Welcome

Welcome to the AWS Device Farm API documentation, which contains APIs for:

- Testing on desktop browsers

  Device Farm makes it possible for you to test your web applications on desktop browsers using Selenium. The APIs for desktop browser testing contain TestGrid in their names. For more information, see Testing Web Applications on Selenium with Device Farm.

- Testing on real mobile devices

  Device Farm makes it possible for you to test apps on physical phones, tablets, and other devices in the cloud. For more information, see the Device Farm Developer Guide.

This document was last published on April 3, 2020.
Actions

The following actions are supported:

- CreateDevicePool (p. 4)
- CreateInstanceProfile (p. 7)
- CreateNetworkProfile (p. 10)
- CreateProject (p. 14)
- CreateRemoteAccessSession (p. 16)
- CreateTestGridProject (p. 21)
- CreateTestGridUrl (p. 23)
- CreateUpload (p. 25)
- CreateVPCEConfiguration (p. 29)
- DeleteDevicePool (p. 32)
- DeleteInstanceProfile (p. 34)
- DeleteNetworkProfile (p. 36)
- DeleteProject (p. 38)
- DeleteRemoteAccessSession (p. 40)
- DeleteRun (p. 42)
- DeleteTestGridProject (p. 44)
- DeleteUpload (p. 46)
- DeleteVPCEConfiguration (p. 48)
- GetAccountSettings (p. 50)
- GetDevice (p. 52)
- GetDeviceInstance (p. 55)
- GetDevicePool (p. 57)
- GetDevicePoolCompatibility (p. 59)
- GetInstanceProfile (p. 65)
- GetJob (p. 67)
- GetNetworkProfile (p. 70)
- GetOfferingStatus (p. 72)
- GetProject (p. 76)
- GetRemoteAccessSession (p. 78)
- GetRun (p. 81)
- GetSuite (p. 84)
- GetTest (p. 87)
- GetTestGridProject (p. 90)
- GetTestGridSession (p. 92)
- GetUpload (p. 95)
- GetVPCEConfiguration (p. 97)
- InstallToRemoteAccessSession (p. 99)
- ListArtifacts (p. 102)
- ListDeviceInstances (p. 105)
- ListDevicePools (p. 108)
• ListDevices (p. 111)
• ListInstanceProfiles (p. 115)
• ListJobs (p. 118)
• ListNetworkProfiles (p. 122)
• ListOfferingPromotions (p. 125)
• ListOfferings (p. 127)
• ListOfferingTransactions (p. 130)
• ListProjects (p. 138)
• ListRemoteAccessSessions (p. 141)

• StopRemoteAccessSession (p. 196)
• StopRun (p. 199)
• TagResource (p. 202)
• UntagResource (p. 204)
• UpdateDeviceInstance (p. 206)
• UpdateDevicePool (p. 209)
• UpdateInstanceProfile (p. 212)
• UpdateNetworkProfile (p. 215)
• UpdateProject (p. 219)
• UpdateTestGridProject (p. 222)
• UpdateUpload (p. 225)
• UpdateVPCEConfiguration (p. 228)
CreateDevicePool

Creates a device pool.

Request Syntax

```
{
    "description": "string",
    "maxDevices": number,
    "name": "string",
    "projectArn": "string",
    "rules": [
        {
            "attribute": "string",
            "operator": "string",
            "value": "string"
        }
    ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

description (p. 4)

The device pool's description.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

maxDevices (p. 4)

The number of devices that Device Farm can add to your device pool. Device Farm adds devices that are available and meet the criteria that you assign for the rules parameter. Depending on how many devices meet these constraints, your device pool might contain fewer devices than the value for this parameter.

By specifying the maximum number of devices, you can control the costs that you incur by running tests.

Type: Integer

Required: No

name (p. 4)

The device pool's name.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: Yes
**projectArn (p. 4)**

The ARN of the project for the device pool.

Type: String

Pattern: `^arn:.+$`

Required: Yes

**rules (p. 4)**

The device pool's rules.

Type: Array of Rule (p. 290) objects

Required: Yes

---

**Response Syntax**

```json
{
    "devicePool": {
        "arn": "string",
        "description": "string",
        "maxDevices": number,
        "name": "string",
        "rules": [
            {
                "attribute": "string",
                "operator": "string",
                "value": "string"
            }
        ],
        "type": "string"
    }
}
```

---

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**devicePool (p. 5)**

The newly created device pool.

Type: DevicePool (p. 252) object

---

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.
HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
CreateInstanceProfile

Creates a profile that can be applied to one or more private fleet device instances.

Request Syntax

```
{
    "description": "string",
    "excludeAppPackagesFromCleanup": [ "string" ],
    "name": "string",
    "packageCleanup": boolean,
    "rebootAfterUse": boolean
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

description (p. 7)

The description of your instance profile.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

excludeAppPackagesFromCleanup (p. 7)

An array of strings that specifies the list of app packages that should not be cleaned up from the device after a test run.

The list of packages is considered only if you set packageCleanup to true.

Type: Array of strings

Required: No

name (p. 7)

The name of your instance profile.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: Yes

packageCleanup (p. 7)

When set to true, Device Farm removes app packages after a test run. The default value is false for private devices.

Type: Boolean

Required: No
rebootAfterUse (p. 7)

When set to true, Device Farm reboots the instance after a test run. The default value is true.

Type: Boolean
Required: No

Response Syntax

```json
{
   "instanceProfile": {
      "arn": "string",
      "description": "string",
      "excludeAppPackagesFromCleanup": [ "string" ],
      "name": "string",
      "packageCleanup": boolean,
      "rebootAfterUse": boolean
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

instanceProfile (p. 8)

An object that contains information about your instance profile.

Type: InstanceProfile (p. 260) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.
HTTP Status Code: 400

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
CreateNetworkProfile

Creates a network profile.

Request Syntax

```json
{
  "description": "string",
  "downlinkBandwidthBits": number,
  "downlinkDelayMs": number,
  "downlinkJitterMs": number,
  "downlinkLossPercent": number,
  "name": "string",
  "projectArn": "string",
  "type": "string",
  "uplinkBandwidthBits": number,
  "uplinkDelayMs": number,
  "uplinkJitterMs": number,
  "uplinkLossPercent": number
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

description (p. 10)

The description of the network profile.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

downlinkBandwidthBits (p. 10)

The data throughput rate in bits per second, as an integer from 0 to 104857600.

Type: Long

Required: No

downlinkDelayMs (p. 10)

Delay time for all packets to destination in milliseconds as an integer from 0 to 2000.

Type: Long

Required: No

downlinkJitterMs (p. 10)

Time variation in the delay of received packets in milliseconds as an integer from 0 to 2000.

Type: Long

Required: No
downlinkLossPercent (p. 10)

Proportion of received packets that fail to arrive from 0 to 100 percent.
Type: Integer
Valid Range: Minimum value of 0. Maximum value of 100.
Required: No

name (p. 10)

The name for the new network profile.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 256.
Required: Yes

projectArn (p. 10)

The Amazon Resource Name (ARN) of the project for which you want to create a network profile.
Type: String
Pattern: ^arn:.+
Required: Yes

type (p. 10)

The type of network profile to create. Valid values are listed here.
Type: String
Valid Values: CURATED | PRIVATE
Required: No

uplinkBandwidthBits (p. 10)

The data throughput rate in bits per second, as an integer from 0 to 104857600.
Type: Long
Required: No

uplinkDelayMs (p. 10)

Delay time for all packets to destination in milliseconds as an integer from 0 to 2000.
Type: Long
Required: No

uplinkJitterMs (p. 10)

Time variation in the delay of received packets in milliseconds as an integer from 0 to 2000.
Type: Long
Required: No

uplinkLossPercent (p. 10)

Proportion of transmitted packets that fail to arrive from 0 to 100 percent.
Type: Integer

Valid Range: Minimum value of 0. Maximum value of 100.

Required: No

Response Syntax

```json
{
    "networkProfile": {
        "arn": "string",
        "description": "string",
        "downlinkBandwidthBits": number,
        "downlinkDelayMs": number,
        "downlinkJitterMs": number,
        "downlinkLossPercent": number,
        "name": "string",
        "type": "string",
        "uplinkBandwidthBits": number,
        "uplinkDelayMs": number,
        "uplinkJitterMs": number,
        "uplinkLossPercent": number
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**networkProfile (p. 12)**

The network profile that is returned by the create network profile request.

Type: `NetworkProfile (p. 271)` object

Errors

For information about the errors that are common to all actions, see `Common Errors (p. 327)`.

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

CreateProject

Creates a project.

Request Syntax

```json
{
  "defaultJobTimeoutMinutes": number,
  "name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

defaultJobTimeoutMinutes (p. 14)

Sets the execution timeout value (in minutes) for a project. All test runs in this project use the specified execution timeout value unless overridden when scheduling a run.

Type: Integer

Required: No

name (p. 14)

The project's name.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: Yes

Response Syntax

```json
{
  "project": {
    "arn": "string",
    "created": number,
    "defaultJobTimeoutMinutes": number,
    "name": "string"
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
**project (p. 14)**

The newly created project.

Type: Project (p. 281) object

---

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

**TagOperationException**

The operation was not successful. Try again.

HTTP Status Code: 400

---

- AWS SDK for Python
- AWS SDK for Ruby V3
CreateRemoteAccessSession

Specifies and starts a remote access session.

**Request Syntax**

```json
{
   "clientId": "string",
   "configuration": {
      "billingMethod": "string",
      "vpceConfigurationArns": [ "string" ]
   },
   "deviceArn": "string",
   "instanceArn": "string",
   "interactionMode": "string",
   "name": "string",
   "projectArn": "string",
   "remoteDebugEnabled": boolean,
   "remoteRecordAppArn": "string",
   "remoteRecordEnabled": boolean,
   "skipAppResign": boolean,
   "sshPublicKey": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see [Common Parameters](p. 325).

The request accepts the following data in JSON format.

### clientId (p. 16)

Unique identifier for the client. If you want access to multiple devices on the same client, you should pass the same clientId value in each call to `CreateRemoteAccessSession`. This identifier is required only if `remoteDebugEnabled` is set to `true`.

Remote debugging is no longer supported.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

### configuration (p. 16)

The configuration information for the remote access session request.

Type: `CreateRemoteAccessSessionConfiguration` (p. 240) object

Required: No

### deviceArn (p. 16)

The ARN of the device for which you want to create a remote access session.

Type: String

Pattern: ^arn:.+
Required: Yes

instanceArn (p. 16)

The Amazon Resource Name (ARN) of the device instance for which you want to create a remote access session.

Type: String

Pattern: ^arn:.+
Required: No

interactionMode (p. 16)

The interaction mode of the remote access session. Valid values are:

- INTERACTIVE: You can interact with the iOS device by viewing, touching, and rotating the screen. You cannot run XCUITest framework-based tests in this mode.
- NO_VIDEO: You are connected to the device, but cannot interact with it or view the screen. This mode has the fastest test execution speed. You can run XCUITest framework-based tests in this mode.
- VIDEO_ONLY: You can view the screen, but cannot touch or rotate it. You can run XCUITest framework-based tests and watch the screen in this mode.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Valid Values: INTERACTIVE | NO_VIDEO | VIDEO_ONLY

Required: No

name (p. 16)

The name of the remote access session to create.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

projectArn (p. 16)

The Amazon Resource Name (ARN) of the project for which you want to create a remote access session.

Type: String

Pattern: ^arn:.+
Required: Yes

remoteDebugEnabled (p. 16)

Set to true if you want to access devices remotely for debugging in your remote access session.

Remote debugging is no longer supported.

Type: Boolean
remoteRecordAppArn (p. 16)

The Amazon Resource Name (ARN) for the app to be recorded in the remote access session.

Type: String

Pattern: ^arn:.+

remoteRecordEnabled (p. 16)

Set to true to enable remote recording for the remote access session.

Type: Boolean

skipAppResign (p. 16)

When set to true, for private devices, Device Farm does not sign your app again. For public devices, Device Farm always signs your apps again.

For more information on how Device Farm modifies your uploads during tests, see Do you modify my app?

Type: Boolean

sshPublicKey (p. 16)

Ignored. The public key of the ssh key pair you want to use for connecting to remote devices in your remote debugging session. This key is required only if remoteDebugEnabled is set to true.

Remote debugging is no longer supported.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 8192.

Response Syntax

```json
{
    "remoteAccessSession": {
        "arn": "string",
        "billingMethod": "string",
        "clientId": "string",
        "created": number,
        "device": {
            "arn": "string",
            "availability": "string",
            "carrier": "string",
            "cpu": {
                "architecture": "string",
                "clock": number,
                "frequency": "string"
            }
        }
    }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

remoteAccessSession (p. 18)

A container that describes the remote access session when the request to create a remote access session is sent.

Type: RemoteAccessSession (p. 284) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

- AWS SDK for Ruby V3
CreateTestGridProject

Creates a Selenium testing project. Projects are used to track TestGridSession (p. 314) instances.

Request Syntax

```json
{
    "description": "string",
    "name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**description** (p. 21)

- Human-readable description of the project.
- Type: String
- Pattern: .*
- Required: No

**name** (p. 21)

- Human-readable name of the Selenium testing project.
- Type: String
- Length Constraints: Minimum length of 1. Maximum length of 64.
- Pattern: .*
- Required: Yes

Response Syntax

```json
{
    "testGridProject": {
        "arn": "string",
        "created": number,
        "description": "string",
        "name": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

testGridProject (p. 21)

ARN of the Selenium testing project that was created.

Type: TestGridProject (p. 313) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

InternalServiceException

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
CreateTestGridUrl

Creates a signed, short-term URL that can be passed to a Selenium RemoteWebDriver constructor.

**Request Syntax**

```json
{
   "expiresInSeconds": number,
   "projectArn": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**expiresInSeconds (p. 23)**

Lifetime, in seconds, of the URL.

Type: Integer

Valid Range: Minimum value of 60. Maximum value of 86400.

Required: Yes

**projectArn (p. 23)**

ARN (from CreateTestGridProject (p. 21) or ListTestGridProjects (p. 157)) to associate with the short-term URL.

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: Yes

**Response Syntax**

```json
{
   "expires": number,
   "url": "string"
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
expires (p. 23)

The number of seconds the URL from `CreateTestGridUrl::url (p. 24)` stays active.

Type: Timestamp

url (p. 23)

A signed URL, expiring in `CreateTestGridUrl::expiresInSeconds (p. 23)` seconds, to be passed to a `RemoteWebDriver`.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

InternalServerError

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

See Also

CreateUpload

Uploads an app or test scripts.

Request Syntax

```
{
   "contentType": "string",
   "name": "string",
   "projectArn": "string",
   "type": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**contentType (p. 25)**

The upload's content type (for example, application/octet-stream).

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

**name (p. 25)**

The upload's file name. The name should not contain any forward slashes (/). If you are uploading an iOS app, the file name must end with the .ipa extension. If you are uploading an Android app, the file name must end with the .apk extension. For all others, the file name must end with the .zip file extension.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: Yes

**projectArn (p. 25)**

The ARN of the project for the upload.

Type: String

Pattern: ^arn:.*$

Required: Yes

**type (p. 25)**

The upload's upload type.

Must be one of the following values:
AWS Device Farm API Reference
Request Parameters

- ANDROID_APP
- IOS_APP
- WEB_APP
- EXTERNAL_DATA
- APPIUM_JAVA_JUNIT_TEST_PACKAGE
- APPIUM_JAVA_TESTNG_TEST_PACKAGE
- APPIUM_PYTHON_TEST_PACKAGE
- APPIUM_NODE_TEST_PACKAGE
- APPIUM_RUBY_TEST_PACKAGE
- APPIUM_WEB_JAVA_JUNIT_TEST_PACKAGE
- APPIUM_WEB_JAVA_TESTNG_TEST_PACKAGE
- APPIUM_WEB_PYTHON_TEST_PACKAGE
- APPIUM_WEB_NODE_TEST_PACKAGE
- CALABASH_TEST_PACKAGE
- INSTRUMENTATION_TEST_PACKAGE
- UIAUTOMATION_TEST_PACKAGE
- UIAUTOMATOR_TEST_PACKAGE
- XCTEST_TEST_PACKAGE
- XCTEST_UI_TEST_PACKAGE
- APPIUM_JAVA_JUNIT_TEST_SPEC
- APPIUM_JAVA_TESTNG_TEST_SPEC
- APPIUM_PYTHON_TEST_SPEC
- APPIUM_NODE_TEST_SPEC
- APPIUM_RUBY_TEST_SPEC
- APPIUM_WEB_JAVA_JUNIT_TEST_SPEC
- APPIUM_WEB_JAVA_TESTNG_TEST_SPEC
- APPIUM_WEB_PYTHON_TEST_SPEC
- APPIUM_WEB_NODE_TEST_SPEC
- APPIUM_WEB_RUBY_TEST_SPEC
- INSTRUMENTATION_TEST_SPEC
- XCTEST_UI_TEST_SPEC

If you call `CreateUpload` with WEB_APP specified, AWS Device Farm throws an ArgumentException error.

Type: String

Valid Values: ANDROID_APP | IOS_APP | WEB_APP | EXTERNAL_DATA | APPIUM_JAVA_JUNIT_TEST_PACKAGE | APPIUM_JAVA_TESTNG_TEST_PACKAGE | APPIUM_PYTHON_TEST_PACKAGE | APPIUM_NODE_TEST_PACKAGE | APPIUM_RUBY_TEST_PACKAGE | APPIUM_WEB_JAVA_JUNIT_TEST_PACKAGE | APPIUM_WEB_JAVA_TESTNG_TEST_PACKAGE | APPIUM_WEB_PYTHON_TEST_PACKAGE | APPIUM_WEB_NODE_TEST_PACKAGE | APPIUM_WEB_RUBY_TEST_PACKAGE | CALABASH_TEST_PACKAGE | INSTRUMENTATION_TEST_PACKAGE | UIAUTOMATION_TEST_PACKAGE | UIAUTOMATOR_TEST_PACKAGE | XCTEST_TEST_PACKAGE | XCTEST_UI_TEST_PACKAGE | APPIUM_JAVA_JUNIT_TEST_SPEC | APPIUM_JAVA_TESTNG_TEST_SPEC | APPIUM_PYTHON_TEST_SPEC | APPIUM_NODE_TEST_SPEC | APPIUM_RUBY_TEST_SPEC | APPIUM_WEB_JAVA_JUNIT_TEST_SPEC | APPIUM_WEB_JAVA_TESTNG_TEST_SPEC
Response Syntax

```
{
  "upload": {
    "arn": "string",
    "category": "string",
    "contentType": "string",
    "created": number,
    "message": "string",
    "metadata": "string",
    "name": "string",
    "status": "string",
    "type": "string",
    "url": "string"
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response. The following data is returned in JSON format by the service.

**upload (p. 27)**

The newly created upload.

Type: Upload (p. 320) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.
HTTP Status Code: 400

See Also

CreateVPCEConfiguration

Creates a configuration record in Device Farm for your Amazon Virtual Private Cloud (VPC) endpoint.

Request Syntax

```
{
  "serviceDnsName": "string",
  "vpceConfigurationDescription": "string",
  "vpceConfigurationName": "string",
  "vpceServiceName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**serviceDnsName (p. 29)**

The DNS name of the service running in your VPC that you want Device Farm to test.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: Yes

**vpceConfigurationDescription (p. 29)**

An optional description that provides details about your VPC endpoint configuration.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

**vpceConfigurationName (p. 29)**

The friendly name you give to your VPC endpoint configuration, to manage your configurations more easily.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: Yes

**vpceServiceName (p. 29)**

The name of the VPC endpoint service running in your AWS account that you want Device Farm to test.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.
Response Syntax

```json
{
    "vpceConfiguration": {
        "arn": "string",
        "serviceDnsName": "string",
        "vpceConfigurationDescription": "string",
        "vpceConfigurationName": "string",
        "vpceServiceName": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**vpceConfiguration (p. 30)**

An object that contains information about your VPC endpoint configuration.

Type: VPCEConfiguration (p. 323) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

DeleteDevicePool

Deletes a device pool given the pool ARN. Does not allow deletion of curated pools owned by the system.

Request Syntax

```
{
  "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

`arn (p. 32)`

Represents the Amazon Resource Name (ARN) of the Device Farm device pool to delete.

Type: String

Pattern: ^arn:.+

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

`ArgumentException`

An invalid argument was specified.

HTTP Status Code: 400

`LimitExceededException`

A limit was exceeded.

HTTP Status Code: 400

`NotFoundException`

The specified entity was not found.

HTTP Status Code: 400

`ServiceAccountException`

There was a problem with the service account.
HTTP Status Code: 400

See Also

DeleteInstanceProfile

Deletes a profile that can be applied to one or more private device instances.

Request Syntax

```
{
  "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

`arn (p. 34)`

The Amazon Resource Name (ARN) of the instance profile you are requesting to delete.

Type: String

Pattern: `^arn:.*`

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

`ArgumentException`

An invalid argument was specified.

HTTP Status Code: 400

`LimitExceededException`

A limit was exceeded.

HTTP Status Code: 400

`NotFoundException`

The specified entity was not found.

HTTP Status Code: 400

`ServiceAccountException`

There was a problem with the service account.
HTTP Status Code: 400

See Also

DeleteNetworkProfile

Deletes a network profile.

**Request Syntax**

```json
{
   "arn":  "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

- **arn (p. 36)**
  - The ARN of the network profile to delete.
  - Type: String
  - Pattern: ^arn:.+
  - Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 327).

- **ArgumentException**
  - An invalid argument was specified.
  - HTTP Status Code: 400
- **LimitExceededException**
  - A limit was exceeded.
  - HTTP Status Code: 400
- **NotFoundException**
  - The specified entity was not found.
  - HTTP Status Code: 400
- **ServiceAccountException**
  - There was a problem with the service account.
HTTP Status Code: 400

DeleteProject

Deletes an AWS Device Farm project, given the project ARN.
Deleting this resource does not stop an in-progress run.

Request Syntax

```json
{
    "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 38)**

- Represents the Amazon Resource Name (ARN) of the Device Farm project to delete.
- Type: String
- Pattern: ^arn:.+
- Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

- An invalid argument was specified.
- HTTP Status Code: 400

**LimitExceededException**

- A limit was exceeded.
- HTTP Status Code: 400

**NotFoundException**

- The specified entity was not found.
- HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
DeleteRemoteAccessSession

Deletes a completed remote access session and its results.

Request Syntax

```
{
  "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

arn (p. 40)

- The Amazon Resource Name (ARN) of the session for which you want to delete remote access.
  - Type: String
  - Pattern: ^arn:.+
  - Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

- An invalid argument was specified.
  - HTTP Status Code: 400

LimitExceededException

- A limit was exceeded.
  - HTTP Status Code: 400

NotFoundException

- The specified entity was not found.
  - HTTP Status Code: 400

ServiceAccountException

- There was a problem with the service account.
HTTP Status Code: 400

DeleteRun

Deletes the run, given the run ARN.
Deleting this resource does not stop an in-progress run.

Request Syntax

```
{
  "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 42)**

The Amazon Resource Name (ARN) for the run to delete.
Type: String
Pattern: ^arn:.+
Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.
HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.
HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.
HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

DeleteTestGridProject

Deletes a Selenium testing project and all content generated under it.

**Important**
You cannot undo this operation.

**Note**
You cannot delete a project if it has active sessions.

**Request Syntax**

```
{
   "projectArn": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**projectArn (p. 44)**

The ARN of the project to delete, from CreateTestGridProject (p. 21) or ListTestGridProjects (p. 157).

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**CannotDeleteException**

The requested object could not be deleted.

HTTP Status Code: 400
InternalServiceException

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

DeleteUpload

Deletes an upload given the upload ARN.

**Request Syntax**

```json
{
    "arn": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 46)**

Represents the Amazon Resource Name (ARN) of the Device Farm upload to delete.

- **Type:** String
- **Length Constraints:** Minimum length of 32. Maximum length of 1011.
- **Pattern:** ^arn:.+
- **Required:** Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 327).

- **ArgumentException**
  
  An invalid argument was specified.
  
  HTTP Status Code: 400

- **LimitExceededException**
  
  A limit was exceeded.
  
  HTTP Status Code: 400

- **NotFoundException**
  
  The specified entity was not found.
  
  HTTP Status Code: 400

- **ServiceAccountException**
  
  There was a problem with the service account.
HTTP Status Code: 400

DeleteVPCEConfiguration

Deletes a configuration for your Amazon Virtual Private Cloud (VPC) endpoint.

Request Syntax

```json
{
    "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 48)**

The Amazon Resource Name (ARN) of the VPC endpoint configuration you want to delete.

- Type: String
- Pattern: ^arn: .+
- Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**InvalidOperationException**

There was an error with the update request, or you do not have sufficient permissions to update this VPC endpoint configuration.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

See Also

GetAccountSettings

Returns the number of unmetered iOS or unmetered Android devices that have been purchased by the account.

Response Syntax

```json
{
  "accountSettings": {
    "awsAccountNumber": "string",
    "defaultJobTimeoutMinutes": number,
    "maxJobTimeoutMinutes": number,
    "maxSlots": {
      "string": number
    },
    "skipAppResign": boolean,
    "trialMinutes": {
      "remaining": number,
      "total": number
    },
    "unmeteredDevices": {
      "string": number
    },
    "unmeteredRemoteAccessDevices": {
      "string": number
    }
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**accountSettings (p. 50)**

The account settings.

Type: AccountSettings (p. 233) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400
NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

GetDevice

Gets information about a unique device type.

Request Syntax

```json
{
  "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 52)**

The device type's ARN.

Type: String

Pattern: ^arn:.

Required: Yes

Response Syntax

```json
{
  "device": {
    "arn": "string",
    "availability": "string",
    "carrier": "string",
    "cpu": {
      "architecture": "string",
      "clock": number,
      "frequency": "string"
    },
    "fleetName": "string",
    "fleetType": "string",
    "formFactor": "string",
    "heapSize": number,
    "image": "string",
    "instances": [
      {
        "arn": "string",
        "deviceArn": "string",
        "instanceProfile": {
          "arn": "string",
          "description": "string",
          "excludeAppPackagesFromCleanup": [ "string" ],
          "name": "string",
          "packageCleanup": boolean,
          "rebootAfterUse": boolean
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

device (p. 52)

An object that contains information about the requested device.

Type: Device (p. 242) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

GetDeviceInstance

Returns information about a device instance that belongs to a private device fleet.

Request Syntax

```json
{
   "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

`arn (p. 55)`

The Amazon Resource Name (ARN) of the instance you're requesting information about.

Type: String

Pattern: ^arn:.*

Required: Yes

Response Syntax

```json
{
   "deviceInstance": {
      "arn": "string",
      "deviceArn": "string",
      "instanceProfile": {
         "arn": "string",
         "description": "string",
         "excludeAppPackagesFromCleanup": [ "string" ],
         "name": "string",
         "packageCleanup": boolean,
         "rebootAfterUse": boolean
      },
      "labels": [ "string" ],
      "status": "string",
      "udid": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
**deviceInstance (p. 55)**

An object that contains information about your device instance.

Type: `DeviceInstance (p. 249)` object

---

## Errors

For information about the errors that are common to all actions, see [Common Errors (p. 327)](#).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

---

API Version 2015-06-23

56
GetDevicePool

Gets information about a device pool.

**Request Syntax**

```json
{
   "arn": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

- **arn (p. 57)**
  
  The device pool's ARN.
  
  Type: String
  
  
  Pattern: ^arn:..
  
  Required: Yes

**Response Syntax**

```json
{
   "devicePool": {
      "arn": "string",
      "description": "string",
      "maxDevices": number,
      "name": "string",
      "rules": [
         {
            "attribute": "string",
            "operator": "string",
            "value": "string"
         }
      ],
      "type": "string"
   }
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
devicePool (p. 57)

An object that contains information about the requested device pool.

Type: DevicePool (p. 252) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

See Also

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
GetDevicePoolCompatibility

Gets information about compatibility with a device pool.

Request Syntax

```
{
  "appArn": "string",
  "configuration": {
    "auxiliaryApps": [ "string" ],
    "billingMethod": "string",
    "customerArtifactPaths": {
      "androidPaths": [ "string" ],
      "deviceHostPaths": [ "string" ],
      "iosPaths": [ "string" ]
    },
    "extraDataPackageArn": "string",
    "locale": "string",
    "location": {
      "latitude": number,
      "longitude": number
    },
    "networkProfileArn": "string",
    "radios": {
      "bluetooth": boolean,
      "gps": boolean,
      "nfc": boolean,
      "wifi": boolean
    },
    "vpceConfigurationArns": [ "string" ]
  },
  "devicePoolArn": "string",
  "test": {
    "filter": "string",
    "parameters": {
      "string": "string"
    },
    "testPackageArn": "string",
    "testSpecArn": "string",
    "type": "string"
  }
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**appArn (p. 59)**

The ARN of the app that is associated with the specified device pool.

Type: String

Pattern: ^arn:.*+
Request Parameters

- **configuration (p. 59)**
  
  An object that contains information about the settings for a run.
  
  Type: `ScheduleRunConfiguration (p. 301)` object

- **devicePoolArn (p. 59)**
  
  The device pool's ARN.
  
  Type: String
  
  
  Pattern: `^arn:.*`

- **test (p. 59)**
  
  Information about the uploaded test to be run against the device pool.
  
  Type: `ScheduleRunTest (p. 303)` object

- **testType (p. 59)**
  
  The test type for the specified device pool.

  Allowed values include the following:
  
  - `BUILTIN_FUZZ`.
  - `BUILTIN_EXPLORER`. For Android, an app explorer that traverses an Android app, interacting with it and capturing screenshots at the same time.
  - `APPIUM_JAVA_JUNIT`.
  - `APPIUM_JAVA_TESTNG`.
  - `APPIUM_PYTHON`.
  - `APPIUM_NODE`.
  - `APPIUM_RUBY`.
  - `APPIUM_WEB_JAVA_JUNIT`.
  - `APPIUM_WEB_JAVA_TESTNG`.
  - `APPIUM_WEB_PYTHON`.
  - `APPIUM_WEB_NODE`.
  - `APPIUM_WEB_RUBY`.
  - `CALABASH`.
  - `INSTRUMENTATION`.
  - `UIAUTOMATION`.
  - `UIAUTOMATOR`.
  - `XCTEST`.
  - `XCTEST_UI`.
Type: String

Valid Values: BUILTIN_FUZZ | BUILTIN_EXPLORER | WEB_PERFORMANCE_PROFILE | APPIUM_JAVA_JUNIT | APPIUM_JAVA_TESTNG | APPIUM_PYTHON | APPIUM_NODE | APPIUM_RUBY | APPIUM_WEB_JAVA_JUNIT | APPIUM_WEB_JAVA_TESTNG | APPIUM_WEB_PYTHON | APPIUM_WEB_NODE | APPIUM_WEB_RUBY | CALABASH | INSTRUMENTATION | UIAUTOMATION | UIAUTOMATOR | XCTEST | XCTEST_UI | REMOTE_ACCESS_RECORD | REMOTE_ACCESS_REPLAY

Required: No

Response Syntax

```json
{
  "compatibleDevices": [
    {
      "compatible": boolean,
      "device": {
        "arn": "string",
        "availability": "string",

        "width": number
      }
    }
  }
],
"incompatibilityMessages": [
  {
    "message": "string",
    "type": "string"
  }
]
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**compatibleDevices (p. 61)**

Information about compatible devices.

Type: Array of DevicePoolCompatibilityResult (p. 254) objects

**incompatibleDevices (p. 61)**

Information about incompatible devices.

Type: Array of DevicePoolCompatibilityResult (p. 254) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

GetInstanceProfile

Returns information about the specified instance profile.

Request Syntax

```json
{
   "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 65)**

The Amazon Resource Name (ARN) of an instance profile.

Type: String

Pattern: ^arn:.+

Required: Yes

Response Syntax

```json
{
   "instanceProfile": {
      "arn": "string",
      "description": "string",
      "excludeAppPackagesFromCleanup": [ "string" ],
      "name": "string",
      "packageCleanup": boolean,
      "rebootAfterUse": boolean
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**instanceProfile (p. 65)**

An object that contains information about an instance profile.

Type: InstanceProfile (p. 260) object
Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

GetJob

Gets information about a job.

Request Syntax

```json
{
    "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 67)**

The job's ARN.

Type: String

Pattern: ^arn:.+

Required: Yes

Response Syntax

```json
{
    "job": {
        "arn": "string",
        "counters": {
            "errored": number,
            "failed": number,
            "passed": number,
            "skipped": number,
            "stopped": number,
            "total": number,
            "warned": number
        },
        "created": number,
        "device": {
            "arn": "string",
            "availability": "string",
            "carrier": "string",
            "cpu": {
                "architecture": "string",
                "clock": number,
                "frequency": "string"
            },
            "fleetName": "string",
            "fleetType": "string",
            "formFactor": "string"
        }
    }
}
```
"heapSize": number,
"image": "string",
"instances": [
{
  "arn": "string",
  "deviceArn": "string",
  "instanceProfile": {
    "arn": "string",
    "description": "string",
    "excludeAppPackagesFromCleanup": [ "string" ],
    "name": "string",
    "packageCleanup": boolean,
    "rebootAfterUse": boolean
  },
  "labels": [ "string" ],
  "status": "string",
  "udid": "string"
}
],
"manufacturer": "string",
"memory": number,
"model": "string",
"modelId": "string",
"name": "string",
"os": "string",
"platform": "string",
"radio": "string",
"remoteAccessEnabled": boolean,
"remoteDebugEnabled": boolean,
"resolution": {
  "height": number,
  "width": number
}
],
"deviceMinutes": {
  "metered": number,
  "total": number,
  "unmetered": number
},
"instanceArn": "string",
"message": "string",
"name": "string",
"result": "string",
"started": number,
"status": "string",
"stopped": number,
"type": "string",
"videoCapture": boolean,
"videoEndpoint": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

job (p. 67)

An object that contains information about the requested job.

Type: Job (p. 262) object
Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

GetNetworkProfile

Returns information about a network profile.

**Request Syntax**

```
{
  "arn": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 70)**

The ARN of the network profile to return information about.

<table>
<thead>
<tr>
<th>Type</th>
<th>String</th>
</tr>
</thead>
<tbody>
<tr>
<td>Length</td>
<td>Minimum length of 32. Maximum length of 1011.</td>
</tr>
<tr>
<td>Pattern</td>
<td>^arn:.*</td>
</tr>
<tr>
<td>Required</td>
<td>Yes</td>
</tr>
</tbody>
</table>

**Response Syntax**

```
{
  "networkProfile": {
    "arn": "string",
    "description": "string",
    "downlinkBandwidthBits": number,
    "downlinkDelayMs": number,
    "downlinkJitterMs": number,
    "downlinkLossPercent": number,
    "name": "string",
    "type": "string",
    "uplinkBandwidthBits": number,
    "uplinkDelayMs": number,
    "uplinkJitterMs": number,
    "uplinkLossPercent": number
  }
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
networkProfile (p. 70)

The network profile.

Type: NetworkProfile (p. 271) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

- AWS SDK for Ruby V3
GetOfferingStatus

Gets the current status and future status of all offerings purchased by an AWS account. The response indicates how many offerings are currently available and the offerings that will be available in the next period. The API returns a NotEligible error if the user is not permitted to invoke the operation. If you must be able to invoke this operation, contact aws-devicefarm-support@amazon.com.

Request Syntax

```json
{
   "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**nextToken (p. 72)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```json
{
   "current": {
      "string": {
         "effectiveOn": number,
         "offering": {
            "description": "string",
            "id": "string",
            "platform": "string",
            "recurringCharges": [
               {
                  "cost": {
                     "amount": number,
                     "currencyCode": "string"
                  },
                  "frequency": "string"
               }
            ],
            "type": "string"
         },
         "quantity": number,
         "type": "string"
      }
   },
   "nextPeriod": {
   }
}
```
"string" : {
    "effectiveOn": number,
    "offering": {
        "description": "string",
        "id": "string",
        "platform": "string",
        "recurringCharges": [
            {
                "cost": {
                    "amount": number,
                    "currencyCode": "string"
                },
                "frequency": "string"
            }
        ],
        "type": "string"
    },
    "quantity": number,
    "type": "string"
},
"nextToken": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**current (p. 72)**

When specified, gets the offering status for the current period.

Type: String to OfferingStatus (p. 276) object map

Key Length Constraints: Minimum length of 32.

**nextPeriod (p. 72)**

When specified, gets the offering status for the next period.

Type: String to OfferingStatus (p. 276) object map

Key Length Constraints: Minimum length of 32.

**nextToken (p. 72)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.
HTTP Status Code: 400

**LimitExceededException**
A limit was exceeded.

HTTP Status Code: 400

**NotEligibleException**
Exception gets thrown when a user is not eligible to perform the specified transaction.

HTTP Status Code: 400

**NotFoundException**
The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**
There was a problem with the service account.

HTTP Status Code: 400

**Example**

The following example checks the current and renewal status.

**Sample Response**

```json
{
    "current": {
        "offering-id-ios": {
            "offering": {
                "platform": "IOS",
                "type": "RECURRING",
                "id": "offering-id-ios",
                "description": "iOS Unmetered Device Slot"
            },
            "quantity": 1
        }
    },
    "nextPeriod": {
        "offering-id-ios": {
            "effectiveOn": 1459468800.0,
            "offering": {
                "platform": "IOS",
                "type": "RECURRING",
                "id": "offering-id-ios",
                "description": "iOS Unmetered Device Slot"
            },
            "quantity": 1
        }
    }
}
```

GetProject

Gets information about a project.

Request Syntax

```json
{
   "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 76)**

The project's ARN.

Type: String

Pattern: `^arn:.+$`

Required: Yes

Response Syntax

```json
{
   "project": {
      "arn": "string",
      "created": number,
      "defaultJobTimeoutMinutes": number,
      "name": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**project (p. 76)**

The project to get information about.

Type: `Project (p. 281)` object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).
**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

---

GetRemoteAccessSession

Returns a link to a currently running remote access session.

Request Syntax

```json
{
   "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 78)**

The Amazon Resource Name (ARN) of the remote access session about which you want to get session information.

Type: String

Pattern: ^arn:.

Required: Yes

Response Syntax

```json
{
   "remoteAccessSession": {
      "arn": "string",
      "billingMethod": "string",
      "clientId": "string",
      "created": number,
      "device": {
         "arn": "string",
         "availability": "string",
         "carrier": "string",
         "cpu": {
            "architecture": "string",
            "clock": number,
            "frequency": "string"
         },
         "fleetName": "string",
         "fleetType": "string",
         "formFactor": "string",
         "heapSize": number,
         "image": "string",
         "instances": [  
            {
               "arn": "string",
            }
         ]
      }
   }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

remoteAccessSession (p. 78)

A container that lists detailed information about the remote access session.

Type: RemoteAccessSession (p. 284) object
Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

GetRun

Gets information about a run.

**Request Syntax**

```json
{
    "arn": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 81)**

The run's ARN.

Type: String

Pattern: ^arn:.

Required: Yes

**Response Syntax**

```json
{
    "run": {
        "appUpload": "string",
        "arn": "string",
        "billingMethod": "string",
        "completedJobs": number,
        "counters": {
            "errored": number,
            "failed": number,
            "passed": number,
            "skipped": number,
            "stopped": number,
            "total": number,
            "warned": number
        },
        "created": number,
        "customerArtifactPaths": {
            "androidPaths": [ "string" ],
            "deviceHostPaths": [ "string" ],
            "iosPaths": [ "string" ]
        },
        "deviceMinutes": {
            "metered": number,
            "total": number,
        }
    }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
run (p. 81)

The run to get results from.

Type: Run (p. 293) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

GetSuite

Gets information about a suite.

Request Syntax

```json
{
    "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 84)**

The suite's ARN.

Type: String

Pattern: ^arn:.

Required: Yes

Response Syntax

```json
{
    "suite": {
        "arn": "string",
        "counters": {
            "errored": number,
            "failed": number,
            "passed": number,
            "skipped": number,
            "stopped": number,
            "total": number,
            "warned": number
        },
        "created": number,
        "deviceMinutes": {
            "metered": number,
            "total": number,
            "unmetered": number
        },
        "message": "string",
        "name": "string",
        "result": "string",
        "started": number,
        "status": "string",
        "stopped": number,
        "type": "string"
    }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

suite (p. 84)

A collection of one or more tests.

Type: Suite (p. 306) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

GetTest

Gets information about a test.

Request Syntax

```json
{
  "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 87)**

The test's ARN.

Type: String

Pattern: ^arn:.+

Required: Yes

Response Syntax

```json
{
  "test": {
    "arn": "string",
    "counters": {
      "errored": number,
      "failed": number,
      "passed": number,
      "skipped": number,
      "stopped": number,
      "total": number,
      "warned": number
    },
    "created": number,
    "deviceMinutes": {
      "metered": number,
      "total": number,
      "unmetered": number
    },
    "message": "string",
    "name": "string",
    "result": "string",
    "started": number,
    "status": "string",
    "stopped": number,
    "type": "string"
  }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

test (p. 87)

A test condition that is evaluated.

Type: Test (p. 310) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

GetTestGridProject

Retrieves information about a Selenium testing project.

Request Syntax

```json
{
   "projectArn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

`projectArn` (p. 90)

The ARN of the Selenium testing project, from either `CreateTestGridProject (p. 21)` or `ListTestGridProjects (p. 157)`.

Type: String

Pattern: `^arn:aws:devicefarm:.+$`

Required: Yes

Response Syntax

```json
{
   "testGridProject": {
      "arn": "string",
      "created": number,
      "description": "string",
      "name": "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

`testGridProject` (p. 90)

A `TestGridProject (p. 313)`.

Type: `TestGridProject (p. 313)` object
Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

InternalServiceException

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

GetTestGridSession

A session is an instance of a browser created through a RemoteWebDriver with the URL from CreateTestGridUrl (p. 24). You can use the following to look up sessions:

- The session ARN (GetTestGridSession:sessionArn (p. 92)).
- The project ARN and a session ID (GetTestGridSession:projectArn (p. 92) and GetTestGridSession:sessionId (p. 92)).

Request Syntax

```json
{
  "projectArn": "string",
  "sessionArn": "string",
  "sessionId": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**projectArn (p. 92)**

The ARN for the project that this session belongs to. See CreateTestGridProject (p. 21) and ListTestGridProjects (p. 157).

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: No

**sessionArn (p. 92)**

An ARN that uniquely identifies a TestGridSession (p. 314).

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: No

**sessionId (p. 92)**

An ID associated with this session.

Type: String

Pattern: .*\S.*
Required: No

Response Syntax

```json
{
  "testGridSession": {
    "arn": "string",
    "billingMinutes": number,
    "created": number,
    "ended": number,
    "seleniumProperties": "string",
    "status": "string"
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

testGridSession (p. 93)

The TestGridSession (p. 314) that was requested.

Type: TestGridSession (p. 314) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

InternalServiceException

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

GetUpload

Gets information about an upload.

Request Syntax

```
{
    "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 95)**

The upload's ARN.

Type: String

Pattern: ^arn:.+

Required: Yes

Response Syntax

```
{
    "upload": {
        "arn": "string",
        "category": "string",
        "contentType": "string",
        "created": number,
        "message": "string",
        "metadata": "string",
        "name": "string",
        "status": "string",
        "type": "string",
        "url": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**upload (p. 95)**

An app or a set of one or more tests to upload or that have been uploaded.
Type: Upload (p. 320) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException
An invalid argument was specified.
HTTP Status Code: 400

LimitExceededException
A limit was exceeded.
HTTP Status Code: 400

NotFoundException
The specified entity was not found.
HTTP Status Code: 400

ServiceAccountException
There was a problem with the service account.
HTTP Status Code: 400

GetVPCEConfiguration

Returns information about the configuration settings for your Amazon Virtual Private Cloud (VPC) endpoint.

Request Syntax

```json
{
    "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

```
arn (p. 97)
```

The Amazon Resource Name (ARN) of the VPC endpoint configuration you want to describe.

Type: String

Pattern: ^arn:.*

Required: Yes

Response Syntax

```json
{
    "vpceConfiguration": {
        "arn": "string",
        "serviceDnsName": "string",
        "vpceConfigurationDescription": "string",
        "vpceConfigurationName": "string",
        "vpceServiceName": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

```
vpceConfiguration (p. 97)
```

An object that contains information about your VPC endpoint configuration.

Type: VPCEConfiguration (p. 323) object
Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

InstallToRemoteAccessSession

Installs an application to the device in a remote access session. For Android applications, the file must be in .apk format. For iOS applications, the file must be in .ipa format.

Request Syntax

```
{
  "appArn": "string",
  "remoteAccessSessionArn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**appArn (p. 99)**

The ARN of the app about which you are requesting information.

Type: String

Pattern: ^arn:.

Required: Yes

**remoteAccessSessionArn (p. 99)**

The Amazon Resource Name (ARN) of the remote access session about which you are requesting information.

Type: String

Pattern: ^arn:.

Required: Yes

Response Syntax

```
{
  "appUpload": {
    "arn": "string",
    "category": "string",
    "contentType": "string",
    "created": number,
    "message": "string",
    "metadata": "string",
    "name": "string",
    "status": "string",
    "type": "string",
  }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**appUpload (p. 99)**

An app to upload or that has been uploaded.

Type: Upload (p. 320) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

ListArtifacts

Gets information about artifacts.

Request Syntax

```json
{
  "arn": "string",
  "nextToken": "string",
  "type": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 102)**

The run, job, suite, or test ARN.

Type: String

Pattern: ^arn:.+

Required: Yes

**nextToken (p. 102)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

**type (p. 102)**

The artifacts' type.

Allowed values include:

- FILE
- LOG
- SCREENSHOT

Type: String

Valid Values: SCREENSHOT | FILE | LOG

Required: Yes
Response Syntax

```json
{
    "artifacts": [
        {
            "arn": "string",
            "extension": "string",
            "name": "string",
            "type": "string",
            "url": "string"
        }
    ],
    "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**artifacts** (p. 103)

Information about the artifacts.

Type: Array of Artifact (p. 235) objects

**nextToken** (p. 103)

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

ListDeviceInstances

Returns information about the private device instances associated with one or more AWS accounts.

Request Syntax

```
{
  "maxResults": number,
  "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

maxResults (p. 105)

An integer that specifies the maximum number of items you want to return in the API response.

Type: Integer

Required: No

nextToken (p. 105)

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```
{
  "deviceInstances": [
    {
      "arn": "string",
      "deviceArn": "string",
      "instanceProfile": {
        "arn": "string",
        "description": "string",
        "excludeAppPackagesFromCleanup": [ "string" ],
        "name": "string",
        "packageCleanup": boolean,
        "rebootAfterUse": boolean
      },
      "labels": [ "string" ],
      "status": "string",
      "udid": "string"
    }
  ],
```

API Version 2015-06-23
"nextToken": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

deviceInstances (p. 105)
An object that contains information about your device instances.
Type: Array of DeviceInstance (p. 249) objects

c.nextToken (p. 105)
An identifier that can be used in the next call to this operation to return the next set of items in the list.
Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException
An invalid argument was specified.
HTTP Status Code: 400

LimitExceededException
A limit was exceeded.
HTTP Status Code: 400

NotFoundException
The specified entity was not found.
HTTP Status Code: 400

ServiceAccountException
There was a problem with the service account.
HTTP Status Code: 400

ListDevicePools

Gets information about device pools.

Request Syntax

```
{
  "arn": "string",
  "nextToken": "string",
  "type": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

`arn` (p. 108)

The project ARN.

Type: String

Pattern: ^arn:.+

Required: Yes

`nextToken` (p. 108)

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

`type` (p. 108)

The device pools' type.

Allowed values include:

- **CURATED**: A device pool that is created and managed by AWS Device Farm.
- **PRIVATE**: A device pool that is created and managed by the device pool developer.

Type: String

Valid Values: CURATED | PRIVATE

Required: No

Response Syntax

```
{
}
```

API Version 2015-06-23
108
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

devicePools (p. 108)

Information about the device pools.

Type: Array of DevicePool (p. 252) objects

nextToken (p. 108)

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceeded Exception

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

See Also

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
ListDevices

Gets information about unique device types.

Request Syntax

```json
{
    "arn": "string",
    "filters": [
        {
            "attribute": "string",
            "operator": "string",
            "values": [ "string" ]
        }
    ],
    "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 111)**

The Amazon Resource Name (ARN) of the project.

Type: String

Pattern: ^arn:.*

Required: No

**filters (p. 111)**

Used to select a set of devices. A filter is made up of an attribute, an operator, and one or more values.

- Attribute: The aspect of a device such as platform or model used as the selection criteria in a device filter.
  
  Allowed values include:
  
  - ARN: The Amazon Resource Name (ARN) of the device (for example, arn:aws:devicefarm:us-west-2::device:12345Example).
  - PLATFORM: The device platform. Valid values are ANDROID or IOS.
  - OS_VERSION: The operating system version (for example, 10.3.2).
  - MODEL: The device model (for example, iPad 5th Gen).
  - AVAILABILITY: The current availability of the device. Valid values are AVAILABLE, HIGHLY_AVAILABLE, BUSY, or TEMPORARY_NOT_AVAILABLE.
  - FORM_FACTOR: The device form factor. Valid values are PHONE or TABLET.
  - MANUFACTURER: The device manufacturer (for example, Apple).
  - REMOTE_ACCESS_ENABLED: Whether the device is enabled for remote access. Valid values are TRUE or FALSE.
• REMOTE_DEBUG_ENABLED: Whether the device is enabled for remote debugging. Valid values are TRUE or FALSE. Because remote debugging is no longer supported, this attribute is ignored.
• INSTANCE_ARN: The Amazon Resource Name (ARN) of the device instance.
• INSTANCE_LABELS: The label of the device instance.
• FLEET_TYPE: The fleet type. Valid values are PUBLIC or PRIVATE.

Operator: The filter operator.
• The EQUALS operator is available for every attribute except INSTANCE_LABELS.
• The CONTAINS operator is available for the INSTANCE_LABELS and MODEL attributes.
• The IN and NOT_IN operators are available for the ARN, OS_VERSION, MODEL, MANUFACTURER, and INSTANCE_ARN attributes.
• The LESS_THAN, GREATER_THAN, LESS_THAN_OR_EQUALS, and GREATER_THAN_OR_EQUALS operators are also available for the OS_VERSION attribute.

Values: An array of one or more filter values.
• The IN and NOT_IN operators take a values array that has one or more elements.
• The other operators require an array with a single element.
• In a request, the AVAILABILITY attribute takes the following values: AVAILABLE, HIGHLYAVAILABLE, BUSY, or TEMPORARY_NOT_AVAILABLE.

Type: Array of DeviceFilter objects

Required: No

nextToken

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```
{
  "devices": [
    {
      "arn": "string",
      "availability": "string",
      "carrier": "string",
      "cpu": {
        "architecture": "string",
        "clock": number,
        "frequency": "string"
      },
      "fleetName": "string",
      "fleetType": "string",
      "formFactor": "string",
      "heapSize": number,
      "image": "string",
      "instances": [
        {
          "arn": "string",
          "deviceArn": "string",
          "instanceProfile": {
            "arn": "string",
          }
        }
      ]
    }
  ]
}
```
"description": "string",
"excludeAppPackagesFromCleanup": [ "string" ],
"name": "string",
"packageCleanup": boolean,
"rebootAfterUse": boolean
},
"labels": [ "string" ],
"status": "string",
"udid": "string"
}
],
"manufacturer": "string",
"memory": number,
"model": "string",
"modelId": "string",
"name": "string",
"os": "string",
"platform": "string",
"radio": "string",
"remoteAccessEnabled": boolean,
"remoteDebugEnabled": boolean,
"resolution": {
  "height": number,
  "width": number
}
]
,"nextToken": "string"
}

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**devices (p. 112)**

Information about the devices.

Type: Array of Device (p. 242) objects

**nextToken (p. 112)**

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400
LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

See Also

ListInstanceProfiles

Returns information about all the instance profiles in an AWS account.

Request Syntax

```json
{
    "maxResults": number,
    "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**maxResults (p. 115)**

An integer that specifies the maximum number of items you want to return in the API response.

- Type: Integer
- Required: No

**nextToken (p. 115)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

- Type: String
- Required: No

Response Syntax

```json
{
    "instanceProfiles": [ 
        {
            "arn": "string",
            "description": "string",
            "excludeAppPackagesFromCleanup": [ "string" ],
            "name": "string",
            "packageCleanup": boolean,
            "rebootAfterUse": boolean
        },
        
        "nextToken": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

API Version 2015-06-23
The following data is returned in JSON format by the service.

**instanceProfiles (p. 115)**

An object that contains information about your instance profiles.

Type: Array of InstanceProfile (p. 260) objects

**nextToken (p. 115)**

An identifier that can be used in the next call to this operation to return the next set of items in the list.

Type: String

---

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

---

ListJobs

Gets information about jobs for a given test run.

Request Syntax

{
  "arn": "string",
  "nextToken": "string"
}

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 118)**

The run's Amazon Resource Name (ARN).

Type: String

Pattern: ^arn: .+

Required: Yes

**nextToken (p. 118)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

{
  "jobs": [
    {
      "arn": "string",
      "counters": {
        "errored": number,
        "failed": number,
        "passed": number,
        "skipped": number,
        "stopped": number,
        "total": number,
        "warned": number
      }
    }
  ]
}
{
"created": number,
"device": {
  "arn": "string",

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

jobs (p. 118)

Information about the jobs.

Type: Array of Job (p. 262) objects

nextToken (p. 118)

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

ListNetworkProfiles

Returns the list of available network profiles.

Request Syntax

```json
{
    "arn": "string",
    "nextToken": "string",
    "type": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 122)**

The Amazon Resource Name (ARN) of the project for which you want to list network profiles.

Type: String
Pattern: `^arn:.*`
Required: Yes

**nextToken (p. 122)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String
Required: No

**type (p. 122)**

The type of network profile to return information about. Valid values are listed here.

Type: String
Valid Values: CURATED | PRIVATE
Required: No

Response Syntax

```json
{
    "networkProfiles": [
        {
            "arn": "string",
            "nextToken": "string",
            "type": "string"
        }
    ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**networkProfiles (p. 122)**

A list of the available network profiles.

Type: Array of NetworkProfile (p. 271) objects

**nextToken (p. 122)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.
HTTP Status Code: 400

ListOfferingPromotions

Returns a list of offering promotions. Each offering promotion record contains the ID and description of the promotion. The API returns a NotEligible error if the caller is not permitted to invoke the operation. Contact aws-devicefarm-support@amazon.com if you must be able to invoke this operation.

Request Syntax

```json
{
    "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**nextToken (p. 125)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```json
{
    "nextToken": "string",
    "offeringPromotions": [
        {
            "description": "string",
            "id": "string"
        }
    ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**nextToken (p. 125)**

An identifier to be used in the next call to this operation, to return the next set of items in the list.

Type: String

offeringPromotions (p. 125)

Information about the offering promotions.

Type: Array of OfferingPromotion (p. 275) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotEligibleException

Exception gets thrown when a user is not eligible to perform the specified transaction.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

ListOfferings

Returns a list of products or offerings that the user can manage through the API. Each offering record indicates the recurring price per unit and the frequency for that offering. The API returns a NotEligible error if the user is not permitted to invoke the operation. If you must be able to invoke this operation, contact aws-devicefarm-support@amazon.com.

Request Syntax

```
{
  "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**nextToken (p. 127)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```
{
  "nextToken": "string",
  "offerings": [
    {
      "description": "string",
      "id": "string",
      "platform": "string",
      "recurringCharges": [
        {
          "cost": {
            "amount": number,
            "currencyCode": "string"
          },
          "frequency": "string"
        }
      ],
      "type": "string"
    }
  ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken (p. 127)

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

offerings (p. 127)

A value that represents the list offering results.

Type: Array of Offering (p. 273) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotEligibleException

Exception gets thrown when a user is not eligible to perform the specified transaction.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

Example

The following example response shows a list of device offerings for the user’s account.
Sample Response

```
{
  "offerings": [
    {
      "recurringCharges": [
        {
          "cost": {
            "amount": 250.0,
            "currencyCode": "USD"
          },
          "frequency": "MONTHLY"
        }
      ],
      "platform": "IOS",
      "type": "RECURRING",
      "id": "offering-id-ios",
      "description": "iOS Unmetered Device Slot"
    },
    {
      "recurringCharges": [
        {
          "cost": {
            "amount": 250.0,
            "currencyCode": "USD"
          },
          "frequency": "MONTHLY"
        }
      ],
      "platform": "ANDROID",
      "type": "RECURRING",
      "id": "offering-id-android",
      "description": "Android Unmetered Device Slot"
    }
  ]
}
```

ListOfferingTransactions

Returns a list of all historical purchases, renewals, and system renewal transactions for an AWS account. The list is paginated and ordered by a descending timestamp (most recent transactions are first). The API returns a NotEligible error if the user is not permitted to invoke the operation. If you must be able to invoke this operation, contact aws-devicefarm-support@amazon.com.

Request Syntax

```
{
   "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

nextToken (p. 130)

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```
{
   "nextToken": "string",
   "offeringTransactions": [ 
   {
      "cost": {
         "amount": number,
         "currencyCode": "string"
      },
      "createdOn": number,
      "offeringPromotionId": "string",
      "offeringStatus": {
         "effectiveOn": number,
         "offering": { 
            "description": "string",
            "id": "string",
            "platform": "string",
            "recurringCharges": [ 
            {
               "cost": {
                  "amount": number,
                  "currencyCode": "string"
               },
               "frequency": "string"
            }
         }
      }
   }
}
```

API Version 2015-06-23
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**nextToken (p. 130)**

An identifier that was returned from the previous call to this operation, which can be used to return
the next set of items in the list.

Type: String

**offeringTransactions (p. 130)**

The audit log of subscriptions you have purchased and modified through AWS Device Farm.

Type: Array of OfferingTransaction (p. 277) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotEligibleException**

Exception gets thrown when a user is not eligible to perform the specified transaction.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.
HTTP Status Code: 400

Example

The following example response contains all the transactions that the customer has made.

Sample Response

```json
{
    "offeringTransactions": [
        {
            "createdOn": 1458596241.001,

ListProjects

Gets information about projects.

Request Syntax

```json
{
   "arn": "string",
   "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**arn (p. 138)**

Optional. If no Amazon Resource Name (ARN) is specified, then AWS Device Farm returns a list of all projects for the AWS account. You can also specify a project ARN.

Type: String

Pattern: `^arn:.+$`

Required: No

**nextToken (p. 138)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```json
{
   "nextToken": "string",
   "projects": [
      {
         "arn": "string",
         "created": number,
         "defaultJobTimeoutMinutes": number,
         "name": "string"
      }
   ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken (p. 138)

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

projects (p. 138)

Information about the projects.

Type: Array of Project (p. 281) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

ListRemoteAccessSessions

Returns a list of all currently running remote access sessions.

Request Syntax

```
{
    "arn": "string",
    "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 141)**

The Amazon Resource Name (ARN) of the project about which you are requesting information.

Type: String

Pattern: ^arn:.+

Required: Yes

**nextToken (p. 141)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```
{
    "nextToken": "string",
    "remoteAccessSessions": [
        {
            "arn": "string",
            "billingMethod": "string",
            "clientId": "string",
            "created": number,
            "device": {
                "arn": "string",
                "availability": "string",
                "carrier": "string",
                "cpu": {
                    "architecture": "string",
                    "clock": number,
                    "frequency": "string"
                }
            }
        }
    ]
}
```
},
  "fleetName": "string",
  "fleetType": "string",

  "hostAddress": "string",
  "instanceArn": "string",
  "interactionMode": "string",
  "message": "string",
  "name": "string",
  "remoteDebugEnabled": boolean,
  "remoteRecordAppArn": "string",
  "remoteRecordEnabled": boolean,
  "result": "string",
  "skipAppResign": boolean,
  "started": number,
  "status": "string",
  "stopped": number
}
]
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**nextToken (p. 141)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

**remoteAccessSessions (p. 141)**

A container that represents the metadata from the service about each remote access session you are requesting.

Type: Array of RemoteAccessSession (p. 284) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

ListRuns

Gets information about runs, given an AWS Device Farm project ARN.

Request Syntax

```json
{
  "arn": "string",
  "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 145)**

The Amazon Resource Name (ARN) of the project for which you want to list runs.

Type: String

Pattern: ^arn:.+

Required: Yes

**nextToken (p. 145)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```json
{
  "nextToken": "string",
  "runs": [
    {
      "appUpload": "string",
      "arn": "string",
      "billingMethod": "string",
      "completedJobs": number,
      "counters": {
        "errored": number,
        "failed": number,
        "passed": number,
        "skipped": number,
        "stopped": number,
      }
    }
  ]
}
```
"total": number,
"warned": number,
"created": number,
"customerArtifactPaths": {
  "androidPaths": [ "string" ],
  "deviceHostPaths": [ "string" ],
  "iosPaths": [ "string" ]
},
"deviceMinutes": {

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken (p. 145)

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

runs (p. 145)

Information about the runs.

Type: Array of Run (p. 293) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

ListSamples

Gets information about samples, given an AWS Device Farm job ARN.

Request Syntax

```json
{
    "arn": "string",
    "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

`arn` *(p. 149)*

The Amazon Resource Name (ARN) of the job used to list samples.

Type: String

Pattern: ^arn:.+

Required: Yes

`nextToken` *(p. 149)*

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```json
{
    "nextToken": "string",
    "samples": [
        {
            "arn": "string",
            "type": "string",
            "url": "string"
        }
    ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

nextToken (p. 149)

If the number of items that are returned is significantly large, this is an identifier that is also
returned. It can be used in a subsequent call to this operation to return the next set of items in the
list.

Type: String

samples (p. 149)

Information about the samples.

Type: Array of Sample (p. 299) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

ListSuites

Gets information about test suites for a given job.

Request Syntax

```
{
    "arn": "string",
    "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 152)**

The job's Amazon Resource Name (ARN).

Type: String

Pattern: ^arn:.*

Required: Yes

**nextToken (p. 152)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```
{
    "nextToken": "string",
    "suites": [
        {
            "arn": "string",
            "counters": {
                "errored": number,
                "failed": number,
                "passed": number,
                "skipped": number,
                "stopped": number,
                "total": number,
                "warned": number
            }
        }
    ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken (p. 152)

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

suites (p. 152)

Information about the suites.

Type: Array of Suite (p. 306) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

See Also

ListTagsForResource

List the tags for an AWS Device Farm resource.

Request Syntax

```json
{
  "ResourceARN": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**ResourceARN (p. 155)**

The Amazon Resource Name (ARN) of the resource or resources for which to list tags. You can associate tags with the following Device Farm resources: PROJECT, RUN, NETWORK_PROFILE, INSTANCE_PROFILE, DEVICE_INSTANCE, SESSION, DEVICE_POOL, DEVICE, and VPCE_CONFIGURATION.

- Type: String
- Pattern: ^arn:aws:devicefarm:.+
- Required: Yes

Response Syntax

```json
{
  "Tags": [
    {
      "Key": "string",
      "Value": "string"
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Tags (p. 155)**

The tags to add to the resource. A tag is an array of key-value pairs. Tag keys can have a maximum character length of 128 characters. Tag values can have a maximum length of 256 characters.

- Type: Array of Tag (p. 309) objects
Array Members: Maximum number of 150 items.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

TagOperationException

The operation was not successful. Try again.

HTTP Status Code: 400

**ListTestGridProjects**

Gets a list of all Selenium testing projects in your account.

**Request Syntax**

```json
{
    "maxResult": number,
    "nextToken": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

- **maxResult (p. 157)**
  - Return no more than this number of results.
  - Type: Integer
  - Valid Range: Minimum value of 1. Maximum value of 1000.
  - Required: No

- **nextToken (p. 157)**
  - From a response, used to continue a paginated listing.
  - Type: String
  - Required: No

**Response Syntax**

```json
{
    "nextToken": "string",
    "testGridProjects": [
    {
        "arn": "string",
        "created": number,
        "description": "string",
        "name": "string"
    }
    ]
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

nextToken (p. 157)

Used for pagination. Pass into ListTestGridProjects (p. 157) to get more results in a paginated request.

Type: String

testGridProjects (p. 157)

The list of TestGridProjects, based on a ListTestGridProjectsRequest (p. 266).

Type: Array of TestGridProject (p. 313) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

InternalServiceException

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

See Also

ListTestGridSessionActions

Returns a list of the actions taken in a TestGridSession (p. 314).

Request Syntax

```json
{
    "maxResult": number,
    "nextToken": "string",
    "sessionArn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**maxResult (p. 159)**

The maximum number of sessions to return per response.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

**nextToken (p. 159)**

Pagination token.

Type: String

Required: No

**sessionArn (p. 159)**

The ARN of the session to retrieve.

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: Yes

Response Syntax

```json
{
    "actions": [
        {
            "action": "string",
        }
    ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**actions (p. 159)**

The action taken by the session.

Type: Array of TestGridSessionAction (p. 316) objects

**nextToken (p. 159)**

Pagination token.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**InternalServiceException**

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

ListTestGridSessionArtifacts

Retrieves a list of artifacts created during the session.

**Request Syntax**

```json
{
    "maxResult": number,
    "nextToken": "string",
    "sessionArn": "string",
    "type": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**maxResult (p. 162)**

The maximum number of results to be returned by a request.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

**nextToken (p. 162)**

Pagination token.

Type: String

Required: No

**sessionArn (p. 162)**

The ARN of a TestGridSession (p. 314).

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: Yes

**type (p. 162)**

Limit results to a specified type of artifact.

Type: String

Valid Values: VIDEO | LOG

Required: No
Response Syntax

```json
{
    "artifacts": [
        {
            "filename": "string",
            "type": "string",
            "url": "string"
        }
    ],
    "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**artifacts (p. 163)**

A list of test grid session artifacts for a TestGridSession (p. 314).

Type: Array of TestGridSessionArtifact (p. 317) objects

**nextToken (p. 163)**

Pagination token.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**InternalServiceException**

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

• AWS SDK for Ruby V3
ListTestGridSessions

Retrieves a list of sessions for a TestGridProject (p. 313).

Request Syntax

```json
{
   "creationTimeAfter": number,
   "creationTimeBefore": number,
   "endTimeAfter": number,
   "endTimeBefore": number,
   "maxResult": number,
   "nextToken": "string",
   "projectArn": "string",
   "status": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**creationTimeAfter (p. 165)**

Return only sessions created after this time.

Type: Timestamp

Required: No

**creationTimeBefore (p. 165)**

Return only sessions created before this time.

Type: Timestamp

Required: No

**endTimeAfter (p. 165)**

Return only sessions that ended after this time.

Type: Timestamp

Required: No

**endTimeBefore (p. 165)**

Return only sessions that ended before this time.

Type: Timestamp

Required: No

**maxResult (p. 165)**

Return only this many results at a time.

Type: Integer
Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

`nextToken (p. 165)`

Pagination token.

Type: String

Required: No

`projectArn (p. 165)`

ARN of a TestGridProject (p. 313).

Type: String

Pattern: ^arn:aws:devicefarm:.

Required: Yes

`status (p. 165)`

Return only sessions in this state.

Type: String

Valid Values: ACTIVE | CLOSED | ERRORED

Required: No

**Response Syntax**

```
{
  "nextToken": "string",
  "testGridSessions": [
    {
      "arn": "string",
      "billingMinutes": number,
      "created": number,
      "ended": number,
      "SeleniumProperties": "string",
      "Status": "string"
    }
  ]
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

`nextToken (p. 166)`

Pagination token.
Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**InternalServiceException**

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

ListTests

Gets information about tests in a given test suite.

Request Syntax

```
{
    "arn": "string",
    "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 168)**

The test suite's Amazon Resource Name (ARN).

Type: String

Pattern: ^arn:.+

Required: Yes

**nextToken (p. 168)**

An identifier that was returned from the previous call to this operation, which can be used to return
the next set of items in the list.

Type: String

Required: No

Response Syntax

```
{
    "nextToken": "string",
    "tests": [
        {
            "arn": "string",
            "counters": {
                "errored": number,
                "failed": number,
                "passed": number,
                "skipped": number,
                "stopped": number,
                "total": number,
                "warned": number
            }
        }
    ]
}
```

API Version 2015-06-23
AWS Device Farm API Reference
Response Elements

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken (p. 168)

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

tests (p. 168)

Information about the tests.

Type: Array of Test (p. 310) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceeded Exception

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

ListUniqueProblems

Gets information about unique problems, such as exceptions or crashes.

Unique problems are defined as a single instance of an error across a run, job, or suite. For example, if a call in your application consistently raises an exception (`OutOfBoundsException` in `MyActivity.java:386`), `ListUniqueProblems` returns a single entry instead of many individual entries for that exception.

**Request Syntax**

```json
{
    "arn": "string",
    "nextToken": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

- **arn (p. 171)**
  - The unique problems' ARNs.
  - Type: String
  - Pattern: `^arn:.*`  
  - Required: Yes

- **nextToken (p. 171)**
  - An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.
  - Type: String
  - Required: No

**Response Syntax**

```json
{
    "nextToken": "string",
    "uniqueProblems": {
        "string": [
            {
                "message": "string",
                "problems": [
                    {
                        "device": {
                            
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**nextToken (p. 171)**

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

**uniqueProblems (p. 171)**

Information about the unique problems.

Allowed values include:
- PENDING
- PASSED
- WARNED
- FAILED
- SKIPPED
-erroRED
- STOPPED

Type: String to array of UniqueProblem (p. 319) objects map

Valid Keys: PENDING | PASSED | WARNED | FAILED | SKIPPED | erroRED | STOPPED

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededExce$$ededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

ListUploads

Gets information about uploads, given an AWS Device Farm project ARN.

**Request Syntax**

```
{
    "arn": "string",
    "nextToken": "string",
    "type": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see [Common Parameters](p. 325).

The request accepts the following data in JSON format.

- **arn (p. 175)**
  - The Amazon Resource Name (ARN) of the project for which you want to list uploads.
  - Type: String
  - Pattern: ^arn:.+
  - Required: Yes

- **nextToken (p. 175)**
  - An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.
  - Type: String
  - Required: No

- **type (p. 175)**
  - The type of upload.
  - Must be one of the following values:
    - ANDROID_APP
    - IOS_APP
    - WEB_APP
    - EXTERNAL_DATA
    - APPIUM_JAVA_JUNIT_TEST_PACKAGE
    - APPIUM_JAVA_TESTNG_TEST_PACKAGE
    - APPIUM_PYTHON_TEST_PACKAGE
    - APPIUM_NODE_TEST_PACKAGE

Required: No
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**nextToken (p. 176)**

If the number of items that are returned is significantly large, this is an identifier that is also returned. It can be used in a subsequent call to this operation to return the next set of items in the list.

Type: String

**uploads (p. 176)**

Information about the uploads.

Type: Array of Upload (p. 320) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

ListVPCEConfigurations

Returns information about all Amazon Virtual Private Cloud (VPC) endpoint configurations in the AWS account.

Request Syntax

```json
{
   "maxResults": number,
   "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**maxResults (p. 179)**

An integer that specifies the maximum number of items you want to return in the API response.

Type: Integer

Required: No

**nextToken (p. 179)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

Required: No

Response Syntax

```json
{
   "nextToken": "string",
   "vpceConfigurations": [
   {
      "arn": "string",
      "serviceDnsName": "string",
      "vpceConfigurationDescription": "string",
      "vpceConfigurationName": "string",
      "vpceServiceName": "string"
   }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

API Version 2015-06-23

179
The following data is returned in JSON format by the service.

**nextToken (p. 179)**

An identifier that was returned from the previous call to this operation, which can be used to return the next set of items in the list.

Type: String

**vpceConfigurations (p. 179)**

An array of VPCEConfiguration objects that contain information about your VPC endpoint configuration.

Type: Array of VPCEConfiguration (p. 323) objects

### Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
PurchaseOffering

Immediately purchases offerings for an AWS account. Offerings renew with the latest total purchased quantity for an offering, unless the renewal was overridden. The API returns a NotEligible error if the user is not permitted to invoke the operation. If you must be able to invoke this operation, contact aws-devicefarm-support@amazon.com.

Request Syntax

```json
{
    "offeringId": "string",
    "offeringPromotionId": "string",
    "quantity": number
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

- **offeringId (p. 181)**
  - The ID of the offering.
  - Type: String
  - Length Constraints: Minimum length of 32.
  - Required: No

- **offeringPromotionId (p. 181)**
  - The ID of the offering promotion to be applied to the purchase.
  - Type: String
  - Required: No

- **quantity (p. 181)**
  - The number of device slots to purchase in an offering request.
  - Type: Integer
  - Required: No

Response Syntax

```json
{
    "offeringTransaction": {
        "cost": {
            "amount": number
        }
    }
}
```
"currencyCode": "string",
"createdOn": number,
"offeringPromotionId": "string",
"offeringStatus": {
  "effectiveOn": number,
  "offering": {
    "description": "string",
    "id": "string",
    "platform": "string",
    "recurringCharges": [
      {
        "cost": {
          "amount": number,
          "currencyCode": "string"
        },
        "frequency": "string"
      }
    ],
    "type": "string"
  },
  "type": "string"
},
"quantity": number,
"type": "string"
},
"transactionId": "string"}
**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

---

**Example**

The following example purchases one unmetered iOS device.

**Sample Request**

```json
{
  "transactions": [
    "purchase": {
      "offeringId": "offering-id-ios",
      "quantity": 1
    }
  ]
}
```

**Sample Response**

```json
{
  "offeringTransaction": {
    "createdOn": 1458587590.308,
    "offeringStatus": {
      "effectiveOn": 1458587590.24,
      "type": "RECURRING",
      "offering": {
        "platform": "IOS",
        "type": "RECURRING",
        "id": "offering-id-ios",
        "description": "iOS Unmetered Device Slot"
      },
      "quantity": 1
    },
    "cost": {
      "amount": 80.65,
      "currencyCode": "USD"
    },
    "transactionId": "transaction-id"
  }
}
```

**See Also**

RenewOffering

Explicitly sets the quantity of devices to renew for an offering, starting from the `effectiveDate` of the next period. The API returns a `NotEligible` error if the user is not permitted to invoke the operation. If you must be able to invoke this operation, contact `aws-devicefarm-support@amazon.com`.

**Request Syntax**

```json
{
    "offeringId": "string",
    "quantity": number
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**offeringId (p. 185)**

The ID of a request to renew an offering.

Type: String

Length Constraints: Minimum length of 32.

Required: No

**quantity (p. 185)**

The quantity requested in an offering renewal.

Type: Integer

Required: No

**Response Syntax**

```json
{
    "offeringTransaction": {
        "cost": {
            "amount": number,
            "currencyCode": "string"
        },
        "createdOn": number,
        "offeringPromotionId": "string",
        "offeringStatus": {
            "effectiveOn": number,
            "offering": {
                "description": "string",
                "id": "string",
                "platform": "string",
                "recurringCharges": [
                    
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

offeringTransaction (p. 185)

 Represents the status of the offering transaction for the renewal.

Type: OfferingTransaction (p. 277) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotEligibleException

Exception gets thrown when a user is not eligible to perform the specified transaction.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400
Example

The following example renews the offering for one unmetered iOS device.

Sample Request

```json
{
    "transactions": [
        "renew": {
            "offeringId": "offering-id-ios",
            "quantity": 1,
        }
    ]
}
```

Sample Response

```json
{
    "offeringTransaction": {
        "createdOn": 1458596930.431,
        "offeringStatus": {
            "effectiveOn": 1459468800.0,
            "type": "RECURRING",
            "offering": {
                "platform": "IOS",
                "type": "RECURRING",
                "id": "offering-id-ios",
                "description": "iOS Unmetered Device Slot"
            },
            "quantity": 1
        },
        "cost": {
            "amount": 250.0,
            "currencyCode": "USD"
        },
        "transactionId": "transaction-id"
    }
}
```

ScheduleRun

Schedules a run.

Request Syntax

```
{
  "appArn": "string",
  "configuration": {
    "auxiliaryApps": [ "string" ],
    "billingMethod": "string",
    "customerArtifactPaths": {
      "androidPaths": [ "string" ],
      "deviceHostPaths": [ "string" ],
      "iosPaths": [ "string" ]
    },
    "extraDataPackageArn": "string",
    "locale": "string",
    "location": { "latitude": number, "longitude": number },
    "networkProfileArn": "string",
    "radios": { "bluetooth": boolean, "gps": boolean, "nfc": boolean, "wifi": boolean },
    "vpceConfigurationArns": [ "string" ],
  },
  "devicePoolArn": "string",
  "deviceSelectionConfiguration": {
    "filters": [
      {
        "attribute": "string",
        "operator": "string",
        "values": [ "string" ]
      }
    ],
    "maxDevices": number
  },
  "executionConfiguration": {
    "accountsCleanup": boolean, "appPackagesCleanup": boolean, "jobTimeoutMinutes": number, "skipAppResign": boolean, "videoCapture": boolean
  },
  "name": "string",
  "projectArn": "string",
  "test": {
    "filter": "string",
    "parameters": {
      "string": "string"
    },
    "testPackageArn": "string",
    "testSpecArn": "string",
    "type": "string"
  }
}
```
Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**appArn (p. 188)**

The ARN of an application package to run tests against, created with CreateUpload (p. 25). See ListUploads (p. 175).

Type: String

Pattern: ^arn:.+

Required: No

**configuration (p. 188)**

Information about the settings for the run to be scheduled.

Type: ScheduleRunConfiguration (p. 301) object

Required: No

**devicePoolArn (p. 188)**

The ARN of the device pool for the run to be scheduled.

Type: String

Pattern: ^arn:.+

Required: No

**deviceSelectionConfiguration (p. 188)**

The filter criteria used to dynamically select a set of devices for a test run and the maximum number of devices to be included in the run.

Either devicePoolArn or deviceSelectionConfiguration is required in a request.

Type: DeviceSelectionConfiguration (p. 255) object

Required: No

**executionConfiguration (p. 188)**

Specifies configuration information about a test run, such as the execution timeout (in minutes).

Type: ExecutionConfiguration (p. 258) object

Required: No

**name (p. 188)**

The name for the run to be scheduled.

Type: String
Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

**projectArn (p. 188)**

The ARN of the project for the run to be scheduled.

Type: String

Pattern: ^arn:.+*

Required: Yes

**test (p. 188)**

Information about the test for the run to be scheduled.

Type: ScheduleRunTest (p. 303) object

Required: Yes

---

**Response Syntax**

```json
{
    "run": {
        "appUpload": "string",
        "arn": "string",
        "billingMethod": "string",
        "completedJobs": number,
        "counters": {
            "errored": number,
            "failed": number,
            "passed": number,
            "skipped": number,
            "stopped": number,
            "total": number,
            "warned": number
        },
        "created": number,
        "customerArtifactPaths": {
            "androidPaths": [ "string" ],
            "deviceHostPaths": [ "string" ],
            "iosPaths": [ "string" ]
        },
        "deviceMinutes": {
            "metered": number,
            "total": number,
            "unmetered": number
        },
        "devicePoolArn": "string",
        "deviceSelectionResult": {
            "filters": [
                {
                    "attribute": "string",
                    "operator": "string",
                    "values": [ "string" ]
                }
            ],
            "matchedDevicesCount": number,
            "maxDevices": number
        }
    }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

run (p. 190)

Information about the scheduled run.

Type: Run (p. 293) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).
**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**IdempotencyException**

An entity with the same name already exists.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

StopJob

Initiates a stop request for the current job. AWS Device Farm immediately stops the job on the device where tests have not started. You are not billed for this device. On the device where tests have started, setup suite and teardown suite tests run to completion on the device. You are billed for setup, teardown, and any tests that were in progress or already completed.

Request Syntax

```json
{
    "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

`arn (p. 193)`

Represents the Amazon Resource Name (ARN) of the Device Farm job to stop.

Type: String

Pattern: ^arn:.+*

Required: Yes

Response Syntax

```json
{
    "job": {
        "arn": "string",
        "counters": {
            "errored": number,
            "failed": number,
            "passed": number,
            "skipped": number,
            "stopped": number,
            "total": number,
            "warned": number
        },
        "created": number,
        "device": {
            "arn": "string",
            "availability": "string",
            "carrier": "string",
            "cpu": {
                "architecture": "string",
                "clock": number,
                "frequency": "string"
            }
        }
    }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

job (p. 193)

The job that was stopped.
Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

StopRemoteAccessSession

Ends a specified remote access session.

Request Syntax

```json
{
  "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 196)**

The Amazon Resource Name (ARN) of the remote access session to stop.

Type: String

Pattern: ^arn:.*

Required: Yes

Response Syntax

```json
{
  "remoteAccessSession": {
    "arn": "string",
    "billingMethod": "string",
    "clientId": "string",
    "created": number,
    "device": {
      "arn": "string",
      "availability": "string",
      "carrier": "string",
      "cpu": {
        "architecture": "string",
        "clock": number,
        "frequency": "string"
      },
      "fleetName": "string",
      "fleetType": "string",
      "formFactor": "string",
      "heapSize": number,
      "image": "string",
      "instances": [
        {
          "arn": "string",
          "deviceArn": "string",
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

remoteAccessSession (p. 196)

A container that represents the metadata from the service about the remote access session you are stopping.

Type: RemoteAccessSession (p. 284) object
Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

StopRun

Initiates a stop request for the current test run. AWS Device Farm immediately stops the run on devices where tests have not started. You are not billed for these devices. On devices where tests have started executing, setup suite and teardown suite tests run to completion on those devices. You are billed for setup, teardown, and any tests that were in progress or already completed.

Request Syntax

```json
{
   "arn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 199)**

Represents the Amazon Resource Name (ARN) of the Device Farm run to stop.

- **Type**: String
- **Length Constraints**: Minimum length of 32. Maximum length of 1011.
- **Pattern**: ^arn:.
- **Required**: Yes

Response Syntax

```json
{
   "run": {
      "appUpload": "string",
      "arn": "string",
      "billingMethod": "string",
      "completedJobs": number,
      "counters": {
         "errored": number,
         "failed": number,
         "passed": number,
         "skipped": number,
         "stopped": number,
         "total": number,
         "warned": number
      },
      "created": number,
      "customerArtifactPaths": {
         "androidPaths": [ "string" ],
         "deviceHostPaths": [ "string" ],
         "iosPaths": [ "string" ]
      },
      "deviceMinutes": {
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**run (p. 199)**

The run that was stopped.

Type: **Run (p. 293)** object

## Errors

For information about the errors that are common to all actions, see [Common Errors (p. 327)](#).

### ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

### LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

### NotFoundException

The specified entity was not found.

HTTP Status Code: 400

### ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

## See Also

TagResource

Associates the specified tags to a resource with the specified resourceArn. If existing tags on a resource are not specified in the request parameters, they are not changed. When a resource is deleted, the tags associated with that resource are also deleted.

Request Syntax

```
{
    "ResourceARN": "string",
    "Tags": [
    {
        "Key": "string",
        "Value": "string"
    }
    ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

ResourceARN (p. 202)

The Amazon Resource Name (ARN) of the resource or resources to which to add tags. You can associate tags with the following Device Farm resources: PROJECT, RUN, NETWORK_PROFILE, INSTANCE_PROFILE, DEVICE_INSTANCE, SESSION, DEVICE_POOL, DEVICE, and VPCE_CONFIGURATION.

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: Yes

Tags (p. 202)

The tags to add to the resource. A tag is an array of key-value pairs. Tag keys can have a maximum character length of 128 characters. Tag values can have a maximum length of 256 characters.

Type: Array of Tag (p. 309) objects

Array Members: Maximum number of 150 items.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).
**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**TagOperationException**

The operation was not successful. Try again.

HTTP Status Code: 400

**TagPolicyException**

The request doesn’t comply with the AWS Identity and Access Management (IAM) tag policy. Correct your request and then retry it.

HTTP Status Code: 400

**TooManyTagsException**

The list of tags on the repository is over the limit. The maximum number of tags that can be applied to a repository is 50.

HTTP Status Code: 400

---

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
UntagResource

Deletes the specified tags from a resource.

Request Syntax

```json
{
   "ResourceARN": "string",
   "TagKeys": [ "string" ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**ResourceARN (p. 204)**

The Amazon Resource Name (ARN) of the resource or resources from which to delete tags. You can associate tags with the following Device Farm resources: PROJECT, RUN, NETWORK_PROFILE, INSTANCE_PROFILE, DEVICE_INSTANCE, SESSION, DEVICE_POOL, DEVICE, and VPCE_CONFIGURATION.

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: Yes

**TagKeys (p. 204)**

The keys of the tags to be removed.

Type: Array of strings

Array Members: Maximum number of 150 items.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.
HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**TagOperationException**

The operation was not successful. Try again.

HTTP Status Code: 400

UpdateDeviceInstance

Updates information about a private device instance.

Request Syntax

```json
{
    "arn": "string",
    "labels": [ "string" ],
    "profileArn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 206)**

The Amazon Resource Name (ARN) of the device instance.

Type: String

Pattern: ^arn:.

Required: Yes

**labels (p. 206)**

An array of strings that you want to associate with the device instance.

Type: Array of strings

Required: No

**profileArn (p. 206)**

The ARN of the profile that you want to associate with the device instance.

Type: String

Pattern: ^arn:.

Required: No

Response Syntax

```json
{
    "deviceInstance": {
        "arn": "string",
        "deviceArn": "string",
}
```
"instanceProfile": {
    "arn": "string",
    "description": "string",
    "excludeAppPackagesFromCleanup": [ "string" ],
    "name": "string",
    "packageCleanup": boolean,
    "rebootAfterUse": boolean
},
    "labels": [ "string" ],
    "status": "string",
    "udid": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

deviceInstance (p. 206)

An object that contains information about your device instance.

Type: DeviceInstance (p. 249) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

- AWS SDK for Ruby V3
UpdateDevicePool

Modifies the name, description, and rules in a device pool given the attributes and the pool ARN. Rule updates are all-or-nothing, meaning they can only be updated as a whole (or not at all).

Request Syntax

```
{
  "arn": "string",
  "clearMaxDevices": boolean,
  "description": "string",
  "maxDevices": number,
  "name": "string",
  "rules": [
    {
      "attribute": "string",
      "operator": "string",
      "value": "string"
    }
  ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 209)**

The Amazon Resource Name (ARN) of the Device Farm device pool to update.

Type: String

Pattern: ^arn:.+

Required: Yes

**clearMaxDevices (p. 209)**

Sets whether the `maxDevices` parameter applies to your device pool. If you set this parameter to `true`, the `maxDevices` parameter does not apply, and Device Farm does not limit the number of devices that it adds to your device pool. In this case, Device Farm adds all available devices that meet the criteria specified in the `rules` parameter.

If you use this parameter in your request, you cannot use the `maxDevices` parameter in the same request.

Type: Boolean

Required: No

**description (p. 209)**

A description of the device pool to update.

Type: String
Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

maxDevices (p. 209)

The number of devices that Device Farm can add to your device pool. Device Farm adds devices that are available and that meet the criteria that you assign for the rules parameter. Depending on how many devices meet these constraints, your device pool might contain fewer devices than the value for this parameter.

By specifying the maximum number of devices, you can control the costs that you incur by running tests.

If you use this parameter in your request, you cannot use the clearMaxDevices parameter in the same request.

Type: Integer

Required: No

name (p. 209)

A string that represents the name of the device pool to update.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

rules (p. 209)

Represents the rules to modify for the device pool. Updating rules is optional. If you update rules for your request, the update replaces the existing rules.

Type: Array of Rule (p. 290) objects

Required: No

Response Syntax

```
{
  "devicePool": {
    "arn": "string",
    "description": "string",
    "maxDevices": number,
    "name": "string",
    "rules": [
      {
        "attribute": "string",
        "operator": "string",
        "value": "string"
      }
    ],
    "type": "string"
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**devicePool (p. 210)**

The device pool you just updated.

Type: DevicePool (p. 252) object

### Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

### See Also

- AWS SDK for Python
- AWS SDK for Ruby V3
UpdateInstanceProfile

Updates information about an existing private device instance profile.

Request Syntax

```
{
   "arn": "string",
   "description": "string",
   "excludeAppPackagesFromCleanup": [ "string" ],
   "name": "string",
   "packageCleanup": boolean,
   "rebootAfterUse": boolean
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 212)**

The Amazon Resource Name (ARN) of the instance profile.

Type: String

Pattern: ^arn:.+

Required: Yes

**description (p. 212)**

The updated description for your instance profile.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

**excludeAppPackagesFromCleanup (p. 212)**

An array of strings that specifies the list of app packages that should not be cleaned up from the device after a test run is over.

The list of packages is only considered if you set packageCleanup to true.

Type: Array of strings

Required: No

**name (p. 212)**

The updated name for your instance profile.

Type: String
Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

**packageCleanup** *(p. 212)*

The updated choice for whether you want to specify package cleanup. The default value is `false` for private devices.

Type: Boolean

Required: No

**rebootAfterUse** *(p. 212)*

The updated choice for whether you want to reboot the device after use. The default value is `true`.

Type: Boolean

Required: No

### Response Syntax

```json
{
  "instanceProfile": {
    "arn": "string",
    "description": "string",
    "excludeAppPackagesFromCleanup": [ "string" ],
    "name": "string",
    "packageCleanup": boolean,
    "rebootAfterUse": boolean
  }
}
```

### Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**instanceProfile** *(p. 213)*

An object that contains information about your instance profile.

Type: `InstanceProfile` *(p. 260)* object

### Errors

For information about the errors that are common to all actions, see `Common Errors` *(p. 327)*.

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.
HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400

**ServiceAccountException**

There was a problem with the service account.

HTTP Status Code: 400

UpdateNetworkProfile

Updates the network profile.

**Request Syntax**

```json
{
  "arn": "string",
  "description": "string",
  "downlinkBandwidthBits": number,
  "downlinkDelayMs": number,
  "downlinkJitterMs": number,
  "downlinkLossPercent": number,
  "name": "string",
  "type": "string",
  "uplinkBandwidthBits": number,
  "uplinkDelayMs": number,
  "uplinkJitterMs": number,
  "uplinkLossPercent": number
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 215)**

The Amazon Resource Name (ARN) of the project for which you want to update network profile settings.

Type: String

Pattern: ^arn:.+

Required: Yes

**description (p. 215)**

The description of the network profile about which you are returning information.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

**downlinkBandwidthBits (p. 215)**

The data throughput rate in bits per second, as an integer from 0 to 104857600.

Type: Long

Required: No

**downlinkDelayMs (p. 215)**

Delay time for all packets to destination in milliseconds as an integer from 0 to 2000.
Type: Long
Required: No
downlinkJitterMs (p. 215)
Time variation in the delay of received packets in milliseconds as an integer from 0 to 2000.
Type: Long
Required: No
downlinkLossPercent (p. 215)
Proportion of received packets that fail to arrive from 0 to 100 percent.
Type: Integer
Valid Range: Minimum value of 0. Maximum value of 100.
Required: No
name (p. 215)
The name of the network profile about which you are returning information.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 256.
Required: No
type (p. 215)
The type of network profile to return information about. Valid values are listed here.
Type: String
Valid Values: CURATED | PRIVATE
Required: No
uplinkBandwidthBits (p. 215)
The data throughput rate in bits per second, as an integer from 0 to 104857600.
Type: Long
Required: No
uplinkDelayMs (p. 215)
Delay time for all packets to destination in milliseconds as an integer from 0 to 2000.
Type: Long
Required: No
uplinkJitterMs (p. 215)
Time variation in the delay of received packets in milliseconds as an integer from 0 to 2000.
Type: Long
Required: No
uplinkLossPercent (p. 215)
Proportion of transmitted packets that fail to arrive from 0 to 100 percent.
Response Syntax

```json
{
  "networkProfile": {
    "arn": "string",
    "description": "string",
    "downlinkBandwidthBits": number,
    "downlinkDelayMs": number,
    "downlinkJitterMs": number,
    "downlinkLossPercent": number,
    "name": "string",
    "type": "string",
    "uplinkBandwidthBits": number,
    "uplinkDelayMs": number,
    "uplinkJitterMs": number,
    "uplinkLossPercent": number
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**networkProfile (p. 217)**

A list of the available network profiles.

Type: NetworkProfile (p. 271) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

**ArgumentException**

An invalid argument was specified.

HTTP Status Code: 400

**LimitExceededException**

A limit was exceeded.

HTTP Status Code: 400

**NotFoundException**

The specified entity was not found.

HTTP Status Code: 400
ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

- AWS SDK for Python
- AWS SDK for Ruby V3
UpdateProject

Modifies the specified project name, given the project ARN and a new name.

Request Syntax

```json
{
  "arn": "string",
  "defaultJobTimeoutMinutes": number,
  "name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 219)**

The Amazon Resource Name (ARN) of the project whose name to update.

- Type: String
- Pattern: ^arn:.+
- Required: Yes

**defaultJobTimeoutMinutes (p. 219)**

The number of minutes a test run in the project executes before it times out.

- Type: Integer
- Required: No

**name (p. 219)**

A string that represents the new name of the project that you are updating.

- Type: String
- Length Constraints: Minimum length of 0. Maximum length of 256.
- Required: No

Response Syntax

```json
{
  "project": {
    "arn": "string",
    "created": number,
    "defaultJobTimeoutMinutes": number,
    "name": "string"
  }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**project (p. 219)**

The project to update.

Type: `Project (p. 281)` object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

- **ArgumentException**
  
  An invalid argument was specified.

  HTTP Status Code: 400

- **LimitExceededException**
  
  A limit was exceeded.

  HTTP Status Code: 400

- **NotFoundException**
  
  The specified entity was not found.

  HTTP Status Code: 400

- **ServiceAccountException**
  
  There was a problem with the service account.

  HTTP Status Code: 400

UpdateTestGridProject

Change details of a project.

Request Syntax

```
{
    "description": "string",
    "name": "string",
    "projectArn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

description (p. 222)

Human-readable description for the project.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: .\S.*

Required: No

name (p. 222)

Human-readable name for the project.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: .\S.*

Required: No

projectArn (p. 222)

ARN of the project to update.

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: Yes

Response Syntax

```
{
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

testGridProject (p. 222)

The project, including updated information.

Type: TestGridProject (p. 313) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

InternalServiceException

An internal exception was raised in the service. Contact aws-devicefarm-support@amazon.com if you see this error.

HTTP Status Code: 500

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

API Version 2015-06-23

223
UpdateUpload

Updates an uploaded test spec.

Request Syntax

```
{
  "arn": "string",
  "contentType": "string",
  "editContent": boolean,
  "name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 225)**

The Amazon Resource Name (ARN) of the uploaded test spec.

  Type: String

  Pattern: ^arn:.*

  Required: Yes

**contentType (p. 225)**

The upload's content type (for example, application/x-yaml).

  Type: String

  Length Constraints: Minimum length of 0. Maximum length of 64.

  Required: No

**editContent (p. 225)**

Set to true if the YAML file has changed and must be updated. Otherwise, set to false.

  Type: Boolean

  Required: No

**name (p. 225)**

The upload's test spec file name. The name must not contain any forward slashes (/). The test spec file name must end with the .yaml or .yml file extension.

  Type: String

  Length Constraints: Minimum length of 0. Maximum length of 256.
Required: No

Response Syntax

{
  "upload": {
    "arn": "string",
    "category": "string",
    "content-Type": "string",
    "created": number,
    "message": "string",
    "metadata": "string",
    "name": "string",
    "status": "string",
    "type": "string",
    "url": "string"
  }
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

upload (p. 226)

A test spec uploaded to Device Farm.

Type: Upload (p. 320) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

LimitExceededException

A limit was exceeded.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.

HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

UpdateVPCEConfiguration

Updates information about an Amazon Virtual Private Cloud (VPC) endpoint configuration.

Request Syntax

```json
{
  "arn": "string",
  "serviceDnsName": "string",
  "vpceConfigurationDescription": "string",
  "vpceConfigurationName": "string",
  "vpceServiceName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 325).

The request accepts the following data in JSON format.

**arn (p. 228)**

The Amazon Resource Name (ARN) of the VPC endpoint configuration you want to update.

- **Type:** String
- **Length Constraints:** Minimum length of 32. Maximum length of 1011.
- **Pattern:** ^arn:.
- **Required:** Yes

**serviceDnsName (p. 228)**

The DNS (domain) name used to connect to your private service in your VPC. The DNS name must not already be in use on the internet.

- **Type:** String
- **Length Constraints:** Minimum length of 0. Maximum length of 2048.
- **Required:** No

**vpceConfigurationDescription (p. 228)**

An optional description that provides details about your VPC endpoint configuration.

- **Type:** String
- **Length Constraints:** Minimum length of 0. Maximum length of 2048.
- **Required:** No

**vpceConfigurationName (p. 228)**

The friendly name you give to your VPC endpoint configuration to manage your configurations more easily.

- **Type:** String
Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: No

vpceServiceName (p. 228)

The name of the VPC endpoint service running in your AWS account that you want Device Farm to test.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

Response Syntax

```
{
  "vpceConfiguration": {
    "arn": "string",
    "serviceDnsName": "string",
    "vpceConfigurationDescription": "string",
    "vpceConfigurationName": "string",
    "vpceServiceName": "string"
  }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

vpceConfiguration (p. 229)

An object that contains information about your VPC endpoint configuration.

Type: VPCEConfiguration (p. 323) object

Errors

For information about the errors that are common to all actions, see Common Errors (p. 327).

ArgumentException

An invalid argument was specified.

HTTP Status Code: 400

InvalidOperationException

There was an error with the update request, or you do not have sufficient permissions to update this VPC endpoint configuration.

HTTP Status Code: 400

NotFoundException

The specified entity was not found.
HTTP Status Code: 400

ServiceAccountException

There was a problem with the service account.

HTTP Status Code: 400

Data Types

The AWS Device Farm API contains several data types that various actions use. This section describes each data type in detail.

**Note**
The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- AccountSettings (p. 233)
- Artifact (p. 235)
- Counters (p. 237)
- CPU (p. 239)
- CreateRemoteAccessSessionConfiguration (p. 240)
- CustomerArtifactPaths (p. 241)
- Device (p. 242)
- DeviceFilter (p. 246)
- DeviceInstance (p. 249)
- DeviceMinutes (p. 251)
- DevicePool (p. 252)
- DevicePoolCompatibilityResult (p. 254)
- DeviceSelectionConfiguration (p. 255)
- DeviceSelectionResult (p. 257)
- ExecutionConfiguration (p. 258)
- IncompatibilityMessage (p. 259)
- InstanceProfile (p. 260)
- Job (p. 262)
- ListTestGridProjectsRequest (p. 266)
- ListTestGridSessionsRequest (p. 267)
- Location (p. 269)
- MonetaryAmount (p. 270)
- NetworkProfile (p. 271)
- Offering (p. 273)
- OfferingPromotion (p. 275)
- OfferingStatus (p. 276)
- OfferingTransaction (p. 277)
- Problem (p. 278)
- ProblemDetail (p. 280)
- Project (p. 281)
- Radios (p. 282)
- RecurringCharge (p. 283)
- RemoteAccessSession (p. 284)
- Resolution (p. 289)
- Rule (p. 290)
• Run (p. 293)
• Sample (p. 299)
• ScheduleRunConfiguration (p. 301)
• ScheduleRunTest (p. 303)
• Suite (p. 306)
• Tag (p. 309)
• Test (p. 310)
• TestGridProject (p. 313)
• TestGridSession (p. 314)
• TestGridSessionAction (p. 316)
• TestGridSessionArtifact (p. 317)
• TrialMinutes (p. 318)
• UniqueProblem (p. 319)
• Upload (p. 320)
• VPCEConfiguration (p. 323)
AccountSettings

A container for account-level settings in AWS Device Farm.

## Contents

**awsAccountNumber**

The AWS account number specified in the AccountSettings container.

Type: String

Required: No

**defaultJobTimeoutMinutes**

The default number of minutes (at the account level) a test run executes before it times out. The default value is 150 minutes.

Type: Integer

Required: No

**maxJobTimeoutMinutes**

The maximum number of minutes a test run executes before it times out.

Type: Integer

Required: No

**maxSlots**

The maximum number of device slots that the AWS account can purchase. Each maximum is expressed as an offering-id:number pair, where the offering-id represents one of the IDs returned by the ListOfferings command.

Type: String to integer map

Required: No

**skipAppResign**

When set to true, for private devices, Device Farm does not sign your app again. For public devices, Device Farm always signs your apps again.

For more information about how Device Farm re-signs your apps, see Do you modify my app? in the AWS Device Farm FAQs.

Type: Boolean

Required: No

**trialMinutes**

Information about an AWS account's usage of free trial device minutes.

Type: TrialMinutes (p. 318) object

Required: No
unmeteredDevices

Returns the unmetered devices you have purchased or want to purchase.

Type: String to integer map

Valid Keys: ANDROID | IOS

Required: No

unmeteredRemoteAccessDevices

Returns the unmetered remote access devices you have purchased or want to purchase.

Type: String to integer map

Valid Keys: ANDROID | IOS

Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Artifact

Represents the output of a test. Examples of artifacts include logs and screenshots.

Contents

**arn**

The artifact's ARN.

Type: String

Pattern: ^arn: .+

Required: No

**extension**

The artifact's file extension.

Type: String

Required: No

**name**

The artifact's name.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

**type**

The artifact's type.

Allowed values include the following:

- UNKNOWN
- SCREENSHOT
- DEVICE_LOG
- MESSAGE_LOG
- VIDEO_LOG
- RESULT_LOG
- SERVICE_LOG
- WEBKIT_LOG
- INSTRUMENTATION_OUTPUT
- EXERCISER_MONKEY_OUTPUT: the artifact (log) generated by an Android fuzz test.
- CALABASH_JSON_OUTPUT
- CALABASHPRETTY_OUTPUT
- CALABASH_STANDARD_OUTPUT
- CALABASH_JAVA_XML_OUTPUT
- AUTOMATION_OUTPUT
- APPIUM_SERVER_OUTPUT
- APPIUM_JAVA_OUTPUT
- APPIUM_JAVA_XML_OUTPUT
- APPIUM_PYTHON_OUTPUT
- APPIUM_PYTHON_XML_OUTPUT
- EXPLORER_EVENT_LOG
- EXPLORER_SUMMARY_LOG
- APPLICATION_CRASH_REPORT
- XCTEST_LOG
- VIDEO
- CUSTOMER_ARTIFACT
- CUSTOMER_ARTIFACT_LOG
- TESTSPEC_OUTPUT

Type: String

Valid Values: UNKNOWN | SCREENSHOT | DEVICE_LOG | MESSAGE_LOG | VIDEO_LOG | RESULT_LOG | SERVICE_LOG | WEBKIT_LOG | INSTRUMENTATION_OUTPUT | EXERCISER_MONKEY_OUTPUT | CALABASH_JSON_OUTPUT | CALABASH_PRETTY_OUTPUT | CALABASH_STANDARD_OUTPUT | CALABASH_JAVA_XML_OUTPUT | AUTOMATION_OUTPUT | APPIUM_SERVER_OUTPUT | APPIUM_JAVA_OUTPUT | APPIUM_JAVA_XML_OUTPUT | APPIUM_PYTHON_OUTPUT | APPIUM_PYTHON_XML_OUTPUT | EXPLORER_EVENT_LOG | EXPLORER_SUMMARY_LOG | APPLICATION_CRASH_REPORT | XCTEST_LOG | VIDEO | CUSTOMER_ARTIFACT | CUSTOMER_ARTIFACT_LOG | TESTSPEC_OUTPUT

Required: No

url

The presigned Amazon S3 URL that can be used with a GET request to download the artifact's file.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Counters

Counters represents entity counters.

Contents

- **errored**
  - The number of errored entities.
  - Type: Integer
  - Required: No

- **failed**
  - The number of failed entities.
  - Type: Integer
  - Required: No

- **passed**
  - The number of passed entities.
  - Type: Integer
  - Required: No

- **skipped**
  - The number of skipped entities.
  - Type: Integer
  - Required: No

- **stopped**
  - The number of stopped entities.
  - Type: Integer
  - Required: No

- **total**
  - The total number of entities.
  - Type: Integer
  - Required: No

- **warned**
  - The number of warned entities.
  - Type: Integer
  - Required: No
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
CPU

Represents the amount of CPU that an app is using on a physical device. Does not represent system-wide CPU usage.

Contents

architecture

The CPU's architecture (for example, x86 or ARM).

Type: String

Required: No

clock

The clock speed of the device's CPU, expressed in hertz (Hz). For example, a 1.2 GHz CPU is expressed as 1200000000.

Type: Double

Required: No

frequency

The CPU's frequency.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
CreateRemoteAccessSessionConfiguration

Configuration settings for a remote access session, including billing method.

Contents

billingMethod

The billing method for the remote access session.

Type: String

Valid Values: METERED | UNMETERED

Required: No

vpceConfigurationArns

An array of ARNs included in the VPC endpoint configuration.

Type: Array of strings

Pattern: ^arn:.+

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
CustomerArtifactPaths

A JSON object that specifies the paths where the artifacts generated by the customer's tests, on the device or in the test environment, are pulled from.

Specify deviceHostPaths and optionally specify either iosPaths or androidPaths.

For web app tests, you can specify both iosPaths and androidPaths.

Contents

androidPaths

Comma-separated list of paths on the Android device where the artifacts generated by the customer's tests are pulled from.

Type: Array of strings

Required: No

deviceHostPaths

Comma-separated list of paths in the test execution environment where the artifacts generated by the customer's tests are pulled from.

Type: Array of strings

Required: No

iosPaths

Comma-separated list of paths on the iOS device where the artifacts generated by the customer's tests are pulled from.

Type: Array of strings

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Device

Represents a device type that an app is tested against.

Contents

arn

The device's ARN.

Type: String

Pattern: ^arn:.+

Required: No

availability

Indicates how likely a device is available for a test run. Currently available in the ListDevices (p. 111) and GetDevice API methods.

Type: String

Valid Values: TEMPORARY_NOT_AVAILABLE | BUSY | AVAILABLE | HIGHLY_AVAILABLE

Required: No

carrier

The device's carrier.

Type: String

Required: No

cpu

Information about the device's CPU.

Type: CPU (p. 239) object

Required: No

fleetName

The name of the fleet to which this device belongs.

Type: String

Required: No

fleetType

The type of fleet to which this device belongs. Possible values are PRIVATE and PUBLIC.

Type: String

Required: No

formFactor

The device's form factor.
Allowed values include:
- PHONE
- TABLET

Type: String

Valid Values: PHONE | TABLET

Required: No

heapSize

The device's heap size, expressed in bytes.

Type: Long

Required: No

image

The device's image name.

Type: String

Required: No

instances

The instances that belong to this device.

Type: Array of DeviceInstance (p. 249) objects

Required: No

manufacturer

The device's manufacturer name.

Type: String

Required: No

memory

The device's total memory size, expressed in bytes.

Type: Long

Required: No

model

The device's model name.

Type: String

Required: No

modelId

The device's model ID.

Type: String

Required: No
name
The device's display name.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 256.
Required: No

os
The device's operating system type.
Type: String
Required: No

platform
The device's platform.
Allowed values include:
• ANDROID
• IOS
Type: String
Valid Values: ANDROID | IOS
Required: No

radio
The device's radio.
Type: String
Required: No

remoteAccessEnabled
Specifies whether remote access has been enabled for the specified device.
Type: Boolean
Required: No

remoteDebugEnabled
This flag is set to true if remote debugging is enabled for the device.
Remote debugging is no longer supported.
Type: Boolean
Required: No

resolution
The resolution of the device.
Type: Resolution (p. 289) object
Required: No
See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
DeviceFilter

Represents a device filter used to select a set of devices to be included in a test run. This data structure is passed in as the deviceSelectionConfiguration parameter to ScheduleRun. For an example of the JSON request syntax, see ScheduleRun (p. 188).

It is also passed in as the filters parameter to ListDevices. For an example of the JSON request syntax, see ListDevices (p. 111).

Contents

attribute

The aspect of a device such as platform or model used as the selection criteria in a device filter.

The supported operators for each attribute are provided in the following list.

ARN

The Amazon Resource Name (ARN) of the device (for example, arn:aws:devicefarm:us-west-2::device:12345Example).

Supported operators: EQUALS, IN, NOT_IN

PLATFORM

The device platform. Valid values are ANDROID or IOS.

Supported operators: EQUALS

OS_VERSION

The operating system version (for example, 10.3.2).

Supported operators: EQUALS, GREATER_THAN, GREATER_THAN_OR_EQUALS, IN, LESS_THAN, LESS_THAN_OR_EQUALS, NOT_IN

MODEL

The device model (for example, iPad 5th Gen).

Supported operators: CONTAINS, EQUALS, IN, NOT_IN

AVAILABILITY

The current availability of the device. Valid values are AVAILABLE, HIGHLY_AVAILABLE, BUSY, or TEMPORARY_NOT_AVAILABLE.

Supported operators: EQUALS

FORM_FACTOR

The device form factor. Valid values are PHONE or TABLET.

Supported operators: EQUALS

MANUFACTURER

The device manufacturer (for example, Apple).

Supported operators: EQUALS, IN, NOT_IN

REMOTE_ACCESS_ENABLED

Whether the device is enabled for remote access. Valid values are TRUE or FALSE.
Supported operators: EQUALS

REMOTE_DEBUG_ENABLED

Whether the device is enabled for remote debugging. Valid values are TRUE or FALSE.

Supported operators: EQUALS

Because remote debugging is no longer supported, this filter is ignored.

INSTANCE_ARN

The Amazon Resource Name (ARN) of the device instance.

Supported operators: EQUALS, IN, NOT_IN

INSTANCE_LABELS

The label of the device instance.

Supported operators: CONTAINS

FLEET_TYPE

The fleet type. Valid values are PUBLIC or PRIVATE.

Supported operators: EQUALS

Attribute:

Type: String

Valid Values: ARN | PLATFORM | OS_VERSION | MODEL | AVAILABILITY | FORM_FACTOR | MANUFACTURER | REMOTE_ACCESS_ENABLED | REMOTE_DEBUG_ENABLED | INSTANCE_ARN | INSTANCE_LABELS | FLEET_TYPE

Required: No

operator

Specifies how Device Farm compares the filter's attribute to the value. See the attribute descriptions.

Type: String

Valid Values: EQUALS | LESS_THAN | LESS_THAN_OR_EQUALS | GREATER_THAN | GREATER_THAN_OR_EQUALS | IN | NOT_IN | CONTAINS

Required: No

values

An array of one or more filter values used in a device filter.

Operator Values

- The IN and NOT_IN operators can take a values array that has more than one element.
- The other operators require an array with a single element.

Attribute Values

- The PLATFORM attribute can be set to ANDROID or IOS.
- The AVAILABILITY attribute can be set to AVAILABLE, HIGHLY_AVAILABLE, BUSY, or TEMPORARY_NOT_AVAILABLE.
- The FORM_FACTOR attribute can be set to PHONE or TABLET.
- The FLEET_TYPE attribute can be set to PUBLIC or PRIVATE.

Type: Array of strings
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
DeviceInstance

Represents the device instance.

Contents

**arn**

The Amazon Resource Name (ARN) of the device instance.

Type: String

Pattern: ^arn:.+

Required: No

**deviceArn**

The ARN of the device.

Type: String

Pattern: ^arn:.+

Required: No

**instanceProfile**

A object that contains information about the instance profile.

Type: [InstanceProfile](#) object

Required: No

**labels**

An array of strings that describe the device instance.

Type: Array of strings

Required: No

**status**

The status of the device instance. Valid values are listed here.

Type: String

Valid Values: IN_USE | PREPARING | AVAILABLE | NOT_AVAILABLE

Required: No

**udid**

Unique device identifier for the device instance.

Type: String

Required: No
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
DeviceMinutes

Represents the total (metered or unmetered) minutes used by the resource to run tests. Contains the sum of minutes consumed by all children.

Contents

cmetered

When specified, represents only the sum of metered minutes used by the resource to run tests.

Type: Double

Required: No

total

When specified, represents the total minutes used by the resource to run tests.

Type: Double

Required: No

unmetered

When specified, represents only the sum of unmetered minutes used by the resource to run tests.

Type: Double

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
DevicePool

Represents a collection of device types.

Contents

arn

The device pool's ARN.
Type: String
Pattern: ^arn:.*
Required: No
description

The device pool's description.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 16384.
Required: No
maxDevices

The number of devices that Device Farm can add to your device pool. Device Farm adds devices that are available and meet the criteria that you assign for the rules parameter. Depending on how many devices meet these constraints, your device pool might contain fewer devices than the value for this parameter.

By specifying the maximum number of devices, you can control the costs that you incur by running tests.
Type: Integer
Required: No
name

The device pool's name.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 256.
Required: No
rules

Information about the device pool's rules.
Type: Array of Rule (p. 290) objects
Required: No
type

The device pool's type.
Allowed values include:

- CURATED: A device pool that is created and managed by AWS Device Farm.
- PRIVATE: A device pool that is created and managed by the device pool developer.

Type: String

Valid Values: CURATED | PRIVATE

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
DevicePoolCompatibilityResult

Represents a device pool compatibility result.

Contents

compatible

Whether the result was compatible with the device pool.

Type: Boolean

Required: No

device

The device (phone or tablet) to return information about.

Type: Device (p. 242) object

Required: No

incompatibilityMessages

Information about the compatibility.

Type: Array of IncompatibilityMessage (p. 259) objects

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
DeviceSelectionConfiguration

Represents the device filters used in a test run and the maximum number of devices to be included in the run. It is passed in as the deviceSelectionConfiguration request parameter in ScheduleRun (p. 188).

Contents

filters

Used to dynamically select a set of devices for a test run. A filter is made up of an attribute, an operator, and one or more values.

- Attribute

  The aspect of a device such as platform or model used as the selection criteria in a device filter.

  Allowed values include:

  - ARN: The Amazon Resource Name (ARN) of the device (for example, arn:aws:devicefarm:us-west-2::device:12345Example).
  - PLATFORM: The device platform. Valid values are ANDROID or IOS.
  - OS_VERSION: The operating system version (for example, 10.3.2).
  - MODEL: The device model (for example, iPad 5th Gen).
  - AVAILABILITY: The current availability of the device. Valid values are AVAILABLE, HIGHLY_AVAILABLE, BUSY, or TEMPORARY_NOT_AVAILABLE.
  - FORM_FACTOR: The device form factor. Valid values are PHONE or TABLET.
  - MANUFACTURER: The device manufacturer (for example, Apple).
  - REMOTE_ACCESS_ENABLED: Whether the device is enabled for remote access. Valid values are TRUE or FALSE.
  - REMOTE_DEBUG_ENABLED: Whether the device is enabled for remote debugging. Valid values are TRUE or FALSE. Because remote debugging is no longer supported, this filter is ignored.
  - INSTANCE_ARN: The Amazon Resource Name (ARN) of the device instance.
  - INSTANCE_LABELS: The label of the device instance.
  - FLEET_TYPE: The fleet type. Valid values are PUBLIC or PRIVATE.

- Operator

  The filter operator.

  - The EQUALS operator is available for every attribute except INSTANCE_LABELS.
  - The CONTAINS operator is available for the INSTANCE_LABELS and MODEL attributes.
  - The IN and NOT_IN operators are available for the ARN, OS_VERSION, MODEL, MANUFACTURER, and INSTANCE_ARN attributes.
  - The LESS_THAN, GREATER_THAN, LESS_THAN_OR_EQUALS, and GREATER_THAN_OR_EQUALS operators are also available for the OS_VERSION attribute.

- Values

  An array of one or more filter values.

Operator Values

- The IN and NOT_IN operators can take a values array that has more than one element.
- The other operators require an array with a single element.
Attribute Values

- The PLATFORM attribute can be set to ANDROID or IOS.
- The AVAILABILITY attribute can be set to AVAILABLE, HIGHLY_AVAILABLE, BUSY, or TEMPORARY_NOT_AVAILABLE.
- The FORM_FACTOR attribute can be set to PHONE or TABLET.
- The FLEET_TYPE attribute can be set to PUBLIC or PRIVATE.

Type: Array of DeviceFilter (p. 246) objects

Required: Yes

maxDevices

The maximum number of devices to be included in a test run.

Type: Integer

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
DeviceSelectionResult

Contains the run results requested by the device selection configuration and how many devices were returned. For an example of the JSON response syntax, see ScheduleRun (p. 188).

Contents

filters

The filters in a device selection result.

Type: Array of DeviceFilter (p. 246) objects

Required: No

matchedDevicesCount

The number of devices that matched the device filter selection criteria.

Type: Integer

Required: No

maxDevices

The maximum number of devices to be selected by a device filter and included in a test run.

Type: Integer

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
ExecutionConfiguration

Represents configuration information about a test run, such as the execution timeout (in minutes).

Contents

accountsCleanup

True if account cleanup is enabled at the beginning of the test. Otherwise, false.

Type: Boolean
Required: No

appPackagesCleanup

True if app package cleanup is enabled at the beginning of the test. Otherwise, false.

Type: Boolean
Required: No

jobTimeoutMinutes

The number of minutes a test run executes before it times out.

Type: Integer
Required: No

skipAppResign

When set to true, for private devices, Device Farm does not sign your app again. For public devices, Device Farm always signs your apps again.

For more information about how Device Farm re-signs your apps, see Do you modify my app? in the AWS Device Farm FAQs.

Type: Boolean
Required: No

videoCapture

Set to true to enable video capture. Otherwise, set to false. The default is true.

Type: Boolean
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
IncompatibilityMessage

Represents information about incompatibility.

Contents

message

A message about the incompatibility.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

type

The type of incompatibility.

Allowed values include:

- ARN
- FORM_FACTOR (for example, phone or tablet)
- MANUFACTURER
- PLATFORM (for example, Android or iOS)
- REMOTE_ACCESS_ENABLED
- APPIUM_VERSION

Type: String

Valid Values: ARN | PLATFORM | FORM_FACTOR | MANUFACTURER | REMOTE_ACCESS_ENABLED | REMOTE_DEBUG_ENABLED | APPIUM_VERSION | INSTANCE_ARN | INSTANCE_LABELS | FLEET_TYPE | OS_VERSION | MODEL | AVAILABILITY

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
InstanceProfile

Represents the instance profile.

Contents

arn

The Amazon Resource Name (ARN) of the instance profile.

Type: String

Pattern: ^arn:.*

Required: No

description

The description of the instance profile.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

excludeAppPackagesFromCleanup

An array of strings containing the list of app packages that should not be cleaned up from the device after a test run completes.

The list of packages is considered only if you set packageCleanup to true.

Type: Array of strings

Required: No

name

The name of the instance profile.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

packageCleanup

When set to true, Device Farm removes app packages after a test run. The default value is false for private devices.

Type: Boolean

Required: No

rebootAfterUse

When set to true, Device Farm reboots the instance after a test run. The default value is true.

Type: Boolean
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Job

Represents a device.

Contents

arn

The job's ARN.

Type: String

Pattern: ^arn:.+

Required: No

counters

The job's result counters.

Type: Counters (p. 237) object

Required: No

created

When the job was created.

Type: Timestamp

Required: No

device

The device (phone or tablet).

Type: Device (p. 242) object

Required: No

deviceMinutes

Represents the total (metered or unmetered) minutes used by the job.

Type: DeviceMinutes (p. 251) object

Required: No

instanceArn

The ARN of the instance.

Type: String

Pattern: ^arn:.+

Required: No

message

A message about the job's result.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 16384.
Required: No
name

The job's name.

Type: String
Length Constraints: Minimum length of 0. Maximum length of 256.
Required: No
result

The job's result.

Allowed values include:
- PENDING
- PASSED
- WARNED
- FAILED
- SKIPPED
- ERRORED
- STOPPED

Type: String
Valid Values: PENDING | PASSED | WARNED | FAILED | SKIPPED | ERRORED | STOPPED
Required: No
started

The job's start time.

Type: Timestamp
Required: No
status

The job's status.

Allowed values include:
- PENDING
- PENDING_CONCURRENCY
- PENDING_DEVICE
- PROCESSING
- SCHEDULING
- PREPARING
- RUNNING
- COMPLETED
- STOPPING

Type: String
Valid Values: PENDING | PENDING_CONCURRENCY | PENDING_DEVICE | PROCESSING | SCHEDULING | PREPARING | RUNNING | COMPLETED | STOPPING

Required: No

stopped

The job's stop time.

Type: Timestamp

Required: No

type

The job's type.

Allowed values include the following:

- BUILTIN_FUZZ
- BUILTIN_EXPLORER. For Android, an app explorer that traverses an Android app, interacting with it and capturing screenshots at the same time.
- APPIUM_JAVA_JUNIT
- APPIUM_JAVA_TESTNG
- APPIUM_PYTHON
- APPIUM_NODE
- APPIUM_RUBY
- APPIUM_WEB_JAVA_JUNIT
- APPIUM_WEB_JAVA_TESTNG
- APPIUM_WEB_PYTHON
- APPIUM_WEB_NODE
- APPIUM_WEB_RUBY
- CALABASH
- INSTRUMENTATION
- UIAUTOMATION
- UIAUTOMATOR
- XCTEST
- XCTEST_UI

Type: String

Valid Values: BUILTIN_FUZZ | BUILTIN_EXPLORER | WEB_PERFORMANCE_PROFILE | APPIUM_JAVA_JUNIT | APPIUM_JAVA_TESTNG | APPIUM_PYTHON | APPIUM_NODE | APPIUM_RUBY | APPIUM_WEB_JAVA_JUNIT | APPIUM_WEB_JAVA_TESTNG | APPIUM_WEB_PYTHON | APPIUM_WEB_NODE | APPIUM_WEB_RUBY | CALABASH | INSTRUMENTATION | UIAUTOMATION | UIAUTOMATOR | XCTEST | XCTEST_UI | REMOTE_ACCESS_RECORD | REMOTE_ACCESS_REPLAY

Required: No

videoCapture

This value is set to true if video capture is enabled. Otherwise, it is set to false.

Type: Boolean

Required: No
videoEndpoint

The endpoint for streaming device video.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
**ListTestGridProjectsRequest**

**Contents**

**maxResult**

Return no more than this number of results.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

**nextToken**

From a response, used to continue a paginated listing.

Type: String

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
ListTestGridSessionsRequest

Contents

creationTimeAfter
   Return only sessions created after this time.
   Type: Timestamp
   Required: No

creationTimeBefore
   Return only sessions created before this time.
   Type: Timestamp
   Required: No

endTimeAfter
   Return only sessions that ended after this time.
   Type: Timestamp
   Required: No

endTimeBefore
   Return only sessions that ended before this time.
   Type: Timestamp
   Required: No

maxResult
   Return only this many results at a time.
   Type: Integer
   Valid Range: Minimum value of 1. Maximum value of 1000.
   Required: No

nextToken
   Pagination token.
   Type: String
   Required: No

projectArn
   ARN of a TestGridProject (p. 313).
   Type: String
Pattern: ^arn:aws:devicefarm:.+

Required: Yes

**status**

Return only sessions in this state.

Type: String

Valid Values: ACTIVE | CLOSED | ERRORED

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Location

Represents a latitude and longitude pair, expressed in geographic coordinate system degrees (for example, 47.6204, -122.3491).

Elevation is currently not supported.

Contents

latitude

The latitude.

Type: Double

Required: Yes

longitude

The longitude.

Type: Double

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
MonetaryAmount

A number that represents the monetary amount for an offering or transaction.

Contents

amount

The numerical amount of an offering or transaction.

Type: Double

Required: No

currencyCode

The currency code of a monetary amount. For example, USD means U.S. dollars.

Type: String

Valid Values: USD

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
NetworkProfile

An array of settings that describes characteristics of a network profile.

Contents

arn

The Amazon Resource Name (ARN) of the network profile.

- Type: String
- Pattern: ^arn:.*
- Required: No

description

The description of the network profile.

- Type: String
- Length Constraints: Minimum length of 0. Maximum length of 16384.
- Required: No

downlinkBandwidthBits

The data throughput rate in bits per second, as an integer from 0 to 104857600.

- Type: Long
- Required: No

downlinkDelayMs

Delay time for all packets to destination in milliseconds as an integer from 0 to 2000.

- Type: Long
- Required: No

downlinkJitterMs

Time variation in the delay of received packets in milliseconds as an integer from 0 to 2000.

- Type: Long
- Required: No

downlinkLossPercent

Proportion of received packets that fail to arrive from 0 to 100 percent.

- Type: Integer
- Valid Range: Minimum value of 0. Maximum value of 100.
- Required: No

name

The name of the network profile.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 256.
Required: No

type
The type of network profile. Valid values are listed here.
Type: String
Valid Values: CURATED | PRIVATE
Required: No

uplinkBandwidthBits
The data throughput rate in bits per second, as an integer from 0 to 104857600.
Type: Long
Required: No

uplinkDelayMs
Delay time for all packets to destination in milliseconds as an integer from 0 to 2000.
Type: Long
Required: No

uplinkJitterMs
Time variation in the delay of received packets in milliseconds as an integer from 0 to 2000.
Type: Long
Required: No

uplinkLossPercent
Proportion of transmitted packets that fail to arrive from 0 to 100 percent.
Type: Integer
Valid Range: Minimum value of 0. Maximum value of 100.
Required: No

See Also
For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Offering

Represents the metadata of a device offering.

Contents

description

A string that describes the offering.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

id

The ID that corresponds to a device offering.

Type: String

Length Constraints: Minimum length of 32.

Required: No

platform

The platform of the device (for example, ANDROID or IOS).

Type: String

Valid Values: ANDROID | IOS

Required: No

recurringCharges

Specifies whether there are recurring charges for the offering.

Type: Array of RecurringCharge (p. 283) objects

Required: No

type

The type of offering (for example, RECURRING) for a device.

Type: String

Valid Values: RECURRING

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
See Also

- AWS SDK for Java
- AWS SDK for Ruby V3
OfferingPromotion

Represents information about an offering promotion.

Contents

description
A string that describes the offering promotion.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 16384.
Required: No

id
The ID of the offering promotion.
Type: String
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
OfferingStatus

The status of the offering.

Contents

effectiveOn

The date on which the offering is effective.
Type: Timestamp
Required: No

donering

Represents the metadata of an offering status.
Type: Offering (p. 273) object
Required: No

quantity

The number of available devices in the offering.
Type: Integer
Required: No

quantity

The number of available devices in the offering.
Type: Integer
Required: No

type

The type specified for the offering status.
Type: String

Valid Values: PURCHASE | RENEW | SYSTEM
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
OfferingTransaction

Represents the metadata of an offering transaction.

Contents

cost

The cost of an offering transaction.
Type: MonetaryAmount (p. 270) object
Required: No

createdOn

The date on which an offering transaction was created.
Type: Timestamp
Required: No

offeringPromotionId

The ID that corresponds to a device offering promotion.
Type: String
Required: No

offeringStatus

The status of an offering transaction.
Type: OfferingStatus (p. 276) object
Required: No

transactionId

The transaction ID of the offering transaction.
Type: String
Length Constraints: Minimum length of 32.
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Problem

Represents a specific warning or failure.

Contents

device

Information about the associated device.

Type: Device (p. 242) object

Required: No

job

Information about the associated job.

Type: ProblemDetail (p. 280) object

Required: No

message

A message about the problem's result.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

result

The problem's result.

Allowed values include:

- PENDING
- PASSED
- WARNED
- FAILED
- SKIPPED
-errored
- STOPPED

Type: String

Valid Values: PENDING | PASSED | WARNED | FAILED | SKIPPED | errored | STOPPED

Required: No

run

Information about the associated run.

Type: ProblemDetail (p. 280) object

Required: No

suite

Information about the associated suite.
Type: ProblemDetail (p. 280) object

Required: No

test

Information about the associated test.

Type: ProblemDetail (p. 280) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
ProblemDetail

Information about a problem detail.

Contents

arn

The problem detail's ARN.

Type: String

Pattern: ^arn:.+

Required: No

name

The problem detail's name.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Project

Represents an operating-system neutral workspace for running and managing tests.

Contents

**arn**

The project's ARN.

Type: String

Pattern: ^arn:.*$

Required: No

**created**

When the project was created.

Type: Timestamp

Required: No

**defaultJobTimeoutMinutes**

The default number of minutes (at the project level) a test run executes before it times out. The default value is 150 minutes.

Type: Integer

Required: No

**name**

The project's name.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Radios

Represents the set of radios and their states on a device. Examples of radios include Wi-Fi, GPS, Bluetooth, and NFC.

Contents

**bluetooth**

True if Bluetooth is enabled at the beginning of the test. Otherwise, false.

Type: Boolean

Required: No

**gps**

True if GPS is enabled at the beginning of the test. Otherwise, false.

Type: Boolean

Required: No

**nfc**

True if NFC is enabled at the beginning of the test. Otherwise, false.

Type: Boolean

Required: No

**wifi**

True if Wi-Fi is enabled at the beginning of the test. Otherwise, false.

Type: Boolean

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
RecurringCharge

Specifies whether charges for devices are recurring.

Contents

cost

The cost of the recurring charge.

Type: MonetaryAmount (p. 270) object

Required: No

frequency

The frequency in which charges recur.

Type: String

Valid Values: MONTHLY

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
RemoteAccessSession

Represents information about the remote access session.

Contents

arn

The Amazon Resource Name (ARN) of the remote access session.

Type: String

Pattern: ^arn:.+

Required: No

billingMethod

The billing method of the remote access session. Possible values include METERED or UNMETERED. For more information about metered devices, see AWS Device Farm terminology.

Type: String

Valid Values: METERED | UNMETERED

Required: No

clientId

Unique identifier of your client for the remote access session. Only returned if remote debugging is enabled for the remote access session.

Remote debugging is no longer supported.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Required: No

created

The date and time the remote access session was created.

Type: Timestamp

Required: No

device

The device (phone or tablet) used in the remote access session.

Type: Device (p. 242) object

Required: No

deviceMinutes

The number of minutes a device is used in a remote access session (including setup and teardown minutes).
Type: DeviceMinutes (p. 251) object

Required: No

deviceUdid

Unique device identifier for the remote device. Only returned if remote debugging is enabled for the remote access session.

Remote debugging is no longer supported.

Type: String

Required: No

epoint

The endpoint for the remote access session.

Type: String

Required: No

hostAddress

IP address of the EC2 host where you need to connect to remotely debug devices. Only returned if remote debugging is enabled for the remote access session.

Remote debugging is no longer supported.

Type: String

Length Constraints: Maximum length of 1024.

Required: No

instanceArn

The ARN of the instance.

Type: String

Pattern: ^arn:.+

Required: No

interactionMode

The interaction mode of the remote access session. Valid values are:

- INTERACTIVE: You can interact with the iOS device by viewing, touching, and rotating the screen. You cannot run XCUITest framework-based tests in this mode.
- NO_VIDEO: You are connected to the device, but cannot interact with it or view the screen. This mode has the fastest test execution speed. You can run XCUITest framework-based tests in this mode.
- VIDEO_ONLY: You can view the screen, but cannot touch or rotate it. You can run XCUITest framework-based tests and watch the screen in this mode.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 64.

Valid Values: INTERACTIVE | NO_VIDEO | VIDEO_ONLY
Required: No

**message**

A message about the remote access session.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

**name**

The name of the remote access session.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

**remoteDebugEnabled**

This flag is set to `true` if remote debugging is enabled for the remote access session.

Remote debugging is no longer supported.

Type: Boolean

Required: No

**remoteRecordAppArn**

The ARN for the app to be recorded in the remote access session.

Type: String

Pattern: `^arn:.*`

Required: No

**remoteRecordEnabled**

This flag is set to `true` if remote recording is enabled for the remote access session.

Type: Boolean

Required: No

**result**

The result of the remote access session. Can be any of the following:

- PENDING.
- PASSED.
- WARNED.
- FAILED.
- SKIPPED.
- ERRORED.
- STOPPED.

Type: String
Valid Values: PENDING | PASSED | WARNED | FAILED | SKIPPED | ERRORED | STOPPED
Required: No

skipAppResign
When set to true, for private devices, Device Farm does not sign your app again. For public devices, Device Farm always signs your apps again.

For more information about how Device Farm re-signs your apps, see Do you modify my app? in the AWS Device Farm FAQs.

Type: Boolean
Required: No

started
The date and time the remote access session was started.

Type: Timestamp
Required: No

status
The status of the remote access session. Can be any of the following:
- PENDING.
- PENDING_CONCURRENCY.
- PENDING_DEVICE.
- PROCESSING.
- SCHEDULING.
- PREPARING.
- RUNNING.
- COMPLETED.
- STOPPING.

Type: String
Valid Values: PENDING | PENDING_CONCURRENCY | PENDING_DEVICE | PROCESSING | SCHEDULING | PREPARING | RUNNING | COMPLETED | STOPPING
Required: No

stopped
The date and time the remote access session was stopped.

Type: Timestamp
Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
• AWS SDK for Ruby V3
Resolution

Represents the screen resolution of a device in height and width, expressed in pixels.

Contents

height

The screen resolution's height, expressed in pixels.

Type: Integer

Required: No

width

The screen resolution's width, expressed in pixels.

Type: Integer

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
**Rule**

Represents a condition for a device pool.

**Contents**

attribute

The rule's stringified attribute. For example, specify the value as ""abc"".

The supported operators for each attribute are provided in the following list.

**APPIUM_VERSION**

The Appium version for the test.

Supported operators: CONTAINS

**ARN**

The Amazon Resource Name (ARN) of the device (for example, arn:aws:devicefarm:us-west-2::device:12345Example).

Supported operators: EQUALS, IN, NOT_IN

**AVAILABILITY**

The current availability of the device. Valid values are AVAILABLE, HIGHLY_AVAILABLE, BUSY, or TEMPORARY_NOT_AVAILABLE.

Supported operators: EQUALS

**FLEET_TYPE**

The fleet type. Valid values are PUBLIC or PRIVATE.

Supported operators: EQUALS

**FORM_FACTOR**

The device form factor. Valid values are PHONE or TABLET.

Supported operators: EQUALS, IN, NOT_IN

**INSTANCE_ARN**

The Amazon Resource Name (ARN) of the device instance.

Supported operators: IN, NOT_IN

**INSTANCE_LABELS**

The label of the device instance.

Supported operators: CONTAINS

**MANUFACTURER**

The device manufacturer (for example, Apple).

Supported operators: EQUALS, IN, NOT_IN

**MODEL**

The device model, such as Apple iPad Air 2 or Google Pixel.
Supported operators: CONTAINS, EQUALS, IN, NOT_IN

**OS_VERSION**

The operating system version (for example, 10.3.2).

Supported operators: EQUALS, GREATER_THAN, GREATER_THAN_OR_EQUALS, IN, LESS_THAN, LESS_THAN_OR_EQUALS, NOT_IN

**PLATFORM**

The device platform. Valid values are ANDROID or IOS.

Supported operators: EQUALS, IN, NOT_IN

**REMOTE_ACCESS_ENABLED**

Whether the device is enabled for remote access. Valid values are TRUE or FALSE.

Supported operators: EQUALS

**REMOTE_DEBUG_ENABLED**

Whether the device is enabled for remote debugging. Valid values are TRUE or FALSE.

Supported operators: EQUALS

Because remote debugging is no longer supported, this filter is ignored.

**Type:** String

**Valid Values:** ARN | PLATFORM | FORM_FACTOR | MANUFACTURER | REMOTE_ACCESS_ENABLED | REMOTE_DEBUG_ENABLED | APPIUM_VERSION | INSTANCE_ARN | INSTANCE_LABELS | FLEET_TYPE | OS_VERSION | MODEL | AVAILABILITY

**Required:** No

**operator**

Specifies how Device Farm compares the rule's attribute to the value. For the operators that are supported by each attribute, see the attribute descriptions.

**Type:** String

**Valid Values:** EQUALS | LESS_THAN | LESS_THAN_OR_EQUALS | GREATER_THAN | GREATER_THAN_OR_EQUALS | IN | NOT_IN | CONTAINS

**Required:** No

**value**

The rule's value.

**Type:** String

**Required:** No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
See Also

- AWS SDK for Java
- AWS SDK for Ruby V3
Run

Represents a test run on a set of devices with a given app package, test parameters, and so on.

Contents

appUpload

An app to upload or that has been uploaded.

Type: String

Pattern: ^arn:.+

Required: No

arn

The run's ARN.

Type: String

Pattern: ^arn:.+

Required: No

billingMethod

Specifies the billing method for a test run: metered or unmetered. If the parameter is not specified, the default value is metered.

Note

If you have unmetered device slots, you must set this to unmetered to use them. Otherwise, the run is counted toward metered device minutes.

Type: String

Valid Values: METERED | UNMETERED

Required: No

completedJobs

The total number of completed jobs.

Type: Integer

Required: No

counters

The run's result counters.

Type: Counters (p. 237) object

Required: No

created

When the run was created.
Type: Timestamp
Required: No

customerArtifactPaths

Output CustomerArtifactPaths object for the test run.
Type: CustomerArtifactPaths (p. 241) object
Required: No
deviceMinutes

 Represents the total (metered or unmetered) minutes used by the test run.
Type: DeviceMinutes (p. 251) object
Required: No
devicePoolArn

The ARN of the device pool for the run.
Type: String
Pattern: ^arn:.+
Required: No
deviceSelectionResult

The results of a device filter used to select the devices for a test run.
Type: DeviceSelectionResult (p. 257) object
Required: No
eventCount

For fuzz tests, this is the number of events, between 1 and 10000, that the UI fuzz test should perform.
Type: Integer
Required: No
jobTimeoutMinutes

The number of minutes the job executes before it times out.
Type: Integer
Required: No
locale

Information about the locale that is used for the run.
Type: String
Required: No
location

Information about the location that is used for the run.
Type: Location (p. 269) object

Required: No

message

A message about the run's result.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

name

The run's name.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

networkProfile

The network profile being used for a test run.

Type: NetworkProfile (p. 271) object

Required: No

parsingResultUrl

Read-only URL for an object in an S3 bucket where you can get the parsing results of the test package. If the test package doesn't parse, the reason why it doesn't parse appears in the file that this URL points to.

Type: String

Required: No

platform

The run's platform.

Allowed values include:

• ANDROID
• IOS

Type: String

Valid Values: ANDROID | IOS

Required: No

radios

Information about the radio states for the run.

Type: Radios (p. 282) object

Required: No

result

The run's result.
Allowed values include:
- PENDING
- PASSED
- WARNED
- FAILED
- SKIPPED
- ERRORED
- STOPPED

Type: String

Valid Values: PENDING | PASSED | WARNED | FAILED | SKIPPED | ERRORED | STOPPED

Required: No

resultCode

Supporting field for the result field. Set only if result is SKIPPED. PARSING_FAILED if the result is skipped because of test package parsing failure.

Type: String

Valid Values: PARSING_FAILED | VPC_ENDPOINT_SETUP_FAILED

Required: No

seed

For fuzz tests, this is a seed to use for randomizing the UI fuzz test. Using the same seed value between tests ensures identical event sequences.

Type: Integer

Required: No

skipAppResign

When set to true, for private devices, Device Farm does not sign your app again. For public devices, Device Farm always signs your apps again.

For more information about how Device Farm re-signs your apps, see Do you modify my app? in the AWS Device Farm FAQs.

Type: Boolean

Required: No

started

The run's start time.

Type: Timestamp

Required: No

status

The run's status.

Allowed values include:
- PENDING
- PENDING_CONCURRENCY
• PENDING_DEVICE
• PROCESSING
• SCHEDULING
• PREPARING
• RUNNING
• COMPLETED
• STOPPING

Type: String

Valid Values: PENDING | PENDING_CONCURRENCY | PENDING_DEVICE | PROCESSING | SCHEDULING | PREPARING | RUNNING | COMPLETED | STOPPING

Required: No

stopped

The run's stop time.

Type: Timestamp

Required: No

testSpecArn

The ARN of the YAML-formatted test specification for the run.

Type: String

Pattern: ^arn:.+

Required: No

totalJobs

The total number of jobs for the run.

Type: Integer

Required: No

type

The run's type.

Must be one of the following values:
• BUILTIN_FUZZ
• BUILTIN_EXPLORER

Note
For Android, an app explorer that traverses an Android app, interacting with it and capturing screenshots at the same time.

• APPIUM_JAVA_JUNIT
• APPIUM_JAVA_TESTNG
• APPIUM_PYTHON
• APPIUM_NODE
• APPIUM_RUBY
• APPIUM_WEB_JAVA_JUNIT
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Sample

Represents a sample of performance data.

Contents

**arn**

The sample's ARN.

Type: String

Pattern: `^arn:.*`  
Required: No

**type**

The sample's type.

Must be one of the following values:

- **CPU**: A CPU sample type. This is expressed as the app processing CPU time (including child processes) as reported by process, as a percentage.
- **MEMORY**: A memory usage sample type. This is expressed as the total proportional set size of an app process, in kilobytes.
- **NATIVE_AVG_DRAWTIME**
- **NATIVE_FPS**
- **NATIVE_FRAMES**
- **NATIVE_MAX_DRAWTIME**
- **NATIVE_MIN_DRAWTIME**
- **OPENGL_AVG_DRAWTIME**
- **OPENGL_FPS**
- **OPENGL_FRAMES**
- **OPENGL_MAX_DRAWTIME**
- **OPENGL_MIN_DRAWTIME**
- **RX**
- **RX_RATE**: The total number of bytes per second (TCP and UDP) that are sent, by app process.
- **THREADS**: A threads sample type. This is expressed as the total number of threads per app process.
- **TX**
- **TX_RATE**: The total number of bytes per second (TCP and UDP) that are received, by app process.

Type: String

Valid Values: CPU | MEMORY | THREADS | RX_RATE | TX_RATE | RX | TX | NATIVE_FRAMES | NATIVE_FPS | NATIVE_MIN_DRAWTIME | NATIVE_AVG_DRAWTIME | NATIVE_MAX_DRAWTIME | OPENGL_FRAMES | OPENGL_FPS | OPENGL_MIN_DRAWTIME | OPENGL_AVG_DRAWTIME | OPENGL_MAX_DRAWTIME

Required: No
**url**

The presigned Amazon S3 URL that can be used with a GET request to download the sample's file.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
ScheduleRunConfiguration

Represents the settings for a run. Includes things like location, radio states, auxiliary apps, and network profiles.

Contents

auxiliaryApps

A list of upload ARNs for app packages to be installed with your app.

Type: Array of strings
Pattern: ^arn:.+
Required: No

billingMethod

Specifies the billing method for a test run: metered or unmetered. If the parameter is not specified, the default value is metered.

Note
If you have purchased unmetered device slots, you must set this parameter to unmetered to make use of them. Otherwise, your run counts against your metered time.

Type: String
Valid Values: METERED | UNMETERED
Required: No

customerArtifactPaths

Input CustomerArtifactPaths object for the scheduled run configuration.

Type: CustomerArtifactPaths (p. 241) object
Required: No

extraDataPackageArn

The ARN of the extra data for the run. The extra data is a .zip file that AWS Device Farm extracts to external data for Android or the app's sandbox for iOS.

Type: String
Pattern: ^arn:.+
Required: No

locale

Information about the locale that is used for the run.

Type: String
Required: No
location

Information about the location that is used for the run.

Type: Location (p. 269) object

Required: No

networkProfileArn

Reserved for internal use.

Type: String

Pattern: ^arn:.+

Required: No

radios

Information about the radio states for the run.

Type: Radios (p. 282) object

Required: No

vpceConfigurationArns

An array of ARNs for your VPC endpoint configurations.

Type: Array of strings

Pattern: ^arn:.+

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
ScheduleRunTest

Represents test settings. This data structure is passed in as the test parameter to ScheduleRun. For an example of the JSON request syntax, see ScheduleRun (p. 188).

Contents

filter

The test's filter.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 8192.

Required: No

parameters

The test's parameters, such as test framework parameters and fixture settings. Parameters are represented by name-value pairs of strings.

For all tests:

- app_performance_monitoring: Performance monitoring is enabled by default. Set this parameter to false to disable it.

For Calabash tests:

- profile: A cucumber profile (for example, my_profile_name).
- tags: You can limit execution to features or scenarios that have (or don't have) certain tags (for example, @smoke or @smoke,~@wip).

For Appium tests (all types):

- appium_version: The Appium version. Currently supported values are 1.6.5 (and later), latest, and default.
  - latest runs the latest Appium version supported by Device Farm (1.9.1).
  - For default, Device Farm selects a compatible version of Appium for the device. The current behavior is to run 1.7.2 on Android devices and iOS 9 and earlier and 1.7.2 for iOS 10 and later.
  - This behavior is subject to change.

For fuzz tests (Android only):

- event_count: The number of events, between 1 and 10000, that the UI fuzz test should perform.
- throttle: The time, in ms, between 0 and 1000, that the UI fuzz test should wait between events.
- seed: A seed to use for randomizing the UI fuzz test. Using the same seed value between tests ensures identical event sequences.

For Explorer tests:

- username: A user name to use if the Explorer encounters a login form. If not supplied, no user name is inserted.
- password: A password to use if the Explorer encounters a login form. If not supplied, no password is inserted.

For Instrumentation:

- filter: A test filter string. Examples:
  - Running a single test case: com.android.abc.Test1
• Running a single test: com.android.abc.Test1#smoke
• Running multiple tests: com.android.abc.Test1,com.android.abc.Test2

For XCTest and XCTestUI:
• filter: A test filter string. Examples:
  • Running a single test class: LoginTests
  • Running a multiple test classes: LoginTests,SmokeTests
  • Running a single test: LoginTests/testValid
  • Running multiple tests: LoginTests/testValid,LoginTests/testInvalid

For UIAutomator:
• filter: A test filter string. Examples:
  • Running a single test case: com.android.abc.Test1
  • Running a single test: com.android.abc.Test1#smoke
  • Running multiple tests: com.android.abc.Test1,com.android.abc.Test2

Type: String to string map

Required: No

testPackageArn

The ARN of the uploaded test to be run.

Type: String

Pattern: ^arn:.+

Required: No

testSpecArn

The ARN of the YAML-formatted test specification.

Type: String

Pattern: ^arn:.+

Required: No

type

The test's type.

Must be one of the following values:
• BUILTIN_FUZZ
• BUILTIN_EXPLORER. For Android, an app explorer that traverses an Android app, interacting with it and capturing screenshots at the same time.
• APPIUM_JAVA_JUNIT
• APPIUM_JAVA_TESTNG
• APPIUM_PYTHON
• APPIUM_NODE
• APPIUM_RUBY
• APPIUM_WEB_JAVA_JUNIT
- APPIUM_WEB_JAVA_TESTNG
- APPIUM_WEB_PYTHON
- APPIUM_WEB_NODE
- APPIUM_WEB_RUBY
- CALABASH
- INSTRUMENTATION
- UIAUTOMATION
- UIAUTOMATOR
- XCTEST
- XCTEST_UI

**Type:** String

**Valid Values:** BUILTIN_FUZZ | BUILTIN_EXPLORER | WEB_PERFORMANCE_PROFILE | APPIUM_JAVA_JUNIT | APPIUM_JAVA_TESTNG | APPIUM_PYTHON | APPIUM_NODE | APPIUM_RUBY | APPIUM_WEB_JAVA_JUNIT | APPIUM_WEB_JAVA_TESTNG | APPIUM_WEB_PYTHON | APPIUM_WEB_NODE | APPIUM_WEB_RUBY | CALABASH | INSTRUMENTATION | UIAUTOMATION | UIAUTOMATOR | XCTEST | XCTEST_UI | REMOTE_ACCESS_RECORD | REMOTE_ACCESS_REPLAY

**Required:** Yes

### See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Suite

Represents a collection of one or more tests.

Contents

arn

The suite's ARN.

Type: String

Pattern: ^arn:.*

Required: No

counters

The suite's result counters.

Type: Counters (p. 237) object

Required: No

created

When the suite was created.

Type: Timestamp

Required: No

deviceMinutes

Represents the total (metered or unmetered) minutes used by the test suite.

Type: DeviceMinutes (p. 251) object

Required: No

message

A message about the suite's result.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

name

The suite's name.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

result

The suite's result.
Allowed values include:
- PENDING
- PASSED
- WARNED
- FAILED
- SKIPPED
- errored
- STOPPED

Type: String

Valid Values: PENDING | PASSED | WARNED | FAILED | SKIPPED | errored | STOPPED

Required: No

started

The suite's start time.

Type: Timestamp

Required: No

status

The suite's status.

Allowed values include:
- PENDING
- PENDING_CONCURRENCY
- PENDING_DEVICE
- PROCESSING
- SCHEDULING
- PREPARING
- RUNNING
- COMPLETED
- STOPPING

Type: String

Valid Values: PENDING | PENDING_CONCURRENCY | PENDING_DEVICE | PROCESSING | SCHEDULING | PREPARING | RUNNING | COMPLETED | STOPPING

Required: No

stopped

The suite's stop time.

Type: Timestamp

Required: No

type

The suite's type.

Must be one of the following values:
- BUILTIN_FUZZ
• BUILTIN_EXPLORER

**Note**
Only available for Android; an app explorer that traverses an Android app, interacting with it and capturing screenshots at the same time.

• APPIUM_JAVA_JUNIT
• APPIUM_JAVA_TESTNG
• APPIUM_PYTHON
• APPIUM_NODE
• APPIUM_RUBY
• APPIUM_WEB_JAVA_JUNIT
• APPIUM_WEB_JAVA_TESTNG
• APPIUM_WEB_PYTHON
• APPIUM_WEB_NODE
• APPIUM_WEB_RUBY
• CALABASH
• INSTRUMENTATION
• UIAUTOMATION
• UIAUTOMATOR
• XCTEST
• XCTEST_UI

Type: String

Valid Values: BUILTIN_FUZZ | BUILTIN_EXPLORER | WEB_PERFORMANCE_PROFILE | APPIUM_JAVA_JUNIT | APPIUM_JAVA_TESTNG | APPIUM_PYTHON | APPIUM_NODE | APPIUM_RUBY | APPIUM_WEB_JAVA_JUNIT | APPIUM_WEB_JAVA_TESTNG | APPIUM_WEB_PYTHON | APPIUM_WEB_NODE | APPIUM_WEB_RUBY | CALABASH | INSTRUMENTATION | UIAUTOMATION | UIAUTOMATOR | XCTEST | XCTEST_UI | REMOTE_ACCESS_RECORD | REMOTE_ACCESS_REPLAY

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

• AWS SDK for C++
• AWS SDK for Go
• AWS SDK for Java
• AWS SDK for Ruby V3
Tag

The metadata that you apply to a resource to help you categorize and organize it. Each tag consists of a key and an optional value, both of which you define. Tag keys can have a maximum character length of 128 characters. Tag values can have a maximum length of 256 characters.

Contents

Key

One part of a key-value pair that makes up a tag. A key is a general label that acts like a category for more specific tag values.

Type: String

Required: Yes

Value

The optional part of a key-value pair that makes up a tag. A value acts as a descriptor in a tag category (key).

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Test

Represents a condition that is evaluated.

Contents

arn

The test's ARN.

Type: String

Pattern: ^arn:.+

Required: No

counters

The test's result counters.

Type: Counters (p. 237) object

Required: No

created

When the test was created.

Type: Timestamp

Required: No

deviceMinutes

Represents the total (metered or unmetered) minutes used by the test.

Type: DeviceMinutes (p. 251) object

Required: No

message

A message about the test's result.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

name

The test's name.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

result

The test's result.
Allowed values include:
- PENDING
- PASSED
- WARNED
- FAILED
- SKIPPED
- ERRORED
- STOPPED

Type: String

Valid Values: PENDING | PASSED | WARNED | FAILED | SKIPPED | ERRORED | STOPPED

Required: No

**started**

The test's start time.

Type: Timestamp

Required: No

**status**

The test's status.

Allowed values include:
- PENDING
- PENDING_CONCURRENCY
- PENDING_DEVICE
- PROCESSING
- SCHEDULING
- PREPARING
- RUNNING
- COMPLETED
- STOPPING

Type: String

Valid Values: PENDING | PENDING_CONCURRENCY | PENDING_DEVICE | PROCESSING | SCHEDULING | PREPARING | RUNNING | COMPLETED | STOPPING

Required: No

**stopped**

The test's stop time.

Type: Timestamp

Required: No

**type**

The test's type.

Must be one of the following values:
- BUILTIN_FUZZ
• BUILTIN_EXPLORER

Note
For Android, an app explorer that traverses an Android app, interacting with it and capturing screenshots at the same time.

• APPIUM_JAVA_JUNIT
• APPIUM_JAVA_TESTNG
• APPIUM_PYTHON
• APPIUM_NODE
• APPIUM_RUBY
• APPIUM_WEB_JAVA_JUNIT
• APPIUM_WEB_JAVA_TESTNG
• APPIUM_WEB_PYTHON
• APPIUM_WEB_NODE
• APPIUM_WEB_RUBY
• CALABASH
• INSTRUMENTATION
• UIAUTOMATION
• UIAUTOMATOR
• XCTEST
• XCTEST_UI

Type: String

Valid Values: BUILTIN_FUZZ | BUILTIN_EXPLORER | WEB_PERFORMANCE_PROFILE | APPIUM_JAVA_JUNIT | APPIUM_JAVA_TESTNG | APPIUM_PYTHON | APPIUM_NODE | APPIUM_RUBY | APPIUM_WEB_JAVA_JUNIT | APPIUM_WEB_JAVA_TESTNG | APPIUM_WEB_PYTHON | APPIUM_WEB_NODE | APPIUM_WEB_RUBY | CALABASH | INSTRUMENTATION | UIAUTOMATION | UIAUTOMATOR | XCTEST | XCTEST_UI | REMOTE_ACCESS_RECORD | REMOTE_ACCESS_REPLAY

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

• AWS SDK for C++
• AWS SDK for Go
• AWS SDK for Java
• AWS SDK for Ruby V3
TestGridProject

A Selenium testing project. Projects are used to collect and collate sessions.

Contents

arn

The ARN for the project.

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: No

created

When the project was created.

Type: Timestamp

Required: No

description

A human-readable description for the project.

Type: String

Required: No

name

A human-readable name for the project.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
TestGridSession

A TestGridSession (p. 314) is a single instance of a browser launched from the URL provided by a call to CreateTestGridUrl (p. 23).

Contents

arn

The ARN of the session.

Type: String

Pattern: ^arn:aws:devicefarm:.+

Required: No

billingMinutes

The number of billed minutes that were used for this session.

Type: Double

Required: No

created

The time that the session was started.

Type: Timestamp

Required: No

ended

The time the session ended.

Type: Timestamp

Required: No

seleniumProperties

A JSON object of options and parameters passed to the Selenium WebDriver.

Type: String

Required: No

status

The state of the session.

Type: String

Valid Values: ACTIVE | CLOSED | ERRORED

Required: No
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
TestGridSessionAction

An action taken by a TestGridSession (p. 314) browser instance.

Contents

action

The action taken by the session.

Type: String

Required: No

duration

The time, in milliseconds, that the action took to complete in the browser.

Type: Long

Required: No

requestMethod

HTTP method that the browser used to make the request.

Type: String

Required: No

started

The time that the session invoked the action.

Type: Timestamp

Required: No

statusCode

HTTP status code returned to the browser when the action was taken.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Artifacts are video and other files that are produced in the process of running a browser in an automated context.

**Note**
Video elements might be broken up into multiple artifacts as they grow in size during creation.

## Contents

**filename**
- The file name of the artifact.
- Type: String
- Required: No

**type**
- The kind of artifact.
- Type: String
- Valid Values: `UNKNOWN`, `VIDEO`, `SELENIUM_LOG`
- Required: No

**url**
- A semi-stable URL to the content of the object.
- Type: String
- Required: No

## See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
TrialMinutes

Represents information about free trial device minutes for an AWS account.

Contents

remaining

The number of free trial minutes remaining in the account.

Type: Double
Required: No

total

The total number of free trial minutes that the account started with.

Type: Double
Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
UniqueProblem

A collection of one or more problems, grouped by their result.

Contents

message

A message about the unique problems' result.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 16384.

Required: No

problems

Information about the problems.

Type: Array of Problem (p. 278) objects

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V3
Upload

An app or a set of one or more tests to upload or that have been uploaded.

Contents

**arn**
The upload's ARN.
Type: String
Pattern: ^arn: .+
Required: No

**category**
The upload's category. Allowed values include:
- CURATED: An upload managed by AWS Device Farm.
- PRIVATE: An upload managed by the AWS Device Farm customer.
Type: String
Valid Values: CURATED | PRIVATE
Required: No

**contentType**
The upload's content type (for example, application/octet-stream).
Type: String
Length Constraints: Minimum length of 0. Maximum length of 64.
Required: No

**created**
When the upload was created.
Type: Timestamp
Required: No

**message**
A message about the upload's result.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 16384.
Required: No

**metadata**
The upload's metadata. For example, for Android, this contains information that is parsed from the manifest and is displayed in the AWS Device Farm console after the associated app is uploaded.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 8192.

Required: No

**name**

The upload's file name.

Type: String
Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

**status**

The upload's status.

Must be one of the following values:
- FAILED
- INITIALIZED
- PROCESSING
- SUCCEEDED

Type: String

Valid Values: INITIALIZED | PROCESSING | SUCCEEDED | FAILED

Required: No

**type**

The upload's type.

Must be one of the following values:
- ANDROID_APP
- IOS_APP
- WEB_APP
- EXTERNAL_DATA
- APPIUM_JAVA_JUNIT_TEST_PACKAGE
- APPIUM_JAVA_TESTNG_TEST_PACKAGE
- APPIUM_PYTHON_TEST_PACKAGE
- APPIUM_NODE_TEST_PACKAGE
- APPIUM_RUBY_TEST_PACKAGE
- APPIUM_WEB_JAVA_JUNIT_TEST_PACKAGE
- APPIUM_WEB_JAVA_TESTNG_TEST_PACKAGE
- APPIUM_WEB_PYTHON_TEST_PACKAGE
- APPIUM_WEB_NODE_TEST_PACKAGE
- APPIUM_WEB_RUBY_TEST_PACKAGE
- CALABASH_TEST_PACKAGE
- INSTRUMENTATION_TEST_PACKAGE
- UIAUTOMATION_TEST_PACKAGE
- UIAUTOMATOR_TEST_PACKAGE
- XCTEST_TEST_PACKAGE
• XCTEST_UI_TEST_PACKAGE
• APPIUM_JAVA_JUNIT_TEST_SPEC
• APPIUM_JAVA_TESTNG_TEST_SPEC
• APPIUM_PYTHON_TEST_SPEC
• APPIUM_NODE_TEST_SPEC
• APPIUM_RUBY_TEST_SPEC
• APPIUM_WEB_JAVA_JUNIT_TEST_SPEC
• APPIUM_WEB_JAVA_TESTNG_TEST_SPEC
• APPIUM_WEB_PYTHON_TEST_SPEC
• APPIUM_WEB_NODE_TEST_SPEC
• APPIUM_WEB_RUBY_TEST_SPEC
• INSTRUMENTATION_TEST_SPEC
• XCTEST_UI_TEST_SPEC

Type: String

Valid Values: ANDROID_APP | IOS_APP | WEB_APP | EXTERNAL_DATA | APPIUM_JAVA_JUNIT_TEST_PACKAGE | APPIUM_JAVA_TESTNG_TEST_PACKAGE | APPIUM_PYTHON_TEST_PACKAGE | APPIUM_NODE_TEST_PACKAGE | APPIUM_Ruby_TEST_PACKAGE | APPIUM_WEB_JAVA_JUNIT_TEST_PACKAGE | APPIUM_WEB_JAVA_TESTNG_TEST_PACKAGE | APPIUM_WEB_PYTHON_TEST_PACKAGE | APPIUM_WEB_NODE_TEST_PACKAGE | APPIUM_WEB_Ruby_TEST_PACKAGE | CALABASH_TEST_PACKAGE | INSTRUMENTATION_TEST_PACKAGE | UITEST_ATTEST_PACKAGE | XCTEST_TEST_PACKAGE | XCTEST_UI_TEST_PACKAGE | APPIUM_JAVA_JUNIT_TEST_SPEC | APPIUM_JAVA_TESTNG_TEST_SPEC | APPIUM_PYTHON_TEST_SPEC | APPIUM_NODE_TEST_SPEC | APPIUM_Ruby_TEST_SPEC | APPIUM_WEB_JAVA_JUNIT_TEST_SPEC | APPIUM_WEB_JAVA_TESTNG_TEST_SPEC | APPIUM_WEB_PYTHON_TEST_SPEC | APPIUM_WEB_NODE_TEST_SPEC | APPIUM_WEB_Ruby_TEST_SPEC | INSTRUMENTATION_TEST_SPEC | XCTEST_UI_TEST_SPEC

Required: No

url

The presigned Amazon S3 URL that was used to store a file using a PUT request.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

See Also

• AWS SDK for C++
• AWS SDK for Go
• AWS SDK for Java
• AWS SDK for Ruby V3
VPCEConfiguration

Represents an Amazon Virtual Private Cloud (VPC) endpoint configuration.

Contents

arn

The Amazon Resource Name (ARN) of the VPC endpoint configuration.

Type: String

Pattern: ^arn:.+

Required: No

serviceDnsName

The DNS name that maps to the private IP address of the service you want to access.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

vpceConfigurationDescription

An optional description that provides details about your VPC endpoint configuration.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

vpceConfigurationName

The friendly name you give to your VPC endpoint configuration to manage your configurations more easily.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: No

vpceServiceName

The name of the VPC endpoint service running in your AWS account that you want Device Farm to test.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

• AWS SDK for Go
• AWS SDK for Java
• AWS SDK for Ruby V3
Common Parameters

The following list contains the parameters that all actions use for signing Signature Version 4 requests with a query string. Any action-specific parameters are listed in the topic for that action. For more information about Signature Version 4, see Signature Version 4 Signing Process in the Amazon Web Services General Reference.

Action
The action to be performed.
Type: string
Required: Yes

Version
The API version that the request is written for, expressed in the format YYYY-MM-DD.
Type: string
Required: Yes

X-Amz-Algorithm
The hash algorithm that you used to create the request signature.
Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.
Type: string
Valid Values: AWS4-HMAC-SHA256
Required: Conditional

X-Amz-Credential
The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string ("aws4_request"). The value is expressed in the following format: access_key/YYYYMMDD/region/service/aws4_request.
For more information, see Task 2: Create a String to Sign for Signature Version 4 in the Amazon Web Services General Reference.
Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.
Type: string
Required: Conditional

X-Amz-Date
The date that is used to create the signature. The format must be ISO 8601 basic format ("YYYYMMDD'T'HHMMSS'Z'"). For example, the following date time is a valid X-Amz-Date value: 20120325T120000Z.
Condition: X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is
not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see Handling Dates in Signature Version 4 in the Amazon Web Services General Reference.

Type: string
Required: Conditional

X-Amz-Security-Token

The temporary security token that was obtained through a call to AWS Security Token Service (AWS STS). For a list of services that support temporary security credentials from AWS Security Token Service, go to AWS Services That Work with IAM in the IAM User Guide.

Condition: If you're using temporary security credentials from the AWS Security Token Service, you must include the security token.

Type: string
Required: Conditional

X-Amz-Signature

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string
Required: Conditional

X-Amz-SignedHeaders

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see Task 1: Create a Canonical Request For Signature Version 4 in the Amazon Web Services General Reference.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string
Required: Conditional
Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.

AccessDeniedException
You do not have sufficient access to perform this action.
HTTP Status Code: 400

IncompleteSignature
The request signature does not conform to AWS standards.
HTTP Status Code: 400

InternalFailure
The request processing has failed because of an unknown error, exception or failure.
HTTP Status Code: 500

InvalidAction
The action or operation requested is invalid. Verify that the action is typed correctly.
HTTP Status Code: 400

InvalidClientTokenId
The X.509 certificate or AWS access key ID provided does not exist in our records.
HTTP Status Code: 403

InvalidParameterCombination
Parameters that must not be used together were used together.
HTTP Status Code: 400

InvalidParameterValue
An invalid or out-of-range value was supplied for the input parameter.
HTTP Status Code: 400

InvalidQueryParameter
The AWS query string is malformed or does not adhere to AWS standards.
HTTP Status Code: 400

MalformedQueryString
The query string contains a syntax error.
HTTP Status Code: 404

MissingAction
The request is missing an action or a required parameter.
HTTP Status Code: 400
**MissingAuthenticationToken**

The request must contain either a valid (registered) AWS access key ID or X.509 certificate.

HTTP Status Code: 403

**MissingParameter**

A required parameter for the specified action is not supplied.

HTTP Status Code: 400

**OptInRequired**

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

**RequestExpired**

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

**ServiceUnavailable**

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

**ThrottlingException**

The request was denied due to request throttling.

HTTP Status Code: 400

**ValidationError**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
