AWSSystemsManagerAccountDiscoveryServicePolicy

Description: Grants AWS Systems Manager (SSM) permission to discover AWS account information.

`AWSSystemsManagerAccountDiscoveryServicePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: October 24, 2019, 17:21 UTC

- **Edited time:** October 17, 2022, 20:25 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AWSSystemsManagerAccountDiscoveryServicePolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "organizations:DescribeAccount",

AWSSystemsManagerEnableConfigRecordingExecutionPolicy

Description: Provides permissions for AWS Systems Manager Quick Setup to enable and configure AWS Config configuration recording.

`AWSSystemsManagerEnableConfigRecordingExecutionPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSSystemsManagerEnableConfigRecordingExecutionPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 26, 2024, 09:40 UTC
- **Edited time:** June 26, 2024, 09:40 UTC

- **ARN**: `arn:aws:iam::aws:policy/AWSSystemsManagerEnableConfigRecordingExecutionPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSSystemsManagerJustInTimeAccessTokenPolicy

Description: The managed policy AWSSystemsManagerJustInTimeAccessTokenPolicy allows Systems Manager to generate access tokens used for just-in-time node access.

`AWSSystemsManagerJustInTimeAccessTokenPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSSystemsManagerJustInTimeAccessTokenPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 17, 2025, 21:07 UTC
- **Edited time:** April 17, 2025, 21:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSSystemsManagerJustInTimeAccessTokenPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSSystemsManagerJustInTimeNodeAccessRolePropagationPolicy

Description: This policy allows Systems Manager to share a deny-access policy for just-in-time node access from the delegated administrator account to member accounts, and replicate the policy to multiple Regions.

`AWSSystemsManagerJustInTimeNodeAccessRolePropagationPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSSystemsManagerJustInTimeNodeAccessRolePropagationPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy

AWSSystemsManagerNotificationsServicePolicy

Description: Permissions required to collect information about a user for Just-In-Time-Node-Access notifications.

`AWSSystemsManagerNotificationsServicePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: April 17, 2025, 20:52 UTC
- **Edited time:** April 17, 2025, 20:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AWSSystemsManagerNotificationsServicePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AWSSystemsManagerOpsDataSyncServiceRolePolicy

Description: IAM role for SSM Explorer to manage OpsData related operations

`AWSSystemsManagerOpsDataSyncServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: April 26, 2021, 20:42 UTC
- **Edited time:** June 28, 2023, 22:53 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AWSSystemsManagerOpsDataSyncServiceRolePolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [

AWSThinkboxAssetServerPolicy

Description: This policy grants the AWS Portal Asset Server the necessary permissions required for normal operation.

`AWSThinkboxAssetServerPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSThinkboxAssetServerPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 27, 2020, 19:18 UTC
- **Edited time:** May 27, 2020, 19:18 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSThinkboxAssetServerPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "logs:DescribeLogGroups",
        "logs:DescribeLogStreams",
        "logs:GetLogEvents"
      ],
      "Resource" : [
        "arn:aws:logs:*:*:log-group:/thinkbox*"
```

```
      ]
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "s3:GetObject",
        "s3:PutObject",
        "s3:ListBucket"
      ],
      "Resource" : [
        "arn:aws:s3:::aws-portal-cache*"
      ]
    }
  ]
}

AWSThinkboxAWSPortalAdminPolicy

Description: This policy grants AWS Thinkbox's Deadline software full access to multiple AWS services as required for AWS Portal administration. This includes access to create arbitrary tags on several EC2 resource types.

`AWSThinkboxAWSPortalAdminPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSThinkboxAWSPortalAdminPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 27, 2020, 19:41 UTC

- **Edited time:** November 12, 2024, 19:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSThinkboxAWSPortalAdminPolicy`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSThinkboxAWSPortalGatewayPolicy

Description: This policy grants the AWS Portal Gateway machine the necessary permissions required for normal operation.

`AWSThinkboxAWSPortalGatewayPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSThinkboxAWSPortalGatewayPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 27, 2020, 19:05 UTC
- **Edited time:** June 30, 2020, 16:02 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSThinkboxAWSPortalGatewayPolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",

AWSThinkboxAWSPortalWorkerPolicy

Description: This policy grants the Deadline Workers in AWS Portal the necessary permissions required for normal operation.

`AWSThinkboxAWSPortalWorkerPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSThinkboxAWSPortalWorkerPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 27, 2020, 19:15 UTC
- **Edited time:** December 07, 2020, 23:27 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSThinkboxAWSPortalWorkerPolicy`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AWSThinkboxDeadlineResourceTrackerAccessPolicy

Description: Grants permissions required for the operation of AWS Thinkbox's Deadline Resource Tracker. This includes full access to some EC2 actions, including DeleteFleets and CancelSpotFleetRequests.

`AWSThinkboxDeadlineResourceTrackerAccessPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSThinkboxDeadlineResourceTrackerAccessPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 27, 2020, 19:25 UTC
- **Edited time:** May 27, 2020, 19:25 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSThinkboxDeadlineResourceTrackerAccessPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

AWSThinkboxDeadlineResourceTrackerAdminPolicy

Description: Grants permissions required to create, destroy, and administer AWS Thinkbox's Deadline Resource Tracker.

`AWSThinkboxDeadlineResourceTrackerAdminPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSThinkboxDeadlineResourceTrackerAdminPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 27, 2020, 19:29 UTC
- **Edited time:** November 12, 2024, 19:29 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSThinkboxDeadlineResourceTrackerAdminPolicy`

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSThinkboxDeadlineSpotEventPluginAdminPolicy

Description: Grants permissions required for AWS Thinkbox's Deadline Spot Event Plugin. This includes permission to request, modify, and cancel a spot fleet, as well as limited PassRole permission.

`AWSThinkboxDeadlineSpotEventPluginAdminPolicy` is an AWS managed policy.

Using this policy

You can attach `AWSThinkboxDeadlineSpotEventPluginAdminPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 27, 2020, 19:38 UTC
- **Edited time:** May 27, 2020, 19:38 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSThinkboxDeadlineSpotEventPluginAdminPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AWSTrustedAdvisorPriorityFullAccess

Description: Provides full access to AWS Trusted Advisor Priority. This policy also enables the user to add Trusted Advisor as a trusted service with AWS Organizations and to specify delegated administrator accounts for Trusted Advisor Priority.

`AWSTrustedAdvisorPriorityFullAccess` is an AWS managed policy.

Using this policy

You can attach `AWSTrustedAdvisorPriorityFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 16, 2022, 16:08 UTC
- **Edited time:** August 16, 2022, 16:08 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSTrustedAdvisorPriorityFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

AWSVendorInsightsAssessorReadOnly

Description: Provides read-only access for viewing entitled Vendor Insights resources

`AWSVendorInsightsAssessorReadOnly` is an AWS managed policy.

Using this policy

You can attach `AWSVendorInsightsAssessorReadOnly` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: July 26, 2022, 15:05 UTC
- **Edited time:** December 01, 2022, 00:55 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSVendorInsightsAssessorReadOnly`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "vendor-insights:ListEntitledSecurityProfiles",

AWSWAFConsoleReadOnlyAccess

Description: Provides read-only access to AWS WAF via the AWS Management Console. Note that this policy also grants permissions to list Amazon CloudFront distributions, permissions to view load balancers on AWS Elastic Load Balancing, permissions to view Amazon API Gateway REST APIs and stages, permissions to list and view Amazon CloudWatch metrics, and permissions to view regions enabled within the account.

`AWSWAFConsoleReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach AWSWAFConsoleReadOnlyAccess to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 06, 2020, 18:43 UTC
- **Edited time:** May 05, 2025, 21:52 UTC
- **ARN**: arn:aws:iam::aws:policy/AWSWAFConsoleReadOnlyAccess

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSWAFFullAccess

Description: Provides full access to AWS WAF actions.

`AWSWAFFullAccess` is an AWS managed policy.

Using this policy

You can attach `AWSWAFFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 06, 2015, 20:44 UTC

- **Edited time:** May 05, 2025, 21:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSWAFFullAccess`

Policy version

Policy version: v12 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

AWSWAFReadOnlyAccess

Description: Provides read only access to AWS WAF actions.

`AWSWAFReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AWSWAFReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 06, 2015, 20:43 UTC
- **Edited time:** May 05, 2025, 21:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSWAFReadOnlyAccess`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {

AWSWellArchitectedDiscoveryServiceRolePolicy

Description: Allows WellArchitected to access AWS services and resources that relate to WellArchitected resources on behalf of customers.

`AWSWellArchitectedDiscoveryServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: April 26, 2023, 18:36 UTC
- **Edited time:** April 26, 2023, 18:36 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/AWSWellArchitectedDiscoveryServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

AWSXrayWriteOnlyAccess

Description: AWS X-Ray write only managed policy

`AWSXrayWriteOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `AWSXrayWriteOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy

- **Creation time**: December 01, 2016, 18:19 UTC
- **Edited time:** August 28, 2018, 23:03 UTC
- **ARN**: `arn:aws:iam::aws:policy/AWSXrayWriteOnlyAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "xray:PutTraceSegments",

BedrockAgentCoreFullAccess

Description: Provides full access to Bedrock AgentCore as well as limited access to related services

`BedrockAgentCoreFullAccess` is an AWS managed policy.

Using this policy

You can attach `BedrockAgentCoreFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: July 16, 2025, 13:37 UTC
- **Edited time:** July 16, 2025, 13:37 UTC
- **ARN**: `arn:aws:iam::aws:policy/BedrockAgentCoreFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

Billing

Description: Grants permissions for billing and cost management. This includes viewing account usage and viewing and modifying budgets and payment methods.

`Billing` is an AWS managed policy.

Using this policy

You can attach `Billing` to your users, groups, and roles.

Policy details

- **Type**: Job function policy
- **Creation time**: November 10, 2016, 17:33 UTC
- **Edited time:** March 12, 2025, 18:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/job-function/Billing`

Policy version

Policy version: v15 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

BudgetsServiceRolePolicy

Description: Allows Budgets to verify access to Billing Views shared across account boundaries.

`BudgetsServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: July 30, 2025, 21:07 UTC
- **Edited time:** July 30, 2025, 21:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/BudgetsServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "billing:GetBillingViewData"
      ],
      "Resource" : "*"
    }
  ]
}

CloudFrontReadOnlyAccess

Description: Provides access to CloudFront distribution configuration information and list distributions via the AWS Management Console.

`CloudFrontReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `CloudFrontReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:39 UTC
- **Edited time:** April 28, 2025, 17:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/CloudFrontReadOnlyAccess`

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "cfReadOnly",
      "Effect" : "Allow",
      "Action" : [
        "acm:DescribeCertificate",
        "acm:ListCertificates",
        "cloudfront:Describe*",
        "cloudfront:Get*",
        "cloudfront:List*",
        "cloudfront-keyvaluestore:Describe*",
        "cloudfront-keyvaluestore:Get*",
        "cloudfront-keyvaluestore:List*",
        "iam:ListServerCertificates",
        "route53:List*",
        "waf:ListWebACLs",
        "waf:GetWebACL",
        "wafv2:ListWebACLs",
        "wafv2:GetWebACL"
      ],
      "Resource" : "*"
    }
  ]
}
```

CloudHSMServiceRolePolicy

Description: Enables access to AWS resources used or managed by CloudHSM

`CloudHSMServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 06, 2017, 19:12 UTC
- **Edited time:** November 06, 2017, 19:12 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/CloudHSMServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "logs:CreateLogGroup",
        "logs:CreateLogStream",
```

```
        "logs:PutLogEvents",
        "logs:DescribeLogStreams"
      ],
      "Resource" : [
        "arn:aws:logs:*:*:*"
      ]
    }
  ]
}
```

CloudSearchFullAccess

Description: Provides full access to the Amazon CloudSearch configuration service.

`CloudSearchFullAccess` is an AWS managed policy.

Using this policy

You can attach `CloudSearchFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:39 UTC
- **Edited time:** February 06, 2015, 18:39 UTC
- **ARN**: `arn:aws:iam::aws:policy/CloudSearchFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Action" : [
        "cloudsearch:*"
      ],
      "Effect" : "Allow",
      "Resource" : "*"
    }
  ]
}
```

CloudTrailServiceRolePolicy

Description: Permission policy for CloudTrail ServiceLinkedRole

`CloudTrailServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: October 24, 2018, 21:21 UTC
- **Edited time:** November 27, 2023, 01:18 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/CloudTrailServiceRolePolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

CloudWatch-CrossAccountAccess

Description: Allows CloudWatch to assume CloudWatch-CrossAccountSharing roles in remote accounts on behalf of the current account in order to display data cross-account, cross-region

`CloudWatch-CrossAccountAccess` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: July 23, 2019, 09:59 UTC
- **Edited time:** July 23, 2019, 09:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/CloudWatch-CrossAccountAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

CloudWatchApplicationInsightsReadOnlyAccess

Description: Provides read only access to CloudWatch Application Insights.

`CloudWatchApplicationInsightsReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `CloudWatchApplicationInsightsReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 24, 2020, 18:48 UTC
- **Edited time:** November 24, 2020, 18:48 UTC
- **ARN**: `arn:aws:iam::aws:policy/CloudWatchApplicationInsightsReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
```

```
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "applicationinsights:Describe*",
        "applicationinsights:List*"
      ],
      "Resource" : "*"
    }
  ]
}
```

CloudwatchApplicationInsightsServiceLinkedRolePolicy

Description: Cloudwatch Application Insights Service Linked Role Policy

`CloudwatchApplicationInsightsServiceLinkedRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 01, 2018, 16:22 UTC
- **Edited time:** July 25, 2024, 16:24 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/CloudwatchApplicationInsightsServiceLinkedRolePolicy`

Policy version

Policy version: v25 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

CloudWatchApplicationSignalsFullAccess

Description: Provide full access to CloudWatch Application Signals service and scoped access to the dependencies needed to use and operate this service.

`CloudWatchApplicationSignalsFullAccess` is an AWS managed policy.

Using this policy

You can attach `CloudWatchApplicationSignalsFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 06, 2024, 22:50 UTC
- **Edited time:** June 06, 2024, 22:50 UTC
- **ARN**: `arn:aws:iam::aws:policy/CloudWatchApplicationSignalsFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

CloudWatchApplicationSignalsReadOnlyAccess

Description: Provides read only access to CloudWatch Application Signals service and scoped access to the dependencies needed to use this service

`CloudWatchApplicationSignalsReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `CloudWatchApplicationSignalsReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 06, 2024, 22:48 UTC
- **Edited time:** June 06, 2024, 22:48 UTC
- **ARN**: `arn:aws:iam::aws:policy/CloudWatchApplicationSignalsReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

CloudWatchApplicationSignalsServiceRolePolicy

Description: Policy grants permission to CloudWatch Application Signals to collect monitoring and tagging data from other relevant AWS services.

`CloudWatchApplicationSignalsServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 09, 2023, 18:09 UTC
- **Edited time:** March 17, 2025, 15:07 UTC

- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/CloudWatchApplicationSignalsServiceRolePolicy`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

CloudWatchEventsServiceRolePolicy

Description: Allow AWS CloudWatch to execute actions on your behalf configured through alarms and events.

`CloudWatchEventsServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 17, 2017, 00:42 UTC
- **Edited time:** November 17, 2017, 00:42 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/CloudWatchEventsServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "cloudwatch:DescribeAlarms",
        "ec2:DescribeInstanceStatus",
        "ec2:DescribeInstances",
        "ec2:DescribeSnapshots",
        "ec2:DescribeVolumeStatus",
        "ec2:DescribeVolumes",
        "ec2:RebootInstances",
        "ec2:StopInstances",
        "ec2:TerminateInstances",
        "ec2:CreateSnapshot"
      ],
```

```
      "Resource" : "*"
    }
  ]
}
```

CloudWatchFullAccess

Description: Provides full access to CloudWatch.

`CloudWatchFullAccess` is an AWS managed policy.

Using this policy

You can attach `CloudWatchFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:40 UTC
- **Edited time:** November 27, 2022, 13:23 UTC
- **ARN**: `arn:aws:iam::aws:policy/CloudWatchFullAccess`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
```

```
  "Version" : "2012-10-17",
  "Statement" : [
    {

CloudWatchLogsReadOnlyAccess

Description: Provides read only access to CloudWatch Logs

`CloudWatchLogsReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `CloudWatchLogsReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:40 UTC
- **Edited time:** May 20, 2025, 16:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/CloudWatchLogsReadOnlyAccess`

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "CloudWatchLogsReadOnlyAccess",
      "Effect" : "Allow",
      "Action" : [
        "logs:Describe*",
        "logs:Get*",
```

```
        "logs:List*",
        "logs:StartQuery",
        "logs:StopQuery",
        "logs:TestMetricFilter",
        "logs:FilterLogEvents",
        "logs:StartLiveTail",
        "logs:StopLiveTail",
        "cloudwatch:GenerateQuery",
        "cloudwatch:GenerateQueryResultsSummary"
      ],
      "Resource" : "*"
    }
  ]
}
```

CloudWatchNetworkFlowMonitorAgentPublishPolicy

Description: You can use this policy in IAM roles that are attached to Amazon EC2 and Amazon EKS instance resources to send telemetry reports (metrics) to a Network Flow Monitor endpoint.

`CloudWatchNetworkFlowMonitorAgentPublishPolicy` is an AWS managed policy.

Using this policy

You can attach `CloudWatchNetworkFlowMonitorAgentPublishPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 01, 2024, 22:51 UTC
- **Edited time:** December 01, 2024, 22:51 UTC

- **ARN**: `arn:aws:iam::aws:policy/CloudWatchNetworkFlowMonitorAgentPublishPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "networkflowmonitor:Publish"
      ],
      "Resource" : "*"
    }
  ]
}
```

CloudWatchNetworkFlowMonitorServiceRolePolicy

Description: You can't attach CloudWatchNetworkFlowMonitorServiceRolePolicy to your IAM entities. This policy is attached to a service-linked role named

AWSServiceRoleForNetworkFlowMonitor, which publishes network telemetry aggregation results, collected by Network Flow Monitor agents, to CloudWatch. It also allows the service to use AWS Organizations to get information for multi-account scenarios.

`CloudWatchNetworkFlowMonitorServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 01, 2024, 22:36 UTC
- **Edited time:** April 29, 2025, 10:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/CloudWatchNetworkFlowMonitorServiceRolePolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "cloudwatch:PutMetricData"
      ],
      "Resource" : "*",
```

```
      "Condition" : {
        "StringEquals" : {
          "cloudwatch:namespace" : "AWS/NetworkFlowMonitor"
        }
      }
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "organizations:ListDelegatedAdministrators",

CloudWatchNetworkFlowMonitorTopologyServiceRolePolicy

Description: You can't attach CloudWatchNetworkFlowMonitorTopologyServiceRolePolicy to your IAM entities. This policy is attached to a service-linked role named AWSServiceRoleForNetworkFlowMonitor_Topology, which generates topology snapshots of resources used by Network Flow Monitor in your account.

`CloudWatchNetworkFlowMonitorTopologyServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 01, 2024, 22:51 UTC
- **Edited time:** December 01, 2024, 22:51 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/CloudWatchNetworkFlowMonitorTopologyServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

CloudWatchNetworkMonitorServiceRolePolicy

Description: Allows CloudWatch Network Monitor to access and manage EC2 and VPC resources, publish data to CloudWatch and access other required services on your behalf.

`CloudWatchNetworkMonitorServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 21, 2023, 18:53 UTC
- **Edited time:** December 21, 2023, 18:53 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/CloudWatchNetworkMonitorServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

CloudWatchReadOnlyAccess

Description: Provides read only access to CloudWatch.

`CloudWatchReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `CloudWatchReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:40 UTC
- **Edited time:** November 21, 2024, 17:51 UTC
- **ARN**: `arn:aws:iam::aws:policy/CloudWatchReadOnlyAccess`

Policy version

Policy version: v10 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

ComputeOptimizerReadOnlyAccess

Description: Provides read only access to ComputeOptimizer.

`ComputeOptimizerReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `ComputeOptimizerReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 07, 2020, 00:11 UTC
- **Edited time:** November 20, 2024, 21:08 UTC
- **ARN**: `arn:aws:iam::aws:policy/ComputeOptimizerReadOnlyAccess`

Policy version

Policy version: v9 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

ComputeOptimizerServiceRolePolicy

Description: Allows ComputeOptimizer to call AWS services and collect workload details on your behalf.

`ComputeOptimizerServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 03, 2019, 08:45 UTC
- **Edited time:** January 03, 2025, 21:37 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/ComputeOptimizerServiceRolePolicy`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",

DataScientist

Description: Grants permissions to AWS data analytics services.

`DataScientist` is an AWS managed policy.

Using this policy

You can attach `DataScientist` to your users, groups, and roles.

Policy details

- **Type**: Job function policy
- **Creation time**: November 10, 2016, 17:28 UTC

- **Edited time:** December 03, 2019, 16:48 UTC
- **ARN**: `arn:aws:iam::aws:policy/job-function/DataScientist`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

DAXServiceRolePolicy

Description: This policy allows DAX to create and manage Network interface, Security group, Subnet and Vpc on behalf of customer

`DAXServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: March 05, 2018, 17:51 UTC
- **Edited time:** March 05, 2018, 17:51 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/DAXServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
```

```
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:AuthorizeSecurityGroupIngress",
        "ec2:CreateNetworkInterface",

EC2FastLaunchServiceRolePolicy

Description: Policy grants ec2fastlaunch to prepare and manage preprovisioned snapshots in customer's account & publish related metrics.

`EC2FastLaunchServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: January 10, 2022, 13:08 UTC
- **Edited time:** July 18, 2025, 00:37 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/EC2FastLaunchServiceRolePolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

EC2FleetTimeShiftableServiceRolePolicy

Description: Policy granting permissions to EC2 Fleet to launch instances in the future.

`EC2FleetTimeShiftableServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: December 23, 2019, 19:47 UTC

- **Edited time:** December 23, 2019, 19:47 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/EC2FleetTimeShiftableServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

EC2ImageBuilderLifecycleExecutionPolicy

Description: The EC2ImageBuilderLifecycleExecutionPolicy policy grants permissions for Image Builder to perform actions such as deprecate or delete Image Builder image resources and their underlying resources (AMIs, snapshots) to support automated rules for image lifecycle management tasks.

`EC2ImageBuilderLifecycleExecutionPolicy` is an AWS managed policy.

Using this policy

You can attach `EC2ImageBuilderLifecycleExecutionPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: November 16, 2023, 23:23 UTC
- **Edited time:** November 16, 2023, 23:23 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/EC2ImageBuilderLifecycleExecutionPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

EC2InstanceConnect

Description: Allows customers to call EC2 Instance Connect to publish ephemeral keys to their EC2 instances and connect via ssh or the EC2 Instance Connect CLI.

`EC2InstanceConnect` is an AWS managed policy.

Using this policy

You can attach `EC2InstanceConnect` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 27, 2019, 18:53 UTC
- **Edited time:** June 27, 2019, 18:53 UTC
- **ARN**: `arn:aws:iam::aws:policy/EC2InstanceConnect`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
```

```
  "Statement" : [
    {
      "Sid" : "EC2InstanceConnect",

Ec2InstanceConnectEndpoint

Description: EC2 Instance Connect endpoint policy to manage EC2 Instance Connect endpoints created by the customer

`Ec2InstanceConnectEndpoint` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: January 24, 2023, 20:19 UTC
- **Edited time:** July 31, 2025, 17:49 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/Ec2InstanceConnectEndpoint`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ElasticLoadBalancingFullAccess

Description: Provides full access to Amazon ElasticLoadBalancing, and limited access to other services necessary to provide ElasticLoadBalancing features.

`ElasticLoadBalancingFullAccess` is an AWS managed policy.

Using this policy

You can attach `ElasticLoadBalancingFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 20, 2018, 20:42 UTC
- **Edited time:** October 24, 2024, 22:21 UTC
- **ARN**: `arn:aws:iam::aws:policy/ElasticLoadBalancingFullAccess`

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : "elasticloadbalancing:*",
      "Resource" : "*"
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:DescribeAccountAttributes",
        "ec2:DescribeAddresses",

ElasticLoadBalancingReadOnly

Description: Provides read only access to Amazon ElasticLoadBalancing and dependent services

`ElasticLoadBalancingReadOnly` is an AWS managed policy.

Using this policy

You can attach `ElasticLoadBalancingReadOnly` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: September 20, 2018, 20:17 UTC
- **Edited time:** November 26, 2023, 18:15 UTC
- **ARN**: `arn:aws:iam::aws:policy/ElasticLoadBalancingReadOnly`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "Statement1",
      "Effect" : "Allow",
      "Action" : [
        "elasticloadbalancing:Describe*",
        "elasticloadbalancing:Get*"
      ],
```

```
      "Resource" : "*"
    },
    {
      "Sid" : "Statement2",
      "Effect" : "Allow",
      "Action" : [
        "ec2:DescribeInstances",
        "ec2:DescribeClassicLinkInstances",
        "ec2:DescribeSecurityGroups"
      ],
      "Resource" : "*"
    },
    {
      "Sid" : "Statement3",
      "Effect" : "Allow",
      "Action" : "arc-zonal-shift:GetManagedResource",

FSxDeleteServiceLinkedRoleAccess

Description: Allows Amazon FSx to delete its Service Linked Roles for Amazon S3 access

`FSxDeleteServiceLinkedRoleAccess` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 28, 2018, 10:40 UTC
- **Edited time:** November 28, 2018, 10:40 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/FSxDeleteServiceLinkedRoleAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "iam:DeleteServiceLinkedRole",
        "iam:GetServiceLinkedRoleDeletionStatus",
        "iam:GetRole"
      ],
      "Resource" : "arn:*:iam::*:role/aws-service-role/s3.data-
source.lustre.fsx.amazonaws.com/AWSServiceRoleForFSxS3Access_*"
    }
  ]
}

IAMReadOnlyAccess

Description: Provides read only access to IAM via the AWS Management Console.

`IAMReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `IAMReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:40 UTC
- **Edited time:** January 25, 2018, 19:11 UTC
- **ARN**: `arn:aws:iam::aws:policy/IAMReadOnlyAccess`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "iam:GenerateCredentialReport",
        "iam:GenerateServiceLastAccessedDetails",
        "iam:Get*",
        "iam:List*",
        "iam:SimulateCustomPolicy",
        "iam:SimulatePrincipalPolicy"
      ],
      "Resource" : "*"
    }
  ]
}
```

IAMSelfManageServiceSpecificCredentials

Description: Allows an IAM user to manage their own Service Specific Credentials.

`IAMSelfManageServiceSpecificCredentials` is an AWS managed policy.

Using this policy

You can attach `IAMSelfManageServiceSpecificCredentials` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: December 22, 2016, 17:25 UTC
- **Edited time:** December 22, 2016, 17:25 UTC
- **ARN**: `arn:aws:iam::aws:policy/IAMSelfManageServiceSpecificCredentials`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "iam:CreateServiceSpecificCredential",
```

```
        "iam:ListServiceSpecificCredentials",
        "iam:UpdateServiceSpecificCredential",
        "iam:DeleteServiceSpecificCredential",
        "iam:ResetServiceSpecificCredential"
      ],
      "Resource" : "arn:aws:iam::*:user/${aws:username}"
    }
  ]
}
```

LexBotPolicy

Description: Policy for AWS Lex Bot use case

`LexBotPolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: February 17, 2017, 22:18 UTC
- **Edited time:** November 13, 2019, 22:29 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/LexBotPolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
```

```
    {
      "Effect" : "Allow",
      "Action" : [
        "polly:SynthesizeSpeech"
      ],
      "Resource" : [
        "*"
      ]
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "comprehend:DetectSentiment"
      ],
      "Resource" : [
        "*"
      ]
    }
  ]
}

MultiPartyApprovalReadOnlyAccess

Description: Provides read-only access to Multi-party approval. This policy also includes related read permission to AWS Organizations and AWS IAM Identity for approval teams and identity sources.

`MultiPartyApprovalReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `MultiPartyApprovalReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 18, 2025, 20:07 UTC
- **Edited time:** June 18, 2025, 20:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/MultiPartyApprovalReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

NeptuneConsoleFullAccess

Description: Provides full access to manage Amazon Neptune using the AWS Management Console. Note this policy also grants full access to publish on all SNS topics within the account, permissions to create and edit Amazon EC2 instances and VPC configurations, permissions to view and list keys on Amazon KMS, and full access to Amazon RDS. For more information, see https://aws.amazon.com/neptune/faqs/.

`NeptuneConsoleFullAccess` is an AWS managed policy.

Using this policy

You can attach `NeptuneConsoleFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: June 19, 2018, 21:35 UTC
- **Edited time:** November 30, 2023, 07:32 UTC
- **ARN**: `arn:aws:iam::aws:policy/NeptuneConsoleFullAccess`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

NeptuneReadOnlyAccess

Description: Provides read only access to Amazon Neptune. Note that this policy also grants access to Amazon RDS resources. For more information, see https://aws.amazon.com/neptune/faqs/.

`NeptuneReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `NeptuneReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: May 30, 2018, 19:16 UTC
- **Edited time:** January 22, 2024, 16:33 UTC
- **ARN**: `arn:aws:iam::aws:policy/NeptuneReadOnlyAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

NetworkSecurityDirectorServiceLinkedRolePolicy

Description: Provides permissions for the AWS Shield network security director service linked role to assess specified environments.

`NetworkSecurityDirectorServiceLinkedRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: June 13, 2025, 20:07 UTC
- **Edited time:** June 13, 2025, 20:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/NetworkSecurityDirectorServiceLinkedRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

OAMFullAccess

Description: Provides full access to CloudWatch Observability Access Manager

`OAMFullAccess` is an AWS managed policy.

Using this policy

You can attach `OAMFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 27, 2022, 13:38 UTC
- **Edited time:** November 27, 2022, 13:38 UTC
- **ARN**: `arn:aws:iam::aws:policy/OAMFullAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "oam:*"
      ],
      "Resource" : "*"
    }
  ]
}
```

OAMReadOnlyAccess

Description: Provides Read Only access to CloudWatch Observability Access Manager

`OAMReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `OAMReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 27, 2022, 13:29 UTC
- **Edited time:** November 27, 2022, 13:29 UTC
- **ARN**: `arn:aws:iam::aws:policy/OAMReadOnlyAccess`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "oam:Get*",
        "oam:List*"
      ],
      "Resource" : "*"
    }
  ]
```

```
}

ResourceGroupsandTagEditorFullAccess

Description: Provides full access to Resource Groups and Tag Editor.

`ResourceGroupsandTagEditorFullAccess` is an AWS managed policy.

Using this policy

You can attach `ResourceGroupsandTagEditorFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:39 UTC
- **Edited time:** August 10, 2023, 13:29 UTC
- **ARN**: `arn:aws:iam::aws:policy/ResourceGroupsandTagEditorFullAccess`

Policy version

Policy version: v6 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "tag:getResources",
        "tag:getTagKeys",
        "tag:getTagValues",
        "tag:TagResources",
        "tag:UntagResources",
        "resource-groups:*",
        "cloudformation:DescribeStacks",
        "cloudformation:ListStackResources",
        "cloudformation:ListStacks"
      ],
      "Resource" : "*"
    }
  ]
}
```

Learn more

- Understand versioning for IAM policies
- Get started with AWS managed policies and move toward least-privilege permissions

ResourceGroupsandTagEditorReadOnlyAccess

Description: Provides access to use Resource Groups and Tag Editor, but does not allow editing of tags via the Tag Editor.

`ResourceGroupsandTagEditorReadOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `ResourceGroupsandTagEditorReadOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:39 UTC
- **Edited time:** August 10, 2023, 13:42 UTC
- **ARN**: `arn:aws:iam::aws:policy/ResourceGroupsandTagEditorReadOnlyAccess`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "tag:getResources",
        "tag:getTagKeys",
        "tag:getTagValues",
        "resource-groups:Get*",
        "resource-groups:List*",
        "resource-groups:Search*",
        "cloudformation:DescribeStacks",
        "cloudformation:ListStackResources",
        "cloudformation:ListStacks"
      ],
      "Resource" : "*"
    }
```

```
  ]
}
```

Learn more

- Understand versioning for IAM policies
- Get started with AWS managed policies and move toward least-privilege permissions

ResourceGroupsServiceRolePolicy

Description: Allows AWS Resource Groups to query the AWS services that own your resources to keep the group up-to-date

`ResourceGroupsServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: January 05, 2023, 16:57 UTC
- **Edited time:** January 05, 2023, 16:57 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/ResourceGroupsServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",
      "Action" : [
        "tag:GetResources",
        "cloudformation:DescribeStacks",
        "cloudformation:ListStackResources"
      ],
      "Resource" : "*"
    }
  ]
}
```

Learn more

- Understand versioning for IAM policies
- Get started with AWS managed policies and move toward least-privilege permissions

ResourceGroupsTaggingAPITagUntagSupportedResources

Description: Provides permissions to tag and untag all the resources supported by Resource Groups Tagging API. This policy also grants the permissions required to retrieve all tagged, or previously tagged, resources through the Resource Groups Tagging API.

`ResourceGroupsTaggingAPITagUntagSupportedResources` is an AWS managed policy.

Using this policy

You can attach `ResourceGroupsTaggingAPITagUntagSupportedResources` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 11, 2024, 11:11 UTC

- **Edited time:** December 11, 2024, 17:51 UTC
- **ARN**: `arn:aws:iam::aws:policy/ResourceGroupsTaggingAPITagUntagSupportedResources`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

ROSAAmazonEBSCSIDriverOperatorPolicy

Description: Allows the OpenShift Amazon EBS Container Storage Interface (CSI) Driver Operator to install and maintain the Amazon EBS CSI driver on a Red Hat OpenShift Service on AWS (ROSA) cluster. The Amazon EBS CSI driver allows ROSA clusters to manage the lifecycle of Amazon EBS volumes for persistent volumes.

`ROSAAmazonEBSCSIDriverOperatorPolicy` is an AWS managed policy.

Using this policy

You can attach ROSAAmazonEBSCSIDriverOperatorPolicy to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: April 20, 2023, 22:36 UTC
- **Edited time:** January 22, 2025, 00:52 UTC
- **ARN**: arn:aws:iam::aws:policy/service-role/ROSAAmazonEBSCSIDriverOperatorPolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ROSACloudNetworkConfigOperatorPolicy

Description: Allows the OpenShift Cloud Network Config Controller Operator to provision and manage networking resources for use by the Red Hat OpenShift Service on AWS (ROSA) cluster networking overlay. The OpenShift Cloud Network Operator interfaces with AWS APIs on behalf of

the network plugins via CustomResourceDefinitions. The operator uses these policy permissions to manage private IP addresses for Amazon EC2 instances as part of the ROSA cluster.

`ROSACloudNetworkConfigOperatorPolicy` is an AWS managed policy.

Using this policy

You can attach `ROSACloudNetworkConfigOperatorPolicy` to your users, groups, and roles.

ROSAControlPlaneOperatorPolicy

Description: Allows Red Hat OpenShift Service on AWS (ROSA) control plane to manage ROSA cluster Amazon EC2 and Amazon Route 53 resources.

`ROSAControlPlaneOperatorPolicy` is an AWS managed policy.

Using this policy

You can attach `ROSAControlPlaneOperatorPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: April 24, 2023, 23:02 UTC
- **Edited time:** April 10, 2025, 23:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/ROSAControlPlaneOperatorPolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

ROSAImageRegistryOperatorPolicy

Description: Allows the OpenShift Image Registry Operator to provision and manage Amazon S3 buckets and objects for use by the Red Hat OpenShift Service on AWS (ROSA) in-cluster image registry to satisfy ROSA storage requirements. The OpenShift Image Registry Operator installs and maintains the internal registry of a Red Hat OpenShift cluster.

`ROSAImageRegistryOperatorPolicy` is an AWS managed policy.

Using this policy

You can attach `ROSAImageRegistryOperatorPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: April 27, 2023, 20:13 UTC
- **Edited time:** May 19, 2025, 18:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/ROSAImageRegistryOperatorPolicy`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

ROSAIngressOperatorPolicy

Description: Allows the OpenShift Ingress Operator to provision and manage load balancers and domain name system (DNS) configurations for Red Hat OpenShift Service on AWS (ROSA) clusters. The policy allows read access to tag values, which the operator filters for Route 53 resources to discover hosted zones.

`ROSAIngressOperatorPolicy` is an AWS managed policy.

Using this policy

You can attach `ROSAIngressOperatorPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: April 20, 2023, 22:37 UTC
- **Edited time:** April 10, 2025, 23:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/ROSAIngressOperatorPolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ROSAKMSProviderPolicy

Description: Allows the built-in ROSA AWS Encryption Provider to manage AWS Key Management Service (KMS) keys to support etcd data encryption using a customer provided AWS KMS key. The policy allows encryption and decryption of data using KMS keys.

`ROSAKMSProviderPolicy` is an AWS managed policy.

Using this policy

You can attach `ROSAKMSProviderPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: April 27, 2023, 20:10 UTC
- **Edited time:** April 27, 2023, 20:10 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/ROSAKMSProviderPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
```

```
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Sid" : "VolumeEncryption",
      "Effect" : "Allow",
      "Action" : [

ROSAKubeControllerPolicy

Description: Allows the ROSA Kubernetes controller to manage Amazon EC2, Elastic Load Balancing (ELB), and AWS Key Management Service (KMS) resources for a ROSA cluster.

`ROSAKubeControllerPolicy` is an AWS managed policy.

Using this policy

You can attach `ROSAKubeControllerPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: April 27, 2023, 20:09 UTC
- **Edited time:** April 10, 2025, 23:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/ROSAKubeControllerPolicy`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ROSAManageSubscription

Description: This policy provides the permissions required to manage the Red Hat OpenShift Service on AWS (ROSA) subscription.

`ROSAManageSubscription` is an AWS managed policy.

Using this policy

You can attach `ROSAManageSubscription` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 11, 2022, 20:58 UTC
- **Edited time:** August 04, 2023, 19:59 UTC
- **ARN**: `arn:aws:iam::aws:policy/ROSAManageSubscription`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

ROSANodePoolManagementPolicy

Description: Allows Red Hat OpenShift Service on AWS (ROSA) to manage cluster EC2 instances as worker nodes, including permission to configure security groups and tag instances and volumes. This policy also allows for the use of EC2 instances with disk encryption provided by AWS Key Management Service (KMS) keys.

`ROSANodePoolManagementPolicy` is an AWS managed policy.

Using this policy

You can attach `ROSANodePoolManagementPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy

- **Creation time**: June 08, 2023, 20:48 UTC
- **Edited time:** May 05, 2025, 16:37 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/ROSANodePoolManagementPolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ROSASharedVPCEndpointPolicy

Description: Allows the Red Hat OpenShift Service on AWS (ROSA) installer to configure VPC Endpoints and Security Groups. Intended to be used on a shared VPC.

`ROSASharedVPCEndpointPolicy` is an AWS managed policy.

Using this policy

You can attach `ROSASharedVPCEndpointPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 11, 2025, 17:19 UTC
- **Edited time:** August 11, 2025, 17:19 UTC
- **ARN**: `arn:aws:iam::aws:policy/ROSASharedVPCEndpointPolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

ROSASRESupportPolicy

Description: Provides ROSA site reliability engineering (SRE) the permissions needed to initially observe, diagnose, and support AWS resources associated with Red Hat OpenShift Service on AWS (ROSA) clusters, including the ability to change ROSA cluster node state.

`ROSASRESupportPolicy` is an AWS managed policy.

Using this policy

You can attach `ROSASRESupportPolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: June 01, 2023, 14:36 UTC
- **Edited time:** April 10, 2025, 23:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/ROSASRESupportPolicy`

Policy version

Policy version: v4 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ROSAWorkerInstancePolicy

Description: Allows Red Hat OpenShift Service on AWS (ROSA) worker nodes in your account read-only access to Amazon EC2 instances and AWS Regions for compute node lifecycle management.

`ROSAWorkerInstancePolicy` is an AWS managed policy.

Using this policy

You can attach ROSAWorkerInstancePolicy to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: April 20, 2023, 22:35 UTC
- **Edited time:** March 20, 2025, 23:07 UTC
- **ARN**: arn:aws:iam::aws:policy/service-role/ROSAWorkerInstancePolicy

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

Route53RecoveryReadinessServiceRolePolicy

Description: Service Linked Role Policy for Route 53 Recovery Readiness

`Route53RecoveryReadinessServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: July 15, 2021, 16:06 UTC
- **Edited time:** February 14, 2023, 18:08 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/Route53RecoveryReadinessServiceRolePolicy`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

Route53ResolverServiceRolePolicy

Description: Enables access to AWS services and Resources used or managed by Route53 Resolver

`Route53ResolverServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: August 12, 2020, 17:47 UTC
- **Edited time:** August 12, 2020, 17:47 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/Route53ResolverServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioAdminIAMPermissiveExecutionPolicy

Description: Administrative execution policy for using IAM roles with SageMaker Unified Studio. Allows admins to provision, manage and access resources in the local account (including broad access to all APIs in data services like S3, Glue, CloudWatch Logs, and others) for IAM-based usage of SageMaker Unified Studio.

`SageMakerStudioAdminIAMPermissiveExecutionPolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioAdminIAMPermissiveExecutionPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 18, 2025, 17:19 UTC
- **Edited time:** August 26, 2025, 21:34 UTC
- **ARN**: `arn:aws:iam::aws:policy/SageMakerStudioAdminIAMPermissiveExecutionPolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioAdminProjectUserRolePolicy

Description: This IAM policy grants an IAM role full access to AWS Glue Data Catalog (metadata) and Amazon S3 (actual data) for data lake operations, with access scoped by account, and role tags.

`SageMakerStudioAdminProjectUserRolePolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioAdminProjectUserRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: July 09, 2025, 20:52 UTC
- **Edited time:** July 10, 2025, 23:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/SageMakerStudioAdminProjectUserRolePolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioBedrockAgentServiceRolePolicy

Description: Allows Amazon Bedrock Agents to access Amazon Bedrock models and other resources attached to an agent in SageMaker Studio.

`SageMakerStudioBedrockAgentServiceRolePolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioBedrockAgentServiceRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: February 13, 2025, 23:37 UTC
- **Edited time:** February 13, 2025, 23:37 UTC

- **ARN**: `arn:aws:iam::aws:policy/service-role/SageMakerStudioBedrockAgentServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioBedrockFlowServiceRolePolicy

Description: Allows Amazon Bedrock Flows to access Amazon Bedrock models and other resources attached to a flow in SageMaker Studio.

`SageMakerStudioBedrockFlowServiceRolePolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioBedrockFlowServiceRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: February 14, 2025, 00:07 UTC
- **Edited time:** April 09, 2025, 20:37 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/SageMakerStudioBedrockFlowServiceRolePolicy`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{

SageMakerStudioBedrockPromptUserRolePolicy

Description: Provides access to an Amazon Bedrock prompt and its configuration in SageMaker Studio.

`SageMakerStudioBedrockPromptUserRolePolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioBedrockPromptUserRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: February 14, 2025, 00:22 UTC
- **Edited time:** February 14, 2025, 00:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/SageMakerStudioBedrockPromptUserRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```

SageMakerStudioEMRInstanceRolePolicy

Description: Amazon SageMaker Studio creates IAM roles for projects users to perform data analytics, artificial intelligence, and machine learning actions, and uses this policy when creating these roles to define the permissions related to EMR.

`SageMakerStudioEMRInstanceRolePolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioEMRInstanceRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: February 27, 2025, 00:22 UTC
- **Edited time:** February 27, 2025, 00:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/SageMakerStudioEMRInstanceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioProjectProvisioningRolePolicy

Description: Amazon SageMaker Studio uses this policy to provision and manage resources in your account.

`SageMakerStudioProjectProvisioningRolePolicy` is an AWS managed policy.

Using this policy

You can attach SageMakerStudioProjectProvisioningRolePolicy to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: November 20, 2024, 21:58 UTC
- **Edited time:** August 27, 2025, 21:04 UTC
- **ARN**: arn:aws:iam::aws:policy/service-role/SageMakerStudioProjectProvisioningRolePolicy

Policy version

Policy version: v20 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioProjectRoleMachineLearningPolicy

Description: Amazon SageMaker Studio creates IAM roles for projects users to perform data analytics, artificial intelligence, and machine learning actions, and uses this policy when creating these roles to define the permissions related to SageMaker.

`SageMakerStudioProjectRoleMachineLearningPolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioProjectRoleMachineLearningPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 20, 2024, 21:55 UTC
- **Edited time:** July 22, 2025, 20:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/SageMakerStudioProjectRoleMachineLearningPolicy`

Policy version

Policy version: v10 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioProjectUserRolePermissionsBoundary

Description: Amazon SageMaker creates IAM roles for Projects users to perform data analytics, artificial intelligence, and machine learning actions, and uses this policy when creating these roles to define the boundary of their permissions.

`SageMakerStudioProjectUserRolePermissionsBoundary` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioProjectUserRolePermissionsBoundary` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 20, 2024, 21:57 UTC
- **Edited time:** January 03, 2025, 00:37 UTC
- **ARN**: `arn:aws:iam::aws:policy/SageMakerStudioProjectUserRolePermissionsBoundary`

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioProjectUserRolePolicy

Description: Amazon SageMaker Studio creates IAM roles for projects users to perform data analytics, artificial intelligence, and machine learning actions, and uses this policy when creating these roles to define the permissions.

`SageMakerStudioProjectUserRolePolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioProjectUserRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy

- **Creation time**: November 20, 2024, 21:59 UTC
- **Edited time:** July 28, 2025, 22:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/SageMakerStudioProjectUserRolePolicy`

Policy version

Policy version: v16 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

SageMakerStudioQueryExecutionRolePolicy

Description: Amazon SageMaker Studio uses this policy when running query executions on federated connections.

`SageMakerStudioQueryExecutionRolePolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioQueryExecutionRolePolicy` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: January 31, 2025, 19:52 UTC
- **Edited time:** January 31, 2025, 19:52 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/SageMakerStudioQueryExecutionRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioUserIAMConsolePolicy

Description: Provides individual setup privileges for Amazon SageMaker Unified Studio via the AWS Management Console and SDK. Allows launching of SageMaker Unified Studio Portal.

`SageMakerStudioUserIAMConsolePolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioUserIAMConsolePolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 18, 2025, 22:49 UTC
- **Edited time:** August 18, 2025, 22:49 UTC
- **ARN**: `arn:aws:iam::aws:policy/SageMakerStudioUserIAMConsolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SageMakerStudioUserIAMDefaultExecutionPolicy

Description: Execution policy for using IAM roles with SageMaker Unified Studio. Allows users to access resources in the local account (excluding access to data resources) for IAM-based usage of SageMaker Unified Studio.

`SageMakerStudioUserIAMDefaultExecutionPolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioUserIAMDefaultExecutionPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 18, 2025, 17:19 UTC
- **Edited time:** August 26, 2025, 21:34 UTC

SageMakerStudioUserIAMPermissiveExecutionPolicy

Description: Execution policy for using IAM roles with SageMaker Unified Studio. Allows users to access resources in your account (including broad access to all APIs in data services like S3, Glue, CloudWatch Logs, and others) for IAM-based usage of SageMaker Unified Studio.

`SageMakerStudioUserIAMPermissiveExecutionPolicy` is an AWS managed policy.

Using this policy

You can attach `SageMakerStudioUserIAMPermissiveExecutionPolicy` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: August 18, 2025, 17:19 UTC
- **Edited time:** August 26, 2025, 21:34 UTC
- **ARN**: `arn:aws:iam::aws:policy/SageMakerStudioUserIAMPermissiveExecutionPolicy`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SecretsManagerReadWrite

Description: Provides read/write access to AWS Secrets Manager via the AWS Management Console. Note: this exludes IAM actions, so combine with IAMFullAccess if rotation configuration is required.

`SecretsManagerReadWrite` is an AWS managed policy.

Using this policy

You can attach `SecretsManagerReadWrite` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: April 04, 2018, 18:05 UTC
- **Edited time:** February 22, 2024, 18:12 UTC
- **ARN**: `arn:aws:iam::aws:policy/SecretsManagerReadWrite`

Policy version

Policy version: v5 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

SecurityAudit

Description: The security audit template grants access to read security configuration metadata. It is useful for software that audits the configuration of an AWS account.

`SecurityAudit` is an AWS managed policy.

Using this policy

You can attach `SecurityAudit` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: February 06, 2015, 18:41 UTC
- **Edited time:** July 24, 2025, 15:07 UTC
- **ARN**: `arn:aws:iam::aws:policy/SecurityAudit`

Policy version

Policy version: v54 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SecurityLakeResourceManagementServiceRolePolicy

Description: Provides access to manage resources created by Security Lake.

`SecurityLakeResourceManagementServiceRolePolicy` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 14, 2024, 22:10 UTC
- **Edited time:** November 14, 2024, 22:10 UTC
- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/SecurityLakeResourceManagementServiceRolePolicy`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

SecurityLakeServiceLinkedRole

Description: This policy grants permissions to operate the Amazon Security Lake service on your behalf

`SecurityLakeServiceLinkedRole` is an AWS managed policy.

Using this policy

This policy is attached to a service-linked role that allows the service to perform actions on your behalf. You cannot attach this policy to your users, groups, or roles.

Policy details

- **Type**: Service-linked role policy
- **Creation time**: November 29, 2022, 14:03 UTC
- **Edited time:** April 19, 2024, 16:00 UTC

- **ARN**: `arn:aws:iam::aws:policy/aws-service-role/SecurityLakeServiceLinkedRole`

Policy version

Policy version: v3 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ServerMigrationConnector

Description: Permissions to allow the AWS Server Migration Connector to migrate VMs to EC2. Allows communication with the AWS Server Migration Service, read/write access to S3 buckets starting with 'sms-b-' and 'import-to-ec2-' as well as the buckets used for AWS Server Migration

Connector upgrade, AWS Server Migration Connector registration with AWS, and metrics upload to AWS.

`ServerMigrationConnector` is an AWS managed policy.

Using this policy

You can attach `ServerMigrationConnector` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: October 24, 2016, 21:45 UTC
- **Edited time:** October 24, 2016, 21:45 UTC
- **ARN**: `arn:aws:iam::aws:policy/ServerMigrationConnector`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

ServerMigrationServiceRoleForInstanceValidation

Description: Permissions to allow the AWS SMS to run used data validation script and send script success/failure back to SMS

`ServerMigrationServiceRoleForInstanceValidation` is an AWS managed policy.

Using this policy

You can attach `ServerMigrationServiceRoleForInstanceValidation` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: July 20, 2020, 22:25 UTC
- **Edited time:** July 20, 2020, 22:25 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/ServerMigrationServiceRoleForInstanceValidation`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",

SystemAdministrator

Description: Grants full access permissions necessary for resources required for application and development operations.

`SystemAdministrator` is an AWS managed policy.

Using this policy

You can attach `SystemAdministrator` to your users, groups, and roles.

Policy details

- **Type**: Job function policy
- **Creation time**: November 10, 2016, 17:23 UTC
- **Edited time:** July 24, 2025, 12:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/job-function/SystemAdministrator`

Policy version

Policy version: v8 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

TranslateFullAccess

Description: Provides full access to Amazon Translate.

`TranslateFullAccess` is an AWS managed policy.

Using this policy

You can attach `TranslateFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 27, 2018, 23:36 UTC
- **Edited time:** January 08, 2020, 21:22 UTC
- **ARN**: `arn:aws:iam::aws:policy/TranslateFullAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

- Get started with AWS managed policies and move toward least-privilege permissions

TranslateReadOnly

Description: Provides read-only access to Amazon Translate.

`TranslateReadOnly` is an AWS managed policy.

Using this policy

You can attach `TranslateReadOnly` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: November 29, 2017, 18:22 UTC
- **Edited time:** May 24, 2023, 17:19 UTC

- **ARN**: `arn:aws:iam::aws:policy/TranslateReadOnly`

Policy version

Policy version: v7 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
    {
      "Effect" : "Allow",

ViewOnlyAccess

Description: This policy grants permissions to view resources and basic metadata across all AWS services.

`ViewOnlyAccess` is an AWS managed policy.

Using this policy

You can attach `ViewOnlyAccess` to your users, groups, and roles.

Policy details

- **Type**: Job function policy
- **Creation time**: November 10, 2016, 17:20 UTC
- **Edited time:** September 03, 2025, 16:34 UTC
- **ARN**: `arn:aws:iam::aws:policy/job-function/ViewOnlyAccess`

Policy version

Policy version: v26 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

VMImportExportRoleForAWSConnector

Description: Default policy for the VM Import/Export service role, for customers using the AWS Connector. The VM Import/Export service assumes a role with this policy to fulfill virtual machine migration requests from the AWS Connector virtual appliance. (Note that the AWS Connector uses the "AWSConnector" managed policy to issue requests on the customer's behalf to the VM Import/Export service.) Provides the ability to create AMIs and EBS snapshots, modify EBS snapshot attributes, make "Describe*" calls on EC2 objects, and read from S3 buckets starting with 'import-to-ec2-'.

`VMImportExportRoleForAWSConnector` is an AWS managed policy.

Using this policy

You can attach `VMImportExportRoleForAWSConnector` to your users, groups, and roles.

Policy details

- **Type**: Service role policy
- **Creation time**: September 03, 2015, 20:48 UTC
- **Edited time:** September 03, 2015, 20:48 UTC
- **ARN**: `arn:aws:iam::aws:policy/service-role/VMImportExportRoleForAWSConnector`

Policy version

Policy version: v1 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
  "Statement" : [
```

```
    {
      "Effect" : "Allow",
      "Action" : [
        "s3:ListBucket",
        "s3:GetBucketLocation",
        "s3:GetObject"
      ],
      "Resource" : [
        "arn:aws:s3:::import-to-ec2-*"
      ]
    },
    {
      "Effect" : "Allow",
      "Action" : [
        "ec2:ModifySnapshotAttribute",
        "ec2:CopySnapshot",
        "ec2:RegisterImage",
        "ec2:Describe*"
      ],
      "Resource" : "*"
    }
  ]
}
```

VPCLatticeFullAccess

Description: Provides full access to Amazon VPC Lattice and access to dependency services.

`VPCLatticeFullAccess` is an AWS managed policy.

Using this policy

You can attach `VPCLatticeFullAccess` to your users, groups, and roles.

Policy details

- **Type**: AWS managed policy
- **Creation time**: March 30, 2023, 02:49 UTC
- **Edited time:** December 01, 2024, 14:21 UTC
- **ARN**: `arn:aws:iam::aws:policy/VPCLatticeFullAccess`

Policy version

Policy version: v2 (default)

The policy's default version is the version that defines the permissions for the policy. When a user or role with the policy makes a request to access an AWS resource, AWS checks the default version of the policy to determine whether to allow the request.

JSON policy document

```
{
  "Version" : "2012-10-17",
