform to AWS standards.

HTTP Status Code: 400

**InternalFailure**

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

**InvalidAction**

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 400

**InvalidClientTokenId**

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

**InvalidParameterCombination**

Parameters that must not be used together were used together.

HTTP Status Code: 400

**InvalidParameterValue**

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

**InvalidQueryParameter**

The AWS query string is malformed or does not adhere to AWS standards.

HTTP Status Code: 400

**MalformedQueryString**

The query string contains a syntax error.

HTTP Status Code: 404

**MissingAction**

The request is missing an action or a required parameter.

HTTP Status Code: 400
MissingAuthenticationToken

The request must contain either a valid (registered) AWS access key ID or X.509 certificate.

HTTP Status Code: 403

MissingParameter

A required parameter for the specified action is not supplied.

HTTP Status Code: 400

OptInRequired

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

RequestExpired

The request reached the service more than 15 minutes after the date stamp on the request or more
than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp
on the request is more than 15 minutes in the future.

HTTP Status Code: 400

ServiceUnavailable

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 400

ValidationError

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
