Welcome

This is the AWS Elemental MediaPackage REST API Reference. It contains examples of REST resources and their operations.

**AWS Elemental MediaPackage REST API overview**

The AWS Elemental MediaPackage API comprises of two main resources: the channel and the endpoint. The channel is the ingest point to AWS Elemental MediaPackage. The endpoint is a part of the channel and is the egress point from AWS Elemental MediaPackage. The endpoint is referred to as an OriginEndpoint in the REST API.

**To get started with AWS Elemental MediaPackage**

Step 1: Create a channel.

The channel is the first component in AWS Elemental MediaPackage. It represents the input to AWS Elemental MediaPackage for incoming content from an encoder.

Step 2: Create endpoints.

The endpoint is attached to the channel, and represents the output of the content from AWS Elemental MediaPackage. There can be multiple endpoints associated with one channel. Each endpoint provides downstream content distribution networks (CDNs) and players access to the content for playback.

Step 3: Integrate AWS Elemental MediaPackage.

When the channel and endpoints are created, they provide URLs that are used for input and output, respectively. In the encoder, use WebDAV to push the stream to AWS Elemental MediaPackage. For the stream destination information, enter the input URL from the channel. You also must configure the username and password from the channel on the encoder’s output stream, or AWS Elemental MediaPackage denies the content push. In the CDN or player, enter the endpoint URL from the AWS Elemental MediaPackage endpoint as the content request address.
Resources

The AWS Elemental MediaPackage REST API includes the following resources.

Topics
- Channels (p. 2)
- Channels id (p. 8)
- Channels id Credentials (p. 14)
- Origin_endpoints (p. 17)
- Origin_endpoints id (p. 33)

Channels

URI

/channels

HTTP Methods

GET

Operation ID: ListChannels

Lists channels that match a set of filters that you define.

AWS CLI Request Syntax

```
aws mediapackage list-channels
[--starting-token <value>]
[--page-size <value>]
[--max-items <value>]
```

Use pagination to limit the number of entries you receive in the response. For more how to use pagination, see Using the AWS Command Line Interface's Pagination Options.

Query Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>nextToken</td>
<td>String</td>
<td>False</td>
<td>Pagination token from the GET list request. Use the token to fetch the next page of results.</td>
</tr>
<tr>
<td>maxResults</td>
<td>String</td>
<td>False</td>
<td>Maximum number of records to return.</td>
</tr>
</tbody>
</table>
## Responses

<table>
<thead>
<tr>
<th>Status Code</th>
<th>Response Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>ChannelList (p. 5)</td>
<td>200 OK response. The list of channels is returned successfully.</td>
</tr>
<tr>
<td>422</td>
<td>None</td>
<td>422 Unprocessable Entity response. AWS Elemental MediaPackage could not process the instructions in the body of the request.</td>
</tr>
<tr>
<td>500</td>
<td>None</td>
<td>500 Internal Server Error response. An unexpected condition prevented AWS Elemental MediaPackage from fulfilling the request.</td>
</tr>
<tr>
<td>403</td>
<td>None</td>
<td>403 Forbidden response. AWS Elemental MediaPackage cannot authorize the request, possibly due to insufficient authentication credentials.</td>
</tr>
<tr>
<td>503</td>
<td>None</td>
<td>Service unavailable response. AWS Elemental MediaPackage can't currently complete the request, usually because of a temporary overload or maintenance.</td>
</tr>
<tr>
<td>404</td>
<td>None</td>
<td>404 Not Found response. AWS Elemental MediaPackage did not find a representation of the target resource.</td>
</tr>
<tr>
<td>429</td>
<td>None</td>
<td>429 Too Many Requests response. Too many requests have been sent in a given amount of time.</td>
</tr>
</tbody>
</table>

## POST

Operation ID: CreateChannel

Creates a channel to ingest content.
Once created, a channel provides static ingest URLs. These URLs remain the same throughout the lifetime of the channel, regardless of any failures or upgrades that might occur. Use these URLs to configure the outputs of your upstream encoder.

**AWS CLI Request Syntax**

```bash
aws mediapackage create-channel
  -id <value>
  [--description <value>]
```

For a complete list of channel attributes, see the ChannelCreateParameters property.

**Example POST Channel Request Body**

```json
{
  "id": "sportschannel",
  "description": "24x7 sports"
}
```

**Responses**

<table>
<thead>
<tr>
<th>Status Code</th>

<th>Status Code</th>
<th>Response Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>404</td>
<td>None</td>
<td>A temporary overload or maintenance.</td>
</tr>
<tr>
<td>404</td>
<td>None</td>
<td>404 Not Found response</td>
</tr>
<tr>
<td>429</td>
<td>None</td>
<td>AWS Elemental MediaPackage did not find a representation of the target resource.</td>
</tr>
<tr>
<td>429</td>
<td>None</td>
<td>429 Too Many Requests response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Too many requests have been sent in a given amount of time.</td>
</tr>
</tbody>
</table>

### Schemas

#### Request Bodies

**Example POST**

```json
{
  "description (p. 6)": "string",
  "id (p. 7)": "string"
}
```

#### Response Bodies

**Example ChannelList**

```json
{
  "channels (p. 7)": [
    
    {
      "description (p. 6)": "string",
      "id (p. 6)": "string",
      "hlsIngest (p. 6)": {
        "ingestEndpoints (p. 7)": [
          {
            "password (p. 7)": "string",
            "url (p. 7)": "string",
            "username (p. 7)": "string"
          }
        ],
        "arn (p. 6)": "string"
      }
    },
    
    "nextToken (p. 7)": "string"
  }
}
```

**Example Channel**

```json
{
  "description (p. 6)": "string",
```
Properties

Channel

description
Any descriptive information that you want to add to the channel for future identification purposes.

Type: string
Required: False

id
Unique identifier that you assign to the channel.

Type: string
Required: False

hlsIngest
System-generated information about the channel.

Type: HlsIngest (p. 7)
Required: False

arn
The channel's unique system-generated resource name, based on the AWS record.

Type: string
Required: False

ChannelCreateParameters

description
Any descriptive information that you want to add to the channel for future identification purposes.

Type: string
Required: False
id

Unique identifier that you assign to the channel.

Type: string
Required: True

ChannelList

channels

List of channel objects that are configured on this account.

Type: Array of type Channel (p. 6)
Required: False

nextToken

Pagination token. Use this token to request the next page of channel results.

Type: string
Required: False

HlsIngest

ingestEndpoints

The ingest URL where the source stream should be sent.

Type: Array of type IngestEndpoint (p. 7)
Required: False

IngestEndpoint

password

The system-generated password for WebDAV ingest authentication.

Type: string
Required: False

url

The ingest URL where the source stream should be sent.

Type: string
Required: False

username

The system-generated username for WebDAV ingest authentication.

Type: string
Required: False
Channels id

URI

/channels/\textit{id}

HTTP Methods

GET

Operation ID: DescribeChannel
Provides details about a channel.

AWS CLI Request Syntax

\texttt{aws mediapackage describe-channel --id <channelId>}

Path Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>\textit{id}</td>
<td>String</td>
<td>True</td>
<td>Identifier for the object that you are working on.</td>
</tr>
</tbody>
</table>

Responses

<table>
<thead>
<tr>
<th>Status Code</th>
<th>Response Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>Channel (p. 12)</td>
<td>200 OK response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Channel details are returned successfully.</td>
</tr>
<tr>
<td>422</td>
<td>None</td>
<td>422 Unprocessable Entity response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>AWS Elemental MediaPackage could not process the instructions in the body of</td>
</tr>
<tr>
<td></td>
<td></td>
<td>the request.</td>
</tr>
<tr>
<td>500</td>
<td>None</td>
<td>500 Internal Server Error response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>An unexpected condition prevented AWS Elemental MediaPackage from fulfilling</td>
</tr>
<tr>
<td></td>
<td></td>
<td>the request.</td>
</tr>
<tr>
<td>403</td>
<td>None</td>
<td>403 Forbidden response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>AWS Elemental MediaPackage cannot authorize the request.</td>
</tr>
<tr>
<td>Status Code</td>
<td>Response Model</td>
<td>Description</td>
</tr>
<tr>
<td>-------------</td>
<td>----------------</td>
<td>-------------</td>
</tr>
<tr>
<td>503</td>
<td>None</td>
<td>Service unavailable response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>AWS Elemental MediaPackage can't currently complete the request, usually because of a temporary overload or maintenance.</td>
</tr>
<tr>
<td>404</td>
<td>None</td>
<td>404 Not Found response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>AWS Elemental MediaPackage did not find a representation of the target resource.</td>
</tr>
<tr>
<td>429</td>
<td>None</td>
<td>429 Too Many Requests response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Too many requests have been sent in a given amount of time.</td>
</tr>
</tbody>
</table>

**PUT**

Operation ID: UpdateChannel

Updates a specific channel. You can't change the id attribute or any other system-generated attributes.

**AWS CLI Request Syntax**

```
aws mediapackage update-channel
  --id <channelId>
  [--description <value>]
```

Pass in the updated description as an argument in the AWS CLI request.

**Path Parameters**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>True</td>
<td>Identifier for the object that you are working on.</td>
</tr>
</tbody>
</table>

**Responses**

<table>
<thead>
<tr>
<th>Status Code</th>
<th>Response Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>Channel (p. 12)</td>
<td>The channel is updated successfully.</td>
</tr>
</tbody>
</table>
### Status Code | Response Model | Description
--- | --- | ---
422 | None | 422 Unprocessable Entity response
AWS Elemental MediaPackage could not process the instructions in the body of the request.

500 | None | 500 Internal Server Error response
An unexpected condition prevented AWS Elemental MediaPackage from fulfilling the request.

403 | None | 403 Forbidden response
AWS Elemental MediaPackage cannot authorize the request, possibly due to insufficient authentication credentials.

503 | None | Service unavailable response
AWS Elemental MediaPackage can't currently complete the request, usually because of a temporary overload or maintenance.

404 | None | 404 Not Found response
AWS Elemental MediaPackage did not find a representation of the target resource.

429 | None | 429 Too Many Requests response
Too many requests have been sent in a given amount of time.

**DELETE**

Operation ID: DeleteChannel

Permanently deletes a channel.

**AWS CLI Request Syntax**

```
aws mediapackage delete-channel --id <channelId>
```
### Path Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>True</td>
<td>Identifier for the object that you are working on.</td>
</tr>
</tbody>
</table>

### Responses

<table>

</table>
Schemas

Request Bodies

Example PUT

```json
{
  "description (p. 13)": "string"
}
```

Response Bodies

Example Channel

```json
{
  "description (p. 12)": "string",
  "id (p. 12)": "string",
  "hlsIngest (p. 13)": {
    "ingestEndpoints (p. 13)": [
      {
        "password (p. 13)": "string",
        "url (p. 13)": "string",
        "username (p. 13)": "string"
      }
    ],
    "arn (p. 13)": "string"
  }
}
```

Properties

Channel

description

Any descriptive information that you want to add to the channel for future identification purposes.

Type: string
Required: False

id

Unique identifier that you assign to the channel.

Type: string
Required: False
**hlsIngest**

System-generated information about the channel.

- **Type**: HlsIngest (p. 13)
- **Required**: False

**arn**

The channel's unique system-generated resource name, based on the AWS record.

- **Type**: string
- **Required**: False

**ChannelUpdateParameters**

**description**

Any descriptive information that you want to add to the channel for future identification purposes.

- **Type**: string
- **Required**: False

**HlsIngest**

**ingestEndpoints**

The ingest URL where the source stream should be sent.

- **Type**: Array of type IngestEndpoint (p. 13)
- **Required**: False

**IngestEndpoint**

**password**

The system-generated password for WebDAV ingest authentication.

- **Type**: string
- **Required**: False

**url**

The ingest URL where the source stream should be sent.

- **Type**: string
- **Required**: False

**username**

The system-generated username for WebDAV ingest authentication.
Type: string
Required: False

Channels id Credentials

URI

/channels/id/credentials

HTTP Methods

PUT

Operation ID: RotateChannelCredentials
Generates a new WebDAV username and password.

Path Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>True</td>
<td>Identifier for the object that you are working on.</td>

### Schemas

### Response Bodies

#### Example Channel

```json
{
  "description (p. 15)": "string",
  "id (p. 16)": "string",
  "hlsIngest (p. 16)": {
    "ingestEndpoints (p. 16)": [
      {
        "password (p. 16)": "string",
        "url (p. 16)": "string",
        "username (p. 16)": "string"
      }
    ],
  },
  "arn (p. 16)": "string"
}
```

### Properties

#### Channel

**description**

Any descriptive information that you want to add to the channel for future identification purposes.

*Type: string*
**Properties**

- **Required**: False

**id**

Unique identifier that you assign to the channel.

- **Type**: string
- **Required**: False

**hlsIngest**

System-generated information about the channel.

- **Type**: HlsIngest (p. 16)
- **Required**: False

**arn**

The channel's unique system-generated resource name, based on the AWS record.

- **Type**: string
- **Required**: False

**HlsIngest**

**ingestEndpoints**

The ingest URL where the source stream should be sent.

- **Type**: Array of type IngestEndpoint (p. 16)
- **Required**: False

**IngestEndpoint**

**password**

The system-generated password for WebDAV ingest authentication.

- **Type**: string
- **Required**: False

**url**

The ingest URL where the source stream should be sent.

- **Type**: string
- **Required**: False

**username**

The system-generated username for WebDAV ingest authentication.

- **Type**: string
- **Required**: False
Origin_endpoints

URI
/origin_endpoints

HTTP Methods
GET

Operation ID: ListOriginEndpoints
Lists endpoints that match a set of filters that you define.

AWS CLI Request Syntax

```
aws mediapackage list-origin-endpoints
[--channelId <channelId>]
[--starting-token <value>]
[--page-size <value>]
[--max-items <value>]
```

Where channel id is the channel that this endpoint is associated with. Use pagination to limit the number of entries you receive in the response. For more how to use pagination, see Using the AWS Command Line Interface's Pagination Options.

Query Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>nextToken</td>
<td>String</td>
<td>False</td>
<td>Pagination token from the GET list request. Use the token to fetch the next page of results.</td>
</tr>
<tr>
<td>maxResults</td>
<td>String</td>
<td>False</td>
<td>Maximum number of records to return.</td>

<td>None</td>
<td>429 Too Many Requests response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Too many requests have been sent in a given amount of time.</td>
</tr>
</tbody>
</table>

**POST**

Operation ID: CreateOriginEndpoint

Create an endpoint on an AWS Elemental MediaPackage channel.

An endpoint represents a single delivery point of a channel, and defines content egress handling through various components, such as packaging protocols, DRM and encryption integration, and more.

Once created, an endpoint provides a fixed public URL. This URL remains the same throughout the lifetime of the endpoint, regardless of any failures or upgrades that might occur. Integrate the URL with a downstream CDN (such as Amazon CloudFront) or playback device.

**AWS CLI Request Syntax**

```
aws mediapackage create-origin-endpoint
```
HTTP Methods

```
--id <endpointId>
--channel-id <channelId>
--dash-package | --hls-package | --mss-package } <packagingSettings>
[--description <value>]
[--manifest-name <value>]
[--startover-window-seconds <value>]
[--time-delay-seconds <value>]
[--whitelist <value>]
```

For nested parameters, such as those for `packagingSettings`, you can reference a JSON file `file://<fileName>.json` that holds all of the attributes. For a complete list of endpoint attributes, see the `CreateOriginEndpointParameters` property.

**Example POST OriginEndpoint Request Body**

```
{
  "id": "hlssports",
  "channelID": "sportschannel",
  "description": "hls sports endpoint",
  "manifestName": "sports",
  "hlsPackage": {
    "segmentDurationSeconds": 10,
    "playlistWindowSeconds": 60,
    "playlistType": "none",
    "adMarkers": "none",
    "includeIframeOnlyStream": true,
    "useAudioRenditionGroup": true,
    "streamSelection": {
      "maxVideoBitsPerSecond": 600000
    }
  }
}
```

    "maxVideoBitsPerSecond (p. 33)": integer,
    "minVideoBitsPerSecond (p. 33)": integer
  }
}

Properties

DashEncryption

keyRotationIntervalSeconds

Number of seconds before AWS Elemental MediaPackage rotates to a new key. By default, rotation is set to 60 seconds. Set to 0 to disable key rotation.

  Type: integer
  Required: False

spekeKeyProvider

Parameters for the SPEKE key provider.

  Type: SpekeKeyProvider (p. 32)
  Required: True
DashPackage

manifestWindowSeconds
Time window (in seconds) contained in each manifest.

  Type: integer
  Required: False

minBufferTimeSeconds
Minimum amount of content (measured in seconds) that a player must keep available in the buffer.

  Type: integer
  Required: False

segmentDurationSeconds
Duration (in seconds) of each fragment. Actual fragments are rounded to the nearest multiple of the source fragment duration.

  Type: integer
  Required: False

encryption
Parameters for encrypting content.

  Type: DashEncryption (p. 24)
  Required: False

profile
DASH profile for the output, such as HbbTV.

Valid values:

- none - the output doesn't use a DASH profile.
- hbbtv_1.5 - the output is HbbTV-compliant.

  Type: string
  Required: False

streamSelection
Limitations for outputs from the endpoint, based on the video bitrate.

  Type: StreamSelection (p. 33)
  Required: False

minUpdatePeriodSeconds
Minimum amount of time (in seconds) that the player should wait before requesting updates to the manifest.
suggestedPresentationDelaySeconds

Amount of time (in seconds) that the player should be from the live point at the end of the manifest.

HlsEncryption

repeatExtXKey

Repeat the EXT-X-KEY directive for every media segment. This might result in an increase in client requests to the DRM server.

constantInitializationVector

A 128-bit, 16-byte hex value represented by a 32-character string, used in conjunction with the key for encrypting blocks.

keyRotationIntervalSeconds

Number of seconds before AWS Elemental MediaPackage rotates to a new key. By default, rotation is set to 60 seconds. Set to 0 to disable key rotation.

encryptionMethod

HLS encryption type.

spekeKeyProvider

Parameters for the SPEKE key provider.
HlsPackage

useAudioRenditionGroup

When true, AWS Elemental MediaPackage bundles all audio tracks in a rendition group. All other tracks in the stream can be used with any audio rendition from the group.

  Type: boolean
  Required: False

segmentDurationSeconds

Duration (in seconds) of each fragment. Actual fragments are rounded to the nearest multiple of the source fragment duration.

  Type: integer
  Required: False

adMarkers

Controls how ad markers are included in the packaged endpoint. Valid values are none, passthrough, or scte35_enhanced.

- none - omits all SCTE-35 ad markers from the output.
- passthrough - creates a copy in the output of the SCTE-35 ad markers (comments) taken directly from the input manifest.
- scte35_enhanced - generates ad markers and blackout tags in the output based on the SCTE-35 messages from the input manifest.

  Type: string
  Required: False

playlistWindowSeconds

Time window (in seconds) contained in each parent manifest.

  Type: integer
  Required: False

encryption

Parameters for encrypting content.

  Type: HlsEncryption (p. 26)
  Required: False

programDateTimeIntervalSeconds

Inserts EXT-X-PROGRAM-DATE-TIME tags in the output manifest at the interval that you specify. Additionally, ID3Timed metadata messages are generated every 5 seconds starting when the content was ingested.

Irrespective of this parameter, if any ID3Timed metadata is in the HLS input, it is passed through to the HLS output.
Omit this attribute or enter 0 to indicate that the EXT-X-PROGRAM-DATE-TIME tags are not included in the manifest.

**Type:** integer  
**Required:** False

**playlistType**

When specified as either **event** or **vod**, a corresponding EXT-X-PLAYLIST-TYPE entry is included in the media playlist. Indicates if the playlist is live to VOD content.

**Type:** string  
**Required:** False

**streamSelection**

Limitations for outputs from the endpoint, based on the video bitrate.

**Type:** StreamSelection (p. 33)  
**Required:** False

**includeIframeOnlyStream**

Only applies to stream sets with a single video track. When true, the stream set includes an additional I-frame only stream, along with the other tracks. If false, this extra stream is not included.

**Type:** boolean  
**Required:** False

**MssEncryption**

**spekeKeyProvider**

Parameters for the SPEKE key provider.

**Type:** SpekeKeyProvider (p. 32)  
**Required:** True

**MssPackage**

**manifestWindowSeconds**

Time window (in seconds) contained in each manifest.

**Type:** integer  
**Required:** False

**segmentDurationSeconds**

Duration (in seconds) of each fragment. Actual fragments are rounded to the nearest multiple of the source fragment duration.

**Type:** integer
Properties

**encryption**
Parameters for encrypting content.

*Type:*

- **MssEncryption (p. 28)**
- **Required:** False

**streamSelection**
Limitations for outputs from the endpoint, based on the video bitrate.

*Type:*

- **StreamSelection (p. 33)**
- **Required:** False

**OriginEndpoint**

**startoverWindowSeconds**
Maximum duration (seconds) of content to retain for startover playback. A 0 indicates that startover playback is disabled for this endpoint.

*Type:*

- **integer**
- **Required:** False

**timeDelaySeconds**
Minimum duration (seconds) of delay to enforce on the playback of live content. A 0 indicates that there is no time delay in effect for this endpoint.

*Type:*

- **integer**
- **Required:** False

**manifestName**
A short string that's appended to the end of the endpoint URL to create a unique path to this endpoint.

*Type:*

- **string**
- **Required:** False

**description**
Any descriptive information that you want to add to the endpoint for future identification purposes.

*Type:*

- **string**
- **Required:** False

**dashPackage**
Parameters for DASH packaging.

*Type:*

- **DashPackage (p. 25)**
- **Required:** False
**id**
The endpoint identifier.

- **Type:** string
- **Required:** False

**whitelist**
The IP addresses that can access this endpoint.

- **Type:** Array of type string
- **Required:** False

**arn**
The endpoint's unique system-generated resource name, based on the AWS record.

- **Type:** string
- **Required:** False

**channelId**
The ID of the channel associated with this endpoint.

- **Type:** string
- **Required:** False

**url**
The URL that's used to request content from this endpoint.

- **Type:** string
- **Required:** False

**hlsPackage**
Parameters for Apple HLS packaging.

- **Type:** HlsPackage (p. 27)
- **Required:** False

**mssPackage**
Parameters for Microsoft Smooth Streaming packaging.

- **Type:** MssPackage (p. 28)
- **Required:** False

**OriginEndpointCreateParameters**

**startoverWindowSeconds**
Maximum duration (seconds) of content to retain for startover playback. Omit this attribute or enter 0 to indicate that startover playback is disabled for this endpoint.
Properties

**Type**: integer  
**Required**: False

**timeDelaySeconds**
Minimum duration (seconds) of delay to enforce on the playback of live content. Omit this attribute or enter 0 to indicate that there is no time delay in effect for this endpoint.

**Type**: integer  
**Required**: False

**manifestName**
A short string that's appended to the end of the endpoint URL to create a unique path to this endpoint.

**Type**: string  
**Required**: False

**description**
Any descriptive information that you want to add to the endpoint for future identification purposes.

**Type**: string  
**Required**: False

**dashPackage**
Parameters for DASH packaging.

**Type**: DashPackage (p. 25)  
**Required**: False

**id**
The endpoint ID is required and must be unique for your account in this region. The ID can't be changed after the endpoint is created.

**Type**: string  
**Required**: True

**whitelist**
The IP addresses that can access this endpoint.

**Type**: Array of type string  
**Required**: False

**channelId**
The ID of the channel associated with this endpoint.

**Type**: string  
**Required**: True
**hlsPackage**
Parameters for Apple HLS packaging.

- **Type:** HlsPackage (p. 27)
- **Required:** False

**mssPackage**
Parameters for Microsoft Smooth Streaming packaging.

- **Type:** MssPackage (p. 28)
- **Required:** False

**OriginEndpointList**

**originEndpoints**
List of endpoints that are configured on this account and the channel that you specified in the request parameters.

- **Type:** Array of type OriginEndpoint (p. 29)
- **Required:** False

**nextToken**
Pagination token. Use this token to request the next page of channel results.

- **Type:** string
- **Required:** False

**SpekeKeyProvider**

**resourceId**
Unique identifier for this endpoint, as it is configured in the key provider service.

- **Type:** string
- **Required:** True

**systemIds**
List of unique identifiers for the DRM systems to use, as defined in the CPIX specification.

- **Type:** Array of type string
- **Required:** True

**roleArn**
The ARN for the IAM role granted by the key provider that provides access to the key provider API. This role must have a trust policy that allows AWS Elemental MediaPackage to assume the role, and it must have a sufficient permissions policy to allow access to the specific key retrieval URL. Valid format: arn:aws:iam::{accountID}:role/{name}
**Origin_endpoints id**

**URI**

`/origin_endpoints/{id}`

**HTTP Methods**

**GET**

Operation ID: DescribeOriginEndpoint

Provides details about an endpoint.
aws mediapackage describe-origin-endpoint --id <endpointId>

**Path Parameters**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>True</td>
<td>Identifier for the object that you are working on.</td>
</tr>
</tbody>
</table>

**Responses**

<table>
<thead>
<tr>
<th>Status Code</th>
<th>Response Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>OriginEndpoint</td>
<td>200 OK response</td>
</tr>
<tr>
<td></td>
<td>(p. 39)</td>
<td>Endpoint details are returned successfully.</td>
</tr>
<tr>
<td>422</td>
<td>None</td>
<td>422 Unprocessable Entity response</td>
</tr>
<tr>
<td></td>
<td></td>
<td>AWS Elemental MediaPackage could not process the instructions in the body of the request.</td>

</table>
### HTTP Methods

<table>
<thead>
<tr>
<th>Status Code</th>
<th>Response Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>OriginEndpoint</td>
<td>The endpoint is updated successfully.</td>
</tr>
<tr>
<td>422</td>
<td>None</td>
<td>AWS Elemental MediaPackage could not process the instructions in the body of the request.</td>
</tr>
</tbody>
</table>

### PUT

**Operation ID: UpdateOriginEndpoint**

Updates a specific endpoint. When you submit the request to update an endpoint, include all necessary attributes in the request, even the ones that aren't being updated. If you send only the updated attributes, then all modifiable attributes that weren't specifically included in the request will reset to default values. For example, if you are using a 30 second time delay and submit a request to only update the endpoint description, then the time delay will update to zero (disabled). We recommend that you submit a GET request to obtain the endpoint's existing attributes and submit an updated version of the GET response body when you are updating an endpoint.

You can't change the `id` attribute or any other system-generated attributes.

**AWS CLI Request Syntax**

```bash
aws mediapackage update-origin-endpoint
  --id <endpointId>
  --dash-package | --hls-package | --mss-package <packagingSettings>
  [--description <value>]
  [--manifest-name <value>]
  [--startover-window-seconds <value>]
  [--time-delay-seconds <value>]
  [--whitelist <value>]
```

For nested parameters, such as those for `packagingSettings`, you can reference a JSON file `file://<fileName>.json` that holds all of the attributes.

**Path Parameters**

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>id</code></td>
<td>String</td>
<td>True</td>
<td>Identifier for the object that you are working on.</td>
</tr>
</tbody>
</table>

**Responses**

<table>
<thead>
<tr>
<th>Status Code</th>
<th>Response Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>200</td>
<td>OriginEndpoint (p. 39)</td>
<td>200 OK response</td>
</tr>
<tr>
<td>422</td>
<td>None</td>
<td>422 Unprocessable Entity response</td>
</tr>
</tbody>
</table>
### Status Code

<table>
<thead>
<tr>
<th>Code</th>
<th>Response Model</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>500</td>
<td>None</td>
<td>500 Internal Server Error response An unexpected condition prevented AWS Elemental MediaPackage from fulfilling the request.</td>
</tr>
<tr>
<td>403</td>
<td>None</td>
<td>403 Forbidden response AWS Elemental MediaPackage cannot authorize the request, possibly due to insufficient authentication credentials.</td>
</tr>
<tr>
<td>503</td>
<td>None</td>
<td>Service unavailable response AWS Elemental MediaPackage can't currently complete the request, usually because of a temporary overload or maintenance.</td>

</tr>
<tr>
<td>429</td>
<td>None</td>
<td>429 Too Many Requests response Too many requests have been sent in a given amount of time.</td>
</tr>
</tbody>
</table>

## DELETE

**Operation ID: DeleteOriginEndpoint**

Permanently deletes an endpoint.

**AWS CLI Request Syntax**

```bash/aws mediapackage delete-origin-endpoint --id <endpointId>
```

### Path Parameters

<table>
<thead>
<tr>
<th>Name</th>
<th>Type</th>
<th>Required</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>id</td>
<td>String</td>
<td>True</td>
<td>Identifier for the object that you are working on.</td>
</tr>
</tbody>
</table>
### Responses

<table>
<thead>
<tr>
<th>Status Code</th>
<th>Response Model</th>
<th>Description</th>
</tr>
</thead>
</table>
| 202         | None           | 202 Accepted response  
AWS Elemental MediaPackage accepted the request but has not processed it yet. |
| 422         | None           | 422 Unprocessable Entity response  
AWS Elemental MediaPackage could not process the instructions in the body of the request. |
| 500         | None           | 500 Internal Server Error response  
An unexpected condition prevented AWS Elemental MediaPackage from fulfilling the request. |
| 403         | None           | 403 Forbidden response  
AWS Elemental MediaPackage cannot authorize the request, possibly due to insufficient authentication credentials. |
| 503         | None           | Service unavailable response  
AWS Elemental MediaPackage can't currently complete the request, usually because of a temporary overload or maintenance. |

Properties

DashEncryption

keyRotationIntervalSeconds

Number of seconds before AWS Elemental MediaPackage rotates to a new key. By default, rotation is set to 60 seconds. Set to 0 to disable key rotation.

Type: integer
Required: False
spekeKeyProvider

Parameters for the SPEKE key provider.

Type: SpekeKeyProvider (p. 48)
Required: True

DashPackage

manifestWindowSeconds

Time window (in seconds) contained in each manifest.

Type: integer
Required: False

minBufferTimeSeconds

Minimum amount of content (measured in seconds) that a player must keep available in the buffer.

Type: integer
Required: False

segmentDurationSeconds

Duration (in seconds) of each fragment. Actual fragments are rounded to the nearest multiple of the source fragment duration.

Type: integer
Required: False

encryption

Parameters for encrypting content.

Type: DashEncryption (p. 40)
Required: False

profile

DASH profile for the output, such as HbbTV.

Valid values:

- none - the output doesn't use a DASH profile.
- hbbtv_1.5 - the output is HbbTV-compliant.

Type: string
Required: False

streamSelection

Limitations for outputs from the endpoint, based on the video bitrate.
Properties

**Type**: StreamSelection (p. 48)

**Required**: False

**minUpdatePeriodSeconds**

Minimum amount of time (in seconds) that the player should wait before requesting updates to the manifest.

**Type**: integer

**Required**: False

**suggestedPresentationDelaySeconds**

Amount of time (in seconds) that the player should be from the live point at the end of the manifest.

**Type**: integer

**Required**: False

**HlsEncryption**

**repeatExtXKey**

Repeat the EXT-X-KEY directive for every media segment. This might result in an increase in client requests to the DRM server.

**Type**: boolean

**Required**: False

**constantInitializationVector**

A 128-bit, 16-byte hex value represented by a 32-character string, used in conjunction with the key for encrypting blocks.

**Type**: string

**Required**: False

**keyRotationIntervalSeconds**

Number of seconds before AWS Elemental MediaPackage rotates to a new key. By default, rotation is set to 60 seconds. Set to 0 to disable key rotation.

**Type**: integer

**Required**: False

**encryptionMethod**

HLS encryption type.

**Type**: string

**Required**: False

**spekeKeyProvider**

Parameters for the SPEKE key provider.
Type: SpekeKeyProvider (p. 48)
Required: True

HlsPackage

useAudioRenditionGroup
When true, AWS Elemental MediaPackage bundles all audio tracks in a rendition group. All other tracks in the stream can be used with any audio rendition from the group.

Type: boolean
Required: False

segmentDurationSeconds
Duration (in seconds) of each fragment. Actual fragments are rounded to the nearest multiple of the source fragment duration.

Type: integer
Required: False

adMarkers
Controls how ad markers are included in the packaged endpoint. Valid values are none, passthrough, or scte35_enhanced.

- none - omits all SCTE-35 ad markers from the output.
- passthrough - creates a copy in the output of the SCTE-35 ad markers (comments) taken directly from the input manifest.
- scte35_enhanced - generates ad markers and blackout tags in the output based on the SCTE-35 messages from the input manifest.

Type: string
Required: False

playlistWindowSeconds
Time window (in seconds) contained in each parent manifest.

Type: integer
Required: False

encryption
Parameters for encrypting content.

Type: HlsEncryption (p. 42)
Required: False

programDateTimeIntervalSeconds
Inserts EXT-X-PROGRAM-DATE-TIME tags in the output manifest at the interval that you specify. Additionally, ID3Timed metadata messages are generated every 5 seconds starting when the content was ingested.
Irrespective of this parameter, if any ID3Timed metadata is in the HLS input, it is passed through to the HLS output.

Omit this attribute or enter 0 to indicate that the EXT-X-PROGRAM-DATE-TIME tags are not included in the manifest.

Type: integer
Required: False

**playlistType**

When specified as either `event` or `vod`, a corresponding EXT-X-PLAYLIST-TYPE entry is included in the media playlist. Indicates if the playlist is live to VOD content.

Type: string
Required: False

**streamSelection**

Limitations for outputs from the endpoint, based on the video bitrate.

Type: StreamSelection (p. 48)
Required: False

**includeIframeOnlyStream**

Only applies to stream sets with a single video track. When true, the stream set includes an additional I-frame only stream, along with the other tracks. If false, this extra stream is not included.

Type: boolean
Required: False

**MssEncryption**

**spekeKeyProvider**

Parameters for the SPEKE key provider.

Type: SpekeKeyProvider (p. 48)
Required: True

**MssPackage**

**manifestWindowSeconds**

Time window (in seconds) contained in each manifest.

Type: integer
Required: False

**segmentDurationSeconds**

Duration (in seconds) of each fragment. Actual fragments are rounded to the nearest multiple of the source fragment duration.
Properties

Type: integer
Required: False

encryption
Parameters for encrypting content.

Type: MssEncryption (p. 44)
Required: False

streamSelection
Limitations for outputs from the endpoint, based on the video bitrate.

Type: StreamSelection (p. 48)
Required: False

OriginEndpoint

startoverWindowSeconds
Maximum duration (seconds) of content to retain for startover playback. A 0 indicates that startover playback is disabled for this endpoint.

Type: integer
Required: False

timeDelaySeconds
Minimum duration (seconds) of delay to enforce on the playback of live content. A 0 indicates that there is no time delay in effect for this endpoint

Type: integer
Required: False

manifestName
A short string that’s appended to the end of the endpoint URL to create a unique path to this endpoint.

Type: string
Required: False

description
Any descriptive information that you want to add to the endpoint for future identification purposes.

Type: string
Required: False

dashPackage
Parameters for DASH packaging.

Type: DashPackage (p. 41)
Required: False
id
The endpoint identifier.

    Type: string
    Required: False

whitelist
The IP addresses that can access this endpoint.

    Type: Array of type string
    Required: False

arn
The endpoint's unique system-generated resource name, based on the AWS record.

    Type: string
    Required: False

channelId
The ID of the channel associated with this endpoint.

    Type: string
    Required: False

test
The URL that's used to request content from this endpoint.

    Type: string
    Required: False

hlsPackage
Parameters for Apple HLS packaging.

    Type: HlsPackage (p. 43)
    Required: False

mssPackage
Parameters for Microsoft Smooth Streaming packaging.

    Type: MssPackage (p. 44)
    Required: False

OriginEndpointUpdateParameters

startoverWindowSeconds
Maximum duration (seconds) of content to retain for startover playback. Enter 0 to indicate that startover playback is disabled for this endpoint.
Properties

**Type**: integer  
**Required**: False

**timeDelaySeconds**
Minimum duration (seconds) of delay to enforce on the playback of live content. Enter 0 to indicate that there is no time delay in effect for this endpoint.

**Type**: integer  
**Required**: False

**manifestName**
A short string that's appended to the end of the endpoint URL to create a unique path to this endpoint.

**Type**: string  
**Required**: False

**description**
Any descriptive information that you want to add to the endpoint for future identification purposes.

**Type**: string  
**Required**: False

**dashPackage**
Parameters for DASH packaging.

**Type**: DashPackage (p. 41)  
**Required**: False

**whitelist**
The IP addresses that can access this endpoint.

**Type**: Array of type string  
**Required**: False

**hlsPackage**
Parameters for Apple HLS packaging.

**Type**: HlsPackage (p. 43)  
**Required**: False

**mssPackage**
Parameters for Microsoft Smooth Streaming packaging.

**Type**: MssPackage (p. 44)  
**Required**: False
**SpekeKeyProvider**

**resourceId**

Unique identifier for this endpoint, as it is configured in the key provider service.

Type: string  
Required: True

**systemIds**

List of unique identifiers for the DRM systems to use, as defined in the CPIX specification.

Type: Array of type string  
Required: True

**roleArn**

The ARN for the IAM role granted by the key provider that provides access to the key provider API. This role must have a trust policy that allows AWS Elemental MediaPackage to assume the role, and it must have a sufficient permissions policy to allow access to the specific key retrieval URL. Valid format: `arn:aws:iam::{accountID}:role/{name}`

Type: string  
Required: True

**url**

URL for the key provider's key retrieval API endpoint. Must start with https://.

Type: string  
Required: True

**StreamSelection**

**streamOrder**

Order in which the different video bitrates are presented to the player.

Type: string  
Required: False

**maxVideoBitsPerSecond**

The upper limit of the bitrates that this endpoint serves. If the video track exceeds this threshold, then AWS Elemental MediaPackage excludes it from output. A 0 indicates that there is no maximum bitrate for this endpoint.

Type: integer  
Required: False
minVideoBitsPerSecond

The lower limit of the bitrates that this endpoint serves. If the video track is below this threshold, then
AWS Elemental MediaPackage excludes it from output. A 0 indicates that there is no minimum bitrate for
this endpoint.

Type: integer
Required: False
