Welcome

Amazon Macie is a security service that uses machine learning to automatically discover, classify, and protect sensitive data in AWS. Macie recognizes sensitive data such as personally identifiable information (PII) or intellectual property, and provides you with dashboards and alerts that give visibility into how this data is being accessed or moved. For more information, see the Macie User Guide.

This document was last published on June 22, 2018.
Actions

The following actions are supported:

- `AssociateMemberAccount` (p. 3)
- `AssociateS3Resources` (p. 5)
- `DisassociateMemberAccount` (p. 8)
- `DisassociateS3Resources` (p. 10)
- `ListMemberAccounts` (p. 12)
- `ListS3Resources` (p. 14)
- `UpdateS3Resources` (p. 17)
AssociateMemberAccount

Associates a specified AWS account with Amazon Macie as a member account.

Request Syntax

```json
{
   "memberAccountId": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 27).

The request accepts the following data in JSON format.

**memberAccountId (p. 3)**

The ID of the AWS account that you want to associate with Amazon Macie as a member account.

Type: String

Pattern: `[0-9]{12}`

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 29).

**InternalException**

Internal server error.

HTTP Status Code: 500

**InvalidInputException**

The request was rejected because an invalid or out-of-range value was supplied for an input parameter.

HTTP Status Code: 400

**LimitExceededException**

The request was rejected because it attempted to create resources beyond the current AWS account limits. The error code describes the limit exceeded.

HTTP Status Code: 400
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
AssociateS3Resources

Associates specified S3 resources with Amazon Macie for monitoring and data classification. If memberAccountId isn't specified, the action associates specified S3 resources with Macie for the current master account. If memberAccountId is specified, the action associates specified S3 resources with Macie for the specified member account.

Request Syntax

```json
{
  "memberAccountId": "string",
  "s3Resources": [
    {
      "bucketName": "string",
      "classificationType": {
        "continuous": "string",
        "oneTime": "string"
      },
      "prefix": "string"
    }
  ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 27).

The request accepts the following data in JSON format.

**memberAccountId (p. 5)**

The ID of the Amazon Macie member account whose resources you want to associate with Macie.

Type: String

Pattern: [0-9]{12}

Required: No

**s3Resources (p. 5)**

The S3 resources that you want to associate with Amazon Macie for monitoring and data classification.

Type: Array of S3ResourceClassification (p. 25) objects

Required: Yes

Response Syntax

```json
{
  "failedS3Resources": [
    {
      "errorCode": "string",
      "errorMessage": "string",
      "failedItem": {
      }
    }
  ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**failedS3Resources (p. 5)**

S3 resources that couldn't be associated with Amazon Macie. An error code and an error message are provided for each failed item.

Type: Array of FailedS3Resource (p. 22) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 29).

**AccessDeniedException**

You do not have required permissions to access the requested resource.

HTTP Status Code: 400

**InternalException**

Internal server error.

HTTP Status Code: 500

**InvalidInputException**

The request was rejected because an invalid or out-of-range value was supplied for an input parameter.

HTTP Status Code: 400

**LimitExceededException**

The request was rejected because it attempted to create resources beyond the current AWS account limits. The error code describes the limit exceeded.

HTTP Status Code: 400

DisassociateMemberAccount

Removes the specified member account from Amazon Macie.

Request Syntax

```
{
   "memberAccountId": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 27).

The request accepts the following data in JSON format.

**memberAccountId (p. 8)**

The ID of the member account that you want to remove from Amazon Macie.

Type: String

Pattern: `[0-9]{12}`

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 29).

**InternalException**

Internal server error.

HTTP Status Code: 500

**InvalidInputException**

The request was rejected because an invalid or out-of-range value was supplied for an input parameter.

HTTP Status Code: 400

- AWS SDK for Python
- AWS SDK for Ruby V2
DisassociateS3Resources

Removes specified S3 resources from being monitored by Amazon Macie. If memberAccountId isn't specified, the action removes specified S3 resources from Macie for the current master account. If memberAccountId is specified, the action removes specified S3 resources from Macie for the specified member account.

Request Syntax

```
{
   "associatedS3Resources": [
   {
   "bucketName": "string",
   "prefix": "string"
   }
   ],
   "memberAccountId": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 27).

The request accepts the following data in JSON format.

**associatedS3Resources (p. 10)**

The S3 resources (buckets or prefixes) that you want to remove from being monitored and classified by Amazon Macie.

Type: Array of S3Resource (p. 24) objects

Required: Yes

**memberAccountId (p. 10)**

The ID of the Amazon Macie member account whose resources you want to remove from being monitored by Amazon Macie.

Type: String

Pattern: [0-9]{12}

Required: No

Response Syntax

```
{
   "failedS3Resources": [
   {
   "errorCode": "string",
   "errorMessage": "string",
   "failedItem": {
   "bucketName": "string",
   "prefix": "string"
   }
   }
   ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

failedS3Resources (p. 10)

S3 resources that couldn’t be removed from being monitored and classified by Amazon Macie. An error code and an error message are provided for each failed item.

Type: Array of FailedS3Resource (p. 22) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 29).

AccessDeniedException

You do not have required permissions to access the requested resource.

HTTP Status Code: 400

InternalException

Internal server error.

HTTP Status Code: 500

InvalidInputException

The request was rejected because an invalid or out-of-range value was supplied for an input parameter.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
ListMemberAccounts

Lists all Amazon Macie member accounts for the current Amazon Macie master account.

Request Syntax

```json
{
   "maxResults": number,
   "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 27).

The request accepts the following data in JSON format.

- **maxResults (p. 12)**
  - Use this parameter to indicate the maximum number of items that you want in the response. The default value is 250.
  - Type: Integer
  - Valid Range: Maximum value of 250.
  - Required: No

- **nextToken (p. 12)**
  - Use this parameter when paginating results. Set the value of this parameter to null on your first call to the ListMemberAccounts action. Subsequent calls to the action fill nextToken in the request with the value of nextToken from the previous response to continue listing data.
  - Type: String
  - Length Constraints: Maximum length of 500.
  - Required: No

Response Syntax

```json
{
   "memberAccounts": [ 
   {
      "accountId": "string"
   },
   "nextToken": "string"
}]
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**memberAccounts (p. 12)**

A list of the Amazon Macie member accounts returned by the action. The current master account is also included in this list.

Type: Array of MemberAccount (p. 23) objects

**nextToken (p. 12)**

When a response is generated, if there is more data to be listed, this parameter is present in the response and contains the value to use for the nextToken parameter in a subsequent pagination request. If there is no more data to be listed, this parameter is set to null.

Type: String

Length Constraints: Maximum length of 500.

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 29).

**InternalException**

Internal server error.

HTTP Status Code: 500

**InvalidInputException**

The request was rejected because an invalid or out-of-range value was supplied for an input parameter.

HTTP Status Code: 400

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
ListS3Resources

Lists all the S3 resources associated with Amazon Macie. If memberAccountId isn't specified, the action lists the S3 resources associated with Amazon Macie for the current master account. If memberAccountId is specified, the action lists the S3 resources associated with Amazon Macie for the specified member account.

Request Syntax

```json
{
  "maxResults": number,
  "memberAccountId": "string",
  "nextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 27).

The request accepts the following data in JSON format.

**maxResults (p. 14)**

Use this parameter to indicate the maximum number of items that you want in the response. The default value is 250.

- Type: Integer
- Valid Range: Maximum value of 250.
- Required: No

**memberAccountId (p. 14)**

The Amazon Macie member account ID whose associated S3 resources you want to list.

- Type: String
- Pattern: `[0-9]{12}`
- Required: No

**nextToken (p. 14)**

Use this parameter when paginating results. Set its value to null on your first call to the ListS3Resources action. Subsequent calls to the action fill nextToken in the request with the value of nextToken from the previous response to continue listing data.

- Type: String
- Length Constraints: Maximum length of 500.
- Required: No

Response Syntax

```json
{
```

API Version 2017-12-19

14
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken (p. 14)

When a response is generated, if there is more data to be listed, this parameter is present in the response and contains the value to use for the nextToken parameter in a subsequent pagination request. If there is no more data to be listed, this parameter is set to null.

Type: String

Length Constraints: Maximum length of 500.

s3Resources (p. 14)

A list of the associated S3 resources returned by the action.

Type: Array of S3ResourceClassification (p. 25) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 29).

AccessDeniedException

You do not have required permissions to access the requested resource.

HTTP Status Code: 400

InternalException

Internal server error.

HTTP Status Code: 500

InvalidInputException

The request was rejected because an invalid or out-of-range value was supplied for an input parameter.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:
See Also

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
UpdateS3Resources

Updates the classification types for the specified S3 resources. If memberAccountId isn't specified, the action updates the classification types of the S3 resources associated with Amazon Macie for the current master account. If memberAccountId is specified, the action updates the classification types of the S3 resources associated with Amazon Macie for the specified member account.

Request Syntax

```
{
  "memberAccountId": "string",
  "s3ResourcesUpdate": [
    {
      "bucketName": "string",
      "classificationTypeUpdate": {
        "continuous": "string",
        "oneTime": "string"
      },
      "prefix": "string"
    }
  ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters (p. 27).

The request accepts the following data in JSON format.

memberAccountId (p. 17)

The AWS ID of the Amazon Macie member account whose S3 resources' classification types you want to update.

Type: String

Pattern: [0–9]{12}

Required: No

s3ResourcesUpdate (p. 17)

The S3 resources whose classification types you want to update.

Type: Array of S3ResourceClassificationUpdate (p. 26) objects

Required: Yes

Response Syntax

```
{
  "failedS3Resources": [
    {
      "errorCode": "string",
      "errorMessage": "string",
      "failedItem": {
      
    }
  ]
```

API Version 2017-12-19
### Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

#### failedS3Resources (p. 17)

The S3 resources whose classification types can't be updated. An error code and an error message are provided for each failed item.

Type: Array of `FailedS3Resource (p. 22)` objects

### Errors

For information about the errors that are common to all actions, see `Common Errors (p. 29)`.

- **AccessDeniedException**
  - You do not have required permissions to access the requested resource.
  - HTTP Status Code: 400

- **InternalException**
  - Internal server error.
  - HTTP Status Code: 500

- **InvalidInputException**
  - The request was rejected because an invalid or out-of-range value was supplied for an input parameter.
  - HTTP Status Code: 400

### See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface

- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
Data Types

The Amazon Macie API contains several data types that various actions use. This section describes each data type in detail.

**Note**
The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- `ClassificationType` (p. 20)
- `ClassificationTypeUpdate` (p. 21)
- `FailedS3Resource` (p. 22)
- `MemberAccount` (p. 23)
- `S3Resource` (p. 24)
- `S3ResourceClassification` (p. 25)
- `S3ResourceClassificationUpdate` (p. 26)
ClassificationType

The classification type that Amazon Macie applies to the associated S3 resources.

Contents

continuous

A continuous classification of the objects that are added to a specified S3 bucket. Amazon Macie begins performing continuous classification after a bucket is successfully associated with Amazon Macie.

Type: String

Valid Values: FULL

Required: Yes

oneTime

A one-time classification of all of the existing objects in a specified S3 bucket.

Type: String

Valid Values: FULL | NONE

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ClassificationTypeUpdate

The classification type that Amazon Macie applies to the associated S3 resources. At least one of the classification types (oneTime or continuous) must be specified.

Contents

continuous

A continuous classification of the objects that are added to a specified S3 bucket. Amazon Macie begins performing continuous classification after a bucket is successfully associated with Amazon Macie.

Type: String
Valid Values: FULL
Required: No

oneTime

A one-time classification of all of the existing objects in a specified S3 bucket.

Type: String
Valid Values: FULL | NONE
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
FailedS3Resource

Includes details about the failed S3 resources.

Contents

errorCode

The status code of a failed item.
Type: String
Length Constraints: Maximum length of 10.
Required: No

eroMessage

The error message of a failed item.
Type: String
Length Constraints: Maximum length of 10000.
Required: No

failedItem

The failed S3 resources.
Type: S3Resource (p. 24) object
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
MemberAccount

Contains information about the Amazon Macie member account.

Contents

accountId

The AWS account ID of the Amazon Macie member account.

Type: String

Pattern: [0-9]{12}

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
S3Resource

Contains information about the S3 resource. This data type is used as a request parameter in the DisassociateS3Resources action and can be used as a response parameter in the AssociateS3Resources and UpdateS3Resources actions.

Contents

bucketName

The name of the S3 bucket.
Type: String
Length Constraints: Maximum length of 500.
Required: Yes

prefix

The prefix of the S3 bucket.
Type: String
Length Constraints: Maximum length of 10000.
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
S3ResourceClassification

The S3 resources that you want to associate with Amazon Macie for monitoring and data classification. This data type is used as a request parameter in the AssociateS3Resources action and a response parameter in the ListS3Resources action.

Contents

bucketName

The name of the S3 bucket that you want to associate with Amazon Macie.

Type: String

Length Constraints: Maximum length of 500.

Required: Yes

classificationType

The classification type that you want to specify for the resource associated with Amazon Macie.

Type: ClassificationType (p. 20) object

Required: Yes

prefix

The prefix of the S3 bucket that you want to associate with Amazon Macie.

Type: String

Length Constraints: Maximum length of 10000.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
S3ResourceClassificationUpdate

The S3 resources whose classification types you want to update. This data type is used as a request parameter in the UpdateS3Resources action.

Contents

bucketName

The name of the S3 bucket whose classification types you want to update.

Type: String

Length Constraints: Maximum length of 500.

Required: Yes

classificationTypeUpdate

The classification type that you want to update for the resource associated with Amazon Macie.

Type: ClassificationTypeUpdate (p. 21) object

Required: Yes

prefix

The prefix of the S3 bucket whose classification types you want to update.

Type: String

Length Constraints: Maximum length of 10000.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Common Parameters

The following list contains the parameters that all actions use for signing Signature Version 4 requests with a query string. Any action-specific parameters are listed in the topic for that action. For more information about Signature Version 4, see Signature Version 4 Signing Process in the Amazon Web Services General Reference.

Action

The action to be performed.

Type: string

Required: Yes

Version

The API version that the request is written for, expressed in the format YYYY-MM-DD.

Type: string

Required: Yes

X-Amz-Algorithm

The hash algorithm that you used to create the request signature.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Valid Values: AWS4-HMAC-SHA256

Required: Conditional

X-Amz-Credential

The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string (“aws4_request”). The value is expressed in the following format: access_key/YYYYMMDD/region/service/aws4_request.

For more information, see Task 2: Create a String to Sign for Signature Version 4 in the Amazon Web Services General Reference.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

X-Amz-Date

The date that is used to create the signature. The format must be ISO 8601 basic format (YYYYMMDD'T'HHMMSS'Z'). For example, the following date time is a valid X-Amz-Date value: 20120325T120000Z.

Condition: X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is
not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see Handling Dates in Signature Version 4 in the Amazon Web Services General Reference.

Type: string
Required: Conditional

X-Amz-Security-Token

The temporary security token that was obtained through a call to AWS Security Token Service (AWS STS). For a list of services that support temporary security credentials from AWS Security Token Service, go to AWS Services That Work with IAM in the IAM User Guide.

Condition: If you're using temporary security credentials from the AWS Security Token Service, you must include the security token.

Type: string
Required: Conditional

X-Amz-Signature

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string
Required: Conditional

X-Amz-SignedHeaders

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see Task 1: Create a Canonical Request For Signature Version 4 in the Amazon Web Services General Reference.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string
Required: Conditional
Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.

**AccessDeniedException**

You do not have sufficient access to perform this action.

HTTP Status Code: 400

**IncompleteSignature**

The request signature does not conform to AWS standards.

HTTP Status Code: 400

**InternalFailure**

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

**InvalidAction**

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 400

**InvalidClientTokenId**

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

**InvalidParameterCombination**

Parameters that must not be used together were used together.

HTTP Status Code: 400

**InvalidParameterValue**

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

**InvalidQueryParameter**

The AWS query string is malformed or does not adhere to AWS standards.

HTTP Status Code: 400

**MalformedQueryString**

The query string contains a syntax error.

HTTP Status Code: 404

**MissingAction**

The request is missing an action or a required parameter.

HTTP Status Code: 400
**MissingAuthenticationToken**

The request must contain either a valid (registered) AWS access key ID or X.509 certificate.

HTTP Status Code: 403

**MissingParameter**

A required parameter for the specified action is not supplied.

HTTP Status Code: 400

**OptInRequired**

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

**RequestExpired**

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

**ServiceUnavailable**

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

**ThrottlingException**

The request was denied due to request throttling.

HTTP Status Code: 400

**ValidationError**

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
