Welcome

Amazon Kinesis Data Firehose is a fully managed service that delivers real-time streaming data to destinations such as Amazon Simple Storage Service (Amazon S3), Amazon Elasticsearch Service (Amazon ES), Amazon Redshift, and Splunk.

This document was last published on June 21, 2018.
Actions

The following actions are supported:

- CreateDeliveryStream (p. 3)
- DeleteDeliveryStream (p. 12)
- DescribeDeliveryStream (p. 14)
- ListDeliveryStreams (p. 22)
- ListTagsForDeliveryStream (p. 25)
- PutRecord (p. 28)
- PutRecordBatch (p. 31)
- TagDeliveryStream (p. 35)
- UntagDeliveryStream (p. 38)
- UpdateDestination (p. 41)
CreateDeliveryStream

Creates a Kinesis Data Firehose delivery stream.

By default, you can create up to 50 delivery streams per AWS Region.

This is an asynchronous operation that immediately returns. The initial status of the delivery stream is CREATING. After the delivery stream is created, its status is ACTIVE and it now accepts data. Attempts to send data to a delivery stream that is not in the ACTIVE state cause an exception. To check the state of a delivery stream, use DescribeDeliveryStream (p. 14).

A Kinesis Data Firehose delivery stream can be configured to receive records directly from providers using PutRecord (p. 28) or PutRecordBatch (p. 31), or it can be configured to use an existing Kinesis stream as its source. To specify a Kinesis data stream as input, set the DeliveryStreamType parameter to KinesisStreamAsSource, and provide the Kinesis stream Amazon Resource Name (ARN) and role ARN in the KinesisStreamSourceConfiguration parameter.

A delivery stream is configured with a single destination: Amazon S3, Amazon ES, Amazon Redshift, or Splunk. You must specify only one of the following destination configuration parameters: ExtendedS3DestinationConfiguration, S3DestinationConfiguration, ElasticsearchDestinationConfiguration, RedshiftDestinationConfiguration, or SplunkDestinationConfiguration.

When you specify S3DestinationConfiguration, you can also provide the following optional values: BufferingHints, EncryptionConfiguration, and CompressionFormat. By default, if no BufferingHints value is provided, Kinesis Data Firehose buffers data up to 5 MB or for 5 minutes, whichever condition is satisfied first. BufferingHints is a hint, so there are some cases where the service cannot adhere to these conditions strictly. For example, record boundaries might be such that the size is a little over or under the configured buffering size. By default, no encryption is performed. We strongly recommend that you enable encryption to ensure secure data storage in Amazon S3.

A few notes about Amazon Redshift as a destination:

- An Amazon Redshift destination requires an S3 bucket as intermediate location. Kinesis Data Firehose first delivers data to Amazon S3 and then uses COPY syntax to load data into an Amazon Redshift table. This is specified in the RedshiftDestinationConfiguration.S3Configuration parameter.
- The compression formats SNAPPY or ZIP cannot be specified in RedshiftDestinationConfiguration.S3Configuration because the Amazon Redshift COPY operation that reads from the S3 bucket doesn't support these compression formats.
- We strongly recommend that you use the user name and password you provide exclusively with Kinesis Data Firehose, and that the permissions for the account are restricted for Amazon Redshift INSERT permissions.

Kinesis Data Firehose assumes the IAM role that is configured as part of the destination. The role should allow the Kinesis Data Firehose principal to assume the role, and the role should have permissions that allow the service to deliver the data. For more information, see Grant Kinesis Data Firehose Access to an Amazon S3 Destination in the Amazon Kinesis Data Firehose Developer Guide.

    "LogGroupName": "string"
Request Parameters

The request accepts the following data in JSON format.

**DeliveryStreamName (p. 3)**

The name of the delivery stream. This name must be unique per AWS account in the same AWS Region. If the delivery streams are in different accounts or different Regions, you can have multiple delivery streams with the same name.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: [a-zA-Z0-9_.-]+
**DeliveryStreamType (p. 3)**

The delivery stream type. This parameter can be one of the following values:
- **DirectPut**: Provider applications access the delivery stream directly.
- **KinesisStreamAsSource**: The delivery stream uses a Kinesis data stream as a source.

Type: String

Valid Values: DirectPut | KinesisStreamAsSource

Required: No

**ElasticsearchDestinationConfiguration (p. 3)**

The destination in Amazon ES. You can specify only one destination.

Type: ElasticsearchDestinationConfiguration (p. 62) object

Required: No

**ExtendedS3DestinationConfiguration (p. 3)**

The destination in Amazon S3. You can specify only one destination.

Type: ExtendedS3DestinationConfiguration (p. 71) object

Required: No

**KinesisStreamSourceConfiguration (p. 3)**

When a Kinesis data stream is used as the source for the delivery stream, a KinesisStreamSourceConfiguration (p. 79) containing the Kinesis data stream Amazon Resource Name (ARN) and the role ARN for the source stream.

Type: KinesisStreamSourceConfiguration (p. 79) object

Required: No

**RedshiftDestinationConfiguration (p. 3)**

The destination in Amazon Redshift. You can specify only one destination.

Type: RedshiftDestinationConfiguration (p. 94) object

Required: No

**S3DestinationConfiguration (p. 3)**

[Deprecated] The destination in Amazon S3. You can specify only one destination.

Type: S3DestinationConfiguration (p. 103) object

Required: No

**SplunkDestinationConfiguration (p. 3)**

The destination in Splunk. You can specify only one destination.

Type: SplunkDestinationConfiguration (p. 113) object

Required: No
Response Syntax

```json
{
    "DeliveryStreamARN": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response. The following data is returned in JSON format by the service.

**DeliveryStreamARN (p. 10)**

The ARN of the delivery stream.

- Type: String
- Pattern: arn:.*

Errors

For information about the errors that are common to all actions, see [Common Errors (p. 121)](#).

**InvalidArgumentException**

The specified input parameter has a value that is not valid.

- HTTP Status Code: 400

**LimitExceededException**

You have already reached the limit for a requested resource.

- HTTP Status Code: 400

**ResourceInUseException**

The resource is already in use and not available for this operation.

- HTTP Status Code: 400

Example

The following JSON example creates a delivery stream named `exampleStreamName` with an Amazon S3 destination. To use this example, first replace the placeholders for the `RoleARN` and `BucketARN` keys with valid strings. For more information, see [Amazon Resource Names (ARNs) and AWS Service Namespaces](#).

Sample Request

```bash
POST / HTTP/1.1
Host: firehose.<region>.<domain>
```
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
DeleteDeliveryStream

Deletes a delivery stream and its data.

You can delete a delivery stream only if it is in ACTIVE or DELETING state, and not in the CREATING state. While the deletion request is in process, the delivery stream is in the DELETING state.

To check the state of a delivery stream, use DescribeDeliveryStream (p. 14).

While the delivery stream is DELETING state, the service might continue to accept the records, but it doesn't make any guarantees with respect to delivering the data. Therefore, as a best practice, you should first stop any applications that are sending records before deleting a delivery stream.

Request Syntax

```
{
  "DeliveryStreamName": "string"
}
```

Request Parameters

The request accepts the following data in JSON format.

**DeliveryStreamName (p. 12)**

The name of the delivery stream.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: [a-zA-Z0-9_.-]+

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 121).

**ResourceInUseException**

The resource is already in use and not available for this operation.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource could not be found.

HTTP Status Code: 400
Example

The following JSON example deletes a delivery stream named exampleStreamName.

Sample Request

```plaintext
POST / HTTP/1.1
Host: firehose.<region>.<domain>
Content-Length: <PayloadSizeBytes>
User-Agent: <UserAgentString>
Content-Type: application/x-amz-json-1.1
Authorization: <AuthParams>
Connection: Keep-Alive
X-Amz-Date: <Date>
X-Amz-Target: Firehose_20150804.DeleteDeliveryStream
{
  "DeliveryStreamName": "exampleStreamName"
}
```

Sample Response

```plaintext
HTTP/1.1 200 OK
x-amzn-RequestId: <RequestId>
Content-Type: application/x-amz-json-1.1
Content-Length: <PayloadSizeBytes>
Date: <Date>
```

See Also

- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
DescribeDeliveryStream

Describes the specified delivery stream and gets the status. For example, after your delivery stream is created, call DescribeDeliveryStream to see whether the delivery stream is ACTIVE and therefore ready for data to be sent to it.

Request Syntax

```json
{
    "DeliveryStreamName": "string",
    "ExclusiveStartDestinationId": "string",
    "Limit": number
}
```

Request Parameters

The request accepts the following data in JSON format.

**DeliveryStreamName (p. 14)**

The name of the delivery stream.

- Type: String
- Length Constraints: Minimum length of 1. Maximum length of 64.
- Pattern: [a-zA-Z0-9_.-]+
- Required: Yes

**ExclusiveStartDestinationId (p. 14)**

The ID of the destination to start returning the destination information. Kinesis Data Firehose supports one destination per delivery stream.

- Type: String
- Required: No

**Limit (p. 14)**

The limit on the number of destinations to return. You can have one destination per delivery stream.

- Type: Integer
- Valid Range: Minimum value of 1. Maximum value of 10000.
- Required: No

Response Syntax

```json
{
    "DeliveryStreamDescription": {
        "CreateTimestamp": number,
        "DeliveryStreamARN": "string",
        "DeliveryStreamName": "string",
        "DeliveryStreamStatus": "string",
        "DeliveryStreamType": "string",
        ...
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**DeliveryStreamDescription (p. 14)**

Information about the delivery stream.

Type: [DeliveryStreamDescription](p. 56) object

---

**Errors**

For information about the errors that are common to all actions, see [Common Errors (p. 121)].

**ResourceNotFoundException**

The specified resource could not be found.

HTTP Status Code: 400

---

**Example**

The following JSON example describes a delivery stream.

### Sample Request

```
POST / HTTP/1.1
Host: firehose.<region>.<domain>
Content-Length: <PayloadSizeBytes>
User-Agent: <UserAgentString>
Content-Type: application/x-amz-json-1.1
Authorization: <AuthParams>
Connection: Keep-Alive
X-Amz-Date: <Date>
X-Amz-Target: Firehose_20150804.DescribeDeliveryStream
{
  "DeliveryStreamName": "exampleStreamName"
}
```

### Sample Response

```
HTTP/1.1 200 OK
x-amzn-RequestId: <RequestId>
Content-Type: application/x-amz-json-1.1
Content-Length: <PayloadSizeBytes>
Date: <Date>
{
  "DeliveryStreamDescription": {
    "DeliveryStreamType": "DirectPut",
    "HasMoreDestinations": false,
    "VersionId": "1",
    "CreateTimestamp": 1517595920.596,
    "DeliveryStreamARN": "arn:aws:firehose:us-east-1:111222333444:deliverystream/exampleStreamName",
    "DeliveryStreamStatus": "ACTIVE",
    "DeliveryStreamName": "exampleStreamName",
    "Destinations": [
      {
        "DestinationId": "destinationId-000000000001",
        "ExtendedS3DestinationDescription": {
```

ListDeliveryStreams

Lists your delivery streams.

The number of delivery streams might be too large to return using a single call to ListDeliveryStreams. You can limit the number of delivery streams returned, using the Limit parameter. To determine whether there are more delivery streams to list, check the value of HasMoreDeliveryStreams in the output. If there are more delivery streams to list, you can request them by specifying the name of the last delivery stream returned in the call in the ExclusiveStartDeliveryStreamName parameter of a subsequent call.

Request Syntax

```
{
  "DeliveryStreamType": "string",
  "ExclusiveStartDeliveryStreamName": "string",
  "Limit": number
}
```

Request Parameters

The request accepts the following data in JSON format.

**DeliveryStreamType (p. 22)**

The delivery stream type. This can be one of the following values:
- DirectPut: Provider applications access the delivery stream directly.
- KinesisStreamAsSource: The delivery stream uses a Kinesis data stream as a source.

This parameter is optional. If this parameter is omitted, delivery streams of all types are returned.

Type: String

Valid Values: DirectPut | KinesisStreamAsSource

Required: No

**ExclusiveStartDeliveryStreamName (p. 22)**

The name of the delivery stream to start the list with.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: [a-zA-Z0-9_-.]+

Required: No

**Limit (p. 22)**

The maximum number of delivery streams to list. The default value is 10.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 10000.

Required: No
Response Syntax

```
{
   "DeliveryStreamNames": [ "string" ],
   "HasMoreDeliveryStreams": boolean
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**DeliveryStreamNames (p. 23)**

The names of the delivery streams.

Type: Array of strings

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: [a-zA-Z0-9_.-]+

**HasMoreDeliveryStreams (p. 23)**

Indicates whether there are more delivery streams available to list.

Type: Boolean

Errors

For information about the errors that are common to all actions, see Common Errors (p. 121).

Example

The following JSON example lists up to three delivery streams configured for DirectPut. The response indicates that there are more DirectPut delivery streams to be listed. To list the remaining DirectPut delivery streams, set DeliveryStreamType to DirectPut and ExclusiveStartDeliveryStreamName to last_stream_in_first_listing, and then run the operation again.

**Sample Request**

```
POST / HTTP/1.1
Host: firehose.<region>.<domain>
Content-Length: <PayloadSizeBytes>
User-Agent: <UserAgentString>
Content-Type: application/x-amz-json-1.1
Authorization: <AuthParams>
Connection: Keep-Alive
X-Amz-Date: <Date>
X-Amz-Target: Firehose_20150804.ListDeliveryStreams
{
   "DeliveryStreamType": "DirectPut",
   "Limit": 3
```
Sample Response

HTTP/1.1 200 OK
x-amzn-RequestId: <RequestId>
Content-Type: application/x-amz-json-1.1
Content-Length: <PayloadSizeBytes>
Date: <Date>
{
  "DeliveryStreamNames": [
    "some_delivery_stream",
    "another_example_delivery_stream",
    "last_stream_in_first_listing"
  ],
  "HasMoreDeliveryStreams": true
}

ListTagsForDeliveryStream

Lists the tags for the specified delivery stream. This operation has a limit of five transactions per second per account.

Request Syntax

```
{
    "DeliveryStreamName": "string",
    "ExclusiveStartTagKey": "string",
    "Limit": number
}
```

Request Parameters

The request accepts the following data in JSON format.

**DeliveryStreamName (p. 25)**

The name of the delivery stream whose tags you want to list.

- Type: String
- Length Constraints: Minimum length of 1. Maximum length of 64.
- Pattern: [a-zA-Z0-9_.-]+
- Required: Yes

**ExclusiveStartTagKey (p. 25)**

The key to use as the starting point for the list of tags. If you set this parameter, ListTagsForDeliveryStream gets all tags that occur after ExclusiveStartTagKey.

- Type: String
- Required: No

**Limit (p. 25)**

The number of tags to return. If this number is less than the total number of tags associated with the delivery stream, HasMoreTags is set to true in the response. To list additional tags, set ExclusiveStartTagKey to the last key in the response.

- Type: Integer
- Required: No

Response Syntax

```
{
    "HasMoreTags": boolean,
}
```
"Tags": [  
  
  {  
    "Key": "string",  
    "Value": "string"  
  }  
]  
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**HasMoreTags (p. 25)**

If this is true in the response, more tags are available. To list the remaining tags, set ExclusiveStartTagKey to the key of the last tag returned and call ListTagsForDeliveryStream again.

Type: Boolean

**Tags (p. 25)**

A list of tags associated with DeliveryStreamName, starting with the first tag after ExclusiveStartTagKey and up to the specified Limit.

Type: Array of Tag (p. 120) objects

Array Members: Minimum number of 0 items. Maximum number of 50 items.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 121).

**InvalidArgumentException**

The specified input parameter has a value that is not valid.

HTTP Status Code: 400

**LimitExceededException**

You have already reached the limit for a requested resource.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource could not be found.

HTTP Status Code: 400

Example

**To list the tags for a stream**

The following JSON example lists the tags for the specified delivery stream.
Sample Request

POST / HTTP/1.1
Host: firehose.<region>.<domain>
Content-Length: <PayloadSizeBytes>
User-Agent: <UserAgentString>
Content-Type: application/x-amz-json-1.1
Authorization: <AuthParams>
Connection: Keep-Alive
X-Amz-Date: <Date>
X-Amz-Target: Firehose_20150804.ListTagsForDeliveryStream
{
  "DeliveryStreamName": "exampleDeliveryStreamName"
}

Sample Response

HTTP/1.1 200 OK
x-amzn-RequestId: <RequestId>
Content-Type: application/x-amz-json-1.1
Content-Length: <PayloadSizeBytes>
Date: <Date>
{
  "HasMoreTags": "false",
  "Tags": [
    {
      "Key": "Project",
      "Value": "myProject"
    },
    {
      "Key": "Environment",
      "Value": "Production"
    }
  ]
}

PutRecord

Writes a single data record into an Amazon Kinesis Data Firehose delivery stream. To write multiple data records into a delivery stream, use PutRecordBatch (p. 31). Applications using these operations are referred to as producers.

By default, each delivery stream can take in up to 2,000 transactions per second, 5,000 records per second, or 5 MB per second. If you use PutRecord (p. 28) and PutRecordBatch (p. 31), the limits are an aggregate across these two operations for each delivery stream. For more information about limits and how to request an increase, see Amazon Kinesis Data Firehose Limits.

You must specify the name of the delivery stream and the data record when using PutRecord (p. 28). The data record consists of a data blob that can be up to 1,000 KB in size, and any kind of data. For example, it can be a segment from a log file, geographic location data, website clickstream data, and so on.

Kinesis Data Firehose buffers records before delivering them to the destination. To disambiguate the data blobs at the destination, a common solution is to use delimiters in the data, such as a newline (\n) or some other character unique within the data. This allows the consumer application to parse individual data items when reading the data from the destination.

The PutRecord operation returns a RecordId, which is a unique string assigned to each record. Producer applications can use this ID for purposes such as auditability and investigation.

If the PutRecord operation throws a ServiceUnavailableException, back off and retry. If the exception persists, it is possible that the throughput limits have been exceeded for the delivery stream.

Data records sent to Kinesis Data Firehose are stored for 24 hours from the time they are added to a delivery stream as it tries to send the records to the destination. If the destination is unreachable for more than 24 hours, the data is no longer available.

Request Syntax

```
{
  "DeliveryStreamName": "string",
  "Record": {
    "Data": blob
  }
}
```

Request Parameters

The request accepts the following data in JSON format.

**DeliveryStreamName (p. 28)**

The name of the delivery stream.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: [a-zA-Z0-9_.-]+

Required: Yes

**Record (p. 28)**

The record.
Type: **Record (p. 93) object**

Required: Yes

## Response Syntax

```
{
  "RecordId": "string"
}
```

## Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**RecordId (p. 29)**

The ID of the record.

Type: String

Length Constraints: Minimum length of 1.

## Errors

For information about the errors that are common to all actions, see [Common Errors (p. 121)](#).

**InvalidArgumentException**

The specified input parameter has a value that is not valid.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource could not be found.

HTTP Status Code: 400

**ServiceUnavailableException**

The service is unavailable. Back off and retry the operation. If you continue to see the exception, throughput limits for the delivery stream may have been exceeded. For more information about limits and how to request an increase, see [Amazon Kinesis Data Firehose Limits](#).

HTTP Status Code: 500

## Example

The following JSON puts a record in the delivery stream named `some_delivery_stream`:

**Sample Request**

```
POST / HTTP/1.1
```

PutRecordBatch

Writes multiple data records into a delivery stream in a single call, which can achieve higher throughput per producer than when writing single records. To write single data records into a delivery stream, use PutRecord (p. 28). Applications using these operations are referred to as producers.

By default, each delivery stream can take in up to 2,000 transactions per second, 5,000 records per second, or 5 MB per second. If you use PutRecord (p. 28) and PutRecordBatch (p. 31), the limits are an aggregate across these two operations for each delivery stream. For more information about limits, see Amazon Kinesis Data Firehose Limits.

Each PutRecordBatch (p. 31) request supports up to 500 records. Each record in the request can be as large as 1,000 KB (before 64-bit encoding), up to a limit of 4 MB for the entire request. These limits cannot be changed.

You must specify the name of the delivery stream and the data record when using PutRecord (p. 28). The data record consists of a data blob that can be up to 1,000 KB in size, and any kind of data. For example, it could be a segment from a log file, geographic location data, website clickstream data, and so on.

Kinesis Data Firehose buffers records before delivering them to the destination. To disambiguate the data blobs at the destination, a common solution is to use delimiters in the data, such as a newline (\n) or some other character unique within the data. This allows the consumer application to parse individual data items when reading the data from the destination.

The PutRecordBatch (p. 31) response includes a count of failed records, FailedPutCount, and an array of responses, RequestResponses. Each entry in the RequestResponses array provides additional information about the processed record. It directly correlates with a record in the request array using the same ordering, from the top to the bottom. The response array always includes the same number of records as the request array. RequestResponses includes both successfully and unsuccessfully processed records. Kinesis Data Firehose tries to process all records in each PutRecordBatch (p. 31) request. A single record failure does not stop the processing of subsequent records.

A successfully processed record includes a RecordId value, which is unique for the record. An unsuccessfully processed record includes ErrorCode and ErrorMessage values. ErrorCode reflects the type of error, and is one of the following values: ServiceUnavailable or InternalFailure. ErrorMessage provides more detailed information about the error.

If there is an internal server error or a timeout, the write might have completed or it might have failed. If FailedPutCount is greater than 0, retry the request, resending only those records that might have failed processing. This minimizes the possible duplicate records and also reduces the total bytes sent (and corresponding charges). We recommend that you handle any duplicates at the destination.

If PutRecordBatch (p. 31) throws ServiceUnavailableException, back off and retry. If the exception persists, it is possible that the throughput limits have been exceeded for the delivery stream.

Data records sent to Kinesis Data Firehose are stored for 24 hours from the time they are added to a delivery stream as it attempts to send the records to the destination. If the destination is unreachable for more than 24 hours, the data is no longer available.

Request Syntax

```json
{
  "DeliveryStreamName": "string",
  "Records": [
    {
      "Data": blob
    }
  ]
}
```
Request Parameters

The request accepts the following data in JSON format.

**DeliveryStreamName (p. 31)**

The name of the delivery stream.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: \[a-zA-Z0-9_.-]+\]

Required: Yes

**Records (p. 31)**

One or more records.

Type: Array of Record (p. 93) objects

Array Members: Minimum number of 1 item. Maximum number of 500 items.

Required: Yes

Response Syntax

```
{
   "FailedPutCount": number,
   "RequestResponses": [ 
      {
         "ErrorCode": "string",
         "ErrorMessage": "string",
         "RecordId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**FailedPutCount (p. 32)**

The number of records that might have failed processing.

Type: Integer

Valid Range: Minimum value of 0.

**RequestResponses (p. 32)**

The results array. For each record, the index of the response element is the same as the index used in the request array.
Errors

For information about the errors that are common to all actions, see Common Errors (p. 121).

InvalidArgumentException

The specified input parameter has a value that is not valid.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource could not be found.

HTTP Status Code: 400

ServiceUnavailableException

The service is unavailable. Back off and retry the operation. If you continue to see the exception, throughput limits for the delivery stream may have been exceeded. For more information about limits and how to request an increase, see Amazon Kinesis Data Firehose Limits.

HTTP Status Code: 500

Example

The following JSON puts two records in the delivery stream named some_delivery_stream:

Sample Request

POST / HTTP/1.1
Host: firehose.<region>.<domain>
Content-Length: <PayloadSizeBytes>
User-Agent: <UserAgentString>
Content-Type: application/x-amz-json-1.1
Authorization: <AuthParams>
Connection: Keep-Alive
X-Amz-Date: <Date>
X-Amz-Target: Firehose_20150804.PutRecordBatch
{
  "DeliveryStreamName": "some_delivery_stream",
  "Records": [
    {
      "Data": "Some data blob."
    },
    {
      "Data": "Another blob of data."
    }
  ]
}

Sample Response

HTTP/1.1 200 OK
x-amzn-RequestId: <RequestId>
Content-Type: application/x-amz-json-1.1
Content-Length: <PayloadSizeBytes>
Date: <Date>
{
  "FailedPutCount": 0,
  "RequestResponses": [
    {
      "RecordId": "AJJBALlfuFN9HyhPj6Dc+XqcRlTjgylbr937TsaEmwWpN39EK/

TagDeliveryStream

Adds or updates tags for the specified delivery stream. A tag is a key-value pair (the value is optional) that you can define and assign to AWS resources. If you specify a tag that already exists, the tag value is replaced with the value that you specify in the request. Tags are metadata. For example, you can add friendly names and descriptions or other types of information that can help you distinguish the delivery stream. For more information about tags, see Using Cost Allocation Tags in the AWS Billing and Cost Management User Guide.

Each delivery stream can have up to 50 tags.

This operation has a limit of five transactions per second per account.

Request Syntax

```
{
  "DeliveryStreamName": "string",
  "Tags": [
    {
      "Key": "string",
      "Value": "string"
    }
  ]
}
```

Request Parameters

The request accepts the following data in JSON format.

DeliveryStreamName (p. 35)

The name of the delivery stream to which you want to add the tags.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: [a-zA-Z0-9_-]+

Required: Yes

Tags (p. 35)

A set of key-value pairs to use to create the tags.

Type: Array of Tag (p. 120) objects

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 121).
**Example**

**To add tags to a stream**

The following JSON example adds two tags to the specified stream.

**Sample Request**

```
POST / HTTP/1.1
Host: firehose.<region>.<domain>
Content-Length: <PayloadSizeBytes>
User-Agent: <UserAgentString>
Content-Type: application/x-amz-json-1.1
Authorization: <AuthParams>
Connection: Keep-Alive
X-Amz-Date: <Date>
X-Amz-Target: Firehose_20150804.TagDeliveryStream
{
  "DeliveryStreamName": "exampleDeliveryStreamName",
  "Tags": [
    {
      "Key": "Project",
      "Value": "myProject"
    },
    {
      "Key": "Environment",
      "Value": "Production"
    }
  ]
}
```

**Sample Response**

```
HTTP/1.1 200 OK
x-amzn-RequestId: <RequestId>
Content-Type: application/x-amz-json-1.1
Content-Length: <PayloadSizeBytes>
```

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
UntagDeliveryStream

Removes tags from the specified delivery stream. Removed tags are deleted, and you can't recover them after this operation successfully completes.

If you specify a tag that doesn't exist, the operation ignores it.

This operation has a limit of five transactions per second per account.

Request Syntax

```
{
    "DeliveryStreamName": "string",
    "TagKeys": [ "string" ]
}
```

Request Parameters

The request accepts the following data in JSON format.

**DeliveryStreamName (p. 38)**

The name of the delivery stream.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: [a-zA-Z0-9_.-]+

Required: Yes

**TagKeys (p. 38)**

A list of tag keys. Each corresponding tag is removed from the delivery stream.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 121).

**InvalidArgumentException**

The specified input parameter has a value that is not valid.
HTTP Status Code: 400
**LimitExceededException**
You have already reached the limit for a requested resource.

HTTP Status Code: 400
**ResourceInUseException**
The resource is already in use and not available for this operation.

HTTP Status Code: 400
**ResourceNotFoundException**
The specified resource could not be found.

HTTP Status Code: 400

**Example**

**To remove tags from a stream**

The following JSON example removes the specified tag from the specified stream.

**Sample Request**

```plaintext
POST / HTTP/1.1
Host: firehose.<region>.<domain>
Content-Length: <PayloadSizeBytes>
User-Agent: <UserAgentString>
Content-Type: application/x-amz-json-1.1
Authorization: <AuthParams>
Connection: Keep-Alive
X-Amz-Target: Firehose_20150804.UntagDeliveryStream
{
  "DeliveryStreamName": "exampleDeliveryStreamName",
  "TagKeys": ["Project", "Environment"]
}
```

**Sample Response**

```plaintext
HTTP/1.1 200 OK
x-amzn-RequestId: <RequestId>
Content-Type: application/x-amz-json-1.1
Content-Length: <PayloadSizeBytes>
Date: <Date>
```

UpdateDestination

Updates the specified destination of the specified delivery stream.

Use this operation to change the destination type (for example, to replace the Amazon S3 destination with Amazon Redshift) or change the parameters associated with a destination (for example, to change the bucket name of the Amazon S3 destination). The update might not occur immediately. The target delivery stream remains active while the configurations are updated, so data writes to the delivery stream can continue during this process. The updated configurations are usually effective within a few minutes.

Switching between Amazon ES and other services is not supported. For an Amazon ES destination, you can only update to another Amazon ES destination.

If the destination type is the same, Kinesis Data Firehose merges the configuration parameters specified with the destination configuration that already exists on the delivery stream. If any of the parameters are not specified in the call, the existing values are retained. For example, in the Amazon S3 destination, if EncryptionConfiguration (p. 70) is not specified, then the existing EncryptionConfiguration is maintained on the destination.

If the destination type is not the same, for example, changing the destination from Amazon S3 to Amazon Redshift, Kinesis Data Firehose does not merge any parameters. In this case, all parameters must be specified.

Kinesis Data Firehose uses CurrentDeliveryStreamVersionId to avoid race conditions and conflicting merges. This is a required field, and the service updates the configuration only if the existing configuration has a version ID that matches. After the update is applied successfully, the version ID is updated, and can be retrieved using DescribeDeliveryStream (p. 14). Use the new version ID to set CurrentDeliveryStreamVersionId in the next call.

Request Syntax

```json
{
    "CurrentDeliveryStreamVersionId": "string",
    "DeliveryStreamName": "string",
    "DestinationId": "string",
    "ElasticsearchDestinationUpdate": {
        "BufferingHints": {
            "IntervalInSeconds": number,
            "SizeInMBs": number
        },
        "CloudWatchLoggingOptions": {
            "Enabled": boolean,
            "LogGroupName": "string",
            "LogStreamName": "string"
        },
        "DomainARN": "string",
        "IndexName": "string",
        "IndexRotationPeriod": "string",
        "ProcessingConfiguration": {
            "Enabled": boolean,
            "Processors": [
                {
                    "Parameters": [
                        {
                            "ParameterName": "string",
                            "ParameterValue": "string"
                        }
                    ],
                    "Type": "string"
                }
            ]
        }
    }
}
```

}
Request Parameters

The request accepts the following data in JSON format.

**CurrentDeliveryStreamVersionId (p. 41)**

Obtain this value from the `VersionId` result of `DeliveryStreamDescription (p. 56)`. This value is required, and helps the service perform conditional operations. For example, if there is an interleaving update and this value is null, then the update destination fails. After the update is successful, the `VersionId` value is updated. The service then performs a merge of the old configuration with the new configuration.

Type: String

Pattern: [0-9]+

Required: Yes

**DeliveryStreamName (p. 41)**

The name of the delivery stream.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: [a-zA-Z0-9-_]+

Required: Yes

**DestinationId (p. 41)**

The ID of the destination.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes
ElasticsearchDestinationUpdate (p. 41)
Describes an update for a destination in Amazon ES.
Type: ElasticsearchDestinationUpdate (p. 67) object
Required: No

ExtendedS3DestinationUpdate (p. 41)
Describes an update for a destination in Amazon S3.
Type: ExtendedS3DestinationUpdate (p. 75) object
Required: No

RedshiftDestinationUpdate (p. 41)
Describes an update for a destination in Amazon Redshift.
Type: RedshiftDestinationUpdate (p. 99) object
Required: No

S3DestinationUpdate (p. 41)
[Deprecated] Describes an update for a destination in Amazon S3.
Type: S3DestinationUpdate (p. 107) object
Required: No

SplunkDestinationUpdate (p. 41)
Describes an update for a destination in Splunk.
Type: SplunkDestinationUpdate (p. 117) object
Required: No

Response Elements
If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors
For information about the errors that are common to all actions, see Common Errors (p. 121).

ConcurrentModificationException
Another modification has already happened. Fetch VersionId again and use it to update the destination.
HTTP Status Code: 400

InvalidArgumentException
The specified input parameter has a value that is not valid.
HTTP Status Code: 400

ResourceInUseException
The resource is already in use and not available for this operation.
HTTP Status Code: 400

ResourceNotFoundException

The specified resource could not be found.

HTTP Status Code: 400

Example

The following JSON updates the buffering hints for the destination to 150 seconds and 2 MiB. You can obtain the other values that you need to use in this example from the response to a DescribeDeliveryStream (p. 14) invocation for the delivery stream in question.

Sample Request

POST / HTTP/1.1
Host: firehose.<region>.<domain>
Content-Length: <PayloadSizeBytes>
User-Agent: <UserAgentString>
Content-Type: application/x-amz-json-1.1
Authorization: <AuthParams>
Connection: Keep-Alive
X-Amz-Date: <Date>
X-Amz-Target: Firehose_20150804.UpdateDestination

{
    "CurrentDeliveryStreamVersionId": "1",
    "DeliveryStreamName": "exampleStreamName",
    "DestinationId": "destinationId-000000000001",
    "ExtendedS3DestinationUpdate": {
        "BucketARN": "arn:aws:s3:::somebucket",
        "BufferingHints": {
            "IntervalInSeconds": 150,
            "SizeInMBs": 2
        },
        "RoleARN": "arn:aws:iam::111222333444:role/exampleStreamName"
    }
}

Sample Response

HTTP/1.1 200 OK
x-amzn-RequestId: <RequestId>
Content-Type: application/x-amz-json-1.1
Content-Length: <PayloadSizeBytes>
Date: <Date>

Data Types

The Amazon Kinesis Firehose API contains several data types that various actions use. This section describes each data type in detail.

**Note**
The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- BufferingHints (p. 52)
- CloudWatchLoggingOptions (p. 53)
- CopyCommand (p. 54)
- DataFormatConversionConfiguration (p. 55)
- DeliveryStreamDescription (p. 56)
- Deserializer (p. 58)
- DestinationDescription (p. 59)
- ElasticsearchBufferingHints (p. 61)
- ElasticsearchDestinationConfiguration (p. 62)
- ElasticsearchDestinationDescription (p. 65)
- ElasticsearchDestinationUpdate (p. 67)
- ElasticsearchRetryOptions (p. 69)
- EncryptionConfiguration (p. 70)
- ExtendedS3DestinationConfiguration (p. 71)
- ExtendedS3DestinationDescription (p. 73)
- ExtendedS3DestinationUpdate (p. 75)
- HiveJsonSerDe (p. 77)
- InputFormatConfiguration (p. 78)
- KinesisStreamSourceConfiguration (p. 79)
- KinesisStreamSourceDescription (p. 80)
- KMSEncryptionConfig (p. 81)
- OpenXJsonSerDe (p. 82)
- OrcSerDe (p. 83)
- OutputFormatConfiguration (p. 86)
- ParquetSerDe (p. 87)
- ProcessingConfiguration (p. 89)
- Processor (p. 90)
- ProcessorParameter (p. 91)
- PutRecordBatchResponseEntry (p. 92)
- Record (p. 93)
- RedshiftDestinationConfiguration (p. 94)
- RedshiftDestinationDescription (p. 97)
- RedshiftDestinationUpdate (p. 99)
- RedshiftRetryOptions (p. 102)
- S3DestinationConfiguration (p. 103)
• S3DestinationDescription (p. 105)
• S3DestinationUpdate (p. 107)
• SchemaConfiguration (p. 109)
• Serializer (p. 111)
• SourceDescription (p. 112)
• SplunkDestinationConfiguration (p. 113)
• SplunkDestinationDescription (p. 115)
• SplunkDestinationUpdate (p. 117)
• SplunkRetryOptions (p. 119)
• Tag (p. 120)
BufferingHints

Describes hints for the buffering to perform before delivering data to the destination. These options are treated as hints, and therefore Kinesis Data Firehose might choose to use different values when it is optimal.

Contents

IntervalInSeconds

Buffer incoming data for the specified period of time, in seconds, before delivering it to the destination. The default value is 300.

Type: Integer

Valid Range: Minimum value of 60. Maximum value of 900.

Required: No

SizeInMBs

Buffer incoming data to the specified size, in MBs, before delivering it to the destination. The default value is 5.

We recommend setting this parameter to a value greater than the amount of data you typically ingest into the delivery stream in 10 seconds. For example, if you typically ingest data at 1 MB/sec, the value should be 10 MB or higher.

Type: Integer

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
CloudWatchLoggingOptions

Describes the Amazon CloudWatch logging options for your delivery stream.

Contents

Enabled

Enables or disables CloudWatch logging.
Type: Boolean
Required: No

LogGroupName

The CloudWatch group name for logging. This value is required if CloudWatch logging is enabled.
Type: String
Required: No

LogStreamName

The CloudWatch log stream name for logging. This value is required if CloudWatch logging is enabled.
Type: String
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
CopyCommand

Describes a COPY command for Amazon Redshift.

Contents

CopyOptions

Optional parameters to use with the Amazon Redshift COPY command. For more information, see the "Optional Parameters" section of Amazon Redshift COPY command. Some possible examples that would apply to Kinesis Data Firehose are as follows:

- `delimiter \t \lzop` - fields are delimited with "\t" (TAB character) and compressed using lzop.
- `delimiter '|'` - fields are delimited with "|" (this is the default delimiter).
- `delimiter '|' escape` - the delimiter should be escaped.
- `fixedwidth 'venueid:3,venuename:25,venuecity:12,venuestate:2,venueseats:6'` - fields are fixed width in the source, with each width specified after every column in the table.
- `JSON 's3://mybucket/jsonpaths.txt'` - data is in JSON format, and the path specified is the format of the data.

For more examples, see Amazon Redshift COPY command examples.

Type: String
Required: No

DataTableColumns

A comma-separated list of column names.

Type: String
Required: No

DataTableName

The name of the target table. The table must already exist in the database.

Type: String
Length Constraints: Minimum length of 1.
Required: Yes

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2

API Version 2015-08-04
54
DataFormatConversionConfiguration

Specifies that you want Kinesis Data Firehose to convert data from the JSON format to the Parquet or ORC format before writing it to Amazon S3. Kinesis Data Firehose uses the serializer and deserializer that you specify, in addition to the column information from the AWS Glue table, to deserialize your input data from JSON and then serialize it to the Parquet or ORC format. For more information, see Kinesis Data Firehose Record Format Conversion.

Contents

Enabled

Defaults to `true`. Set it to `false` if you want to disable format conversion while preserving the configuration details.

Type: Boolean

Required: No

InputFormatConfiguration

Specifies the deserializer that you want Kinesis Data Firehose to use to convert the format of your data from JSON.

Type: `InputFormatConfiguration` (p. 78) object

Required: No

OutputFormatConfiguration

Specifies the serializer that you want Kinesis Data Firehose to use to convert the format of your data to the Parquet or ORC format.

Type: `OutputFormatConfiguration` (p. 86) object

Required: No

SchemaConfiguration

Specifies the AWS Glue Data Catalog table that contains the column information.

Type: `SchemaConfiguration` (p. 109) object

Required: No

DeliveryStreamDescription

Contains information about a delivery stream.

Contents

CreateTimestamp

The date and time that the delivery stream was created.

Type: Timestamp

Required: No

DeliveryStreamARN

The Amazon Resource Name (ARN) of the delivery stream. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Pattern: arn:.*

Required: Yes

DeliveryStreamName

The name of the delivery stream.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 64.

Pattern: [a-zA-Z0-9_.-]+

Required: Yes

DeliveryStreamStatus

The status of the delivery stream.

Type: String

Valid Values: CREATING | DELETING | ACTIVE

Required: Yes

DeliveryStreamType

The delivery stream type. This can be one of the following values:

- DirectPut: Provider applications access the delivery stream directly.
- KinesisStreamAsSource: The delivery stream uses a Kinesis data stream as a source.

Type: String

Valid Values: DirectPut | KinesisStreamAsSource

Required: Yes
Destinations
The destinations.
Type: Array of DestinationDescription (p. 59) objects
Required: Yes

HasMoreDestinations
Indicates whether there are more destinations available to list.
Type: Boolean
Required: Yes

LastUpdateTimestamp
The date and time that the delivery stream was last updated.
Type: Timestamp
Required: No

Source
If the DeliveryStreamType parameter is KinesisStreamAsSource, a SourceDescription (p. 112) object describing the source Kinesis data stream.
Type: SourceDescription (p. 112) object
Required: No

VersionId
Each time the destination is updated for a delivery stream, the version ID is changed, and the current version ID is required when updating the destination. This is so that the service knows it is applying the changes to the correct version of the delivery stream.
Type: String
Pattern: \[0-9\]+
Required: Yes

See Also
For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Deserializer

The deserializer you want Kinesis Data Firehose to use for converting the input data from JSON. Kinesis Data Firehose then serializes the data to its final format using the Serializer (p. 111). Kinesis Data Firehose supports two types of deserializers: the Apache Hive JSON SerDe and the OpenX JSON SerDe.

Contents

HiveJsonSerDe

The native Hive / HCatalog JsonSerDe. Used by Kinesis Data Firehose for deserializing data, which means converting it from the JSON format in preparation for serializing it to the Parquet or ORC format. This is one of two deserializers you can choose, depending on which one offers the functionality you need. The other option is the OpenX SerDe.

Type: HiveJsonSerDe (p. 77) object

Required: No

OpenXJsonSerDe

The OpenX SerDe. Used by Kinesis Data Firehose for deserializing data, which means converting it from the JSON format in preparation for serializing it to the Parquet or ORC format. This is one of two deserializers you can choose, depending on which one offers the functionality you need. The other option is the native Hive / HCatalog JsonSerDe.

Type: OpenXJsonSerDe (p. 82) object

Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
DestinationDescription

Describes the destination for a delivery stream.

Contents

DestinationId

The ID of the destination.
Type: String
Length Constraints: Minimum length of 1. Maximum length of 100.
Required: Yes

ElasticsearchDestinationDescription

The destination in Amazon ES.
Type: ElasticsearchDestinationDescription (p. 65) object
Required: No

ExtendedS3DestinationDescription

The destination in Amazon S3.
Type: ExtendedS3DestinationDescription (p. 73) object
Required: No

RedshiftDestinationDescription

The destination in Amazon Redshift.
Type: RedshiftDestinationDescription (p. 97) object
Required: No

S3DestinationDescription

[Deprecated] The destination in Amazon S3.
Type: S3DestinationDescription (p. 105) object
Required: No

SplunkDestinationDescription

The destination in Splunk.
Type: SplunkDestinationDescription (p. 115) object
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ElasticsearchBufferingHints

Describes the buffering to perform before delivering data to the Amazon ES destination.

Contents

IntervalInSeconds

Buffer incoming data for the specified period of time, in seconds, before delivering it to the destination. The default value is 300 (5 minutes).

Type: Integer

Valid Range: Minimum value of 60. Maximum value of 900.

Required: No

SizeInMBs

Buffer incoming data to the specified size, in MBs, before delivering it to the destination. The default value is 5.

We recommend setting this parameter to a value greater than the amount of data you typically ingest into the delivery stream in 10 seconds. For example, if you typically ingest data at 1 MB/sec, the value should be 10 MB or higher.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ElasticsearchDestinationConfiguration

Describes the configuration of a destination in Amazon ES.

Contents

BufferingHints

The buffering options. If no value is specified, the default values for ElasticsearchBufferingHints are used.

Type: ElasticsearchBufferingHints (p. 61) object

Required: No

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

DomainARN

The ARN of the Amazon ES domain. The IAM role must have permissions for DescribeElasticsearchDomain, DescribeElasticsearchDomains, and DescribeElasticsearchDomainConfig after assuming the role specified in RoleARN. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Pattern: arn:.*

Required: Yes

IndexName

The Elasticsearch index name.

Type: String

Required: Yes

IndexRotationPeriod

The Elasticsearch index rotation period. Index rotation appends a time stamp to the IndexName to facilitate the expiration of old data. For more information, see Index Rotation for the Amazon ES Destination. The default value is OneDay.

Type: String

Valid Values: NoRotation | OneHour | OneDay | OneWeek | OneMonth

Required: No

ProcessingConfiguration

The data processing configuration.
Type: `ProcessingConfiguration (p. 89)` object

Required: No

**RetryOptions**

The retry behavior in case Kinesis Data Firehose is unable to deliver documents to Amazon ES. The default value is 300 (5 minutes).

Type: `ElasticsearchRetryOptions (p. 69)` object

Required: No

**RoleARN**

The Amazon Resource Name (ARN) of the IAM role to be assumed by Kinesis Data Firehose for calling the Amazon ES Configuration API and for indexing documents. For more information, see [Grant Kinesis Data Firehose Access to an Amazon S3 Destination](https://docs.aws.amazon.com/AmazonKinesis/latest/dev/kinesis-access-s3-iam.html) and [Amazon Resource Names (ARNs) and AWS Service Namespaces](https://docs.aws.amazon.com/AmazonS3/latest/dev/using-with-s3-arns.html).

Type: String

Pattern: `arn:*`

Required: Yes

**S3BackupMode**

Defines how documents should be delivered to Amazon S3. When it is set to `FailedDocumentsOnly`, Kinesis Data Firehose writes any documents that could not be indexed to the configured Amazon S3 destination, with `elasticsearch-failed/` appended to the key prefix. When set to `AllDocuments`, Kinesis Data Firehose delivers all incoming records to Amazon S3, and also writes failed documents with `elasticsearch-failed/` appended to the prefix. For more information, see [Amazon S3 Backup for the Amazon ES Destination](https://docs.aws.amazon.com/AmazonKinesis/latest/dev/backup.html). Default value is `FailedDocumentsOnly`.

Type: String

Valid Values: FailedDocumentsOnly | AllDocuments

Required: No

**S3Configuration**

The configuration for the backup Amazon S3 location.

Type: `S3DestinationConfiguration (p. 103)` object

Required: Yes

**TypeName**

The Elasticsearch type name. For Elasticsearch 6.x, there can be only one type per index. If you try to specify a new type for an existing index that already has another type, Kinesis Data Firehose returns an error during run time.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ElasticsearchDestinationDescription

The destination description in Amazon ES.

Contents

BufferingHints

The buffering options.

Type: ElasticsearchBufferingHints (p. 61) object

Required: No

CloudWatchLoggingOptions

The Amazon CloudWatch logging options.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

DomainARN

The ARN of the Amazon ES domain. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Pattern: arn:.*

Required: No

IndexName

The Elasticsearch index name.

Type: String

Required: No

IndexRotationPeriod

The Elasticsearch index rotation period

Type: String

Valid Values: NoRotation | OneHour | OneDay | OneWeek | OneMonth

Required: No

ProcessingConfiguration

The data processing configuration.

Type: ProcessingConfiguration (p. 89) object

Required: No
**RetryOptions**

The Amazon ES retry options.

Type: `ElasticsearchRetryOptions (p. 69)` object

Required: No

**RoleARN**

The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Pattern: `arn:*`

Required: No

**S3BackupMode**

The Amazon S3 backup mode.

Type: String

Valid Values: `FailedDocumentsOnly` | `AllDocuments`

Required: No

**S3DestinationDescription**

The Amazon S3 destination.

Type: `S3DestinationDescription (p. 105)` object

Required: No

**TypeName**

The Elasticsearch type name.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

---

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ElasticsearchDestinationUpdate

Describes an update for a destination in Amazon ES.

Contents

BufferingHints

The buffering options. If no value is specified, ElasticsearchBufferingHints object default values are used.

Type: ElasticsearchBufferingHints (p. 61) object

Required: No

CloudWatchLoggingOptions

The CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

DomainARN

The ARN of the Amazon ES domain. The IAM role must have permissions for DescribeElasticsearchDomain, DescribeElasticsearchDomains, and DescribeElasticsearchDomainConfig after assuming the IAM role specified in RoleARN. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Pattern: arn:.*

Required: No

IndexName

The Elasticsearch index name.

Type: String

Required: No

IndexRotationPeriod

The Elasticsearch index rotation period. Index rotation appends a time stamp to IndexName to facilitate the expiration of old data. For more information, see Index Rotation for the Amazon ES Destination. Default value is OneDay.

Type: String

Valid Values: NoRotation | OneHour | OneDay | OneWeek | OneMonth

Required: No

ProcessingConfiguration

The data processing configuration.
Type: `ProcessingConfiguration (p. 89)` object

Required: No

**RetryOptions**

The retry behavior in case Kinesis Data Firehose is unable to deliver documents to Amazon ES. The default value is 300 (5 minutes).

Type: `ElasticsearchRetryOptions (p. 69)` object

Required: No

**RoleARN**

The Amazon Resource Name (ARN) of the IAM role to be assumed by Kinesis Data Firehose for calling the Amazon ES Configuration API and for indexing documents. For more information, see [Grant Kinesis Data Firehose Access to an Amazon S3 Destination](https://docs.aws.amazon.com/AmazonKinesis/latest/dev/kinesisfirehose-s3-access.html) and [Amazon Resource Names (ARNs) and AWS Service Namespaces](https://docs.aws.amazon.com/general/latest/gr/aws-arns-and-rns.html).

Type: String

Pattern: `arn:`

Required: No

**S3Update**

The Amazon S3 destination.

Type: `S3DestinationUpdate (p. 107)` object

Required: No

**TypeName**

The Elasticsearch type name. For Elasticsearch 6.x, there can be only one type per index. If you try to specify a new type for an existing index that already has another type, Kinesis Data Firehose returns an error during runtime.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

---

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ElasticsearchRetryOptions

Configures retry behavior in case Kinesis Data Firehose is unable to deliver documents to Amazon ES.

Contents

DurationIn Seconds

After an initial failure to deliver to Amazon ES, the total amount of time during which Kinesis Data Firehose retries delivery (including the first attempt). After this time has elapsed, the failed documents are written to Amazon S3. Default value is 300 seconds (5 minutes). A value of 0 (zero) results in no retries.

Type: Integer

Valid Range: Minimum value of 0. Maximum value of 7200.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
EncryptionConfiguration

Describes the encryption for a destination in Amazon S3.

Contents

**KMSEncryptionConfig**

The encryption key.

Type: KMSEncryptionConfig (p. 81) object

Required: No

**NoEncryptionConfig**

Specifically override existing encryption information to ensure that no encryption is used.

Type: String

Valid Values: NoEncryption

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ExtendedS3DestinationConfiguration

Describes the configuration of a destination in Amazon S3.

Contents

BucketARN

The ARN of the S3 bucket. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: arn:.*

Required: Yes

BufferingHints

The buffering option.

Type: BufferingHints (p. 52) object

Required: No

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

CompressionFormat

The compression format. If no value is specified, the default is UNCOMPRESSED.

Type: String

Valid Values: UNCOMPRESSED | GZIP | ZIP | Snappy

Required: No

DataFormatConversionConfiguration

The serializer, deserializer, and schema for converting data from the JSON format to the Parquet or ORC format before writing it to Amazon S3.

Type: DataFormatConversionConfiguration (p. 55) object

Required: No

EncryptionConfiguration

The encryption configuration. If no value is specified, the default is no encryption.

Type: EncryptionConfiguration (p. 70) object

Required: No
Prefix

The "YYYY/MM/DD/HH" time format prefix is automatically used for delivered Amazon S3 files. You can specify an extra prefix to be added in front of the time format prefix. If the prefix ends with a slash, it appears as a folder in the S3 bucket. For more information, see Amazon S3 Object Name Format in the Amazon Kinesis Data Firehose Developer Guide.

Type: String
Required: No

ProcessingConfiguration

The data processing configuration.

Type: ProcessingConfiguration (p. 89) object
Required: No

RoleARN

The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String
Pattern: arn:.*
Required: Yes

S3BackupConfiguration

The configuration for backup in Amazon S3.

Type: S3DestinationConfiguration (p. 103) object
Required: No

S3BackupMode

The Amazon S3 backup mode.

Type: String
Valid Values: Disabled | Enabled
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ExtendedS3DestinationDescription

Describes a destination in Amazon S3.

Contents

BucketARN

The ARN of the S3 bucket. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: arn:.*

Required: Yes

BufferingHints

The buffering option.

Type: BufferingHints (p. 52) object

Required: Yes

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

CompressionFormat

The compression format. If no value is specified, the default is UNCOMPRESSED.

Type: String

Valid Values: UNCOMPRESSED | GZIP | ZIP | Snappy

Required: Yes

DataFormatConversionConfiguration

The serializer, deserializer, and schema for converting data from the JSON format to the Parquet or ORC format before writing it to Amazon S3.

Type: DataFormatConversionConfiguration (p. 55) object

Required: No

EncryptionConfiguration

The encryption configuration. If no value is specified, the default is no encryption.

Type: EncryptionConfiguration (p. 70) object

Required: Yes
Prefix

The "YYYY/MM/DD/HH" time format prefix is automatically used for delivered Amazon S3 files. You can specify an extra prefix to be added in front of the time format prefix. If the prefix ends with a slash, it appears as a folder in the S3 bucket. For more information, see Amazon S3 Object Name Format in the Amazon Kinesis Data Firehose Developer Guide.

Type: String
Required: No

ProcessingConfiguration

The data processing configuration.

Type: ProcessingConfiguration (p. 89) object
Required: No

RoleARN

The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String
Pattern: arn:.*
Required: Yes

S3BackupDescription

The configuration for backup in Amazon S3.

Type: S3DestinationDescription (p. 105) object
Required: No

S3BackupMode

The Amazon S3 backup mode.

Type: String
Valid Values: Disabled | Enabled
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ExtendedS3DestinationUpdate

Describes an update for a destination in Amazon S3.

Contents

BucketARN

The ARN of the S3 bucket. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: arn:.*

Required: No

BufferingHints

The buffering option.

Type: BufferingHints (p. 52) object

Required: No

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

CompressionFormat

The compression format. If no value is specified, the default is UNCOMPRESSED.

Type: String

Valid Values: UNCOMPRESSED | GZIP | ZIP | Snappy

Required: No

DataFormatConversionConfiguration

The serializer, deserializer, and schema for converting data from the JSON format to the Parquet or ORC format before writing it to Amazon S3.

Type: DataFormatConversionConfiguration (p. 55) object

Required: No

EncryptionConfiguration

The encryption configuration. If no value is specified, the default is no encryption.

Type: EncryptionConfiguration (p. 70) object

Required: No
Prefix
The "YYYY/MM/DD/HH" time format prefix is automatically used for delivered Amazon S3 files. You can specify an extra prefix to be added in front of the time format prefix. If the prefix ends with a slash, it appears as a folder in the S3 bucket. For more information, see Amazon S3 Object Name Format in the Amazon Kinesis Data Firehose Developer Guide.

Type: String
Required: No

ProcessingConfiguration
The data processing configuration.

Type: ProcessingConfiguration (p. 89) object
Required: No

RoleARN
The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String
Pattern: arn:.*
Required: No

S3BackupMode
Enables or disables Amazon S3 backup mode.

Type: String
Valid Values: Disabled | Enabled
Required: No

S3BackupUpdate
The Amazon S3 destination for backup.

Type: S3DestinationUpdate (p. 107) object
Required: No

See Also
For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
HiveJsonSerDe

The native Hive / HCatalog JsonSerDe. Used by Kinesis Data Firehose for deserializing data, which means converting it from the JSON format in preparation for serializing it to the Parquet or ORC format. This is one of two deserializers you can choose, depending on which one offers the functionality you need. The other option is the OpenX SerDe.

Contents

TimestampFormats

Indicates how you want Kinesis Data Firehose to parse the date and time stamps that may be present in your input data JSON. To specify these format strings, follow the pattern syntax of JodaTime's DateTimeFormat format strings. For more information, see Class DateTimeFormat. You can also use the special value `millis` to parse time stamps in epoch milliseconds. If you don't specify a format, Kinesis Data Firehose uses java.sql.Timestamp::valueOf by default.

Type: Array of strings

Pattern: `^(?!\s*$).+`

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
InputFormatConfiguration

Specifies the deserializer you want to use to convert the format of the input data.

Contents

Deserializer

Specifies which deserializer to use. You can choose either the Apache Hive JSON SerDe or the OpenX JSON SerDe. If both are non-null, the server rejects the request.

Type: Deserializer (p. 58) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
KinesisStreamSourceConfiguration

The stream and role Amazon Resource Names (ARNs) for a Kinesis data stream used as the source for a delivery stream.

Contents

KinesisStreamARN

The ARN of the source Kinesis data stream. For more information, see Amazon Kinesis Data Streams ARN Format.

Type: String

Pattern: arn:.*

Required: Yes

RoleARN

The ARN of the role that provides access to the source Kinesis data stream. For more information, see AWS Identity and Access Management (IAM) ARN Format.

Type: String

Pattern: arn:.*

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
KinesisStreamSourceDescription

Details about a Kinesis data stream used as the source for a Kinesis Data Firehose delivery stream.

Contents

DeliveryStartTimestamp

Kinesis Data Firehose starts retrieving records from the Kinesis data stream starting with this time stamp.

Type: Timestamp

Required: No

KinesisStreamARN

The Amazon Resource Name (ARN) of the source Kinesis data stream. For more information, see Amazon Kinesis Data Streams ARN Format.

Type: String

Pattern: arn:.*

Required: No

RoleARN

The ARN of the role used by the source Kinesis data stream. For more information, see AWS Identity and Access Management (IAM) ARN Format.

Type: String

Pattern: arn:.*

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
KMSEncryptionConfig

Describes an encryption key for a destination in Amazon S3.

Contents

AWSKMSKeyARN

The Amazon Resource Name (ARN) of the encryption key. Must belong to the same AWS Region as the destination Amazon S3 bucket. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Pattern: arn:.*

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
OpenXJsonSerDe

The OpenX SerDe. Used by Kinesis Data Firehose for deserializing data, which means converting it from the JSON format in preparation for serializing it to the Parquet or ORC format. This is one of two deserializers you can choose, depending on which one offers the functionality you need. The other option is the native Hive / HCatalog JsonSerDe.

Contents

CaseInsensitive

When set to \texttt{true}, which is the default, Kinesis Data Firehose converts JSON keys to lowercase before deserializing them.

Type: Boolean

Required: No

ColumnToJsonKeyMappings

Maps column names to JSON keys that aren't identical to the column names. This is useful when the JSON contains keys that are Hive keywords. For example, 	exttt{timestamp} is a Hive keyword. If you have a JSON key named 	exttt{timestamp}, set this parameter to \{"ts": "timestamp"\} to map this key to a column named \texttt{ts}.

Type: String to string map

Key Pattern: ^\S+$

Value Pattern: ^(?![\s]*).+$

Required: No

ConvertDotsInJsonKeysToUnderscores

When set to \texttt{true}, specifies that the names of the keys include dots and that you want Kinesis Data Firehose to replace them with underscores. This is useful because Apache Hive does not allow dots in column names. For example, if the JSON contains a key whose name is "a.b", you can define the column name to be "a\_b" when using this option.

The default is \texttt{false}.

Type: Boolean

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
OrcSerDe

A serializer to use for converting data to the ORC format before storing it in Amazon S3. For more information, see Apache ORC.

Contents

**BlockSizeBytes**

The Hadoop Distributed File System (HDFS) block size. This is useful if you intend to copy the data from Amazon S3 to HDFS before querying. The default is 256 MiB and the minimum is 64 MiB. Kinesis Data Firehose uses this value for padding calculations.

Type: Integer

Valid Range: Minimum value of 67108864.

Required: No

**BloomFilterColumns**

The column names for which you want Kinesis Data Firehose to create bloom filters. The default is null.

Type: Array of strings

Pattern: `\S+`  

Required: No

**BloomFilterFalsePositiveProbability**

The Bloom filter false positive probability (FPP). The lower the FPP, the bigger the Bloom filter. The default value is 0.05, the minimum is 0, and the maximum is 1.

Type: Double

Valid Range: Minimum value of 0. Maximum value of 1.

Required: No

**Compression**

The compression code to use over data blocks. The default is SNAPPY.

Type: String

Valid Values: NONE | ZLIB | SNAPPY

Required: No

**DictionaryKeyThreshold**

Represents the fraction of the total number of non-null rows. To turn off dictionary encoding, set this fraction to a number that is less than the number of distinct keys in a dictionary. To always use dictionary encoding, set this threshold to 1.

Type: Double

Valid Range: Minimum value of 0. Maximum value of 1.

Required: No
EnablePadding

Set this to true to indicate that you want stripes to be padded to the HDFS block boundaries. This is useful if you intend to copy the data from Amazon S3 to HDFS before querying. The default is false.

Type: Boolean
Required: No

FormatVersion

The version of the file to write. The possible values are V0_11 and V0_12. The default is V0_12.

Type: String
Valid Values: V0_11 | V0_12
Required: No

PaddingTolerance

A number between 0 and 1 that defines the tolerance for block padding as a decimal fraction of stripe size. The default value is 0.05, which means 5 percent of stripe size.

For the default values of 64 MiB ORC stripes and 256 MiB HDFS blocks, the default block padding tolerance of 5 percent reserves a maximum of 3.2 MiB for padding within the 256 MiB block. In such a case, if the available size within the block is more than 3.2 MiB, a new, smaller stripe is inserted to fit within that space. This ensures that no stripe crosses block boundaries and causes remote reads within a node-local task.

Kinesis Data Firehose ignores this parameter when OrcSerDe:EnablePadding (p. 84) is false.

Type: Double
Valid Range: Minimum value of 0. Maximum value of 1.
Required: No

RowIndexStride

The number of rows between index entries. The default is 10,000 and the minimum is 1,000.

Type: Integer
Valid Range: Minimum value of 1000.
Required: No

StripeSizeBytes

The number of bytes in each stripe. The default is 64 MiB and the minimum is 8 MiB.

Type: Integer
Valid Range: Minimum value of 8388608.
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:
See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
OutputFormatConfiguration

Specifies the serializer that you want Kinesis Data Firehose to use to convert the format of your data before it writes it to Amazon S3.

Contents

Serializer

Specifies which serializer to use. You can choose either the ORC SerDe or the Parquet SerDe. If both are non-null, the server rejects the request.

Type: Serializer (p. 111) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ParquetSerDe

A serializer to use for converting data to the Parquet format before storing it in Amazon S3. For more information, see Apache Parquet.

Contents

**BlockSizeBytes**

The Hadoop Distributed File System (HDFS) block size. This is useful if you intend to copy the data from Amazon S3 to HDFS before querying. The default is 256 MiB and the minimum is 64 MiB. Kinesis Data Firehose uses this value for padding calculations.

Type: Integer

Valid Range: Minimum value of 67108864.

Required: No

**Compression**

The compression code to use over data blocks. The possible values are UNCOMPRESSED, SNAPPY, and GZIP, with the default being SNAPPY. Use SNAPPY for higher decompression speed. Use GZIP if the compression ratio is more important than speed.

Type: String

Valid Values: UNCOMPRESSED | GZIP | SNAPPY

Required: No

**EnableDictionaryCompression**

Indicates whether to enable dictionary compression.

Type: Boolean

Required: No

**MaxPaddingBytes**

The maximum amount of padding to apply. This is useful if you intend to copy the data from Amazon S3 to HDFS before querying. The default is 0.

Type: Integer

Valid Range: Minimum value of 0.

Required: No

**PageSizeBytes**

The Parquet page size. Column chunks are divided into pages. A page is conceptually an indivisible unit (in terms of compression and encoding). The minimum value is 64 KiB and the default is 1 MiB.

Type: Integer

Valid Range: Minimum value of 65536.

Required: No

**WriterVersion**

Indicates the version of row format to output. The possible values are v1 and v2. The default is v1.
Type: String

Valid Values: V1 | V2

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ProcessingConfiguration

Describes a data processing configuration.

Contents

Enabled

   Enables or disables data processing.
   Type: Boolean
   Required: No

Processors

   The data processors.
   Type: Array of Processor (p. 90) objects
   Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Processor

Describes a data processor.

Contents

Parameters

The processor parameters.

Type: Array of ProcessorParameter (p. 91) objects

Required: No

Type

The type of processor.

Type: String

Valid Values: Lambda

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ProcessorParameter

Describes the processor parameter.

Contents

**ParameterName**

The name of the parameter.

Type: String

Valid Values: LambdaArn | NumberOfRetries | RoleArn | BufferSizeInMBs | BufferIntervalInSeconds

Required: Yes

**ParameterValue**

The parameter value.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
PutRecordBatchResponseEntry

Contains the result for an individual record from a PutRecordBatch (p. 31) request. If the record is successfully added to your delivery stream, it receives a record ID. If the record fails to be added to your delivery stream, the result includes an error code and an error message.

Contents

**ErrorCode**

The error code for an individual record result.

Type: String

Required: No

**ErrorMessage**

The error message for an individual record result.

Type: String

Required: No

**RecordId**

The ID of the record.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Record

The unit of data in a delivery stream.

Contents

Data

The data blob, which is base64-encoded when the blob is serialized. The maximum size of the data blob, before base64-encoding, is 1,000 KB.

Type: Base64-encoded binary data object

Length Constraints: Minimum length of 0. Maximum length of 1024000.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
RedshiftDestinationConfiguration

Describes the configuration of a destination in Amazon Redshift.

Contents

CloudWatchLoggingOptions

The CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

ClusterJDBCURL

The database connection string.

Type: String

Length Constraints: Minimum length of 1.

Pattern: jdbc:(redshift|postgresql)://((?!-)[A-Za-z0-9-]{1,63}(?!-_\.)+redshift\.amazonaws\.com:\d{1,5}/[a-zA-Z0-9_$]+

Required: Yes

CopyCommand

The COPY command.

Type: CopyCommand (p. 54) object

Required: Yes

Password

The user password.

Type: String

Required: Yes

ProcessingConfiguration

The data processing configuration.

Type: ProcessingConfiguration (p. 89) object

Required: No

RetryOptions

The retry behavior in case Kinesis Data Firehose is unable to deliver documents to Amazon Redshift. Default value is 3600 (60 minutes).

Type: RedshiftRetryOptions (p. 102) object

Required: No
RoleARN

The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Pattern: arn:.*

Required: Yes

S3BackupConfiguration

The configuration for backup in Amazon S3.

Type: S3DestinationConfiguration (p. 103) object

Required: No

S3BackupMode

The Amazon S3 backup mode.

Type: String

Valid Values: Disabled | Enabled

Required: No

S3Configuration

The configuration for the intermediate Amazon S3 location from which Amazon Redshift obtains data. Restrictions are described in the topic for CreateDeliveryStream (p. 3).

The compression formats SNAPPY or ZIP cannot be specified in RedshiftDestinationConfiguration.S3Configuration because the Amazon Redshift COPY operation that reads from the S3 bucket doesn't support these compression formats.

Type: S3DestinationConfiguration (p. 103) object

Required: Yes

Username

The name of the user.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
RedshiftDestinationDescription

Describes a destination in Amazon Redshift.

Contents

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

ClusterJDBCURL

The database connection string.

Type: String

Length Constraints: Minimum length of 1.

Pattern: jdbc:(redshift|postgresql):/\(((?![-])[A-Za-z0-9-]{1,63}(?![-])\.)+redshift\.amazonaws\.com:\d(1,5)/[a-zA-Z0-9-]\)+

Required: Yes

CopyCommand

The COPY command.

Type: CopyCommand (p. 54) object

Required: Yes

ProcessingConfiguration

The data processing configuration.

Type: ProcessingConfiguration (p. 89) object

Required: No

RetryOptions

The retry behavior in case Kinesis Data Firehose is unable to deliver documents to Amazon Redshift. Default value is 3600 (60 minutes).

Type: RedshiftRetryOptions (p. 102) object

Required: No

RoleARN

The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Pattern: arn:.*
Required: Yes

**S3BackupDescription**

The configuration for backup in Amazon S3.

Type: S3DestinationDescription (p. 105) object

Required: No

**S3BackupMode**

The Amazon S3 backup mode.

Type: String

Valid Values: Disabled | Enabled

Required: No

**S3DestinationDescription**

The Amazon S3 destination.

Type: S3DestinationDescription (p. 105) object

Required: Yes

**Username**

The name of the user.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
RedshiftDestinationUpdate

Describes an update for a destination in Amazon Redshift.

Contents

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

ClusterJDBCURL

The database connection string.

Type: String

Length Constraints: Minimum length of 1.

Pattern: jdbc:(redshift|postgresql)//((?!-)[A-Za-z0-9-]{1,63}(?!-)[!-])(?!-)[A-Za-z0-9_.]+redshift\.amazonaws\.com:5432\/[a-zA-Z0-9_$]+

Required: No

CopyCommand

The COPY command.

Type: CopyCommand (p. 54) object

Required: No

Password

The user password.

Type: String

Required: No

ProcessingConfiguration

The data processing configuration.

Type: ProcessingConfiguration (p. 89) object

Required: No

RetryOptions

The retry behavior in case Kinesis Data Firehose is unable to deliver documents to Amazon Redshift. Default value is 3600 (60 minutes).

Type: RedshiftRetryOptions (p. 102) object

Required: No
RoleARN

The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Pattern: arn:.*

Required: No

S3BackupMode

The Amazon S3 backup mode.

Type: String

Valid Values: Disabled | Enabled

Required: No

S3BackupUpdate

The Amazon S3 destination for backup.

Type: S3DestinationUpdate (p. 107) object

Required: No

S3Update

The Amazon S3 destination.

The compression formats SNAPPY or ZIP cannot be specified in RedshiftDestinationUpdate.S3Update because the Amazon Redshift COPY operation that reads from the S3 bucket doesn't support these compression formats.

Type: S3DestinationUpdate (p. 107) object

Required: No

Username

The name of the user.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
RedshiftRetryOptions

Configures retry behavior in case Kinesis Data Firehose is unable to deliver documents to Amazon Redshift.

Contents

DurationInSeconds

The length of time during which Kinesis Data Firehose retries delivery after a failure, starting from the initial request and including the first attempt. The default value is 3600 seconds (60 minutes). Kinesis Data Firehose does not retry if the value of DurationInSeconds is 0 (zero) or if the first delivery attempt takes longer than the current value.

Type: Integer

Valid Range: Minimum value of 0. Maximum value of 7200.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
S3DestinationConfiguration

Describes the configuration of a destination in Amazon S3.

Contents

BucketARN

The ARN of the S3 bucket. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: arn:.*

Required: Yes

BufferingHints

The buffering option. If no value is specified, BufferingHints object default values are used.

Type: BufferingHints (p. 52) object

Required: No

CloudWatchLoggingOptions

The CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

CompressionFormat

The compression format. If no value is specified, the default is UNCOMPRESSED.

The compression formats SNAPPY or ZIP cannot be specified for Amazon Redshift destinations because they are not supported by the Amazon Redshift COPY operation that reads from the S3 bucket.

Type: String

Valid Values: UNCOMPRESSED | GZIP | ZIP | Snappy

Required: No

EncryptionConfiguration

The encryption configuration. If no value is specified, the default is no encryption.

Type: EncryptionConfiguration (p. 70) object

Required: No

Prefix

The "YYYY/MM/DD/HH" time format prefix is automatically used for delivered Amazon S3 files. You can specify an extra prefix to be added in front of the time format prefix. If the prefix ends with a slash, it appears as a folder in the S3 bucket. For more information, see Amazon S3 Object Name Format in the Amazon Kinesis Data Firehose Developer Guide.
Type: String
Required: No

RoleARN
The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String
Pattern: arn:.*
Required: Yes

See Also
For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
S3DestinationDescription

Describes a destination in Amazon S3.

Contents

BucketARN

The ARN of the S3 bucket. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: arn:.*

Required: Yes

BufferingHints

The buffering option. If no value is specified, BufferingHints object default values are used.

Type: BufferingHints (p. 52) object

Required: Yes

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

CompressionFormat

The compression format. If no value is specified, the default is UNCOMPRESSED.

Type: String

Valid Values: UNCOMPRESSED | GZIP | ZIP | Snappy

Required: Yes

EncryptionConfiguration

The encryption configuration. If no value is specified, the default is no encryption.

Type: EncryptionConfiguration (p. 70) object

Required: Yes

Prefix

The "YYYY/MM/DD/HH" time format prefix is automatically used for delivered Amazon S3 files. You can specify an extra prefix to be added in front of the time format prefix. If the prefix ends with a slash, it appears as a folder in the S3 bucket. For more information, see Amazon S3 Object Name Format in the Amazon Kinesis Data Firehose Developer Guide.

Type: String

Required: No
RoleARN

The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String
Pattern: arn:.*
Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
S3DestinationUpdate

Describes an update for a destination in Amazon S3.

Contents

BucketARN

The ARN of the S3 bucket. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: arn:.*

Required: No

BufferingHints

The buffering option. If no value is specified, BufferingHints object default values are used.

Type: BufferingHints (p. 52) object

Required: No

CloudWatchLoggingOptions

The CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

CompressionFormat

The compression format. If no value is specified, the default is UNCOMPRESSED.

The compression formats SNAPPY or ZIP cannot be specified for Amazon Redshift destinations because they are not supported by the Amazon Redshift COPY operation that reads from the S3 bucket.

Type: String

Valid Values: UNCOMPRESSED | GZIP | ZIP | Snappy

Required: No

EncryptionConfiguration

The encryption configuration. If no value is specified, the default is no encryption.

Type: EncryptionConfiguration (p. 70) object

Required: No

Prefix

The "YYYY/MM/DD/HH" time format prefix is automatically used for delivered Amazon S3 files. You can specify an extra prefix to be added in front of the time format prefix. If the prefix ends with a slash, it appears as a folder in the S3 bucket. For more information, see Amazon S3 Object Name Format in the Amazon Kinesis Data Firehose Developer Guide.
Type: String
Required: No

RoleARN

The Amazon Resource Name (ARN) of the AWS credentials. For more information, see Amazon Resource Names (ARNs) and AWS Service Namespaces.

Type: String
Pattern: arn:.*
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
SchemaConfiguration

Specifies the schema to which you want Kinesis Data Firehose to configure your data before it writes it to Amazon S3.

### Contents

**CatalogId**

The ID of the AWS Glue Data Catalog. If you don't supply this, the AWS account ID is used by default.

*Type: String*

*Pattern: ^\S+$*

*Required: No*

**DatabaseName**

Specifies the name of the AWS Glue database that contains the schema for the output data.

*Type: String*

*Pattern: ^\S+$*

*Required: No*

**Region**

If you don't specify an AWS Region, the default is the current Region.

*Type: String*

*Pattern: ^\S+$*

*Required: No*

**RoleARN**

The role that Kinesis Data Firehose can use to access AWS Glue. This role must be in the same account you use for Kinesis Data Firehose. Cross-account roles aren't allowed.

*Type: String*

*Pattern: ^\S+$*

*Required: No*

**TableName**

Specifies the AWS Glue table that contains the column information that constitutes your data schema.

*Type: String*

*Pattern: ^\S+$*

*Required: No*

**VersionId**

Specifies the table version for the output data schema. If you don't specify this version ID, or if you set it to LATEST, Kinesis Data Firehose uses the most recent version. This means that any updates to the table are automatically picked up.
Type: String
Pattern: ^\S+$
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Serializer

The serializer that you want Kinesis Data Firehose to use to convert data to the target format before writing it to Amazon S3. Kinesis Data Firehose supports two types of serializers: the ORC SerDe and the Parquet SerDe.

Contents

OrcSerDe

A serializer to use for converting data to the ORC format before storing it in Amazon S3. For more information, see Apache ORC.

Type: OrcSerDe (p. 83) object

Required: No

ParquetSerDe

A serializer to use for converting data to the Parquet format before storing it in Amazon S3. For more information, see Apache Parquet.

Type: ParquetSerDe (p. 87) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
SourceDescription

Details about a Kinesis data stream used as the source for a Kinesis Data Firehose delivery stream.

Contents

KinesisStreamSourceDescription

The KinesisStreamSourceDescription (p. 80) value for the source Kinesis data stream.

Type: KinesisStreamSourceDescription (p. 80) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
SplunkDestinationConfiguration

Describes the configuration of a destination in Splunk.

Contents

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

HECAcknowledgmentTimeoutInSeconds

The amount of time that Kinesis Data Firehose waits to receive an acknowledgment from Splunk after it sends it data. At the end of the timeout period, Kinesis Data Firehose either tries to send the data again or considers it an error, based on your retry settings.

Type: Integer

Required: No

HECEndpoint

The HTTP Event Collector (HEC) endpoint to which Kinesis Data Firehose sends your data.

Type: String

Required: Yes

HECEndpointType

This type can be either "Raw" or "Event."

Type: String

Valid Values: Raw | Event

Required: Yes

HECToken

This is a GUID that you obtain from your Splunk cluster when you create a new HEC endpoint.

Type: String

Required: Yes

ProcessingConfiguration

The data processing configuration.

Type: ProcessingConfiguration (p. 89) object

Required: No

RetryOptions

The retry behavior in case Kinesis Data Firehose is unable to deliver data to Splunk, or if it doesn't receive an acknowledgment of receipt from Splunk.
Type: SplunkRetryOptions (p. 119) object

Required: No

**S3BackupMode**

Defines how documents should be delivered to Amazon S3. When set to `FailedDocumentsOnly`, Kinesis Data Firehose writes any data that could not be indexed to the configured Amazon S3 destination. When set to `AllDocuments`, Kinesis Data Firehose delivers all incoming records to Amazon S3, and also writes failed documents to Amazon S3. Default value is `FailedDocumentsOnly`.

Type: String

Valid Values: FailedEventsOnly | AllEvents

Required: No

**S3Configuration**

The configuration for the backup Amazon S3 location.

Type: S3DestinationConfiguration (p. 103) object

Required: Yes

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
SplunkDestinationDescription

Describes a destination in Splunk.

Contents

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

HECAcknowledgmentTimeoutInSeconds

The amount of time that Kinesis Data Firehose waits to receive an acknowledgment from Splunk after it sends it data. At the end of the timeout period, Kinesis Data Firehose either tries to send the data again or considers it an error, based on your retry settings.

Type: Integer

Required: No

HECEndpoint

The HTTP Event Collector (HEC) endpoint to which Kinesis Data Firehose sends your data.

Type: String

Required: No

HECEndpointType

This type can be either "Raw" or "Event."

Type: String

Valid Values: Raw  |  Event

Required: No

HECToken

A GUID you obtain from your Splunk cluster when you create a new HEC endpoint.

Type: String

Required: No

ProcessingConfiguration

The data processing configuration.

Type: ProcessingConfiguration (p. 89) object

Required: No

RetryOptions

The retry behavior in case Kinesis Data Firehose is unable to deliver data to Splunk or if it doesn't receive an acknowledgment of receipt from Splunk.
Type: SplunkRetryOptions (p. 119) object

Required: No

S3BackupMode

Defines how documents should be delivered to Amazon S3. When set to FailedDocumentsOnly, Kinesis Data Firehose writes any data that could not be indexed to the configured Amazon S3 destination. When set to AllDocuments, Kinesis Data Firehose delivers all incoming records to Amazon S3, and also writes failed documents to Amazon S3. Default value is FailedDocumentsOnly.

Type: String

Valid Values: FailedEventsOnly | AllEvents

Required: No

S3DestinationDescription

The Amazon S3 destination.

Type: S3DestinationDescription (p. 105) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
SplunkDestinationUpdate

Describes an update for a destination in Splunk.

Contents

CloudWatchLoggingOptions

The Amazon CloudWatch logging options for your delivery stream.

Type: CloudWatchLoggingOptions (p. 53) object

Required: No

HECAcknowledgmentTimeoutInSeconds

The amount of time that Kinesis Data Firehose waits to receive an acknowledgment from Splunk after it sends data. At the end of the timeout period, Kinesis Data Firehose either tries to send the data again or considers it an error, based on your retry settings.

Type: Integer

Required: No

HECEndpoint

The HTTP Event Collector (HEC) endpoint to which Kinesis Data Firehose sends your data.

Type: String

Required: No

HECEndpointType

This type can be either "Raw" or "Event."

Type: String

Valid Values: Raw | Event

Required: No

HECToken

A GUID that you obtain from your Splunk cluster when you create a new HEC endpoint.

Type: String

Required: No

ProcessingConfiguration

The data processing configuration.

Type: ProcessingConfiguration (p. 89) object

Required: No

RetryOptions

The retry behavior in case Kinesis Data Firehose is unable to deliver data to Splunk or if it doesn't receive an acknowledgment of receipt from Splunk.
Type: SplunkRetryOptions (p. 119) object

Required: No

**S3BackupMode**

Defines how documents should be delivered to Amazon S3. When set to FailedDocumentsOnly, Kinesis Data Firehose writes any data that could not be indexed to the configured Amazon S3 destination. When set to AllDocuments, Kinesis Data Firehose delivers all incoming records to Amazon S3, and also writes failed documents to Amazon S3. Default value is FailedDocumentsOnly.

Type: String

Valid Values: FailedEventsOnly | AllEvents

Required: No

**S3Update**

Your update to the configuration of the backup Amazon S3 location.

Type: S3DestinationUpdate (p. 107) object

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
SplunkRetryOptions

Configures retry behavior in case Kinesis Data Firehose is unable to deliver documents to Splunk, or if it doesn't receive an acknowledgment from Splunk.

Contents

DurationInSeconds

The total amount of time that Kinesis Data Firehose spends on retries. This duration starts after the initial attempt to send data to Splunk fails. It doesn't include the periods during which Kinesis Data Firehose waits for acknowledgment from Splunk after each attempt.

Type: Integer

Valid Range: Minimum value of 0. Maximum value of 7200.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Tag

Metadata that you can assign to a delivery stream, consisting of a key-value pair.

Contents

Key

A unique identifier for the tag. Maximum length: 128 characters. Valid characters: Unicode letters, digits, white space, _ . / = + - % @

Type: String

Required: Yes

Value

An optional string, which you can use to describe or define the tag. Maximum length: 256 characters. Valid characters: Unicode letters, digits, white space, _ . / = + - % @

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.

AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 400

IncompleteSignature

The request signature does not conform to AWS standards.

HTTP Status Code: 400

InternalFailure

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

InvalidAction

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 400

InvalidClientTokenId

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

InvalidParameterCombination

Parameters that must not be used together were used together.

HTTP Status Code: 400

InvalidParameterValue

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

InvalidQueryParameter

The AWS query string is malformed or does not adhere to AWS standards.

HTTP Status Code: 400

MalformedQueryString

The query string contains a syntax error.

HTTP Status Code: 404

MissingAction

The request is missing an action or a required parameter.

HTTP Status Code: 400
MissingAuthenticationToken

The request must contain either a valid (registered) AWS access key ID or X.509 certificate.

HTTP Status Code: 403

MissingParameter

A required parameter for the specified action is not supplied.

HTTP Status Code: 400

OptInRequired

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

RequestExpired

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

ServiceUnavailable

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 400

ValidationError

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
