Welcome to the Amazon WorkSpaces API Reference

This is the Amazon WorkSpaces API Reference. This guide provides detailed information about the Amazon WorkSpaces API.
Actions

The following actions are supported:

- AssociateIpGroups (p. 3)
- AuthorizeIpRules (p. 5)
- CreateIpGroup (p. 7)
- CreateTags (p. 10)
- CreateWorkspaces (p. 12)
- DeleteIpGroup (p. 15)
- DeleteTags (p. 17)
- DescribeIpGroups (p. 19)
- DescribeTags (p. 22)
- DescribeWorkspaceBundles (p. 24)
- DescribeWorkspaceDirectories (p. 27)
- DescribeWorkspaces (p. 29)
- DescribeWorkspacesConnectionStatus (p. 33)
- DisassociateIpGroups (p. 35)
- ModifyWorkspaceProperties (p. 37)
- ModifyWorkspaceState (p. 39)
- RebootWorkspaces (p. 41)
- RebuildWorkspaces (p. 43)
- RevokeIpRules (p. 45)
- StartWorkspaces (p. 47)
- StopWorkspaces (p. 49)
- TerminateWorkspaces (p. 51)
- UpdateRulesOfIpGroup (p. 53)
Associates the specified IP access control group with the specified directory.

**Request Syntax**

```json
{
    "DirectoryId": "string",
    "GroupIds": [ "string" ]
}
```

**Request Parameters**

The request accepts the following data in JSON format.

**DirectoryId (p. 3)**

The ID of the directory.

Type: String

Pattern: `^d-[0-9a-f]{8,63}$`

Required: Yes

**GroupIds (p. 3)**

The IDs of one or more IP access control groups.

Type: Array of strings

Pattern: `wsipg-[0-9a-z]{8,63}$`

Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 84).

**AccessDeniedException**

The user is not authorized to access a resource.

HTTP Status Code: 400

**InvalidParameterValuesException**

One or more parameter values are not valid.

HTTP Status Code: 400

**InvalidResourceStateException**

The state of the resource is not valid for this operation.
HTTP Status Code: 400

**OperationNotSupportedException**

This operation is not supported.

HTTP Status Code: 400

**ResourceLimitExceededException**

Your resource limits have been exceeded.

HTTP Status Code: 400

**ResourceNotFoundException**

The resource could not be found.

HTTP Status Code: 400

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
AuthorizeIpRules

Adds one or more rules to the specified IP access control group.

This action gives users permission to access their WorkSpaces from the CIDR address ranges specified in the rules.

Request Syntax

```json
{
    "GroupId": "string",
    "UserRules": [
        {
            "ipRule": "string",
            "ruleDesc": "string"
        }
    ]
}
```

Request Parameters

The request accepts the following data in JSON format.

**GroupId (p. 5)**

The ID of the group.

Type: String

Pattern: wsipg-[0-9a-z]{8,63}$

Required: Yes

**UserRules (p. 5)**

The rules to add to the group.

Type: Array of IpRuleItem (p. 60) objects

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

**AccessDeniedException**

The user is not authorized to access a resource.

HTTP Status Code: 400

**InvalidParameterValueException**

One or more parameter values are not valid.
HTTP Status Code: 400

**InvalidResourceStateException**

The state of the resource is not valid for this operation.

HTTP Status Code: 400

**ResourceLimitExceedededException**

Your resource limits have been exceeded.

HTTP Status Code: 400

**ResourceNotFoundException**

The resource could not be found.

HTTP Status Code: 400

### See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
CreateIpGroup

Creates an IP access control group.

An IP access control group provides you with the ability to control the IP addresses from which users are allowed to access their WorkSpaces. To specify the CIDR address ranges, add rules to your IP access control group and then associate the group with your directory. You can add rules when you create the group or at any time using AuthorizeIpRules (p. 5).

There is a default IP access control group associated with your directory. If you don't associate an IP access control group with your directory, the default group is used. The default group includes a default rule that allows users to access their WorkSpaces from anywhere. You cannot modify the default IP access control group for your directory.

Request Syntax

```
{
    "GroupDesc": "string",
    "GroupName": "string",
    "UserRules": [
        {
            "ipRule": "string",
            "ruleDesc": "string"
        }
    ]
}
```

Request Parameters

The request accepts the following data in JSON format.

**GroupDesc (p. 7)**

The description of the group.

Type: String

Required: No

**GroupName (p. 7)**

The name of the group.

Type: String

Required: Yes

**UserRules (p. 7)**

The rules to add to the group.

Type: Array of IpRuleItem (p. 60) objects

Required: No

Response Syntax

```
{
}
```
"GroupId": "string"
}

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**GroupId (p. 7)**

The ID of the group.

Type: String

Pattern: wsipg-[0-9a-zA-Z]{8,63}$

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

**AccessDeniedException**

The user is not authorized to access a resource.

HTTP Status Code: 400

**InvalidParameterValuesException**

One or more parameter values are not valid.

HTTP Status Code: 400

**ResourceAlreadyExistsException**

The specified resource already exists.

HTTP Status Code: 400

**ResourceCreationFailedException**

The resource could not be created.

HTTP Status Code: 400

**ResourceLimitExceededException**

Your resource limits have been exceeded.

HTTP Status Code: 400

- AWS SDK for C++
- AWS SDK for Go
• AWS SDK for Java
• AWS SDK for JavaScript
• AWS SDK for PHP V3
• AWS SDK for Python
• AWS SDK for Ruby V2
CreateTags

Creates the specified tags for the specified WorkSpace.

Request Syntax

```
{
    "ResourceId": "string",
    "Tags": [
    {
        "Key": "string",
        "Value": "string"
    }
    ]
}
```

Request Parameters

The request accepts the following data in JSON format.

ResourceId (p. 10)

The ID of the WorkSpace. To find this ID, use DescribeWorkspaces (p. 29).

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Tags (p. 10)

The tags. Each WorkSpace can have a maximum of 50 tags.

Type: Array of Tag (p. 67) objects

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

InvalidParameterValuesException

One or more parameter values are not valid.

HTTP Status Code: 400

ResourceLimitExceeded Exception

Your resource limits have been exceeded.

HTTP Status Code: 400
ResourceNotFoundException

The resource could not be found.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
CreateWorkspaces

Creates one or more WorkSpaces.

This operation is asynchronous and returns before the WorkSpaces are created.

Request Syntax

```json
{
    "Workspaces": [
        {
            "BundleId": "string",
            "DirectoryId": "string",
            "RootVolumeEncryptionEnabled": boolean,
            "Tags": [
                {
                    "Key": "string",
                    "Value": "string"
                }
            ],
            "UserName": "string",
            "UserVolumeEncryptionEnabled": boolean,
            "VolumeEncryptionKey": "string",
            "WorkspaceProperties": {
                "ComputeTypeName": "string",
                "RootVolumeSizeGib": number,
                "RunningMode": "string",
                "RunningModeAutoStopTimeoutInMinutes": number,
                "UserVolumeSizeGib": number
            }
        }
    ]
}
```

Request Parameters

The request accepts the following data in JSON format.

**Workspaces (p. 12)**

The WorkSpaces to create. You can specify up to 25 WorkSpaces.

Type: Array of WorkspaceRequest (p. 81) objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```json
{
    "FailedRequests": [
        {
            "ErrorCode": "string",
            "ErrorMessage": "string",
            "WorkspaceRequest": {"BundleId": "string"}
        }
    ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**FailedRequests (p. 12)**

Information about the WorkSpaces that could not be created.

Type: Array of [FailedCreateWorkspaceRequest (p. 58)] objects
PendingRequests (p. 12)

Information about the WorkSpaces that were created.

Because this operation is asynchronous, the identifier returned is not immediately available for use with other operations. For example, if you call DescribeWorkspaces (p. 29) before the WorkSpace is created, the information returned can be incomplete.

Type: Array of Workspace (p. 70) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

InvalidParameterValueException

One or more parameter values are not valid.

HTTP Status Code: 400

ResourceLimitExceededException

Your resource limits have been exceeded.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
DeleteIpGroup

Deletes the specified IP access control group.

You cannot delete an IP access control group that is associated with a directory.

**Request Syntax**

```json
{
    "GroupId": "string"
}
```

**Request Parameters**

The request accepts the following data in JSON format.

`GroupId (p. 15)`

The ID of the IP access control group.

Type: String

Pattern: `wsipg-[0-9a-z]{8,63}$`

Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see [Common Errors (p. 84)](#).

`AccessDeniedException`  

The user is not authorized to access a resource.

HTTP Status Code: 400

`InvalidParameterValueException`  

One or more parameter values are not valid.

HTTP Status Code: 400

`ResourceAssociatedException`  

The resource is associated with a directory.

HTTP Status Code: 400

`ResourceNotFoundException`  

The resource could not be found.

HTTP Status Code: 400
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
DeleteTags

Deletes the specified tags from the specified WorkSpace.

Request Syntax

```json
{
    "ResourceId": "string",
    "TagKeys": [ "string" ]
}
```

Request Parameters

The request accepts the following data in JSON format.

ResourceId (p. 17)

The ID of the WorkSpace. To find this ID, use DescribeWorkspaces (p. 29).

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

TagKeys (p. 17)

The tag keys.

Type: Array of strings

Length Constraints: Minimum length of 1.

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

InvalidParameterValuesException

One or more parameter values are not valid.

HTTP Status Code: 400

ResourceNotFoundException

The resource could not be found.

HTTP Status Code: 400
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
DescribeIpGroups

Describes one or more of your IP access control groups.

Request Syntax

```json
{
    "GroupIds": [ "string" ],
    "MaxResults": number,
    "NextToken": "string"
}
```

Request Parameters

The request accepts the following data in JSON format.

**GroupIds (p. 19)**

The IDs of one or more IP access control groups.

Type: Array of strings

Pattern: `wsipg-[0-9a-z]{8,63}$`

Required: No

**MaxResults (p. 19)**

The maximum number of items to return.

Type: Integer

Required: No

**NextToken (p. 19)**

The token for the next set of results. (You received this token from a previous call.)

Type: String

Required: No

Response Syntax

```json
{
    "NextToken": "string",
    "Result": [
        {
            "groupDesc": "string",
            "groupId": "string",
            "groupName": "string",
            "userRules": [
                {
                    "ipRule": "string",
                }
            ]
        }
    ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response. The following data is returned in JSON format by the service.

**NextToken (p. 19)**

The token to use to retrieve the next set of results, or null if there are no more results available. This token is valid for one day and must be used within that time frame.

Type: String

**Result (p. 19)**

Information about the IP access control groups.

Type: Array of WorkspacesIpGroup (p. 83) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

**AccessDeniedException**

The user is not authorized to access a resource.

HTTP Status Code: 400

**InvalidParameterValueException**

One or more parameter values are not valid.

HTTP Status Code: 400

- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
See Also

- AWS SDK for Ruby V2
DescribeTags

Describes the specified tags for the specified WorkSpace.

Request Syntax

```
{
  "ResourceId": "string"
}
```

Request Parameters

The request accepts the following data in JSON format.

ResourceId (p. 22)

The ID of the WorkSpace. To find this ID, use DescribeWorkspaces (p. 29).

Type: String

Length Constraints: Minimum length of 1.

Required: Yes

Response Syntax

```
{
  "TagList": [
    {
      "Key": "string",
      "Value": "string"
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

TagList (p. 22)

The tags.

Type: Array of Tag (p. 67) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

ResourceNotFoundException

The resource could not be found.
HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
DescribeWorkspaceBundles

Describes the available WorkSpace bundles.
You can filter the results using either bundle ID or owner, but not both.

Request Syntax

```
{
   "BundleIds": [ "string" ],
   "NextToken": "string",
   "Owner": "string"
}
```

Request Parameters

The request accepts the following data in JSON format.

**BundleIds (p. 24)**

The IDs of the bundles. This parameter cannot be combined with any other filter.
Type: Array of strings
Array Members: Minimum number of 1 item. Maximum number of 25 items.
Pattern: ^wsb-[0-9a-z]{8,63}$
Required: No

**NextToken (p. 24)**

The token for the next set of results. (You received this token from a previous call.)
Type: String
Required: No

**Owner (p. 24)**

The owner of the bundles. This parameter cannot be combined with any other filter.
Specify AMAZON to describe the bundles provided by AWS or null to describe the bundles that belong to your account.
Type: String
Required: No

Response Syntax

```
{
   "Bundles": [
      {
         "BundleId": "string",
      }
   ]
}
```
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

Bundles (p. 24)

Information about the bundles.

Type: Array of WorkspaceBundle (p. 73) objects

NextToken (p. 24)

The token to use to retrieve the next set of results, or null if there are no more results available. This token is valid for one day and must be used within that time frame.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

InvalidParameterValueException

One or more parameter values are not valid.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
• AWS SDK for JavaScript
• AWS SDK for PHP V3
• AWS SDK for Python
• AWS SDK for Ruby V2
DescribeWorkspaceDirectories

Describes the available AWS Directory Service directories that are registered with Amazon WorkSpaces.

Request Syntax

```
{
    "DirectoryIds": [ "string" ],
    "NextToken": "string"
}
```

Request Parameters

The request accepts the following data in JSON format.

**DirectoryIds (p. 27)**

The identifiers of the directories. If the value is null, all directories are retrieved.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Pattern: ^d-[0-9a-f]{8,63}$

Required: No

**NextToken (p. 27)**

The token for the next set of results. (You received this token from a previous call.)

Type: String

Required: No

Response Syntax

```
{
    "Directories": [ {
        "Alias": "string",
        "CustomerUserName": "string",
        "DirectoryId": "string",
        "DirectoryName": "string",
        "DirectoryType": "string",
        "DnsIpAddresses": [ "string" ],
        "IamRoleId": "string",
        "IpGroupIds": [ "string" ],
        "RegistrationCode": "string",
        "State": "string",
        "SubnetIds": [ "string" ],
        "WorkspaceCreationProperties": { 
            "CustomSecurityGroupId": "string",
            "DefaultOu": "string",
            "EnableInternetAccess": boolean,
```

API Version 2015-04-08

27
Response Elements

If the action is successful, the service sends back an HTTP 200 response. The following data is returned in JSON format by the service.

Directories (p. 27)

Information about the directories.

Type: Array of WorkspaceDirectory (p. 76) objects

NextToken (p. 27)

The token to use to retrieve the next set of results, or null if there are no more results available. This token is valid for one day and must be used within that time frame.

Type: String

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

InvalidParameterValueException

One or more parameter values are not valid.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
DescribeWorkspaces

Describes the specified WorkSpaces.

You can filter the results using bundle ID, directory ID, or owner, but you can specify only one filter at a time.

Request Syntax

```
{
  "BundleId": "string",
  "DirectoryId": "string",
  "Limit": number,
  "NextToken": "string",
  "UserName": "string",
  "WorkspaceIds": [ "string" ]
}
```

Request Parameters

The request accepts the following data in JSON format.

BundleId (p. 29)

The ID of the bundle. All WorkSpaces that are created from this bundle are retrieved. This parameter cannot be combined with any other filter.

Type: String

Pattern: ^wsb-[0-9a-z]{8,63}$

Required: No

DirectoryId (p. 29)

The ID of the directory. In addition, you can optionally specify a specific directory user (see UserName). This parameter cannot be combined with any other filter.

Type: String

Pattern: ^d-[0-9a-f]{8,63}$

Required: No

Limit (p. 29)

The maximum number of items to return.

Type: Integer

Required: No

NextToken (p. 29)

The token for the next set of results. (You received this token from a previous call.)

Type: String

Required: No

**UserName (p. 29)**

The name of the directory user. You must specify this parameter with `DirectoryId`.

Type: String

Required: No

**WorkspaceIds (p. 29)**

The IDs of the WorkSpaces. This parameter cannot be combined with any other filter.

Because the [CreateWorkspaces](#) operation is asynchronous, the identifier it returns is not immediately available. If you immediately call [DescribeWorkspaces](#) with this identifier, no information is returned.

Type: Array of strings

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Pattern: ^ws-[0-9a-z]{8,63}$

Required: No

### Response Syntax

```json
{
    "NextToken": "string",
    "Workspaces": [
        {
            "BundleId": "string",
            "ComputerName": "string",
            "DirectoryId": "string",
            "ErrorCode": "string",
            "ErrorMessage": "string",
            "IpAddress": "string",
            "ModificationStates": [
                {
                    "Resource": "string",
                    "State": "string"
                }
            ],
            "RootVolumeEncryptionEnabled": boolean,
            "State": "string",
            "SubnetId": "string",
            "UserName": "string",
            "UserVolumeEncryptionEnabled": boolean,
            "VolumeEncryptionKey": "string",
            "WorkspaceId": "string",
            "WorkspaceProperties": {
                "ComputeTypeName": "string",
                "RootVolumeSizeGib": number,
                "RunningMode": "string",
                "RunningModeAutoStopTimeoutInMinutes": number,
                "UserVolumeSizeGib": number
            }
        }
    ]
}
```

API Version 2015-04-08
Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

`NextToken (p. 30)`

The token to use to retrieve the next set of results, or null if there are no more results available. This token is valid for one day and must be used within that time frame.

Type: String

`Workspaces (p. 30)`

Information about the WorkSpaces.

Because `CreateWorkspaces (p. 12)` is an asynchronous operation, some of the returned information could be incomplete.

Type: Array of `Workspace (p. 70)` objects

Errors

For information about the errors that are common to all actions, see `Common Errors (p. 84)`.

`InvalidParameterValueException`

One or more parameter values are not valid.

HTTP Status Code: 400

`ResourceUnavailableException`

The specified resource is not available.

HTTP Status Code: 400

See Also

- AWS SDK for PHP V3
- AWS SDK for Python
• AWS SDK for Ruby V2
DescribeWorkspacesConnectionStatus

Describes the connection status of the specified WorkSpaces.

**Request Syntax**

```json
{
  "NextToken": "string",
  "WorkspaceIds": [ "string" ]
}
```

**Request Parameters**

The request accepts the following data in JSON format.

- **NextToken (p. 33)**
  - The token for the next set of results. (You received this token from a previous call.)
  - Type: String
  - Required: No

- **WorkspaceIds (p. 33)**
  - The identifiers of the WorkSpaces. You can specify up to 25 WorkSpaces.
  - Type: Array of strings
  - Array Members: Minimum number of 1 item. Maximum number of 25 items.
  - Pattern: ^ws-[0-9a-z]{8,63}$
  - Required: No

**Response Syntax**

```json
{
  "NextToken": "string",
  "WorkspacesConnectionStatus": [ {
    "ConnectionState": "string",
    "ConnectionStateCheckTimestamp": number,
    "LastKnownUserConnectionTimestamp": number,
    "WorkspaceId": "string"
  } ]
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.
**NextToken (p. 33)**

The token to use to retrieve the next set of results, or null if there are no more results available.

Type: String

**WorkspacesConnectionStatus (p. 33)**

Information about the connection status of the WorkSpace.

Type: Array of `WorkspaceConnectionStatus (p. 75)` objects

---

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 84).

**InvalidParameterValueException**

One or more parameter values are not valid.

HTTP Status Code: 400

---

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
DisassociateIpGroups

Disassociates the specified IP access control group from the specified directory.

Request Syntax

```
{
    "DirectoryId": "string",
    "GroupIds": [ "string" ]
}
```

Request Parameters

The request accepts the following data in JSON format.

**DirectoryId (p. 35)**

The ID of the directory.

- Type: String
- Pattern: ^d-[0-9a-f]{8,63}$
- Required: Yes

**GroupIds (p. 35)**

The IDs of one or more IP access control groups.

- Type: Array of strings
- Pattern: wsipg-[0-9a-z]{8,63}$
- Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

**AccessException**

The user is not authorized to access a resource.

- HTTP Status Code: 400

**InvalidParameterValuesException**

One or more parameter values are not valid.

- HTTP Status Code: 400

**InvalidResourceStateException**

The state of the resource is not valid for this operation.
HTTP Status Code: 400

ResourceNotFoundException

The resource could not be found.

HTTP Status Code: 400

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
ModifyWorkspaceProperties

Modifies the specified WorkSpace properties.

Request Syntax

```json
{
    "WorkspaceId": "string",
    "WorkspaceProperties": {
        "ComputeTypeName": "string",
        "RootVolumeSizeGib": number,
        "RunningMode": "string",
        "RunningModeAutoStopTimeoutInMinutes": number,
        "UserVolumeSizeGib": number
    }
}
```

Request Parameters

The request accepts the following data in JSON format.

WorkspaceId (p. 37)

The ID of the WorkSpace.

Type: String

Pattern: ^ws-[0-9a-z]{8,63}$

Required: Yes

WorkspaceProperties (p. 37)

The properties of the WorkSpace.

Type: WorkspaceProperties (p. 79) object

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

AccessDeniedException

The user is not authorized to access a resource.

HTTP Status Code: 400

InvalidParameterValueException

One or more parameter values are not valid.
HTTP Status Code: 400

`InvalidResourceStateException`

The state of the resource is not valid for this operation.

HTTP Status Code: 400

`OperationInProgressException`

The properties of this WorkSpace are currently being modified. Try again in a moment.

HTTP Status Code: 400

`ResourceNotFoundException`

The resource could not be found.

HTTP Status Code: 400

`ResourceUnavailableException`

The specified resource is not available.

HTTP Status Code: 400

`UnsupportedWorkspaceConfigurationException`

The configuration of this WorkSpace is not supported for this operation. For more information, see the Amazon WorkSpaces Administration Guide.

HTTP Status Code: 400

See Also

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
ModifyWorkspaceState

Sets the state of the specified WorkSpace.

To maintain a WorkSpace without being interrupted, set the WorkSpace state to **ADMIN_MAINTENANCE**. WorkSpaces in this state do not respond to requests to reboot, stop, start, or rebuild. An AutoStop WorkSpace in this state is not stopped. Users can log into a WorkSpace in the **ADMIN_MAINTENANCE** state.

**Request Syntax**

```json
{
    "WorkspaceId": "string",
    "WorkspaceState": "string"
}
```

**Request Parameters**

The request accepts the following data in JSON format.

**WorkspaceId (p. 39)**

The ID of the WorkSpace.

Type: String

Pattern: `^ws-[0-9a-z]{8,63}$`

Required: Yes

**WorkspaceState (p. 39)**

The WorkSpace state.

Type: String

Valid Values: `AVAILABLE | ADMIN_MAINTENANCE`

Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see [Common Errors (p. 84)](#).

*InvalidParameterValueException*

One or more parameter values are not valid.

HTTP Status Code: 400

*InvalidResourceStateException*

The state of the resource is not valid for this operation.
HTTP Status Code: 400

**ResourceNotFoundException**

The resource could not be found.

HTTP Status Code: 400

See Also

- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
RebootWorkspaces

Reboots the specified WorkSpaces.

You cannot reboot a WorkSpace unless its state is AVAILABLE or UNHEALTHY.

This operation is asynchronous and returns before the WorkSpaces have rebooted.

Request Syntax

```
{
  "RebootWorkspaceRequests": [
    {
      "WorkspaceId": "string"
    }
  ]
}
```

Request Parameters

The request accepts the following data in JSON format.

**RebootWorkspaceRequests (p. 41)**

The WorkSpaces to reboot. You can specify up to 25 WorkSpaces.

Type: Array of RebootRequest (p. 62) objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```
{
  "FailedRequests": [
    {
      "ErrorCode": "string",
      "ErrorMessage": "string",
      "WorkspaceId": "string"
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**FailedRequests (p. 41)**

Information about the WorkSpaces that could not be rebooted.

Type: Array of FailedWorkspaceChangeRequest (p. 59) objects
Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
RebuildWorkspaces

Rebuilds the specified WorkSpace.

You cannot rebuild a WorkSpace unless its state is AVAILABLE, ERROR, or UNHEALTHY.

Rebuilding a WorkSpace is a potentially destructive action that can result in the loss of data. For more information, see Rebuild a WorkSpace.

This operation is asynchronous and returns before the WorkSpaces have been completely rebuilt.

**Request Syntax**

```
{
  "RebuildWorkspaceRequests": [
    {
      "WorkspaceId": "string"
    }
  ]
}
```

**Request Parameters**

The request accepts the following data in JSON format.

**RebuildWorkspaceRequests (p. 43)**

The WorkSpace to rebuild. You can specify a single WorkSpace.

Type: Array of RebuildRequest (p. 63) objects

Array Members: Fixed number of 1 item.

Required: Yes

**Response Syntax**

```
{
  "FailedRequests": [
    {
      "ErrorCode": "string",
      "ErrorMessage": "string",
      "WorkspaceId": "string"
    }
  ]
}
```

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**FailedRequests (p. 43)**

Information about the WorkSpace if it could not be rebuilt.
Type: Array of `FailedWorkspaceChangeRequest (p. 59)` objects

**Errors**

For information about the errors that are common to all actions, see *Common Errors (p. 84).*

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
RevokeIpRules

Removes one or more rules from the specified IP access control group.

**Request Syntax**

```json
{
    "GroupId": "string",
    "UserRules": [ "string" ]
}
```

**Request Parameters**

The request accepts the following data in JSON format.

- **GroupId (p. 45)**
  - The ID of the group.
  - Type: String
  - Pattern: wsipg-[0-9a-z]{8,63}$
  - Required: Yes

- **UserRules (p. 45)**
  - The rules to remove from the group.
  - Type: Array of strings
  - Required: Yes

**Response Elements**

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

**Errors**

For information about the errors that are common to all actions, see Common Errors (p. 84).

- **AccessDeniedException**
  - The user is not authorized to access a resource.
  - HTTP Status Code: 400

- **InvalidParameterValuesException**
  - One or more parameter values are not valid.
  - HTTP Status Code: 400

- **InvalidResourceStateException**
  - The state of the resource is not valid for this operation.
  - HTTP Status Code: 400
ResourceNotFoundException
The resource could not be found.
HTTP Status Code: 400

See Also

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
StartWorkspaces

Starts the specified WorkSpaces.

You cannot start a WorkSpace unless it has a running mode of AutoStop and a state of STOPPED.

Request Syntax

```json
{
   "StartWorkspaceRequests": [
      { "WorkspaceId": "string" }
   ]
}
```

Request Parameters

The request accepts the following data in JSON format.

StartWorkspaceRequests (p. 47)

The WorkSpaces to start. You can specify up to 25 WorkSpaces.

Type: Array of StartRequest (p. 65) objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```json
{
   "FailedRequests": [
      { "ErrorCode": "string",
        "ErrorMessage": "string",
        "WorkspaceId": "string"
      }
   ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

FailedRequests (p. 47)

Information about the WorkSpaces that could not be started.

Type: Array of FailedWorkspaceChangeRequest (p. 59) objects
Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
StopWorkspaces

Stops the specified WorkSpaces.

You cannot stop a WorkSpace unless it has a running mode of AutoStop and a state of AVAILABLE, IMPAIRED, UNHEALTHY, or ERROR.

Request Syntax

```
{
  "StopWorkspaceRequests": [
    {
      "WorkspaceId": "string"
    }
  ]
}
```

Request Parameters

The request accepts the following data in JSON format.

**StopWorkspaceRequests (p. 49)**

The WorkSpaces to stop. You can specify up to 25 WorkSpaces.

Type: Array of StopRequest (p. 66) objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```
{
  "FailedRequests": [
    {
      "ErrorCode": "string",
      "ErrorMessage": "string",
      "WorkspaceId": "string"
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**FailedRequests (p. 49)**

Information about the WorkSpaces that could not be stopped.

Type: Array of FailedWorkspaceChangeRequest (p. 59) objects
Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
Terminates the specified WorkSpaces.

Terminating a WorkSpace is a permanent action and cannot be undone. The user's data is destroyed. If you need to archive any user data, contact Amazon Web Services before terminating the WorkSpace.

You can terminate a WorkSpace that is in any state except SUSPENDED.

This operation is asynchronous and returns before the WorkSpaces have been completely terminated.

Request Syntax

```json
{
  "TerminateWorkspaceRequests": [
    {
      "WorkspaceId": "string"
    }
  ]
}
```

Request Parameters

The request accepts the following data in JSON format.

**TerminateWorkspaceRequests (p. 51)**

The WorkSpaces to terminate. You can specify up to 25 WorkSpaces.

Type: Array of TerminateRequest (p. 68) objects

Array Members: Minimum number of 1 item. Maximum number of 25 items.

Required: Yes

Response Syntax

```json
{
  "FailedRequests": [
    {
      "ErrorCode": "string",
      "ErrorMessage": "string",
      "WorkspaceId": "string"
    }
  ]
}
```

Response Elements

If the action is successful, the service sends back an HTTP 200 response.

The following data is returned in JSON format by the service.

**FailedRequests (p. 51)**

Information about the WorkSpaces that could not be terminated.
Type: Array of FailedWorkspaceChangeRequest (p. 59) objects

Errors

For information about the errors that are common to all actions, see Common Errors (p. 84).

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS Command Line Interface
- AWS SDK for .NET
- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for JavaScript
- AWS SDK for PHP V3
- AWS SDK for Python
- AWS SDK for Ruby V2
UpdateRulesOfIpGroup

Replaces the current rules of the specified IP access control group with the specified rules.

Request Syntax

```json
{
  "GroupId": "string",
  "UserRules": [
    {
      "ipRule": "string",
      "ruleDesc": "string"
    }
  ]
}
```

Request Parameters

The request accepts the following data in JSON format.

**GroupId** *(p. 53)*

The ID of the group.

Type: String

Pattern: wsipg-[0-9a-z]{8,63}#

Required: Yes

**UserRules** *(p. 53)*

One or more rules.

Type: Array of *IpRuleItem* *(p. 60)* objects

Required: Yes

Response Elements

If the action is successful, the service sends back an HTTP 200 response with an empty HTTP body.

Errors

For information about the errors that are common to all actions, see **Common Errors** *(p. 84).*

**AccessDeniedException**

The user is not authorized to access a resource.

HTTP Status Code: 400

**InvalidParameterValuesException**

One or more parameter values are not valid.

HTTP Status Code: 400
InvalidResourceStateException

The state of the resource is not valid for this operation.

HTTP Status Code: 400

ResourceLimitExceeded Exception

Your resource limits have been exceeded.

HTTP Status Code: 400

ResourceNotFoundException

The resource could not be found.

HTTP Status Code: 400

See Also

Data Types

The Amazon WorkSpaces API contains several data types that various actions use. This section describes each data type in detail.

Note
The order of each element in a data type structure is not guaranteed. Applications should not assume a particular order.

The following data types are supported:

- ComputeType (p. 56)
- DefaultWorkspaceCreationProperties (p. 57)
- FailedCreateWorkspaceRequest (p. 58)
- FailedWorkspaceChangeRequest (p. 59)
- IpRuleItem (p. 60)
- ModificationState (p. 61)
- RebootRequest (p. 62)
- RebuildRequest (p. 63)
- RootStorage (p. 64)
- StartRequest (p. 65)
- StopRequest (p. 66)
- Tag (p. 67)
- TerminateRequest (p. 68)
- UserStorage (p. 69)
- Workspace (p. 70)
- WorkspaceBundle (p. 73)
- WorkspaceConnectionStatus (p. 75)
- WorkspaceDirectory (p. 76)
- WorkspaceProperties (p. 79)
- WorkspaceRequest (p. 81)
- WorkspacesIpGroup (p. 83)
**ComputeType**

Information about the compute type.

**Contents**

**Name**

The compute type.

Type: String

Valid Values: VALUE | STANDARD | PERFORMANCE | POWER | GRAPHICS

Required: No

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
DefaultWorkspaceCreationProperties

Information about defaults used to create a WorkSpace.

Contents

CustomSecurityGroupId

The identifier of any security groups to apply to WorkSpaces when they are created.

Type: String

Pattern: ^sg-[0-9a-f]{8}$

Required: No

DefaultOu

The organizational unit (OU) in the directory for the WorkSpace machine accounts.

Type: String

Required: No

EnableInternetAccess

The public IP address to attach to all WorkSpaces that are created or rebuilt.

Type: Boolean

Required: No

EnableWorkDocs

Indicates whether the directory is enabled for Amazon WorkDocs.

Type: Boolean

Required: No

UserEnabledAsLocalAdministrator

Indicates whether the WorkSpace user is an administrator on the WorkSpace.

Type: Boolean

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
FailedCreateWorkspaceRequest

Information about a WorkSpace that could not be created.

Contents

**ErrorCode**

The error code.

Type: String

Required: No

**ErrorMessage**

The textual error message.

Type: String

Required: No

**WorkspaceRequest**

Information about the WorkSpace.

Type: `WorkspaceRequest (p. 81)` object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
FailedWorkspaceChangeRequest

Information about a WorkSpace that could not be rebooted (RebootWorkspaces (p. 41)), rebuilt (RebuildWorkspaces (p. 43)), terminated (TerminateWorkspaces (p. 51)), started (StartWorkspaces (p. 47)), or stopped (StopWorkspaces (p. 49)).

Contents

ErrorCode

The error code.

Type: String

Required: No

ErrorMessage

The textual error message.

Type: String

Required: No

WorkspaceId

The identifier of the WorkSpace.

Type: String

Pattern: ^w[0-9a-z]{8,63}$

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
IpRuleItem

Information about a rule for an IP access control group.

Contents

ipRule

The IP address range, in CIDR notation.

Type: String
Required: No

ruleDesc

The description.

Type: String
Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
ModificationState

Information about a WorkSpace modification.

Contents

Resource

The resource.

Type: String

Valid Values: ROOT_VOLUME | USER_VOLUME | COMPUTE_TYPE

Required: No

State

The modification state.

Type: String

Valid Values: UPDATE_INITIATED | UPDATE_IN_PROGRESS

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
RebootRequest

Information used to reboot a WorkSpace.

Contents

WorkspaceId

The ID of the WorkSpace.
Type: String
Pattern: ^ws-[0-9a-z]{8,63}$
Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
RebuildRequest

Information used to rebuild a WorkSpace.

Contents

WorkspaceId

The ID of the WorkSpace.

Type: String

Pattern: ^ws-[0-9a-z]{8,63}$

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
RootStorage

Information about the root volume for a WorkSpace bundle.

Contents

Capacity

The size of the root volume.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
StartRequest

Information used to start a WorkSpace.

Contents

WorkspaceId

The ID of the WorkSpace.

Type: String

Pattern: ^ws-[0-9a-z]{8,63}$

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
StopRequest

Information used to stop a WorkSpace.

Contents

WorkspaceId

The ID of the WorkSpace.

Type: String

Pattern: ^ws-[0-9a-z]{8,63}$

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Tag

Information about a tag.

Contents

Key

The key of the tag.

Type: String

Required: Yes

Value

The value of the tag.

Type: String

Length Constraints: Maximum length of 255.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
TerminateRequest

Information used to terminate a WorkSpace.

Contents

WorkspaceId

The ID of the WorkSpace.

Type: String

Pattern: \^[w]+\-[0-9a-z]{8,63}\$

Required: Yes

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
UserStorage

Information about the user storage for a WorkSpace bundle.

Contents

Capacity

The size of the user storage.

Type: String

Length Constraints: Minimum length of 1.

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Workspace

Information about a WorkSpace.

Contents

BundleId

The identifier of the bundle used to create the WorkSpace.

Type: String

Pattern: ^wsb-[0-9a-z]{8,63}$

Required: No

ComputerName

The name of the WorkSpace, as seen by the operating system.

Type: String

Required: No

DirectoryId

The identifier of the AWS Directory Service directory for the WorkSpace.

Type: String

Pattern: ^d-[0-9a-f]{8,63}$

Required: No

ErrorCode

If the WorkSpace could not be created, contains the error code.

Type: String

Required: No

ErrorMessage

If the WorkSpace could not be created, contains a textual error message that describes the failure.

Type: String

Required: No

IpAddress

The IP address of the WorkSpace.

Type: String

Required: No

ModificationStates

The modification states of the WorkSpace.

Type: Array of ModificationState (p. 61) objects

API Version 2015-04-08
Required: No

**RootVolumeEncryptionEnabled**

Indicates whether the data stored on the root volume is encrypted.

Type: Boolean

Required: No

**State**

The operational state of the WorkSpace.

Type: String

Valid Values: PENDING | AVAILABLE | IMPAIRED | UNHEALTHY | REBOOTING | STARTING | REBUILDING | MAINTENANCE | ADMIN_MAINTENANCE | TERMINATING | TERMINATED | SUSPENDED | UPDATING | STOPPING | STOPPED | ERROR

Required: No

**SubnetId**

The identifier of the subnet for the WorkSpace.

Type: String

Pattern: ^(subnet-[0-9a-f]{8})$

Required: No

**UserName**

The user for the WorkSpace.

Type: String

Required: No

**UserVolumeEncryptionEnabled**

Indicates whether the data stored on the user volume is encrypted.

Type: Boolean

Required: No

**VolumeEncryptionKey**

The KMS key used to encrypt data stored on your WorkSpace.

Type: String

Required: No

**WorkspaceId**

The identifier of the WorkSpace.

Type: String

Pattern: ^ws-[0-9a-z]{8,63}$

Required: No
WorkspaceProperties

The properties of the WorkSpace.

Type: WorkspaceProperties (p. 79) object

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
WorkspaceBundle

Information about a WorkSpace bundle.

Contents

BundleId

The bundle identifier.
Type: String
Pattern: ^wsb-[0-9a-z]{8,63}$
Required: No

ComputeType

The compute type. For more information, see Amazon WorkSpaces Bundles.
Type: ComputeType (p. 56) object
Required: No

Description

A description.
Type: String
Required: No

Name

The name of the bundle.
Type: String
Length Constraints: Minimum length of 1.
Required: No

Owner

The owner of the bundle. This is the account identifier of the owner, or AMAZON if the bundle is provided by AWS.
Type: String
Required: No

RootStorage

The size of the root volume.
Type: RootStorage (p. 64) object
Required: No

UserStorage

The size of the user storage.
Type: UserStorage (p. 69) object
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
WorkspaceConnectionStatus

Describes the connection status of a WorkSpace.

Contents

ConnectionState

The connection state of the WorkSpace. The connection state is unknown if the WorkSpace is stopped.

Type: String

Valid Values: CONNECTED | DISCONNECTED | UNKNOWN

Required: No

ConnectionStateCheckTimestamp

The timestamp of the connection state check.

Type: Timestamp

Required: No

LastKnownUserConnectionTimestamp

The timestamp of the last known user connection.

Type: Timestamp

Required: No

WorkspaceId

The ID of the WorkSpace.

Type: String

Pattern: ^ws-[0-9a-z]{8,63}$

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
WorkspaceDirectory

Information about an AWS Directory Service directory for use with Amazon WorkSpaces.

Contents

Alias

The directory alias.

Type: String

Required: No

CustomerUserName

The user name for the service account.

Type: String

Required: No

DirectoryId

The directory identifier.

Type: String

Pattern: ^d-[0-9a-f]{8,63}$

Required: No

DirectoryName

The name of the directory.

Type: String

Required: No

DirectoryType

The directory type.

Type: String

Valid Values: SIMPLE_AD | AD_CONNECTOR

Required: No

DnsIpAddresses

The IP addresses of the DNS servers for the directory.

Type: Array of strings

Required: No

IamRoleId

The identifier of the IAM role. This is the role that allows Amazon WorkSpaces to make calls to other services, such as Amazon EC2, on your behalf.
Type: String

Pattern: ^arn:aws:[A-Za-z0-9][A-za-z0-9_/.-]{0,62}:[A-za-z0-9_/.-]{0,63}:[A-za-z0-9_/.-]{0,63}:[A-Za-z0-9][A-za-z0-9_/.-]{0,127}$

Required: No

**ipGroupIds**

The identifiers of the IP access control groups associated with the directory.

Type: Array of strings

Pattern: wsipg-[0-9a-z]{8,63}$

Required: No

**RegistrationCode**

The registration code for the directory. This is the code that users enter in their Amazon WorkSpaces client application to connect to the directory.

Type: String

Required: No

**State**

The state of the directory's registration with Amazon WorkSpaces

Type: String

Valid Values: REGISTERING | REGISTERED | Deregistering | Deregistered | ERROR

Required: No

**SubnetIds**

The identifiers of the subnets used with the directory.

Type: Array of strings

Pattern: ^subnet-[0-9a-f]{8}$

Required: No

**WorkspaceCreationProperties**

The default creation properties for all WorkSpaces in the directory.

Type: **DefaultWorkspaceCreationProperties** (p. 57) object

Required: No

**WorkspaceSecurityGroupId**

The identifier of the security group that is assigned to new WorkSpaces.

Type: String

Pattern: ^sg-[0-9a-f]{8}$

Required: No
See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
WorkspaceProperties

Information about a WorkSpace.

Contents

ComputeTypeName

The compute type. For more information, see Amazon WorkSpaces Bundles.

Type: String

Valid Values: VALUE | STANDARD | PERFORMANCE | POWER | GRAPHICS

Required: No

RootVolumeSizeGib

The size of the root volume.

Type: Integer

Required: No

RunningMode

The running mode. For more information, see Manage the WorkSpace Running Mode.

Type: String

Valid Values: AUTO_STOP | ALWAYS_ON

Required: No

RunningModeAutoStopTimeoutInMinutes

The time after a user logs off when WorkSpaces are automatically stopped. Configured in 60 minute intervals.

Type: Integer

Required: No

UserVolumeSizeGib

The size of the user storage.

Type: Integer

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
WorkspaceRequest

Information used to create a WorkSpace.

Contents

BundleId

The identifier of the bundle for the WorkSpace. You can use DescribeWorkspaceBundles (p. 24) to list the available bundles.

Type: String

Pattern: ^wsb-[0-9a-z]{8,63}$

Required: Yes

DirectoryId

The identifier of the AWS Directory Service directory for the WorkSpace. You can use DescribeWorkspaceDirectories (p. 27) to list the available directories.

Type: String

Pattern: ^d-[0-9a-f]{8,63}$

Required: Yes

RootVolumeEncryptionEnabled

Indicates whether the data stored on the root volume is encrypted.

Type: Boolean

Required: No

Tags

The tags for the WorkSpace.

Type: Array of Tag (p. 67) objects

Required: No

UserName

The username of the user for the WorkSpace. This username must exist in the AWS Directory Service directory for the WorkSpace.

Type: String

Required: Yes

UserVolumeEncryptionEnabled

Indicates whether the data stored on the user volume is encrypted.

Type: Boolean

Required: No
**VolumeEncryptionKey**

The KMS key used to encrypt data stored on your WorkSpace.

Type: String

Required: No

**WorkspaceProperties**

The WorkSpace properties.

Type: WorkspaceProperties (p. 79) object

Required: No

---

**See Also**

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
WorkspacesIpGroup

Information about an IP access control group.

Contents

groupDesc

The description of the group.

Type: String

Required: No

groupId

The ID of the group.

Type: String

Pattern: wsipg-[0-9a-z]{8,63}$

Required: No

groupName

The name of the group.

Type: String

Required: No

userRules

The rules.

Type: Array of IpRuleItem (p. 60) objects

Required: No

See Also

For more information about using this API in one of the language-specific AWS SDKs, see the following:

- AWS SDK for C++
- AWS SDK for Go
- AWS SDK for Java
- AWS SDK for Ruby V2
Common Errors

This section lists the errors common to the API actions of all AWS services. For errors specific to an API action for this service, see the topic for that API action.

**AccessDeniedException**

You do not have sufficient access to perform this action.

HTTP Status Code: 400

**IncompleteSignature**

The request signature does not conform to AWS standards.

HTTP Status Code: 400

**InternalFailure**

The request processing has failed because of an unknown error, exception or failure.

HTTP Status Code: 500

**InvalidAction**

The action or operation requested is invalid. Verify that the action is typed correctly.

HTTP Status Code: 400

**InvalidClientTokenId**

The X.509 certificate or AWS access key ID provided does not exist in our records.

HTTP Status Code: 403

**InvalidParameterCombination**

Parameters that must not be used together were used together.

HTTP Status Code: 400

**InvalidParameterValue**

An invalid or out-of-range value was supplied for the input parameter.

HTTP Status Code: 400

**InvalidQueryParameter**

The AWS query string is malformed or does not adhere to AWS standards.

HTTP Status Code: 400

**MalformedQueryString**

The query string contains a syntax error.

HTTP Status Code: 404

**MissingAction**

The request is missing an action or a required parameter.

HTTP Status Code: 400
MissingAuthenticationToken

The request must contain either a valid (registered) AWS access key ID or X.509 certificate.

HTTP Status Code: 403

MissingParameter

A required parameter for the specified action is not supplied.

HTTP Status Code: 400

OptInRequired

The AWS access key ID needs a subscription for the service.

HTTP Status Code: 403

RequestExpired

The request reached the service more than 15 minutes after the date stamp on the request or more than 15 minutes after the request expiration date (such as for pre-signed URLs), or the date stamp on the request is more than 15 minutes in the future.

HTTP Status Code: 400

ServiceUnavailable

The request has failed due to a temporary failure of the server.

HTTP Status Code: 503

ThrottlingException

The request was denied due to request throttling.

HTTP Status Code: 400

ValidationException

The input fails to satisfy the constraints specified by an AWS service.

HTTP Status Code: 400
Logging Amazon WorkSpaces API Calls by Using CloudTrail

The Amazon WorkSpaces API is integrated with AWS CloudTrail, a service that captures API calls made by or on behalf of Amazon WorkSpaces in your AWS account and delivers the log files to an Amazon S3 bucket that you specify. Using the information collected by CloudTrail, you can determine what request was made to Amazon WorkSpaces, the source IP address from which the request was made, who made the request, when it was made, and so on. For more information about CloudTrail, including how to configure and enable it, see the AWS CloudTrail User Guide.

Amazon WorkSpaces Information in CloudTrail

When CloudTrail logging is enabled in your AWS account, API calls made to Amazon WorkSpaces actions are tracked in log files. For example, calls to create, rebuild, or terminate WorkSpaces generate entries in CloudTrail log files. For more information, see Actions (p. 2).

Amazon WorkSpaces records are written together with other AWS service records in a log file. CloudTrail determines when to create and write to a new file based on a time period and file size.

Every log entry contains information about who generated the request. The user identity information in the log helps you determine whether the request was made with root or IAM user credentials, with temporary security credentials for a role or federated user, or by another AWS service. For more information, see the userIdentity field in the CloudTrail Event Reference.

You can store your log files in your bucket for as long as you want, but you can also define Amazon S3 lifecycle rules to archive or delete log files automatically. By default, your log files are encrypted by using Amazon S3 server-side encryption (SSE).

You can choose to have CloudTrail publish Amazon SNS notifications when new log files are delivered if you want to take quick action upon log file delivery. For more information, see Configuring Amazon SNS Notifications.

You can also aggregate Amazon WorkSpaces log files from multiple AWS regions and multiple AWS accounts into a single Amazon S3 bucket. For more information, see Aggregating CloudTrail Log Files to a Single Amazon S3 Bucket.

Understanding Amazon WorkSpaces Log File Entries

CloudTrail log files can contain one or more log entries where each entry is made up of multiple JSON-formatted events. A log entry represents a single request from any source and includes information about the requested action, any parameters, the date and time of the action, and so on. The log entries are not guaranteed to be in any particular order. That is, they are not an ordered stack trace of the public API calls.

Any sensitive information, such as passwords, authentication tokens, file comments, and file contents are redacted in the log entries.
The following example shows an example of a CloudTrail log entry for Amazon WorkSpaces.

```json
{
  "Records" : [
    {
      "eventVersion" : "1.02",
      "userIdentity" : {
        "type" : "IAMUser",
        "principalId" : "user_id",
        "arn" : "user_arn",
        "accountId" : "account_id",
        "accessKeyId" : "access_key_id",
        "userName" : "username"
      },
      "eventTime" : "event_time",
      "eventSource" : "workspaces.amazonaws.com",
      "eventName" : "DescribeWorkspaces",
      "awsRegion" : "region",
      "sourceIPAddress" : "IP_address",
      "userAgent" : "user_agent",
      "requestParameters" : {
        "requestContext" : {
          "awsAccountId" : "account_id"
        }
      },
      "responseElements" : {
        "workspaces" : [
          {
            "bundleId" : "bundle_id",
            "userName" : "workspace_user_name",
            "ipAddress" : "ip_address",
            "directoryId" : "directory_id",
            "state" : "state",
            "workspaceId" : "workspace_id",
            "subnetId" : "subnet_id"
          }
        ],
        "requestID" : "request_id",
        "eventID" : "event_id",
        "eventType" : "AwsApiCall",
        "recipientAccountId" : "account_id"
      }
    }
  ]
}
```
