Welcome

This is the *Amazon AppStream 2.0 API Reference*. This documentation provides descriptions and syntax for each of the actions and data types in AppStream 2.0. AppStream 2.0 is a fully managed, secure application streaming service that lets you stream desktop applications to users without rewriting applications. AppStream 2.0 manages the AWS resources that are required to host and run your applications, scales automatically, and provides access to your users on demand.

**Note**

You can call the AppStream 2.0 API operations by using an interface VPC endpoint (interface endpoint). For more information, see Access AppStream 2.0 API Operations and CLI Commands Through an Interface VPC Endpoint in the *Amazon AppStream 2.0 Administration Guide*.

To learn more about AppStream 2.0, see the following resources:

- [Amazon AppStream 2.0 product page](#)
- [Amazon AppStream 2.0 documentation](#)

This document was last published on March 29, 2024.
Actions

The following actions are supported:

- AssociateAppBlockBuilderAppBlock
- AssociateApplicationFleet
- AssociateApplicationToEntitlement
- AssociateFleet
- BatchAssociateUserStack
- BatchDisassociateUserStack
- CopyImage
- CreateAppBlock
- CreateAppBlockBuilder
- CreateAppBlockBuilderStreamingURL
- CreateApplication
- CreateDirectoryConfig
- CreateEntitlement
- CreateFleet
- CreateImageBuilder
- CreateImageBuilderStreamingURL
- CreateStack
- CreateStreamingURL
- CreateUpdatedImage
- CreateUsageReportSubscription
- CreateUser
- DeleteAppBlock
- DeleteAppBlockBuilder
- DeleteApplication
- DeleteDirectoryConfig
- DeleteEntitlement
- DeleteFleet
- `DeleteImage`
- `DeleteImageBuilder`
- `DeleteImagePermissions`
- `DeleteStack`
- `DeleteUsageReportSubscription`
- `DeleteUser`

- `DescribeImagePermissions`
- `DescribeImages`
- `DescribeSessions`
- `DescribeStacks`
- `DescribeUsageReportSubscriptions`
- `DescribeUsers`
- `DescribeUserStackAssociations`
- `DisableUser`
- `DisassociateAppBlockBuilderAppBlock`
- `DisassociateApplicationFleet`
- `DisassociateApplicationFromEntitlement`
- `DisassociateFleet`
- `EnableUser`
- `ExpireSession`
- `ListAssociatedFleets`
- ListAssociatedStacks
- ListEntitledApplications
- ListTagsForResource
- StartAppBlockBuilder
- StartFleet
- StartImageBuilder
- StopAppBlockBuilder
- StopFleet
- StopImageBuilder
- TagResource
- UntagResource
- UpdateAppBlockBuilder
- UpdateApplication
- UpdateDirectoryConfig
- UpdateEntitlement
- UpdateFleet
- UpdateImagePermissions
- UpdateStack
AssociateAppBlockBuilderAppBlock

Associates the specified app block builder with the specified app block.

Request Syntax

```json
{
    "AppBlockArn": "string",
    "AppBlockBuilderName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**AppBlockArn**

The ARN of the app block.

Type: String

Pattern: `^arn:aws(?:-cn|-iso-b|-iso|-us-gov)?:[A-Za-z0-9][A-Za-z0-9_/-]{0,62}:[A-Za-z0-9_/-]{0,63}:[A-Za-z0-9_/-]{0,63}:[A-Za-z0-9_/-]{0,1023}$`

Required: Yes

**AppBlockBuilderName**

The name of the app block builder.

Type: String

Pattern: `^[a-zA-Z0-9_/-]{0,100}$`

Required: Yes

Response Syntax

```json
{
}
```
"AppBlockBuilderAppBlockAssociation": {
    "AppBlockArn": "string",
    "AppBlockBuilderName": "string"
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**AppBlockBuilderAppBlockAssociation**

The list of app block builders associated with app blocks.

Type: [AppBlockBuilderAppBlockAssociation object]

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**InvalidParameterCombinationException**

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

**LimitExceededExceptio**

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

**OperationNotPermitted**

The attempted operation is not permitted.
HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS Command Line Interface](#)
- [AWS SDK for .NET](#)
- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for JavaScript V3](#)
- [AWS SDK for PHP V3](#)
- [AWS SDK for Python](#)
- [AWS SDK for Ruby V3](#)
AssociateApplicationFleet

Associates the specified application with the specified fleet. This is only supported for Elastic fleets.

Request Syntax

```json
{
   "ApplicationArn": "string",
   "FleetName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**ApplicationArn**

The ARN of the application.

Type: String

Pattern: `^arn:aws(?:-cn|\-iso\-b|\-iso\-|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\.-\[0,62\]:[A-Za-z0-9\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,63\]:[A-Za-z0-9\._\.-\[0,60\]:[A-Za-z0-9\._\.-\[0,1023\]$`

Required: Yes

**FleetName**

The name of the fleet.

Type: String

Pattern: `^[a-zA-Z0-9-9][a-zA-Z0-9-9._]-]{0,100}$`

Required: Yes

Response Syntax

```json
{
}
```
"ApplicationFleetAssociation": {
    "ApplicationArn": "string",
    "FleetName": "string"
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**ApplicationFleetAssociation**

If fleet name is specified, this returns the list of applications that are associated to it. If application ARN is specified, this returns the list of fleets to which it is associated.

Type: [ApplicationFleetAssociation](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**InvalidParameterCombinationException**

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

**LimitExceededException**

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.
HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

AssociateApplicationToEntitlement

Associates an application to entitle.

Request Syntax

```json
{
    "ApplicationIdentifier": "string",
    "EntitlementName": "string",
    "StackName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**ApplicationIdentifier**

The identifier of the application.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**EntitlementName**

The name of the entitlement.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**StackName**

The name of the stack.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes
Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

EntitlementNotFoundException

The entitlement can't be found.

HTTP Status Code: 400

LimitExceededException

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

AssociateFleet

Associates the specified fleet with the specified stack.

Request Syntax

```
{
    "FleetName": "string",
    "StackName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**FleetName**

The name of the fleet.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**StackName**

The name of the stack.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.
Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

IncompatibleImageException

The image can't be updated because it's not compatible for updates.

HTTP Status Code: 400

InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

LimitExceededException

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

BatchAssociateUserStack

Associates the specified users with the specified stacks. Users in a user pool cannot be assigned to
stacks with fleets that are joined to an Active Directory domain.

Request Syntax

```
{
   "UserStackAssociations": [
      {
         "AuthenticationType": "string",
         "SendEmailNotification": boolean,
         "StackName": "string",
         "UserName": "string"
      }
   ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**UserStackAssociations**

The list of UserStackAssociation objects.

Type: Array of UserStackAssociation objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```
{
   "errors": [
      {
         "ErrorCode": "string",
         "ErrorMessage": "string"
      }
   ]
}
```
"UserStackAssociation": {
  "AuthenticationType": "string",
  "SendEmailNotification": boolean,
  "StackName": "string",
  "UserName": "string"
}
}
]

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**errors**

The list of UserStackAssociationError objects.

Type: Array of UserStackAssociationError objects

**Errors**

For information about the errors that are common to all actions, see Common Errors.

**InvalidParameterCombinationException**

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

BatchDisassociateUserStack

Disassociates the specified users from the specified stacks.

Request Syntax

```json
{
  "UserStackAssociations": [
    {
      "AuthenticationType": "string",
      "SendEmailNotification": boolean,
      "StackName": "string",
      "UserName": "string"
    }
  ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**UserStackAssociations**

The list of UserStackAssociation objects.

Type: Array of [UserStackAssociation](#) objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```json
{
  "errors": [
    {
      "ErrorCode": "string",
      "ErrorMessage": "string",
      "UserStackAssociation": {
      }
    }
  ]
}
```
"AuthenticationType": "string",
"SendEmailNotification": boolean,
"StackName": "string",
"UserName": "string"
}]

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

errors

The list of UserStackAssociationError objects.

Type: Array of UserStackAssociationError objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

CopyImage

Copies the image within the same region or to a new region within the same AWS account. Note that any tags you added to the image will not be copied.

Request Syntax

```
{
   "DestinationImageDescription": "string",
   "DestinationImageName": "string",
   "DestinationRegion": "string",
   "SourceImageName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**DestinationImageDescription**

The description that the image will have when it is copied to the destination.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**DestinationImageName**

The name that the image will have when it is copied to the destination.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**DestinationRegion**

The destination region to which the image will be copied. This parameter is required, even if you are copying an image within the same region.
Type: String

Required: Yes

SourceImageName

The name of the image to copy.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

Response Syntax

```json
{
   "DestinationImageName": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DestinationImageName

The name of the destination image.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Errors

For information about the errors that are common to all actions, see Common Errors.

IncompatibleImageException

The image can't be updated because it's not compatible for updates.
InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

LimitExceededException

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

ResourceAlreadyExistsException

The specified resource already exists.

HTTP Status Code: 400

ResourceNotAvailableException

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

CreateAppBlock

Creates an app block.

App blocks are an Amazon AppStream 2.0 resource that stores the details about the virtual hard disk in an S3 bucket. It also stores the setup script with details about how to mount the virtual hard disk. The virtual hard disk includes the application binaries and other files necessary to launch your applications. Multiple applications can be assigned to a single app block.

This is only supported for Elastic fleets.

Request Syntax

```json
{
  "Description": "string",
  "DisplayName": "string",
  "Name": "string",
  "PackagingType": "string",
  "PostSetupScriptDetails": {
    "ExecutableParameters": "string",
    "ExecutablePath": "string",
    "ScriptS3Location": {
      "S3Bucket": "string",
      "S3Key": "string"
    },
    "TimeoutInSeconds": number
  },
  "SetupScriptDetails": {
    "ExecutableParameters": "string",
    "ExecutablePath": "string",
    "ScriptS3Location": {
      "S3Bucket": "string",
      "S3Key": "string"
    },
    "TimeoutInSeconds": number
  },
  "SourceS3Location": {
    "S3Bucket": "string",
    "S3Key": "string"
  },
  "Tags": {
    "string" : "string"
  }
}```
Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**Description**

The description of the app block.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**Display Name**

The display name of the app block. This is not displayed to the user.

Type: String

Length Constraints: Maximum length of 100.

Required: No

**Name**

The name of the app block.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**Packaging Type**

The packaging type of the app block.

Type: String

Valid Values: CUSTOM | APPSTREAM2

Required: No
PostSetupScriptDetails

The post setup script details of the app block. This can only be provided for the APPSTREAM2 PackagingType.

Type: ScriptDetails object

Required: No

SetupScriptDetails

The setup script details of the app block. This must be provided for the CUSTOM PackagingType.

Type: ScriptDetails object

Required: No

SourceS3Location

The source S3 location of the app block.

Type: S3Location object

Required: Yes

Tags

The tags assigned to the app block.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^((?!aws:).[^p{L}p{Z}p{N}_.:/=\-@]*)$ 

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: ^([^p{L}p{Z}p{N}_.:/=\-@]*)$ 

Required: No

Response Syntax

```
{
  "AppBlock": {
```

"AppBlockErrors": [  
{  
  "ErrorCode": "string",  
  "ErrorMessage": "string"  
  },  
  "Arn": "string",  
  "CreatedTime": number,  
  "Description": "string",  
  "DisplayName": "string",  
  "Name": "string",  
  "PackagingType": "string",  
  "PostSetupScriptDetails": {  
    "ExecutableParameters": "string",  
    "ExecutablePath": "string",  
    "ScriptS3Location": {  
      "S3Bucket": "string",  
      "S3Key": "string"  
    },  
    "TimeoutInSeconds": number  
  },  
  "SetupScriptDetails": {  
    "ExecutableParameters": "string",  
    "ExecutablePath": "string",  
    "ScriptS3Location": {  
      "S3Bucket": "string",  
      "S3Key": "string"  
    },  
    "TimeoutInSeconds": number  
  },  
  "SourceS3Location": {  
    "S3Bucket": "string",  
    "S3Key": "string"  
  },  
  "State": "string"  
}  
]

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
**AppBlock**

The app block.

Type: `AppBlock` object

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**LimitExceededException**

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceAlreadyExistsException**

The specified resource already exists.

HTTP Status Code: 400

**See Also**

CreateAppBlockBuilder

Creates an app block builder.

Request Syntax

```
{
   "AccessEndpoints": [
      {
         "EndpointType": "string",
         "VpceId": "string"
      }
   ],
   "Description": "string",
   "DisplayName": "string",
   "EnableDefaultInternetAccess": boolean,
   "IamRoleArn": "string",
   "InstanceType": "string",
   "Name": "string",
   "Platform": "string",
   "Tags": {
      "string": "string"
   },
   "VpcConfig": {
      "SecurityGroupIds": [ "string" ],
      "SubnetIds": [ "string" ]
   }
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**AccessEndpoints**

The list of interface VPC endpoint (interface endpoint) objects. Administrators can connect to the app block builder only through the specified endpoints.

Type: Array of AccessEndpoint objects
Array Members: Minimum number of 1 item. Maximum number of 4 items.

Required: No

**Description**

The description of the app block builder.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**DisplayName**

The display name of the app block builder.

Type: String

Length Constraints: Maximum length of 100.

Required: No

**EnableDefaultInternetAccess**

Enables or disables default internet access for the app block builder.

Type: Boolean

Required: No

**IamRoleArn**

The Amazon Resource Name (ARN) of the IAM role to apply to the app block builder. To assume a role, the app block builder calls the AWS Security Token Service (STS) AssumeRole API operation and passes the ARN of the role to use. The operation creates a new session with temporary credentials. AppStream 2.0 retrieves the temporary credentials and creates the `appstream_machine_role` credential profile on the instance.

For more information, see [Using an IAM Role to Grant Permissions to Applications and Scripts Running on AppStream 2.0 Streaming Instances](https://docs.aws.amazon.com/appstream2/latest/DeveloperGuide/IAM-Role-Example.html) in the *Amazon AppStream 2.0 Administration Guide*.

Type: String
Pattern: ^arn:aws(?:-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\_/\-]{0,62}:[A-Za-z0-9\_/\-]{0,63}:[A-Za-z0-9\_/\-]{0,63}:[A-Za-z0-9\/[A-Za-z0-9\_/\-]{0,1023}$

Required: No

**InstanceType**

The instance type to use when launching the app block builder. The following instance types are available:

- stream.standard.small
- stream.standard.medium
- stream.standard.large
- stream.standard.xlarge
- stream.standard.2xlarge

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**Name**

The unique name for the app block builder.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9\_/\-]{0,100}$

Required: Yes

**Platform**

The platform of the app block builder.

WINDOWS_SERVER_2019 is the only valid value.

Type: String

Valid Values: WINDOWS_SERVER_2019

Required: Yes
**Tags**

The tags to associate with the app block builder. A tag is a key-value pair, and the value is optional. For example, Environment=Test. If you do not specify a value, Environment=.

If you do not specify a value, the value is set to an empty string.

Generally allowed characters are: letters, numbers, and spaces representable in UTF-8, and the following special characters:

_ . : / = + \ - @

For more information, see [Tagging Your Resources](https://docs.aws.amazon.com/appstream2/latest/administration/tagging-your-resources.html) in the *Amazon AppStream 2.0 Administration Guide*.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^[^\aws:.][p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: `^[\p{L}\p{Z}\p{N}_.:/=+\-@]*$`

Required: No

**VpcConfig**

The VPC configuration for the app block builder.

App block builders require that you specify at least two subnets in different availability zones.

Type: `VpcConfig` object

Required: Yes

**Response Syntax**

```
{
  "AppBlockBuilder": {
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**AppBlockBuilder**

Describes an app block builder.
Type: AppBlockBuilder object

Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

InvalidRoleException

The specified role is invalid.

HTTP Status Code: 400

LimitExceededExeption

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

RequestLimitExceededExeption

AppStream 2.0 can’t process the request right now because the Describe calls from your AWS account are being throttled by Amazon EC2. Try again later.
HTTP Status Code: 400

**ResourceAlreadyExistsException**

The specified resource already exists.

HTTP Status Code: 400

**ResourceNotAvailableException**

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

CreateAppBlockBuilderStreamingURL

Creates a URL to start a create app block builder streaming session.

Request Syntax

```
{
    "AppBlockBuilderName": "string",
    "Validity": number
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**AppBlockBuilderName**

The name of the app block builder.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**Validity**

The time that the streaming URL will be valid, in seconds. Specify a value between 1 and 604800 seconds. The default is 3600 seconds.

Type: Long

Required: No

Response Syntax

```
{
    "Expires": number,
    "StreamingURL": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Expires

The elapsed time, in seconds after the Unix epoch, when this URL expires.

Type: Timestamp

StreamingURL

The URL to start the streaming session.

Type: String

Length Constraints: Minimum length of 1.

Errors

For information about the errors that are common to all actions, see Common Errors.

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

CreateApplication

Creates an application.

Applications are an Amazon AppStream 2.0 resource that stores the details about how to launch applications on Elastic fleet streaming instances. An application consists of the launch details, icon, and display name. Applications are associated with an app block that contains the application binaries and other files. The applications assigned to an Elastic fleet are the applications users can launch.

This is only supported for Elastic fleets.

Request Syntax

```
{
  "AppBlockArn": "string",
  "Description": "string",
  "DisplayName": "string",
  "IconS3Location": {
    "S3Bucket": "string",
    "S3Key": "string"
  },
  "InstanceFamilies": [ "string" ],
  "LaunchParameters": "string",
  "LaunchPath": "string",
  "Name": "string",
  "Platforms": [ "string" ],
  "Tags": {
    "string" : "string"
  },
  "WorkingDirectory": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**AppBlockArn**

The app block ARN to which the application should be associated.
Type: String

Pattern: `^arn:aws(?::\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\_/.\-]{0,62}:{A-Za-z0-9\_/\.-}{0,63}:{A-Za-z0-9\_/\.-}{0,63}:{A-Za-z0-9\_+/\+=,@.\-\-]{0,1023}$`

Required: Yes

Description

The description of the application.

Type: String

Length Constraints: Maximum length of 256.

Required: No

DisplayName

The display name of the application. This name is visible to users in the application catalog.

Type: String

Length Constraints: Maximum length of 100.

Required: No

IconS3Location

The location in S3 of the application icon.

Type: S3Location object

Required: Yes

InstanceFamilies

The instance families the application supports. Valid values are GENERAL_PURPOSE and GRAPHICS_G4.

Type: Array of strings

Length Constraints: Minimum length of 1.

Required: Yes
**LaunchParameters**

The launch parameters of the application.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**LaunchPath**

The launch path of the application.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**Name**

The name of the application. This name is visible to users when display name is not specified.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**Platforms**

The platforms the application supports. WINDOWS_SERVER_2019 and AMAZON_LINUX2 are supported for Elastic fleets.

Type: Array of strings

Array Members: Maximum number of 4 items.

Valid Values: WINDOWS | WINDOWS_SERVER_2016 | WINDOWS_SERVER_2019 | WINDOWS_SERVER_2022 | AMAZON_LINUX2

Required: Yes

**Tags**

The tags assigned to the application.
Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^\(^(?!aws:).[\p{L}\p{Z}\p{N}_.:=+-@]*)$\n
Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: ^\([\p{L}\p{Z}\p{N}_.:=+-@]*)$\n
Required: No

WorkingDirectory

The working directory of the application.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```json
{
  "Application": {
    "AppBlockArn": "string",
    "Arn": "string",
    "CreatedTime": number,
    "Description": "string",
    "DisplayName": "string",
    "Enabled": boolean,
    "IconS3Location": {
      "S3Bucket": "string",
      "S3Key": "string"
    },
    "IconURL": "string",
    "InstanceFamilies": [ "string" ],
    "LaunchParameters": "string",
    "LaunchPath": "string",
    "Metadata": {
      "string": "string"
    }
  }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Application**

Describes an application in the application catalog.

Type: Application object

**Errors**

For information about the errors that are common to all actions, see Common Errors.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**LimitExceededException**

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceAlreadyExistsException**

The specified resource already exists.
HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

CreateDirectoryConfig

Creates a Directory Config object in AppStream 2.0. This object includes the configuration information required to join fleets and image builders to Microsoft Active Directory domains.

Request Syntax

```
{
    "CertificateBasedAuthProperties": {
        "CertificateAuthorityArn": "string",
        "Status": "string"
    },
    "DirectoryName": "string",
    "OrganizationalUnitDistinguishedNames": [ "string" ],
    "ServiceAccountCredentials": {
        "AccountName": "string",
        "AccountPassword": "string"
    }
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

CertificateBasedAuthProperties

The certificate-based authentication properties used to authenticate SAML 2.0 Identity Provider (IdP) user identities to Active Directory domain-joined streaming instances. Fallback is turned on by default when certificate-based authentication is Enabled. Fallback allows users to log in using their AD domain password if certificate-based authentication is unsuccessful, or to unlock a desktop lock screen. Enabled_no_directory_login_fallback enables certificate-based authentication, but does not allow users to log in using their AD domain password. Users will be disconnected to re-authenticate using certificates.

Type: CertificateBasedAuthProperties object

Required: No
DirectoryName

The fully qualified name of the directory (for example, corp.example.com).

Type: String

Required: Yes

OrganizationalUnitDistinguishedNames

The distinguished names of the organizational units for computer accounts.

Type: Array of strings

Required: Yes

ServiceAccountCredentials

The credentials for the service account used by the fleet or image builder to connect to the directory.

Type: ServiceAccountCredentials object

Required: No

Response Syntax

```
{
   "DirectoryName": {
      "CertificateBasedAuthProperties": {
         "CertificateAuthorityArn": "string",
         "Status": "string"
      },
      "CreatedTime": number,
      "DirectoryName": "string",
      "OrganizationalUnitDistinguishedNames": [ "string" ],
      "ServiceAccountCredentials": {
         "AccountName": "string",
         "AccountPassword": "string"
      }
   }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**DirectoryConfig**

Information about the directory configuration.

Type: DirectoryConfig object

Errors

For information about the errors that are common to all actions, see Common Errors.

**InvalidAccountStatusException**

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

**InvalidRoleException**

The specified role is invalid.

HTTP Status Code: 400

**LimitExceededException**

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceAlreadyExistsException**

The specified resource already exists.
HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

- AWS SDK for JavaScript V3
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
CreateEntitlement

Creates a new entitlement. Entitlements control access to specific applications within a stack, based on user attributes. Entitlements apply to SAML 2.0 federated user identities. Amazon AppStream 2.0 user pool and streaming URL users are entitled to all applications in a stack. Entitlements don't apply to the desktop stream view application, or to applications managed by a dynamic app provider using the Dynamic Application Framework.

Request Syntax

```json
{
    "AppVisibility": "string",
    "Attributes": [
        {
            "Name": "string",
            "Value": "string"
        }
    ],
    "Description": "string",
    "Name": "string",
    "StackName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**AppVisibility**

Specifies whether all or selected apps are entitled.

Type: String

Valid Values: ALL | ASSOCIATED

Required: Yes

**Attributes**

The attributes of the entitlement.
Type: Array of `EntitlementAttribute` objects

Array Members: Minimum number of 1 item.

Required: Yes

**Description**

The description of the entitlement.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**Name**

The name of the entitlement.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**StackName**

The name of the stack with which the entitlement is associated.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**Response Syntax**

```json
{
   "Entitlement": {
      "AppVisibility": "string",
      "Attributes": [
         {
            "Name": "string",
            "Value": "string"
         }
      ]
   }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Entitlement

The entitlement.

Type: Entitlement object

Errors

For information about the errors that are common to all actions, see Common Errors.

EntitlementAlreadyExistsException

The entitlement already exists.

HTTP Status Code: 400

LimitExceeded Exception

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

OperationNotAllowedException

The attempted operation is not permitted.

HTTP Status Code: 400
ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

CreateFleet

Creates a fleet. A fleet consists of streaming instances that your users access for their applications and desktops.

Request Syntax

```
{
    "ComputeCapacity": {
        "DesiredInstances": number,
        "DesiredSessions": number
    },
    "Description": "string",
    "DisconnectTimeoutInSeconds": number,
    "DisplayName": "string",
    "DomainJoinInfo": {
        "DirectoryName": "string",
        "OrganizationalUnitDistinguishedName": "string"
    },
    "EnableDefaultInternetAccess": boolean,
    "FleetType": "string",
    "IamRoleArn": "string",
    "IdleDisconnectTimeoutInSeconds": number,
    "ImageArn": "string",
    "ImageName": "string",
    "InstanceType": "string",
    "MaxConcurrentSessions": number,
    "MaxSessionsPerInstance": number,
    "MaxUserDurationInSeconds": number,
    "Name": "string",
    "Platform": "string",
    "SessionScriptS3Location": {
        "S3Bucket": "string",
        "S3Key": "string"
    },
    "StreamView": "string",
    "Tags": {
        "string": "string"
    },
    "UsbDeviceFilterStrings": [ "string" ],
    "VpcConfig": {
        "SecurityGroupIds": [ "string" ],
        "SubnetIds": [ "string" ]
    }
}
```
Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**ComputeCapacity**

The desired capacity for the fleet. This is not allowed for Elastic fleets. For Elastic fleets, specify MaxConcurrentSessions instead.

Type: ComputeCapacity object

Required: No

**Description**

The description to display.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**DisconnectTimeoutInSeconds**

The amount of time that a streaming session remains active after users disconnect. If users try to reconnect to the streaming session after a disconnection or network interruption within this time interval, they are connected to their previous session. Otherwise, they are connected to a new session with a new streaming instance.

Specify a value between 60 and 36000.

Type: Integer

Required: No

**DisplayName**

The fleet name to display.

Type: String
Length Constraints: Maximum length of 100.

Required: No

**DomainJoinInfo**

The name of the directory and organizational unit (OU) to use to join the fleet to a Microsoft Active Directory domain. This is not allowed for Elastic fleets.

Type: `DomainJoinInfo` object

Required: No

**EnableDefaultInternetAccess**

Enables or disables default internet access for the fleet.

Type: Boolean

Required: No

**FleetType**

The fleet type.

**ALWAYS_ON**

Provides users with instant-on access to their apps. You are charged for all running instances in your fleet, even if no users are streaming apps.

**ON_DEMAND**

Provide users with access to applications after they connect, which takes one to two minutes. You are charged for instance streaming when users are connected and a small hourly fee for instances that are not streaming apps.

Type: String

Valid Values: ALWAYS_ON | ON_DEMAND | ELASTIC

Required: No

**IamRoleArn**

The Amazon Resource Name (ARN) of the IAM role to apply to the fleet. To assume a role, a fleet instance calls the AWS Security Token Service (STS) AssumeRole API operation and passes the ARN of the role to use. The operation creates a new session with temporary credentials.
AppStream 2.0 retrieves the temporary credentials and creates the `appstream_machine_role` credential profile on the instance.

For more information, see [Using an IAM Role to Grant Permissions to Applications and Scripts Running on AppStream 2.0 Streaming Instances](#) in the *Amazon AppStream 2.0 Administration Guide*.

Type: String

Pattern: `^arn:aws(?:-cn|-iso-b|-iso|-us-gov)?:[A-Za-z0-9][A-Za-z0-9_-/.-]{0,62}:[A-Za-z0-9_-/.-]{0,63}:[A-Za-z0-9_-/.-]{0,63}:[A-Za-z0-9][A-Za-z0-9:_/+=,@.\-_]{0,1023}$`

Required: No

### IdleDisconnectTimeoutInSeconds

The amount of time that users can be idle (inactive) before they are disconnected from their streaming session and the `DisconnectTimeoutInSeconds` time interval begins. Users are notified before they are disconnected due to inactivity. If they try to reconnect to the streaming session before the time interval specified in `DisconnectTimeoutInSeconds` elapses, they are connected to their previous session. Users are considered idle when they stop providing keyboard or mouse input during their streaming session. File uploads and downloads, audio in, audio out, and pixels changing do not qualify as user activity. If users continue to be idle after the time interval in `IdleDisconnectTimeoutInSeconds` elapses, they are disconnected.

To prevent users from being disconnected due to inactivity, specify a value of 0. Otherwise, specify a value between 60 and 36000. The default value is 0.

**Note**

If you enable this feature, we recommend that you specify a value that corresponds exactly to a whole number of minutes (for example, 60, 120, and 180). If you don't do this, the value is rounded to the nearest minute. For example, if you specify a value of 70, users are disconnected after 1 minute of inactivity. If you specify a value that is at the midpoint between two different minutes, the value is rounded up. For example, if you specify a value of 90, users are disconnected after 2 minutes of inactivity.

Type: Integer
ImageArn

The ARN of the public, private, or shared image to use.

Type: String

Pattern: `^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9]+[A-Za-z0-9\_/.-]{0,62}:[A-Za-z0-9\_/.-]{0,63}:[A-Za-z0-9\_/.-]{0,63}:[A-Za-z0-9\_/.+=,@.\-]{0,1023}$`

Required: No

ImageName

The name of the image used to create the fleet.

Type: String

Pattern: `^[a-zA-Z0-9\_/.-]{0,100}$`

Required: No

InstanceType

The instance type to use when launching fleet instances. The following instance types are available:

- stream.standard.small
- stream.standard.medium
- stream.standard.large
- stream.standard.xlarge
- stream.standard.2xlarge
- stream.compute.large
- stream.compute.xlarge
- stream.compute.2xlarge
- stream.compute.4xlarge
- stream.compute.8xlarge
• stream.memory.large
• stream.memory.xlarge
• stream.memory.2xlarge
• stream.memory.4xlarge
• stream.memory.8xlarge
• stream.memory.z1d.large
• stream.memory.z1d.xlarge
• stream.memory.z1d.2xlarge
• stream.memory.z1d.3xlarge
• stream.memory.z1d.6xlarge
• stream.memory.z1d.12xlarge
• stream.graphics-design.large
• stream.graphics-design.xlarge
• stream.graphics-design.2xlarge
• stream.graphics-design.4xlarge
• stream.graphics-design.desktop.2xlarge
• stream.graphics.g4dn.xlarge
• stream.graphics.g4dn.2xlarge
• stream.graphics.g4dn.4xlarge
• stream.graphics.g4dn.8xlarge
• stream.graphics.g4dn.12xlarge
• stream.graphics.g4dn.16xlarge
• stream.graphics-pro.4xlarge
• stream.graphics-pro.8xlarge
• stream.graphics-pro.16xlarge

The following instance types are available for Elastic fleets:
• stream.standard.small
• stream.standard.medium
• stream.standard.large
- stream.standard.xlarge
- stream.standard.2xlarge

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**MaxConcurrentSessions**

The maximum concurrent sessions of the Elastic fleet. This is required for Elastic fleets, and not allowed for other fleet types.

Type: Integer

Required: No

**MaxSessionsPerInstance**

The maximum number of user sessions on an instance. This only applies to multi-session fleets.

Type: Integer

Required: No

**MaxUserDurationInSeconds**

The maximum amount of time that a streaming session can remain active, in seconds. If users are still connected to a streaming instance five minutes before this limit is reached, they are prompted to save any open documents before being disconnected. After this time elapses, the instance is terminated and replaced by a new instance.

Specify a value between 600 and 432000.

Type: Integer

Required: No

**Name**

A unique name for the fleet.

Type: String
Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**Platform**

The fleet platform. WINDOWS_SERVER_2019 and AMAZON_LINUX2 are supported for Elastic fleets.

Type: String

Valid Values: WINDOWS | WINDOWS_SERVER_2016 | WINDOWS_SERVER_2019 | WINDOWS_SERVER_2022 | AMAZON_LINUX2

Required: No

**SessionScriptS3Location**

The S3 location of the session scripts configuration zip file. This only applies to Elastic fleets.

Type: [S3Location](#) object

Required: No

**StreamView**

The AppStream 2.0 view that is displayed to your users when they stream from the fleet. When APP is specified, only the windows of applications opened by users display. When DESKTOP is specified, the standard desktop that is provided by the operating system displays.

The default value is APP.

Type: String

Valid Values: APP | DESKTOP

Required: No

**Tags**

The tags to associate with the fleet. A tag is a key-value pair, and the value is optional. For example, Environment=Test. If you do not specify a value, Environment=.

If you do not specify a value, the value is set to an empty string.
Generally allowed characters are: letters, numbers, and spaces representable in UTF-8, and the following special characters:

_ . / = + \ - @

For more information, see [Tagging Your Resources](#) in the [Amazon AppStream 2.0 Administration Guide](#).

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(^(!aws:).*\[p{L}\p{Z}\p{N}\_\_\_\_:/=+/@]*\)`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: `^(\[p{L}\p{Z}\p{N}\_\_\_\_:/=+/@]*\)`

Required: No

**UsbDeviceFilterStrings**

The USB device filter strings that specify which USB devices a user can redirect to the fleet streaming session, when using the Windows native client. This is allowed but not required for Elastic fleets.

Type: Array of strings

Length Constraints: Minimum length of 0. Maximum length of 100.

Pattern: `^((\w*)\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*\?\(\w*\)s*,\s*\?\(\w*\)\s*,\s*\?\d*\s*,\s*\?\d*\s*,\s*[0-1]\s*,\s*[0-1]\s*)$`

Required: No

**VpcConfig**

The VPC configuration for the fleet. This is required for Elastic fleets, but not required for other fleet types. Elastic fleets require that you specify at least two subnets in different availability zones.
Type: `VpcConfig` object

Required: No

Response Syntax

```
{
    "Fleet": {
        "Arn": "string",
        "ComputeCapacityStatus": {
            "ActiveUserSessions": number,
            "ActualUserSessions": number,

    "SubnetIds": [ "string" ]
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Fleet**

Information about the fleet.

Type: Fleet object

Errors

For information about the errors that are common to all actions, see Common Errors.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**IncompatibleImageException**

The image can't be updated because it's not compatible for updates.

HTTP Status Code: 400
InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

InvalidRoleException

The specified role is invalid.

HTTP Status Code: 400

LimitExceededException

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

RequestLimitExceededException

AppStream 2.0 can't process the request right now because the Describe calls from your AWS account are being throttled by Amazon EC2. Try again later.

HTTP Status Code: 400

ResourceAlreadyExistsException

The specified resource already exists.

HTTP Status Code: 400

ResourceNotAvailableException

The specified resource exists and is not in use, but isn't available.
HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

- AWS SDK for Ruby V3
CreateImageBuilder

Creates an image builder. An image builder is a virtual machine that is used to create an image.

The initial state of the builder is PENDING. When it is ready, the state is RUNNING.

Request Syntax

```json
{
   "AccessEndpoints": [
      {
         "EndpointType": "string",
         "VpcId": "string"
      }
   ],
   "AppstreamAgentVersion": "string",
   "Description": "string",
   "DisplayName": "string",
   "DomainJoinInfo": {
      "DirectoryName": "string",
      "OrganizationalUnitDistinguishedName": "string"
   },
   "EnableDefaultInternetAccess": boolean,
   "IamRoleArn": "string",
   "ImageArn": "string",
   "ImageName": "string",
   "InstanceType": "string",
   "Name": "string",
   "Tags": {
      "string": "string"
   },
   "VpcConfig": {
      "SecurityGroupIds": [ "string" ],
      "SubnetIds": [ "string" ]
   }
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.
AccessEndpoints

The list of interface VPC endpoint (interface endpoint) objects. Administrators can connect to the image builder only through the specified endpoints.

Type: Array of AccessEndpoint objects

Array Members: Minimum number of 1 item. Maximum number of 4 items.

Required: No

AppstreamAgentVersion

The version of the AppStream 2.0 agent to use for this image builder. To use the latest version of the AppStream 2.0 agent, specify [LATEST].

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

Description

The description to display.

Type: String

Length Constraints: Maximum length of 256.

Required: No

DisplayName

The image builder name to display.

Type: String

Length Constraints: Maximum length of 100.

Required: No

DomainJoinInfo

The name of the directory and organizational unit (OU) to use to join the image builder to a Microsoft Active Directory domain.
DomainJoinInfo object

Required: No

EnableDefaultInternetAccess

Enables or disables default internet access for the image builder.

Type: Boolean

Required: No

IamRoleArn

The Amazon Resource Name (ARN) of the IAM role to apply to the image builder. To assume a role, the image builder calls the AWS Security Token Service (STS) AssumeRole API operation and passes the ARN of the role to use. The operation creates a new session with temporary credentials. AppStream 2.0 retrieves the temporary credentials and creates the appstream_machine_role credential profile on the instance.

For more information, see Using an IAM Role to Grant Permissions to Applications and Scripts Running on AppStream 2.0 Streaming Instances in the Amazon AppStream 2.0 Administration Guide.

Type: String

Pattern: ^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\_\.\-]{0,62}:[A-Za-z0-9\_\.\-]{0,63}:[A-Za-z0-9\_\.\-]{0,63}:[A-Za-z0-9\_\+\@\.@\-]{0,1023}$

Required: No

ImageArn

The ARN of the public, private, or shared image to use.

Type: String

Pattern: ^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\_\.\-]{0,62}:[A-Za-z0-9\_\.\-]{0,63}:[A-Za-z0-9\_\.\-]{0,63}:[A-Za-z0-9\_\+\@\.@\-]{0,1023}$

Required: No
**ImageName**

The name of the image used to create the image builder.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**InstanceType**

The instance type to use when launching the image builder. The following instance types are available:

- stream.standard.small
- stream.standard.medium
- stream.standard.large
- stream.compute.large
- stream.compute.xlarge
- stream.compute.2xlarge
- stream.compute.4xlarge
- stream.compute.8xlarge
- stream.memory.large
- stream.memory.xlarge
- stream.memory.2xlarge
- stream.memory.4xlarge
- stream.memory.8xlarge
- stream.memory.z1d.large
- stream.memory.z1d.xlarge
- stream.memory.z1d.2xlarge
- stream.memory.z1d.3xlarge
- stream.memory.z1d.6xlarge
- stream.memory.z1d.12xlarge
- stream.graphics-design.large
- stream.graphics-design.xlarge
- stream.graphics-design.2xlarge
- stream.graphics-design.4xlarge
- stream.graphics-desktop.2xlarge
- stream.graphics.g4dn.xlarge
- stream.graphics.g4dn.2xlarge
- stream.graphics.g4dn.4xlarge
- stream.graphics.g4dn.8xlarge
- stream.graphics.g4dn.12xlarge
- stream.graphics.g4dn.16xlarge
- stream.graphics-pro.4xlarge
- stream.graphics-pro.8xlarge
- stream.graphics-pro.16xlarge

**Type:** String

Length Constraints: Minimum length of 1.

**Required:** Yes

**Name**

A unique name for the image builder.

**Type:** String

**Pattern:** ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

**Required:** Yes

**Tags**

The tags to associate with the image builder. A tag is a key-value pair, and the value is optional. For example, Environment=Test. If you do not specify a value, Environment=.

Generally allowed characters are: letters, numbers, and spaces representable in UTF-8, and the following special characters:

_.:/ = + \ - @
If you do not specify a value, the value is set to an empty string.

For more information about tags, see Tagging Your Resources in the Amazon AppStream 2.0 Administration Guide.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^([^aws:].[p{L}\p{Z}\p{N}_.:/=+-@]*)$  

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: ^([p{L}\p{Z}\p{N}_.:/=+-@]*)$

Required: No

VpcConfig

The VPC configuration for the image builder. You can specify only one subnet.

Type: VpcConfig object

Required: No

Response Syntax

```
{
  "ImageBuilder": {
    "AccessEndpoints": [
      {
        "EndpointType": "string",
        "VpceId": "string"
      }
    ],
    "AppstreamAgentVersion": "string",
    "Arn": "string",
    "CreatedTime": number,
    "Description": "string",
    "DisplayName": "string",
    "DomainJoinInfo": {
    
```
"DirectoryName": "string",
"OrganizationalUnitDistinguishedName": "string"
],
"EnableDefaultInternetAccess": boolean,
"IamRoleArn": "string",
"ImageArn": "string",
"ImageBuilderErrors": [
{
   "ErrorCode": "string",
   "ErrorMessage": "string",
   "ErrorTimestamp": number
}
],
"InstanceType": "string",
"Name": "string",
"NetworkAccessConfiguration": {
   "EniId": "string",
   "EniPrivateIpAddress": "string"
}
],
"Platform": "string",
"State": "string",
"StateChangeReason": {
   "Code": "string",
   "Message": "string"
}
],
"VpcConfig": {
   "SecurityGroupIds": [ "string" ],
   "SubnetIds": [ "string" ]
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**ImageBuilder**

Information about the image builder.

Type: ImageBuilder object
Errors

For information about the errors that are common to all actions, see Common Errors.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**IncompatibleImageException**

The image can't be updated because it's not compatible for updates.

HTTP Status Code: 400

**InvalidAccountStatusException**

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

**InvalidParameterCombinationException**

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

**InvalidRoleException**

The specified role is invalid.

HTTP Status Code: 400

**LimitExceededException**

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400
RequestLimitExceededException

AppStream 2.0 can't process the request right now because the Describe calls from your AWS account are being throttled by Amazon EC2. Try again later.

HTTP Status Code: 400

ResourceAlreadyExistsException

The specified resource already exists.

HTTP Status Code: 400

ResourceNotAvailableException

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

CreateImageBuilderStreamingURL

Creates a URL to start an image builder streaming session.

Request Syntax

```json
{
    "Name": "string",
    "Validity": number
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Name**

The name of the image builder.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**Validity**

The time that the streaming URL will be valid, in seconds. Specify a value between 1 and 604800 seconds. The default is 3600 seconds.

Type: Long

Required: No

Response Syntax

```json
{
    "Expires": number,
    "StreamingURL": "string"
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Expires**

The elapsed time, in seconds after the Unix epoch, when this URL expires.

Type: Timestamp

**StreamingURL**

The URL to start the AppStream 2.0 streaming session.

Type: String

Length Constraints: Minimum length of 1.

Errors

For information about the errors that are common to all actions, see Common Errors.

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

See Also

• AWS SDK for Python
• AWS SDK for Ruby V3
CreateStack

Creates a stack to start streaming applications to users. A stack consists of an associated fleet, user access policies, and storage configurations.

**Request Syntax**

```json
{
    "AccessEndpoints": [ 
        {
            "EndpointType": "string",
            "VpceId": "string"
        }
    ],
    "ApplicationSettings": { 
        "Enabled": boolean,
        "SettingsGroup": "string"
    },
    "Description": "string",
    "DisplayName": "string",
    "EmbedHostDomains": [ "string" ],
    "FeedbackURL": "string",
    "Name": "string",
    "RedirectURL": "string",
    "StorageConnectors": [ 
        {
            "ConnectorType": "string",
            "Domains": [ "string" ],
            "ResourceIdentifier": "string"
        }
    ],
    "StreamingExperienceSettings": { 
        "PreferredProtocol": "string"
    },
    "Tags": { 
        "string": "string"
    },
    "UserSettings": [ 
        {
            "Action": "string",
            "MaximumLength": number,
            "Permission": "string"
        }
    ]
}
```
Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**AccessEndpoints**

The list of interface VPC endpoint (interface endpoint) objects. Users of the stack can connect to AppStream 2.0 only through the specified endpoints.

Type: Array of AccessEndpoint objects

Array Members: Minimum number of 1 item. Maximum number of 4 items.

Required: No

**ApplicationSettings**

The persistent application settings for users of a stack. When these settings are enabled, changes that users make to applications and Windows settings are automatically saved after each session and applied to the next session.

Type: ApplicationSettings object

Required: No

**Description**

The description to display.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**DisplayName**

The stack name to display.

Type: String
Length Constraints: Maximum length of 100.
Required: No

**EmbedHostDomains**

The domains where AppStream 2.0 streaming sessions can be embedded in an iframe. You must approve the domains that you want to host embedded AppStream 2.0 streaming sessions.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 20 items.

Length Constraints: Maximum length of 128.

Pattern: (?:[a-z0-9](?:[a-z0-9-]{0,61}[a-z0-9])?\.)+[a-z0-9][a-z0-9-]{0,61}[a-z0-9]

Required: No

**FeedbackURL**

The URL that users are redirected to after they click the Send Feedback link. If no URL is specified, no Send Feedback link is displayed.

Type: String

Length Constraints: Maximum length of 1000.

Required: No

**Name**

The name of the stack.

Type: String

Pattern: ^[a-zA-Z0-9-zA-Z0-9_.-]{0,100}$

Required: Yes

**RedirectURL**

The URL that users are redirected to after their streaming session ends.

Type: String
Length Constraints: Maximum length of 1000.

Required: No

**StorageConnectors**

The storage connectors to enable.

Type: Array of `StorageConnector` objects

Required: No

**StreamingExperienceSettings**

The streaming protocol you want your stack to prefer. This can be UDP or TCP. Currently, UDP is only supported in the Windows native client.

Type: `StreamingExperienceSettings` object

Required: No

**Tags**

The tags to associate with the stack. A tag is a key-value pair, and the value is optional. For example, Environment=Test. If you do not specify a value, Environment=.

If you do not specify a value, the value is set to an empty string.

Generally allowed characters are: letters, numbers, and spaces representable in UTF-8, and the following special characters:

```
_.:/ = + \ - @
```

For more information about tags, see [Tagging Your Resources](#) in the *Amazon AppStream 2.0 Administration Guide*.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^((?!aws:.)[p{L}\p{Z}\p{N}]_.:/=+\-@]*)$`

Value Length Constraints: Minimum length of 0. Maximum length of 256.
Value Pattern: ^([-\{L\p{Z}\p{N}_./=+\-=@]*)$

Required: No

**UserSettings**

The actions that are enabled or disabled for users during their streaming sessions. By default, these actions are enabled.

Type: Array of [UserSetting](#) objects

Array Members: Minimum number of 1 item.

Required: No

**Response Syntax**

```json
{
    "Stack": {
        "AccessEndpoints": [
            {
                "EndpointType": "string",
                "VpceId": "string"
            }
        ],
        "ApplicationSettings": {
            "Enabled": boolean,
            "S3BucketName": "string",
            "SettingsGroup": "string"
        },
        "Arn": "string",
        "CreatedTime": number,
        "Description": "string",
        "DisplayName": "string",
        "EmbedHostDomains": [ "string" ],
        "FeedbackURL": "string",
        "Name": "string",
        "RedirectURL": "string",
        "StackErrors": [
            {
                "ErrorCode": "string",
                "ErrorMessage": "string"
            }
        ]
    }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Stack

Information about the stack.

Type: Stack object

Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

InvalidRoleException

The specified role is invalid.

HTTP Status Code: 400

LimitExceededException

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceAlreadyExistsException

The specified resource already exists.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

• **AWS SDK for Python**
• **AWS SDK for Ruby V3**
CreateStreamingURL

Creates a temporary URL to start an AppStream 2.0 streaming session for the specified user. A streaming URL enables application streaming to be tested without user setup.

Request Syntax

```
{
    "ApplicationId": "string",
    "FleetName": "string",
    "SessionContext": "string",
    "StackName": "string",
    "UserId": "string",
    "Validity": number
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**ApplicationId**

The name of the application to launch after the session starts. This is the name that you specified as Name in the Image Assistant. If your fleet is enabled for the Desktop stream view, you can also choose to launch directly to the operating system desktop. To do so, specify Desktop.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**FleetName**

The name of the fleet.

Type: String
Length Constraints: Minimum length of 1.

Required: Yes

**SessionContext**

The session context. For more information, see Session Context in the Amazon AppStream 2.0 Administration Guide.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**StackName**

The name of the stack.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**UserId**

The identifier of the user.

Type: String

Pattern: [\w+=,.@-]*

Required: Yes

**Validity**

The time that the streaming URL will be valid, in seconds. Specify a value between 1 and 604800 seconds. The default is 60 seconds.

Type: Long

Required: No
Response Syntax

```json
{
   "Expires": number,
   "StreamingURL": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Expires**

The elapsed time, in seconds after the Unix epoch, when this URL expires.

Type: Timestamp

**StreamingURL**

The URL to start the AppStream 2.0 streaming session.

Type: String

Length Constraints: Minimum length of 1.

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**InvalidParameterCombinationException**

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400
**ResourceNotFoundException**

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

CreateUpdatedImage

Creates a new image with the latest Windows operating system updates, driver updates, and AppStream 2.0 agent software.

For more information, see the "Update an Image by Using Managed AppStream 2.0 Image Updates" section in Administer Your AppStream 2.0 Images, in the Amazon AppStream 2.0 Administration Guide.

Request Syntax

```json
{
    "dryRun": boolean,
    "existingImageName": "string",
    "newImageDescription": "string",
    "newImageDisplayName": "string",
    "newImageName": "string",
    "newImageTags": {
        "string": "string"
    }
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**dryRun**

Indicates whether to display the status of image update availability before AppStream 2.0 initiates the process of creating a new updated image. If this value is set to true, AppStream 2.0 displays whether image updates are available. If this value is set to false, AppStream 2.0 initiates the process of creating a new updated image without displaying whether image updates are available.

Type: Boolean

Required: No
**existingImageName**

The name of the image to update.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**newImageDescription**

The description to display for the new image.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**newImageDisplayName**

The name to display for the new image.

Type: String

Length Constraints: Maximum length of 100.

Required: No

**newImageName**

The name of the new image. The name must be unique within the AWS account and Region.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**newImageTags**

The tags to associate with the new image. A tag is a key-value pair, and the value is optional. For example, Environment=Test. If you do not specify a value, Environment=.

Generally allowed characters are: letters, numbers, and spaces representable in UTF-8, and the following special characters:
If you do not specify a value, the value is set to an empty string.

For more information about tags, see [Tagging Your Resources](#) in the *Amazon AppStream 2.0 Administration Guide*.

**Type:** String to string map

**Map Entries:** Maximum number of 50 items.

**Key Length Constraints:** Minimum length of 1. Maximum length of 128.

**Key Pattern:** `^\([^!\w].[^!\w_/:=\@]*\)$`

**Value Length Constraints:** Minimum length of 0. Maximum length of 256.

**Value Pattern:** `^\([^!\w_/:=\@]*\)$`

**Required:** No

**Response Syntax**

```
{
  "canUpdateImage": boolean,
  "image": {
    "Applications": [
      {
        "AppBlockArn": "string",
        "Arn": "string",
        "CreatedTime": number,
        "Description": "string",
        "DisplayName": "string",
        "Enabled": boolean,
        "IconS3Location": {
          "S3Bucket": "string",
          "S3Key": "string"
        },
        "IconURL": "string",
        "InstanceFamilies": ["string"],
        "LaunchParameters": "string",
        "LaunchPath": "string",
        "Metadata": {
```
"string" : "string"
},
"Name": "string",
"Platforms": [ "string" ],
"WorkingDirectory": "string"
}
],
"AppstreamAgentVersion": "string",
"Arn": "string",
"BaseImageArn": "string",
"CreatedTime": number,
"Description": "string",
"DisplayName": "string",
"ImageBuilderName": "string",
"ImageBuilderSupported": boolean,
"ImageErrors": [
{
"ErrorCode": "string",
"ErrorMessage": "string",
"ErrorTimestamp": number
}
],
"ImagePermissions": {
"allowFleet": boolean,
"allowImageBuilder": boolean
},
"Name": "string",
"Platform": "string",
"PublicBaseImageReleasedDate": number,
"State": "string",
"StateChangeReason": {
"Code": "string",
"Message": "string"
},
"Visibility": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
**canUpdateImage**

Indicates whether a new image can be created.

Type: Boolean

**image**

Describes an image.

Type: Image object

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**IncompatibleImageException**

The image can't be updated because it's not compatible for updates.

HTTP Status Code: 400

**InvalidAccountStatusException**

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

**LimitExceededException**

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400
ResourceAlreadyExistsException

The specified resource already exists.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for JavaScript V3
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
CreateUsageReportSubscription

Creates a usage report subscription. Usage reports are generated daily.

Response Syntax

```
{
  "S3BucketName": "string",
  "Schedule": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**S3BucketName**

The Amazon S3 bucket where generated reports are stored.

If you enabled on-instance session scripts and Amazon S3 logging for your session script configuration, AppStream 2.0 created an S3 bucket to store the script output. The bucket is unique to your account and Region. When you enable usage reporting in this case, AppStream 2.0 uses the same bucket to store your usage reports. If you haven't already enabled on-instance session scripts, when you enable usage reports, AppStream 2.0 creates a new S3 bucket.

Type: String

Length Constraints: Minimum length of 1.

**Schedule**

The schedule for generating usage reports.

Type: String

Valid Values: DAILY
Errors

For information about the errors that are common to all actions, see Common Errors.

InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

InvalidRoleException

The specified role is invalid.

HTTP Status Code: 400

LimitExceededException

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

CreateUser

Creates a new user in the user pool.

Request Syntax

```json
{
    "AuthenticationType": "string",
    "FirstName": "string",
    "LastName": "string",
    "MessageAction": "string",
    "UserName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**AuthenticationType**

The authentication type for the user. You must specify USERPOOL.

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: Yes

**FirstName**

The first name, or given name, of the user.

Type: String

Length Constraints: Maximum length of 2048.

Pattern: ^[A-Za-z0-9-_\s]+$

Required: No
**LastName**

The last name, or surname, of the user.

Type: String

Length Constraints: Maximum length of 2048.

Pattern: ^[A-Za-z0-9\-_\s]+$

Required: No

**MessageAction**

The action to take for the welcome email that is sent to a user after the user is created in the user pool. If you specify SUPPRESS, no email is sent. If you specify RESEND, do not specify the first name or last name of the user. If the value is null, the email is sent.

**Note**

The temporary password in the welcome email is valid for only 7 days. If users don’t set their passwords within 7 days, you must send them a new welcome email.

Type: String

Valid Values: SUPPRESS | RESEND

Required: No

**UserName**

The email address of the user.

**Note**

Users' email addresses are case-sensitive. During login, if they specify an email address that doesn't use the same capitalization as the email address specified when their user pool account was created, a "user does not exist" error message displays.

Type: String

Pattern: [\p{L}\p{M}\p{S}\p{N}\p{P}]+

Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

*InvalidAccountStatusException*

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

*InvalidParameterCombinationException*

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

*LimitExceededException*

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

*OperationNotPermittedException*

The attempted operation is not permitted.

HTTP Status Code: 400

*ResourceAlreadyExistsException*

The specified resource already exists.

HTTP Status Code: 400

DeleteAppBlock

Deletes an app block.

Request Syntax

```json
{
  "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see `Common Parameters`.

The request accepts the following data in JSON format.

**Name**

The name of the app block.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see `Common Errors`.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
ResourceInUseException

The specified resource is in use.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

DeleteAppBlockBuilder

Deletes an app block builder.

An app block builder can only be deleted when it has no association with an app block.

Request Syntax

```
{
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Name**

The name of the app block builder.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceInUseException**

The specified resource is in use.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

DeleteApplication

Deletes an application.

Request Syntax

```
{
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**Name**

The name of the application.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceInUseException

The specified resource is in use.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

DeleteDirectoryConfig

Deletes the specified Directory Config object from AppStream 2.0. This object includes the information required to join streaming instances to an Active Directory domain.

Request Syntax

```
{
   "DirectoryName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

DirectoryName

The name of the directory configuration.

Type: String

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ResourceInUseException

The specified resource is in use.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.
HTTP Status Code: 400

**See Also**

- AWS SDK for Ruby V3
DeleteEntitlement

Deletes the specified entitlement.

Request Syntax

```
{
  "Name": "string",
  "StackName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**Name**

The name of the entitlement.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**StackName**

The name of the stack with which the entitlement is associated.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.
Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**EntitlementNotFoundException**

The entitlement can't be found.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

DeleteFleet

Deletes the specified fleet.

Request Syntax

```
{
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**Name**

The name of the fleet.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
ResourceInUseException

The specified resource is in use.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

- AWS SDK for Ruby V3
DeleteImage

Deletes the specified image. You cannot delete an image when it is in use. After you delete an image, you cannot provision new capacity using the image.

Request Syntax

```json
{
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**Name**

The name of the image.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

Response Syntax

```json
{
   "Image": {
      "Applications": [
         {
            "AppBlockArn": "string",
            "Arn": "string",
            "CreatedTime": number,
            "Description": "string",
            "DisplayName": "string",
            "Enabled": boolean,
            "IconS3Location": {
               "S3Bucket": "string",
               "S3Key": "string"
            }
         }
      ]
   }
}
```

```
},
  "IconURL": "string",
  "InstanceFamilies": [ "string" ],
  "LaunchParameters": "string",
  "LaunchPath": "string",
  "Metadata": {
    "string": "string"
  },
  "Name": "string",
  "Platforms": [ "string" ],
  "WorkingDirectory": "string"
}
],
"AppstreamAgentVersion": "string",
"Arn": "string",
"BaseImageArn": "string",
"CreatedTime": number,
"Description": "string",
"DisplayName": "string",
"ImageBuilderName": "string",
"ImageBuilderSupported": boolean,
"ImageErrors": [
  {
    "ErrorCode": "string",
    "ErrorMessage": "string",
    "ErrorTimestamp": number
  }
],
"ImagePermissions": {
  "allowFleet": boolean,
  "allowImageBuilder": boolean
},
"Name": "string",
"Platform": "string",
"PublicBaseImageReleasedDate": number,
"State": "string",
"StateChangeReason": {
  "Code": "string",
  "Message": "string"
},
"Visibility": "string"
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Image**

Information about the image.

Type: Image object

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceInUseException**

The specified resource is in use.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

• AWS SDK for Ruby V3
DeleteImageBuilder

Deletes the specified image builder and releases the capacity.

Request Syntax

```json
{
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Name**

The name of the image builder.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

Response Syntax

```json
{
   "ImageBuilder": {
      "AccessEndpoints": [
         {
            "EndpointType": "string",
            "VpceId": "string"
         }
      ],
      "AppstreamAgentVersion": "string",
      "Arn": "string",
      "CreatedTime": "number",
      "Description": "string"
   }
}
```
"DisplayName": "string",
"DomainJoinInfo": {
   "DirectoryName": "string",
   "OrganizationalUnitDistinguishedName": "string"
},
"EnableDefaultInternetAccess": boolean,
"IamRoleArn": "string",
"ImageArn": "string",
"ImageBuilderErrors": [
   {
      "ErrorCode": "string",
      "ErrorMessage": "string",
      "ErrorTimestamp": number
   }
],
"InstanceType": "string",
"Name": "string",
"NetworkAccessConfiguration": {
   "EniId": "string",
   "EniPrivateIpAddress": "string"
},
"Platform": "string",
"State": "string",
"StateChangeReason": {
   "Code": "string",
   "Message": "string"
},
"VpcConfig": {
   "SecurityGroupId": [ "string" ],
   "SubnetIds": [ "string" ]
}
}

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**ImageBuilder**

Information about the image builder.
Type: ImageBuilder object

Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

- AWS SDK for Ruby V3
DeleteImagePermissions

Deletes permissions for the specified private image. After you delete permissions for an image, AWS accounts to which you previously granted these permissions can no longer use the image.

Request Syntax

```json
{
   "Name": "string",
   "SharedAccountId": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**Name**

The name of the private image.

Type: String

Pattern: \^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**SharedAccountId**

The 12-digit identifier of the AWS account for which to delete image permissions.

Type: String

Pattern: ^\d+$

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.
Errors

For information about the errors that are common to all actions, see Common Errors.

ResourceNotAvailableException

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

- AWS SDK for Ruby V3
DeleteStack

Deletes the specified stack. After the stack is deleted, the application streaming environment provided by the stack is no longer available to users. Also, any reservations made for application streaming sessions for the stack are released.

Request Syntax

```
{
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**Name**

The name of the stack.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceInUseException

The specified resource is in use.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

DeleteUsageReportSubscription

Disables usage report generation.

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

DeleteUser

Deletes a user from the user pool.

Request Syntax

```
{
   "AuthenticationType": "string",
   "UserName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**AuthenticationType**

The authentication type for the user. You must specify USERPOOL.

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: Yes

**UserName**

The email address of the user.

- **Note**
  Users' email addresses are case-sensitive.

Type: String

Pattern: [\p{L}\p{M}\p{S}\p{N}\p{P}]+
Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

DescribeAppBlockBuilderAppBlockAssociations

Retrieves a list that describes one or more app block builder associations.

Request Syntax

```
{
   "AppBlockArn": "string",
   "AppBlockBuilderName": "string",
   "MaxResults": number,
   "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#). The request accepts the following data in JSON format.

**AppBlockArn**

The ARN of the app block.

Type: String

Pattern: ^arn:aws(?:-cn|-iso-b|-iso|-us-gov)?:[A-Za-z0-9][A-Za-z0-9_/\-]{0,62}:[A-Za-z0-9_/\-]{0,63}:[A-Za-z0-9_/\-]{0,63}:[A-Za-z0-9\[A-Za-z0-9_\-/+=,@.\-]{0,1023}$

Required: No

**AppBlockBuilderName**

The name of the app block builder.

Type: String

Pattern: ^[a-zA-Z0-9-9][a-zA-Z0-9_/\-]{0,100}$

Required: No

**MaxResults**

The maximum size of each page of results.
Type: Integer

Required: No

NextToken

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```json
{
    "AppBlockBuilderAppBlockAssociations": [
        {
            "AppBlockArn": "string",
            "AppBlockBuilderName": "string"
        }
    ],
    "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

AppBlockBuilderAppBlockAssociations

This list of app block builders associated with app blocks.

Type: Array of AppBlockBuilderAppBlockAssociation objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

NextToken

The pagination token used to retrieve the next page of results for this operation.
Type: String

Length Constraints: Minimum length of 1.

Errors

For information about the errors that are common to all actions, see Common Errors.

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

See Also

- AWS SDK for Ruby V3
DescribeAppBlockBuilders

Retrieves a list that describes one or more app block builders.

Request Syntax

```json
{
  "MaxResults": number,
  "Names": [ "string" ],
  "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**MaxResults**

The maximum size of each page of results. The maximum value is 25.

Type: Integer

Required: No

**Names**

The names of the app block builders.

Type: Array of strings

Length Constraints: Minimum length of 1.

Required: No

**NextToken**

The pagination token used to retrieve the next page of results for this operation.

Type: String
Length Constraints: Minimum length of 1.
Required: No

Response Syntax

```json
{
    "AppBlockBuilders": [
        {
            "AccessEndpoints": [
                {
                    "EndpointType": "string",
                    "VpceId": "string"
                }
            ],
            "AppBlockBuilderErrors": [
                {
                    "ErrorCode": "string",
                    "ErrorMessage": "string",
                    "ErrorTimestamp": number
                }
            ],
            "Arn": "string",
            "CreatedTime": number,
            "Description": "string",
            "DisplayName": "string",
            "EnableDefaultInternetAccess": boolean,
            "IamRoleArn": "string",
            "InstanceType": "string",
            "Name": "string",
            "Platform": "string",
            "State": "string",
            "StateChangeReason": {
                "Code": "string",
                "Message": "string"
            },
            "VpcConfig": {
                "SecurityGroupIds": [ "string" ],
                "SubnetIds": [ "string" ]
            }
        }
    ],
    "NextToken": "string"
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**AppBlockBuilders**

The list that describes one or more app block builders.

Type: Array of [AppBlockBuilder](#) objects

**NextToken**

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

DescribeAppBlocks

Retrieves a list that describes one or more app blocks.

Request Syntax

```
{
   "Arns": [ "string" ],
   "MaxResults": number,
   "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**Arns**

The ARNs of the app blocks.

Type: Array of strings

Pattern: ^arn:aws(?!-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9-._/-]{0,62}:[A-Za-z0-9-._/-]{0,63}:[A-Za-z0-9-._/-]{0,63}:[A-Za-z0-9][A-Za-z0-9-._/+@\-]{0,1023}$

Required: No

**MaxResults**

The maximum size of each page of results.

Type: Integer

Required: No

**NextToken**

The pagination token used to retrieve the next page of results for this operation.
Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```json
{
    "AppBlocks": [
        {
            "AppBlockErrors": [
                {
                    "ErrorCode": "string",
                    "ErrorMessage": "string"
                }
            ],
            "Arn": "string",
            "CreatedTime": number,
            "Description": "string",
            "DisplayName": "string",
            "Name": "string",
            "PackagingType": "string",
            "PostSetupScriptDetails": {
                "ExecutableParameters": "string",
                "ExecutablePath": "string",
                "ScriptS3Location": {
                    "S3Bucket": "string",
                    "S3Key": "string"
                },
                "TimeoutInSeconds": number
            },
            "SetupScriptDetails": {
                "ExecutableParameters": "string",
                "ExecutablePath": "string",
                "ScriptS3Location": {
                    "S3Bucket": "string",
                    "S3Key": "string"
                },
                "TimeoutInSeconds": number
            },
            "SourceS3Location": {
                "S3Bucket": "string",
                "S3Key": "string"
            }
        }
    ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**AppBlocks**

The app blocks in the list.

Type: Array of [AppBlock](#) objects

**NextToken**

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

DescribeApplicationFleetAssociations

Retrieves a list that describes one or more application fleet associations. Either ApplicationArn or FleetName must be specified.

Request Syntax

```
{
   "ApplicationArn": "string",
   "FleetName": "string",
   "MaxResults": number,
   "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**ApplicationArn**

The ARN of the application.

Type: String

Pattern: `^arn:aws(?:-cn|-iso-b|-iso|-us-gov)?:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,1023}$`

Required: No

**FleetName**

The name of the fleet.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: No
**MaxResults**

The maximum size of each page of results.

Type: Integer

Required: No

**NextToken**

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**Response Syntax**

```
{
   "ApplicationFleetAssociations": [
   {
      "ApplicationArn": "string",
      "FleetName": "string"
   }
   ],
   "NextToken": "string"
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**ApplicationFleetAssociations**

The application fleet associations in the list.

Type: Array of **ApplicationFleetAssociation** objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.
NextToken

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.

Errors

For information about the errors that are common to all actions, see Common Errors.

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

See Also

DescribeApplications

Retrieves a list that describes one or more applications.

Request Syntax

```
{
    "Arns": [ "string" ],
    "MaxResults": number,
    "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Arns**

The ARNs for the applications.

Type: Array of strings

Pattern: `^arn:aws([^:-]+)(?:-[a-z0-9]*[^-]+)*:[a-z0-9][a-z0-9_/.+-]{0,1023}$`

  Required: No

**MaxResults**

The maximum size of each page of results.

Type: Integer

  Required: No

**NextToken**

The pagination token used to retrieve the next page of results for this operation.
Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```json
{
    "Applications": [
        {
            "AppBlockArn": "string",
            "Arn": "string",
            "CreatedTime": "number",
            "Description": "string",
            "DisplayName": "string",
            "Enabled": "boolean",
            "IconS3Location": {
                "S3Bucket": "string",
                "S3Key": "string"
            },
            "IconURL": "string",
            "InstanceFamilies": [ "string" ],
            "LaunchParameters": "string",
            "LaunchPath": "string",
            "Metadata": {
                "string": "string"
            },
            "Name": "string",
            "Platforms": [ "string" ],
            "WorkingDirectory": "string"
        }
    ],
    "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
Applications

The applications in the list.

Type: Array of Application objects

NextToken

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.

Errors

For information about the errors that are common to all actions, see Common Errors.

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

• AWS SDK for Ruby V3
DescribeDirectoryConfigs

Retrieves a list that describes one or more specified Directory Config objects for AppStream 2.0, if the names for these objects are provided. Otherwise, all Directory Config objects in the account are described. These objects include the configuration information required to join fleets and image builders to Microsoft Active Directory domains.

Although the response syntax in this topic includes the account password, this password is not returned in the actual response.

Request Syntax

```
{
  "DirectoryNames": [ "string" ],
  "MaxResults": number,
  "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**DirectoryNames**

The directory names.

Type: Array of strings

Required: No

**MaxResults**

The maximum size of each page of results.

Type: Integer

Required: No

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.
Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

{  
  "DirectoryConfigs": [  
    {  
      "CertificateBasedAuthProperties": {  
        "CertificateAuthorityArn": "string",  
        "Status": "string"  
      },  
      "CreatedTime": number,  
      "DirectoryName": "string",  
      "OrganizationalUnitDistinguishedNames": [ "string" ],  
      "ServiceAccountCredentials": {  
        "AccountName": "string",  
        "AccountPassword": "string"  
      }  
    }  
  ],  
  "NextToken": "string"  
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DirectoryConfigs

Information about the directory configurations. Note that although the response syntax in this topic includes the account password, this password is not returned in the actual response.

Type: Array of DirectoryConfig objects
**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

**See Also**

DescribeEntitlements

Retrieves a list that describes one of more entitlements.

Request Syntax

```
{
    "MaxResults": number,
    "Name": "string",
    "NextToken": "string",
    "StackName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**MaxResults**

The maximum size of each page of results.

Type: Integer

Required: No

**Name**

The name of the entitlement.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: No

**NextToken**

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.
Required: No

StackName

The name of the stack with which the entitlement is associated.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

Response Syntax

```json
{
    "Entitlements": [
        {
            "AppVisibility": "string",
            "Attributes": [
                {
                    "Name": "string",
                    "Value": "string"
                }
            ],
            "CreatedTime": number,
            "Description": "string",
            "LastModifiedTime": number,
            "Name": "string",
            "StackName": "string"
        }
    ],
    "NextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Entitlements

The entitlements.
Type: Array of `Entitlement` objects

**NextToken**

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**EntitlementNotFoundException**

The entitlement can't be found.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

**See Also**

DescribeFleets

Retrieves a list that describes one or more specified fleets, if the fleet names are provided. Otherwise, all fleets in the account are described.

Request Syntax

```json
{
   "Names": [ "string" ],
   "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Names**

The names of the fleets to describe.

Type: Array of strings

Length Constraints: Minimum length of 1.

Required: No

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```json
{
   "Fleets": [
```
{  
  "Arn": "string",
  "ComputeCapacityStatus": {  
    "ActiveUserSessions": number,
    "ActualUserSessions": number,
    "Available": number,
    "AvailableUserSessions": number,
    "Desired": number,
    "DesiredUserSessions": number,
    "InUse": number,
    "Running": number
  },
  "CreatedTime": number,
  "Description": "string",
  "DisconnectTimeoutInSeconds": number,
  "DisplayName": "string",
  "DomainJoinInfo": {  
    "DirectoryName": "string",
    "OrganizationalUnitDistinguishedName": "string"
  },
  "EnableDefaultInternetAccess": boolean,
  "FleetErrors": [
    {  
      "ErrorCode": "string",
      "ErrorMessage": "string"
    }
  ],
  "FleetType": "string",
  "IamRoleArn": "string",
  "IdleDisconnectTimeoutInSeconds": number,
  "ImageArn": "string",
  "ImageName": "string",
  "InstanceType": "string",
  "MaxConcurrentSessions": number,
  "MaxSessionsPerInstance": number,
  "MaxUserDurationInSeconds": number,
  "Name": "string",
  "Platform": "string",
  "SessionScriptS3Location": {  
    "S3Bucket": "string",
    "S3Key": "string"
  },
  "State": "string",
  "StreamView": "string"  
}
"UsbDeviceFilterStrings": [ "string" ],
"VpcConfig": {
   "SecurityGroupIds": [ "string" ],
   "SubnetIds": [ "string" ]
}
"NextToken": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Fleets**

Information about the fleets.

Type: Array of Fleet objects

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

Errors

For information about the errors that are common to all actions, see Common Errors.

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

DescribeImageBuilders

Retrieves a list that describes one or more specified image builders, if the image builder names are provided. Otherwise, all image builders in the account are described.

**Request Syntax**

```
{
    "MaxResults": number,
    "Names": [ "string" ],
    "NextToken": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**MaxResults**

The maximum size of each page of results.

Type: Integer

Required: No

**Names**

The names of the image builders to describe.

Type: Array of strings

Length Constraints: Minimum length of 1.

Required: No

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.
Response Syntax

```json
{
    "ImageBuilders": [
        {
            "AccessEndpoints": [
                {
                    "EndpointType": "string",
                    "VpcId": "string"
                }
            ],
            "AppstreamAgentVersion": "string",
            "Arn": "string",
            "CreatedTime": "number",
            "Description": "string",
            "DisplayName": "string",
            "DomainJoinInfo": {
                "DirectoryName": "string",
                "OrganizationalUnitDistinguishedName": "string"
            },
            "EnableDefaultInternetAccess": boolean,
            "IamRoleArn": "string",
            "ImageArn": "string",
            "ImageBuilderErrors": [
                {
                    "ErrorCode": "string",
                    "ErrorMessage": "string",
                    "ErrorTimestamp": "number"
                }
            ],
            "InstanceType": "string",
            "Name": "string",
            "NetworkAccessConfiguration": {
                "EniId": "string",
                "EniPrivateIpAddress": "string"
            },
            "Platform": "string"
        }
    ]
}
```
"State": "string",
"StateChangeReason": {
  "Code": "string",
  "Message": "string"
},
"VpcConfig": {
  "SecurityGroupIds": [ "string" ],
  "SubnetIds": [ "string" ]
}
],
"NextToken": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**ImageBuilders**

Information about the image builders.

Type: Array of **ImageBuilder** objects

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

**Errors**

For information about the errors that are common to all actions, see **Common Errors**.

**ResourceNotFoundException**

The specified resource was not found.
HTTP Status Code: 400

DescribeImagePermissions

Retrieves a list that describes the permissions for shared AWS account IDs on a private image that you own.

Request Syntax

```json
{
   "MaxResults": number,
   "Name": "string",
   "NextToken": "string",
   "SharedAwsAccountIds": [ "string" ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**MaxResults**

The maximum size of each page of results.

Type: Integer

Valid Range: Minimum value of 0. Maximum value of 500.

Required: No

**Name**

The name of the private image for which to describe permissions. The image must be one that you own.

Type: String

Pattern: ^[a-zA-Z0-9-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes
**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**SharedAwsAccountIds**

The 12-digit identifier of one or more AWS accounts with which the image is shared.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 5 items.

Pattern: ^\d+$

Required: No

**Response Syntax**

```json
{
   "Name": "string",
   "NextToken": "string",
   "SharedImagePermissionsList": [
      {
         "imagePermissions": {
            "allowFleet": boolean,
            "allowImageBuilder": boolean
         },
         "sharedAccountId": "string"
      }
   ]
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

Name

The name of the private image.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

NextToken

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

SharedImagePermissionsList

The permissions for a private image that you own.

Type: Array of SharedImagePermissions objects

Errors

For information about the errors that are common to all actions, see Common Errors.

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

• AWS SDK for Python
• AWS SDK for Ruby V3
DescribeImages

Retrieves a list that describes one or more specified images, if the image names or image ARNs are provided. Otherwise, all images in the account are described.

Request Syntax

```json
{
    "Arns": [ "string" ],
    "MaxResults": number,
    "Names": [ "string" ],
    "NextToken": "string",
    "Type": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**Arns**

The ARNs of the public, private, and shared images to describe.

Type: Array of strings

Pattern: `^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\_/.-]{0,62}:[A-Za-z0-9\_/.-]{0,63}:[A-Za-z0-9\_/.-]{0,63}:[A-Za-z0-9\_/.+=,@.\-]{0,1023}$`

Required: No

**MaxResults**

The maximum size of each page of results.

Type: Integer

Valid Range: Minimum value of 0. Maximum value of 25.

Required: No
Names

The names of the public or private images to describe.

Type: Array of strings

Length Constraints: Minimum length of 1.

Required: No

NextToken

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Type

The type of image (public, private, or shared) to describe.

Type: String

Valid Values: PUBLIC | PRIVATE | SHARED

Required: No

Response Syntax

```json
{
  "Images": [
    {
      "Applications": [
        {
          "AppBlockArn": "string",
          "Arn": "string",
          "CreatedAt": number,
          "Description": "string",
          "DisplayName": "string",
          "Enabled": boolean,
          "IconS3Location": {}
        }
      ]
    }
  ]
}
```
"S3Bucket": "string",
"S3Key": "string"
},
"IconURL": "string",
"InstanceFamilies": [ "string" ],
"LaunchParameters": "string",
"LaunchPath": "string",
"Metadata": {
  "string": "string"
},
"Name": "string",
"Platforms": [ "string" ],
"WorkingDirectory": "string"
}]
],
"AppstreamAgentVersion": "string",
"Arn": "string",
"BaseImageArn": "string",
"CreateTime": number,
"Description": "string",
"DisplayName": "string",
"ImageBuilderName": "string",
"ImageBuilderSupported": boolean,
"ImageErrors": [
  {
    "ErrorCode": "string",
    "ErrorMessage": "string",
    "ErrorTimestamp": number
  }
],
"ImagePermissions": {
  "allowFleet": boolean,
  "allowImageBuilder": boolean
},
"Name": "string",
"Platform": "string",
"PublicBaseImageReleasedDate": number,
"State": "string",
"StateChangeReason": {
  "Code": "string",
  "Message": "string"
},
"Visibility": "string"}
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Images**

Information about the images.

Type: Array of [Image objects]

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**InvalidParameterCombinationException**

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400
See Also

- AWS SDK for Ruby V3
DescribeSessions

Retrieves a list that describes the streaming sessions for a specified stack and fleet. If a UserId is provided for the stack and fleet, only streaming sessions for that user are described. If an authentication type is not provided, the default is to authenticate users using a streaming URL.

Request Syntax

```
{
   "AuthenticationType": "string",
   "FleetName": "string",
   "InstanceId": "string",
   "Limit": number,
   "NextToken": "string",
   "StackName": "string",
   "UserId": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**AuthenticationType**

The authentication method. Specify API for a user authenticated using a streaming URL or SAML for a SAML federated user. The default is to authenticate users using a streaming URL.

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: No

**FleetName**

The name of the fleet. This value is case-sensitive.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$
Required: Yes

**InstanceId**

The identifier for the instance hosting the session.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**Limit**

The size of each page of results. The default value is 20 and the maximum value is 50.

Type: Integer

Required: No

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**StackName**

The name of the stack. This value is case-sensitive.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**UserId**

The user identifier (ID). If you specify a user ID, you must also specify the authentication type.

Type: String

Required: No

Response Syntax

```
{
    "NextToken": "string",
    "Sessions": [
        {
            "AuthenticationType": "string",
            "ConnectionState": "string",
            "FleetName": "string",
            "Id": "string",
            "InstanceId": "string",
            "MaxExpirationTime": number,
            "NetworkAccessConfiguration": {
                "EniId": "string",
                "EniPrivateIpAddress": "string"
            },
            "StackName": "string",
            "StartTime": number,
            "State": "string",
            "UserId": "string"
        }
    ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.
Sessions

Information about the streaming sessions.

Type: Array of Session objects

Errors

For information about the errors that are common to all actions, see Common Errors.

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

See Also

- AWS SDK for Ruby V3
DescribeStacks

Retrieves a list that describes one or more specified stacks, if the stack names are provided. Otherwise, all stacks in the account are described.

**Request Syntax**

```json
{
   "Names": [ "string" ],
   "NextToken": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Names**

The names of the stacks to describe.

Type: Array of strings

Length Constraints: Minimum length of 1.

Required: No

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**Response Syntax**

```json
{
   "NextToken": "string",
}
```
"Stacks": [
  {
    "AccessEndpoints": [
      {
        "EndpointType": "string",
        "VpcId": "string"
      }
    ],
    "ApplicationSettings": {
      "Enabled": boolean,
      "S3BucketName": "string",
      "SettingsGroup": "string"
    },
    "Arn": "string",
    "CreatedTime": number,
    "Description": "string",
    "DisplayName": "string",
    "EmbedHostDomains": [ "string" ],
    "FeedbackURL": "string",
    "Name": "string",
    "RedirectURL": "string",
    "StackErrors": [
      {
        "ErrorCode": "string",
        "ErrorMessage": "string"
      }
    ],
    "StorageConnectors": [
      {
        "ConnectorType": "string",
        "Domains": [ "string" ],
        "ResourceIdentifier": "string"
      }
    ],
    "StreamingExperienceSettings": {
      "PreferredProtocol": "string"
    },
    "UserSettings": [
      {
        "Action": "string",
        "MaximumLength": number,
        "Permission": "string"
      }
    ]
  }
]
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

**Stacks**

Information about the stacks.

Type: Array of Stack objects

Errors

For information about the errors that are common to all actions, see Common Errors.

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

See Also

DescribeUsageReportSubscriptions

Retrieves a list that describes one or more usage report subscriptions.

Request Syntax

```json
{
   "MaxResults": number,
   "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**MaxResults**

The maximum size of each page of results.

Type: Integer

Required: No

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```json
{
   "NextToken": "string",
   "UsageReportSubscriptions": [ ...
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

**UsageReportSubscriptions**

Information about the usage report subscription.

Type: Array of UsageReportSubscription objects

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**InvalidAccountStatusException**

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.
HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V3
DescribeUsers

Retrieves a list that describes one or more specified users in the user pool.

Request Syntax

```json
{
    "AuthenticationType": "string",
    "MaxResults": number,
    "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**AuthenticationType**

The authentication type for the users in the user pool to describe. You must specify USERPOOL.

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: Yes

**MaxResults**

The maximum size of each page of results.

Type: Integer

Required: No

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String
Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```
{
    "NextToken": "string",
    "Users": [
        {
            "Arn": "string",
            "AuthenticationType": "string",
            "CreatedTime": number,
            "Enabled": boolean,
            "FirstName": "string",
            "LastName": "string",
            "Status": "string",
            "UserName": "string"
        }
    ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

**Users**

Information about users in the user pool.

Type: Array of User objects
Errors

For information about the errors that are common to all actions, see Common Errors.

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

- AWS SDK for Ruby V3
DescribeUserStackAssociations

Retrieves a list that describes the UserStackAssociation objects. You must specify either or both of the following:

- The stack name
- The user name (email address of the user associated with the stack) and the authentication type for the user

Request Syntax

```json
{
    "AuthenticationType": "string",
    "MaxResults": number,
    "NextToken": "string",
    "StackName": "string",
    "UserName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**AuthenticationType**

The authentication type for the user who is associated with the stack. You must specify USERPOOL.

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: No

**MaxResults**

The maximum size of each page of results.

Type: Integer
Valid Range: Minimum value of 0. Maximum value of 500.

Required: No

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**StackName**

The name of the stack that is associated with the user.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**UserName**

The email address of the user who is associated with the stack.

Note

Users' email addresses are case-sensitive.

Type: String

Pattern: [\p{L}\p{M}\p{S}\p{N}\p{P}]+

Required: No

**Response Syntax**

```json
{
}
```
"NextToken": "string",
"UserStackAssociations": [
  {
    "AuthenticationType": "string",
    "SendEmailNotification": boolean,
    "StackName": "string",
    "UserName": "string"
  }
]
}

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

**UserStackAssociations**

The UserStackAssociation objects.

Type: Array of UserStackAssociation objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**InvalidParameterCombinationException**

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400
OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

See Also

DisableUser

Disables the specified user in the user pool. Users can't sign in to AppStream 2.0 until they are re-enabled. This action does not delete the user.

Request Syntax

```json
{
    "AuthenticationType": "string",
    "UserName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**AuthenticationType**

The authentication type for the user. You must specify USERPOOL.

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: Yes

**UserName**

The email address of the user.

Type: String

Pattern: [\p{L}\p{M}\p{S}\p{N}\p{P}]+
Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

- AWS SDK for Ruby V3
DisassociateAppBlockBuilderAppBlock

Disassociates a specified app block builder from a specified app block.

Request Syntax

```
{
    "AppBlockArn": "string",
    "AppBlockBuilderName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**AppBlockArn**

The ARN of the app block.

Type: String

Pattern: ^arn:aws(?::\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\_/\.\-]{0,62}:[A-Za-z0-9\_/\.\-]{0,63}:[A-Za-z0-9\_/\.\-]{0,63}:[A-Za-z0-9\_/\.\-]{0,63}:[A-Za-z0-9\_/\.\-]{0,63}:[A-Za-z0-9\_/\-]+,\@\.\-]{0,1023}$

Required: Yes

**AppBlockBuilderName**

The name of the app block builder.

Type: String

Pattern: ^[a-zA-Z0-9\_/\.\-]{0,100}$

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.
Errors

For information about the errors that are common to all actions, see Common Errors.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**InvalidParameterCombinationException**

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

DisassociateApplicationFleet

Disassociates the specified application from the fleet.

Request Syntax

```
{
   "ApplicationArn": "string",
   "FleetName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**ApplicationArn**

The ARN of the application.

Type: String

Pattern: `^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\_\-/\.]\{0,62\}:[A-Za-z0-9\_\-/\.]\{0,63\}:[A-Za-z0-9\_\-/\.]\{0,63\}:[A-Za-z0-9\_\+/\=\,\@\.,\-]\{0,1023\}$`

Required: Yes

**FleetName**

The name of the fleet.

Type: String

Pattern: `^[a-zA-Z0-9\_\-.]\{0,100\}$`

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.
Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

DisassociateApplicationFromEntitlement

Deletes the specified application from the specified entitlement.

Request Syntax

```json
{
   "ApplicationIdentifier": "string",
   "EntitlementName": "string",
   "StackName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**ApplicationIdentifier**

The identifier of the application to remove from the entitlement.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**EntitlementName**

The name of the entitlement.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**StackName**

The name of the stack with which the entitlement is associated.

Type: String
Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

EntitlementNotFoundException

The entitlement can't be found.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

DisassociateFleet

Disassociates the specified fleet from the specified stack.

Request Syntax

{  "FleetName": "string",  "StackName": "string"}

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**FleetName**

The name of the fleet.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**StackName**

The name of the stack.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.
Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceInUseException**

The specified resource is in use.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

EnableUser

Enables a user in the user pool. After being enabled, users can sign in to AppStream 2.0 and open applications from the stacks to which they are assigned.

Request Syntax

```json
{
    "AuthenticationType": "string",
    "UserName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**AuthenticationType**

The authentication type for the user. You must specify USERPOOL.

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: Yes

**UserName**

The email address of the user.

Type: String

Note

Users' email addresses are case-sensitive. During login, if they specify an email address that doesn't use the same capitalization as the email address specified when their user pool account was created, a "user does not exist" error message displays.

Pattern: [\p{L}\p{M}\p{S}\p{N}\p{P}]+

Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

### InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

### ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

**See Also**

ExpireSession

Immediately stops the specified streaming session.

Request Syntax

```json
{
    "SessionId": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**SessionId**

The identifier of the streaming session.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ListAssociatedFleets

Retrieves the name of the fleet that is associated with the specified stack.

Request Syntax

{  
  "NextToken": "string",
  "StackName": "string"
}

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**StackName**

The name of the stack.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Syntax

{
}
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Names**

The name of the fleet.

Type: Array of strings

Length Constraints: Minimum length of 1.

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**See Also**

• AWS SDK for Ruby V3
ListAssociatedStacks

Retrieves the name of the stack with which the specified fleet is associated.

Request Syntax

```
{
   "FleetName": "string",
   "NextToken": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**FleetName**

The name of the fleet.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If this value is null, it retrieves the first page.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Response Syntax

```
{}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Names**

The name of the stack.

Type: Array of strings

Length Constraints: Minimum length of 1.

**NextToken**

The pagination token to use to retrieve the next page of results for this operation. If there are no more pages, this value is null.

Type: String

Length Constraints: Minimum length of 1.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**See Also**

• AWS SDK for Ruby V3
ListEntitledApplications

Retrieves a list of entitled applications.

Request Syntax

```json
{
    "EntitlementName": "string",
    "MaxResults": number,
    "NextToken": "string",
    "StackName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**EntitlementName**

The name of the entitlement.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**MaxResults**

The maximum size of each page of results.

Type: Integer

Required: No

**NextToken**

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.
Required: No

**StackName**

The name of the stack with which the entitlement is associated.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

### Response Syntax

```
{
    "EntitledApplications": [
        {
            "ApplicationIdentifier": "string"
        }
    ],
    "NextToken": "string"
}
```

### Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**EntitledApplications**

The entitled applications.

Type: Array of `EntitledApplication` objects

**NextToken**

The pagination token used to retrieve the next page of results for this operation.

Type: String

Length Constraints: Minimum length of 1.
Errors

For information about the errors that are common to all actions, see Common Errors.

EntitlementNotFoundException

The entitlement can't be found.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

ListTagsForResource

Retrieves a list of all tags for the specified AppStream 2.0 resource. You can tag AppStream 2.0 image builders, images, fleets, and stacks.

For more information about tags, see Tagging Your Resources in the Amazon AppStream 2.0 Administration Guide.

Request Syntax

```
{
  "ResourceArn": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**ResourceArn**

The Amazon Resource Name (ARN) of the resource.

Type: String

Pattern: `^arn:aws(?:-cn|\-iso-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\-\.\_]{0,62}:[A-Za-z0-9\-\.\_]{0,63}:[A-Za-z0-9\-\.\_]{0,63}:[A-Za-z0-9\-\.\_\+\=,\@\-\\_]{0,1023}$`

Required: Yes

Response Syntax

```
{
  "Tags": {
    "string": "string"
  }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Tags**

The information about the tags.

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^(?!aws:).[^\p{L}\p{Z}\p{N}_.:/=+-@]*$`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: `^([^\p{L}\p{Z}\p{N}_.:/=+-@]*)$`

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

**See Also**

• AWS SDK for Go
• AWS SDK for Java V2
• AWS SDK for JavaScript V3
• AWS SDK for PHP V3
• AWS SDK for Python
• AWS SDK for Ruby V3
StartAppBlockBuilder

Starts an app block builder.

An app block builder can only be started when it's associated with an app block.

Starting an app block builder starts a new instance, which is equivalent to an elastic fleet instance with application builder assistance functionality.

Request Syntax

```json
{
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Name**

The name of the app block builder.

Type: String

Pattern: `^[a-zA-Z0-9\[a-zA-Z0-9\_.-]{0,100}$`

Required: Yes

Response Syntax

```json
{
   "AppBlockBuilder": {
      "AccessEndpoints": [
         {
            "EndpointType": "string",
            "VpceId": "string"
         }
      ],
      "AppBlockBuilderErrors": ["string"
   ]
}
```
{
    "ErrorCode": "string",
    "ErrorMessage": "string",
    "ErrorTimestamp": number
},
"Arn": "string",
"CreatedTime": number,
"Description": "string",
"DisplayName": "string",
"EnableDefaultInternetAccess": boolean,
"IamRoleArn": "string",
"InstanceType": "string",
"Name": "string",
"Platform": "string",
"State": "string",
"StateChangeReason": {
    "Code": "string",
    "Message": "string"
},
"VpcConfig": {
    "SecurityGroupIds": [ "string" ],
    "SubnetIds": [ "string" ]
}
}
ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

LimitExceededException

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

RequestLimitExceededException

AppStream 2.0 can't process the request right now because the Describe calls from your AWS account are being throttled by Amazon EC2. Try again later.

HTTP Status Code: 400

ResourceNotAvailableException

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

StartFleet

Starts the specified fleet.

Request Syntax

```json
{
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Name**

The name of the fleet.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
**InvalidAccountStatusException**

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

**InvalidRoleException**

The specified role is invalid.

HTTP Status Code: 400

**LimitExceededException**

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**RequestLimitExceededException**

AppStream 2.0 can't process the request right now because the Describe calls from your AWS account are being throttled by Amazon EC2. Try again later.

HTTP Status Code: 400

**ResourceNotAvailableException**

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

**See Also**

• AWS SDK for Java V2
• AWS SDK for JavaScript V3
• AWS SDK for PHP V3
• AWS SDK for Python
• AWS SDK for Ruby V3
StartImageBuilder

Starts the specified image builder.

Request Syntax

```json
{
   "AppstreamAgentVersion": "string",
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#)

The request accepts the following data in JSON format.

**AppstreamAgentVersion**

The version of the AppStream 2.0 agent to use for this image builder. To use the latest version of the AppStream 2.0 agent, specify [LATEST].

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

**Name**

The name of the image builder.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Syntax

```json
{
   "ImageBuilder": {
      "AccessEndpoints": [
      
      ]
   }
}
```
{
    "EndpointType": "string",
    "VpceId": "string"
}
]
,"AppstreamAgentVersion": "string",
"Arn": "string",
"CreatedTime": number,
"Description": "string",
"DisplayName": "string",
"DomainJoinInfo": {
    "DirectoryName": "string",
    "OrganizationalUnitDistinguishedName": "string"
},
"EnableDefaultInternetAccess": boolean,
"IamRoleArn": "string",
"ImageArn": "string",
"ImageBuilderErrors": [
    
],
"InstanceType": "string",
"Name": "string",
"NetworkAccessConfiguration": {
    "EniId": "string",
    "EniPrivateIpAddress": "string"
},
"Platform": "string",
"State": "string",
"StateChangeReason": {
    "Code": "string",
    "Message": "string"
},
"VpcConfig": {
    "SecurityGroupIds": [ "string" ],
    "SubnetIds": [ "string" ]
}
}
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**ImageBuilder**

Information about the image builder.

Type: [ImageBuilder](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**IncompatibleImageException**

The image can't be updated because it's not compatible for updates.

HTTP Status Code: 400

**InvalidAccountStatusException**

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

**ResourceNotAvailableException**

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.
HTTP Status Code: 400

StopAppBlockBuilder

Stops an app block builder.

Stopping an app block builder terminates the instance, and the instance state is not persisted.

**Request Syntax**

```
{
   "Name": "string"
}
```

**Request Parameters**

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Name**

The name of the app block builder.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**Response Syntax**

```
{
   "AppBlockBuilder": {
      "AccessEndpoints": [
         {
            "EndpointType": "string",
            "VpceId": "string"
         }
      ],
      "AppBlockBuilderErrors": [
         {
            "ErrorCode": "string",
            "ErrorMessage": "string"
         }
      ]
   }
}
```
"ErrorResponse": {
  "ErrorTimestamp": number,
  "Arn": "string",
  "CreatedTime": number,
  "Description": "string",
  "DisplayName": "string",
  "EnableDefaultInternetAccess": boolean,
  "IamRoleArn": "string",
  "InstanceType": "string",
  "Name": "string",
  "Platform": "string",
  "State": "string",
  "StateChangeReason": {
    "Code": "string",
    "Message": "string"
  }
  "VpcConfig": {
    "SecurityGroupId": [ "string" ],
    "SubnetId": [ "string" ]
  }
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**AppBlockBuilder**

Describes an app block builder.

Type: AppBlockBuilder object

**Errors**

For information about the errors that are common to all actions, see Common Errors.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.
HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

**See Also**

StopFleet

Stops the specified fleet.

Request Syntax

```json
{
   "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

Name

The name of the fleet.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

StopImageBuilder

Stops the specified image builder.

Request Syntax

```
{
    "Name": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**Name**

The name of the image builder.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Syntax

```
{
    "ImageBuilder": {
        "AccessEndpoints": [
            {
                "EndpointType": "string",
                "VpcId": "string"
            }
        ],
        "AppstreamAgentVersion": "string",
        "Arn": "string",
        "CreatedTime": number,
        "Description": "string",
    }
}
```
"DisplayName": "string",
"DomainJoinInfo": {
    "DirectoryName": "string",
    "OrganizationalUnitDistinguishedName": "string"
},
"EnableDefaultInternetAccess": boolean,
"IamRoleArn": "string",
"ImageArn": "string",
"ImageBuilderErrors": [
    {
        "ErrorCode": "string",
        "ErrorMessage": "string",
        "ErrorTimestamp": number
    }
],
"InstanceType": "string",
"Name": "string",
"NetworkAccessConfiguration": {
    "EniId": "string",
    "EniPrivateIpAddress": "string"
},
"Platform": "string",
"State": "string",
"StateChangeReason": {
    "Code": "string",
    "Message": "string"
},
"VpcConfig": {
    "SecurityGroupIds": [ "string" ],
    "SubnetIds": [ "string" ]
}
}

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**ImageBuilder**

Information about the image builder.
Type: ImageBuilder object

Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

TagResource

Adds or overwrites one or more tags for the specified AppStream 2.0 resource. You can tag AppStream 2.0 image builders, images, fleets, and stacks.

Each tag consists of a key and an optional value. If a resource already has a tag with the same key, this operation updates its value.

To list the current tags for your resources, use `ListTagsForResource`. To disassociate tags from your resources, use `UntagResource`.

For more information about tags, see Tagging Your Resources in the Amazon AppStream 2.0 Administration Guide.

Request Syntax

```
{
    "ResourceArn": "string",
    "Tags": {
        "string": "string"
    }
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**ResourceArn**

The Amazon Resource Name (ARN) of the resource.

Type: String

Pattern: ^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9_/.\-]{0,62}:[A-Za-z0-9_/.\-]{0,63}:[A-Za-z0-9_/.\-]{0,63}:[A-Za-z0-9\[A-Za-z0-9_/.\-]{0,62}:[A-Za-z0-9_/.\-]{0,63}:[A-Za-z0-9\[A-Za-z0-9_/.\-]{0,63}:[A-Za-z0-9\[A-Za-z0-9_/.\-]{0,1023}$

Required: Yes
Tags

The tags to associate. A tag is a key-value pair, and the value is optional. For example, Environment=Test. If you do not specify a value, Environment=.

If you do not specify a value, the value is set to an empty string.

Generally allowed characters are: letters, numbers, and spaces representable in UTF-8, and the following special characters:

_ . / = + \ - @

Type: String to string map

Map Entries: Maximum number of 50 items.

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^\([^!\%]\s+\[\p{L}\p{Z}\p{N}\_\.[=\+/\-@]*\]$\)

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: ^\[\p{L}\p{Z}\p{N}\_.\/=\+\-@]*\]$ $\)

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

LimitExceededExpectation

The requested limit exceeds the permitted limit for an account.
HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

UntagResource

Disassociates one or more specified tags from the specified AppStream 2.0 resource.

To list the current tags for your resources, use ListTagsForResource.

For more information about tags, see Tagging Your Resources in the Amazon AppStream 2.0 Administration Guide.

Request Syntax

```
{
    "ResourceArn": "string",
    "TagKeys": [ "string" ]
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**ResourceArn**

The Amazon Resource Name (ARN) of the resource.

Type: String

Pattern: ^arn:aws(?:-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\._/-]{0,62}:[A-Za-z0-9\._/-]{0,63}:[A-Za-z0-9\._/-]{0,63}:[A-Za-z0-9\._/-]{0,62}:[A-Za-z0-9\._/-]{0,63}$

Required: Yes

**TagKeys**

The tag keys for the tags to disassociate.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 50 items.

Pattern: ^([^aws:].[p{L}\p{Z}\p{N}{-}=/@=+\-@]*)$

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

See Also

UpdateAppBlockBuilder

Updates an app block builder.

If the app block builder is in the STARTING or STOPPING state, you can't update it. If the app block builder is in the RUNNING state, you can only update the DisplayName and Description. If the app block builder is in the STOPPED state, you can update any attribute except the Name.

Request Syntax

```json
{
  "AccessEndpoints": [
    {
      "EndpointType": "string",
      "VpceId": "string"
    }
  ],
  "AttributesToDelete": [ "string" ],
  "Description": "string",
  "DisplayName": "string",
  "EnableDefaultInternetAccess": boolean,
  "IamRoleArn": "string",
  "InstanceType": "string",
  "Name": "string",
  "Platform": "string",
  "VpcConfig": {
    "SecurityGroupIds": [ "string" ],
    "SubnetIds": [ "string" ]
  }
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

AccessEndpoints

The list of interface VPC endpoint (interface endpoint) objects. Administrators can connect to the app block builder only through the specified endpoints.
Type: Array of `AccessEndpoint` objects

Array Members: Minimum number of 1 item. Maximum number of 4 items.

Required: No

**AttributesToDelete**

The attributes to delete from the app block builder.

Type: Array of strings

Valid Values: `IAM_ROLE_ARN` | `ACCESS_ENDPOINTS` | `VPC_CONFIGURATION_SECURITY_GROUP_IDS`

Required: No

**Description**

The description of the app block builder.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**DisplayName**

The display name of the app block builder.

Type: String

Length Constraints: Maximum length of 100.

Required: No

**EnableDefaultInternetAccess**

Enables or disables default internet access for the app block builder.

Type: Boolean

Required: No
**IamRoleArn**

The Amazon Resource Name (ARN) of the IAM role to apply to the app block builder. To assume a role, the app block builder calls the AWS Security Token Service (STS) `AssumeRole` API operation and passes the ARN of the role to use. The operation creates a new session with temporary credentials. AppStream 2.0 retrieves the temporary credentials and creates the `appstream_machine_role` credential profile on the instance.

For more information, see [Using an IAM Role to Grant Permissions to Applications and Scripts Running on AppStream 2.0 Streaming Instances](https://docs.aws.amazon.com/appstream2/latest/adminguide/using-iam-role.html) in the *Amazon AppStream 2.0 Administration Guide*.

Type: String

**Pattern:** `^arn:aws(?:-cn|-iso-b|-iso|-us-gov)?:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.+=,@.\-]{0,1023}$`

Required: No

**InstanceType**

The instance type to use when launching the app block builder. The following instance types are available:

- `stream.standard.small`
- `stream.standard.medium`
- `stream.standard.large`
- `stream.standard.xlarge`
- `stream.standard.2xlarge`

Type: String

Length Constraints: Minimum length of 1.

Required: No

**Name**

The unique name for the app block builder.

Type: String
Pattern: \^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}\$

Required: Yes

**Platform**

The platform of the app block builder.

WINDOWS_SERVER_2019 is the only valid value.

Type: String

Valid Values: WINDOWS | WINDOWS_SERVER_2016 | WINDOWS_SERVER_2019 | WINDOWS_SERVER_2022 | AMAZON_LINUX2

Required: No

**VpcConfig**

The VPC configuration for the app block builder.

App block builders require that you specify at least two subnets in different availability zones.

Type: VpcConfig object

Required: No

**Response Syntax**

```json
{"AppBlockBuilder": {
    "AccessEndpoints": [
    {
        "EndpointType": "string",
        "VpceId": "string"
    }
    ],
    "AppBlockBuilderErrors": [
    {
        "ErrorCode": "string",
        "ErrorMessage": "string",
        "ErrorTimestamp": number
    }
    ]
}
```
"Arn": "string",
"CreateTime": number,
"Description": "string",
"DisplayName": "string",
"EnableDefaultInternetAccess": boolean,
"IamRoleArn": "string",
"InstanceType": "string",
"Name": "string",
"Platform": "string",
"State": "string",
"StateChangeReason": {
    "Code": "string",
    "Message": "string"
},
"VpcConfig": {
    "SecurityGroupIds": [ "string" ],
    "SubnetIds": [ "string" ]
}
)

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**AppBlockBuilder**

Describes an app block builder.

Type: AppBlockBuilder object

Errors

For information about the errors that are common to all actions, see Common Errors.

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
InvalidAccountStatusException

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

InvalidParameterCombinationException

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

InvalidRoleException

The specified role is invalid.

HTTP Status Code: 400

LimitExceedededException

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

RequestLimitExceedededException

AppStream 2.0 can't process the request right now because the Describe calls from your AWS account are being throttled by Amazon EC2. Try again later.

HTTP Status Code: 400

ResourceInUseException

The specified resource is in use.

HTTP Status Code: 400

ResourceNotAvailableException

The specified resource exists and is not in use, but isn't available.
HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.

HTTP Status Code: 400

# UpdateApplication

Updates the specified application.

## Request Syntax

```json
{
    "AppBlockArn": "string",
    "AttributesToDelete": [ "string" ],
    "Description": "string",
    "DisplayName": "string",
    "IconS3Location": {
        "S3Bucket": "string",
        "S3Key": "string"
    },
    "LaunchParameters": "string",
    "LaunchPath": "string",
    "Name": "string",
    "WorkingDirectory": "string"
}
```

## Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

### AppBlockArn

The ARN of the app block.

Type: String

Pattern: ^arn:aws(?:-cn|\-iso-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9_/\.-]{0,62}:[A-Za-z0-9_/\.-]{0,63}:[A-Za-z0-9_/\.-]{0,63}:[A-Za-z0-9_/\.-]{0,63}:[A-Za-z0-9_/\.-]{0,63}:[A-Za-z0-9_/\.-]{0,63}:[A-Za-z0-9_/\.-]{0,63}:[A-Za-z0-9_/\.-]{0,63}$

Required: No

### AttributesToDelete

The attributes to delete for an application.
Type: Array of strings

Array Members: Maximum number of 2 items.

Valid Values: LAUNCH_PARAMETERS | WORKING_DIRECTORY

Required: No

**Description**

The description of the application.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**DisplayName**

The display name of the application. This name is visible to users in the application catalog.

Type: String

Length Constraints: Maximum length of 100.

Required: No

**IconS3Location**

The icon S3 location of the application.

Type: [S3Location object](#)

Required: No

**LaunchParameters**

The launch parameters of the application.

Type: String

Length Constraints: Minimum length of 1.

Required: No
**LaunchPath**

The launch path of the application.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**Name**

The name of the application. This name is visible to users when display name is not specified.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**WorkingDirectory**

The working directory of the application.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**Response Syntax**

```json
{
    "Application": {
        "AppBlockArn": "string",
        "Arn": "string",
        "CreatedTime": number,
        "Description": "string",
        "DisplayName": "string",
        "Enabled": boolean,
        "IconS3Location": {
            "S3Bucket": "string",
            "S3Key": "string"
        }
    }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**Application**

Describes an application in the application catalog.

Type: `Application` object

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**ConcurrentModificationException**

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.
HTTP Status Code: 400

- AWS SDK for Ruby V3
UpdateDirectoryConfig

Updates the specified Directory Config object in AppStream 2.0. This object includes the configuration information required to join fleets and image builders to Microsoft Active Directory domains.

Request Syntax

```json
{
    "CertificateBasedAuthProperties": {
        "CertificateAuthorityArn": "string",
        "Status": "string"
    },
    "DirectoryName": "string",
    "OrganizationalUnitDistinguishedNames": [ "string" ],
    "ServiceAccountCredentials": {
        "AccountName": "string",
        "AccountPassword": "string"
    }
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**CertificateBasedAuthProperties**

The certificate-based authentication properties used to authenticate SAML 2.0 Identity Provider (IdP) user identities to Active Directory domain-joined streaming instances. Fallback is turned on by default when certificate-based authentication is Enabled. Fallback allows users to log in using their AD domain password if certificate-based authentication is unsuccessful, or to unlock a desktop lock screen. Enabled_no_directory_login_fallback enables certificate-based authentication, but does not allow users to log in using their AD domain password. Users will be disconnected to re-authenticate using certificates.

Type: CertificateBasedAuthProperties object

Required: No
**DirectoryName**

The name of the Directory Config object.

Type: String

Required: Yes

**OrganizationalUnitDistinguishedNames**

The distinguished names of the organizational units for computer accounts.

Type: Array of strings

Required: No

**ServiceAccountCredentials**

The credentials for the service account used by the fleet or image builder to connect to the directory.

Type: ServiceAccountCredentials object

Required: No

**Response Syntax**

```json
{
    "DirectoryName": {
        "CertificateBasedAuthProperties": {
            "CertificateAuthorityArn": "string",
            "Status": "string"
        },
        "CreatedTime": number,
        "DirectoryName": "string",
        "OrganizationalUnitDistinguishedNames": [ "string" ],
        "ServiceAccountCredentials": {
            "AccountName": "string",
            "AccountPassword": "string"
        }
    }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

DirectoryConfig

Information about the Directory Config object.

Type: DirectoryConfig object

Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

InvalidRoleException

The specified role is invalid.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceInUseException

The specified resource is in use.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.
HTTP Status Code: 400

- AWS SDK for Python
- AWS SDK for Ruby V3
UpdateEntitlement

Updates the specified entitlement.

Request Syntax

```
{
   "AppVisibility": "string",
   "Attributes": [
      {
         "Name": "string",
         "Value": "string"
      }
   ],
   "Description": "string",
   "Name": "string",
   "StackName": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

**AppVisibility**

Specifies whether all or only selected apps are entitled.

Type: String

Valid Values: ALL  |  ASSOCIATED

Required: No

**Attributes**

The attributes of the entitlement.

Type: Array of EntitlementAttribute objects

Array Members: Minimum number of 1 item.
Required: No

**Description**

The description of the entitlement.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**Name**

The name of the entitlement.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**StackName**

The name of the stack with which the entitlement is associated.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**Response Syntax**

```json
{
   "Entitlement": {
      "AppVisibility": "string",
      "Attributes": [
         {
            "Name": "string",
            "Value": "string"
         }
      ],
      "CreatedTime": number
   }
}
```
"Description": "string",
"LastModifiedTime": number,
"Name": "string",
"StackName": "string"
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Entitlement

The entitlement.

Type: Entitlement object

Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

EntitlementNotFoundException

The entitlement can't be found.

HTTP Status Code: 400

OperationNotPermittedException

The attempted operation is not permitted.

HTTP Status Code: 400

ResourceNotFoundException

The specified resource was not found.
HTTP Status Code: 400

UpdateFleet

Updates the specified fleet.

If the fleet is in the STOPPED state, you can update any attribute except the fleet name.

If the fleet is in the RUNNING state, you can update the following based on the fleet type:

- Always-On and On-Demand fleet types
  You can update the DisplayName, ComputeCapacity, ImageARN, ImageName, IdleDisconnectTimeoutInSeconds, and DisconnectTimeoutInSeconds attributes.
- Elastic fleet type
  You can update the DisplayName, IdleDisconnectTimeoutInSeconds, DisconnectTimeoutInSeconds, MaxConcurrentSessions, SessionScriptS3Location and UsbDeviceFilterStrings attributes.

If the fleet is in the STARTING or STOPPED state, you can't update it.

Request Syntax

```json
{
    "AttributesToDelete": [ "string" ],
    "ComputeCapacity": {
        "DesiredInstances": number,
        "DesiredSessions": number
    },
    "DeleteVpcConfig": boolean,
    "Description": "string",
    "DisconnectTimeoutInSeconds": number,
    "DisplayName": "string",
    "DomainJoinInfo": {
        "DirectoryName": "string",
        "OrganizationalUnitDistinguishedName": "string"
    },
    "EnableDefaultInternetAccess": boolean,
    "IamRoleArn": "string",
    "IdleDisconnectTimeoutInSeconds": number,
    "ImageArn": "string",
    "ImageName": "string"
}
```
Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**AttributesToDelete**

The fleet attributes to delete.

Type: Array of strings

Valid Values: VPC_CONFIGURATION | VPC_CONFIGURATION_SECURITY_GROUP_IDS | DOMAIN_JOIN_INFO | IAM_ROLE_ARN | USB_DEVICE_FILTER_STRINGS | SESSION_SCRIPT_S3_LOCATION | MAX_SESSIONS_PER_INSTANCE

Required: No

**ComputeCapacity**

The desired capacity for the fleet. This is not allowed for Elastic fleets.

Type: [ComputeCapacity](#) object

Required: No
DeleteVpcConfig

This parameter has been deprecated.

Deletes the VPC association for the specified fleet.

Type: Boolean

Required: No

Description

The description to display.

Type: String

Length Constraints: Maximum length of 256.

Required: No

DisconnectTimeoutInSeconds

The amount of time that a streaming session remains active after users disconnect. If users try to reconnect to the streaming session after a disconnection or network interruption within this time interval, they are connected to their previous session. Otherwise, they are connected to a new session with a new streaming instance.

Specify a value between 60 and 36000.

Type: Integer

Required: No

DisplayName

The fleet name to display.

Type: String

Length Constraints: Maximum length of 100.

Required: No

DomainJoinInfo

The name of the directory and organizational unit (OU) to use to join the fleet to a Microsoft Active Directory domain.
Type: `DomainJoinInfo` object

Required: No

**EnableDefaultInternetAccess**

Enables or disables default internet access for the fleet.

Type: Boolean

Required: No

**IamRoleArn**

The Amazon Resource Name (ARN) of the IAM role to apply to the fleet. To assume a role, a fleet instance calls the AWS Security Token Service (STS) `AssumeRole` API operation and passes the ARN of the role to use. The operation creates a new session with temporary credentials. AppStream 2.0 retrieves the temporary credentials and creates the `appstream_machine_role` credential profile on the instance.

For more information, see [Using an IAM Role to Grant Permissions to Applications and Scripts Running on AppStream 2.0 Streaming Instances](#) in the [Amazon AppStream 2.0 Administration Guide](#).

Type: String

Pattern: `^arn:aws(?:-cn|-iso-b|-iso|-us-gov)?:[A-Za-z0-9][A-Za-z0-9-_/.-]{0,62}:[A-Za-z0-9-_/.-]{0,63}:[A-Za-z0-9-_/.-]{0,63}:[A-Za-z0-9-_/+=,@.\-/]{0,1023}$`

Required: No

**IdleDisconnectTimeoutInSeconds**

The amount of time that users can be idle (inactive) before they are disconnected from their streaming session and the `DisconnectTimeoutInSeconds` time interval begins. Users are notified before they are disconnected due to inactivity. If users try to reconnect to the streaming session before the time interval specified in `DisconnectTimeoutInSeconds` elapses, they are connected to their previous session. Users are considered idle when they stop providing keyboard or mouse input during their streaming session. File uploads and downloads, audio in, audio out, and pixels changing do not qualify as user activity. If users continue to be idle after the time interval in `IdleDisconnectTimeoutInSeconds` elapses, they are disconnected.
To prevent users from being disconnected due to inactivity, specify a value of 0. Otherwise, specify a value between 60 and 36000. The default value is 0.

**Note**

If you enable this feature, we recommend that you specify a value that corresponds exactly to a whole number of minutes (for example, 60, 120, and 180). If you don’t do this, the value is rounded to the nearest minute. For example, if you specify a value of 70, users are disconnected after 1 minute of inactivity. If you specify a value that is at the midpoint between two different minutes, the value is rounded up. For example, if you specify a value of 90, users are disconnected after 2 minutes of inactivity.

Type: Integer

Required: No

**ImageArn**

The ARN of the public, private, or shared image to use.

Type: String

Pattern: `^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9_/.\-]{0,62}:[A-Za-z0-9_/.\-]{0,63}:[A-Za-z0-9_/.\-]{0,63}:[A-Za-z0-9_\+@.\-]{0,1023}$`

Required: No

**ImageName**

The name of the image used to create the fleet.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**InstanceType**

The instance type to use when launching fleet instances. The following instance types are available:

- `stream.standard.small`
- stream.standard.medium
- stream.standard.large
- stream.standard.xlarge
- stream.standard.2xlarge
- stream.compute.large
- stream.compute.xlarge
- stream.compute.2xlarge
- stream.compute.4xlarge
- stream.compute.8xlarge
- stream.memory.large
- stream.memory.xlarge
- stream.memory.2xlarge
- stream.memory.4xlarge
- stream.memory.8xlarge
- stream.memory.z1d.large
- stream.memory.z1d.xlarge
- stream.memory.z1d.2xlarge
- stream.memory.z1d.3xlarge
- stream.memory.z1d.6xlarge
- stream.memory.z1d.12xlarge
- stream.graphics-design.large
- stream.graphics-design.xlarge
- stream.graphics-design.2xlarge
- stream.graphics-design.4xlarge
- stream.graphics-desktop.2xlarge
- stream.graphics.g4dn.xlarge
- stream.graphics.g4dn.2xlarge
- stream.graphics.g4dn.4xlarge
- stream.graphics.g4dn.8xlarge
- stream.graphics.g4dn.12xlarge
• stream.graphics.g4dn.16xlarge
• stream.graphics-pro.4xlarge
• stream.graphics-pro.8xlarge
• stream.graphics-pro.16xlarge

The following instance types are available for Elastic fleets:
• stream.standard.small
• stream.standard.medium
• stream.standard.large
• stream.standard.xlarge
• stream.standard.2xlarge

Type: String

Length Constraints: Minimum length of 1.

Required: No

MaxConcurrentSessions

The maximum number of concurrent sessions for a fleet.

Type: Integer

Required: No

MaxSessionsPerInstance

The maximum number of user sessions on an instance. This only applies to multi-session fleets.

Type: Integer

Required: No

MaxUserDurationInSeconds

The maximum amount of time that a streaming session can remain active, in seconds. If users are still connected to a streaming instance five minutes before this limit is reached, they are prompted to save any open documents before being disconnected. After this time elapses, the instance is terminated and replaced by a new instance.

Specify a value between 600 and 432000.
Name

A unique name for the fleet.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: No

Platform

The platform of the fleet. WINDOWS_SERVER_2019 and AMAZON_LINUX2 are supported for Elastic fleets.

Type: String

Valid Values: WINDOWS | WINDOWS_SERVER_2016 | WINDOWS_SERVER_2019 | WINDOWS_SERVER_2022 | AMAZON_LINUX2

Required: No

SessionScriptS3Location

The S3 location of the session scripts configuration zip file. This only applies to Elastic fleets.

Type: S3Location object

Required: No

StreamView

The AppStream 2.0 view that is displayed to your users when they stream from the fleet. When APP is specified, only the windows of applications opened by users display. When DESKTOP is specified, the standard desktop that is provided by the operating system displays.

The default value is APP.

Type: String

Valid Values: APP | DESKTOP

Required: No
**UsbDeviceFilterStrings**

The USB device filter strings that specify which USB devices a user can redirect to the fleet streaming session, when using the Windows native client. This is allowed but not required for Elastic fleets.

Type: Array of strings

Length Constraints: Minimum length of 0. Maximum length of 100.

Pattern: ^((\w*)\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*\d*\s*,\s*\d*\s*,\s*[0-1]\s*,\s*[0-1]\s*)$

Required: No

**VpcConfig**

The VPC configuration for the fleet. This is required for Elastic fleets, but not required for other fleet types. Elastic fleets require that you specify at least two subnets in different availability zones.

Type: [VpcConfig](#) object

Required: No

**Response Syntax**

```json
{
  "Fleet": {
    "Arn": "string",
    "ComputeCapacityStatus": {
      "ActiveUserSessions": number,
      "ActualUserSessions": number,
      "Available": number,
      "AvailableUserSessions": number,
      "Desired": number,
      "DesiredUserSessions": number,
      "InUse": number,
      "Running": number
    },
    "CreatedTime": number,
    "Description": "string",
    ...
  }
}
```
"DisconnectTimeoutInSeconds": number,
"DisplayName": "string",
"DomainJoinInfo": {
    "DirectoryName": "string",
    "OrganizationalUnitDistinguishedName": "string"
},
"EnableDefaultInternetAccess": boolean,
"FleetErrors": [
    {
        "ErrorCode": "string",
        "ErrorMessage": "string"
    }
],
"FleetType": "string",
"IamRoleArn": "string",
"IdleDisconnectTimeoutInSeconds": number,
"ImageArn": "string",
"ImageName": "string",
"InstanceType": "string",
"MaxConcurrentSessions": number,
"MaxSessionsPerInstance": number,
"MaxUserDurationInSeconds": number,
"Name": "string",
"Platform": "string",
"SessionScriptS3Location": {
    "S3Bucket": "string",
    "S3Key": "string"
},
"State": "string",
"StreamView": "string",
"UsbDeviceFilterStrings": [ "string" ],
"VpcConfig": {
    "SecurityGroupIds": [ "string" ],
    "SubnetIds": [ "string" ]
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
**Fleet**

Information about the fleet.

Type: *Fleet* object

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

*ConcurrentModificationException*

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400

*IncompatibleImageException*

The image can't be updated because it's not compatible for updates.

HTTP Status Code: 400

*InvalidAccountStatusException*

The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.

HTTP Status Code: 400

*InvalidParameterCombinationException*

Indicates an incorrect combination of parameters, or a missing parameter.

HTTP Status Code: 400

*InvalidRoleException*

The specified role is invalid.

HTTP Status Code: 400

*LimitExceededError*

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400
**OperationNotPermittedException**

The attempted operation is not permitted.

HTTP Status Code: 400

**RequestLimitExceededException**

AppStream 2.0 can't process the request right now because the Describe calls from your AWS account are being throttled by Amazon EC2. Try again later.

HTTP Status Code: 400

**ResourceInUseException**

The specified resource is in use.

HTTP Status Code: 400

**ResourceNotAvailableException**

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

UpdateImagePermissions

Adds or updates permissions for the specified private image.

Request Syntax

```
{
  "ImagePermissions": {
    "allowFleet": boolean,
    "allowImageBuilder": boolean
  },
  "Name": "string",
  "SharedAccountId": "string"
}
```

Request Parameters

For information about the parameters that are common to all actions, see [Common Parameters](#).

The request accepts the following data in JSON format.

**ImagePermissions**

The permissions for the image.

Type: [ImagePermissions](#) object

Required: Yes

**Name**

The name of the private image.

Type: String

Pattern: `^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$`

Required: Yes

**SharedAccountId**

The 12-digit identifier of the AWS account for which you want add or update image permissions.
Type: String

Pattern: ^\d+$

Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**LimitExceededError**

The requested limit exceeds the permitted limit for an account.

HTTP Status Code: 400

**ResourceNotAvailableError**

The specified resource exists and is not in use, but isn't available.

HTTP Status Code: 400

**ResourceNotFoundException**

The specified resource was not found.

HTTP Status Code: 400

**See Also**

• AWS SDK for Ruby V3
UpdateStack

Updates the specified fields for the specified stack.

Request Syntax

```json
{
  "AccessEndpoints": [
    {
      "EndpointType": "string",
      "VpceId": "string"
    }
  ],
  "ApplicationSettings": {
    "Enabled": boolean,
    "SettingsGroup": "string"
  },
  "AttributesToDelete": [ "string" ],
  "DeleteStorageConnectors": boolean,
  "Description": "string",
  "DisplayName": "string",
  "EmbedHostDomains": [ "string" ],
  "FeedbackURL": "string",
  "Name": "string",
  "RedirectURL": "string",
  "StorageConnectors": [
    {
      "ConnectorType": "string",
      "Domains": [ "string" ],
      "ResourceIdentifier": "string"
    }
  ],
  "StreamingExperienceSettings": {
    "PreferredProtocol": "string"
  },
  "UserSettings": [
    {
      "Action": "string",
      "MaximumLength": number,
      "Permission": "string"
    }
  ]
}
```
Request Parameters

For information about the parameters that are common to all actions, see Common Parameters.

The request accepts the following data in JSON format.

AccessEndpoints

The list of interface VPC endpoint (interface endpoint) objects. Users of the stack can connect to AppStream 2.0 only through the specified endpoints.

Type: Array of AccessEndpoint objects

Array Members: Minimum number of 1 item. Maximum number of 4 items.

Required: No

ApplicationSettings

The persistent application settings for users of a stack. When these settings are enabled, changes that users make to applications and Windows settings are automatically saved after each session and applied to the next session.

Type: ApplicationSettings object

Required: No

AttributesToDelete

The stack attributes to delete.

Type: Array of strings

Valid Values: STORAGE_CONNECTORS | STORAGE_CONNECTOR_HOMEFOLDERS | STORAGE_CONNECTOR_GOOGLE_DRIVE | STORAGE_CONNECTOR_ONE_DRIVE | REDIRECT_URL | FEEDBACK_URL | THEME_NAME | USER_SETTINGS | EMBED_HOST_DOMAINS | IAM_ROLE_ARN | ACCESS_ENDPOINTS | STREAMING_EXPERIENCE_SETTINGS

Required: No
**DeleteStorageConnectors**

*This parameter has been deprecated.*

Deletes the storage connectors currently enabled for the stack.

Type: Boolean

Required: No

**Description**

The description to display.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**DisplayName**

The stack name to display.

Type: String

Length Constraints: Maximum length of 100.

Required: No

**EmbedHostDomains**

The domains where AppStream 2.0 streaming sessions can be embedded in an iframe. You must approve the domains that you want to host embedded AppStream 2.0 streaming sessions.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 20 items.

Length Constraints: Maximum length of 128.

Pattern: `(?:[a-z0-9](?:[a-z0-9-]{0,61}[a-z0-9])?\.)+[a-z0-9][a-z0-9-]{0,61}[a-z0-9]`
Required: No

**FeedbackURL**

The URL that users are redirected to after they choose the Send Feedback link. If no URL is specified, no Send Feedback link is displayed.

Type: String

Length Constraints: Maximum length of 1000.

Required: No

**Name**

The name of the stack.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**RedirectURL**

The URL that users are redirected to after their streaming session ends.

Type: String

Length Constraints: Maximum length of 1000.

Required: No

**StorageConnectors**

The storage connectors to enable.

Type: Array of StorageConnector objects

Required: No

**StreamingExperienceSettings**

The streaming protocol you want your stack to prefer. This can be UDP or TCP. Currently, UDP is only supported in the Windows native client.
Type: **StreamingExperienceSettings** object

Required: No

**UserSettings**

The actions that are enabled or disabled for users during their streaming sessions. By default, these actions are enabled.

Type: Array of **UserSetting** objects

Array Members: Minimum number of 1 item.

Required: No

**Response Syntax**

```json
{
    "Stack": {
        "AccessEndpoints": [
            {
                "EndpointType": "string",
                "VpceId": "string"
            }
        ],
        "ApplicationSettings": {
            "Enabled": boolean,
            "S3BucketName": "string",
            "SettingsGroup": "string"
        },
        "Arn": "string",
        "CreatedTime": number,
        "Description": "string",
        "DisplayName": "string",
        "EmbedHostDomains": [ "string" ],
        "FeedbackURL": "string",
        "Name": "string",
        "RedirectURL": "string",
        "StackErrors": [
            {
                "ErrorCode": "string",
                "ErrorMessage": "string"
            }
        ]
    }
}
```
"StorageConnectors": [
  {
    "ConnectorType": "string",
    "Domains": [ "string" ],
    "ResourceIdentifier": "string"
  }
],
"StreamingExperienceSettings": {
  "PreferredProtocol": "string"
},
"UserSettings": [
  {
    "Action": "string",
    "MaximumLength": number,
    "Permission": "string"
  }
]
"Errors": [
  {
    "Stack": "string",
    "ResourceIdentifier": "string"
  }
],

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Stack

Information about the stack.

Type: Stack object

Errors

For information about the errors that are common to all actions, see Common Errors.

ConcurrentModificationException

An API error occurred. Wait a few minutes and try again.

HTTP Status Code: 400
IncompatibleImageException
The image can't be updated because it's not compatible for updates.
HTTP Status Code: 400

InvalidAccountStatusException
The resource cannot be created because your AWS account is suspended. For assistance, contact AWS Support.
HTTP Status Code: 400

InvalidParameterCombinationException
Indicates an incorrect combination of parameters, or a missing parameter.
HTTP Status Code: 400

InvalidRoleException
The specified role is invalid.
HTTP Status Code: 400

LimitExceededException
The requested limit exceeds the permitted limit for an account.
HTTP Status Code: 400

OperationNotPermittedException
The attempted operation is not permitted.
HTTP Status Code: 400

ResourceInUseException
The specified resource is in use.
HTTP Status Code: 400

ResourceNotFoundException
The specified resource was not found.
HTTP Status Code: 400

Data Types

The Amazon AppStream 2.0 API contains several data types that various actions use. This section describes each data type in detail.

**Note**

The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- **AccessEndpoint**
- **AppBlock**
- **AppBlockBuilder**
- **AppBlockBuilderAppBlockAssociation**
- **AppBlockBuilderStateChangeReason**
- **Application**
- **ApplicationFleetAssociation**
- **ApplicationSettings**
- **ApplicationSettingsResponse**
- **CertificateBasedAuthProperties**
- **ComputeCapacity**
- **ComputeCapacityStatus**
- **DirectoryConfig**
- **DomainJoinInfo**
- **EntitledApplication**
- **Entitlement**
- **EntitlementAttribute**
- **ErrorDetails**
- **Fleet**
- **FleetError**
• Image
• ImageBuilder
• ImageBuilderInterface
• ImagePermission
• ImagePermission
• ImageStateChangeReason
• LastReportGenerationExecutionError
• NetworkAccessConfiguration
• ResourceError
• S3Location
• ScriptDetails
• ServiceAccountCredentials
• Session
• SharedImagePermissions
• Stack
• StackError
• StorageConnector
• StreamingExperienceSettings
• UsageReportSubscription
• User
• UserSetting
• UserStackAssociation
• UserStackAssociationError
• VpcConfig
AccessEndpoint

Describes an interface VPC endpoint (interface endpoint) that lets you create a private connection between the virtual private cloud (VPC) that you specify and AppStream 2.0. When you specify an interface endpoint for a stack, users of the stack can connect to AppStream 2.0 only through that endpoint. When you specify an interface endpoint for an image builder, administrators can connect to the image builder only through that endpoint.

Contents

EndpointType

The type of interface endpoint.

Type: String

Valid Values: STREAMING

Required: Yes

VpcId

The identifier (ID) of the VPC in which the interface endpoint is used.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
AppBlock

Describes an app block.

App blocks are an Amazon AppStream 2.0 resource that stores the details about the virtual hard disk in an S3 bucket. It also stores the setup script with details about how to mount the virtual hard disk. The virtual hard disk includes the application binaries and other files necessary to launch your applications. Multiple applications can be assigned to a single app block.

This is only supported for Elastic fleets.

Contents

Arn

The ARN of the app block.

Type: String

Pattern: ^arn:aws(?:-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\_\.\-/]{0,62}:[A-Za-z0-9\_\.\-/]{0,63}:[A-Za-z0-9\_\.\-/]{0,63}:[A-Za-z0-9\_\+/\=,@.\-]{0,1023}$

Required: Yes

Name

The name of the app block.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

AppBlockErrors

The errors of the app block.

Type: Array of ErrorDetails objects

Required: No
**CreatedTime**

The created time of the app block.

Type: Timestamp

Required: No

**Description**

The description of the app block.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**DisplayName**

The display name of the app block.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**PackagingType**

The packaging type of the app block.

Type: String

Valid Values: CUSTOM | APPSTREAM2

Required: No

**PostSetupScriptDetails**

The post setup script details of the app block.

This only applies to app blocks with PackagingType APPSTREAM2.

Type: [ScriptDetails](#) object

Required: No
SetupScriptDetails

The setup script details of the app block.

This only applies to app blocks with PackagingType CUSTOM.

Type: ScriptDetails object

Required: No

SourceS3Location

The source S3 location of the app block.

Type: S3Location object

Required: No

State

The state of the app block.

An app block with AppStream 2.0 packaging will be in the INACTIVE state if no application package (VHD) is assigned to it. After an application package (VHD) is created by an app block builder for an app block, it becomes ACTIVE.

Custom app blocks are always in the ACTIVE state and no action is required to use them.

Type: String

Valid Values: INACTIVE | ACTIVE

Required: No

See Also

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
• AWS SDK for Ruby V3
AppBlockBuilder

Describes an app block builder.

Contents

Arn

The ARN of the app block builder.

Type: String

Pattern: ^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9]\[A-Za-z0-9-9__/.-]{0,62}:\[A-Za-z0-9-9__/.-]{0,63}:\[A-Za-z0-9-9__/.-]{0,63}:\[A-Za-z0-9-9__/.-]{0,63}:\[A-Za-z0-9-9__:+/=,\@./-]{0,1023}$

Required: Yes

InstanceType

The instance type of the app block builder.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Name

The name of the app block builder.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Platform

The platform of the app block builder.

WINDOWS_SERVER_2019 is the only valid value.

Type: String
Valid Values: WINDOWS_SERVER_2019

Required: Yes

**State**

The state of the app block builder.

Type: String

Valid Values: STARTING | RUNNING | STOPPING | STOPPED

Required: Yes

**VpcConfig**

The VPC configuration for the app block builder.

Type: [VpcConfig](#) object

Required: Yes

**AccessEndpoints**

The list of interface VPC endpoint (interface endpoint) objects. Administrators can connect to the app block builder only through the specified endpoints.

Type: Array of [AccessEndpoint](#) objects

Array Members: Minimum number of 1 item. Maximum number of 4 items.

Required: No

**AppBlockBuilderErrors**

The app block builder errors.

Type: Array of [ResourceError](#) objects

Required: No

**CreatedTime**

The creation time of the app block builder.

Type: Timestamp
Required: No

**Description**

The description of the app block builder.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**DisplayName**

The display name of the app block builder.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**EnableDefaultInternetAccess**

Indicates whether default internet access is enabled for the app block builder.

Type: Boolean

Required: No

**IamRoleArn**

The ARN of the IAM role that is applied to the app block builder.

Type: String

Pattern: ^arn:aws(?:-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\_\-/\.]\{0,62\}:[A-Za-z0-9\_\-/\.]\{0,63\}:[A-Za-z0-9\_\-/\.]\{0,63\}:[A-Za-z0-9\_\+/\-\=,\@.\-]\{0,1023\}$

Required: No

**StateChangeReason**

The state change reason.

Type: [AppBlockBuilderStateChangeReason](#) object
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
AppBlockBuilderAppBlockAssociation

Describes an association between an app block builder and app block.

Contents

AppBlockArn

The ARN of the app block.

Type: String

Pattern: ^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.=,@.\-_]{0,1023}$

Required: Yes

AppBlockBuilderName

The name of the app block builder.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
AppBlockBuilderStateChangeReason

Describes the reason why the last app block builder state change occurred.

Contents

Code

The state change reason code.

Type: String

Valid Values: INTERNAL_ERROR

Required: No

Message

The state change reason message.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
Application

Describes an application in the application catalog.

Contents

AppBlockArn

The app block ARN of the application.

Type: String

Pattern: ^arn:aws(\-cn\-iso-b\-iso\-us-gov)?[A-Za-z0-9][A-Za-z0-9_/.\-]{0,62}[A-Za-z0-9_/.\-]{0,63}[A-Za-z0-9_/.\-]{0,63}[A-Za-z0-9_/.\-]{0,1023}$

Required: No

Arn

The ARN of the application.

Type: String

Pattern: ^arn:aws(\-cn\-iso-b\-iso\-us-gov)?[A-Za-z0-9][A-Za-z0-9_/.\-]{0,62}[A-Za-z0-9_/.\-]{0,63}[A-Za-z0-9_/.\-]{0,63}[A-Za-z0-9_/.\-]{0,1023}$

Required: No

CreatedTime

The time at which the application was created within the app block.

Type: Timestamp

Required: No

Description

The description of the application.

Type: String
Length Constraints: Minimum length of 1.

Required: No

**DisplayName**

The application name to display.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**Enabled**

If there is a problem, the application can be disabled after image creation.

Type: Boolean

Required: No

**IconS3Location**

The S3 location of the application icon.

Type: [S3Location](#) object

Required: No

**IconURL**

The URL for the application icon. This URL might be time-limited.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**InstanceFamilies**

The instance families for the application.

Type: Array of strings

Length Constraints: Minimum length of 1.
Required: No

**LaunchParameters**

The arguments that are passed to the application at launch.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**LaunchPath**

The path to the application executable in the instance.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**Metadata**

Additional attributes that describe the application.

Type: String to string map

Key Length Constraints: Minimum length of 1.

Value Length Constraints: Minimum length of 1.

Required: No

**Name**

The name of the application.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**Platforms**

The platforms on which the application can run.
Type: Array of strings

Array Members: Maximum number of 4 items.

Valid Values: WINDOWS | WINDOWS_SERVER_2016 | WINDOWS_SERVER_2019 | WINDOWS_SERVER_2022 | AMAZON_LINUX2

Required: No

**WorkingDirectory**

The working directory for the application.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**See Also**

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
ApplicationFleetAssociation

Describes the application fleet association.

Contents

ApplicationArn

The ARN of the application associated with the fleet.

Type: String

Pattern: ^arn:aws(?::\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\-_/.-]{0,62}:[A-Za-z0-9\-_/.-]{0,63}:[A-Za-z0-9\-_/.-]{0,63}:[A-Za-z0-9\-_/.-]{0,1023}$_+@\-]{0,1023}$

Required: Yes

FleetName

The name of the fleet associated with the application.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ApplicationSettings

The persistent application settings for users of a stack.

Contents

Enabled

Enables or disables persistent application settings for users during their streaming sessions.

Type: Boolean

Required: Yes

SettingsGroup

The path prefix for the S3 bucket where users' persistent application settings are stored. You can allow the same persistent application settings to be used across multiple stacks by specifying the same settings group for each stack.

Type: String

Length Constraints: Maximum length of 100.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ApplicationSettingsResponse

Describes the persistent application settings for users of a stack.

Contents

Enabled

Specifies whether persistent application settings are enabled for users during their streaming sessions.

Type: Boolean

Required: No

S3BucketName

The S3 bucket where users’ persistent application settings are stored. When persistent application settings are enabled for the first time for an account in an AWS Region, an S3 bucket is created. The bucket is unique to the AWS account and the Region.

Type: String

Length Constraints: Minimum length of 1.

Required: No

SettingsGroup

The path prefix for the S3 bucket where users’ persistent application settings are stored.

Type: String

Length Constraints: Maximum length of 100.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
CertificateBasedAuthProperties

The certificate-based authentication properties used to authenticate SAML 2.0 Identity Provider (IdP) user identities to Active Directory domain-joined streaming instances. Fallback is turned on by default when certificate-based authentication is Enabled. Fallback allows users to log in using their AD domain password if certificate-based authentication is unsuccessful, or to unlock a desktop lock screen. Enabled_no_directory_login_fallback enables certificate-based authentication, but does not allow users to log in using their AD domain password. Users will be disconnected to re-authenticate using certificates.

Contents

CertificateAuthorityArn

The ARN of the AWS Certificate Manager Private CA resource.

Type: String

Pattern: ^arn:aws(?::\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9-9_/.-]{0,62}:[A-Za-z0-9-9_/.-]{0,63}:[A-Za-z0-9-9_/.-]{0,63}:[A-Za-z0-9-9-_+/+=,@.\-]{0,1023}$

Required: No

Status

The status of the certificate-based authentication properties.

Type: String

Valid Values: DISABLED | ENABLED | ENABLED_NO_DIRECTORY_LOGIN_FALLBACK

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
• AWS SDK for Go
• AWS SDK for Java V2
• AWS SDK for Ruby V3
ComputeCapacity

Describes the capacity for a fleet.

Contents

**DesiredInstances**

The desired number of streaming instances.

Type: Integer

Required: No

**DesiredSessions**

The desired number of user sessions for a multi-session fleet. This is not allowed for single-session fleets.

When you create a fleet, you must set either the DesiredSessions or DesiredInstances attribute, based on the type of fleet you create. You can't define both attributes or leave both attributes blank.

Type: Integer

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
ComputeCapacityStatus

Describes the capacity status for a fleet.

Contents

Desired

The desired number of streaming instances.

Type: Integer
Required: Yes

ActiveUserSessions

The number of user sessions currently being used for streaming sessions. This only applies to multi-session fleets.

Type: Integer
Required: No

ActualUserSessions

The total number of session slots that are available for streaming or are currently streaming.

ActualUserSessionCapacity = AvailableUserSessionCapacity + ActiveUserSessions

This only applies to multi-session fleets.

Type: Integer
Required: No

Available

The number of currently available instances that can be used to stream sessions.

Type: Integer
Required: No

AvailableUserSessions

The number of idle session slots currently available for user sessions.
AvailableUserSessionCapacity = ActualUserSessionCapacity - ActiveUserSessions

This only applies to multi-session fleets.

Type: Integer

Required: No

**DesiredUserSessions**

The total number of sessions slots that are either running or pending. This represents the total number of concurrent streaming sessions your fleet can support in a steady state.

DesiredUserSessionCapacity = ActualUserSessionCapacity + PendingUserSessionCapacity

This only applies to multi-session fleets.

Type: Integer

Required: No

**InUse**

The number of instances in use for streaming.

Type: Integer

Required: No

**Running**

The total number of simultaneous streaming instances that are running.

Type: Integer

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
• AWS SDK for Java V2
• AWS SDK for Ruby V3
DirectoryConfig

Describes the configuration information required to join fleets and image builders to Microsoft Active Directory domains.

Contents

DirectoryName

The fully qualified name of the directory (for example, corp.example.com).

Type: String

Required: Yes

CertificateBasedAuthProperties

The certificate-based authentication properties used to authenticate SAML 2.0 Identity Provider (IdP) user identities to Active Directory domain-joined streaming instances. Fallback is turned on by default when certificate-based authentication is Enabled. Fallback allows users to log in using their AD domain password if certificate-based authentication is unsuccessful, or to unlock a desktop lock screen. Enabled_no_directory_login_fallback enables certificate-based authentication, but does not allow users to log in using their AD domain password. Users will be disconnected to re-authenticate using certificates.

Type: CertificateBasedAuthProperties object

Required: No

CreatedTime

The time the directory configuration was created.

Type: Timestamp

Required: No

OrganizationalUnitDistinguishedNames

The distinguished names of the organizational units for computer accounts.

Type: Array of strings

Required: No

**ServiceAccountCredentials**

The credentials for the service account used by the fleet or image builder to connect to the directory.

Type: [ServiceAccountCredentials](#) object

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
DomainJoinInfo

Describes the configuration information required to join fleets and image builders to Microsoft Active Directory domains.

Contents

DirectoryName

The fully qualified name of the directory (for example, corp.example.com).

Type: String

Required: No

OrganizationalUnitDistinguishedName

The distinguished name of the organizational unit for computer accounts.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
EntitledApplication

The application associated to an entitlement. Access is controlled based on user attributes.

Contents

ApplicationIdentifier

The identifier of the application.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
Entitlement

Specifies an entitlement. Entitlements control access to specific applications within a stack, based on user attributes. Entitlements apply to SAML 2.0 federated user identities. Amazon AppStream 2.0 user pool and streaming URL users are entitled to all applications in a stack. Entitlements don't apply to the desktop stream view application, or to applications managed by a dynamic app provider using the Dynamic Application Framework.

Contents

AppVisibility

Specifies whether all or selected apps are entitled.

Type: String

Valid Values: ALL | ASSOCIATED

Required: Yes

Attributes

The attributes of the entitlement.

Type: Array of EntitlementAttribute objects

Array Members: Minimum number of 1 item.

Required: Yes

Name

The name of the entitlement.

Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

StackName

The name of the stack with which the entitlement is associated.
Type: String

Pattern: ^[a-zA-Z0-9][a-zA-Z0-9_.-]{0,100}$

Required: Yes

**CreatedTime**

The time when the entitlement was created.

Type: Timestamp

Required: No

**Description**

The description of the entitlement.

Type: String

Length Constraints: Maximum length of 256.

Required: No

**LastModifiedTime**

The time when the entitlement was last modified.

Type: Timestamp

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
EntitlementAttribute

An attribute associated with an entitlement. Application entitlements work by matching a supported SAML 2.0 attribute name to a value when a user identity federates to an Amazon AppStream 2.0 SAML application.

Contents

Name

A supported AWS IAM SAML PrincipalTag attribute that is matched to the associated value when a user identity federates into an Amazon AppStream 2.0 SAML application.

The following are valid values:

- roles
- department
- organization
- groups
- title
- costCenter
- userType

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Value

A value that is matched to a supported SAML attribute name when a user identity federates into an Amazon AppStream 2.0 SAML application.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes
See Also

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
ErrorDetails

The error details.

Contents

ErrorCode

The error code.

Type: String

Length Constraints: Minimum length of 1.

Required: No

ErrorMessage

The error message.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
Fleet

Describes a fleet.

Contents

Arn

The Amazon Resource Name (ARN) for the fleet.

Type: String

Pattern: ^arn:aws([-\:cn\-iso\-b\-iso\-us\-gov]?[A-Za-z0-9][-\:A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,1023}$

Required: Yes

ComputeCapacityStatus

The capacity status for the fleet.

Type: ComputeCapacityStatus object

Required: Yes

InstanceType

The instance type to use when launching fleet instances. The following instance types are available:

- stream.standard.small
- stream.standard.medium
- stream.standard.large
- stream.compute.large
- stream.compute.xlarge
- stream.compute.2xlarge
- stream.compute.4xlarge
- stream.compute.8xlarge
- stream.memory.large
- stream.memory.xlarge
- stream.memory.2xlarge
- stream.memory.4xlarge
- stream.memory.8xlarge
- stream.memory.z1d.large
- stream.memory.z1d.xlarge
- stream.memory.z1d.2xlarge
- stream.memory.z1d.3xlarge
- stream.memory.z1d.6xlarge
- stream.memory.z1d.12xlarge
- stream.graphics-design.large
- stream.graphics-design.xlarge
- stream.graphics-design.2xlarge
- stream.graphics-design.4xlarge
- stream.graphics-design.desktop.2xlarge
- stream.graphics.g4dn.xlarge
- stream.graphics.g4dn.2xlarge
- stream.graphics.g4dn.4xlarge
- stream.graphics.g4dn.8xlarge
- stream.graphics.g4dn.12xlarge
- stream.graphics.g4dn.16xlarge
- stream.graphics-pro.4xlarge
- stream.graphics-pro.8xlarge
- stream.graphics-pro.16xlarge

**Type:** String

**Length Constraints:** Minimum length of 1.

**Required:** Yes

**Name**

The name of the fleet.
Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**State**

The current state for the fleet.

Type: String

Valid Values: STARTING | RUNNING | STOPPING | STOPPED

Required: Yes

**CreatedTime**

The time the fleet was created.

Type: Timestamp

Required: No

**Description**

The description to display.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**DisconnectTimeoutInSeconds**

The amount of time that a streaming session remains active after users disconnect. If they try to reconnect to the streaming session after a disconnection or network interruption within this time interval, they are connected to their previous session. Otherwise, they are connected to a new session with a new streaming instance.

Specify a value between 60 and 36000.

Type: Integer
**Required: No**

**DisplayName**

The fleet name to display.

*Type: String*

*Length Constraints: Minimum length of 1.*

*Required: No*

**DomainJoinInfo**

The name of the directory and organizational unit (OU) to use to join the fleet to a Microsoft Active Directory domain.

*Type: DomainJoinInfo object*

*Required: No*

**EnableDefaultInternetAccess**

Indicates whether default internet access is enabled for the fleet.

*Type: Boolean*

*Required: No*

**FleetErrors**

The fleet errors.

*Type: Array of FleetError objects*

*Required: No*

**FleetType**

The fleet type.

**ALWAYS_ON**

Provides users with instant-on access to their apps. You are charged for all running instances in your fleet, even if no users are streaming apps.
ON_DEMAND

Provide users with access to applications after they connect, which takes one to two minutes. You are charged for instance streaming when users are connected and a small hourly fee for instances that are not streaming apps.

Type: String

Valid Values: ALWAYS_ON | ON_DEMAND | ELASTIC

Required: No

iamRoleArn

The ARN of the IAM role that is applied to the fleet. To assume a role, the fleet instance calls the AWS Security Token Service (STS) AssumeRole API operation and passes the ARN of the role to use. The operation creates a new session with temporary credentials. AppStream 2.0 retrieves the temporary credentials and creates the appstream-machine-role credential profile on the instance.

For more information, see Using an IAM Role to Grant Permissions to Applications and Scripts Running on AppStream 2.0 Streaming Instances in the Amazon AppStream 2.0 Administration Guide.

Type: String

Pattern: ^arn:aws(?:-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9-\.\-/]{0,62}:[A-Za-z0-9-\.\-/]{0,63}:[A-Za-z0-9-\.\-/]{0,63}:[A-Za-z0-9][A-Za-z0-9-_/+=,@.\-]{0,1023}$

Required: No

IdleDisconnectTimeoutInSeconds

The amount of time that users can be idle (inactive) before they are disconnected from their streaming session and the DisconnectTimeoutInSeconds time interval begins. Users are notified before they are disconnected due to inactivity. If users try to reconnect to the streaming session before the time interval specified in DisconnectTimeoutInSeconds elapses, they are connected to their previous session. Users are considered idle when they stop providing keyboard or mouse input during their streaming session. File uploads and downloads, audio in, audio out, and pixels changing do not qualify as user activity. If users continue to
be idle after the time interval in IdleDisconnectTimeoutInSeconds elapses, they are disconnected.

To prevent users from being disconnected due to inactivity, specify a value of 0. Otherwise, specify a value between 60 and 36000. The default value is 0.

**Note**

If you enable this feature, we recommend that you specify a value that corresponds exactly to a whole number of minutes (for example, 60, 120, and 180). If you don't do this, the value is rounded to the nearest minute. For example, if you specify a value of 70, users are disconnected after 1 minute of inactivity. If you specify a value that is at the midpoint between two different minutes, the value is rounded up. For example, if you specify a value of 90, users are disconnected after 2 minutes of inactivity.

Type: Integer

Required: No

**ImageArn**

The ARN for the public, private, or shared image.

Type: String

Pattern: `arn:aws(?:-cn|-iso-b|-iso|-us-gov)?:[A-Za-z0-9]([A-Za-z0-9_/.-]{0,62}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.-]{0,63}:[A-Za-z0-9_/.+@.\-]{0,1023}($

Required: No

**ImageName**

The name of the image used to create the fleet.

Type: String

Length Constraints: Minimum length of 1.

Required: No
MaxConcurrentSessions

The maximum number of concurrent sessions for the fleet.

Type: Integer

Required: No

MaxSessionsPerInstance

The maximum number of user sessions on an instance. This only applies to multi-session fleets.

Type: Integer

Required: No

MaxUserDurationInSeconds

The maximum amount of time that a streaming session can remain active, in seconds. If users are still connected to a streaming instance five minutes before this limit is reached, they are prompted to save any open documents before being disconnected. After this time elapses, the instance is terminated and replaced by a new instance.

Specify a value between 600 and 360000.

Type: Integer

Required: No

Platform

The platform of the fleet.

Type: String

Valid Values: WINDOWS | WINDOWS_SERVER_2016 | WINDOWS_SERVER_2019 | WINDOWS_SERVER_2022 | AMAZON_LINUX2

Required: No

SessionScriptS3Location

The S3 location of the session scripts configuration zip file. This only applies to Elastic fleets.

Type: S3Location object
StreamView

The AppStream 2.0 view that is displayed to your users when they stream from the fleet. When APP is specified, only the windows of applications opened by users display. When DESKTOP is specified, the standard desktop that is provided by the operating system displays.

The default value is APP.

Type: String

Valid Values: APP | DESKTOP

UsbDeviceFilterStrings

The USB device filter strings associated with the fleet.

Type: Array of strings

Length Constraints: Minimum length of 0. Maximum length of 100.

Pattern: ^((\w*)\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*,\s*(\w*)\s*)$

VpcConfig

The VPC configuration for the fleet.

Type: VpcConfig object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
• AWS SDK for Go
• AWS SDK for Java V2
• AWS SDK for Ruby V3
FleetError

Describes a fleet error.

Contents

ErrorCode

The error code.

Type: String

Valid Values: IAM_SERVICE_ROLE_MISSING_ENI_DESCRIBE_ACTION | IAM_SERVICE_ROLE_MISSING_ENI_CREATE_ACTION | IAM_SERVICE_ROLE_MISSING_ENI_DELETE_ACTION | NETWORK_INTERFACE_LIMIT_EXCEEDED | INTERNALSERVICE_ERROR | IAM_SERVICE_ROLE_MISSING | MACHINE_ROLE_IS_MISSING | STS_DISABLED_IN_REGION | SUBNET_HAS_INSUFFICIENT_IP_ADDRESSES | IAM_SERVICE_ROLE_MISSING_DESCRIBE_SUBNET_ACTION | SUBNET_NOT_FOUND | IMAGE_NOT_FOUND | INVALID_SUBNET_CONFIGURATION | SECURITY_GROUPS_NOT_FOUND | IGW_NOT_ATTACHED | IAM_SERVICE_ROLE_MISSING_DESCRIBE_SECURITY_GROUPS_ACTION | FLEET_STOPPED | FLEET_INSTANCE_PROVISIONING_FAILURE | DOMAIN_JOIN_ERROR_FILE_NOT_FOUND | DOMAIN_JOIN_ERROR_ACCESS_DENIED | DOMAIN_JOIN_ERROR_LOGON_FAILURE | DOMAIN_JOIN_ERROR_INVALID_PARAMETER | DOMAIN_JOIN_ERROR_MORE_DATA | DOMAIN_JOIN_ERROR_NO_SUCH_DOMAIN | DOMAIN_JOIN_ERROR_NOT_SUPPORTED | DOMAIN_JOIN_NERR_INVALID_WORKGROUP_NAME | DOMAIN_JOIN_NERR_WORKSTATION_NOT_STARTED | DOMAIN_JOIN_ERROR_DS_MACHINE_ACCOUNT_QUOTA_EXCEEDED | DOMAIN_JOIN_NERR_PASSWORD_EXPIRED | DOMAIN_JOIN_INTERNAL_SERVICE_ERROR

Required: No

ErrorMessage

The error message.

Type: String

Length Constraints: Minimum length of 1.
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**Image**

Describes an image.

**Contents**

**Name**

The name of the image.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**Applications**

The applications associated with the image.

Type: Array of *Application* objects

Required: No

**AppstreamAgentVersion**

The version of the AppStream 2.0 agent to use for instances that are launched from this image.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

**Arn**

The ARN of the image.

Type: String

Pattern: `^arn:aws\(\?::\(-cn\|\-iso\-b\|\-iso\|\-us\-gov\)?:[A-Za-z0-9\[A-Za-z0-9_\./-]{0,62}:\[A-Za-z0-9_\./-]{0,63}:\[A-Za-z0-9_\./-]{0,63}:\[A-Za-z0-9\[A-Za-z0-9_\./-]{0,1023}\$`

Required: No
**BaseImageArn**

The ARN of the image from which this image was created.

Type: String

Pattern: ^arn:aws(?::(-cn|\-iso\-b|\-iso\-\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9_/.\-]{0,62}:[A-Za-z0-9_/.\-]{0,63}:[A-Za-z0-9_/.\-]{0,63}:[A-Za-z0-9_/.\-]{0,1023}$

Required: No

**CreatedAt**

The time the image was created.

Type: Timestamp

Required: No

**Description**

The description to display.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**DisplayName**

The image name to display.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**ImageBuilderName**

The name of the image builder that was used to create the private image. If the image is shared, this value is null.

Type: String
Length Constraints: Minimum length of 1.

Required: No

**ImageBuilderSupported**

Indicates whether an image builder can be launched from this image.

Type: Boolean

Required: No

**ImageErrors**

Describes the errors that are returned when a new image can't be created.

Type: Array of [ResourceError objects](#)

Required: No

**ImagePermissions**

The permissions to provide to the destination AWS account for the specified image.

Type: [ImagePermissions object](#)

Required: No

**Platform**

The operating system platform of the image.

Type: String

Valid Values: WINDOWS | WINDOWS_SERVER_2016 | WINDOWS_SERVER_2019 | WINDOWS_SERVER_2022 | AMAZON_LINUX2

Required: No

**PublicBaseImageReleasedDate**

The release date of the public base image. For private images, this date is the release date of the base image from which the image was created.

Type: Timestamp

Required: No
State

The image starts in the PENDING state. If image creation succeeds, the state is AVAILABLE. If image creation fails, the state is FAILED.

Type: String

Valid Values: PENDING | AVAILABLE | FAILED | COPYING | DELETING | CREATING | IMPORTING

Required: No

StateChangeReason

The reason why the last state change occurred.

Type: ImageStateChangeReason object

Required: No

Visibility

Indicates whether the image is public or private.

Type: String

Valid Values: PUBLIC | PRIVATE | SHARED

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ImageBuilder

Describes a virtual machine that is used to create an image.

Contents

Name

The name of the image builder.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

AccessEndpoints

The list of virtual private cloud (VPC) interface endpoint objects. Administrators can connect to the image builder only through the specified endpoints.

Type: Array of AccessEndpoint objects

Array Members: Minimum number of 1 item. Maximum number of 4 items.

Required: No

AppstreamAgentVersion

The version of the AppStream 2.0 agent that is currently being used by the image builder.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

Arn

The ARN for the image builder.

Type: String

Pattern: ^arn:aws(?::\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9\-_/.\-]{0,62}:[A-Za-z0-9\-_/.\-]{0,63}:[A-Za-z0-9\-_/.\-]{0,63}:[A-Za-z0-9\-_/.\-]{0,1023}$
Required: No

**CreatedTime**

The time stamp when the image builder was created.

Type: Timestamp

Required: No

**Description**

The description to display.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**DisplayName**

The image builder name to display.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**DomainJoinInfo**

The name of the directory and organizational unit (OU) to use to join the image builder to a Microsoft Active Directory domain.

Type: [DomainJoinInfo](#) object

Required: No

**EnableDefaultInternetAccess**

Enables or disables default internet access for the image builder.

Type: Boolean

Required: No
IamRoleArn

The ARN of the IAM role that is applied to the image builder. To assume a role, the image builder calls the AWS Security Token Service (STS) AssumeRole API operation and passes the ARN of the role to use. The operation creates a new session with temporary credentials. AppStream 2.0 retrieves the temporary credentials and creates the `appstream_machine_role` credential profile on the instance.

For more information, see [Using an IAM Role to Grant Permissions to Applications and Scripts Running on AppStream 2.0 Streaming Instances](#) in the [Amazon AppStream 2.0 Administration Guide](#).

Type: String

Pattern: `^arn:aws(?:-cn|-iso-b|-iso|-us-gov)?:[A-Za-z0-9][A-Za-z0-9\_/.-]{0,62}:[A-Za-z0-9\_/.-]{0,63}:[A-Za-z0-9\_/.-]{0,63}:[A-Za-z0-9\_/.+\=,@.\-]{0,1023}$`

Required: No

ImageArn

The ARN of the image from which this builder was created.

Type: String

Pattern: `^arn:aws(?:-cn|-iso-b|-iso|-us-gov)?:[A-Za-z0-9][A-Za-z0-9\_/.-]{0,62}:[A-Za-z0-9\_/.-]{0,63}:[A-Za-z0-9\_/.-]{0,63}:[A-Za-z0-9\_/.+\=,@.\-]{0,1023}$`

Required: No

ImageBuilderErrors

The image builder errors.

Type: Array of `ResourceError` objects

Required: No

InstanceType

The instance type for the image builder. The following instance types are available:
- stream.standard.small
- stream.standard.medium
- stream.standard.large
- stream.compute.large
- stream.compute.xlarge
- stream.compute.2xlarge
- stream.compute.4xlarge
- stream.compute.8xlarge
- stream.memory.large
- stream.memory.xlarge
- stream.memory.2xlarge
- stream.memory.4xlarge
- stream.memory.8xlarge
- stream.memory.z1d.large
- stream.memory.z1d.xlarge

- `stream.graphics-pro.4xlarge`
- `stream.graphics-pro.8xlarge`
- `stream.graphics-pro.16xlarge`

  Type: String

  Length Constraints: Minimum length of 1.

  Required: No

**NetworkAccessConfiguration**

Describes the network details of the fleet or image builder instance.

Type: [NetworkAccessConfiguration](#) object

Required: No

**Platform**

The operating system platform of the image builder.

Type: String

Valid Values: `WINDOWS` | `WINDOWS_SERVER_2016` | `WINDOWS_SERVER_2019` | `WINDOWS_SERVER_2022` | `AMAZON_LINUX2`

Required: No

**State**

The state of the image builder.

Type: String

Valid Values: `PENDING` | `UPDATING_AGENT` | `RUNNING` | `STOPPING` | `STOPPED` | `REBOOTING` | `SNAPSHOTTING` | `DELETING` | `FAILED` | `UPDATING` | `PENDING_QUALIFICATION`

Required: No

**StateChangeReason**

The reason why the last state change occurred.
Type: `ImageBuilderStateChangeReason` object

Required: No

**VpcConfig**

The VPC configuration of the image builder.

Type: `VpcConfig` object

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
ImageBuilderStateChangeReason

Describes the reason why the last image builder state change occurred.

Contents

Code

The state change reason code.

Type: String

Valid Values: INTERNAL_ERROR | IMAGE_UNAVAILABLE

Required: No

Message

The state change reason message.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ImagePermissions

Describes the permissions for an image.

Contents

allowFleet

Indicates whether the image can be used for a fleet.

Type: Boolean

Required: No

allowImageBuilder

Indicates whether the image can be used for an image builder.

Type: Boolean

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ImageStateChangeReason

Describes the reason why the last image state change occurred.

Contents

Code

The state change reason code.

Type: String

Valid Values: INTERNAL_ERROR | IMAGE_BUILDER_NOT_AVAILABLE | IMAGE_COPY_FAILURE

Required: No

Message

The state change reason message.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
LastReportGenerationExecutionError

Describes the error that is returned when a usage report can't be generated.

Contents

ErrorCode

The error code for the error that is returned when a usage report can't be generated.

Type: String

Valid Values: RESOURCE_NOT_FOUND | ACCESS_DENIED | INTERNAL_SERVICE_ERROR

Required: No

ErrorMessage

The error message for the error that is returned when a usage report can't be generated.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
NetworkAccessConfiguration

Describes the network details of the fleet or image builder instance.

Contents

EniId

The resource identifier of the elastic network interface that is attached to instances in your VPC. All network interfaces have the eni-xxxxxxxx resource identifier.

Type: String

Length Constraints: Minimum length of 1.

Required: No

EniPrivateIpAddress

The private IP address of the elastic network interface that is attached to instances in your VPC.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ResourceError

Describes a resource error.

Contents

ErrorCode

The error code.

Type: String

Valid Values: IAM_SERVICE_ROLE_MISSING_ENI_DESCRIBE_ACTION | IAM_SERVICE_ROLE_MISSING_ENI_CREATE_ACTION | IAM_SERVICE_ROLE_MISSING_ENI_DELETE_ACTION | NETWORK_INTERFACE_LIMIT_EXCEEDED | INTERNALSERVICEERROR | IAM_SERVICE_ROLE_IS_MISSING | MACHINE_ROLE_IS_MISSING | STS_DISABLED_IN_REGION | SUBNET_HAS_INSUFFICIENT_IP_ADDRESSES | IAM_SERVICE_ROLE_MISSING_DESCRIBE_SUBNET_ACTION | SUBNET_NOT_FOUND | IMAGE_NOT_FOUND | INVALID_SUBNET_CONFIGURATION | SECURITY_GROUPS_NOT_FOUND | IGW_NOT_ATTACHED | IAM_SERVICE_ROLE_MISSING_DESCRIBE_SECURITY_GROUPS_ACTION | FLEET_STOPPED | FLEET_INSTANCE_PROVISIONING_FAILURE | DOMAINJOIN_ERROR_FILE_NOT_FOUND | DOMAINJOIN_ERROR_ACCESS_DENIED | DOMAINJOIN_ERROR_LOGON_FAILURE | DOMAINJOIN_ERROR_INVALID_PARAMETER | DOMAINJOIN_ERROR_MORE_DATA | DOMAINJOIN_ERROR_NO_SUCH_DOMAIN | DOMAINJOIN_ERROR_NOT_SUPPORTED | DOMAINJOIN_NERR_INVALID_WORKGROUP_NAME | DOMAINJOIN_NERR_WORKSTATION_NOT_STARTED | DOMAINJOIN_ERROR_DS_MACHINE_ACCOUNT_QUOTA_EXCEEDED | DOMAINJOIN_NERR_PASSWORD_EXPIRED | DOMAINJOIN_INTERNAL_SERVICE_ERROR

Required: No

ErrorMessage

The error message.

Type: String

Length Constraints: Minimum length of 1.
Required: No

**ErrorTimestamp**

The time the error occurred.

Type: Timestamp

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
S3Location

Describes the S3 location.

Contents

S3Bucket

The S3 bucket of the S3 object.

Type: String

Pattern: ^\[0-9a-z\.-\-]*(?<!\.)$ 

Required: Yes

S3Key

The S3 key of the S3 object.

This is required when used for the following:

• IconS3Location (Actions: CreateApplication and UpdateApplication)
• SessionScriptS3Location (Actions: CreateFleet and UpdateFleet)
• ScriptDetails (Actions: CreateAppBlock)
• SourceS3Location when creating an app block with CUSTOM PackagingType (Actions: CreateAppBlock)
• SourceS3Location when creating an app block with APPSTREAM2 PackagingType, and using an existing application package (VHD file). In this case, S3Key refers to the VHD file. If a new application package is required, then S3Key is not required. (Actions: CreateAppBlock)

Type: String

Required: No
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
ScriptDetails

Describes the details of the script.

Contents

ExecutablePath

The run path for the script.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

ScriptS3Location

The S3 object location for the script.

Type: S3Location object

Required: Yes

TimeoutInSeconds

The run timeout, in seconds, for the script.

Type: Integer

Required: Yes

ExecutableParameters

The runtime parameters passed to the run path for the script.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ServiceAccountCredentials

Describes the credentials for the service account used by the fleet or image builder to connect to the directory.

Contents

AccountName

The user name of the account. This account must have the following privileges: create computer objects, join computers to the domain, and change/reset the password on descendant computer objects for the organizational units specified.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

AccountPassword

The password for the account.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](https://aws.amazon.com/sdk-for-cpp/)
- [AWS SDK for Go](https://github.com/aws/aws-sdk-go)
- [AWS SDK for Java V2](https://aws.amazon.com/sdk-for-java/)
- [AWS SDK for Ruby V3](https://aws.amazon.com/sdk-for-ruby/)

Session

Describes a streaming session.

Contents

FleetName

The name of the fleet for the streaming session.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Id

The identifier of the streaming session.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

StackName

The name of the stack for the streaming session.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

State

The current state of the streaming session.

Type: String

Valid Values: ACTIVE | PENDING | EXPIRED

Required: Yes
UserId

The identifier of the user for whom the session was created.

Type: String

Required: Yes

AuthenticationType

The authentication method. The user is authenticated using a streaming URL (API) or SAML 2.0 federation (SAML).

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: No

ConnectionState

Specifies whether a user is connected to the streaming session.

Type: String

Valid Values: CONNECTED | NOT_CONNECTED

Required: No

InstanceId

The identifier for the instance hosting the session.

Type: String

Length Constraints: Minimum length of 1.

Required: No

MaxExpirationTime

The time when the streaming session is set to expire. This time is based on the MaxUserDurationInSeconds value, which determines the maximum length of time that a streaming session can run. A streaming session might end earlier than the time specified in
SessionMaxExpirationTime, when the DisconnectTimeOutInSeconds elapses or the user chooses to end his or her session. If the DisconnectTimeOutInSeconds elapses, or the user chooses to end his or her session, the streaming instance is terminated and the streaming session ends.

Type: Timestamp

Required: No

NetworkAccessConfiguration

The network details for the streaming session.

Type: NetworkAccessConfiguration object

Required: No

StartTime

The time when a streaming instance is dedicated for the user.

Type: Timestamp

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
SharedImagePermissions

Describes the permissions that are available to the specified AWS account for a shared image.

Contents

imagePermissions

Describes the permissions for a shared image.

Type: ImagePermissions object

Required: Yes

sharedAccountId

The 12-digit identifier of the AWS account with which the image is shared.

Type: String

Pattern: ^\d+$

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
Stack

Describes a stack.

Contents

Name

The name of the stack.

Type: String
Length Constraints: Minimum length of 1.
Required: Yes

AccessEndpoints

The list of virtual private cloud (VPC) interface endpoint objects. Users of the stack can connect to AppStream 2.0 only through the specified endpoints.

Type: Array of AccessEndpoint objects
Array Members: Minimum number of 1 item. Maximum number of 4 items.
Required: No

ApplicationSettings

The persistent application settings for users of the stack.

Type: ApplicationSettingsResponse object
Required: No

Arn

The ARN of the stack.

Type: String

Pattern: ^arn:aws(?:-cn|\-iso\-b|\-iso\-us\-gov)?:[A-Za-z0-9][A-Za-z0-9-_/\.]*[A-Za-z0-9-_/\.]*[0,62]:[A-Za-z0-9-_/\.]*[0,63]:[A-Za-z0-9-_/\.]*[0,63]:[A-Za-z0-9-_/\.]*[A-Za-z0-9-_/\.]*[A-Za-z0-9-_/\.]*[A-Za-z0-9-_/\.]*[A-Za-z0-9-_/\.]*[A-Za-z0-9-_/\.]*[A-Za-z0-9-_/\.]*[A-Za-z0-9-_/\.]*[A-Za-z0-9-_/\.]*$
Required: No

**CreatedTime**

The time the stack was created.

Type: Timestamp

Required: No

**Description**

The description to display.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**DisplayName**

The stack name to display.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**EmbedHostDomains**

The domains where AppStream 2.0 streaming sessions can be embedded in an iframe. You must approve the domains that you want to host embedded AppStream 2.0 streaming sessions.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 20 items.

Length Constraints: Maximum length of 128.

Pattern: \(?: [a-z0-9](?: [a-z0-9-] [0,61] [a-z0-9])? \).+ [a-z0-9] [a-z0-9-] [0,61] [a-z0-9]  

Required: No
FeedbackURL

The URL that users are redirected to after they click the Send Feedback link. If no URL is specified, no Send Feedback link is displayed.

Type: String

Length Constraints: Maximum length of 1000.

Required: No

RedirectURL

The URL that users are redirected to after their streaming session ends.

Type: String

Length Constraints: Maximum length of 1000.

Required: No

StackErrors

The errors for the stack.

Type: Array of StackError objects

Required: No

StorageConnectors

The storage connectors to enable.

Type: Array of StorageConnector objects

Required: No

StreamingExperienceSettings

The streaming protocol you want your stack to prefer. This can be UDP or TCP. Currently, UDP is only supported in the Windows native client.

Type: StreamingExperienceSettings object

Required: No
UserSettings

The actions that are enabled or disabled for users during their streaming sessions. By default these actions are enabled.

Type: Array of UserSetting objects

Array Members: Minimum number of 1 item.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
StackError

Describes a stack error.

Contents

ErrorCode

The error code.

Type: String

Valid Values: STORAGE_CONNECTOR_ERROR | INTERNAL_SERVICE_ERROR

Required: No

ErrorMessage

The error message.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
StorageConnector

Describes a connector that enables persistent storage for users.

Contents

**ConnectorType**

The type of storage connector.

Type: String

Valid Values: HOM FOLDERS | GOOGLE_DRIVE | ONE_DRIVE

Required: Yes

**Domains**

The names of the domains for the account.

Type: Array of strings

Array Members: Maximum number of 50 items.

Length Constraints: Minimum length of 1. Maximum length of 64.

Required: No

**ResourceIdentifier**

The ARN of the storage connector.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
StreamingExperienceSettings

The streaming protocol you want your stack to prefer. This can be UDP or TCP. Currently, UDP is only supported in the Windows native client.

Contents

PreferredProtocol

The preferred protocol that you want to use while streaming your application.

Type: String

Valid Values: TCP | UDP

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
UsageReportSubscription

Describes information about the usage report subscription.

Contents

LastGeneratedReportDate

The time when the last usage report was generated.

Type: Timestamp

Required: No

S3BucketName

The Amazon S3 bucket where generated reports are stored.

If you enabled on-instance session scripts and Amazon S3 logging for your session script configuration, AppStream 2.0 created an S3 bucket to store the script output. The bucket is unique to your account and Region. When you enable usage reporting in this case, AppStream 2.0 uses the same bucket to store your usage reports. If you haven't already enabled on-instance session scripts, when you enable usage reports, AppStream 2.0 creates a new S3 bucket.

Type: String

Length Constraints: Minimum length of 1.

Required: No

Schedule

The schedule for generating usage reports.

Type: String

Valid Values: DAILY

Required: No

SubscriptionErrors

The errors that were returned if usage reports couldn't be generated.
Type: Array of LastReportGenerationExecutionError objects

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
User

Describes a user in the user pool.

Contents

AuthenticationType

The authentication type for the user.

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: Yes

Arn

The ARN of the user.

Type: String

Pattern: ^arn:aws(?:\-cn|\-iso\-b|\-iso|\-us\-gov)?:[A-Za-z0-9]+:[A-Za-z0-9\-]+:[A-Za-z0-9\-]+:[A-Za-z0-9\-]+:[A-Za-z0-9\-]+:[A-Za-z0-9\-]+:[A-Za-z0-9\-]+:[A-Za-z0-9\-]+:\[0,1023]$  

Required: No

CreatedTime

The date and time the user was created in the user pool.

Type: Timestamp

Required: No

Enabled

Specifies whether the user in the user pool is enabled.

Type: Boolean

Required: No
**FirstName**

The first name, or given name, of the user.

Type: String

Length Constraints: Maximum length of 2048.

Pattern: `^[A-Za-z0-9_-\s]+$`

Required: No

**LastName**

The last name, or surname, of the user.

Type: String

Length Constraints: Maximum length of 2048.

Pattern: `^[A-Za-z0-9_-\s]+$`

Required: No

**Status**

The status of the user in the user pool. The status can be one of the following:

- **UNCONFIRMED** – The user is created but not confirmed.
- **CONFIRMED** – The user is confirmed.
- **ARCHIVED** – The user is no longer active.
- **COMPROMISED** – The user is disabled because of a potential security threat.
- **UNKNOWN** – The user status is not known.

Type: String

Length Constraints: Minimum length of 1.

Required: No

**UserName**

The email address of the user.
Users' email addresses are case-sensitive.

Type: String

Pattern: [\p{L}\p{M}\p{S}\p{N}\p{P}]+

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
UserSetting

Describes an action and whether the action is enabled or disabled for users during their streaming sessions.

Contents

Action

The action that is enabled or disabled.

Type: String

Valid Values: CLIPBOARD_COPY_FROM_LOCAL_DEVICE | CLIPBOARD_COPY_TO_LOCAL_DEVICE | FILE_UPLOAD | FILE_DOWNLOAD | PRINTING_TO_LOCAL_DEVICE | DOMAIN_PASSWORD_SIGNIN | DOMAIN_SMART_CARD_SIGNIN

Required: Yes

Permission

Indicates whether the action is enabled or disabled.

Type: String

Valid Values: ENABLED | DISABLED

Required: Yes

MaximumLength

Specifies the number of characters that can be copied by end users from the local device to the remote session, and to the local device from the remote session.

This can be specified only for the CLIPBOARD_COPY_FROM_LOCAL_DEVICE and CLIPBOARD_COPY_TO_LOCAL_DEVICE actions.

This defaults to 20,971,520 (20 MB) when unspecified and the permission is ENABLED. This can't be specified when the permission is DISABLED.

The value can be between 1 and 20,971,520 (20 MB).
Type: Integer

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
UserStackAssociation

Describes a user in the user pool and the associated stack.

Contents

**AuthenticationType**

The authentication type for the user.

Type: String

Valid Values: API | SAML | USERPOOL | AWS_AD

Required: Yes

**StackName**

The name of the stack that is associated with the user.

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

**UserName**

The email address of the user who is associated with the stack.

Type: String

Pattern: [\p{L}\p{M}\p{S}\p{N}\p{P}]+

Required: Yes

*Note*

Users' email addresses are case-sensitive.
SendEmailNotification

Specifies whether a welcome email is sent to a user after the user is created in the user pool.

Type: Boolean

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
UserStackAssociationError

Describes the error that is returned when a user can't be associated with or disassociated from a stack.

Contents

ErrorCode

The error code for the error that is returned when a user can't be associated with or disassociated from a stack.

Type: String

Valid Values: STACK_NOT_FOUND | USER_NAME_NOT_FOUND | DIRECTORY_NOT_FOUND | INTERNAL_ERROR

Required: No

ErrorMessage

The error message for the error that is returned when a user can't be associated with or disassociated from a stack.

Type: String

Length Constraints: Minimum length of 1.

Required: No

UserStackAssociation

Information about the user and associated stack.

Type: UserStackAssociation object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:
- **AWS SDK for C++**
- **AWS SDK for Go**
- **AWS SDK for Java V2**
- **AWS SDK for Ruby V3**

**See Also**
VpcConfig

Describes VPC configuration information for fleets and image builders.

Contents

SecurityGroupIds

The identifiers of the security groups for the fleet or image builder.

Type: Array of strings

Array Members: Maximum number of 5 items.

Length Constraints: Minimum length of 1.

Required: No

SubnetIds

The identifiers of the subnets to which a network interface is attached from the fleet instance or image builder instance. Fleet instances use one or more subnets. Image builder instances use one subnet.

Type: Array of strings

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
Common Parameters

The following list contains the parameters that all actions use for signing Signature Version 4 requests with a query string. Any action-specific parameters are listed in the topic for that action. For more information about Signature Version 4, see Signing AWS API requests in the IAM User Guide.

Action

The action to be performed.

Type: string

Required: Yes

Version

The API version that the request is written for, expressed in the format YYYY-MM-DD.

Type: string

Required: Yes

X-Amz-Algorithm

The hash algorithm that you used to create the request signature.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Valid Values: AWS4-HMAC-SHA256

Required: Conditional

X-Amz-Credential

The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string ("aws4_request"). The value is expressed in the following format: access_key/YYYYMMDD/region/service/aws4_request.
For more information, see Create a signed AWS API request in the IAM User Guide.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

**X-Amz-Date**

The date that is used to create the signature. The format must be ISO 8601 basic format (YYYYMMDD'T'HHMMSS'Z'). For example, the following date time is a valid X-Amz-Date value: 20120325T120000Z.

Condition: X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see Elements of an AWS API request signature in the IAM User Guide.

Type: string

Required: Conditional

**X-Amz-Security-Token**

The temporary security token that was obtained through a call to AWS Security Token Service (AWS STS). For a list of services that support temporary security credentials from AWS STS, see AWS services that work with IAM in the IAM User Guide.

Condition: If you're using temporary security credentials from AWS STS, you must include the security token.

Type: string

Required: Conditional

**X-Amz-Signature**

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.
Type: string

Required: Conditional

**X-Amz-SignedHeaders**

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see [Create a signed AWS API request](#) in the [IAM User Guide](#).

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional
Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.

**AccessDeniedException**

You do not have sufficient access to perform this action.

HTTP Status Code: 400

**IncompleteSignature**

The request signature does not conform to AWS standards.

HTTP Status Code: 400

**InternalFailure**

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

**InvalidAction**

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 400

**InvalidClientTokenId**

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

**NotAuthorized**

You do not have permission to perform this action.

HTTP Status Code: 400

**OptInRequired**

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403
RequestExpired

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

ServiceUnavailable

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 400

ValidationError

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
