Amazon Bedrock API Reference

This document provides detailed information about the Bedrock API actions and their parameters. For more information about setting up the Amazon Bedrock APIs, see Set up the Amazon Bedrock API.

For information about the IAM access control permissions you need to use the APIs, see Identity-based policy examples for Amazon Bedrock.

Amazon Bedrock endpoints

To connect programmatically to an AWS service, you use an endpoint. Refer to the Amazon Bedrock endpoints and quotas chapter in the AWS General Reference for information about the endpoints that you can use for Amazon Bedrock.

Amazon Bedrock provides the following service endpoints.

- **bedrock** – Contains control plane APIs for managing, training, and deploying models. For more information, see Amazon Bedrock Actions and Amazon Bedrock Data Types.

- **bedrock-runtime** – Contains data plane APIs for making inference requests for models hosted in Amazon Bedrock. For more information, see Amazon Bedrock Runtime Actions and Amazon Bedrock Runtime Data Types.

- **bedrock-agent** – Contains control plane APIs for creating and managing agents and knowledge bases. For more information, see Agents for Amazon Bedrock Actions and Agents for Amazon Bedrock Data Types.

- **bedrock-agent-runtime** – Contains data plane APIs for invoking agents and querying knowledge bases. For more information, see Agents for Amazon Bedrock Runtime Actions and Agents for Amazon Bedrock Runtime Data Types.

>Note

Check that you're using the correct endpoint when making an API request.
AWS Command Line Interface references

Refer to the following references for AWS CLI commands and operations:

- Amazon Bedrock CLI commands
- Amazon Bedrock Runtime CLI commands
- Agents for Amazon Bedrock CLI commands
- Agents for Amazon Bedrock Runtime CLI commands

AWS SDK references

AWS software development kits (SDKs) are available for many popular programming languages. Each SDK provides an API, code examples, and documentation that make it easier for developers to build applications in their preferred language. SDKs automatically perform useful tasks for you, such as:

- Cryptographically sign your service requests
- Retry requests
- Handle error responses

Refer to the following table to find general information about and code examples for each SDK, as well as the Amazon Bedrock API references for each SDK. You can also find code examples at Code examples for Amazon Bedrock using AWS SDKs.

### Actions

The following actions are supported by Amazon Bedrock:

- [CreateModelCustomizationJob](#)
- [CreateProvisionedModelThroughput](#)
• DeleteCustomModel
• DeleteModelInvocationLoggingConfiguration
• DeleteProvisionedModelThroughput
• GetCustomModel
• GetFoundationModel
• GetModelCustomizationJob
• GetModelInvocationLoggingConfiguration
• GetProvisionedModelThroughput
• ListCustomModels
• ListFoundationModels
• ListModelCustomizationJobs
• ListProvisionedModelThroughputs
• ListTagsForResource
• PutModelInvocationLoggingConfiguration
• StopModelCustomizationJob
• TagResource
• UntagResource
• UpdateProvisionedModelThroughput

The following actions are supported by Agents for Amazon Bedrock:

• AssociateAgentKnowledgeBase
• CreateAgent
• CreateAgentActionGroup
• CreateAgentAlias
• CreateDataSource
• CreateKnowledgeBase
• DeleteAgent
• DeleteAgentActionGroup
• DeleteAgentAlias
• DeleteAgentVersion
• **DeleteDataSource**
• **DeleteKnowledgeBase**
• **DisassociateAgentKnowledgeBase**
• **GetAgent**
• **GetAgentActionGroup**
• **GetAgentAlias**
• **GetAgentKnowledgeBase**
• **GetAgentVersion**
• **GetDataSource**
• **GetIngestionJob**
• **GetKnowledgeBase**
• **ListAgentActionGroups**
• **ListAgentAliases**
• **ListAgentKnowledgeBases**
• **ListAgents**
• **ListAgentVersions**
• **ListDataSources**
• **ListIngestionJobs**
• **ListKnowledgeBases**
• **ListTagsForResource**
• **PrepareAgent**
• **StartIngestionJob**
• **TagResource**
• **UntagResource**
• **UpdateAgent**
• **UpdateAgentActionGroup**
• **UpdateAgentAlias**
• **UpdateAgentKnowledgeBase**
• **UpdateDataSource**
• **UpdateKnowledgeBase**
The following actions are supported by Agents for Amazon Bedrock Runtime:

- InvokeAgent
- Retrieve
- RetrieveAndGenerate

The following actions are supported by Amazon Bedrock Runtime:

- InvokeModel
- InvokeModelWithResponseStream

**Amazon Bedrock**

The following actions are supported by Amazon Bedrock:

- CreateModelCustomizationJob
- CreateProvisionedModelThroughput
- DeleteCustomModel
- DeleteModelInvocationLoggingConfiguration
- DeleteProvisionedModelThroughput
- GetCustomModel
- GetFoundationModel
- GetModelCustomizationJob
- GetModelInvocationLoggingConfiguration
- GetProvisionedModelThroughput
- ListCustomModels
- ListFoundationModels
- ListModelCustomizationJobs
- ListProvisionedModelThroughputs
- ListTagsForResource
- PutModelInvocationLoggingConfiguration
- StopModelCustomizationJob
- TagResource
- **UntagResource**
- **UpdateProvisionedModelThroughput**
CreateModelCustomizationJob

Service: Amazon Bedrock

Creates a fine-tuning job to customize a base model.

You specify the base foundation model and the location of the training data. After the model-customization job completes successfully, your custom model resource will be ready to use. Amazon Bedrock returns validation loss metrics and output generations after the job completes.

For information on the format of training and validation data, see [Prepare the datasets](#).

Model-customization jobs are asynchronous and the completion time depends on the base model and the training/validation data size. To monitor a job, use the GetModelCustomizationJob operation to retrieve the job status.

For more information, see [Custom models](#) in the Amazon Bedrock User Guide.

**Request Syntax**

```json
POST /model-customization-jobs HTTP/1.1
Content-type: application/json

{
   "baseModelIdentifier": "string",
   "clientRequestToken": "string",
   "customizationType": "string",
   "customModelKmsKeyId": "string",
   "customModelName": "string",
   "customModelTags": [
       {
           "key": "string",
           "value": "string"
       }
   ],
   "hyperParameters": {
       "string": "string"
   },
   "jobName": "string",
   "jobTags": [
       {
           "key": "string",
           "value": "string"
       }
   ]
}
```
The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

**baseModelIdentifier**

Name of the base model.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:([0-9]{12}):custom-model/([a-z0-9-]{1,63}[.]1[63]{1}[a-z0-9-]{1,63}[.]?[a-z0-9-]{1,63})([.]?([a-z0-9-]+)([.]?([0-9a-zA-Z]_[-]?)+)$`
**clientRequestToken**

A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see [Ensuring idempotency](#).

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `^[a-zA-Z0-9](-*[a-zA-Z0-9])*$`

Required: No

**customizationType**

The customization type.

Type: String

Valid Values: FINE_TUNING | CONTINUED_PRE_TRAINING

Required: No

**customModelKmsKeyId**

The custom model is encrypted at rest using this key.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws(-[^:]+)?:kms:[a-zA-Z0-9-]*:[0-9]{12}:(key/[a-zA-Z0-9-]{36})|(alias/[a-zA-Z0-9-_.]+)($

Required: No

**customModelName**

A name for the resulting custom model.

Type: String
customModelTags

Tags to attach to the resulting custom model.

Type: Array of Tag objects

Array Members: Minimum number of 0 items. Maximum number of 200 items.

Required: No

hyperParameters

Parameters related to tuning the model. For details on the format for different models, see Custom model hyperparameters.

Type: String to string map

Required: Yes

jobName

A name for the fine-tuning job.

Type: String

Pattern: ^[a-zA-Z0-9-9\-]*[a-zA-Z0-9\-9\-]*$  

Required: Yes

jobTags

Tags to attach to the job.

Type: Array of Tag objects

Array Members: Minimum number of 0 items. Maximum number of 200 items.

Required: No
outputDataConfig

S3 location for the output data.

Type: OutputDataConfig object

Required: Yes

roleArn

The Amazon Resource Name (ARN) of an IAM role that Amazon Bedrock can assume to perform tasks on your behalf. For example, during model training, Amazon Bedrock needs your permission to read input data from an S3 bucket, write model artifacts to an S3 bucket. To pass this role to Amazon Bedrock, the caller of this API must have the iam:PassRole permission.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:aws([-^:]+)?:iam::([0-9]{12}):role/.+$

Required: Yes

trainingDataConfig

Information about the training dataset.

Type: TrainingDataConfig object

Required: Yes

validationDataConfig

Information about the validation dataset.

Type: ValidationDataConfig object

Required: No

vpcConfig

VPC configuration (optional). Configuration parameters for the private Virtual Private Cloud (VPC) that contains the resources you are using for this job.

Type: VpcConfig object
Required: No

**Response Syntax**

HTTP/1.1 201
Content-type: application/json

```json
{
  "jobArn": "string"
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 201 response.

The following data is returned in JSON format by the service.

**jobArn**

ARN of the fine tuning job

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1011.

Pattern: `^arn:aws([-^:+]*):bedrock:[a-z0-9-]{1,20}:[0-9]{12}:model-customization-job/[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\.[a-zA-Z0-9-]{1,63}\.$`

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

Error occurred because of a conflict while performing an operation.
HTTP Status Code: 400

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 400

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**TooManyTagsException**

The request contains more tags than can be associated with a resource (50 tags per resource). The maximum number of tags includes both existing tags and those included in your current request.

HTTP Status Code: 400

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

CreateProvisionedModelThroughput

Service: Amazon Bedrock

Creates a Provisioned Throughput with dedicated throughput for a foundation model or a fine-tuned model.

For more information, see Provisioned throughput in the Amazon Bedrock User Guide.

Request Syntax

POST /provisioned-model-throughput HTTP/1.1
Content-type: application/json

{
   "clientRequestToken": "string",
   "commitmentDuration": "string",
   "modelId": "string",
   "modelUnits": number,
   "provisionedModelName": "string",
   "tags": [
      {
         "key": "string",
         "value": "string"
      }
   ]
}

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

clientRequestToken

A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see Ensuring idempotency.

Type: String
Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: \^[a-zA-Z0-9]*\$\^[a-zA-Z0-9]*\$

Required: No

**commitmentDuration**

Commitment duration requested for the Provisioned Throughput. For custom models, you can purchase on-demand Provisioned Throughput by omitting this field.

Type: String

Valid Values: OneMonth | SixMonths

Required: No

**modelId**

Name or ARN of the model to associate with this Provisioned Throughput. Find the ID of the model for which you want to create a Provisioned Throughput in [Amazon Bedrock base model IDs (Provisioned Throughput)](https://docs.aws.amazon.com/bm/docs/Bedrock/Models/Provisioning.html).

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]+)?:bedrock:a-zA-Z0-9-\{1,63\}\.|1\[a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\}\(\[:\a-zA-Z0-9-\{1,63\]\]_?\])\]$\]

Required: Yes

**modelUnits**

Number of model units to allocate. A model unit delivers a specific throughput level for the specified model. The throughput level of a model unit specifies the total number of input and output tokens that it can process and generate within a span of one minute. For model unit quotas, see [Provisioned Throughput quotas](https://docs.aws.amazon.com/bm/docs/Bedrock/Models/Provisioning.html).

Type: Integer
Valid Range: Minimum value of 1.

Required: Yes

**provisionedModelName**

Unique name for this Provisioned Throughput.

Type: String

Pattern: `^([0-9a-zA-Z][_-]?)+$`

Required: Yes

**tags**

Tags to associate with this Provisioned Throughput.

Type: Array of Tag objects

Array Members: Minimum number of 0 items. Maximum number of 200 items.

Required: No

**Response Syntax**

```
HTTP/1.1 201
Content-type: application/json

{
    "provisionedModelArn": "string"
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 201 response.

The following data is returned in JSON format by the service.

**provisionedModelArn**

The ARN for this Provisioned Throughput.
Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:provisioned-model/[a-z0-9]{12}$

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 400

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**TooManyTagsException**

The request contains more tags than can be associated with a resource (50 tags per resource). The maximum number of tags includes both existing tags and those included in your current request.

HTTP Status Code: 400
**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

DeleteCustomModel

Service: Amazon Bedrock

Deletes a custom model that you created earlier. For more information, see Custom models in the Amazon Bedrock User Guide.

Request Syntax

DELETE /custom-models/modelIdentifier HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

modelIdentifier

Name of the model to delete.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:(([0-9]{12}:custom-model/[a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}([[:][a-z0-9-]{1,63}){0,2})?/[a-z0-9-]{12}])|(:foundation-model/([a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}([[:][a-z0-9-]{1,63}){0,2})))|([a-z0-9-]{1,63}[.]{1}[a-zA-Z0-9-])+$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.
Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

  The request is denied because of missing access permissions.

  HTTP Status Code: 403

ConflictException

  Error occurred because of a conflict while performing an operation.

  HTTP Status Code: 400

InternalServerException

  An internal server error occurred. Retry your request.

  HTTP Status Code: 500

ResourceNotFoundException

  The specified resource ARN was not found. Check the ARN and try your request again.

  HTTP Status Code: 404

ThrottlingException

  The number of requests exceeds the limit. Resubmit your request later.

  HTTP Status Code: 429

ValidationException

  Input validation failed. Check your request parameters and retry the request.

  HTTP Status Code: 400

DeleteModelInvocationLoggingConfiguration

Service: Amazon Bedrock

Delete the invocation logging.

Request Syntax

DELETE /logging/modelinvocations HTTP/1.1

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.
HTTP Status Code: 429

DeleteProvisionedModelThroughput

Service: Amazon Bedrock

Deletes a Provisioned Throughput. For more information, see Provisioned throughput in the Amazon Bedrock User Guide.

Request Syntax

```
DELETE /provisioned-model-throughput/provisionedModelId HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

- **provisionedModelId**
  
  The ARN or name of the Provisioned Throughput.
  
  Pattern: `^(((\[0-9a-zA-Z][_\-]?)+)|(arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:provisioned-model/[a-z0-9]{12}))$`
  
  Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.
HTTP Status Code: 403

**ConflictException**

Error occurred because of a conflict while performing an operation.

HTTP Status Code: 400

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

GetCustomModel
Service: Amazon Bedrock

Get the properties associated with a Amazon Bedrock custom model that you have created. For more information, see Custom models in the Amazon Bedrock User Guide.

Request Syntax

GET /custom-models/{modelIdentifier} HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

modelIdentifier

Name or ARN of the custom model.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:(([[0-9]{12}:custom-model/[a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})?/[a-z0-9-]{12})|(:foundation-model/([a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([[:]][a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63})([[:]][a-zA-Z][-_]?)+$]

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
    "baseModelArn": "string",
}
"creationTime": "string",
"customizationType": "string",
"hyperParameters": {
  "string": "string"
},
"jobArn": "string",
"jobName": "string",
"modelArn": "string",
"modelKmsKeyArn": "string",
"modelName": "string",
"outputDataConfig": {
  "s3Uri": "string"
},
"trainingDataConfig": {
  "s3Uri": "string"
},
"trainingMetrics": {
  "trainingLoss": number
},
"validationDataConfig": {
  "validators": [
    {
      "s3Uri": "string"
    }
  ]
},
"validationMetrics": [
  {
    "validationLoss": number
  }
]
}

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**baseModelArn**

ARN of the base model.

Type: String

Pattern: ^arn:aws(-[^:]*)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:custom-model/[a-z0-9-]{1,63}[/a-z0-9-]{1,63}/[a-z0-9]{12}$

**creationTime**

Creation time of the model.

Type: Timestamp

**customizationType**

The type of model customization.

Type: String

Valid Values: FINE_TUNING | CONTINUED_PRE_TRAINING

**hyperParameters**

Hyperparameter values associated with this model. For details on the format for different models, see [Custom model hyperparameters](#).

Type: String to string map

**jobArn**

Job ARN associated with this model.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1011.

Pattern: ^arn:aws(-[^:]*)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:model-customization-job/[a-z0-9-]{1,63}[/a-z0-9-]{1,63}/[a-z0-9]{12}$

**jobName**

Job name associated with this model.

Type: String

Pattern: `^[a-zA-Z0-9-]*[a-zA-Z0-9\+-\/.]+$`

**modelArn**

ARN associated with this model.

Type: String

Pattern: `^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[([0-9]{12}:custom-model/[a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63}/[a-z0-9-]{12})|(:foundation-model/[a-z0-9-]{1,63}[.]1{1}([a-z0-9-]{1,63}[.]0,2)[a-z0-9-]{1,63}([:] [a-z0-9-]{1,63}){0,2}))$`

**modelKmsKeyArn**

The custom model is encrypted at rest using this key.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws(-[^:]+)?:kms:[a-zA-Z0-9-]*:[0-9]{12}:key/[a-zA-Z0-9-]{34}$`

**modelName**

Model name associated with this model.

Type: String

Pattern: `^([0-9a-zA-Z][-_]?)+$`

**outputDataConfig**

Output data configuration associated with this custom model.

Type: `OutputDataConfig` object

**trainingDataConfig**

Contains information about the training dataset.
Type: TrainingDataConfig object

**trainingMetrics**

Contains training metrics from the job creation.

Type: TrainingMetrics object

**validationDataConfig**

Contains information about the validation dataset.

Type: ValidationDataConfig object

**validationMetrics**

The validation metrics from the job creation.

Type: Array of ValidatorMetric objects

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429
ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

GetFoundationModel
Service: Amazon Bedrock

Get details about a Amazon Bedrock foundation model.

Request Syntax

GET /foundation-models/modelIdentifier HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

**modelIdentifier**

The model identifier.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:([0-9]{12}:custom-model/[a-z0-9-]{1,63}.[1,63][a-z0-9-]{1,63}([[:]][a-z0-9-]{1,63}){0,2})?/[a-z0-9-]{12})|(:foundation-model/([a-z0-9-]{1,63}.[1,63][a-z0-9-]{1,63}([[:]][a-z0-9-]{1,63}){0,2}))|([a-z0-9-]{1,63}([[:]][a-z0-9-]{1,63})([[:]][a-z0-9-]{1,63}){0,2})|([0-9a-zA-Z]_[-]?)+$  

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

```json
{
    "modelDetails": {
        "customizationsSupported": [ "string" ],
        "inferenceTypesSupported": [ "string" ],
```
"inputModalities": ["string"],
"modelArn": "string",
"modelId": "string",
"modelLifecycle": {
  "status": "string"
},
"modelName": "string",
"outputModalities": ["string"],
"providerName": "string",
"responseStreamingSupported": boolean
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**modelDetails**

Information about the foundation model.

Type: FoundationModelDetails object

Errors

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.
HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

GetModelCustomizationJob
Service: Amazon Bedrock

Retrieves the properties associated with a model-customization job, including the status of the job. For more information, see Custom models in the Amazon Bedrock User Guide.

Request Syntax

GET /model-customization-jobs/jobIdentifier HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

jobIdentifier

Identifier for the customization job.

Length Constraints: Minimum length of 0. Maximum length of 1011.

Pattern: ^(arn:aws(-[^:]*)??:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:model-
 customization-job/[a-z0-9-]{1,63}\.\{1\}[a-z0-9-]{1,63}(\[a-z0-9-]\{1,63\}
 \{\}\{0,2\}[a-z0-9-]{1,63}\{\}\{a-z0-9-\}1,63\}\{0,2\}/[a-z0-9]{12})\{([a-zA-
Z0-9]-\*\{a-zA-Z0-9\+\-\})*\}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
    "baseModelArn": "string",
    "clientRequestToken": "string",
    "creationTime": "string",
    "customizationType": "string",
    "endTime": "string",
    "..."}
"failureMessage": "string",
"hyperParameters": {
  "string": "string"
},
"jobArn": "string",
"jobName": "string",
"lastModifiedTime": "string",
"outputDataConfig": {
  "s3Uri": "string"
},
"outputModelArn": "string",
"outputModelKmsKeyArn": "string",
"outputModelName": "string",
"roleArn": "string",
"status": "string",
"trainingDataConfig": {
  "s3Uri": "string"
},
"trainingMetrics": {
  "trainingLoss": number
},
"validationDataConfig": {
  "validators": [
    {
      "s3Uri": "string"
    }
  ]
},
"validationMetrics": [
  {
    "validationLoss": number
  }
],
"vpcConfig": {
  "securityGroupIds": [ "string" ],
  "subnetIds": [ "string" ]
}

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
**baseModelArn**

ARN of the base model.

Type: String

Pattern: `^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}::foundation-model/[a-z0-9-]{1,63} [.]{1}([a-z0-9-]{1,63} [.]){0,2}[a-z0-9-]{1,63}([:]([a-z0-9-] {1,63}){0,2}$

**clientRequestToken**

The token that you specified in the CreateCustomizationJob request.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 256.

Pattern: `^[a-zA-Z0-9](-*[a-zA-Z0-9])*$`

**creationTime**

Time that the resource was created.

Type: Timestamp

**customizationType**

The type of model customization.

Type: String

Valid Values: FINE_TUNING | CONTINUED_PRE_TRAINING

**endTime**

Time that the resource transitioned to terminal state.

Type: Timestamp

**failureMessage**

Information about why the job failed.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.
**hyperParameters**

The hyperparameter values for the job. For details on the format for different models, see [Custom model hyperparameters](#).

Type: String to string map

**jobArn**

The ARN of the customization job.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1011.

Pattern: `^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:model-customization-job/[a-z0-9-]{1,63}.[1][a-z0-9-]{1,63}([a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}[.]{0,2}[a-z0-9-]{1,63}{0,2}/[a-z0-9]{12}$`

**jobName**

The name of the customization job.

Type: String

Pattern: `^[a-zA-Z0-9](-*[a-zA-Z0-9\-\+\-\.]*)*$`

**lastModifiedTime**

Time that the resource was last modified.

Type: Timestamp

**outputDataConfig**

Output data configuration

Type: [OutputDataConfig](#) object

**outputModelArn**

The ARN of the output model.

Type: String

Pattern: ^arn:aws(-[^:]*)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:custom-model/[a-z0-9-]{1}[.]1[a-z0-9-]1,63}{1,63}([a-z0-9-]{1,63}[.]){0,2}[a-z0-9-]{1,63}([:][a-z0-9-]{1,63}){0,2}/[a-z0-9]{12}$

**outputModelKmsKeyArn**

The custom model is encrypted at rest using this key.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]*)?:kms:[a-zA-Z0-9-]*:[0-9]{12}:key/[a-zA-Z0-9-]{36}$

**outputModelName**

The name of the output model.

Type: String

Pattern: ^([0-9a-zA-Z]_[-]*)+$

**roleArn**

The ARN of the IAM role.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]*)?:iam:[0-9]{12}?role/.*$

**status**

The status of the job. A successful job transitions from in-progress to completed when the output model is ready to use. If the job failed, the failure message contains information about why the job failed.

Type: String

Valid Values: InProgress | Completed | Failed | Stopping | Stopped
trainingDataConfig

Contains information about the training dataset.

Type: TrainingDataConfig object

trainingMetrics

Contains training metrics from the job creation.

Type: TrainingMetrics object

validationDataConfig

Contains information about the validation dataset.

Type: ValidationDataConfig object

validationMetrics

The loss metric for each validator that you provided in the createjob request.

Type: Array of ValidatorMetric objects

vpcConfig

VPC configuration for the custom model job.

Type: VpcConfig object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500
ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

GetModelInvocationLoggingConfiguration
Service: Amazon Bedrock

Get the current configuration values for model invocation logging.

Request Syntax

GET /logging/modelinvocations HTTP/1.1

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
    "loggingConfig": {
        "cloudWatchConfig": {
            "largeDataDeliveryS3Config": {
                "bucketName": "string",
                "keyPrefix": "string"
            },
            "logGroupName": "string",
            "roleArn": "string"
        },
        "embeddingDataDeliveryEnabled": boolean,
        "imageDataDeliveryEnabled": boolean,
        "s3Config": {
            "bucketName": "string",
            "keyPrefix": "string"
        },
        "textDataDeliveryEnabled": boolean
    }
}
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

loggingConfig

The current configuration values.

Type: LoggingConfig object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

GetProvisionedModelThroughput

Service: Amazon Bedrock

Get details for a Provisioned Throughput. For more information, see Provisioned throughput in the Amazon Bedrock User Guide.

Request Syntax

GET /provisioned-model-throughput/provisionedModelId HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

**provisionedModelId**

The ARN or name of the Provisioned Throughput.

Pattern: ^((([0-9a-zA-Z][_-]?)*)|(arn:aws(-[^:]*)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:provisioned-model/[a-z0-9-]{12}))$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
  "commitmentDuration": "string",
  "commitmentExpirationTime": "string",
  "creationTime": "string",
  "desiredModelArn": "string",
  "desiredModelUnits": number,
  "failureMessage": "string",
  "foundationModelArn": "string",
  "lastModifiedTime": "string",
}
"modelArn": "string",
"modelUnits": number,
"provisionedModelArn": "string",
"provisionedModelName": "string",
"status": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

commitmentDuration

Commitment duration of the Provisioned Throughput.

Type: String

Valid Values: OneMonth | SixMonths

commitmentExpirationTime

Commitment expiration time for the Provisioned Throughput.

Type: Timestamp

creationTime

The timestamp of the creation time for this Provisioned Throughput.

Type: Timestamp

desiredModelArn

The ARN of the new model to associate with this Provisioned Throughput.

Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[([0-9]{12}:custom-model/[a-z0-9-]{1,63}\.[.]{1}[a-z0-9-]\.{0,2}[a-z0-9-]\.{0,2})|(:foundation-model/[a-z0-9-]\.{1}\.[.]{1}[a-z0-9-]\.{0,2}[a-z0-9-]\.{0,2})\{0,2\}[a-z0-9-]\.{1,63}\{0,2\})\$
**desiredModelUnits**

The desired number of model units that was requested to be available for this Provisioned Throughput.

Type: Integer

Valid Range: Minimum value of 1.

**failureMessage**

Failure message for any issues that the create operation encounters.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

**foundationModelArn**

ARN of the foundation model.

Type: String

Pattern: `^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:foundation-model/[a-z0-9-]{1,63}[][.]{1}([a-z0-9-]{1,63}[][.]{0,2}[^a-z0-9-]{1,63}([-:][a-z0-9-]{1,63}){0,2})$`

**lastModifiedTime**

The timestamp of the last modified time of this Provisioned Throughput.

Type: Timestamp

**modelArn**

The ARN or name of the model associated with this Provisioned Throughput.

Type: String

Pattern: `^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:(([0-9]{12}:custom-model/[a-z0-9-]{1,63}[][.]{1}[a-z0-9-]{1,63}/[a-z0-9-]{12}):(foundation-model/[a-z0-9-]{1,63}[][.]{1}([a-z0-9-]{1,63}[][.]{0,2}[^a-z0-9-]{1,63}([-:][a-z0-9-]{1,63}){0,2}))$`
**modelUnits**

The current number of model units requested to be available for this Provisioned Throughput.

Type: Integer

Valid Range: Minimum value of 1.

**provisionedModelArn**

The ARN of the Provisioned Throughput.

Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:provisioned-model/[a-z0-9]{12}$

**provisionedModelName**

The name of the Provisioned Throughput.

Type: String

Pattern: ^([0-9a-zA-Z][_-]?)+$

**status**

Status of the Provisioned Throughput.

Type: String

Valid Values: Creating | InService | Updating | Failed

**Errors**

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403
**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

ListCustomModels
Service: Amazon Bedrock

Returns a list of the custom models that you have created with the CreateModelCustomizationJob operation.

For more information, see Custom models in the Amazon Bedrock User Guide.

Request Syntax

GET /custom-models?
baseModelArnEquals=baseModelArnEquals&creationTimeAfter=creationTimeAfter&creationTimeBefore=creationTimeBefore&foundationModelArnEquals=foundationModelArnEquals&maxResults=maxResults&nameContains=nameContains&nextToken=nextToken&sortBy=sortBy&sortOrder=sortOrder

HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

**baseModelArnEquals**

Return custom models only if the base model ARN matches this parameter.

Pattern: ^arn:aws(-[^:]*)?:bedrock:[a-z0-9-]{1,20}:(([0-9]{12}:custom-model/[a-z0-9-]{1,63}[/\[a-z0-9-]\{1,63\}[.]{1}[a-z0-9-]\{1,63\}/a-z0-9]{12})|(:foundation-model/[a-z0-9-]\{1,63\}[.]{1}[a-z0-9-]\{1,63\}[.]{0,2}[a-z0-9-]{1,63}([:][a-z0-9-]\{1,63\}]{0,2}))$

**creationTimeAfter**

Return custom models created after the specified time.

**creationTimeBefore**

Return custom models created before the specified time.

**foundationModelArnEquals**

Return custom models only if the foundation model ARN matches this parameter.

Pattern: ^arn:aws(-[^:]*)?:bedrock:[a-z0-9-]{1,20}::foundation-model/[a-z0-9-]\{1,63\}[.]{1}[a-z0-9-]\{1,63\}[.]{0,2}[a-z0-9-]{1,63}([:][a-z0-9-]\{1,63\}){0,2}$
**maxResults**

Maximum number of results to return in the response.

Valid Range: Minimum value of 1. Maximum value of 1000.

**nameContains**

Return custom models only if the job name contains these characters.

Pattern: `^([0-9a-zA-Z][_-]?)+$`

**nextToken**

Continuation token from the previous response, for Amazon Bedrock to list the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\S*$`

**sortBy**

The field to sort by in the returned list of models.

Valid Values: `CreationTime`

**sortOrder**

The sort order of the results.

Valid Values: `Ascending | Descending`

**Request Body**

The request does not have a request body.

**Response Syntax**

```
HTTP/1.1 200
Content-type: application/json

{
```
"modelSummaries": [ 
    {
        "baseModelArn": "string",
        "baseModelName": "string",
        "creationTime": "string",
        "customizationType": "string",
        "modelArn": "string",
        "modelName": "string"
    },
    
    "nextToken": "string"
  ],

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**modelSummaries**

Model summaries.

Type: Array of [CustomModelSummary](#) objects

**nextToken**

Continuation token for the next request to list the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403
**InternalServerErrorException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

ListFoundationModels
Service: Amazon Bedrock

Lists Amazon Bedrock foundation models that you can use. You can filter the results with the request parameters. For more information, see Foundation models in the Amazon Bedrock User Guide.

Request Syntax

```
GET /foundation-models?
byCustomizationType=byCustomizationType&byInferenceType=byInferenceType&byOutputModality=byOutputModality
HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

**byCustomizationType**

Return models that support the customization type that you specify. For more information, see Custom models in the Amazon Bedrock User Guide.

Valid Values: FINE_TUNING | CONTINUED_PRE_TRAINING

**byInferenceType**

Return models that support the inference type that you specify. For more information, see Provisioned throughput in the Amazon Bedrock User Guide.

Valid Values: ON_DEMAND | PROVISIONED

**byOutputModality**

Return models that support the output modality that you specify.

Valid Values: TEXT | IMAGE | EMBEDDING

**byProvider**

Return models belonging to the model provider that you specify.

Pattern: ^[A-Za-z0-9- ]{1,63}$
Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
   "modelSummaries": [
      {
         "customizationsSupported": [ "string" ],
         "inferenceTypesSupported": [ "string" ],
         "inputModalities": [ "string" ],
         "modelArn": "string",
         "modelId": "string",
         "modelName": "string",
         "responseStreamingSupported": boolean
      },
      {
         "modelName": "string",
         "outputModalities": [ "string" ],
         "providerName": "string",
         "responseStreamingSupported": boolean
      }
   ]
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**modelSummaries**

A list of Amazon Bedrock foundation models.

Type: Array of [ FoundationModelSummary ] objects

Errors

For information about the errors that are common to all actions, see [Common Errors](#).
**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

ListModelCustomizationJobs

Service: Amazon Bedrock

Returns a list of model customization jobs that you have submitted. You can filter the jobs to return based on one or more criteria.

For more information, see Custom models in the Amazon Bedrock User Guide.

Request Syntax

GET /model-customization-jobs?
creationTimeAfter=creationTimeAfter&creationTimeBefore=creationTimeBefore&maxResults=maxResults
nextToken=nextToken
sortBy=sortBy
sortOrder=sortOrder
statusEquals=statusEquals

HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

creationTimeAfter

Return customization jobs created after the specified time.

creationTimeBefore

Return customization jobs created before the specified time.

maxResults

Maximum number of results to return in the response.

Valid Range: Minimum value of 1. Maximum value of 1000.

nameContains

Return customization jobs only if the job name contains these characters.

Pattern: ^[a-zA-Z0-9\-\*][a-zA-Z0-9\-\+\-\./]*$

nextToken

Continuation token from the previous response, for Amazon Bedrock to list the next set of results.
Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

**sortBy**

The field to sort by in the returned list of jobs.

Valid Values: CreationTime

**sortOrder**

The sort order of the results.

Valid Values: Ascending | Descending

**statusEquals**

Return customization jobs with the specified status.

Valid Values: InProgress | Completed | Failed | Stopping | Stopped

**Request Body**

The request does not have a request body.

**Response Syntax**

```
HTTP/1.1 200
Content-type: application/json

{
   "modelCustomizationJobSummaries": [
      {
         "baseModelArn": "string",
         "creationTime": "string",
         "customizationType": "string",
         "customModelArn": "string",
         "customModelName": "string",
         "endTime": "string",
         "jobArn": "string",
         "jobName": "string",
         "lastModifiedTime": "string",
         "status": "string"
      }
   ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**modelCustomizationJobSummaries**

Job summaries.

Type: Array of [ModelCustomizationJobSummary](#) objects

**nextToken**

Page continuation token to use in the next request.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.
HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

ListProvisionedModelThroughputs

Service: Amazon Bedrock

List the Provisioned Throughputs. For more information, see Provisioned throughput in the Amazon Bedrock User Guide.

Request Syntax

GET /provisioned-model-throughputs?
creationTimeAfter=creationTimeAfter&creationTimeBefore=creationTimeBefore&maxResults=maxResults&modelArnEquals=modelArnEquals&nameContains=nameContains&nextToken=nextToken&sortBy=sortBy&sortOrder=sortOrder&statusEquals=statusEquals

HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

**creationTimeAfter**

Return Provisioned Throughputs created after the specified time.

**creationTimeBefore**

Return Provisioned Throughputs created before the specified time.

**maxResults**

The maximum number of results to return in the response.

Valid Range: Minimum value of 1. Maximum value of 1000.

**modelArnEquals**

Return the list of Provisioned Throughputs where their model ARN is equal to this parameter.

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:((['0-9]{12}:custom-model/[a-z0-9-]{1,63}[,\{1}[a-z0-9-]{1,63}/[a-z0-9-]{12}])|(:foundation-model/[a-z0-9-]{1,63}[,\{1}([a-z0-9-]{1,63}[,\{0,2}[a-z0-9-]{1,63}]{1,63})([:,]\[a-z0-9-]{1,63}]{1,63})){0,2})$

**nameContains**

Return the list of Provisioned Throughputs if their name contains these characters.

Pattern: ^([0-9a-zA-Z][_-]?)+$

**nextToken**

Continuation token from the previous response, for Amazon Bedrock to list the next set of results.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

**sortBy**

The field to sort by in the returned list of Provisioned Throughputs.

Valid Values: CreationTime

**sortOrder**

The sort order of the results.

Valid Values: Ascending | Descending

**statusEquals**

Return the list of Provisioned Throughputs that match the specified status.

Valid Values: Creating | InService | Updating | Failed

**Request Body**

The request does not have a request body.

**Response Syntax**

```
HTTP/1.1 200
Content-type: application/json

{
    "nextToken": "string",
    "provisionedModelSummaries": [
    
    "commitmentDuration": "string",
```
"commitmentExpirationTime": "string",
"creationTime": "string",
"desiredModelArn": "string",
"desiredModelUnits": number,
"foundationModelArn": "string",
"lastModifiedTime": "string",
"modelArn": "string",
"modelUnits": number,
"provisionedModelArn": "string",
"provisionedModelName": "string",
"status": "string"
]
]

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

nextToken

Continuation token for the next request to list the next set of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

provisionedModelSummaries

List of summaries, one for each Provisioned Throughput in the response.

Type: Array of ProvisionedModelSummary objects

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.
HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

ListTagsForResource
Service: Amazon Bedrock

List the tags associated with the specified resource.

For more information, see Tagging resources in the Amazon Bedrock User Guide.

Request Syntax

```plaintext
POST /listTagsForResource HTTP/1.1
Content-type: application/json

{
    "resourceARN": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

**resourceARN**

The ARN of the resource.

Type: String

Pattern: (^[a-zA-Z0-9][a-zA-Z0-9\-]*$)|(^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]
{1,20}:([0-9]{12})|((fine-tuning-job|model-customization-job|custom-
model)/[a-z0-9-]{1,63}\.[1,63]([a-z0-9-]{1,63}([a-z0-9-]{1,63}\.|)\{0,2\}[a-
z0-9-]{1,63}([.][a-z0-9-]{1,63})\{0,2\}/([a-z0-9]{12}))|((:provisioned-
model/[a-z0-9]{12}$)))

Required: Yes

Response Syntax

HTTP/1.1 200
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

tag

An array of the tags associated with this resource.

Type: Array of Tag objects

Array Members: Minimum number of 0 items. Maximum number of 200 items.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.
HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**See Also**

PutModelInvocationLoggingConfiguration
Service: Amazon Bedrock

Set the configuration values for model invocation logging.

Request Syntax

```
PUT /logging/modelinvocations HTTP/1.1
Content-type: application/json

{
    "loggingConfig": {
        "cloudWatchConfig": {
            "largeDataDeliveryS3Config": {
                "bucketName": "string",
                "keyPrefix": "string"
            },
            "logGroupName": "string",
            "roleArn": "string"
        },
        "embeddingDataDeliveryEnabled": boolean,
        "imageDataDeliveryEnabled": boolean,
        "s3Config": {
            "bucketName": "string",
            "keyPrefix": "string"
        },
        "textDataDeliveryEnabled": boolean
    }
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

**loggingConfig**

The logging configuration values to set.

Type: [LoggingConfig](#) object
Required: Yes

Response Syntax

HTTP/1.1 200

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

StopModelCustomizationJob
Service: Amazon Bedrock

Stops an active model customization job. For more information, see Custom models in the Amazon Bedrock User Guide.

Request Syntax

POST /model-customization-jobs/jobIdentifier/stop HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

**jobIdentifier**

Job identifier of the job to stop.

Length Constraints: Minimum length of 0. Maximum length of 1011.

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:model-customization-job/[a-zA-Z0-9-]{1,63}([.:][a-zA-Z0-9-]{1,63}[^/\r\n]*)*$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.
AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

ConflictException

Error occurred because of a conflict while performing an operation.

HTTP Status Code: 400

InternalServerErrorException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

TagResource
Service: Amazon Bedrock

Associate tags with a resource. For more information, see Tagging resources in the Amazon Bedrock User Guide.

Request Syntax

POST /tagResource HTTP/1.1
Content-type: application/json

{  
  "resourceARN": "string",
  "tags": [
    {
      "key": "string",
      "value": "string"
    }
  ]
}

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

currentARN

The ARN of the resource to tag.

Type: String

Pattern: (^[a-zA-Z0-9][a-zA-Z0-9-]*)$|^arn:aws(-[^:]*)+?:bedrock:[a-z0-9-]
{1,20}:[0-9]{12}[/fine-tuning-job|model-customization-job|custom-
model]/[a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63}([a-z0-9-]{1,63}[]]0,2)[a-
z0-9-]{1,63}([:]a-z0-9-){1,63}){0,2}(/[a-z0-9]{12}$)|(:provisioned-
model(/[a-z0-9]{12}$)))
**tags**

Tags to associate with the resource.

Type: Array of Tag objects

Array Members: Minimum number of 0 items. Maximum number of 200 items.

Required: Yes

**Response Syntax**

HTTP/1.1 200

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.
HTTP Status Code: 429

**TooManyTagsException**

The request contains more tags than can be associated with a resource (50 tags per resource). The maximum number of tags includes both existing tags and those included in your current request.

HTTP Status Code: 400

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

UntagResource
Service: Amazon Bedrock

Remove one or more tags from a resource. For more information, see Tagging resources in the Amazon Bedrock User Guide.

Request Syntax

POST /untagResource HTTP/1.1
Content-type: application/json

{
    "resourceARN": "string",
    "tagKeys": [ "string" ]
}

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

resourceARN

The ARN of the resource to untag.

Type: String

Pattern: (^[a-zA-Z0-9][a-zA-Z0-9-]*$)(^[arn:aws(-[[:^:]+$)?:bedrock:[a-zA-Z0-9-]
{1,20}:([0-9]{12})|((fine-tuning-job|model-customization-job|custom-
model)/[a-zA-Z0-9-]{1,63}[.]1[1a-zA-Z0-9-]{1,63}([a-zA-Z0-9-]{1,63}[.]0,2[a-
-zA-Z0-9-]{1,63}([a-zA-Z0-9-]{1,63})0,2(/[a-zA-Z0-9-]{12}$)|([provisioned-
model/[a-zA-Z0-9-]{12}$]))

Required: Yes

tagKeys

Tag keys of the tags to remove from the resource.
Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 200 items.

Pattern: ^[a-zA-Z0-9\s:_/=+@-]*$

Required: Yes

Response Syntax

HTTP/1.1 200

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerErrorException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429
ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

UpdateProvisionedModelThroughput

Service: Amazon Bedrock

Update a Provisioned Throughput. For more information, see Provisioned throughput in the Amazon Bedrock User Guide.

Request Syntax

PATCH /provisioned-model-throughput/provisionedModelId HTTP/1.1
Content-type: application/json

{
   "desiredModelId": "string",
   "desiredProvisionedModelName": "string"
}

URI Request Parameters

The request uses the following URI parameters.

provisionedModelId

The ARN or name of the Provisioned Throughput to update.

Pattern: ^(((\[[0-9a-zA-Z][_\-]\]+)|(arn:aws(-[^:\]+)?:bedrock:\[a-z0-9-]\{1,20\}:\[0-9]\{12\}:provisioned-model/[a-z0-9]\{12\}))/

Required: Yes

Request Body

The request accepts the following data in JSON format.

desiredModelId

The ARN of the new model to associate with this Provisioned Throughput.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-[^:\]+)?:bedrock:\[a-z0-9-]\{1,20\}:(\[0-9]\{12\}:custom-model/[a-z0-9-]\{1,63\}[.\[1]\[a-z0-9-]\{1,63\}(\[\[\[a-z0-9-]\{1,63\}\{0,2\})/
**desiredProvisionedModelName**

The new name for this Provisioned Throughput.

Type: String

Pattern: `^([0-9a-zA-Z][-_]?)+$`

Required: No

---

**Response Syntax**

```
HTTP/1.1 200
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500
ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

Agents for Amazon Bedrock

The following actions are supported by Agents for Amazon Bedrock:

- AssociateAgentKnowledgeBase
- CreateAgent
• CreateAgentActionGroup
• CreateAgentAlias
• CreateDataSource
• CreateKnowledgeBase
• DeleteAgent
• DeleteAgentActionGroup
• DeleteAgentAlias
• DeleteAgentVersion
• DeleteDataSource
• DeleteKnowledgeBase
• DisassociateAgentKnowledgeBase
• GetAgent
• GetAgentActionGroup
• GetAgentAlias
• GetAgentKnowledgeBase
• GetAgentVersion
• GetDataSource
• GetIngestionJob
• GetKnowledgeBase
• ListAgentActionGroups
• ListAgentAliases
• ListAgentKnowledgeBases
• ListAgents
• ListAgentVersions
• ListDataSources
• ListIngestionJobs
• ListKnowledgeBases
• ListTagsForResource
• PrepareAgent
• StartIngestionJob
• TagResource
• UntagResource
• UpdateAgent
• UpdateAgentActionGroup
• UpdateAgentAlias
• UpdateAgentKnowledgeBase
• UpdateDataSource
• UpdateKnowledgeBase
**AssociateAgentKnowledgeBase**

Service: Agents for Amazon Bedrock

Associates a knowledge base with an agent. If a knowledge base is associated and its `indexState` is set to `Enabled`, the agent queries the knowledge base for information to augment its response to the user.

**Request Syntax**

```
PUT /agents/{agentId}/agentversions/{agentVersion}/knowledgebases/ HTTP/1.1
Content-type: application/json

{
    "description": "string",
    "knowledgeBaseId": "string",
    "knowledgeBaseState": "string"
}
```

**URI Request Parameters**

The request uses the following URI parameters.

- **agentId**
  
  The unique identifier of the agent with which you want to associate the knowledge base.
  
  Pattern: `^[0-9a-zA-Z]{10}$`

  Required: Yes

- **agentVersion**
  
  The version of the agent with which you want to associate the knowledge base.
  
  Length Constraints: Fixed length of 5.

  Pattern: `^DRAFT$`

  Required: Yes

**Request Body**

The request accepts the following data in JSON format.
**description**

A description of what the agent should use the knowledge base for.

Type: String

Required: Yes

**knowledgeBaseId**

The unique identifier of the knowledge base to associate with the agent.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

**knowledgeBaseState**

Specifies whether to use the knowledge base or not when sending an `InvokeAgent` request.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

**Response Syntax**

```json
HTTP/1.1 200
Content-type: application/json

{
   "agentKnowledgeBase": {
      "agentId": "string",
      "agentVersion": "string",
      "createdAt": "string",
      "description": "string",
      "knowledgeBaseId": "string",
      "knowledgeBaseState": "string",
      "updatedAt": "string"
   }
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**agentKnowledgeBase**

Contains details about the knowledge base that has been associated with the agent.

Type: AgentKnowledgeBase object

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.

HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.
HTTP Status Code: 402

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

CreateAgent
Service: Agents for Amazon Bedrock

Creates an agent that orchestrates interactions between foundation models, data sources, software applications, user conversations, and APIs to carry out tasks to help customers.

- Specify the following fields for security purposes.
  - `agentResourceRoleArn` – The ARN of the role with permissions to create an agent.
  - (Optional) `customerEncryptionKeyArn` – The ARN of a AWS KMS key to encrypt the creation of the agent.
  - (Optional) `idleSessionTTLInSeconds` – Specify the number of seconds for which the agent should maintain session information. After this time expires, the subsequent `InvokeAgent` request begins a new session.
- To override the default prompt behavior for agent orchestration and to use advanced prompts, include a `promptOverrideConfiguration` object. For more information, see [Advanced prompts](#).
- If you agent fails to be created, the response returns a list of `failureReasons` alongside a list of `recommendedActions` for you to troubleshoot.

Request Syntax

```http
PUT /agents/ HTTP/1.1
Content-type: application/json

{
    "agentName": "string",
    "agentResourceRoleArn": "string",
    "clientToken": "string",
    "customerEncryptionKeyArn": "string",
    "description": "string",
    "foundationModel": "string",
    "idleSessionTTLInSeconds": number,
    "instruction": "string",
    "promptOverrideConfiguration": {
        "overrideLambda": "string",
        "promptConfigurations": [
            {
                "basePromptTemplate": "string",
                "inferenceConfiguration": {
```
"maximumLength": number,
"stopSequences": [ "string" ],
"temperature": number,
"topK": number,
"topP": number
},
"parserMode": "string",
"promptCreationMode": "string",
"promptState": "string",
"promptType": "string"
}
},
"tags": {
"string": "string"
}

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

agentName

A name for the agent that you create.

Type: String

Pattern: ^([0-9a-zA-Z][_-]?){1,100}$

Required: Yes

agentResourceRoleArn

The ARN of the IAM role with permissions to create the agent. The ARN must begin with AmazonBedrockExecutionRoleForAgents_.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.
Pattern: ^arn:aws(-[^:]+)?:iam:([0-9]{12})?:role/(service-role/)?AmazonBedrockExecutionRoleForAgents.+$

Required: Yes

**clientToken**

A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see [Ensuring idempotency](#).

Type: String

Length Constraints: Minimum length of 33. Maximum length of 256.

Pattern: ^(a-zA-Z0-9)(-*[a-zA-Z0-9]+)$

Required: No

**customerEncryptionKeyArn**

The ARN of the AWS KMS key with which to encrypt the agent.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-cn|-us-gov):kms:[a-zA-Z0-9-]*:[0-9]{12}:key/[a-zA-Z0-9-]{36}$

Required: No

**description**

A description of the agent.

Type: String

Required: No

**foundationModel**

The foundation model to be used for orchestration by the agent you create.

Type: String
Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]*)?bedrock:[a-z0-9-]{1,20}(:[0-9]{12}:custom-model/[a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}(:[a-z0-9-]{1,63}){0,2})?(/ [a-z0-9]{12})|(:foundation-model/([a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}([.:][a-z0-9-]{1,63}){0,2})|([a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}([.:][a-z0-9-]{1,63}){0,2})|([a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}([.:][a-z0-9-]{1,63}){0,2})|([a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}([.:][a-z0-9-]{1,63}){0,2})|([a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}([.:][a-z0-9-]{1,63}){0,2}))$}

Required: No

idleSessionTTLInSeconds

The number of seconds for which Amazon Bedrock keeps information about a user's conversation with the agent.

A user interaction remains active for the amount of time specified. If no conversation occurs during this time, the session expires and Amazon Bedrock deletes any data provided before the timeout.

Type: Integer

Valid Range: Minimum value of 60. Maximum value of 3600.

Required: No

instruction

Instructions that tell the agent what it should do and how it should interact with users.

Type: String

Required: No

promptOverrideConfiguration

Contains configurations to override prompts in different parts of an agent sequence. For more information, see Advanced prompts.

Type: PromptOverrideConfiguration object

Required: No
tags

Any tags that you want to attach to the agent.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^[a-zA-Z0-9\s._:/=+@-]*$

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: ^[a-zA-Z0-9\s._:/=+@-]*$

Required: No

Response Syntax

HTTP/1.1 202
Content-type: application/json

{
    "agent": {
        "agentArn": "string",
        "agentId": "string",
        "agentName": "string",
        "agentResourceRoleArn": "string",
        "agentStatus": "string",
        "agentVersion": "string",
        "clientToken": "string",
        "createdAt": "string",
        "customerEncryptionKeyArn": "string",
        "description": "string",
        "failureReasons": [ "string" ],
        "foundationModel": "string",
        "idleSessionTTLInSeconds": "number",
        "instruction": "string",
        "preparedAt": "string",
        "promptOverrideConfiguration": {
            "overrideLambda": "string",
            "promptConfigurations": [
                {
                    "basePromptTemplate": "string",
                }
            ],
        }
    }"}
"inferenceConfiguration": {
  "maximumLength": number,
  "stopSequences": [ "string" ],
  "temperature": number,
  "topK": number,
  "topP": number
},
  "parserMode": "string",
  "promptCreationMode": "string",
  "promptState": "string",
  "promptType": "string"
}
]
},
  "recommendedActions": [ "string" ],
  "updatedAt": "string"
}
}

Response Elements

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.

**agent**

Contains details about the agent created.

Type: [Agent](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.
HTTP Status Code: 409

**InternalServerError**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 402

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of CreateAgent.

```
PUT /agents/ HTTP/1.1
Content-type: application/json

{
    "agentName": "o1nvve1",
    "agentResourceRoleArn": "arn:aws:iam::123456789012:role/AmazonBedrockExecutionRoleForAgents_user",
    "instruction": "You are an IT agent who solves customer's problems",
    "description": "Description is here",
    "idleSessionTTLInSeconds": 900,
    "foundationModel": "anthropic.claude-v2"
}
```
Example

This example illustrates one usage of CreateAgent.

Response:
HTTP/1.1 202
Content-type: application/json

{payload}

CreateAgentActionGroup

Service: Agents for Amazon Bedrock

Creates an action group for an agent. An action group represents the actions that an agent can carry out for the customer by defining the APIs that an agent can call and the logic for calling them.

To allow your agent to request the user for additional information when trying to complete a task, add an action group with the parentActionGroupSignature field set to AMAZON.UserInput. You must leave the description, apiSchema, and actionGroupExecutor fields blank for this action group. During orchestration, if your agent determines that it needs to invoke an API in an action group, but doesn't have enough information to complete the API request, it will invoke this action group instead and return an Observation reprompting the user for more information.

Request Syntax

PUT /agents/agentId/agentversions/agentVersion/actiongroups/ HTTP/1.1
Content-type: application/json

{   
    "actionGroupExecutor": { ... },
    "actionGroupName": "string",
    "actionGroupState": "string",
    "apiSchema": { ... },
    "clientToken": "string",
    "description": "string",
    "parentActionGroupSignature": "string"
}

URI Request Parameters

The request uses the following URI parameters.

agentId

The unique identifier of the agent for which to create the action group.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes
agentVersion

The version of the agent for which to create the action group.

Length Constraints: Fixed length of 5.

Pattern: ^DRAFT$

Required: Yes

Request Body

The request accepts the following data in JSON format.

actionGroupExecutor

The ARN of the Lambda function containing the business logic that is carried out upon invoking the action.

Type: ActionGroupExecutor object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

actionGroupName

The name to give the action group.

Type: String

Pattern: ^([0-9a-zA-Z][_\-]?)\{1,100}$

Required: Yes

actionGroupState

Specifies whether the action group is available for the agent to invoke or not when sending an InvokeAgent request.

Type: String

Valid Values: ENABLED | DISABLED
Required: No

apiSchema

Contains either details about the S3 object containing the OpenAPI schema for the action group or the JSON or YAML-formatted payload defining the schema. For more information, see Action group OpenAPI schemas.

Type: APISchema object

Note: This object is a Union. Only one member of this object can be specified or returned.

clientToken

A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see Ensuring idempotency.

Type: String

Length Constraints: Minimum length of 33. Maximum length of 256.

Pattern: ^[a-zA-Z0-9](-*[a-zA-Z0-9])*$

Required: No

description

A description of the action group.

Type: String

Required: No

parentActionGroupSignature

To allow your agent to request the user for additional information when trying to complete a task, set this field to AMAZON.UserInput. You must leave the description, apiSchema, and actionGroupExecutor fields blank for this action group.
During orchestration, if your agent determines that it needs to invoke an API in an action group, but doesn't have enough information to complete the API request, it will invoke this action group instead and return an *Observation* reprompting the user for more information.

Type: String

Valid Values: AMAZON.UserInput

Required: No

**Response Syntax**

```
HTTP/1.1 200
Content-type: application/json

{
    "agentActionGroup": {
        "actionGroupExecutor": { ... },
        "actionGroupId": "string",
        "actionGroupName": "string",
        "actionGroupState": "string",
        "agentId": "string",
        "agentVersion": "string",
        "apiSchema": { ... },
        "clientToken": "string",
        "createdAt": "string",
        "description": "string",
        "parentActionSignature": "string",
        "updatedAt": "string"
    }
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**agentActionGroup**

Contains details about the action group that was created.

Type: *AgentActionGroup* object
Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

  The request is denied because of missing access permissions.

  HTTP Status Code: 403

ConflictException

  There was a conflict performing an operation.

  HTTP Status Code: 409

InternalServerException

  An internal server error occurred. Retry your request.

  HTTP Status Code: 500

ResourceNotFoundException

  The specified resource ARN was not found. Check the ARN and try your request again.

  HTTP Status Code: 404

ServiceQuotaExceededException

  The number of requests exceeds the service quota. Resubmit your request later.

  HTTP Status Code: 402

ThrottlingException

  The number of requests exceeds the limit. Resubmit your request later.

  HTTP Status Code: 429

ValidationException

  Input validation failed. Check your request parameters and retry the request.

  HTTP Status Code: 400
Examples

Example request

This example illustrates one usage of CreateAgentActionGroup.

```json
PUT /agents/ABCDEFGHIJ/agentversions/DRAFT/actiongroups/ HTTP/1.1
Content-type: application/json

{
    "actionGroupName": "Test Action",
    "actionGroupState": "ENABLED",
    "apiSchema": {
        "s3": {
            "s3BucketName": "apischema-s3",
            "s3ObjectKey": "it_agent_openapi.json"
        }
    },
    "description": "Testing latest IT Management action",
    "actionGroupExecutor": {
        "lambda": "arn:aws:lambda:us-west-2:123456789012:function:ItAgentLambda"
    }
}
```

Example

This example illustrates one usage of CreateAgentActionGroup.

```
HTTP/1.1 200
Content-type: application/json

{payload}
```

CreateAgentAlias
Service: Agents for Amazon Bedrock

Creates an alias of an agent that can be used to deploy the agent.

Request Syntax

PUT /agents/{agentId}/agentaliases/ {agentId} HTTP/1.1
Content-type: application/json

{
    "agentAliasName": "string",
    "clientToken": "string",
    "description": "string",
    "routingConfiguration": [
        {
            "agentVersion": "string"
        }
    ],
    "tags": {
        "string" : "string"
    }
}

URI Request Parameters

The request uses the following URI parameters.

agentId

The unique identifier of the agent.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request accepts the following data in JSON format.

agentAliasName

The name of the alias.
Type: String

Pattern: ^\([0-9a-zA-Z][_-]?)\{1,100}$

Required: Yes

clientToken

A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see Ensuring idempotency.

Type: String

Length Constraints: Minimum length of 33. Maximum length of 256.

Pattern: ^[a-zA-Z0-9][-]*[a-zA-Z0-9]$*

Required: No

description

A description of the alias of the agent.

Type: String

Required: No

routingConfiguration

Contains details about the routing configuration of the alias.

Type: Array of AgentAliasRoutingConfigurationListItem objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Required: No

tags

Any tags that you want to attach to the alias of the agent.

Type: String to string map
Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^[a-zA-Z0-9\s._/:=+@-]*$

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: ^[a-zA-Z0-9\s._/:=+@-]*$

Required: No

Response Syntax

HTTP/1.1 202
Content-type: application/json

{"agentAlias": {
  "agentAliasArn": "string",
  "agentAliasHistoryEvents": [
    {
      "endDate": "string",
      "routingConfiguration": [
        {
          "agentVersion": "string"
        }
      ],
      "startDate": "string"
    }
  ],
  "agentAliasId": "string",
  "agentAliasName": "string",
  "agentAliasStatus": "string",
  "agentId": "string",
  "clientToken": "string",
  "createdAt": "string",
  "description": "string",
  "routingConfiguration": [
    {
      "agentVersion": "string"
    }
  ],
  "updatedAt": "string"}
Response Elements

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.

agentAlias

Contains details about the alias that was created.

Type: AgentAlias object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

ConflictException

There was a conflict performing an operation.

HTTP Status Code: 409

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ServiceQuotaExceeded Exception

The number of requests exceeds the service quota. Resubmit your request later.
HTTP Status Code: 402

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

Examples

Example request

This example illustrates one usage of CreateAgentAlias.

```
PUT /agents/ABCDEFGHIJ/agentaliases/ HTTP/1.1
Content-type: application/json

{
  "agentAliasName": "TestName",
  "description": "Alias is test"
}
```

Example

This example illustrates one usage of CreateAgentAlias.

```
HTTP/1.1 202
Content-type: application/json

{payload}
```

CreateDataSource

Service: Agents for Amazon Bedrock

Sets up a data source to be added to a knowledge base.

⚠️ Important

You can't change the chunkingConfiguration after you create the data source.

Request Syntax

PUT /knowledgebases/<knowledgeBaseId>/datasources/ HTTP/1.1
Content-type: application/json

```json
{
    "clientToken": "string",
    "dataSourceConfiguration": {
        "s3Configuration": {
            "bucketArn": "string",
            "inclusionPrefixes": [ "string" ]
        },
        "type": "string"
    },
    "description": "string",
    "name": "string",
    "serverSideEncryptionConfiguration": {
        "kmsKeyArn": "string"
    },
    "vectorIngestionConfiguration": {
        "chunkingConfiguration": {
            "chunkingStrategy": "string",
            "fixedSizeChunkingConfiguration": {
                "maxTokens": number,
                "overlapPercentage": number
            }
        }
    }
}
```
URI Request Parameters

The request uses the following URI parameters.

**knowledgeBaseId**

The unique identifier of the knowledge base to which to add the data source.

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

Request Body

The request accepts the following data in JSON format.

**clientToken**

A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see [Ensuring idempotency](#).

Type: String

Length Constraints: Minimum length of 33. Maximum length of 256.

Pattern: `^[a-zA-Z0-9](-*[a-zA-Z0-9])*$`

Required: No

**dataSourceConfiguration**

Contains metadata about where the data source is stored.

Type: `DataSourceConfiguration` object

Required: Yes

**description**

A description of the data source.

Type: String

name

The name of the data source.

Type: String

Pattern: `^[0-9a-zA-Z][_-]?{1,100}$`

Required: Yes

serverSideEncryptionConfiguration

Contains details about the server-side encryption for the data source.

Type: `ServerSideEncryptionConfiguration` object

vectorIngestionConfiguration

Contains details about how to ingest the documents in the data source.

Type: `VectorIngestionConfiguration` object

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "dataSource": {
        "createdAt": "string",
        "dataSourceConfiguration": {
            "s3Configuration": {
                "bucketArn": "string",
                "inclusionPrefixes": [ "string" ]
            },
            "type": "string"
        },
        "dataSourceId": "string",
        "description": "string",
```
"knowledgeBaseId": "string",
"name": "string",
"serverSideEncryptionConfiguration": {
  "kmsKeyArn": "string"
},
"status": "string",
"updatedAt": "string",
"vectorIngestionConfiguration": {
  "chunkingConfiguration": {
    "chunkingStrategy": "string",
    "fixedSizeChunkingConfiguration": {
      "maxTokens": number,
      "overlapPercentage": number
    }
  }
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**dataSource**

Contains details about the data source.

Type: [DataSource](https://example.com) object

Errors

For information about the errors that are common to all actions, see [Common Errors](https://example.com).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.
HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 402

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

CreateKnowledgeBase
Service: Agents for Amazon Bedrock

Creates a knowledge base that contains data sources from which information can be queried and used by LLMs. To create a knowledge base, you must first set up your data sources and configure a supported vector store. For more information, see Set up your data for ingestion.

Note
If you prefer to let Amazon Bedrock create and manage a vector store for you in Amazon OpenSearch Service, use the console. For more information, see Create a knowledge base.

- Provide the name and an optional description.
- Provide the ARN with permissions to create a knowledge base in the roleArn field.
- Provide the embedding model to use in the embeddingModelArn field in the knowledgeBaseConfiguration object.
- Provide the configuration for your vector store in the storageConfiguration object.
  - For an Amazon OpenSearch Service database, use the opensearchServerlessConfiguration object. For more information, see Create a vector store in Amazon OpenSearch Service.
  - For an Amazon Aurora database, use the RdsConfiguration object. For more information, see Create a vector store in Amazon Aurora.
  - For a Pinecone database, use the pineconeConfiguration object. For more information, see Create a vector store in Pinecone.
  - For a Redis Enterprise Cloud database, use the redisEnterpriseCloudConfiguration object. For more information, see Create a vector store in Redis Enterprise Cloud.

Request Syntax

```
PUT /knowledgebases/ HTTP/1.1
Content-type: application/json

{
    "clientToken": "string",
    "description": "string",
    "knowledgeBaseConfiguration": {

```
"type": "string",
"vectorKnowledgeBaseConfiguration": {
  "embeddingModelArn": "string"
},
"name": "string",
"roleArn": "string",
"storageConfiguration": {
  "opensearchServerlessConfiguration": {
    "collectionArn": "string",
    "fieldMapping": {
      "metadataField": "string",
      "textField": "string",
      "vectorField": "string"
    },
    "vectorIndexName": "string"
  },
  "pineconeConfiguration": {
    "connectionString": "string",
    "credentialsSecretArn": "string",
    "fieldMapping": {
      "metadataField": "string",
      "textField": "string"
    },
    "namespace": "string"
  },
  "rdsConfiguration": {
    "credentialsSecretArn": "string",
    "databaseName": "string",
    "fieldMapping": {
      "metadataField": "string",
      "primaryKeyField": "string",
      "textField": "string",
      "vectorField": "string"
    },
    "resourceArn": "string",
    "tableName": "string"
  },
  "redisEnterpriseCloudConfiguration": {
    "credentialsSecretArn": "string",
    "endpoint": "string",
    "fieldMapping": {
      "metadataField": "string",
      "textField": "string"
    },
"vectorField": "string",
},
"vectorIndexName": "string",
},
"type": "string",
},
"tags": {
"string": "string"
}
}

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

clientToken

A unique, case-sensitive identifier to ensure that the API request completes no more than one
time. If this token matches a previous request, Amazon Bedrock ignores the request, but does
not return an error. For more information, see Ensuring idempotency.

Type: String

Length Constraints: Minimum length of 33. Maximum length of 256.

Pattern: ^[a-zA-Z0-9](-*[a-zA-Z0-9])*$

Required: No
description

A description of the knowledge base.

Type: String

Required: No
**knowledgeBaseConfiguration**

Contains details about the embeddings model used for the knowledge base.

Type: KnowledgeBaseConfiguration object

Required: Yes

**name**

A name for the knowledge base.

Type: String

Pattern: ^([^0-9a-zA-Z][_-]?){1,100}$

Required: Yes

**roleArn**

The ARN of the IAM role with permissions to create the knowledge base.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]*)?:iam::([0-9]{12}):role/.*$\

Required: Yes

**storageConfiguration**

Contains details about the configuration of the vector database used for the knowledge base.

Type: StorageConfiguration object

Required: Yes

**tags**

Specify the key-value pairs for the tags that you want to attach to your knowledge base in this object.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.
Key Pattern: ^[a-zA-Z0-9\s._/:=+@-]*$

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: ^[a-zA-Z0-9\s._/:=+@-]*$

Required: No

Response Syntax

HTTP/1.1 202
Content-type: application/json

{
  "knowledgeBase": {
    "createdAt": "string",
    "description": "string",
    "failureReasons": [ "string" ],
    "knowledgeBaseArn": "string",
    "knowledgeBaseConfiguration": {
      "type": "string",
      "vectorKnowledgeBaseConfiguration": {
        "embeddingModelArn": "string"
      }
    },
    "knowledgeBaseId": "string",
    "name": "string",
    "roleArn": "string",
    "status": "string",
    "storageConfiguration": {
      "opensearchServerlessConfiguration": {
        "collectionArn": "string",
        "fieldMapping": {
          "metadataField": "string",
          "textField": "string",
          "vectorField": "string"
        },
        "vectorIndexName": "string"
      },
      "pineconeConfiguration": {
        "connectionString": "string",
        "credentialsSecretArn": "string",
        "fieldMapping": {
  
}
"metadataField": "string",
"textField": "string"
},
"namespace": "string"
},
"rdsConfiguration": {
  "credentialsSecretArn": "string",

    "metadataField": "string",
    "textField": "string",
    "vectorField": "string"
  },
  "vectorIndexName": "string"
},
"type": "string"
},
"updatedAt": "string"
}

**Response Elements**

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.

**knowledgeBase**

Contains details about the knowledge base.

Type: **KnowledgeBase** object
Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

ConflictException

There was a conflict performing an operation.

HTTP Status Code: 409

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ServiceQuotaExceededException

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 402

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

DeleteAgent
Service: Agents for Amazon Bedrock

Deletes an agent.

Request Syntax

```
DELETE /agents/{agentId}/?skipResourceInUseCheck={skipResourceInUseCheck} HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

**agentId**

The unique identifier of the agent to delete.

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**skipResourceInUseCheck**

By default, this value is `false` and deletion is stopped if the resource is in use. If you set it to `true`, the resource will be deleted even if the resource is in use.

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 202
Content-type: application/json

{
   "agentId": "string",
   "agentStatus": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 202 response.
The following data is returned in JSON format by the service.

**agentId**

The unique identifier of the agent that was deleted.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

**agentStatus**

The status of the agent.

Type: String

Valid Values: CREATING | PREPARING | PREPARED | NOT_PREPARED | DELETING | FAILED | VERSIONING | UPDATING

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.

HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404
**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of DeleteAgent.

```
DELETE /agents/ABCDEFGHIJ/ HTTP/1.1
```

**Example response**

This example illustrates one usage of DeleteAgent.

```
HTTP/1.1 202
Content-type: application/json

{payload}
```

DeleteAgentActionGroup
Service: Agents for Amazon Bedrock

Deletes an action group in an agent.

Request Syntax

DELETE /agents/{agentId}/agentversions/{agentVersion}/actiongroups/{actionGroupId}/?
skipResourceInUseCheck={skipResourceInUseCheck}  HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

**actionGroupId**

The unique identifier of the action group to delete.

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**agentId**

The unique identifier of the agent that the action group belongs to.

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**agentVersion**

The version of the agent that the action group belongs to.

Length Constraints: Fixed length of 5.

Pattern: `^DRAFT$`

Required: Yes

**skipResourceInUseCheck**

By default, this value is `false` and deletion is stopped if the resource is in use. If you set it to `true`, the resource will be deleted even if the resource is in use.
Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 204

Response Elements

If the action is successful, the service sends back an HTTP 204 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

ConflictException

There was a conflict performing an operation.

HTTP Status Code: 409

InternalServerErrorException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429
ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

Examples

Example request

This example illustrates one usage of DeleteAgentActionGroup.

```
DELETE /agents/ABCDEFGHIJ/agentversions/1/actiongroups/ABCDEFGHIJ/ HTTP/1.1
```

Example response

This example illustrates one usage of DeleteAgentActionGroup.

```
HTTP/1.1 204
{payload}
```

DeleteAgentAlias

Service: Agents for Amazon Bedrock

Deletes an alias of an agent.

Request Syntax

DELETE /agents/{agentId}/agentaliases/{agentAliasId}/ HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

agentAliasId

The unique identifier of the alias to delete.

Length Constraints: Fixed length of 10.

Pattern: ^([\bTSTALIASID\b|\[0-9a-zA-Z\]+)$

Required: Yes

agentId

The unique identifier of the agent that the alias belongs to.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 202
Content-type: application/json

{
   "agentAliasId": "string",
   "agentAliasStatus": "string",
}
"agentId": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 202 response. The following data is returned in JSON format by the service.

**agentAliasId**

The unique identifier of the alias that was deleted.

Type: String

Length Constraints: Fixed length of 10.

Pattern: `^\bTSTALIASID\b\^[0-9a-zA-Z]+$`

**agentAliasStatus**

The status of the alias.

Type: String

Valid Values: CREATING | PREPARED | FAILED | UPDATING | DELETING

**agentId**

The unique identifier of the agent that the alias belongs to.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Errors

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403
InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

Examples

Example request

This example illustrates one usage of DeleteAgentAlias.

DELETE /agents/ABCDEFGHIJ/agentaliases/ABCDEFGHIJ/ HTTP/1.1

Example response

This example illustrates one usage of DeleteAgentAlias.

HTTP/1.1 202
Content-type: application/json

{payload}

DeleteAgentVersion
Service: Agents for Amazon Bedrock

Deletes a version of an agent.

Request Syntax

DELETE /agents/agentId/agentversions/agentVersion/?skipResourceInUseCheck=skipResourceInUseCheck HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

agentId

The unique identifier of the agent that the version belongs to.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

agentVersion

The version of the agent to delete.

Pattern: ^[0-9]{1,5}$

Required: Yes

skipResourceInUseCheck

By default, this value is false and deletion is stopped if the resource is in use. If you set it to true, the resource will be deleted even if the resource is in use.

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 202
Content-type: application/json
Response Elements

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.

agentId

The unique identifier of the agent that the version belongs to.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

agentStatus

The status of the agent version.

Type: String

Valid Values: CREATING | PREPARING | PREPARED | NOT_PREPARED | DELETING | FAILED | VERSIONING | UPDATING

agentVersion

The version that was deleted.

Type: String

Pattern: ^[0-9]{1,5}$

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.
HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.

HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of DeleteAgentVersion.

```
DELETE /agents/ABCDEFGHIJ/agentversions/1/?skipResourceInUseCheck=true HTTP/1.1
```

**Example response**

This example illustrates one usage of DeleteAgentVersion.

```
HTTP/1.1 202
```

DeleteDataSource
Service: Agents for Amazon Bedrock

Deletes a data source from a knowledge base.

Request Syntax

DELETE /knowledgebases/knowledgeBaseId/datasources/datasourceId HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

**dataSourceId**

The unique identifier of the data source to delete.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

**knowledgeBaseId**

The unique identifier of the knowledge base from which to delete the data source.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 202
Content-type: application/json

```json
{
  "dataSourceId": "string",
  "knowledgeBaseId": "string",
  "status": "string"
}
```
Response Elements

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.

**dataSourceId**

The unique identifier of the data source that was deleted.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

**knowledgeBaseId**

The unique identifier of the knowledge base to which the data source that was deleted belonged.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

**status**

The status of the data source.

Type: String

Valid Values: AVAILABLE | DELETING

Errors

For information about the errors that are common to all actions, see [Common Errors](#)

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.
HTTP Status Code: 409

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

DeleteKnowledgeBase

Service: Agents for Amazon Bedrock

Deletes a knowledge base. Before deleting a knowledge base, you should disassociate the knowledge base from any agents that it is associated with by making a DisassociateAgentKnowledgeBase request.

Request Syntax

DELETE /knowledgebases/{knowledgeBaseId} HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

knowledgeBaseId

The unique identifier of the knowledge base to delete.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 202
Content-type: application/json

{
   "knowledgeBaseId": "string",
   "status": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.
**knowledgeBaseUrl**

The unique identifier of the knowledge base that was deleted.

Type: String

Pattern: \^[0-9a-zA-Z]{10}\$

**status**

The status of the knowledge base and whether it has been successfully deleted.

Type: String

Valid Values: CREATING | ACTIVE | DELETING | UPDATING | FAILED

**Errors**

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.

HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.
HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

DisassociateAgentKnowledgeBase
Service: Agents for Amazon Bedrock

Disassociates a knowledge base from an agent.

Request Syntax

DELETE /agents/{agentId}/agentversions/{agentVersion}/knowledgebases/{knowledgeBaseId}/
HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

agentId

The unique identifier of the agent from which to disassociate the knowledge base.

Pattern: ^[\d-9a-zA-Z]{10}$

Required: Yes

agentVersion

The version of the agent from which to disassociate the knowledge base.

Length Constraints: Fixed length of 5.

Pattern: ^DRAFT$

Required: Yes

knowledgeBaseId

The unique identifier of the knowledge base to disassociate.

Pattern: ^[\d-9a-zA-Z]{10}$

Required: Yes

Request Body

The request does not have a request body.
Response Syntax

HTTP/1.1 204

Response Elements

If the action is successful, the service sends back an HTTP 204 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

ConflictException

There was a conflict performing an operation.

HTTP Status Code: 409

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

GetAgent
Service: Agents for Amazon Bedrock

Gets information about an agent.

Request Syntax

GET /agents/{agentId} HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

agentId
The unique identifier of the agent.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{  
  "agent": {  
    "agentArn": "string",
    "agentId": "string",
    "agentName": "string",
    "agentResourceRoleArn": "string",
    "agentStatus": "string",
    "agentVersion": "string",
    "clientToken": "string",
    "createdAt": "string",
    "customerEncryptionKeyArn": "string",
    "description": "string",
    "failureReasons": [ "string" ]
  }
}
"foundationModel": "string",
"idleSessionTTLInSeconds": number,
"instruction": "string",
"preparedAt": "string",
"promptOverrideConfiguration": {
  "overrideLambda": "string",
  "promptConfigurations": [
    {
      "basePromptTemplate": "string",
      "inferenceConfiguration": {
        "maximumLength": number,
        "stopSequences": [ "string" ],
        "temperature": number,
        "topK": number,
        "topP": number
      },
      "parserMode": "string",

      "promptState": "string",
      "promptType": "string"
    }
  ],
  "recommendedActions": [ "string" ],
  "updatedAt": "string"
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

agent

Contains details about the agent.

Type: Agent object

Errors

For information about the errors that are common to all actions, see Common Errors.
AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

Examples

Example request

This example illustrates one usage of GetAgent.

GET /agents/ABCDEFGHIJ/ HTTP/1.1

Example response

This example illustrates one usage of GetAgent.

HTTP/1.1 200
Content-type: application/json
See Also

GetAgentActionGroup

Service: Agents for Amazon Bedrock

Gets information about an action group for an agent.

**Request Syntax**

```
GET /agents/{agentId}/agentversions/{agentVersion}/actiongroups/{actionGroupId}/ HTTP/1.1
```

**URI Request Parameters**

The request uses the following URI parameters.

- **actionGroupId**
  - The unique identifier of the action group for which to get information.
  - Pattern: `^[0-9a-zA-Z]{10}$`
  - Required: Yes

- **agentId**
  - The unique identifier of the agent that the action group belongs to.
  - Pattern: `^[0-9a-zA-Z]{10}$`
  - Required: Yes

- **agentVersion**
  - The version of the agent that the action group belongs to.
  - Pattern: `^\d+(\d+)$`
  - Required: Yes

**Request Body**

The request does not have a request body.
Response Syntax

HTTP/1.1 200
Content-type: application/json

```json
{
    "agentActionGroup": {
        "actionGroupExecutor": { ... },
        "actionGroupId": "string",
        "actionGroupName": "string",
        "actionGroupState": "string",
        "agentId": "string",
        "agentVersion": "string",
        "apiSchema": { ... },
        "clientToken": "string",
        "createdAt": "string",
        "description": "string",
        "parentActionSignature": "string",
        "updatedAt": "string"
    }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**agentActionGroup**

Contains details about the action group.

Type: [AgentActionGroup](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403
**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of GetAgentActionGroup.

```
GET /agents/ABCDEFGHIJ/agentversions/1/actiongroups/ABCDEFGHIJ/ HTTP/1.1
```

**Example response**

This example illustrates one usage of GetAgentActionGroup.

```
HTTP/1.1 200
Content-type: application/json

{payload}
```

GetAgentAlias

Service: Agents for Amazon Bedrock

Gets information about an alias of an agent.

Request Syntax

GET /agents/{agentId}/agentaliases/{agentAliasId}/ HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

agentAliasId

The unique identifier of the alias for which to get information.

Length Constraints: Fixed length of 10.

Pattern: ^(\bTSTALIASID\b|\[0-9a-zA-Z]+)$

Required: Yes

agentId

The unique identifier of the agent to which the alias to get information belongs.

Pattern: ^[0-9a-zA-Z]{10}$_

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
   "agentAlias": 
}
"agentAliasArn": "string",
"agentAliasHistoryEvents": [
    {
        "endDate": "string",
        "routingConfiguration": [
            {
                "agentVersion": "string"
            }
        ],
        "startDate": "string"
    }
],
"agentAliasId": "string",
"agentAliasName": "string",
"agentAliasStatus": "string",
"agentId": "string",
"clientToken": "string",
"createdAt": "string",
"description": "string",
"routingConfiguration": [
    {
        "agentVersion": "string"
    }
],
"updatedAt": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

agentAlias

Contains information about the alias.

Type: AgentAlias object

Errors

For information about the errors that are common to all actions, see Common Errors.
AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

Examples

Example request

This example illustrates one usage of GetAgentAlias.

GET /agents/ABCDEFGHIJ/agentaliases/ABCDEFGHIJ/ HTTP/1.1

Example response

This example illustrates one usage of GetAgentAlias.

HTTP/1.1 200
Content-type: application/json

GetAgentKnowledgeBase
Service: Agents for Amazon Bedrock

Gets information about a knowledge base associated with an agent.

Request Syntax

GET /agents/{agentId}/agentversions/{agentVersion}/knowledgebases/{knowledgeBaseId}/ HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

agentId
The unique identifier of the agent with which the knowledge base is associated.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

agentVersion
The version of the agent with which the knowledge base is associated.

Pattern: ^(DRAFT|\[0-9\]{0,4}[1-9]\[0-9\]{0,4})$

Required: Yes

knowledgeBaseId
The unique identifier of the knowledge base associated with the agent.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request does not have a request body.
Response Syntax

HTTP/1.1 200
Content-type: application/json

{
   "agentKnowledgeBase": {
      "agentId": "string",
      "agentVersion": "string",
      "createdAt": "string",
      "description": "string",
      "knowledgeBaseId": "string",
      "knowledgeBaseState": "string",
      "updatedAt": "string"
   }
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

agentKnowledgeBase

Contains details about a knowledge base attached to an agent.

Type: AgentKnowledgeBase object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500
ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

GetAgentVersion
Service: Agents for Amazon Bedrock

Gets details about a version of an agent.

Request Syntax

GET /agents/{agentId}/agentversions/{agentVersion}/ HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

agentId

The unique identifier of the agent.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

agentVersion

The version of the agent.

Pattern: ^[0-9]{1,5}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
  "agentVersion": {
    "agentArn": "string",
    "agentId": "string",

```json
```

```json
}```

```json
```
"agentName": "string",
"agentResourceRoleArn": "string",
"agentStatus": "string",
"createdAt": "string",
"customerEncryptionKeyArn": "string",
"description": "string",
"failureReasons": [ "string" ],
"foundationModel": "string",
"idleSessionTTLInSeconds": number,

        }
    ],
    "recommendedActions": [ "string" ],
    "updatedAt": "string",
    "version": "string"
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

agentVersion

Contains details about the version of the agent.
Type: **AgentVersion** object

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

GetDataSource
Service: Agents for Amazon Bedrock

Gets information about a data source.

Request Syntax

GET /knowledgebases/knowledgeBaseId/datasources/dataSourceId HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

dataSourceId

The unique identifier of the data source.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

knowledgeBaseId

The unique identifier of the knowledge base that the data source was added to.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
   "dataSource": {
      "createdAt": "string",
   }
}
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**dataSource**

Contains details about the data source.

Type: **DataSource** object

Errors

For information about the errors that are common to all actions, see **Common Errors**.
AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

GetIngestionJob
Service: Agents for Amazon Bedrock

Gets information about a ingestion job, in which a data source is added to a knowledge base.

Request Syntax

GET /knowledgebases/knowledgeBaseId/datasources/dataSourceId/
ingestionjobs/ingestionJobId HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

dataSourceId

The unique identifier of the data source in the ingestion job.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

ingestionJobId

The unique identifier of the ingestion job.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

knowledgeBaseId

The unique identifier of the knowledge base for which the ingestion job applies.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
    "ingestionJob": {
        "dataSourceId": "string",
        "description": "string",
        "failureReasons": [ "string" ],
        "ingestionJobId": "string",
        "knowledgeBaseId": "string",
        "startedAt": "string",
        "statistics": {
            "numberOfDocumentsDeleted": number,
            "numberOfDocumentsFailed": number,
            "numberOfDocumentsScanned": number,
            "numberOfMetadataDocumentsModified": number,
            "numberOfMetadataDocumentsScanned": number,
            "numberOfModifiedDocumentsIndexed": number,
            "numberOfNewDocumentsIndexed": number
        },
        "status": "string",
        "updatedAt": "string"
    }
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**ingestionJob**

Contains details about the ingestion job.

Type: IngestionJob object

Errors

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.
HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

GetKnowledgeBase
Service: Agents for Amazon Bedrock

Gets information about a knowledge base.

Request Syntax

GET /knowledgebases/knowledgeBaseId HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

knowledgeBaseId

The unique identifier of the knowledge base for which to get information.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
   "knowledgeBase": {
      "createdAt": "string",

      },
      "vectorIndexName": "string"
   }
}
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**knowledgeBase**

Contains details about the knowledge base.

Type: [KnowledgeBase](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429
**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

### ListAgentActionGroups

**Service:** Agents for Amazon Bedrock

Lists the action groups for an agent and information about each one.

#### Request Syntax

```plaintext
POST /agents/{agentId}/agentversions/{agentVersion}/actiongroups/ HTTP/1.1
Content-type: application/json

{
  "maxResults": number,
  "nextToken": "string"
}
```

#### URI Request Parameters

The request uses the following URI parameters.

- **agentId**
  - The unique identifier of the agent.
  - Pattern: `^[0-9a-zA-Z]{10}$`
  - Required: Yes

- **agentVersion**
  - The version of the agent.
  - Pattern: `^(DRAFT|[0-9]{1-4}[1-9][0-9]{0,4})$`
  - Required: Yes

#### Request Body

The request accepts the following data in JSON format.
**maxResults**

The maximum number of results to return in the response. If the total number of results is greater than this value, use the token returned in the response in the `nextToken` field when making another request to return the next batch of results.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, enter the token returned in the `nextToken` field in the response in this field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

Required: No

**Response Syntax**

```
HTTP/1.1  200
Content-type: application/json

{
   "actionGroupSummaries": [
      {
         "actionGroupId": "string",
         "actionGroupName": "string",
         "actionGroupState": "string",
         "description": "string",
         "updatedAt": "string"
      },
      
      "nextToken": "string"
   ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**actionGroupSummaries**

A list of objects, each of which contains information about an action group.

Type: Array of `ActionGroupSummary` objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, use this token when making another request in the `nextToken` field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\S*$`

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.
HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of ListAgentActionGroups.

```plaintext
POST /agents/ABCDEFGHIJ/agentversions/1/actiongroups/ HTTP/1.1
Content-type: application/json

{
  "maxResults": 10
}
```

**Example response**

This example illustrates one usage of ListAgentActionGroups.

```plaintext
HTTP/1.1 200
Content-type: application/json

{payload}
```

ListAgentAliases
Service: Agents for Amazon Bedrock

Lists the aliases of an agent and information about each one.

Request Syntax

POST /agents/<agentId>/agentaliases/ HTTP/1.1
Content-type: application/json

{
  "maxResults": number,
  "nextToken": "string"
}

URI Request Parameters

The request uses the following URI parameters.

agentId

The unique identifier of the agent.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request accepts the following data in JSON format.

maxResults

The maximum number of results to return in the response. If the total number of results is greater than this value, use the token returned in the response in the nextToken field when making another request to return the next batch of results.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No
**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, enter the token returned in the `nextToken` field in the response in this field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\S*$`

Required: No

**Response Syntax**

```
HTTP/1.1 200
Content-type: application/json

{
   "agentAliasSummaries": [
   {
      "agentAliasId": "string",
      "agentAliasName": "string",
      "agentAliasStatus": "string",
      "createdAt": "string",
      "description": "string",
      "routingConfiguration": [
         {
            "agentVersion": "string"
         }
      ],
      "updatedAt": "string"
   },
   "nextToken": "string"
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
**agentAliasSummaries**

A list of objects, each of which contains information about an alias of the agent.

Type: Array of [AgentAliasSummary](#) objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, use this token when making another request in the `nextToken` field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\S*$`

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.
HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of ListAgentAliases.

```plaintext
POST /agents/ABCDEFGHIJ/agentaliases/ HTTP/1.1
Content-type: application/json

{
  "maxResults": 10
}
```

**Example response**

This example illustrates one usage of ListAgentAliases.

```plaintext
HTTP/1.1 200
Content-type: application/json

{payload}
```

ListAgentKnowledgeBases
Service: Agents for Amazon Bedrock

Lists knowledge bases associated with an agent and information about each one.

Request Syntax

POST /agents/{agentId}/agentversions/{agentVersion}/knowledgebases/ HTTP/1.1
Content-type: application/json

{
    "maxResults": number,
    "nextToken": "string"
}

URI Request Parameters

The request uses the following URI parameters.

agentId

The unique identifier of the agent for which to return information about knowledge bases associated with it.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

agentVersion

The version of the agent for which to return information about knowledge bases associated with it.

Pattern: ^(DRAFT|\[0-9\]{0,4}\[1-9\][0-9\]{0,4})$

Required: Yes

Request Body

The request accepts the following data in JSON format.
**maxResults**

The maximum number of results to return in the response. If the total number of results is greater than this value, use the token returned in the response in the `nextToken` field when making another request to return the next batch of results.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, enter the token returned in the `nextToken` field in the response in this field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

Required: No

**Response Syntax**

```json
HTTP/1.1 200
Content-type: application/json

{
   "agentKnowledgeBaseSummaries": [ 
   {
      "description": "string",
      "knowledgeBaseId": "string",
      "knowledgeBaseState": "string",
      "updatedAt": "string"
   }
   ],
   "nextToken": "string"
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**agentKnowledgeBaseSummaries**

A list of objects, each of which contains information about a knowledge base associated with the agent.

Type: Array of [AgentKnowledgeBaseSummary](#) objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, use this token when making another request in the `nextToken` field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\S*$`

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.
HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

ListAgents
Service: Agents for Amazon Bedrock

Lists the agents belonging to an account and information about each agent.

Request Syntax

POST /agents/ HTTP/1.1
Content-type: application/json

{
   "maxResults": number,
   "nextToken": "string"
}

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

**maxResults**

The maximum number of results to return in the response. If the total number of results is greater than this value, use the token returned in the response in the nextToken field when making another request to return the next batch of results.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

**nextToken**

If the total number of results is greater than the maxResults value provided in the request, enter the token returned in the nextToken field in the response in this field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.
Response Syntax

HTTP/1.1 200
Content-type: application/json

{
  "agentSummaries": [
    {
      "agentId": "string",
      "agentName": "string",
      "agentStatus": "string",
      "description": "string",
      "latestAgentVersion": "string",
      "updatedAt": "string"
    }
  ],
  "nextToken": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

agentSummaries

A list of objects, each of which contains information about an agent.

Type: Array of AgentSummary objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

nextToken

If the total number of results is greater than the maxResults value provided in the request, use this token when making another request in the nextToken field to return the next batch of results.
Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

Errors

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

Examples

**Example request**

This example illustrates one usage of ListAgents.

```
POST /agents/ HTTP/1.1
Content-type: application/json

{
```
Example response

This example illustrates one usage of ListAgents.

HTTP/1.1 200
Content-type: application/json

{payload}

ListAgentVersions
Service: Agents for Amazon Bedrock

Lists the versions of an agent and information about each version.

Request Syntax

POST /agents/{agentId}/agentversions/ HTTP/1.1
Content-type: application/json

{
   "maxResults": number,
   "nextToken": "string"
}

URI Request Parameters

The request uses the following URI parameters.

agentId

The unique identifier of the agent.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request accepts the following data in JSON format.

maxResults

The maximum number of results to return in the response. If the total number of results is greater than this value, use the token returned in the response in the nextToken field when making another request to return the next batch of results.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No
**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, enter the token returned in the `nextToken` field in the response in this field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\S*$`

Required: No

**Response Syntax**

HTTP/1.1 200
Content-type: application/json

```
{
    "agentVersionSummaries": [ 
        {
            "agentName": "string",
            "agentStatus": "string",
            "agentVersion": "string",
            "createdAt": "string",
            "description": "string",
            "updatedAt": "string"
        }
    ],
    "nextToken": "string"
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response. The following data is returned in JSON format by the service.

**agentVersionSummaries**

A list of objects, each of which contains information about a version of the agent.
Type: Array of AgentVersionSummary objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

**nextToken**

If the total number of results is greater than the maxResults value provided in the request, use this token when making another request in the nextToken field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.
HTTP Status Code: 400

Examples

Example request

This example illustrates one usage of ListAgentVersions.

```
POST /agents/agentId/agentversions/ HTTP/1.1
Content-type: application/json

{
   "maxResults": 10
}
```

Example response

This example illustrates one usage of ListAgentVersions.

```
HTTP/1.1 200
Content-type: application/json

{payload}
```

ListDataSources
Service: Agents for Amazon Bedrock

Lists the data sources in a knowledge base and information about each one.

Request Syntax

POST /knowledgebases/knowledgeBaseId/datasources/ HTTP/1.1
Content-type: application/json

{
   "maxResults": number,
   "nextToken": "string"
}

URI Request Parameters

The request uses the following URI parameters.

knowledgeBaseId

The unique identifier of the knowledge base for which to return a list of information.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request accepts the following data in JSON format.

maxResults

The maximum number of results to return in the response. If the total number of results is greater than this value, use the token returned in the response in the nextToken field when making another request to return the next batch of results.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No
**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, enter the token returned in the `nextToken` field in the response in this field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

Required: No

**Response Syntax**

HTTP/1.1 200
Content-type: application/json

```json
{
    "dataSourceSummaries": [
        {
            "dataSourceId": "string",
            "description": "string",
            "knowledgeBaseUrl": "string",
            "name": "string",
            "status": "string",
            "updatedAt": "string"
        }
    ],
    "nextToken": "string"
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**dataSourceSummaries**

A list of objects, each of which contains information about a data source.
Type: Array of [DataSourceSummary](#) objects

### nextToken

If the total number of results is greater than the maxResults value provided in the request, use this token when making another request in the nextToken field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

### Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerError**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.
HTTP Status Code: 400

ListIngestionJobs
Service: Agents for Amazon Bedrock

Lists the ingestion jobs for a data source and information about each of them.

Request Syntax

```
POST /knowledgebases/knowledgeBaseId/datasources/dataSourceId/ingestionjobs/ HTTP/1.1
Content-type: application/json

{
    "filters": [
        {
            "attribute": "string",
            "operator": "string",
            "values": [ "string" ]
        }
    ],
    "maxResults": number,
    "nextToken": "string",
    "sortBy": {
        "attribute": "string",
        "order": "string"
    }
}
```

URI Request Parameters

The request uses the following URI parameters.

**dataSourceId**

The unique identifier of the data source for which to return ingestion jobs.

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**knowledgeBaseId**

The unique identifier of the knowledge base for which to return ingestion jobs.

Pattern: `^[0-9a-zA-Z]{10}$`
Required: Yes

Request Body

The request accepts the following data in JSON format.

**filters**

Contains a definition of a filter for which to filter the results.

Type: Array of `IngestionJobFilter` objects

Array Members: Fixed number of 1 item.

Required: No

**maxResults**

The maximum number of results to return in the response. If the total number of results is greater than this value, use the token returned in the response in the `nextToken` field when making another request to return the next batch of results.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 1000.

Required: No

**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, enter the token returned in the `nextToken` field in the response in this field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\S*$`

Required: No

**sortBy**

Contains details about how to sort the results.
Type: `IngestionJobSortBy` object

Required: No

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
    "ingestionJobSummaries": [
        {
            "dataSourceId": "string",
            "description": "string",
            "ingestionJobId": "string",
            "knowledgeBaseId": "string",
            "startedAt": "string",
            "statistics": {
                "numberOfDocumentsDeleted": number,
                "numberOfDocumentsFailed": number,
                "numberOfDocumentsScanned": number,
                "numberOfMetadataDocumentsModified": number,
                "numberOfMetadataDocumentsScanned": number,
                "numberOfModifiedDocumentsIndexed": number,
                "numberOfNewDocumentsIndexed": number
            },
            "status": "string",
            "updatedAt": "string"
        }
    ],
    "nextToken": "string"
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

`ingestionJobSummaries`

A list of objects, each of which contains information about an ingestion job.
Type: Array of `IngestionJobSummary` objects

**nextToken**

If the total number of results is greater than the `maxResults` value provided in the request, use this token when making another request in the `nextToken` field to return the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\$*$`

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.
HTTP Status Code: 400

ListKnowledgeBases
Service: Agents for Amazon Bedrock

Lists the knowledge bases in an account and information about each of them.

Request Syntax

```
POST /knowledgebases/ HTTP/1.1
Content-type: application/json

{
    "maxResults": number,
    "nextToken": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.

Request Body

The request accepts the following data in JSON format.

- **maxResults**
  
The maximum number of results to return in the response. If the total number of results is greater than this value, use the token returned in the response in the nextToken field when making another request to return the next batch of results.
  
  Type: Integer
  
  Valid Range: Minimum value of 1. Maximum value of 1000.
  
  Required: No

- **nextToken**
  
  If the total number of results is greater than the maxResults value provided in the request, enter the token returned in the nextToken field in the response in this field to return the next batch of results.
  
  Type: String
Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

Required: No

Response Syntax

HTTP/1.1 200
Content-type: application/json

{
   "knowledgeBaseSummaries": [
      {
         "description": "string",
         "knowledgeBaseId": "string",
         "name": "string",
         "status": "string",
         "updatedAt": "string"
      }
   ],
   "nextToken": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

knowledgeBaseSummaries

A list of objects, each of which contains information about a knowledge base.

Type: Array of KnowledgeBaseSummary objects

nextToken

If the total number of results is greater than the maxResults value provided in the request, use this token when making another request in the nextToken field to return the next batch of results.

Type: String
Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^\S*$

Errors

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

ListTagsForResource
Service: Agents for Amazon Bedrock

List all the tags for the resource you specify.

Request Syntax

```
GET /tags/<resourceArn> HTTP/1.1
```

URI Request Parameters

The request uses the following URI parameters.

**resourceArn**

The ARN of the resource for which to list tags.

- Required: Yes

Request Body

The request does not have a request body.

Response Syntax

```
HTTP/1.1 200
Content-type: application/json

{
   "tags" : {
      "string" : "string"
   }
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.
The following data is returned in JSON format by the service.

**tags**

The key-value pairs for the tags associated with the resource.

Type: String to string map

Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: `^[a-zA-Z0-9\s._:/=+@-]*$`

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: `^[a-zA-Z0-9\s._:/=+@-]*$`

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.
HTTP Status Code: 400

Examples

Example request

This example illustrates one usage of ListTagsForResource.

GET /tags/arn:aws:bedrock:us-west-2:123456789012:agent/ABCDEFGHIJ HTTP/1.1

Example response

This example illustrates one usage of ListTagsForResource.

HTTP/1.1 200
Content-type: application/json

{payload}

PrepareAgent
Service: Agents for Amazon Bedrock

Creates a DRAFT version of the agent that can be used for internal testing.

**Request Syntax**

```
POST /agents/agentId/ HTTP/1.1
```

**URI Request Parameters**

The request uses the following URI parameters.

- **agentId**
  
  The unique identifier of the agent for which to create a DRAFT version.
  
  Pattern: `^[0-9a-zA-Z]{10}$`
  
  Required: Yes

**Request Body**

The request does not have a request body.

**Response Syntax**

```
HTTP/1.1 202
Content-type: application/json

{
    "agentId": "string",
    "agentStatus": "string",
    "agentVersion": "string",
    "preparedAt": "string"
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.
**agentId**

The unique identifier of the agent for which the DRAFT version was created.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

**agentStatus**

The status of the DRAFT version and whether it is ready for use.

Type: String

Valid Values: CREATING | PREPARING | PREPARED | NOT_PREPARED | DELETING | FAILED | VERSIONING | UPDATING

**agentVersion**

The version of the agent.

Type: String

Pattern: `^(DRAFT|\[0-9\]{0,4}\[1-9]\[0-9\]{0,4})$`

**preparedAt**

The time at which the DRAFT version of the agent was last prepared.

Type: Timestamp

**Errors**

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.
HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 402

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of PrepareAgent.

```
POST /agents/ABCDEFGHIJ/ HTTP/1.1
```

**Example response**

This example illustrates one usage of PrepareAgent.

```
HTTP/1.1 202
```
Content-type: application/json

{payload}

**StartIngestionJob**

Service: Agents for Amazon Bedrock

Begins an ingestion job, in which a data source is added to a knowledge base.

**Request Syntax**

```
PUT /knowledgebases/knowledgeBaseId/datasources/dataSourceId/ingestionjobs/ HTTP/1.1
Content-type: application/json

{
   "clientToken": "string",
   "description": "string"
}
```

**URI Request Parameters**

The request uses the following URI parameters.

- **dataSourceId**
  
  The unique identifier of the data source to ingest.
  
  Pattern: ^[0-9a-zA-Z]{10}$
  
  Required: Yes

- **knowledgeBaseId**
  
  The unique identifier of the knowledge base to which to add the data source.
  
  Pattern: ^[0-9a-zA-Z]{10}$
  
  Required: Yes

**Request Body**

The request accepts the following data in JSON format.

- **clientToken**
  
  A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see [Ensuring idempotency](#).
Type: String

Length Constraints: Minimum length of 33. Maximum length of 256.

Pattern: ^[a-zA-Z0-9](-*[a-zA-Z0-9])*$

Required: No

description

A description of the ingestion job.

Type: String

Required: No

Response Syntax

HTTP/1.1 202
Content-type: application/json

{
   "ingestionJob": {
      "dataSourceId": "string",
      "description": "string",
      "failureReasons": [ "string" ],
      "ingestionJobId": "string",
      "knowledgeBaseId": "string",
      "startedAt": "string",
      "statistics": {
         "numberOfDocumentsDeleted": number,
         "numberOfDocumentsFailed": number,
         "numberOfDocumentsScanned": number,
         "numberOfMetadataDocumentsModified": number,
         "numberOfMetadataDocumentsScanned": number,
         "numberOfModifiedDocumentsIndexed": number,
         "numberOfNewDocumentsIndexed": number
      },
      "status": "string",
      "updatedAt": "string"
   }
}
Response Elements

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.

**ingestionJob**

An object containing information about the ingestion job.

Type: IngestionJob object

Errors

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.

HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.
HTTP Status Code: 402

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

TagResource
Service: Agents for Amazon Bedrock

Associate tags with a resource. For more information, see Tagging resources in the Amazon Bedrock User Guide.

Request Syntax

POST /tags/resourceArn HTTP/1.1
Content-type: application/json

{    "tags": {        "string" : "string"    }}

URI Request Parameters

The request uses the following URI parameters.

resourceArn

The ARN of the resource to tag.

Required: Yes

Request Body

The request accepts the following data in JSON format.

tag

An object containing key-value pairs that define the tags to attach to the resource.

Type: String to string map
Key Length Constraints: Minimum length of 1. Maximum length of 128.

Key Pattern: ^[a-zA-Z0-9\s._:/=+@-]*$

Value Length Constraints: Minimum length of 0. Maximum length of 256.

Value Pattern: ^[a-zA-Z0-9\s._:/=+@-]*$

Required: Yes

Response Syntax

HTTP/1.1 200

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerErrorException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ServiceQuotaExceededException

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 402
**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of TagResource.

```
POST /tags/arn:aws:bedrock:us-west-2:123456789012:agent/ABCDEFGHIJ HTTP/1.1
Content-type: application/json

{
   "tags": {
      "cost-center" : "Tech"
   }
}
```

**Example response**

This example illustrates one usage of TagResource.

```
HTTP/1.1 200
```

UntagResource

Service: Agents for Amazon Bedrock

Remove tags from a resource.

Request Syntax

DELETE /tags/{resourceArn}?tagKeys={tagKeys} HTTP/1.1

URI Request Parameters

The request uses the following URI parameters.

resourceArn

The ARN of the resource from which to remove tags.

Required: Yes

tagKeys

A list of keys of the tags to remove from the resource.

Array Members: Minimum number of 0 items. Maximum number of 200 items.

Pattern: ^[a-zA-Z0-9\s._:/=+@-]+$

Required: Yes

Request Body

The request does not have a request body.

Response Syntax

HTTP/1.1 200
Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

InternalServerErrorException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

Examples

Example request

This example illustrates one usage of UntagResource.

DELETE /tags/arn:aws:bedrock:us-west-2:123456789012:agent/ABCDEFGHIJ HTTP/1.1
Example response

This example illustrates one usage of UntagResource.

HTTP/1.1 200

**UpdateAgent**

Service: Agents for Amazon Bedrock

Updates the configuration of an agent.

**Request Syntax**

```
PUT /agents/{agentId}/ HTTP/1.1
Content-type: application/json

{
    "agentName": "string",
    "agentResourceRoleArn": "string",
    "customerEncryptionKeyArn": "string",
    "description": "string",
    "foundationModel": "string",
    "idleSessionTTLInSeconds": number,
    "instruction": "string",
    "promptOverrideConfiguration": {
        "overrideLambda": "string",
        "promptConfigurations": [
            {
                "basePromptTemplate": "string",
                "inferenceConfiguration": {
                    "maximumLength": number,
                    "stopSequences": [ "string" ],
                    "temperature": number,
                    "topK": number,
                    "topP": number
                },
                "parserMode": "string",
                "promptCreationMode": "string",
                "promptState": "string",
                "promptType": "string"
            }
        ]
    }
}
```

**URI Request Parameters**

The request uses the following URI parameters.
**agentId**

The unique identifier of the agent.

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**Request Body**

The request accepts the following data in JSON format.

**agentName**

Specifies a new name for the agent.

Type: String

Pattern: `^([0-9a-zA-Z][_-]?){1,100}$`

Required: Yes

**agentResourceRoleArn**

The ARN of the IAM role with permissions to update the agent. The ARN must begin with `AmazonBedrockExecutionRoleForAgents_`.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: `^arn:aws(-[^:]+)?:iam:([0-9]{12})?:role/(service-role/)?AmazonBedrockExecutionRoleForAgents_.+$`

Required: Yes

**customerEncryptionKeyArn**

The ARN of the AWS KMS key with which to encrypt the agent.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.
Pattern: ^arn:aws([-cn-|-us-gov]:kms:[a-zA-Z0-9-]*:[0-9]{12}:key/[a-zA-Z0-9-]{36}$

Required: No

description

Specifies a new description of the agent.

Type: String

Required: No

foundationModel

Specifies a new foundation model to be used for orchestration by the agent.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws([-[^:]+])?:bedrock:[a-zA-Z0-9-]{1,20}:[(][0-9]{12}]:custom-model/[a-zA-Z0-9-]{1,63}[.]{1}[a-zA-Z0-9-]{1,63}([[:][a-zA-Z0-9-]{1,63}]0,2))\?([a-zA-Z0-9-]{1,63}\?[.]{1}[a-zA-Z0-9-]{1,63}(\?[.]{1}[a-zA-Z0-9-]{1,63})(\?[.]{1}[a-zA-Z0-9-]{1,63})\?([0-9a-zA-Z\[_-]+)+$}

Required: Yes

idleSessionTTLInSeconds

The number of seconds for which Amazon Bedrock keeps information about a user's conversation with the agent.

A user interaction remains active for the amount of time specified. If no conversation occurs during this time, the session expires and Amazon Bedrock deletes any data provided before the timeout.

Type: Integer

Valid Range: Minimum value of 60. Maximum value of 3600.
Required: No

**instruction**

Specifies new instructions that tell the agent what it should do and how it should interact with users.

Type: String

Required: No

**promptOverrideConfiguration**

Contains configurations to override prompts in different parts of an agent sequence. For more information, see Advanced prompts.

Type: PromptOverrideConfiguration object

Required: No

**Response Syntax**

HTTP/1.1 202
Content-type: application/json

```
{
  "agent": {
    "agentArn": "string",
    "agentId": "string",
    "agentName": "string",
    "agentResourceRoleArn": "string",
    "agentStatus": "string",
    "agentVersion": "string",
    "clientToken": "string",
    "createdAt": "string",
    "customerEncryptionKeyArn": "string",
    "description": "string",
    "failureReasons": [ "string" ],
    "foundationModel": "string",
    "idleSessionTTLInSeconds": number,
    "instruction": "string",
    "preparedAt": "string",
  }
```
Response Elements

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.

agent

Contains details about the agent that was updated.

Type: Agent object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.
HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.

HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceeded Exception**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 402

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of UpdateAgent.

```
PUT /agents/ABCDEFGHIJ/ HTTP/1.1
Content-type: application/json
```
Example response

This example illustrates one usage of UpdateAgent.

HTTP/1.1 202
Content-type: application/json

{payload}

UpdateAgentActionGroup
Service: Agents for Amazon Bedrock

Updates the configuration for an action group for an agent.

Request Syntax

PUT /agents/{agentId}/agentversions/{agentVersion}/actiongroups/{actionGroupId}/ HTTP/1.1
Content-type: application/json

{
    "actionGroupExecutor": { ... },
    "actionGroupName": "string",
    "actionGroupState": "string",
    "apiSchema": { ... },
    "description": "string",
    "parentActionGroupSignature": "string"
}

URI Request Parameters

The request uses the following URI parameters.

**actionGroupId**

The unique identifier of the action group.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

**agentId**

The unique identifier of the agent for which to update the action group.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

**agentVersion**

The unique identifier of the agent version for which to update the action group.

Length Constraints: Fixed length of 5.
Pattern: ^DRAFT$

Required: Yes

**Request Body**

The request accepts the following data in JSON format.

**actionGroupExecutor**

The ARN of the Lambda function containing the business logic that is carried out upon invoking the action.

Type: `ActionGroupExecutor` object

*Note:* This object is a Union. Only one member of this object can be specified or returned.

Required: No

**actionGroupName**

Specifies a new name for the action group.

Type: String

Pattern: ^([0-9a-zA-Z][_-]?){1,100}$

Required: Yes

**actionGroupState**

Specifies whether the action group is available for the agent to invoke or not when sending an `InvokeAgent` request.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

**apiSchema**

Contains either details about the S3 object containing the OpenAPI schema for the action group or the JSON or YAML-formatted payload defining the schema. For more information, see [Action group OpenAPI schemas](#).
Type: **APISchema** object

**Note:** This object is a Union. Only one member of this object can be specified or returned.

Required: No

**description**

Specifies a new name for the action group.

Type: String

Required: No

**parentActionGroupSignature**

To allow your agent to request the user for additional information when trying to complete a task, set this field to `AMAZON.UserInput`. You must leave the `description`, `apiSchema`, and `actionGroupExecutor` fields blank for this action group.

During orchestration, if your agent determines that it needs to invoke an API in an action group, but doesn't have enough information to complete the API request, it will invoke this action group instead and return an **Observation** reprompting the user for more information.

Type: String

Valid Values: `AMAZON.UserInput`

Required: No

**Response Syntax**

```
HTTP/1.1 200
Content-type: application/json

{
    "agentActionGroup": {
        "actionGroupExecutor": { ... },
        "actionGroupId": "string",
        "actionGroupName": "string",
        "actionGroupState": "string",
    }
}
```
"agentId": "string",
"agentVersion": "string",
"apiSchema": { ... },
"clientToken": "string",
"createdAt": "string",
"description": "string",
"parentActionSignature": "string",
"updatedAt": "string"

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

agentActionGroup

Contains details about the action group that was updated.

Type: AgentActionGroup object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

ConfictException

There was a conflict performing an operation.

HTTP Status Code: 409

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500
**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 402

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

---

**Examples**

**Example request**

This example illustrates one usage of UpdateAgentActionGroup.

```
PUT /agents/ABCDEFGHIJ/agentversions/1/actiongroups/ABCDEFGHIJ/ HTTP/1.1
Content-type: application/json

{
    "actionGroupName": "bedrock-temp-actions",
    "actionGroupState": "ENABLED",
    "description": "Testing = latest IT Management action",
    "apiSchema": {
        "s3": {
            "s3BucketName": "apischema-s3",
            "s3ObjectKey": "it_agent_openapi.json"
        }
    },
    "actionGroupExecutor": {
        "lambda": "arn:aws:lambda:us-west-2:551322703766:function:ItAgentLambda"
    }
}
```

---
Example response

This example illustrates one usage of UpdateAgentActionGroup.

HTTP/1.1 200
Content-type: application/json

{payload}

UpdateAgentAlias
Service: Agents for Amazon Bedrock

Updates configurations for an alias of an agent.

Request Syntax

PUT /agents/{agentId}/agentaliases/{agentAliasId}/ HTTP/1.1
Content-type: application/json

{
    "agentAliasName": "string",
    "description": "string",
    "routingConfiguration": [
        {
            "agentVersion": "string"
        }
    ]
}

URI Request Parameters

The request uses the following URI parameters.

agentAliasId

The unique identifier of the alias.

Length Constraints: Fixed length of 10.

Pattern: ^(\bTSTALIASID\b|[0-9a-zA-Z]+)$

Required: Yes

agentId

The unique identifier of the agent.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes
**Request Body**

The request accepts the following data in JSON format.

**agentAliasName**

Specifies a new name for the alias.

Type: String

Pattern: `^([0-9a-zA-Z][_-]?){1,100}$`

Required: Yes

**description**

Specifies a new description for the alias.

Type: String

Required: No

**routingConfiguration**

Contains details about the routing configuration of the alias.

Type: Array of AgentAliasRoutingConfigurationListItem objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Required: No

**Response Syntax**

- HTTP/1.1 202
  - Content-type: application/json

```json
{
    "agentAlias": {
        "agentAliasArn": "string",
        "agentAliasHistoryEvents": [
            {
                "endDate": "string",
            }
        ]
    }
}
```
"routingConfiguration": [
    {
        "agentVersion": "string"
    },
    "startDate": "string"
],
"agentAliasId": "string",
"agentAliasName": "string",
"agentAliasStatus": "string",
"agentId": "string",
"clientToken": "string",
"createdAt": "string",
"description": "string",
"routingConfiguration": [
    {
        "agentVersion": "string"
    },
    "updatedAt": "string"
]
}

## Response Elements

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.

### agentAlias

Contains details about the alias that was updated.

Type: [AgentAlias](#) object

## Errors

For information about the errors that are common to all actions, see [Common Errors](#).

### AccessDeniedException

The request is denied because of missing access permissions.
HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.

HTTP Status Code: 409

**InternalServerErrorException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 402

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of UpdateAgentAlias.

```
PUT /agents/ABCDEFGHIJ/agentaliases/ABCDEFGHIJ/ HTTP/1.1
Content-type: application/json
```
Example response

This example illustrates one usage of UpdateAgentAlias.

HTTP/1.1 202
Content-type: application/json

{payload}

UpdateAgentKnowledgeBase
Service: Agents for Amazon Bedrock

Updates the configuration for a knowledge base that has been associated with an agent.

Request Syntax

```
PUT /agents/<agentId>/agentversions/<agentVersion>/knowledgebases/<knowledgeBaseId>/ HTTP/1.1
Content-type: application/json

{
    "description": "string",
    "knowledgeBaseState": "string"
}
```

URI Request Parameters

The request uses the following URI parameters.

**agentId**

The unique identifier of the agent associated with the knowledge base that you want to update.

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**agentVersion**

The version of the agent associated with the knowledge base that you want to update.

Length Constraints: Fixed length of 5.

Pattern: `^DRAFT$`

Required: Yes

**knowledgeBaseId**

The unique identifier of the knowledge base that has been associated with an agent.

Pattern: `^[0-9a-zA-Z]{10}$`
Required: Yes

Request Body

The request accepts the following data in JSON format.

description

Specifies a new description for the knowledge base associated with an agent.

Type: String

Required: No

knowledgeBaseState

Specifies whether the agent uses the knowledge base or not when sending an InvokeAgent request.

Type: String

Valid Values: ENABLED | DISABLED

Required: No

Response Syntax

HTTP/1.1 200
Content-type: application/json

{  
  "agentKnowledgeBase": {  
    "agentId": "string",
    "agentVersion": "string",
    "createdAt": "string",
    "description": "string",
    "knowledgeBaseId": "string",
    "knowledgeBaseState": "string",
    "updatedAt": "string"
  }
}
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

agentKnowledgeBase

Contains details about the knowledge base that has been associated with an agent.

Type: AgentKnowledgeBase object

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions.

HTTP Status Code: 403

ConflictException

There was a conflict performing an operation.

HTTP Status Code: 409

InternalServerException

An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ThrottlingException

The number of requests exceeds the limit. Resubmit your request later.
HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

UpdateDataSource
Service: Agents for Amazon Bedrock

Updates configurations for a data source.

⚠️ Important

You can't change the chunkingConfiguration after you create the data source. Specify the existing chunkingConfiguration.

Request Syntax

```json
PUT /knowledgebases/knowledgeBaseId/datasources/dataSourceId HTTP/1.1
Content-type: application/json

{
    "dataSourceConfiguration": {
        "s3Configuration": {
            "bucketArn": "string",
            "inclusionPrefixes": [ "string" ]
        },
        "type": "string"
    },
    "description": "string",
    "name": "string",
    "serverSideEncryptionConfiguration": {
        "kmsKeyArn": "string"
    },
    "vectorIngestionConfiguration": {
        "chunkingConfiguration": {
            "chunkingStrategy": "string",
            "fixedSizeChunkingConfiguration": {
                "maxTokens": number,
                "overlapPercentage": number
            }
        }
    }
}
```
URI Request Parameters

The request uses the following URI parameters.

dataSourceId

The unique identifier of the data source.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

knowledgeBaseId

The unique identifier of the knowledge base to which the data source belongs.

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

Request Body

The request accepts the following data in JSON format.

dataSourceConfiguration

Contains details about the storage configuration of the data source.

Type: DataSourceConfiguration object

Required: Yes

description

Specifies a new description for the data source.

Type: String

Required: No

name

Specifies a new name for the data source.
Type: String

Pattern: ^([0-9a-zA-Z][-_]?)\{1,100}$

Required: Yes

**serverSideEncryptionConfiguration**

Contains details about server-side encryption of the data source.

Type: `ServerSideEncryptionConfiguration` object

Required: No

**vectorIngestionConfiguration**

Contains details about how to ingest the documents in the data source.

Type: `VectorIngestionConfiguration` object

Required: No

**Response Syntax**

HTTP/1.1 200
Content-type: application/json

```
{
  "dataSource": {
    "createdAt": "string",
    "dataSourceConfiguration": {
      "s3Configuration": {
        "bucketArn": "string",
        "inclusionPrefixes": [ "string" ]
      },
      "type": "string"
    },
    "dataSourceId": "string",
    "description": "string",
    "knowledgeBaseId": "string",
    "name": "string",
    "serverSideEncryptionConfiguration": {
      "kmsKeyArn": "string"
    }
  }
}
```
"status": "string",
"updatedAt": "string",
"vectorIngestionConfiguration": {
   "chunkingConfiguration": {
      "chunkingStrategy": "string",
      "fixedSizeChunkingConfiguration": {
         "maxTokens": number,
         "overlapPercentage": number
      }
   }
}
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**dataSource**

Contains details about the data source.

Type: [DataSource](#) object

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.

HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.
HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**UpdateKnowledgeBase**

Service: Agents for Amazon Bedrock

Updates the configuration of a knowledge base with the fields that you specify. Because all fields will be overwritten, you must include the same values for fields that you want to keep the same.

You can change the following fields:

- name
- description
- roleArn

You can't change the knowledgeBaseConfiguration or storageConfiguration fields, so you must specify the same configurations as when you created the knowledge base. You can send a **GetKnowledgeBase** request and copy the same configurations.

**Request Syntax**

```http
PUT /knowledgebases/{knowledgeBaseId} HTTP/1.1
Content-type: application/json

{
   "description": "string",
   "knowledgeBaseConfiguration": {
      "type": "string",
      "vectorKnowledgeBaseConfiguration": {
         "embeddingModelArn": "string"
      }
   },
   "name": "string",
   "roleArn": "string",
   "storageConfiguration": {
      "opensearchServerlessConfiguration": {
         "collectionArn": "string",
         "fieldMapping": {
            "metadataField": "string",
            "textField": "string",
            "vectorField": "string"
         },
         "vectorIndexName": "string"
      }
   }
}
```
"pineconeConfiguration": {
  "connectionString": "string",
  "credentialsSecretArn": "string",
  "fieldMapping": {
    "metadataField": "string",
    "textField": "string"
  },
  "namespace": "string"
},
"rdsConfiguration": {
  "credentialsSecretArn": "string",
  "databaseName": "string",
  "fieldMapping": {
    "metadataField": "string",
    "primaryKeyField": "string",
    "textField": "string",
    "vectorField": "string"
  },
  "resourceArn": "string",
  "tableName": "string"
},
"redisEnterpriseCloudConfiguration": {
  "credentialsSecretArn": "string",
  "endpoint": "string",
  "fieldMapping": {
    "metadataField": "string",
    "textField": "string",
    "vectorField": "string"
  },
  "vectorIndexName": "string"
},
"type": "string"
}

**URI Request Parameters**

The request uses the following URI parameters.

**knowledgeBaseId**

The unique identifier of the knowledge base to update.

Pattern: `^[0-9a-zA-Z]{10}$`
Required: Yes

Request Body

The request accepts the following data in JSON format.

**description**

Specifies a new description for the knowledge base.

Type: String

Required: No

**knowledgeBaseConfiguration**

Specifies the configuration for the embeddings model used for the knowledge base. You must use the same configuration as when the knowledge base was created.

Type: `KnowledgeBaseConfiguration` object

Required: Yes

**name**

Specifies a new name for the knowledge base.

Type: String

Pattern: `^[0-9a-zA-Z][_-]?{1,100}$`

Required: Yes

**roleArn**

Specifies a different Amazon Resource Name (ARN) of the IAM role with permissions to modify the knowledge base.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: `^arn:aws(-[^:]+)?:iam::[0-9]{12}:role/.*$`
storageConfiguration

Specifies the configuration for the vector store used for the knowledge base. You must use the same configuration as when the knowledge base was created.

Type: StorageConfiguration object

Required: Yes

Response Syntax

HTTP/1.1 202
Content-type: application/json

{  
    "knowledgeBase": {  
        "createdAt": "string",
        "description": "string",
        "failureReasons": [ "string" ],
        "knowledgeBaseArn": "string",
        "knowledgeBaseConfiguration": {  
            "type": "string",
            "vectorKnowledgeBaseConfiguration": {  
                "embeddingModelArn": "string"
            }  
        },
        "knowledgeBaseId": "string",
        "name": "string",
        "roleArn": "string",
        "status": "string",
        "storageConfiguration": {  
            "opensearchServerlessConfiguration": {  
                "collectionArn": "string",
                "fieldMapping": {  
                    "metadataField": "string",
                    "textField": "string",
                    "vectorField": "string"
                },
                "vectorIndexName": "string"
            },
            "pineconeConfiguration": {  
                "connectionString": "string",
                ""}  
        }  
    }  
}
"credentialsSecretArn": "string",
"fieldMapping": {
    "metadataField": "string",
    "textField": "string"
},
"namespace": "string"
},
"rdsConfiguration": {
    "credentialsSecretArn": "string",
    "databaseName": "string",
    "fieldMapping": {
        "metadataField": "string",
        "primaryKeyField": "string",
        "textField": "string",
        "vectorField": "string"
    },
    "resourceArn": "string",
    "tableName": "string"
},
"redisEnterpriseCloudConfiguration": {
    "credentialsSecretArn": "string",
    "endpoint": "string",
    "fieldMapping": {
        "metadataField": "string",
        "textField": "string",
        "vectorField": "string"
    },
    "vectorIndexName": "string"
},
"type": "string"
},
"updatedAt": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 202 response.

The following data is returned in JSON format by the service.

**knowledgeBase**

Contains details about the knowledge base.
Type: `KnowledgeBase` object

Errors

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**ConflictException**

There was a conflict performing an operation.

HTTP Status Code: 409

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:
Agents for Amazon Bedrock Runtime

The following actions are supported by Agents for Amazon Bedrock Runtime:

- InvokeAgent
- Retrieve
- RetrieveAndGenerate
InvokeAgent

Service: Agents for Amazon Bedrock Runtime

Sends a prompt for the agent to process and respond to.

**Note**
The AWS CLI doesn't support InvokeAgent.

- To continue the same conversation with an agent, use the same sessionId value in the request.
- To activate trace enablement, turn enableTrace to true. Trace enablement helps you follow the agent's reasoning process that led it to the information it processed, the actions it took, and the final result it yielded. For more information, see [Trace enablement](#).
- End a conversation by setting endSession to true.
- Include attributes for the session or prompt in the sessionState object.

The response is returned in the bytes field of the chunk object.

- The attribution object contains citations for parts of the response.
- If you set enableTrace to true in the request, you can trace the agent's steps and reasoning process that led it to the response.
- Errors are also surfaced in the response.

**Request Syntax**

```
POST /agents/{agentId}/agentAliases/{agentAliasId}/sessions/{sessionId}/text HTTP/1.1
Content-type: application/json

{
   "enableTrace": boolean,
   "endSession": boolean,
   "inputText": "string",
   "sessionState": {
      "promptSessionAttributes": {,
         "string": "string"
      },
      "sessionAttributes": {
```
"string" : "string"
}
}

URI Request Parameters

The request uses the following URI parameters.

agentAliasId

The alias of the agent to use.

Length Constraints: Minimum length of 0. Maximum length of 10.

Pattern: ^[0-9a-zA-Z]+$  

Required: Yes

agentId

The unique identifier of the agent to use.

Length Constraints: Minimum length of 0. Maximum length of 10.

Pattern: ^[0-9a-zA-Z]+$  

Required: Yes

sessionId

The unique identifier of the session. Use the same value across requests to continue the same conversation.

Pattern: ^[0-9a-zA-Z_.:]+$  

Required: Yes

Request Body

The request accepts the following data in JSON format.
**enableTrace**

Specifies whether to turn on the trace or not to track the agent's reasoning process. For more information, see [Trace enablement](#).

Type: Boolean

Required: No

**endSession**

Specifies whether to end the session with the agent or not.

Type: Boolean

Required: No

**inputText**

The prompt text to send the agent.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 25000000.

Required: Yes

**sessionState**

Contains parameters that specify various attributes of the session. For more information, see [Control session context](#).

Type: SessionState object

Required: No

**Response Syntax**

```plaintext
HTTP/1.1 200
x-amzn-bedrock-agent-content-type: contentType
x-amz-bedrock-agent-session-id: sessionId
Content-type: application/json

{
   "accessDeniedException": {
   
   
   }
}
```

"resourceNotFoundException": {
},
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The response returns the following HTTP headers.

**contentType**

The MIME type of the input data in the request. The default value is application/json.

**sessionId**

The unique identifier of the session with the agent.

Pattern: ^[0-9a-zA-Z._:-]+$

The following data is returned in JSON format by the service.

**accessDeniedException**

The request is denied because of missing access permissions. Check your permissions and retry your request.

Type: Exception

HTTP Status Code: 403

**badGatewayException**

There was an issue with a dependency due to a server issue. Retry your request.
chunk

Contains a part of an agent response and citations for it.

Type: PayloadPart object

conflictException

There was a conflict performing an operation. Resolve the conflict and retry your request.

Type: Exception
HTTP Status Code: 409

dependencyFailedException

There was an issue with a dependency. Check the resource configurations and retry the request.

Type: Exception
HTTP Status Code: 424

internalServerException

An internal server error occurred. Retry your request.

Type: Exception
HTTP Status Code: 500

resourceNotFoundException

The specified resource ARN was not found. Check the ARN and try your request again.

Type: Exception
HTTP Status Code: 404

serviceQuotaExceeded Exception

The number of requests exceeds the service quota. Resubmit your request later.

Type: Exception
HTTP Status Code: 400

throttlingException

The number of requests exceeds the limit. Resubmit your request later.
Type: Exception
HTTP Status Code: 429

trace

Contains information about the agent and session, alongside the agent's reasoning process and results from calling API actions and querying knowledge bases and metadata about the trace. You can use the trace to understand how the agent arrived at the response it provided the customer. For more information, see Trace events.

Type: TracePart object

validationException

Input validation failed. Check your request parameters and retry the request.

Type: Exception
HTTP Status Code: 400

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions. Check your permissions and retry your request.

HTTP Status Code: 403

BadGatewayException

There was an issue with a dependency due to a server issue. Retry your request.

HTTP Status Code: 502

ConflictException

There was a conflict performing an operation. Resolve the conflict and retry your request.

HTTP Status Code: 409

DependencyFailedException

There was an issue with a dependency. Check the resource configurations and retry the request.
HTTP Status Code: 424

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 400

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Example request**

This example illustrates one usage of InvokeAgent.

```json
POST https://bedrock-agent-runtime.us-east-1.amazonaws.com/agents/ABCDEFGHIJ/
agentAliases/TSTALIASID/sessions/abb/text
{
  "inputText": "can you show me the policy engine violation under his name from 10/10/2023 to 11/10/2023 ? My alias is adam@",
  "enableTrace": true,
  "endSession": false,
  "sessionState": {  
```

Retrieve
Service: Agents for Amazon Bedrock Runtime

Queries a knowledge base and retrieves information from it.

Request Syntax

```
POST /knowledgebases/knowledgeBaseId/retrieve HTTP/1.1
Content-type: application/json

{
    "nextToken": "string",
    "retrievalConfiguration": {
        "vectorSearchConfiguration": {
            "filter": { ... },
            "numberOfResults": number,
            "overrideSearchType": "string"
        }
    },
    "retrievalQuery": {
        "text": "string"
    }
}
```

URI Request Parameters

The request uses the following URI parameters.

**knowledgeBaseId**

The unique identifier of the knowledge base to query.

Length Constraints: Minimum length of 0. Maximum length of 10.

Pattern: ^[0-9a-zA-Z]+$  

Required: Yes

Request Body

The request accepts the following data in JSON format.
**nextToken**

If there are more results than can fit in the response, the response returns a `nextToken`. Use this token in the `nextToken` field of another request to retrieve the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\S*$`

Required: No

**retrievalConfiguration**

Contains configurations for the knowledge base query and retrieval process. For more information, see [Query configurations](#).

Type: `KnowledgeBaseRetrievalConfiguration` object

Required: No

**retrievalQuery**

Contains the query to send the knowledge base.

Type: `KnowledgeBaseQuery` object

Required: Yes

**Response Syntax**

```
HTTP/1.1 200
Content-type: application/json

{
    "nextToken": "string",
    "retrievalResults": [
        {
            "content": {
                "text": "string"
            },
            "location": {
                "s3Location": {
        ```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**nextToken**

If there are more results than can fit in the response, the response returns a `nextToken`. Use this token in the `nextToken` field of another request to retrieve the next batch of results.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^\S*$`

**retrievalResults**

A list of results from querying the knowledge base.

Type: Array of `KnowledgeBaseRetrievalResult` objects

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions. Check your permissions and retry your request.
HTTP Status Code: 403

BadGatewayException
There was an issue with a dependency due to a server issue. Retry your request.

HTTP Status Code: 502

ConflictException
There was a conflict performing an operation. Resolve the conflict and retry your request.

HTTP Status Code: 409

DependencyFailedException
There was an issue with a dependency. Check the resource configurations and retry the request.

HTTP Status Code: 424

InternalServerException
An internal server error occurred. Retry your request.

HTTP Status Code: 500

ResourceNotFoundException
The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

ServiceQuotaExceededException
The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 400

ThrottlingException
The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

ValidationException
Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400
Examples

Send a basic query

The following example queries a knowledge base.

```
POST /knowledgebases/KB12345678/retrieve HTTP/1.1
Content-type: application/json

{
   "retrievalQuery": {
      "text": "What is AWS?"
   }
}
```

Send a query and include filters

To include filters in a knowledge base query, at least one of the data source files must include a `.metadata.json` file. For example, if you had a data source of articles called `articles.pdf`, accompanied by a metadata file called `articles.metadata.json`, you could tag it for genre, year, and author. In the Retrieve request, you could apply the following filter to return all entertainment articles written after 2018, in addition to cooking or sports articles written by authors starting with C.

```
POST /knowledgebases/KB12345678/retrieve HTTP/1.1
Content-type: application/json

{
   "retrievalQuery": {
      "text": "What is AWS?"
   },
   "vectorSearchConfiguration": {
      "numberOfResults": 5,
      "filter": {
         "orAll": [
            {
               "andAll": [
                  {
                     "equals": {
                        "key": "genre",
                        "value": "entertainment"
                     }
                  }
               ]
            }
         ]
      }
   }
}
```

RetrieveAndGenerate
Service: Agents for Amazon Bedrock Runtime

Queries a knowledge base and generates responses based on the retrieved results. The response only cites sources that are relevant to the query.

Request Syntax

```json
POST /retrieveAndGenerate HTTP/1.1
Content-type: application/json

{
   "input": {
      "text": "string"
   },
   "retrieveAndGenerateConfiguration": {
      "knowledgeBaseConfiguration": {
         "generationConfiguration": {
            "promptTemplate": {
               "textPromptTemplate": "string"
            }
         },
         "knowledgeBaseId": "string",
         "modelArn": "string",
         "retrievalConfiguration": {
            "vectorSearchConfiguration": {
               "filter": { ... },
               "numberOfResults": number,
               "overrideSearchType": "string"
            }
         }
      },
      "type": "string"
   },
   "sessionConfiguration": {
      "kmsKeyArn": "string"
   },
   "sessionId": "string"
}
```

URI Request Parameters

The request does not use any URI parameters.
Request Body

The request accepts the following data in JSON format.

**input**

Contains the query to be made to the knowledge base.

Type: `RetrieveAndGenerateInput` object

Required: Yes

**retrieveAndGenerateConfiguration**

Contains configurations for the knowledge base query and retrieval process. For more information, see [Query configurations](#).

Type: `RetrieveAndGenerateConfiguration` object

Required: No

**sessionConfiguration**

Contains details about the session with the knowledge base.

Type: `RetrieveAndGenerateSessionConfiguration` object

Required: No

**sessionId**

The unique identifier of the session. Reuse the same value to continue the same session with the knowledge base.

Type: String

Pattern: `^[0-9a-zA-Z._:-]+$`

Required: No

Response Syntax

```
HTTP/1.1 200
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
citations

A list of segments of the generated response that are based on sources in the knowledge base, alongside information about the sources.

Type: Array of Citation objects

output

Contains the response generated from querying the knowledge base.

Type: RetrieveAndGenerateOutput object

sessionId

The unique identifier of the session. Reuse the same value to continue the same session with the knowledge base.

Type: String

Pattern: ^[0-9a-zA-Z._:-]+$

Errors

For information about the errors that are common to all actions, see Common Errors.

AccessDeniedException

The request is denied because of missing access permissions. Check your permissions and retry your request.

HTTP Status Code: 403

BadGatewayException

There was an issue with a dependency due to a server issue. Retry your request.

HTTP Status Code: 502

ConflictException

There was a conflict performing an operation. Resolve the conflict and retry your request.
HTTP Status Code: 409

**DependencyFailedException**

There was an issue with a dependency. Check the resource configurations and retry the request.

HTTP Status Code: 424

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 400

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Send a basic query**

The following example uses the minimally required fields to generate a response after querying a knowledge base.

```
POST /retrieveAndGenerate HTTP/1.1
```
Send a query and include filters

To include filters in a knowledge base query, at least one of the data source files must include a .metadata.json file. For example, if you had a data source of articles called articles.pdf, accompanied by a metadata file called articles.metadata.json, you could tag it for genre, year, and author. In the Retrieve request, you could apply the following filter to return all entertainment articles written after 2018, in addition to cooking or sports articles written by authors starting with C.

```
POST /retrieveAndGenerate HTTP/1.1
Content-type: application/json

{
    "input": {
        "text": "What is AWS?"
    },
    "retrieveAndGenerateConfiguration": {
        "knowledgeBaseConfiguration": {
            "knowledgeBaseId": "KB12345678",
            "modelArn": "anthropic.claude-v2:1"
        },
        "type": "KNOWLEDGE_BASE"
    }
}
```

**Amazon Bedrock Runtime**

The following actions are supported by Amazon Bedrock Runtime:

- **InvokeModel**
- **InvokeModelWithResponseStream**
InvokeModel
Service: Amazon Bedrock Runtime

Invokes the specified Amazon Bedrock model to run inference using the input provided in the request body. You use InvokeModel to run inference for text models, image models, and embedding models.

The modelId to provide in the header depends on the type of model that you use.

- If you use a base model, specify the model ID or its ARN.
- If you use a provisioned model, specify the provisionedModelArn that was returned from the creation of the Provisioned Throughput.
- If you use a custom model, first purchase Provisioned Throughput for it (for more information, see Provisioned throughput in the Amazon Bedrock User Guide). Then specify the provisionedModelArn that was returned from the creation of the Provisioned Throughput.

In the request body, specify the prompt and inference parameters to influence the response. To see the format and content of the request body for different models, refer to Inference parameters. For more information, see Run inference in the Bedrock User Guide.

For example code, see Invoke model code examples.

For example requests, see Examples (after the Errors section).

Request Syntax

POST /model/modelId/invoke HTTP/1.1
Accept: accept
Content-Type: contentType

body

URI Request Parameters

The request uses the following URI parameters.

accept

The desired MIME type of the inference body in the response. The default value is application/json.
**contentType**

The MIME type of the input data in the request. The default value is application/json.

**modelId**

Identifier of the model.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:(([0-9]{12}:custom-model/[a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63}/[a-z0-9]{12})|(:foundation-model/[a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63}(.[0-9]{12}:provisioned-model/[a-z0-9-]{12}))|([a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63}(.[0-9a-zA-Z][_\-]?)+)$`

Required: Yes

**Request Body**

The request accepts the following binary data.

**body**

Input data in the format specified in the content-type request header. To see the format and content of this field for different models, refer to [Inference parameters](#).

Length Constraints: Minimum length of 0. Maximum length of 25000000.

Required: Yes

**Response Syntax**

```
HTTP/1.1 200
Content-Type: contentType

body
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.
The response returns the following HTTP headers.

**contentType**

The MIME type of the inference result.

The response returns the following as the HTTP body.

**body**

Inference response from the model in the format specified in the content-type header field. To see the format and content of the request body for different models, refer to Inference parameters.

Length Constraints: Minimum length of 0. Maximum length of 25000000.

**Errors**

For information about the errors that are common to all actions, see Common Errors.

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ModelErrorException**

The request failed due to an error while processing the model.

HTTP Status Code: 424

**ModelNotReadyException**

The model specified in the request is not ready to serve inference requests.

HTTP Status Code: 429
**ModelException**

The request took too long to process. Processing time exceeded the model timeout length.

HTTP Status Code: 408

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 400

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

---

**Examples**

**Run inference on a text model**

Send an invoke request to run inference on a Titan Text G1 - Express model. We set the accept parameter to accept any content type in the response.

```
POST https://bedrock-runtime.us-east-1.amazonaws.com/model/amazon.titan-text-express-v1/invoke

-H accept: */*
-H content-type: application/json

Payload
{
"inputText": "Hello world"
}
```
Example response

Response for the above request.

- H content-type: application/json

Payload
<the model response>

Run inference on an image model

In the following example, the request sets the accept parameter to image/png.

- H accept: image/png
- H content-type: application/json

Payload
{"inputText": "Picture of a bird"}

Example response

Response for the above example.

- H content-type: image/png

Payload
<image bytes>

**InvokeModelWithResponseStream**
Service: Amazon Bedrock Runtime

Invoke the specified Amazon Bedrock model to run inference using the input provided. Return the response in a stream.

To find out if a model supports streaming, call [GetFoundationModel](#) and check the `responseStreamingSupported` field in the response.

The `modelId` to provide in the header depends on the type of model that you use.

- If you use a base model, specify the [model ID](#) or its ARN.
- If you use a provisioned model, specify the `provisionedModelArn` that was returned from the creation of the Provisioned Throughput.
- If you use a custom model, first purchase Provisioned Throughput for it (for more information, see [Provisioned throughput](#) in the Amazon Bedrock User Guide). Then specify the `provisionedModelArn` that was returned from the creation of the Provisioned Throughput.

In the request body, specify the prompt and inference parameters to influence the response. To see the format and content of the request body for different models, refer to [Inference parameters](#). For more information, see [Run inference](#) in the Bedrock User Guide.

For example code, see [Invoke model with streaming code example](#).

For an example request and response, see Examples (after the Errors section).

**Request Syntax**

```plaintext
POST /model/{modelId}/invoke-with-response-stream HTTP/1.1
X-Amzn-Bedrock-Accept: accept
Content-Type: contentType

body
```

**URI Request Parameters**

The request uses the following URI parameters.
**accept**

The desired MIME type of the inference body in the response. The default value is application/json.

**contentType**

The MIME type of the input data in the request. The default value is application/json.

**modelId**

Id of the model to invoke using the streaming request.

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: `^((arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[([0-9]{12}:custom-model/[a-z0-9-]{1,63}[/a-z0-9-]{1,63}/[a-z0-9-]{12})|(:foundation-model/[a-z0-9-]{1,63}[/a-z0-9-]{1,63}/[a-z0-9-]{1,63}([.][a-z0-9-]{1,63}))|([0-9]{12}:provisioned-model/[a-z0-9-]{12})))|([a-z0-9-]{1,63}[/a-z0-9-]{1,63}([.][a-z0-9-]{1,63}))|(([0-9a-zA-Z]_?)+)$`

Required: Yes

**Request Body**

The request accepts the following binary data.

**body**

Inference input in the format specified by the content-type. To see the format and content of the request body for different models, refer to [Inference parameters](..).

Length Constraints: Minimum length of 0. Maximum length of 25000000.

Required: Yes

**Response Syntax**

```
HTTP/1.1 200
X-Amzn-Bedrock-Content-Type: contentType
Content-type: application/json

{
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The response returns the following HTTP headers.

`contentType`

The MIME type of the inference result.

The following data is returned in JSON format by the service.

`chunk`

Content included in the response.

Type: `PayloadPart` object

`internalServerException`

An internal server error occurred. Retry your request.

Type: Exception
HTTP Status Code: 500

`modelStreamErrorException`

An error occurred while streaming the response. Retry your request.

Type: Exception
HTTP Status Code: 424

**modelTimeoutException**

The request took too long to process. Processing time exceeded the model timeout length.

Type: Exception
HTTP Status Code: 408

**throttlingException**

The number or frequency of requests exceeds the limit. Resubmit your request later.

Type: Exception
HTTP Status Code: 429

**validationException**

Input validation failed. Check your request parameters and retry the request.

Type: Exception
HTTP Status Code: 400

Errors

For information about the errors that are common to all actions, see [Common Errors](#).

**AccessDeniedException**

The request is denied because of missing access permissions.

HTTP Status Code: 403

**InternalServerException**

An internal server error occurred. Retry your request.

HTTP Status Code: 500

**ModelErrorException**

The request failed due to an error while processing the model.

HTTP Status Code: 424

**ModelNotReadyException**

The model specified in the request is not ready to serve inference requests.
HTTP Status Code: 429

**ModelStreamErrorException**

An error occurred while streaming the response. Retry your request.

HTTP Status Code: 424

**ModelTimeoutException**

The request took too long to process. Processing time exceeded the model timeout length.

HTTP Status Code: 408

**ResourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

HTTP Status Code: 404

**ServiceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

HTTP Status Code: 400

**ThrottlingException**

The number of requests exceeds the limit. Resubmit your request later.

HTTP Status Code: 429

**ValidationException**

Input validation failed. Check your request parameters and retry the request.

HTTP Status Code: 400

**Examples**

**Run inference with streaming on a text model**

For streaming, you can set `x-amzn-bedrock-accept-type` in the header to contain the desired content type of the response. In this example, we set it to accept any content type. The default value is `application/json`.

-H accept: application/vnd.amazon.eventstream
-H content-type: application/json
-H x-amzn-bedrock-accept: */*

Payload
{"inputText": "Hello world"}

Example response

For streaming, the content type in the response is always set to application/vnd.amazon.eventstream. The response includes an additional header (x-amzn-bedrock-content-type), which contains the actual content type of the response.

-H content-type: application/vnd.amazon.eventstream
-H x-amzn-bedrock-content-type: application/json

Payload (stream events)
<response chunk>

Data Types

The following data types are supported by Amazon Bedrock:

- CloudWatchConfig
- CustomModelSummary
- FoundationModelDetails
- FoundationModelLifecycle
- FoundationModelSummary
- LoggingConfig
- ModelCustomizationJobSummary
- OutputDataConfig
- ProvisionedModelSummary
- S3Config
- Tag
- TrainingDataConfig
- TrainingMetrics
- ValidationDataConfig
- Validator
- ValidatorMetric
- VpcConfig

The following data types are supported by Agents for Amazon Bedrock:

- ActionGroupExecutor
- ActionGroupSummary
- Agent
- AgentActionGroup
- AgentAlias
- AgentAliasHistoryEvent
- AgentAliasRoutingConfigurationListItem
- AgentAliasSummary
The following data types are supported by Agents for Amazon Bedrock Runtime:

- ActionGroupInvocationInput
- ActionGroupInvocationOutput
- Attribution
- Citation
- FailureTrace
- FilterAttribute
- FinalResponse
- GeneratedResponsePart
- GenerationConfiguration
- InferenceConfiguration
- InvocationInput
- KnowledgeBaseLookupInput
- KnowledgeBaseLookupOutput
- KnowledgeBaseQuery
- KnowledgeBaseRetrievalConfiguration
- KnowledgeBaseRetrievalResult
- KnowledgeBaseRetrieveAndGenerateConfiguration
- KnowledgeBaseVectorSearchConfiguration
- ModelInvocationInput
- Observation
- OrchestrationTrace
The following data types are supported by Amazon Bedrock Runtime:

- **PayloadPart**
The following data types are supported by Amazon Bedrock:

- **CloudWatchConfig**
- **CustomModelSummary**
- **FoundationModelDetails**
- **FoundationModelLifecycle**
- **FoundationModelSummary**
- **LoggingConfig**
- **ModelCustomizationJobSummary**
- **OutputDataConfig**
- **ProvisionedModelSummary**
- **S3Config**
- **Tag**
- **TrainingDataConfig**
- **TrainingMetrics**
- **ValidationDataConfig**
- **Validator**
- **ValidatorMetric**
- **VpcConfig**
CloudWatchConfig
Service: Amazon Bedrock

CloudWatch logging configuration.

Contents

logGroupName

The log group name.

Type: String

Required: Yes

roleArn

The role ARN.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]++)?:iam::([0-9]{12})?:role/.*$

Required: Yes

largeDataDeliveryS3Config

S3 configuration for delivering a large amount of data.

Type: S3Config object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- **AWS SDK for Java V2**
- **AWS SDK for Ruby V3**
**CustomModelSummary**

Service: Amazon Bedrock

Summary information for a custom model.

**Contents**

**baseModelArn**

The base model ARN.

Type: String

Pattern: `^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:(([0-9]{12}:custom-model/[a-z0-9-]{1,63}\.\d{1}[a-z0-9-]{1,63}/[a-z0-9]{12})|(:foundation-model/[a-z0-9-]{1,63}\.\d{1}([a-z0-9-]{1,63}\.[a-z0-9-]{1,63}\:[a-z0-9-]{1,63}]*[a-z0-9-]{1,63}(:[a-z0-9-]{1,63}){0,2})){0,2}$`

Required: Yes

**baseModelName**

The base model name.

Type: String

Pattern: `^[a-z0-9-]{1,63}\.[a-z0-9-]{1,63}$`

Required: Yes

**creationTime**

Creation time of the model.

Type: Timestamp

Required: Yes

**modelArn**

The ARN of the custom model.
Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:custom-model/[a-z0-9-]{1,63}\.\[1\]([a-z0-9-]{1,63}\[\.]\{0,2}\[a-z0-9-]\{1,63\}\[\:]\[a-z0-9-]\{1,63\}\{0,2\}/[a-z0-9]{12}$

Required: Yes

**modelName**

The name of the custom model.

Type: String

Pattern: ^([0-9a-zA-Z]\[_-]?)+$

Required: Yes

**customizationType**

Specifies whether to carry out continued pre-training of a model or whether to fine-tune it. For more information, see [Custom models](#).

Type: String

Valid Values: FINE_TUNING | CONTINUED_PRE_TRAINING

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
**FoundationModelDetails**

Service: Amazon Bedrock

Information about a foundation model.

**Contents**

**modelArn**

The model ARN.

Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}::foundation-model/[a-z0-9-]{1,63}\.\{1\}([a-z0-9-]{1,63}\.)\{0,2\}[a-z0-9-]{1,63}\(\[:\][a-z0-9-]{1,63}\)\{1,63\}\{0,2\}$

Required: Yes

**modelId**

The model identifier.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 140.

Pattern: ^[a-z0-9-]{1,63}\.\{1\}[a-z0-9-]{1,63}(\[a-z0-9-]{1,63}\.)\{0,2\}[a-z0-9-]{1,63}(\[:\][a-z0-9-]{1,63}\)\{1,63\}\{0,2\}(\/[a-z0-9]{12})\)\$

Required: Yes

**customizationsSupported**

The customization that the model supports.

Type: Array of strings

Valid Values: FINE_TUNING | CONTINUED_PRE_TRAINING

Required: No

**inferenceTypesSupported**

The inference types that the model supports.
**inputModalities**

The input modalities that the model supports.

Type: Array of strings

Valid Values: TEXT | IMAGE | EMBEDDING

Required: No

**modelName**

The model name.

Type: String

Pattern: ^.*$

Required: No

**outputModalities**

The output modalities that the model supports.

Type: Array of strings

Valid Values: TEXT | IMAGE | EMBEDDING

Required: No
**providerName**

The model's provider name.

Type: String

Pattern: ^.*$

Required: No

**responseStreamingSupported**

Indicates whether the model supports streaming.

Type: Boolean

Required: No

**See Also**

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
FoundationModelLifecycle
Service: Amazon Bedrock

Details about whether a model version is available or deprecated.

Contents

status

Specifies whether a model version is available (ACTIVE) or deprecated (LEGACY).

Type: String

Valid Values: ACTIVE | LEGACY

Required: Yes

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
FoundationModelSummary
Service: Amazon Bedrock

Summary information for a foundation model.

Contents

modelArn

The ARN of the foundation model.

Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:a-zA-Z0-9-]+1,20]:foundation-model/[a-zA-Z0-9-]+1,63][.]1([a-zA-Z0-9-]+1,63)[.]0,2[a-zA-Z0-9-]+1,63)([:][a-zA-Z0-9-]+1,63)\{0,2}\$

Required: Yes

modelId

The model Id of the foundation model.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 140.

Pattern: ^[a-zA-Z0-9-]+1,63][.][1][a-zA-Z0-9-]+1,63([a-zA-Z0-9-]+1,63)[.]0,2[a-zA-Z0-9-]+1,63)([:][a-zA-Z0-9-]+1,63)\{0,2}(/[a-zA-Z0-9]+12|)$

Required: Yes

customizationsSupported

Whether the model supports fine-tuning or continual pre-training.

Type: Array of strings

Valid Values: FINE_TUNING  |  CONTINUED_PRE_TRAINING

Required: No

inferenceTypesSupported

The inference types that the model supports.
Type: Array of strings

Valid Values: ON_DEMAND | PROVISIONED

Required: No

**inputModalities**

The input modalities that the model supports.

Type: Array of strings

Valid Values: TEXT | IMAGE | EMBEDDING

Required: No

**modelLifecycle**

Contains details about whether a model version is available or deprecated.

Type: FoundationModelLifecycle object

Required: No

**modelName**

The name of the model.

Type: String

Pattern: ^.*$

Required: No

**outputModalities**

The output modalities that the model supports.

Type: Array of strings

Valid Values: TEXT | IMAGE | EMBEDDING

Required: No
**providerName**

The model's provider name.

Type: String

Pattern: ^.*$

Required: No

**responseStreamingSupported**

Indicates whether the model supports streaming.

Type: Boolean

Required: No

**See Also**

LoggingConfig

Service: Amazon Bedrock

Configuration fields for invocation logging.

Contents

cloudWatchConfig

CloudWatch logging configuration.

Type: `CloudWatchConfig` object

Required: No

embeddingDataDeliveryEnabled

Set to include embeddings data in the log delivery.

Type: Boolean

Required: No

imageDataDeliveryEnabled

Set to include image data in the log delivery.

Type: Boolean

Required: No

s3Config

S3 configuration for storing log data.

Type: `S3Config` object

Required: No

textDataDeliveryEnabled

Set to include text data in the log delivery.

Type: Boolean

Required: No
See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ModelCustomizationJobSummary

Service: Amazon Bedrock

Information about one customization job

Contents

**baseModelArn**

ARN of the base model.

Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:custom-model/[a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63}/[a-z0-9-]{12})|(:foundation-model/[a-z0-9-]{1,63}[.]1([a-z0-9-]{1,63}[.]0,2)[a-z0-9-]{1,63}([[:a-z0-9-]{1,63}){0,2}])$

Required: Yes

**creationTime**

Creation time of the custom model.

Type: Timestamp

Required: Yes

**jobArn**

ARN of the customization job.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1011.

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:model-customization-job/[a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63}([a-z0-9-]{1,63}){0,2}/[a-z0-9-]{12}$

Required: Yes
**jobName**

Name of the customization job.

Type: String

Pattern: `^[a-zA-Z0-9](-*[a-zA-Z0-9\+\-\.])*$`

Required: Yes

**status**

Status of the customization job.

Type: String

Valid Values: InProgress | Completed | Failed | Stopping | Stopped

Required: Yes

**customizationType**

Specifies whether to carry out continued pre-training of a model or whether to fine-tune it. For more information, see [Custom models](#).

Type: String

Valid Values: FINE_TUNING | CONTINUED_PRE_TRAINING

Required: No

**customModelArn**

ARN of the custom model.

Type: String

Pattern: `^arn:aws(-[^:]*)?:bedrock:[a-zA-Z0-9-]{1,20}:[0-9]{12}:custom-model/ [a-zA-Z0-9-]{1,63}\.\{1\}[a-zA-Z0-9-]{1,63}\([^\]a-zA-Z0-9-]{1,63}\]\{0,2\}[a-zA-Z0-9-] {1,63}\([^:\]\]a-zA-Z0-9-\]\{1,63\}\{0,2\}/[a-zA-Z0-9]{12}\$`

Required: No
**customModelName**

Name of the custom model.

Type: String

Pattern: `^([0-9a-zA-Z][_-]?)+$`

Required: No

**endTime**

Time that the customization job ended.

Type: Timestamp

Required: No

**lastModifiedTime**

Time that the customization job was last modified.

Type: Timestamp

Required: No

**See Also**

OutputDataConfig
Service: Amazon Bedrock

S3 Location of the output data.

Contents

s3Uri

The S3 URI where the output data is stored.

Type: String

Pattern: \^s3://[a-z0-9][\./-a-z0-9]{1,61}[a-z0-9](/.*)?$\n
Required: Yes

ProvisionedModelSummary
Service: Amazon Bedrock

Set of fields associated with a Provisioned Throughput.

Contents

creationTime

The time that this Provisioned Throughput was created.

Type: Timestamp

Required: Yes

desiredModelArn

Desired model ARN.

Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:(([0-9]{12}:custom-model/[a-z0-9-]{1,63}[.]{1}[a-z0-9-]{1,63}/[a-z0-9-]{12})|(:foundation-model/[a-z0-9-]{1,63}[.]{1}([a-z0-9-]{1,63}[.]{0,2}[a-z0-9-]{1,63}[[:] [a-z0-9-]{1,63}}{0,2}){0,2})))$

Required: Yes

desiredModelUnits

Desired model units.

Type: Integer

Valid Range: Minimum value of 1.

Required: Yes

foundationModelArn

Foundation model ARN.
Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}::foundation-model/[a-z0-9-]{1,63}[:12][1][a-z0-9-]{1,63}[][0,2][a-z0-9-]{1,63}([[:]]{0,2}$

Required: Yes

lastModifiedTime

The time that this Provisioned Throughput was last modified.

Type: Timestamp

Required: Yes

modelArn

The ARN of the model associated with this Provisioned Throughput.

Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}(([:12][1][a-z0-9-]{1,63}[:12]::custom-model/[a-z0-9-]{1,63}[:12])|([a-z0-9-]{1,63}::foundation-model/[a-z0-9-]{1,63}[:12][0,2][a-z0-9-]{1,63}([[:]]{0,2}$

Required: Yes

modelUnits

The number of model units allocated.

Type: Integer

Valid Range: Minimum value of 1.

Required: Yes

provisionedModelArn

The ARN of the Provisioned Throughput.
provisionedModelName

The name of the Provisioned Throughput.

Type: String

Pattern: ^([0-9a-zA-Z][_\-]?)+$

Required: Yes

status

Status of the Provisioned Throughput.

Type: String

Valid Values: Creating | InService | Updating | Failed

Required: Yes

commitmentDuration

Commitment duration for the Provisioned Throughput.

Type: String

Valid Values: OneMonth | SixMonths

Required: No

commitmentExpirationTime

Commitment expiration time for the Provisioned Throughput.

Type: Timestamp

Required: No
See Also

- **AWS SDK for C++**
- **AWS SDK for Go**
- **AWS SDK for Java V2**
- **AWS SDK for Ruby V3**
S3Config
Service: Amazon Bedrock

S3 configuration for storing log data.

Contents

bucketName

S3 bucket name.

Type: String

Required: Yes

keyPrefix

S3 prefix.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1024.

Required: No

See Also

Tag
Service: Amazon Bedrock

Definition of the key/value pair for a tag.

Contents

key

Key for the tag.

Type: String

Pattern: ^[a-zA-Z0-9\s._:/=+@-]*$

Required: Yes

value

Value for the tag.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 256.

Pattern: ^[a-zA-Z0-9\s._:/=+@-]*$

Required: Yes

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
TrainingDataConfig
Service: Amazon Bedrock

S3 Location of the training data.

Contents

s3Uri

The S3 URI where the training data is stored.

Type: String

Pattern: ^s3://[a-z0-9][\./-a-z0-9]{1,61}[a-z0-9](/\.*)?$ 

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**TrainingMetrics**  
Service: Amazon Bedrock

Metrics associated with the custom job.

**Contents**

**trainingLoss**

Loss metric associated with the custom job.

Type: Float

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)

ValidationDataConfig
Service: Amazon Bedrock

Array of up to 10 validators.

Contents

validators

  Information about the validators.

  Type: Array of Validator objects

  Array Members: Minimum number of 0 items. Maximum number of 10 items.

  Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
Validator
Service: Amazon Bedrock

Information about a validator.

Contents

s3Uri

The S3 URI where the validation data is stored.

Type: String

Pattern: \^s3://[a-z0-9][\.-a-z0-9]{1,61}[a-z0-9](/\.*)?$\$

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**ValidatorMetric**

Service: Amazon Bedrock

The metric for the validator.

**Contents**

**validationLoss**

The validation loss associated with this validator.

Type: Float

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)

VpcConfig

Service: Amazon Bedrock

VPC configuration.

Contents

securityGroupIds

VPC configuration security group IDs.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 5 items.

Length Constraints: Minimum length of 0. Maximum length of 32.

Pattern: ^[-0-9a-zA-Z]+$

Required: Yes

subnetIds

VPC configuration subnets.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 16 items.

Length Constraints: Minimum length of 0. Maximum length of 32.

Pattern: ^[-0-9a-zA-Z]+$

Required: Yes

See Also

ActionGroupExecutor

Service: Agents for Amazon Bedrock

Contains details about the Lambda function containing the business logic that is carried out upon invoking the action.

Contents

⚠️ Important

This data type is a UNION, so only one of the following members can be specified when used or returned.

Lambda

The ARN of the Lambda function containing the business logic that is carried out upon invoking the action.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:(aws[a-zA-Z-]*)?:lambda:[a-z]{2}(-gov)?-[a-z]+-\d{1}:\d{12}:function:[a-zA-Z0-9-._]+(:($LATEST|[a-zA-Z0-9-._]+))?$/

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**ActionGroupSummary**  
Service: Agents for Amazon Bedrock

Contains details about an action group.

**Contents**

**actionGroupId**

The unique identifier of the action group.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**actionGroupName**

The name of the action group.

Type: String

Pattern: `^\([0-9a-zA-Z][_-]?\){1,100}$`

Required: Yes

**actionGroupState**

Specifies whether the action group is available for the agent to invoke or not when sending an InvokeAgent request.

Type: String

Valid Values: ENABLED | DISABLED

Required: Yes

**updatedAt**

The time at which the action group was last updated.

Type: Timestamp

Required: Yes
**description**

The description of the action group.

Type: String

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
Agent
Service: Agents for Amazon Bedrock

Contains details about an agent.

Contents

agentArn

The ARN of the agent.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:aws:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:agent/[0-9a-zA-Z]{10}$_

Required: Yes

agentId

The unique identifier of the agent.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

agentName

The name of the agent.

Type: String

Pattern: ^([0-9a-zA-Z][_-]?){1,100}$

Required: Yes

agentResourceRoleArn

The ARN of the IAM role with permissions to call API operations on the agent. The ARN must begin with AmazonBedrockExecutionRoleForAgents_.

Type: String
Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]+)?:iam::([0-9]{12})?:role/(service-role/)?AmazonBedrockExecutionRoleForAgents_.+$

Required: Yes

agentStatus

The status of the agent and whether it is ready for use. The following statuses are possible:

- CREATING – The agent is being created.
- PREPARING – The agent is being prepared.
- PREPARED – The agent is prepared and ready to be invoked.
- NOT_PREPARED – The agent has been created but not yet prepared.
- FAILED – The agent API operation failed.
- UPDATING – The agent is being updated.
- DELETING – The agent is being deleted.

Type: String

Valid Values: CREATING | PREPARING | PREPARED | NOT_PREPARED | DELETING | FAILED | VERSIONING | UPDATING

Required: Yes

agentVersion

The version of the agent.

Type: String

Length Constraints: Fixed length of 5.

Pattern: ^DRAFT$

Required: Yes

createdAt

The time at which the agent was created.

Type: Timestamp
idleSessionTTLInSeconds

The number of seconds for which Amazon Bedrock keeps information about a user's conversation with the agent.

A user interaction remains active for the amount of time specified. If no conversation occurs during this time, the session expires and Amazon Bedrock deletes any data provided before the timeout.

Type: Integer

Valid Range: Minimum value of 60. Maximum value of 3600.

Required: Yes

updatedAt

The time at which the agent was last updated.

Type: Timestamp

Required: Yes

clientToken

A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see Ensuring idempotency.

Type: String

Length Constraints: Minimum length of 33. Maximum length of 256.

Pattern: ^[a-zA-Z0-9](-*[a-zA-Z0-9])*$

Required: No

customerEncryptionKeyArn

The ARN of the AWS KMS key that encrypts the agent.

Type: String
Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(|-cn|-us-gov):kms:[a-zA-Z0-9-]*:[0-9]{12}:key/[a-zA-Z0-9-]{36}$

Required: No

description

The description of the agent.

Type: String

Required: No

failureReasons

Contains reasons that the agent-related API that you invoked failed.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 2048 items.

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

foundationModel

The foundation model used for orchestration by the agent.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:(([0-9]{12}:custom\-model/[a-z0-9-]{1,63}[.]1\{1\}[a-z0-9-]{1,63}([[:]][a-z0-9-]{1,63}){0,2})?/[a-z0-9-]{12}))/(:foundation-model/([a-z0-9-]{1,63}[.]1\{1\}[a-z0-9-]{1,63}([[:]][a-z0-9-]{1,63}){0,2})?([[:]][a-z0-9-]{1,63}[.]1\{1\}[a-z0-9-]{1,63}([[:]][a-z0-9-]{1,63}){0,2})?)([[:]][a-z0-9-]{1,63}[.]1\{1\}[a-z0-9-]{1,63}([[:]][a-z0-9-]{1,63}){0,2}))?|(((0-9a-zA-Z\[_-\]+)+)$(

Required: No
**instruction**

Instructions that tell the agent what it should do and how it should interact with users.

Type: String

Required: No

**preparedAt**

The time at which the agent was last prepared.

Type: Timestamp

Required: No

**promptOverrideConfiguration**

Contains configurations to override prompt templates in different parts of an agent sequence. For more information, see [Advanced prompts](#).

Type: `PromptOverrideConfiguration` object

Required: No

**recommendedActions**

Contains recommended actions to take for the agent-related API that you invoked to succeed.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 2048 items.

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
AgentActionGroup
Service: Agents for Amazon Bedrock

Contains details about an action group.

Contents

actionGroupId

The unique identifier of the action group.

Type: String

Pattern: \^[0-9a-zA-Z]{10}\$

Required: Yes

actionGroupName

The name of the action group.

Type: String

Pattern: ^([0-9a-zA-Z][_-]?){1,100}$

Required: Yes

actionGroupState

Specifies whether the action group is available for the agent to invoke or not when sending an InvokeAgent request.

Type: String

Valid Values: ENABLED | DISABLED

Required: Yes

agentId

The unique identifier of the agent to which the action group belongs.

Type: String

Pattern: \^[0-9a-zA-Z]{10}\$

Required: Yes

agentVersion

The version of the agent to which the action group belongs.

Type: String

Pattern: ^(DRAFT | \[0-9]\{0,4\}\[1-9]\[0-9]\{0,4\})$

Required: Yes

createdAt

The time at which the action group was created.

Type: Timestamp

Required: Yes

updatedAt

The time at which the action group was last updated.

Type: Timestamp

Required: Yes

actionGroupExecutor

The ARN of the Lambda function containing the business logic that is carried out upon invoking the action.

Type: ActionGroupExecutor object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

apiSchema

Contains either details about the S3 object containing the OpenAPI schema for the action group or the JSON or YAML-formatted payload defining the schema. For more information, see Action group OpenAPI schemas.
Type: **APISchema** object

**Note:** This object is a Union. Only one member of this object can be specified or returned.

**clientToken**

A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see [Ensuring idempotency](#).

Type: String

Length Constraints: Minimum length of 33. Maximum length of 256.

Pattern: `^[a-zA-Z0-9-]*[a-zA-Z0-9-]*$`

Required: No

**description**

The description of the action group.

Type: String

Required: No

**parentActionSignature**

If this field is set as `AMAZON.UserInput`, the agent can request the user for additional information when trying to complete a task. The description, apiSchema, and actionGroupExecutor fields must be blank for this action group.

During orchestration, if the agent determines that it needs to invoke an API in an action group, but doesn't have enough information to complete the API request, it will invoke this action group instead and return an **Observation** reprompting the user for more information.

Type: String

Valid Values: `AMAZON.UserInput`

Required: No

AgentAlias
Service: Agents for Amazon Bedrock
Contains details about an alias of an agent.

Contents

agentAliasArn
The ARN of the alias of the agent.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 2048.
Pattern: ^arn:aws:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:agent-alias/[0-9a-zA-Z]{10}/[0-9a-zA-Z]{10}$
Required: Yes

agentAliasId
The unique identifier of the alias of the agent.
Type: String
Length Constraints: Fixed length of 10.
Pattern: ^(\bTSTALIASID\b|\b[0-9a-zA-Z]+)$
Required: Yes

agentAliasName
The name of the alias of the agent.
Type: String
Pattern: ^([0-9a-zA-Z][_-]?){1,100}$
Required: Yes

agentAliasStatus
The status of the alias of the agent and whether it is ready for use. The following statuses are possible:
- CREATING – The agent alias is being created.
- PREPARED – The agent alias is finished being created or updated and is ready to be invoked.
- FAILED – The agent alias API operation failed.
- UPDATING – The agent alias is being updated.
- DELETING – The agent alias is being deleted.

Type: String

Valid Values: CREATING | PREPARED | FAILED | UPDATING | DELETING

Required: Yes

agentId

The unique identifier of the agent.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

createdAt

The time at which the alias of the agent was created.

Type: Timestamp

Required: Yes

routingConfiguration

Contains details about the routing configuration of the alias.

Type: Array of AgentAliasRoutingConfigurationListItem objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Required: Yes

updatedAt

The time at which the alias was last updated.

Type: Timestamp
Required: Yes

`agentAliasHistoryEvents`

Contains details about the history of the alias.

Type: Array of `AgentAliasHistoryEvent` objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Required: No

`clientToken`

A unique, case-sensitive identifier to ensure that the API request completes no more than one time. If this token matches a previous request, Amazon Bedrock ignores the request, but does not return an error. For more information, see [Ensuring idempotency](#).

Type: String

Length Constraints: Minimum length of 33. Maximum length of 256.

Pattern: `^[a-zA-Z0-9](-*[a-zA-Z0-9])*$`

Required: No

`description`

The description of the alias of the agent.

Type: String

Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
• AWS SDK for Ruby V3
AgentAliasHistoryEvent

Service: Agents for Amazon Bedrock

Contains details about the history of the alias.

Contents

**endDate**

The date that the alias stopped being associated to the version in the routingConfiguration object

Type: Timestamp

Required: No

**routingConfiguration**

Contains details about the version of the agent with which the alias is associated.

Type: Array of AgentAliasRoutingConfigurationListItem objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Required: No

**startDate**

The date that the alias began being associated to the version in the routingConfiguration object.

Type: Timestamp

Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
• **AWS SDK for Ruby V3**
AgentAliasRoutingConfigurationListItem
Service: Agents for Amazon Bedrock

Contains details about the routing configuration of the alias.

Contents

agentVersion

The version of the agent with which the alias is associated.

Type: String

Pattern: ^(DRAFT | [0-9]{0,4}[1-9][0-9]{0,4})$

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

AgentAliasSummary
Service: Agents for Amazon Bedrock

Contains details about an alias of an agent.

Contents

agentAliasId

Contains details about

Type: String

Length Constraints: Fixed length of 10.

Pattern: ^(\bTSTALIASID\b|\[0-9a-zA-Z\]+)$

Required: Yes

agentAliasName

The name of the alias.

Type: String

Pattern: ^([0-9a-zA-Z][_-]?)\{1,100}$

Required: Yes

agentAliasStatus

The status of the alias.

Type: String

Valid Values: CREATING | PREPARED | FAILED | UPDATING | DELETING

Required: Yes

createdAt

The time at which the alias of the agent was created.

Type: Timestamp

Required: Yes
updatedAt

The time at which the alias was last updated.

Type: Timestamp

Required: Yes

description

The description of the alias.

Type: String

Required: No

routingConfiguration

Contains details about the version of the agent with which the alias is associated.

Type: Array of AgentAliasRoutingConfigurationListItem objects

Array Members: Minimum number of 0 items. Maximum number of 1 item.

Required: No

- AWS SDK for Ruby V3
AgentKnowledgeBase
Service: Agents for Amazon Bedrock

Contains details about a knowledge base that is associated with an agent.

Contents

agentId

The unique identifier of the agent with which the knowledge base is associated.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

agentVersion

The version of the agent with which the knowledge base is associated.

Type: String

Pattern: ^(DRAFT|\d{0,4}[^0-9]{0,4})$

Required: Yes

createdAt

The time at which the association between the agent and the knowledge base was created.

Type: Timestamp

Required: Yes

description

The description of the association between the agent and the knowledge base.

Type: String

Required: Yes
**knowledgeBaseId**

The unique identifier of the association between the agent and the knowledge base.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**knowledgeBaseState**

Specifies whether to use the knowledge base or not when sending an `InvokeAgent` request.

Type: String

Valid Values: ENABLED | DISABLED

Required: Yes

**updatedAt**

The time at which the association between the agent and the knowledge base was last updated.

Type: Timestamp

Required: Yes

**See Also**

AgentKnowledgeBaseSummary
Service: Agents for Amazon Bedrock

Contains details about a knowledge base associated with an agent.

Contents

knowledgeBaseId

The unique identifier of the knowledge base associated with an agent.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

knowledgeBaseState

Specifies whether the agent uses the knowledge base or not when sending an InvokeAgent request.

Type: String

Valid Values: ENABLED  |  DISABLED

Required: Yes

updatedAt

The time at which the knowledge base associated with an agent was last updated.

Type: Timestamp

Required: Yes

description

The description of the knowledge base associated with an agent.

Type: String

Required: No
See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
AgentSummary
Service: Agents for Amazon Bedrock

Contains details about an agent.

Contents

agentId

The unique identifier of the agent.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

agentName

The name of the agent.

Type: String

Pattern: ^([0-9a-zA-Z][_-]?){1,100}$

Required: Yes

agentStatus

The status of the agent.

Type: String

Valid Values: CREATING | PREPARING | PREPARED | NOT_PREPARED | DELETING | FAILED | VERSIONING | UPDATING

Required: Yes

updatedAt

The time at which the agent was last updated.

Type: Timestamp

Required: Yes
**description**

The description of the agent.

Type: String

Required: No

**latestAgentVersion**

The latest version of the agent.

Type: String

Pattern: ^(DRAFT | \[0-9\]\{0,4\} \[1-9\]\{0,4\}$

Required: No

**See Also**

AgentVersion
Service: Agents for Amazon Bedrock

Contains details about a version of an agent.

Contents

agentArn
The ARN of the agent that the version belongs to.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 2048.
Pattern: ^arn:aws:bedrock:[a-z0-9-]{1,20}:[0-9]{12}:agent/[0-9a-zA-Z]{10}$
Required: Yes

agentId
The unique identifier of the agent that the version belongs to.
Type: String
Pattern: ^[0-9a-zA-Z]{10}$
Required: Yes

agentName
The name of the agent that the version belongs to.
Type: String
Pattern: ^([0-9a-zA-Z][_\-]?){1,100}$
Required: Yes

agentResourceRoleArn
The ARN of the IAM role with permissions to invoke API operations on the agent. The ARN must begin with AmazonBedrockExecutionRoleForAgents_.
Type: String
Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]+)?:iam::([0-9]{12})?:role/(service-role/)?AmazonBedrockExecutionRoleForAgents_.+$

Required: Yes

**agentStatus**

The status of the agent that the version belongs to.

Type: String

Valid Values: CREATING | PREPARING | PREPARED | NOT_PREPARED | DELETING | FAILED | VERSIONING | UPDATING

Required: Yes

**createdAt**

The time at which the version was created.

Type: Timestamp

Required: Yes

**idleSessionTTLInSeconds**

The number of seconds for which Amazon Bedrock keeps information about a user's conversation with the agent.

A user interaction remains active for the amount of time specified. If no conversation occurs during this time, the session expires and Amazon Bedrock deletes any data provided before the timeout.

Type: Integer

Valid Range: Minimum value of 60. Maximum value of 3600.

Required: Yes

**updatedAt**

The time at which the version was last updated.

Type: Timestamp
Required: Yes

version

The version number.

Type: String

Pattern: ^[0-9]{1,5}$

Required: Yes

customerEncryptionKeyArn

The ARN of the AWS KMS key that encrypts the agent.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws( |-cn|-us-gov):kms:[a-zA-Z0-9-]*:[0-9]{12}:key/[a-zA-Z0-9-]{36}$

Required: No

description

The description of the version.

Type: String

Required: No

failureReasons

A list of reasons that the API operation on the version failed.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 2048 items.

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No
foundationModel

The foundation model that the version invokes.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(-[^:])?:bedrock:[a-z0-9-]{1,20}:(([0-9]{12}:[custom-model/[a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63}((:[a-z0-9-]{1,63}){0,2})/ |[a-z0-9-]{12}]):foundation-model/([a-z0-9-]{1,63}[.]1[a-z0-9-]{1,63}([.:][a-z0-9-]{1,63}){0,2}))|(([a-z0-9-]{1,63} [.]1[a-z0-9-]{1,63}([.:][a-z0-9-]{1,63}){0,2}))/ |(([0-9a-zA-Z][_\-]?)+)/\+\$}

Required: No

instruction

The instructions provided to the agent.

Type: String

Required: No

promptOverrideConfiguration

Contains configurations to override prompt templates in different parts of an agent sequence. For more information, see Advanced prompts.

Type: PromptOverrideConfiguration object

Required: No

recommendedActions

A list of recommended actions to take for the failed API operation on the version to succeed.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 2048 items.

Length Constraints: Minimum length of 0. Maximum length of 2048.
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
AgentVersionSummary
Service: Agents for Amazon Bedrock

Contains details about a version of an agent.

Contents

agentName

The name of the agent to which the version belongs.

Type: String

Pattern: ^([0-9a-zA-Z][_-]?){1,100}$

Required: Yes

agentStatus

The status of the agent to which the version belongs.

Type: String

Valid Values: CREATING | PREPARING | PREPARED | NOT_PREPARED | DELETING | FAILED | VERSIONING | UPDATING

Required: Yes

agentVersion

The version of the agent.

Type: String

Pattern: ^(DRAFT|\[0-9]{0,4}\[1-9]\[0-9]{0,4})$

Required: Yes

createdAt

The time at which the version was created.

Type: Timestamp
Required: Yes

**updatedAt**

The time at which the version was last updated.

Type: Timestamp

Required: Yes

**description**

The description of the version of the agent.

Type: String

Required: No

**See Also**

APISchema
Service: Agents for Amazon Bedrock

Contains details about the OpenAPI schema for the action group. For more information, see Action group OpenAPI schemas. You can either include the schema directly in the payload field or you can upload it to an S3 bucket and specify the S3 bucket location in the s3 field.

Contents

⚠️ Important
This data type is a UNION, so only one of the following members can be specified when used or returned.

payload

The JSON or YAML-formatted payload defining the OpenAPI schema for the action group. For more information, see Action group OpenAPI schemas.

Type: String
Required: No

s3

Contains details about the S3 object containing the OpenAPI schema for the action group. For more information, see Action group OpenAPI schemas.

Type: S3Identifier object
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
• AWS SDK for Ruby V3
**ChunkingConfiguration**

Service: Agents for Amazon Bedrock

Details about how to chunk the documents in the data source. A *chunk* refers to an excerpt from a data source that is returned when the knowledge base that it belongs to is queried.

### Contents

**chunkingStrategy**

Knowledge base can split your source data into chunks. A *chunk* refers to an excerpt from a data source that is returned when the knowledge base that it belongs to is queried. You have the following options for chunking your data. If you opt for NONE, then you may want to pre-process your files by splitting them up such that each file corresponds to a chunk.

- **FIXED_SIZE** – Amazon Bedrock splits your source data into chunks of the approximate size that you set in the `fixedSizeChunkingConfiguration`.
- **NONE** – Amazon Bedrock treats each file as one chunk. If you choose this option, you may want to pre-process your documents by splitting them into separate files.

Type: String

Valid Values: FIXED_SIZE | NONE

Required: Yes

**fixedSizeChunkingConfiguration**

Configurations for when you choose fixed-size chunking. If you set the `chunkingStrategy` as NONE, exclude this field.

Type: `FixedSizeChunkingConfiguration` object

Required: No

### See Also

**DataSource**

Service: Agents for Amazon Bedrock

Contains details about a data source.

**Contents**

`createdAt`

The time at which the data source was created.

Type: Timestamp

Required: Yes

`dataSourceConfiguration`

Contains details about how the data source is stored.

Type: [DataSourceConfiguration](#) object

Required: Yes

`dataSourceId`

The unique identifier of the data source.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

`knowledgeBaseId`

The unique identifier of the knowledge base to which the data source belongs.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

`name`

The name of the data source.
Type: String

Pattern: ^([0-9a-zA-Z][_\-]?){1,100}$

Required: Yes

status

The status of the data source. The following statuses are possible:

- Available – The data source has been created and is ready for ingestion into the knowledge base.
- Deleting – The data source is being deleted.

Type: String

Valid Values: AVAILABLE | DELETING

Required: Yes

updatedAt

The time at which the data source was last updated.

Type: Timestamp

Required: Yes

description

The description of the data source.

Type: String

Required: No

serverSideEncryptionConfiguration

Contains details about the configuration of the server-side encryption.

Type: ServerSideEncryptionConfiguration object

Required: No
vectorIngestionConfiguration

Contains details about how to ingest the documents in the data source.

Type: VectorIngestionConfiguration object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
DataSourceConfiguration
Service: Agents for Amazon Bedrock

Contains details about how a data source is stored.

Contents

type

The type of storage for the data source.

Type: String

Valid Values: S3

Required: Yes

s3Configuration

Contains details about the configuration of the S3 object containing the data source.

Type: S3DataSourceConfiguration object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**DataSourceSummary**
Service: Agents for Amazon Bedrock

Contains details about a data source.

**Contents**

**dataSourceId**

The unique identifier of the data source.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**knowledgeBaseId**

The unique identifier of the knowledge base to which the data source belongs.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**name**

The name of the data source.

Type: String

Pattern: `^([0-9a-zA-Z][_-]?)\{1,100}$`

Required: Yes

**status**

The status of the data source.

Type: String

Valid Values: AVAILABLE | DELETING

Required: Yes
updatedAt

The time at which the data source was last updated.

Type: Timestamp

Required: Yes

description

The description of the data source.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
FixedSizeChunkingConfiguration
Service: Agents for Amazon Bedrock

Configurations for when you choose fixed-size chunking. If you set the chunkingStrategy as NONE, exclude this field.

Contents

maxTokens

The maximum number of tokens to include in a chunk.

Type: Integer

Valid Range: Minimum value of 1.

Required: Yes

overlapPercentage

The percentage of overlap between adjacent chunks of a data source.

Type: Integer

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
InferenceConfiguration

Service: Agents for Amazon Bedrock

Contains inference parameters to use when the agent invokes a foundation model in the part of
the agent sequence defined by the promptType. For more information, see Inference parameters
for foundation models.

Contents

maximumLength

The maximum number of tokens to allow in the generated response.

Type: Integer

Valid Range: Minimum value of 0. Maximum value of 4096.

Required: No

stopSequences

A list of stop sequences. A stop sequence is a sequence of characters that causes the model to
stop generating the response.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 4 items.

Required: No

temperature

The likelihood of the model selecting higher-probability options while generating a response. A
lower value makes the model more likely to choose higher-probability options, while a higher
value makes the model more likely to choose lower-probability options.

Type: Float

Valid Range: Minimum value of 0. Maximum value of 1.

Required: No

topK

While generating a response, the model determines the probability of the following token
at each point of generation. The value that you set for topK is the number of most-likely
candidates from which the model chooses the next token in the sequence. For example, if you set topK to 50, the model selects the next token from among the top 50 most likely choices.

**Type:** Integer

**Valid Range:** Minimum value of 0. Maximum value of 500.

**Required:** No

**topP**

While generating a response, the model determines the probability of the following token at each point of generation. The value that you set for Top P determines the number of most-likely candidates from which the model chooses the next token in the sequence. For example, if you set topP to 80, the model only selects the next token from the top 80% of the probability distribution of next tokens.

**Type:** Float

**Valid Range:** Minimum value of 0. Maximum value of 1.

**Required:** No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**IngestionJob**

Service: Agents for Amazon Bedrock

Contains details about an ingestion job, which converts a data source to embeddings for a vector store in knowledge base.

This data type is used in the following API operations:

- [StartIngestionJob response](#)
- [GetIngestionJob response](#)
- [ListIngestionJob response](#)

**Contents**

**dataSourceId**

The unique identifier of the ingested data source.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**ingestionJobId**

The unique identifier of the ingestion job.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**knowledgeBaseId**

The unique identifier of the knowledge base to which the data source is being added.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes
**startedAt**

The time at which the ingestion job started.

Type: Timestamp

Required: Yes

**status**

The status of the ingestion job.

Type: String

Valid Values: STARTING | IN_PROGRESS | COMPLETE | FAILED

Required: Yes

**updatedAt**

The time at which the ingestion job was last updated.

Type: Timestamp

Required: Yes

**description**

The description of the ingestion job.

Type: String

Required: No

**failureReasons**

A list of reasons that the ingestion job failed.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 2048 items.

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No
statistics

Contains statistics about the ingestion job.

Type: IngestionJobStatistics object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**IngestionJobFilter**

Service: Agents for Amazon Bedrock

Defines a filter by which to filter the results.

**Contents**

**attribute**

The attribute by which to filter the results.

Type: String

Valid Values: STATUS

Required: Yes

**operator**

The operation to carry out between the attribute and the values.

Type: String

Valid Values: EQ

Required: Yes

**values**

A list of values for the attribute.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Length Constraints: Minimum length of 0. Maximum length of 100.

Pattern: ^.*$

Required: Yes

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:
• AWS SDK for C++
• AWS SDK for Go
• AWS SDK for Java V2
• AWS SDK for Ruby V3
**IngestionJobSortBy**

**Service:** Agents for Amazon Bedrock

Parameters by which to sort the results.

**Contents**

**attribute**

The attribute by which to sort the results.

Type: String

Valid Values: STATUS | STARTED_AT

Required: Yes

**order**

The order by which to sort the results.

Type: String

Valid Values: ASCENDING | DESCENDING

Required: Yes

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
**IngestionJobStatistics**

Service: Agents for Amazon Bedrock

Contains the statistics for the ingestion job.

**Contents**

**numberOfDocumentsDeleted**

The number of source documents that was deleted.

Type: Long

Required: No

**numberOfDocumentsFailed**

The number of source documents that failed to be ingested.

Type: Long

Required: No

**numberOfDocumentsScanned**

The total number of source documents that were scanned. Includes new, updated, and unchanged documents.

Type: Long

Required: No

**numberOfMetadataDocumentsModified**

The number of metadata files that were updated or deleted.

Type: Long

Required: No

**numberOfMetadataDocumentsScanned**

The total number of metadata files that were scanned. Includes new, updated, and unchanged files.

Type: Long
**numberOfModifiedDocumentsIndexed**

The number of modified source documents in the data source that were successfully indexed.

Type: Long

Required: No

**numberOfNewDocumentsIndexed**

The number of new source documents in the data source that were successfully indexed.

Type: Long

Required: No

**See Also**

---

**Agents for Amazon Bedrock**
IngestionJobSummary
Service: Agents for Amazon Bedrock

Contains details about an ingestion job.

Contents

dataSourceId

The unique identifier of the data source in the ingestion job.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

ingestionJobId

The unique identifier of the ingestion job.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

knowledgeBaseId

The unique identifier of the knowledge base to which the data source is added.

Type: String

Pattern: ^[0-9a-zA-Z]{10}$

Required: Yes

startedAt

The time at which the ingestion job was started.

Type: Timestamp

Required: Yes
status

The status of the ingestion job.

Type: String

Valid Values: STARTING | IN_PROGRESS | COMPLETE | FAILED

Required: Yes

updatedAt

The time at which the ingestion job was last updated.

Type: Timestamp

Required: Yes

description

The description of the ingestion job.

Type: String

Required: No

statistics

Contains statistics for the ingestion job.

Type: IngestionJobStatistics object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
• **AWS SDK for Ruby V3**
**KnowledgeBase**
Service: Agents for Amazon Bedrock

Contains information about a knowledge base.

**Contents**

`createdAt`

The time at which the knowledge base was created.

Type: `Timestamp`

Required: Yes

`knowledgeBaseArn`

The ARN of the knowledge base.

Type: `String`

Length Constraints: Minimum length of 0. Maximum length of 128.

Pattern: `^arn:aws([-cn|-us-gov]):bedrock:[a-zA-Z0-9-]*:[0-9]{12}:knowledge-base/\[0-9a-zA-Z]+\$`

Required: Yes

`knowledgeBaseConfiguration`

Contains details about the embeddings configuration of the knowledge base.

Type: `KnowledgeBaseConfiguration` object

Required: Yes

`knowledgeBaseId`

The unique identifier of the knowledge base.

Type: `String`

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes
name

The name of the knowledge base.

Type: String

Pattern: ^([0-9a-zA-Z][_-]?){1,100}$

Required: Yes

roleArn

The ARN of the IAM role with permissions to invoke API operations on the knowledge base. The ARN must begin with AmazonBedrockExecutionRoleForKnowledgeBase_.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:aws(-[^:]+)?:iam::([0-9]{12})?:role/.+$

Required: Yes

status

The status of the knowledge base. The following statuses are possible:

- CREATING – The knowledge base is being created.
- ACTIVE – The knowledge base is ready to be queried.
- DELETING – The knowledge base is being deleted.
- UPDATING – The knowledge base is being updated.
- FAILED – The knowledge base API operation failed.

Type: String

Valid Values: CREATING | ACTIVE | DELETING | UPDATING | FAILED

Required: Yes

storageConfiguration

Contains details about the storage configuration of the knowledge base.

Type: StorageConfiguration object
**updatedAt**

The time at which the knowledge base was last updated.

Type: Timestamp

Required: Yes

**description**

The description of the knowledge base.

Type: String

Required: No

**failureReasons**

A list of reasons that the API operation on the knowledge base failed.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 2048 items.

Length Constraints: Minimum length of 0. Maximum length of 2048.

Required: No

**See Also**

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
KnowledgeBaseConfiguration
Service: Agents for Amazon Bedrock

Contains details about the embeddings configuration of the knowledge base.

Contents

type

The type of data that the data source is converted into for the knowledge base.

Type: String

Valid Values: VECTOR

Required: Yes

vectorKnowledgeBaseConfiguration

Contains details about the embeddings model that's used to convert the data source.

Type: VectorKnowledgeBaseConfiguration object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**KnowledgeBaseSummary**

Service: Agents for Amazon Bedrock

Contains details about a knowledge base.

**Contents**

**knowledgeBaseUrl**

The unique identifier of the knowledge base.

Type: String

Pattern: `^[0-9a-zA-Z]{10}$`

Required: Yes

**name**

The name of the knowledge base.

Type: String

Pattern: `^[0-9a-zA-Z][_-]?{1,100}$`

Required: Yes

**status**

The status of the knowledge base.

Type: String

Valid Values: CREATING | ACTIVE | DELETING | UPDATING | FAILED

Required: Yes

**updatedAt**

The time at which the knowledge base was last updated.

Type: Timestamp

Required: Yes
**description**

The description of the knowledge base.

Type: String

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
**OpenSearchServerlessConfiguration**

Service: Agents for Amazon Bedrock

Contains details about the storage configuration of the knowledge base in Amazon OpenSearch Service. For more information, see [Create a vector index in Amazon OpenSearch Service](#).

**Contents**

**collectionArn**

The ARN of the OpenSearch Service vector store.

Type: **String**

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: `^arn:aws:aoss:[a-z]{2}(-gov)?-[a-z]+-\d{1}:\d{12}:collection/[a-zA-Z0-9-]{3,32}$`

Required: Yes

**fieldMapping**

Contains the names of the fields to which to map information about the vector store.

Type: [OpenSearchServerlessFieldMapping](#) object

Required: Yes

**vectorIndexName**

The name of the vector store.

Type: **String**

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: `^.*$`

Required: Yes

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:
• AWS SDK for C++
• AWS SDK for Go
• AWS SDK for Java V2
• AWS SDK for Ruby V3
OpenSearchServerlessFieldMapping
Service: Agents for Amazon Bedrock

Contains the names of the fields to which to map information about the vector store.

Contents

metadataField

The name of the field in which Amazon Bedrock stores metadata about the vector store.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^.*$

Required: Yes

textField

The name of the field in which Amazon Bedrock stores the raw text from your data. The text is split according to the chunking strategy you choose.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^.*$

Required: Yes

vectorField

The name of the field in which Amazon Bedrock stores the vector embeddings for your data sources.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^.*$

Required: Yes
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**PineconeConfiguration**

Service: Agents for Amazon Bedrock

Contains details about the storage configuration of the knowledge base in Pinecone. For more information, see [Create a vector index in Pinecone](#).

**Contents**

**connectionString**

The endpoint URL for your index management page.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: `^.*$`

Required: Yes

**credentialsSecretArn**

The ARN of the secret that you created in AWS Secrets Manager that is linked to your Pinecone API key.

Type: String

Pattern: `^arn:aws(|-cn|-us-gov):secretsmanager:[a-z0-9-]{1,20}:([0-9]{12}|):secret:[a-zA-Z0-9!/_+=.@-]{1,512}$`

Required: Yes

**fieldMapping**

Contains the names of the fields to which to map information about the vector store.

Type: PineconeFieldMapping object

Required: Yes

**namespace**

The namespace to be used to write new data to your database.

Type: String
Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^.*$

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
PineconeFieldMapping
Service: Agents for Amazon Bedrock

Contains the names of the fields to which to map information about the vector store.

Contents

metadataField

The name of the field in which Amazon Bedrock stores metadata about the vector store.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^\.*$

Required: Yes

textField

The name of the field in which Amazon Bedrock stores the raw text from your data. The text is split according to the chunking strategy you choose.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^\.*$

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
PromptConfiguration
Service: Agents for Amazon Bedrock

Contains configurations to override a prompt template in one part of an agent sequence. For more information, see Advanced prompts.

Contents

basePromptTemplate

Defines the prompt template with which to replace the default prompt template. You can use placeholder variables in the base prompt template to customize the prompt. For more information, see Prompt template placeholder variables.

Type: String

Required: No

inferenceConfiguration

Contains inference parameters to use when the agent invokes a foundation model in the part of the agent sequence defined by the promptType. For more information, see Inference parameters for foundation models.

Type: InferenceConfiguration object

Required: No

parserMode

Specifies whether to override the default parser Lambda function when parsing the raw foundation model output in the part of the agent sequence defined by the promptType. If you set the field as OVERRIDEN, the overrideLambda field in the PromptOverrideConfiguration must be specified with the ARN of a Lambda function.

Type: String

Valid Values: DEFAULT | OVERRIDEN

Required: No
**promptCreationMode**

Specifies whether to override the default prompt template for this `promptType`. Set this value to OVERRIDDEN to use the prompt that you provide in the `basePromptTemplate`. If you leave it as DEFAULT, the agent uses a default prompt template.

Type: String

Valid Values: DEFAULT | OVERRIDDEN

Required: No

**promptState**

Specifies whether to allow the agent to carry out the step specified in the `promptType`. If you set this value to DISABLED, the agent skips that step. The default state for each `promptType` is as follows.

- PRE_PROCESSING – ENABLED
- ORCHESTRATION – ENABLED
- KNOWLEDGE_BASE_RESPONSE_GENERATION – ENABLED
- POST_PROCESSING – DISABLED

Type: String

Valid Values: ENABLED | DISABLED

Required: No

**promptType**

The step in the agent sequence that this prompt configuration applies to.

Type: String

Valid Values: PRE_PROCESSING | ORCHESTRATION | POST_PROCESSING | KNOWLEDGE_BASE_RESPONSE_GENERATION

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
PromptOverrideConfiguration

Service: Agents for Amazon Bedrock

Contains configurations to override prompts in different parts of an agent sequence. For more information, see Advanced prompts.

Contents

promptConfigurations

Contains configurations to override a prompt template in one part of an agent sequence. For more information, see Advanced prompts.

Type: Array of PromptConfiguration objects

Array Members: Minimum number of 0 items. Maximum number of 10 items.

Required: Yes

overrideLambda

The ARN of the Lambda function to use when parsing the raw foundation model output in parts of the agent sequence. If you specify this field, at least one of the promptConfigurations must contain a parserMode value that is set to OVERRIDDEN.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^arn:(aws[a-zA-Z-]*)?:lambda:[a-z]{2}(-gov)?-[a-z]+-\d{1}:\d{12}:function:[a-zA-Z0-9-._]+(:($LATEST|[a-zA-Z0-9-._]+))?$

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
• AWS SDK for Ruby V3
**RdsConfiguration**

Service: Agents for Amazon Bedrock

Contains details about the storage configuration of the knowledge base in Amazon RDS. For more information, see [Create a vector index in Amazon RDS](https://docs.aws.amazon.com/bedrock/latest/APIReference/RdsConfiguration.html).

**Contents**

**credentialsSecretArn**

The ARN of the secret that you created in AWS Secrets Manager that is linked to your Amazon RDS database.

Type: String

Pattern: `^arn:aws(-cn|-us-gov):secretsmanager:[a-z0-9-]{1,20}:[0-9]{12}:secret:[a-zA-Z0-9!/_+=.@-]{1,512}$`

Required: Yes

**databaseName**

The name of your Amazon RDS database.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 63.

Pattern: `^[a-zA-Z0-9-]_]+$`

Required: Yes

**fieldMapping**

Contains the names of the fields to which to map information about the vector store.

Type: [RdsFieldMapping](https://docs.aws.amazon.com/bedrock/latest/APIReference/RdsFieldMapping.html) object

Required: Yes

**resourceArn**

The ARN of the vector store.

Type: String
Pattern: ^arn:aws([-cn|-us-gov]):rds:[a-zA-Z0-9-]*:[0-9]{12}:cluster:[a-zA-Z0-9-]{1,63}$

Required: Yes

**tableName**

The name of the table in the database.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 63.

Pattern: ^[a-zA-Z0-9_\-\.\_]+$

Required: Yes

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
**RdsFieldMapping**

Service: Agents for Amazon Bedrock

Contains the names of the fields to which to map information about the vector store.

**Contents**

**metadataField**

The name of the field in which Amazon Bedrock stores metadata about the vector store.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 63.

Pattern: `^[a-zA-Z0-9_\-]+$`

Required: Yes

**primaryKeyField**

The name of the field in which Amazon Bedrock stores the ID for each entry.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 63.

Pattern: `^[a-zA-Z0-9_\-]+$`

Required: Yes

**textField**

The name of the field in which Amazon Bedrock stores the raw text from your data. The text is split according to the chunking strategy you choose.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 63.

Pattern: `^[a-zA-Z0-9_\-]+$`

Required: Yes
**vectorField**

The name of the field in which Amazon Bedrock stores the vector embeddings for your data sources.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 63.

Pattern: `^[a-zA-Z0-9\-_]+$`

Required: Yes

**See Also**

RedisEnterpriseCloudConfiguration
Service: Agents for Amazon Bedrock

Contains details about the storage configuration of the knowledge base in Redis Enterprise Cloud. For more information, see [Create a vector index in Redis Enterprise Cloud](#).

Contents

credentialsSecretArn

The ARN of the secret that you created in AWS Secrets Manager that is linked to your Redis Enterprise Cloud database.

Type: String

Pattern: ^arn:aws(|-cn|-us-gov):secretsmanager:[a-z0-9-]{1,20}:([0-9]{12}|):secret:[a-zA-Z0-9!/_+=.@-]{1,512}$

Required: Yes

epoint

The endpoint URL of the Redis Enterprise Cloud database.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^.*$

Required: Yes

fieldMapping

Contains the names of the fields to which to map information about the vector store.

Type: RedisEnterpriseCloudFieldMapping object

Required: Yes

vectorIndexName

The name of the vector index.

Type: String
Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^.*$

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
RedisEnterpriseCloudFieldMapping
Service: Agents for Amazon Bedrock

Contains the names of the fields to which to map information about the vector store.

Contents

**metadataField**

The name of the field in which Amazon Bedrock stores metadata about the vector store.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^.*$

Required: Yes

**textField**

The name of the field in which Amazon Bedrock stores the raw text from your data. The text is split according to the chunking strategy you choose.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^.*$

Required: Yes

**vectorField**

The name of the field in which Amazon Bedrock stores the vector embeddings for your data sources.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 2048.

Pattern: ^.*$

Required: Yes
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
S3DataSourceConfiguration
Service: Agents for Amazon Bedrock

Contains information about the S3 configuration of the data source.

Contents

bucketArn

The ARN of the bucket that contains the data source.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws([-|(-cn|-us-gov):s3::][a-z0-9][a-z0-9.-]{1,61}[a-z0-9]$ 

Required: Yes

inclusionPrefixes

A list of S3 prefixes that define the object containing the data sources. For more information, see Organizing objects using prefixes.

Type: Array of strings

Array Members: Fixed number of 1 item.

Length Constraints: Minimum length of 1. Maximum length of 300.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**S3Identifier**

Service: Agents for Amazon Bedrock

Contains information about the S3 object containing the resource.

**Contents**

**s3BucketName**

The name of the S3 bucket.

Type: String

Pattern: `^[a-z0-9][\.-a-z0-9]{1,61}[a-z0-9]$`

Required: No

**s3ObjectKey**

The S3 object key containing the resource.

Type: String

Pattern: `^[\.-!\*_\'\(\)a-zA-Z0-9][\.-!\*_\'\(\)\a-zA-Z0-9]*$`

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
ServerSideEncryptionConfiguration
Service: Agents for Amazon Bedrock

Contains the configuration for server-side encryption.

Contents

kmsKeyArn

The ARN of the AWS KMS key used to encrypt the resource.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(|-cn|-us-gov):kms:[a-zA-Z0-9-]*:[0-9]{12}:key/[a-zA-Z0-9-]{36}\$

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
StorageConfiguration
Service: Agents for Amazon Bedrock

Contains the storage configuration of the knowledge base.

Contents

type

The vector store service in which the knowledge base is stored.

Type: String

Valid Values: OPENSEARCH_SERVERLESS | PINECONE | REDIS_ENTERPRISE_CLOUD | RDS

Required: Yes

opensearchServerlessConfiguration

Contains the storage configuration of the knowledge base in Amazon OpenSearch Service.

Type: OpenSearchServerlessConfiguration object

Required: No

pineconeConfiguration

Contains the storage configuration of the knowledge base in Pinecone.

Type: PineconeConfiguration object

Required: No

rdsConfiguration

Contains details about the storage configuration of the knowledge base in Amazon RDS. For more information, see Create a vector index in Amazon RDS.

Type: RdsConfiguration object

Required: No

redisEnterpriseCloudConfiguration

Contains the storage configuration of the knowledge base in Redis Enterprise Cloud.
Type: RedisEnterpriseCloudConfiguration object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ValidationExceptionField
Service: Agents for Amazon Bedrock

Stores information about a field passed inside a request that resulted in a validation error.

Contents

message

A message describing why this field failed validation.

Type: String

Pattern: ^\s\S+\s$

Required: Yes

name

The name of the field.

Type: String

Pattern: ^\s\S+\s$

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**VectorIngestionConfiguration**

Service: Agents for Amazon Bedrock

Contains details about how to ingest the documents in a data source.

**Contents**

**chunkingConfiguration**

Details about how to chunk the documents in the data source. A *chunk* refers to an excerpt from a data source that is returned when the knowledge base that it belongs to is queried.

Type:  ChunkingConfiguration  object

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)

VectorKnowledgeBaseConfiguration
Service: Agents for Amazon Bedrock

Contains details about the model used to create vector embeddings for the knowledge base.

Contents

embeddingModelArn

The ARN of the model used to create vector embeddings for the knowledge base.

Type: String

Pattern: ^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:[([0-9]{12}:custom-model/[a-z0-9-]{1,63}\.){1}[a-z0-9-]{1,63}/([a-z0-9-]{12})):foundation-model/[a-z0-9-]{1,63}\.){1}[a-z0-9-]{1,63})$^

Required: Yes

See Also

• RetrieveAndGenerateOutput
• RetrieveAndGenerateSessionConfiguration
• RetrievedReference
• SessionState
• Span
• TextResponsePart
• Trace
• TracePart
ActionGroupInvocationInput
Service: Agents for Amazon Bedrock Runtime

Contains information about the action group being invoked.

Contents

actionGroupName

The name of the action group.

Type: String

Required: No

apiPath

The path to the API to call, based off the action group.

Type: String

Required: No

parameters

The parameters in the Lambda input event.

Type: Array of Parameter objects

Required: No

requestBody

The parameters in the request body for the Lambda input event.

Type: RequestBody object

Required: No

verb

The API method being used, based off the action group.

Type: String

Required: No
See Also

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
ActionGroupInvocationOutput

Service: Agents for Amazon Bedrock Runtime

Contains the JSON-formatted string returned by the API invoked by the action group.

Contents

text

The JSON-formatted string returned by the API invoked by the action group.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**Attribution**

Service: Agents for Amazon Bedrock Runtime

Contains citations for a part of an agent response.

**Contents**

**citations**

A list of citations and related information for a part of an agent response.

Type: Array of Citation objects

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
Citation
Service: Agents for Amazon Bedrock Runtime

An object containing a segment of the generated response that is based on a source in the knowledge base, alongside information about the source.

This data type is used in the following API operations:

- Retrieve response – in the citations field
- RetrieveAndGenerate response – in the citations field

Contents

generatedResponsePart

Contains the generated response and metadata

Type: GeneratedResponsePart object

Required: No

retrievedReferences

Contains metadata about the sources cited for the generated response.

Type: Array of RetrievedReference objects

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**FailureTrace**

Service: Agents for Amazon Bedrock Runtime

Contains information about the failure of the interaction.

**Contents**

**failureReason**

The reason the interaction failed.

Type: String

Required: No

**traceId**

The unique identifier of the trace.

Type: String

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
FilterAttribute
Service: Agents for Amazon Bedrock Runtime

Specifies the name that the metadata attribute must match and the value to which to compare the value of the metadata attribute. For more information, see Query configurations.

This data type is used in the following API operations:

- RetrieveAndGenerate request

Contents

key

The name that the metadata attribute must match.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 100.

Required: Yes

value

The value to which to compare the value of the metadata attribute.

Type: JSON value

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
FinalResponse
Service: Agents for Amazon Bedrock Runtime

Contains details about the response to the user.

Contents

text

The text in the response to the user.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**GeneratedResponsePart**

Service: Agents for Amazon Bedrock Runtime

Contains metadata about a part of the generated response that is accompanied by a citation.

This data type is used in the following API operations:

- [Retrieve response](#) – in the `generatedResponsePart` field
- [RetrieveAndGenerate response](#) – in the `generatedResponsePart` field

**Contents**

**textResponsePart**

Contains metadata about a textual part of the generated response that is accompanied by a citation.

Type: [TextResponsePart](#) object

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
**GenerationConfiguration**

Service: Agents for Amazon Bedrock Runtime

Contains configurations for response generation based on the knowledge base query results.

This data type is used in the following API operations:

- **RetrieveAndGenerate request**

**Contents**

**promptTemplate**

Contains the template for the prompt that's sent to the model for response generation.

Type: **PromptTemplate** object

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
InferenceConfiguration
Service: Agents for Amazon Bedrock Runtime

Specifications about the inference parameters that were provided alongside the prompt. These are specified in the PromptOverrideConfiguration object that was set when the agent was created or updated. For more information, see Inference parameters for foundation models.

Contents

maximumLength

The maximum number of tokens allowed in the generated response.

Type: Integer

Valid Range: Minimum value of 0. Maximum value of 4096.

Required: No

stopSequences

A list of stop sequences. A stop sequence is a sequence of characters that causes the model to stop generating the response.

Type: Array of strings

Array Members: Minimum number of 0 items. Maximum number of 4 items.

Required: No

temperature

The likelihood of the model selecting higher-probability options while generating a response. A lower value makes the model more likely to choose higher-probability options, while a higher value makes the model more likely to choose lower-probability options.

Type: Float

Valid Range: Minimum value of 0. Maximum value of 1.

Required: No

topK

While generating a response, the model determines the probability of the following token at each point of generation. The value that you set for topK is the number of most-likely
candidates from which the model chooses the next token in the sequence. For example, if you set topK to 50, the model selects the next token from among the top 50 most likely choices.

Type: Integer

Valid Range: Minimum value of 0. Maximum value of 500.

Required: No

**topP**

While generating a response, the model determines the probability of the following token at each point of generation. The value that you set for TopP determines the number of most-likely candidates from which the model chooses the next token in the sequence. For example, if you set topP to 80, the model only selects the next token from the top 80% of the probability distribution of next tokens.

Type: Float

Valid Range: Minimum value of 0. Maximum value of 1.

Required: No

**See Also**

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
InvocationInput
Service: Agents for Amazon Bedrock Runtime

Contains information pertaining to the action group or knowledge base that is being invoked.

Contents

actionGroupInvocationInput

Contains information about the action group to be invoked.

Type: ActionGroupInvocationInput object

Required: No

invocationType

Specifies whether the agent is invoking an action group or a knowledge base.

Type: String

Valid Values: ACTION_GROUP | KNOWLEDGE_BASE | FINISH

Required: No

knowledgeBaseLookupInput

Contains details about the knowledge base to look up and the query to be made.

Type: KnowledgeBaseLookupInput object

Required: No

traceId

The unique identifier of the trace.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
KnowledgeBaseLookupInput
Service: Agents for Amazon Bedrock Runtime

Contains details about the knowledge base to look up and the query to be made.

Contents

knowledgeBaseId

The unique identifier of the knowledge base to look up.

Type: String

Required: No

text

The query made to the knowledge base.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
KnowledgeBaseLookupOutput
Service: Agents for Amazon Bedrock Runtime

Contains details about the results from looking up the knowledge base.

Contents

retrievedReferences

Contains metadata about the sources cited for the generated response.

Type: Array of RetrievedReference objects

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
KnowledgeBaseQuery
Service: Agents for Amazon Bedrock Runtime

Contains the query made to the knowledge base.

This data type is used in the following API operations:

- Retrieve request – in the retrievalQuery field

Contents

text

The text of the query made to the knowledge base.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
KnowledgeBaseRetrievalConfiguration
Service: Agents for Amazon Bedrock Runtime

Contains configurations for the knowledge base query and retrieval process. For more information, see Query configurations.

This data type is used in the following API operations:

- Retrieve request – in the retrievalConfiguration field
- RetrieveAndGenerate request – in the retrievalConfiguration field

Contents

vectorSearchConfiguration

Contains details about how the results from the vector search should be returned. For more information, see Query configurations.

Type: KnowledgeBaseVectorSearchConfiguration object

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**KnowledgeBaseRetrievalResult**

Service: Agents for Amazon Bedrock Runtime

Details about a result from querying the knowledge base.

This data type is used in the following API operations:

- **Retrieve response** – in the `retrievalResults` field

**Contents**

**content**

Contains a chunk of text from a data source in the knowledge base.

Type: `RetrievalResultContent` object

Required: Yes

**location**

Contains information about the location of the data source.

Type: `RetrievalResultLocation` object

Required: No

**metadata**

Contains metadata attributes and their values for the file in the data source. For more information, see [Metadata and filtering](#).

Type: String to JSON value map

Map Entries: Maximum number of items.

Key Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No

**score**

The level of relevance of the result to the query.

Type: Double
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
**KnowledgeBaseRetrieveAndGenerateConfiguration**

Service: Agents for Amazon Bedrock Runtime

Contains details about the resource being queried.

This data type is used in the following API operations:

- **Retrieve request** – in the knowledgeBaseConfiguration field
- **RetrieveAndGenerate request** – in the knowledgeBaseConfiguration field

**Contents**

**knowledgeBaseId**

The unique identifier of the knowledge base that is queried and the foundation model used for generation.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 10.

Pattern: `^[0-9a-zA-Z]+$`

Required: Yes

**modelArn**

The ARN of the foundation model used to generate a response.

Type: String

Pattern: `^arn:aws(-[^:]+)?:bedrock:[a-z0-9-]{1,20}:([0-9]{12}:custom-model/[a-z0-9-]{1,63}\.\{1\}[a-z0-9-]{1,63}/[a-z0-9]{12})|(:foundation-model/[a-z0-9-]{1,63}\.\{1\}[a-z0-9-]{1,63}))$`

Required: Yes

**generationConfiguration**

Contains configurations for response generation based on the knowledge base query results.
Type: `GenerationConfiguration` object

Required: No

**retrievalConfiguration**

Contains configurations for how to retrieve and return the knowledge base query.

Type: `KnowledgeBaseRetrievalConfiguration` object

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
KnowledgeBaseVectorSearchConfiguration

Service: Agents for Amazon Bedrock Runtime

Configurations for how to perform the search query and return results. For more information, see Query configurations.

This data type is used in the following API operations:

- Retrieve request – in the vectorSearchConfiguration field
- RetrieveAndGenerate request – in the vectorSearchConfiguration field

Contents

filter

Specifies the filters to use on the metadata in the knowledge base data sources before returning results. For more information, see Query configurations.

Type: RetrievalFilter object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

numberOfResults

The number of source chunks to retrieve.

Type: Integer

Valid Range: Minimum value of 1. Maximum value of 100.

Required: No

overrideSearchType

By default, Amazon Bedrock decides a search strategy for you. If you're using an Amazon OpenSearch Serverless vector store that contains a filterable text field, you can specify whether to query the knowledge base with a HYBRID search using both vector embeddings and raw text, or SEMANTIC search using only vector embeddings. For other vector store configurations, only SEMANTIC search is available. For more information, see Test a knowledge base.

Type: String
Valid Values: HYBRID | SEMANTIC

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ModelInvocationInput

Service: Agents for Amazon Bedrock Runtime

The input for the pre-processing step.

- The type matches the agent step.
- The text contains the prompt.
- The inferenceConfiguration, parserMode, and overrideLambda values are set in the PromptOverrideConfiguration object that was set when the agent was created or updated.

Contents

inferenceConfiguration

Specifications about the inference parameters that were provided alongside the prompt. These are specified in the PromptOverrideConfiguration object that was set when the agent was created or updated. For more information, see Inference parameters for foundation models.

Type: InferenceConfiguration object

Required: No

overrideLambda

The ARN of the Lambda function to use when parsing the raw foundation model output in parts of the agent sequence.

Type: String

Required: No

parserMode

Specifies whether to override the default parser Lambda function when parsing the raw foundation model output in the part of the agent sequence defined by the promptType.

Type: String

Valid Values: DEFAULT | OVERRIDDEN

Required: No
**promptCreationMode**

Specifies whether the default prompt template was OVERRIDDEN. If it was, the basePromptTemplate that was set in the `PromptOverrideConfiguration` object when the agent was created or updated is used instead.

Type: String

Valid Values: DEFAULT | OVERRIDDEN

Required: No

**text**

The text that prompted the agent at this step.

Type: String

Required: No

**traceId**

The unique identifier of the trace.

Type: String

Required: No

**type**

The step in the agent sequence.

Type: String

Valid Values: PRE_PROCESSING | ORCHESTRATION | KNOWLEDGE_BASE_RESPONSE_GENERATION | POST_PROCESSING

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:
- **AWS SDK for C++**
- **AWS SDK for Go**
- **AWS SDK for Java V2**
- **AWS SDK for Ruby V3**
Observation
Service: Agents for Amazon Bedrock Runtime

Contains the result or output of an action group or knowledge base, or the response to the user.

Contents

actionGroupInvocationOutput

Contains the JSON-formatted string returned by the API invoked by the action group.

Type: ActionGroupInvocationOutput object

Required: No

finalResponse

Contains details about the response to the user.

Type: FinalResponse object

Required: No

knowledgeBaseLookupOutput

Contains details about the results from looking up the knowledge base.

Type: KnowledgeBaseLookupOutput object

Required: No

repromptResponse

Contains details about the response to reprompt the input.

Type: RepromptResponse object

Required: No

traceId

The unique identifier of the trace.

Type: String

type

Specifies what kind of information the agent returns in the observation. The following values are possible.

- ACTION_GROUP – The agent returns the result of an action group.
- KNOWLEDGE_BASE – The agent returns information from a knowledge base.
- FINISH – The agent returns a final response to the user with no follow-up.
- ASK_USER – The agent asks the user a question.
- REPROMPT – The agent prompts the user again for the same information.

Type: String

Valid Values: ACTION_GROUP | KNOWLEDGE_BASE | FINISH | ASK_USER | REPROMPT

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
OrchestrationTrace
Service: Agents for Amazon Bedrock Runtime

Details about the orchestration step, in which the agent determines the order in which actions are executed and which knowledge bases are retrieved.

Contents

⚠️ Important
This data type is a UNION, so only one of the following members can be specified when used or returned.

InvocationInput
Contains information pertaining to the action group or knowledge base that is being invoked.

Type: InvocationInput object

Required: No

ModelInvocationInput
The input for the orchestration step.

• The type is ORCHESTRATION.
• The text contains the prompt.
• The inferenceConfiguration, parserMode, and overrideLambda values are set in the PromptOverrideConfiguration object that was set when the agent was created or updated.

Type: ModelInvocationInput object

Required: No

Observation
Details about the observation (the output of the action group Lambda or knowledge base) made by the agent.

Type: Observation object

Required: No
rationale

Details about the reasoning, based on the input, that the agent uses to justify carrying out an action group or getting information from a knowledge base.

Type: Rationale object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**Parameter**
Service: Agents for Amazon Bedrock Runtime

A parameter in the Lambda input event.

**Contents**

**name**

The name of the parameter.

Type: String

Required: No

**type**

The type of the parameter.

Type: String

Required: No

**value**

The value of the parameter.

Type: String

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
PayloadPart
Service: Agents for Amazon Bedrock Runtime

Contains a part of an agent response and citations for it.

Contents

attribution

Contains citations for a part of an agent response.

Type: Attribution object

Required: No

bytes

A part of the agent response in bytes.

Type: Base64-encoded binary data object

Length Constraints: Minimum length of 0. Maximum length of 1000000.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
PostProcessingModelInvocationOutput
Service: Agents for Amazon Bedrock Runtime

The foundation model output from the post-processing step.

Contents

parsedResponse

Details about the response from the Lambda parsing of the output of the post-processing step.

Type: PostProcessingParsedResponse object

Required: No

traceId

The unique identifier of the trace.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
PostProcessingParsedResponse
Service: Agents for Amazon Bedrock Runtime

Details about the response from the Lambda parsing of the output from the post-processing step.

Contents

text

The text returned by the parser.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
PostProcessingTrace
Service: Agents for Amazon Bedrock Runtime

Details about the post-processing step, in which the agent shapes the response.

Contents

⚠️ Important
This data type is a UNION, so only one of the following members can be specified when used or returned.

modellInvocationInput

The input for the post-processing step.

- The type is POST_PROCESSING.
- The text contains the prompt.
- The inferenceConfiguration, parserMode, and overrideLambda values are set in the PromptOverrideConfiguration object that was set when the agent was created or updated.

Type: ModellInvocationInput object

Required: No

modellInvocationOutput

The foundation model output from the post-processing step.

Type: PostProcessingModellInvocationOutput object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
PreProcessingModelInvocationOutput
Service: Agents for Amazon Bedrock Runtime

The foundation model output from the pre-processing step.

Contents

parsedResponse

Details about the response from the Lambda parsing of the output of the pre-processing step.

Type: PreProcessingParsedResponse object

Required: No

traceId

The unique identifier of the trace.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
PreProcessingParsedResponse

Service: Agents for Amazon Bedrock Runtime

Details about the response from the Lambda parsing of the output from the pre-processing step.

Contents

isValid

Whether the user input is valid or not. If false, the agent doesn't proceed to orchestration.

Type: Boolean

Required: No

rationale

The text returned by the parsing of the pre-processing step, explaining the steps that the agent plans to take in orchestration, if the user input is valid.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
PreProcessingTrace
Service: Agents for Amazon Bedrock Runtime

Details about the pre-processing step, in which the agent contextualizes and categorizes user inputs.

Contents

⚠️ Important
This data type is a UNION, so only one of the following members can be specified when used or returned.

modelInvocationInput

The input for the pre-processing step.

- The type is PRE_PROCESSING.
- The text contains the prompt.
- The inferenceConfiguration, parserMode, and overrideLambda values are set in the PromptOverrideConfiguration object that was set when the agent was created or updated.

Type: ModelInvocationInput object

Required: No

modelInvocationOutput

The foundation model output from the pre-processing step.

Type: PreProcessingModelInvocationOutput object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
• AWS SDK for Go
• AWS SDK for Java V2
• AWS SDK for Ruby V3
PromptTemplate
Service: Agents for Amazon Bedrock Runtime

Contains the template for the prompt that's sent to the model for response generation. For more information, see Knowledge base prompt templates.

This data type is used in the following API operations:

- RetrieveAndGenerate request – in the filter field

Contents

textPromptTemplate

The template for the prompt that's sent to the model for response generation. You can include prompt placeholders, which become replaced before the prompt is sent to the model to provide instructions and context to the model. In addition, you can include XML tags to delineate meaningful sections of the prompt template.

For more information, see the following resources:

- Knowledge base prompt templates
- Use XML tags with Anthropic Claude models

Type: String

Length Constraints: Minimum length of 1. Maximum length of 4000.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
Rationale
Service: Agents for Amazon Bedrock Runtime

Contains the reasoning, based on the input, that the agent uses to justify carrying out an action group or getting information from a knowledge base.

Contents

text

The reasoning or thought process of the agent, based on the input.

Type: String

Required: No

traceId

The unique identifier of the trace step.

Type: String

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
**RepromptResponse**

Service: Agents for Amazon Bedrock Runtime

Contains details about the agent's response to reprompt the input.

**Contents**

**source**

Specifies what output is prompting the agent to reprompt the input.

Type: String

Valid Values: ACTION_GROUP | KNOWLEDGE_BASE | PARSER

Required: No

**text**

The text reprompting the input.

Type: String

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
RequestBody
Service: Agents for Amazon Bedrock Runtime

The parameters in the request body for the Lambda input event.

Contents

ccontent

The content in the request body.

Type: String to array of Parameter objects map

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
ResponseStream
Service: Agents for Amazon Bedrock Runtime

The response from invoking the agent and associated citations and trace information.

Contents

accessDeniedException

The request is denied because of missing access permissions. Check your permissions and retry your request.

Type: Exception
HTTP Status Code: 403
Required: No

badGatewayException

There was an issue with a dependency due to a server issue. Retry your request.

Type: Exception
HTTP Status Code: 502
Required: No

chunk

Contains a part of an agent response and citations for it.

Type: PayloadPart object
Required: No

conflictException

There was a conflict performing an operation. Resolve the conflict and retry your request.

Type: Exception
HTTP Status Code: 409
Required: No

dependencyFailedException

There was an issue with a dependency. Check the resource configurations and retry the request.
Type: Exception
HTTP Status Code: 424

Required: No

**internalServerException**

An internal server error occurred. Retry your request.

Type: Exception
HTTP Status Code: 500

Required: No

**resourceNotFoundException**

The specified resource ARN was not found. Check the ARN and try your request again.

Type: Exception
HTTP Status Code: 404

Required: No

**serviceQuotaExceededException**

The number of requests exceeds the service quota. Resubmit your request later.

Type: Exception
HTTP Status Code: 400

Required: No

**throttlingException**

The number of requests exceeds the limit. Resubmit your request later.

Type: Exception
HTTP Status Code: 429

Required: No

**trace**

Contains information about the agent and session, alongside the agent's reasoning process and results from calling API actions and querying knowledge bases and metadata about the
trace. You can use the trace to understand how the agent arrived at the response it provided the customer. For more information, see Trace events.

Type: TracePart object

Required: No

validationException

Input validation failed. Check your request parameters and retry the request.

Type: Exception
HTTP Status Code: 400

Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
RetrievalFilter
Service: Agents for Amazon Bedrock Runtime

Specifies the filters to use on the metadata attributes in the knowledge base data sources before returning results. For more information, see Query configurations.

This data type is used in the following API operations:
- Retrieve request – in the filter field
- RetrieveAndGenerate request – in the filter field

Contents

⚠️ Important
This data type is a UNION, so only one of the following members can be specified when used or returned.

andAll

Knowledge base data sources whose metadata attributes fulfill all the filter conditions inside this list are returned.

Type: Array of RetrievalFilter objects

Array Members: Minimum number of 2 items. Maximum number of 5 items.

Required: No

equals

Knowledge base data sources that contain a metadata attribute whose name matches the key and whose value matches the value in this object are returned.

Type: FilterAttribute object

Required: No

greaterThan

Knowledge base data sources that contain a metadata attribute whose name matches the key and whose value is greater than the value in this object are returned.
Type: FilterAttribute object

Required: No

greaterThanOrEquals

Knowledge base data sources that contain a metadata attribute whose name matches the key and whose value is greater than or equal to the value in this object are returned.

Type: FilterAttribute object

Required: No

in

Knowledge base data sources that contain a metadata attribute whose name matches the key and whose value is in the list specified in the value in this object are returned.

Type: FilterAttribute object

Required: No

lessThan

Knowledge base data sources that contain a metadata attribute whose name matches the key and whose value is less than the value in this object are returned.

Type: FilterAttribute object

Required: No

lessThanOrEquals

Knowledge base data sources that contain a metadata attribute whose name matches the key and whose value is less than or equal to the value in this object are returned.

Type: FilterAttribute object

Required: No

notEquals

Knowledge base data sources that contain a metadata attribute whose name matches the key and whose value doesn't match the value in this object are returned.

Type: FilterAttribute object
**notIn**

Knowledge base data sources that contain a metadata attribute whose name matches the key and whose value isn't in the list specified in the value in this object are returned.

Type: FilterAttribute object

**orAll**

Knowledge base data sources whose metadata attributes fulfill at least one of the filter conditions inside this list are returned.

Type: Array of RetrievalFilter objects

Array Members: Minimum number of 2 items. Maximum number of 5 items.

**startsWith**

Knowledge base data sources that contain a metadata attribute whose name matches the key and whose value starts with the value in this object are returned. This filter is currently only supported for Amazon OpenSearch Serverless vector stores.

Type: FilterAttribute object

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**RetrievalResultContent**  
Service: Agents for Amazon Bedrock Runtime

Contains the cited text from the data source.

This data type is used in the following API operations:

- Retrieve response – in the content field
- RetrieveAndGenerate response – in the content field
- Retrieve response – in the content field

**Contents**

text

The cited text from the data source.

Type: String

Required: Yes

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**RetrievalResultLocation**

Service: Agents for Amazon Bedrock Runtime

Contains information about the location of the data source.

This data type is used in the following API operations:

- Retrieve response – in the location field
- RetrieveAndGenerate response – in the location field
- Retrieve response – in the location field

**Contents**

**type**

The type of the location of the data source.

Type: String

Valid Values: S3

Required: Yes

**s3Location**

Contains the S3 location of the data source.

Type: RetrievalResultS3Location object

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
RetrievalResultS3Location
Service: Agents for Amazon Bedrock Runtime

Contains the S3 location of the data source.

This data type is used in the following API operations:

- **Retrieve response** – in the `s3Location` field
- **RetrieveAndGenerate response** – in the `s3Location` field
- **Retrieve response** – in the `s3Location` field

**Contents**

**uri**

The S3 URI of the data source.

Type: String

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)

RetrieveAndGenerateConfiguration
Service: Agents for Amazon Bedrock Runtime

Contains details about the resource being queried.

This data type is used in the following API operations:

- **RetrieveAndGenerate request** – in the `retrieveAndGenerateConfiguration` field

Contents

type

The type of resource that is queried by the request.

Type: String

Valid Values: KNOWLEDGE_BASE

Required: Yes

knowledgeBaseConfiguration

Contains details about the resource being queried.

Type: `KnowledgeBaseRetrieveAndGenerateConfiguration` object

Required: No

See Also

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
RetrieveAndGenerateInput
Service: Agents for Amazon Bedrock Runtime

Contains the query made to the knowledge base.

This data type is used in the following API operations:

- RetrieveAndGenerate request – in the input field

Contents

text

The query made to the knowledge base.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 1000.

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- [AWS SDK for C++](#)
- [AWS SDK for Go](#)
- [AWS SDK for Java V2](#)
- [AWS SDK for Ruby V3](#)
RetrieveAndGenerateOutput
Service: Agents for Amazon Bedrock Runtime

Contains the response generated from querying the knowledge base.

This data type is used in the following API operations:

- RetrieveAndGenerate response – in the output field

Contents

text

The response generated from querying the knowledge base.

Type: String

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
RetrieveAndGenerateSessionConfiguration
Service: Agents for Amazon Bedrock Runtime

Contains configuration about the session with the knowledge base.

This data type is used in the following API operations:

- RetrieveAndGenerate request – in the sessionConfiguration field

Contents

kmsKeyArn

The ARN of the AWS KMS key encrypting the session.

Type: String

Length Constraints: Minimum length of 1. Maximum length of 2048.

Pattern: ^arn:aws(|-cn|-us-gov):kms:[a-zA-Z0-9-]*:[0-9]{12}:key/[a-zA-Z0-9]{36}$

Required: Yes

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**RetrievedReference**

Service: Agents for Amazon Bedrock Runtime

Contains metadata about a source cited for the generated response.

This data type is used in the following API operations:

- **RetrieveAndGenerate response** – in the retrievedReferences field
- **Retrieve response** – in the retrievedReferences field

**Contents**

**content**

Contains the cited text from the data source.

Type: [RetrievalResultContent](#) object

Required: No

**location**

Contains information about the location of the data source.

Type: [RetrievalResultLocation](#) object

Required: No

**metadata**

Contains metadata attributes and their values for the file in the data source. For more information, see [Metadata and filtering](#).

Type: String to JSON value map

Map Entries: Maximum number of items.

Key Length Constraints: Minimum length of 1. Maximum length of 100.

Required: No
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
SessionState
Service: Agents for Amazon Bedrock Runtime

Contains parameters that specify various attributes that persist across a session or prompt. You can define session state attributes as key-value pairs when writing a Lambda function for an action group or pass them when making an InvokeAgent request. Use session state attributes to control and provide conversational context for your agent and to help customize your agent's behavior. For more information, see Control session context.

Contents

promptSessionAttributes

Contains attributes that persist across a prompt and the values of those attributes. These attributes replace the $prompt_session_attributes$ placeholder variable in the orchestration prompt template. For more information, see Prompt template placeholder variables.

Type: String to string map

Required: No

sessionAttributes

Contains attributes that persist across a session and the values of those attributes.

Type: String to string map

Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
Span
Service: Agents for Amazon Bedrock Runtime

Contains information about where the text with a citation begins and ends in the generated output.

This data type is used in the following API operations:

- **RetrieveAndGenerate response** – in the span field
- **Retrieve response** – in the span field

Contents

end

Where the text with a citation ends in the generated output.

Type: Integer

Valid Range: Minimum value of 0.

Required: No

start

Where the text with a citation starts in the generated output.

Type: Integer

Valid Range: Minimum value of 0.

Required: No

See Also

• AWS SDK for Ruby V3
**TextResponsePart**

Service: Agents for Amazon Bedrock Runtime

Contains the part of the generated text that contains a citation, alongside where it begins and ends.

This data type is used in the following API operations:

- **RetrieveAndGenerate response** – in the `textResponsePart` field
- **Retrieve response** – in the `textResponsePart` field

**Contents**

**span**

Contains information about where the text with a citation begins and ends in the generated output.

Type: **Span** object

Required: No

**text**

The part of the generated text that contains a citation.

Type: String

Required: No

**See Also**

Trace
Service: Agents for Amazon Bedrock Runtime

Contains one part of the agent's reasoning process and results from calling API actions and querying knowledge bases. You can use the trace to understand how the agent arrived at the response it provided the customer. For more information, see Trace enablement.

Contents

⚠ Important
This data type is a UNION, so only one of the following members can be specified when used or returned.

failureTrace

Contains information about the failure of the interaction.

Type: FailureTrace object

Required: No

orchestrationTrace

Details about the orchestration step, in which the agent determines the order in which actions are executed and which knowledge bases are retrieved.

Type: OrchestrationTrace object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

postProcessingTrace

Details about the post-processing step, in which the agent shapes the response.

Type: PostProcessingTrace object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No
preProcessingTrace

Details about the pre-processing step, in which the agent contextualizes and categorizes user inputs.

Type: PreProcessingTrace object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
TracePart
Service: Agents for Amazon Bedrock Runtime

Contains information about the agent and session, alongside the agent's reasoning process and results from calling API actions and querying knowledge bases and metadata about the trace. You can use the trace to understand how the agent arrived at the response it provided the customer. For more information, see Trace enablement.

Contents

agentAliasId

The unique identifier of the alias of the agent.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 10.

Pattern: ^[0-9a-zA-Z]+$

Required: No

agentId

The unique identifier of the agent.

Type: String

Length Constraints: Minimum length of 0. Maximum length of 10.

Pattern: ^[0-9a-zA-Z]+$

Required: No

sessionId

The unique identifier of the session with the agent.

Type: String

Pattern: ^[0-9a-zA-Z._:-]+$

Required: No
trace

Contains one part of the agent's reasoning process and results from calling API actions and querying knowledge bases. You can use the trace to understand how the agent arrived at the response it provided the customer. For more information, see Trace enablement.

Type: Trace object

Note: This object is a Union. Only one member of this object can be specified or returned.

Required: No

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3

Amazon Bedrock Runtime

The following data types are supported by Amazon Bedrock Runtime:

- PayloadPart
- ResponseStream
PayloadPart
Service: Amazon Bedrock Runtime

Payload content included in the response.

Contents

bytes

Base64-encoded bytes of payload data.

Type: Base64-encoded binary data object

Length Constraints: Minimum length of 0. Maximum length of 1000000.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java V2
- AWS SDK for Ruby V3
**ResponseStream**

Service: Amazon Bedrock Runtime

Definition of content in the response stream.

**Contents**

**chunk**

Content included in the response.

Type: [PayloadPart](#) object

Required: No

**internalServerException**

An internal server error occurred. Retry your request.

Type: Exception

HTTP Status Code: 500

Required: No

**modelStreamErrorException**

An error occurred while streaming the response. Retry your request.

Type: Exception

HTTP Status Code: 424

Required: No

**modelTimeoutException**

The request took too long to process. Processing time exceeded the model timeout length.

Type: Exception

HTTP Status Code: 408

Required: No

**throttlingException**

The number or frequency of requests exceeds the limit. Resubmit your request later.

Type: Exception

Common Parameters

The following list contains the parameters that all actions use for signing Signature Version 4 requests with a query string. Any action-specific parameters are listed in the topic for that action.

For more information about Signature Version 4, see [Signing AWS API requests](#) in the [IAM User Guide](#).

Action

The action to be performed.

Type: string

Required: Yes

Version

The API version that the request is written for, expressed in the format YYYY-MM-DD.
Type: string

Required: Yes

**X-Amz-Algorithm**

The hash algorithm that you used to create the request signature.

**Condition:** Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Valid Values: AWS4-HMAC-SHA256

Required: Conditional

**X-Amz-Credential**

The credential scope value, which is a string that includes your access key, the date, the region you are targeting, the service you are requesting, and a termination string ("aws4_request"). The value is expressed in the following format: `access_key/YYYYMMDD/region/service/aws4_request`.

For more information, see [Create a signed AWS API request](https://docs.aws.amazon.com/IAM/latest/userguide/elements-signing.html) in the *IAM User Guide*.

**Condition:** Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

**X-Amz-Date**

The date that is used to create the signature. The format must be ISO 8601 basic format (YYYYMMDD'T'HHMMSS'Z'). For example, the following date time is a valid X-Amz-Date value: `20120325T120000Z`.

**Condition:** X-Amz-Date is optional for all requests; it can be used to override the date used for signing requests. If the Date header is specified in the ISO 8601 basic format, X-Amz-Date is not required. When X-Amz-Date is used, it always overrides the value of the Date header. For more information, see [Elements of an AWS API request signature](https://docs.aws.amazon.com/IAM/latest/userguide/elements-signing.html) in the *IAM User Guide*.

Type: string
Required: Conditional

X-Amz-Security-Token

The temporary security token that was obtained through a call to AWS Security Token Service (AWS STS). For a list of services that support temporary security credentials from AWS STS, see AWS services that work with IAM in the IAM User Guide.

Condition: If you're using temporary security credentials from AWS STS, you must include the security token.

Type: string

Required: Conditional

X-Amz-Signature

Specifies the hex-encoded signature that was calculated from the string to sign and the derived signing key.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

X-Amz-SignedHeaders

Specifies all the HTTP headers that were included as part of the canonical request. For more information about specifying signed headers, see Create a signed AWS API request in the IAM User Guide.

Condition: Specify this parameter when you include authentication information in a query string instead of in the HTTP authorization header.

Type: string

Required: Conditional

Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.
AccessDeniedException

You do not have sufficient access to perform this action.

HTTP Status Code: 400

IncompleteSignature

The request signature does not conform to AWS standards.

HTTP Status Code: 400

InternalFailure

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

InvalidAction

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 400

InvalidClientTokenId

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

NotAuthorized

You do not have permission to perform this action.

HTTP Status Code: 400

OptInRequired

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

RequestExpired

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.
HTTP Status Code: 400

ServiceUnavailable

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 400

ValidationError

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
